IF A SEAL IS PRESENT ON THIS SHEET IT HAS BEEN ELECTRONICALLY SEALED AND DATED.

REV.

Sign Spacing, Device Spacing, Channelizing Taper Lengths And Recommended Maximum Speed Reductions

TAPER LENGTHS AND SPACING OF CHANNELIZING DEVICES						
SPEED (P) MPH	MINIMUM TAPER LENGTHS (L) FOR LANE WIDTHS (W)			MINIMUM TAPER SHOULDER (T1)	MAXIMUM CHANNELIZER SPACING	
	10 FT	11 FT	12 FT		THROUGH TAPER	THROUGH WORK AREA
0-35	205 FT	225 FT	245 FT	70	35 FT	50 FT
40-45	450 FT	495 FT	540 FT	150	40 FT	100 FT
50-55	550 FT	605 FT	660 FT	185	50 FT	100 FT
60-70	700 FT	770 FT	840 FT	235	60 FT	100 FT

TAPER LENGTHS AND END TREATMENTS FOR CONCRETE BARRIER				
SPEED (P) MPH	MINIMUM TAPER LENGTHS FOR LANE WIDTHS (3)			END TREATMENT (4)
	10 FT	11 FT	12 FT	
<40	160 FT	168 FT	176 FT	BARRIER HEIGHT TRANSITION
≥40	160 FT	168 FT	176 FT	APPROVED CRASH CUSHION

SIGN SPACING FOR ADVANCE SIGN SERIES (1) (2)		
SPEED (P) MPH	NON-DIVIDED HIGHWAYS (S)	DIVIDED HIGHWAYS (S)
0-35	200 FT	200 FT
40-45	350 FT	500 FT
50-55	500 FT	1000 FT
60-70	SA-1000 FT, SB-1500 FT, SC-2640 FT **	

** THE SA DIMENSION IS THE DISTANCE FROM THE TRANSITION OR POINT OF RESTRICTION TO THE FIRST SIGN.

THE SB DIMENSION IS THE DISTANCE BETWEEN THE FIRST AND SECOND SIGNS.

THE SC DIMENSION IS THE DISTANCE BETWEEN THE SECOND AND THIRD SIGNS.

(THE "FIRST SIGN" IS THE SIGN IN A THREE-SIGN SERIES THAT IS CLOSEST TO THE TEMPORARY TRAFFIC CONTROL ZONE. THE "THIRD SIGN" IS THE SIGN THAT IS FURTHEST UPSTREAM FROM THE TEMPORARY TRAFFIC CONTROL ZONE)

NOTES:

DIMENSIONS IN FEET UNLESS OTHERWISE NOTED.

(1) SPACING BETWEEN SIGNS AND SPACING BETWEEN LAST SIGN AND FLAGGER, BEGINNING OF TAPER, OR SIGNED CONDITION

(2) SPACINGS MAY BE ADJUSTED AS NECESSARY TO MEET FIELD CONDITIONS

(3) TAPER LENGTHS SHOWN INCLUDE LENGTH REQUIRED FOR LANE AND 10' SHOULDER.

(4) CONCRETE BARRIER MAY BE INSTALLED AT AN 8:1 FLARE RATE FROM THE SHOULDER POINT TO THE LIMITS OF THE CLEAR ZONE WHERE THEY SIDE SLOPE IS 6:1 OR FLATTER.

TAPER LENGTH (L)

L = W X P FOR 40 MPH OR MORE

$L = \frac{WP^2}{60}$ FOR 35 MPH OR LESS

L = TAPER LENGTH IN FEET

W = LATERAL SHIFT IN FEET

P = POSTED SPEED PRIOR TO ROAD WORK IN MPH

LONGITUDINAL BUFFER SPACE	
SPEED (P) MPH	BUFFER SPACE (FEET)
0-35	250
40-45	360
50-55	495
60-70	730

EPG TABLE 616.29 RECOMMENDED MAXIMUM SPEED REDUCTIONS	
ACTIVITY (I.E. WORKERS, EQUIPMENT OR MATERIAL) LOCATION	RECOMMENDED WORK ZONE SPEED REDUCTION (WHEN APPLICABLE)
10 FT. BEYOND EDGE OF TRAVELWAY TO EDGE OF RIGHT OF WAY	NO SPEED REDUCTION
IN TRAFFIC LANE OR WITHIN 10FT. OF THE TRAFFIC LANE	10 MPH
HEAD-TO-HEAD ON MULTILANE	10 MPH
SPECIAL CIRCUMSTANCES WITHIN A TEMPORARY TRAFFIC CONTROL WORK ZONE MAY WARRANT A LOWER SPEED LIMIT THAN RECOMMENDED ABOVE. ALL SPEED LIMIT REDUCTIONS GREATER THAN 10 MPH SHALL BE DOCUMENTED, SUBMITTED TO AND APPROVED BY THE DISTRICT WORK ZONE COORDINATOR.	

GENERAL NOTES:

1. SEE STANDARD PLAN 616.10 FOR DETAILS AND ITEMS NOT SHOWN
2. EXISTING SIGNS SHALL BE COVERED DURING WORKING HOURS ONLY IF IN CONFLICT WITH TRAFFIC CONTROL PLANS.
3. NO DIRECT PAYMENT WILL BE MADE FOR RELOCATING, COVERING, UNCOVERING OR REMOVING SIGNS.
4. CONES ALLOWABLE FOR DAYTIME OPERATIONS ONLY.
5. LOCATE FLASHING ARROW PANEL AT BEGINNING OF TAPER WHEN FEASIBLE, ARROW PANELS ARE ALWAYS LOCATED BEHIND CHANNELIZERS OR CONES.
6. ADJUST SIGN & DEVICE SPACING ACCORDING TO FIELD CONDITIONS AS DIRECTED BY THE ENGINEER.

MISSOURI HIGHWAYS AND TRANSPORTATION COMMISSION

U.I.P. AND REHAB EXISTING (70'-105'-110'-105')(6'-100'-118'-118'-100') CONTINUOUS CONCRETE BOX GIRDER SPANS

General Notes:

Design Specifications:
2002 - AASHTO 17th Edition
Load Factor Design
Seismic Performance Category A
Bridge Deck Rating = 5

Design Loading:
HS20-44 Military 24,000# Tandem Axle (1968 & New Construction)
15#/Sq. Ft. Future Wearing Surface
Fatigue Stress - Case I

Design Unit Stresses:

Class B-2 Concrete (Superstructure, except Safety Barrier Curb)	f'c = 4,000 psi
Class B-1 Concrete (Safety Barrier Curb)	f'c = 4,000 psi
Reinforcing Steel (Grade 60)	fy = 60,000 psi

Reinforcing Steel:
Minimum clearance to reinforcing steel shall be 1-1/2", unless otherwise shown.

Joint Filler:
All joint filler shall be in accordance with Sec 1057 for preformed sponge rubber expansion and partition joint filler, except as noted.

Miscellaneous:
Outline of old work is indicated by light dashed lines. Heavy lines indicate new work.

Contractor shall verify all dimensions in field before ordering new material.

Bars bonded in old concrete not removed shall be cleanly stripped and embedded into new concrete where possible. If length is available, old bars shall extend into new concrete at least 40 diameters for smooth bars and 30 diameters for deformed bars, unless otherwise noted.

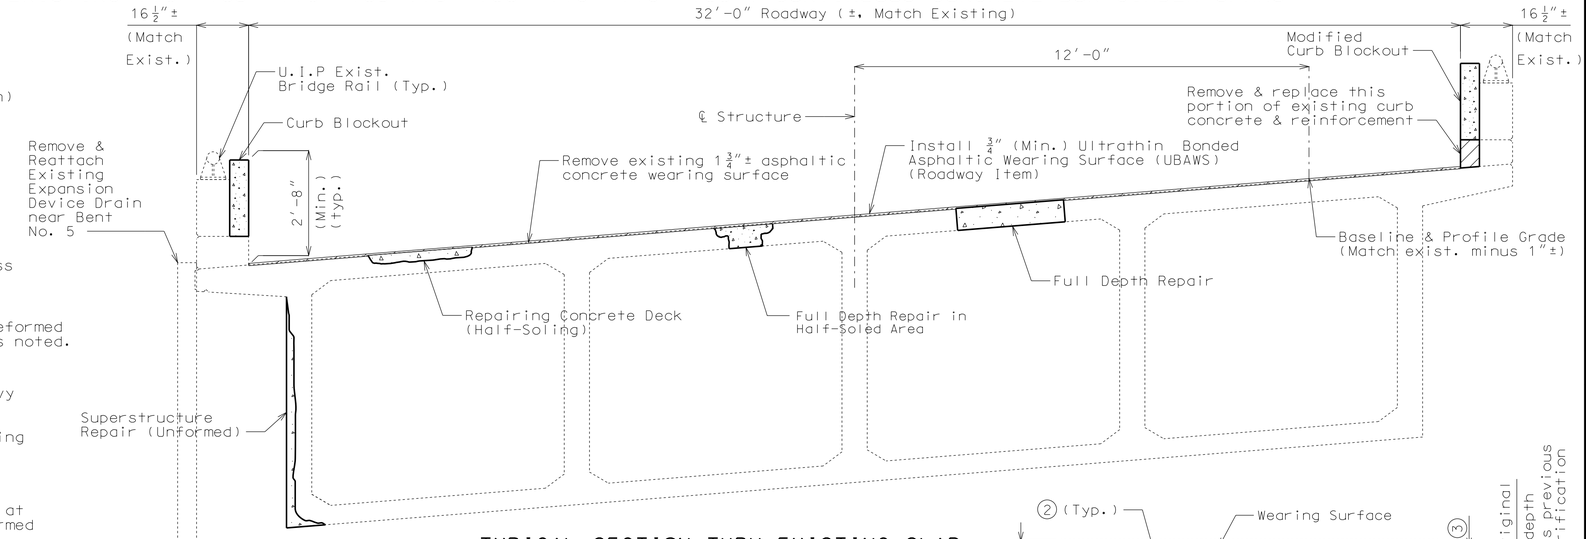
For PLAN OF SLAB SHOWING SPECIAL REPAIR ZONES, see A-2281R bridge plans Sh. 1 of 4.

Any half-soling required in the areas designated as special repair zones shall be completed in alphabetical sequence. Any repair in the remainder of the bridge that is adjacent to Zone A and not designated as a special repair zone shall be completed prior to work in Zone A.

Removal and repair shall be completed in one special repair zone and concrete shall have attained a compressive strength of 3200 psi before work can be started in the next special repair zone. Before placing concrete in areas adjacent to areas of subsequent repair, the concrete shall be separated with a material such as polyethylene sheets to aid in removal of old concrete.

Zones with the same letter designation may be repaired at the same time except for the zones directly adjacent to the centerline of bent. If either of the zones adjacent to centerline of bent has a single repair area of over 10 square feet or a total repair area of over 20 square feet, that zone shall be repaired before removing concrete in the other zone of the same designation at that bent.

Total width of full depth repair shall not exceed 1/3 of the deck width at one time. For any area of deck repair that extends over a concrete girder and is more than 18 inches in length along the girder, the concrete removal shall stop at the centerline of girder and repair completed in this area. Prior to continuing work in this area, the concrete shall have attained a compressive strength of 3200 psi. No traffic shall be permitted over the girder that is undergoing repair.



TYPICAL SECTION THRU EXISTING SLAB

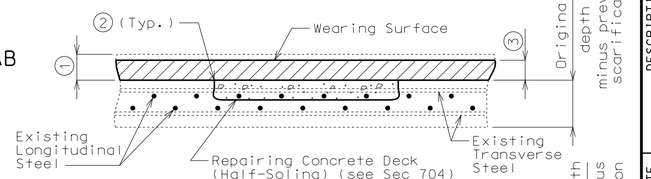
Miscellaneous (cont.):

When the full depth repair extends over a diaphragm or girder and the deteriorated concrete extends into the diaphragm or girder, all deteriorated concrete shall be removed and replaced as full depth repair. Concrete in girders shall not be removed below the deck haunch of the girder without prior review and approval from the engineer.

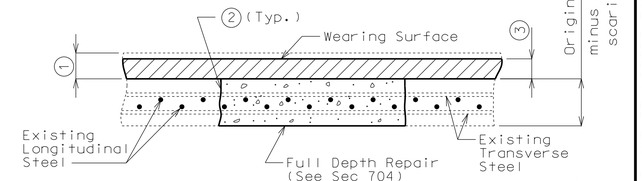
Interior falsework installed by the contractor resting on the bottom slab shall be removed where entry access is available.

If any single repair area does not exceed 9 square feet in size and the total repair within a special repair zone does not exceed 27 square feet, the special repair zone requirement does not apply for that zone. Half-soling repair in the special repair zone, on either side of the intermediate bents, shall be to a depth that will not expose half the diameter of the longitudinal reinforcing bar. Full depth repair shall be made when removal of deteriorated concrete exposes half or more of the diameter of the longitudinal reinforcing bar.

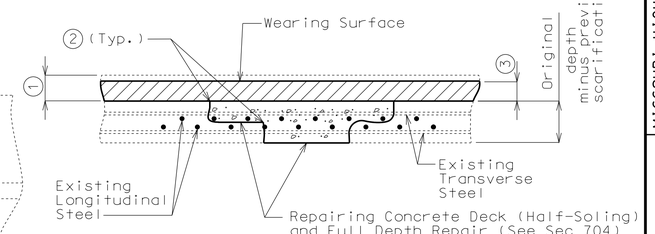
Traffic Handling:
Structure to be closed during construction.



HALF-SOLED AREA



FULL DEPTH REPAIR



FULL DEPTH REPAIR
WITH HALF-SOLED REPAIR

① Remove existing wearing surface.

② One inch vertical side shall be established outside the deteriorated area. See Sec 704.

③ ¾" (min.) UBAWS overlay. (Roadway Item)

Estimated Quantities

Item		Total
Removal of Asphalt Wearing Surface	sq. foot	27144
Removal of Existing Expansion Joints & Adjacent Concrete	linear foot	32
Remove and Replace Curb and Parapet	linear foot	6
Class B-2 Concrete	cu. yard	3.9
Curb Blockout	linear foot	859
Modified Curb Blockout	linear foot	875
Superstructure Repair (Unformed)	sq. foot	13
Repairing Concrete Deck (Half Soling)	sq. foot	5350
Full Depth Repair	sq. foot	100
Clean and Epoxy Seal	sq. foot	307
Strip Seal Expansion Joint System	linear foot	32

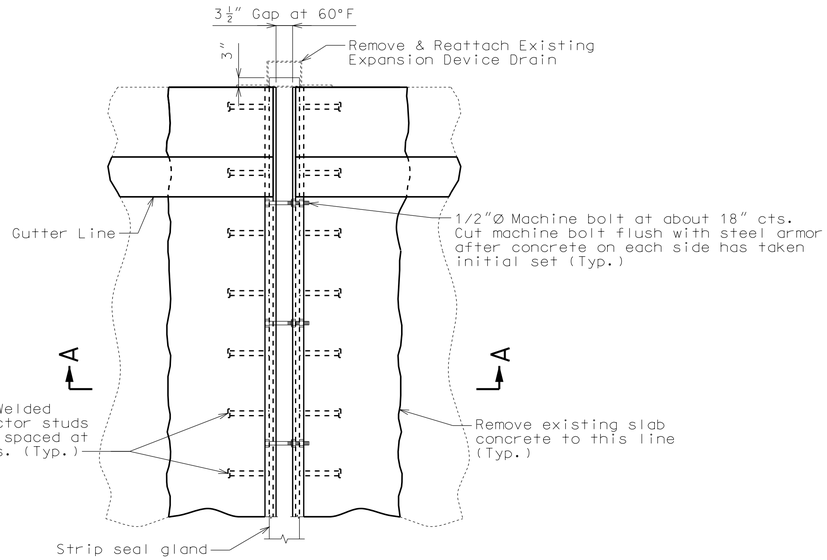
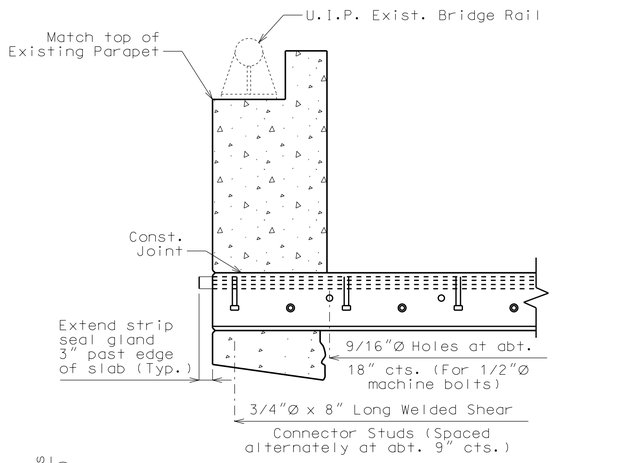
PART ELEVATION OF LEFT CURB

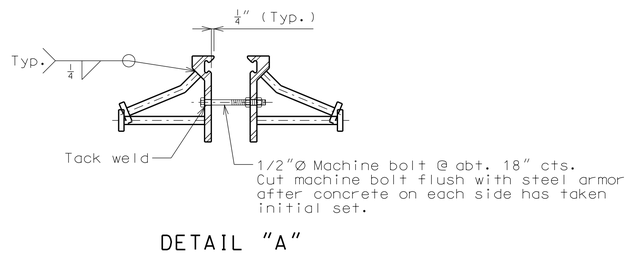
(Right Curb similar)



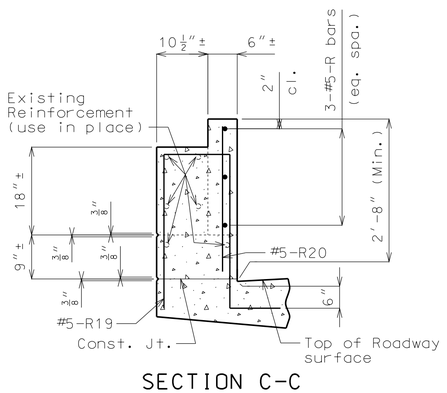
PART PLAN



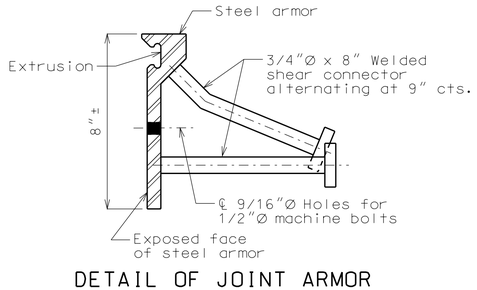
PART SECTION B-B



DETAIL "A"



SECTION C-C



DETAIL OF JOINT ARMOR

Strip seal gland size = 5"

DETAIL OF GLAND

GENERAL NOTES:

Expansion joint system shall be fabricated in one section, except for stage construction and when the length is over 50 feet. A complete joint penetration groove welded splice shall be required. Welds shall be ground flush to provide a smooth surface. The expansion joint system shall be fabricated and installed to the crown and grade of the roadway.

The strip seal gland shall be installed in joints in one continuous piece without field splices. Factory splicing will be permitted for joints in excess of 53 feet.

Structural steel for the expansion joint system shall be ASTM A709 Grade 36 except the steel armor may be ASTM A709 Grade 50W. Anchors for the expansion joint system shall be in accordance with Sec 1037. Strip seal expansion joint system shall be in accordance with Sec 717.

Structural steel for the expansion joint system shall be coated with a minimum of two coats of inorganic zinc primer (5 mils minimum) or galvanized in accordance with ASTM A123. Anchors need not be protected from overspray.

Plan dimensions are based on installation at 60°F. The expansion gap and other dimensions shall be increased or decreased 5/16" for each 10° fall or rise in temperature at installation.

Concrete shall be forced under and around steel armor and anchors. Proper consolidation of the concrete shall be achieved by localized internal vibration.

Cost of removal (except curbs) will be completely covered by the contract unit price for "Removal of Existing Expansion Joints & Adjacent Concrete."

Cost of new concrete and Epoxy Coated Reinforcing Steel will be completely covered by the contract unit price for Class B-2 Concrete.

Cost of removing & reattaching the existing expansion device drain will be considered completely covered by the contract unit price for "Removal of Existing Expansion Joints & Adjacent Concrete." See existing bridge plans for details.

Existing tube rails that fall within the area of parapet removal at expansion joint shall be protected from damage.

Any damage to tube rails during removal shall be repaired or replaced, at the contractors expense, as directed by the engineer.

Tube rails shall be reattached in removal areas. Cost of reattaching tube rails will be considered completely covered by the contract unit price for "Remove and Replace Curb and Parapet".

"THIS MEDIA SHOULD NOT BE CONSIDERED A CERTIFIED DOCUMENT."

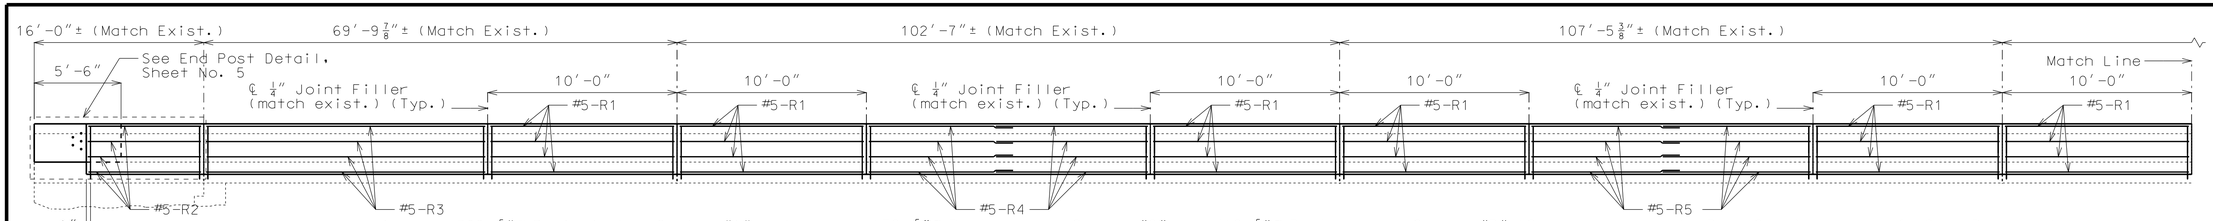
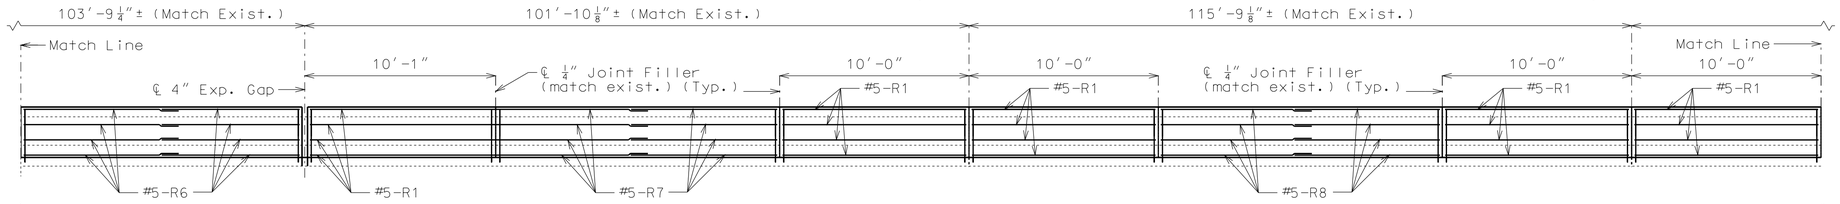
REV.

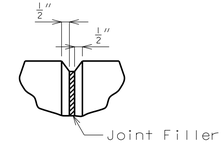
DETAILS OF STRIP SEAL NEAR INTERMEDIATE BENT NO. 5

Detailed Sep. 2012
Checked Sep. 2012

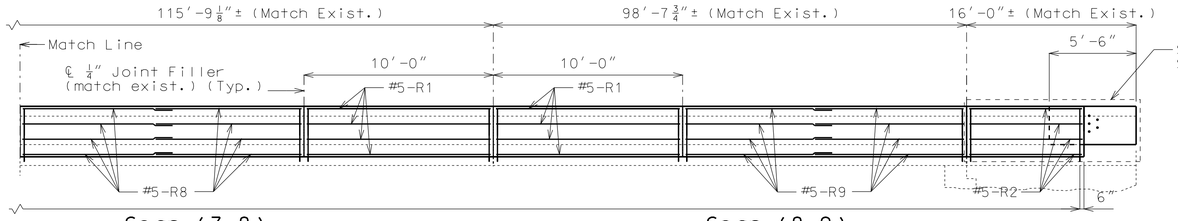
Note: This drawing is not to scale. Follow dimensions.







FILLED JOINT DETAIL

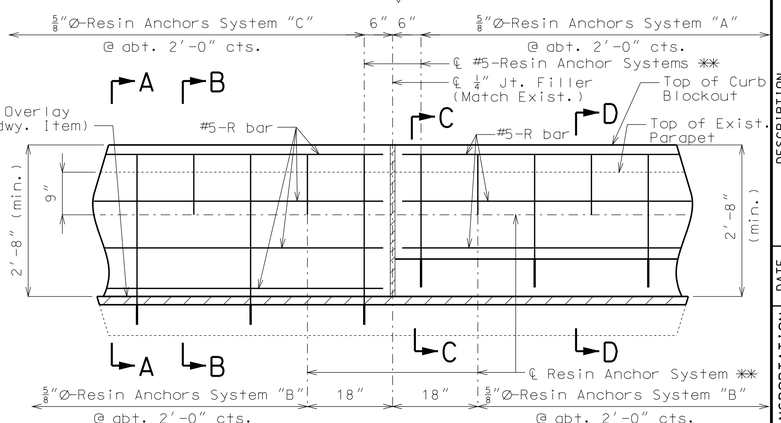


DEVELOPED SECTION NEAR LEFT CURB BLOCKOUT

(Modified Curb Blockout shown, for simplicity (1))

Note: Longitudinal dimensions shown are along grade and are taken at top and outside face of Parapet along the curve.

Bridge rail not shown, for clarity.



PART SECTION NEAR LEFT CURB BLOCKOUT

Notes:
Concrete in curb blockout shall be Class B-1 with f′c = 4000 psi.

Measurement of curb blockout is to the nearest linear foot, measured at the top and outside face of parapet from end of wing to end of wing. (Match existing curb and parapet)

All exposed edges of curb blockout shall have 1/2″ radius or 3/8″ bevel unless otherwise shown.

Payment for concrete, reinforcing steel, resin anchors, and any other work incidental to the curb blockout, complete in place, will be included in the contract unit price for Curb Blockout per linear foot.

Cost of any concrete curb or parapet repair will be included in the contract unit price for Curb Blockout.

All reinforcement shall be epoxy coated.

** Shift resin anchors where necessary to clear existing anchor bolts for bridge rail, and clear existing reinforcement.

Use a minimum lap of 2′-11″ for #5 horizontal curb blockout bars.

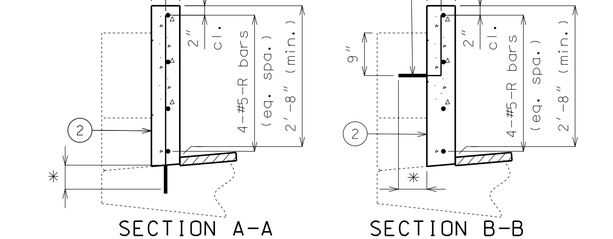
Concrete traffic barrier delineators shall be placed on top of the curb blockout similarly as shown on Missouri Standard Plans 617.10 and in accordance with Sec 617. Concrete traffic barrier delineators will be considered completely covered by the contract unit price for "Curb Blockout"/"Modified Curb Blockout".

The contractor shall use one of the qualified resin anchor systems in accordance with Sec 1039.

The minimum embedment depth in concrete with f′c = 4,000 psi for the resin anchor system shall be that required to meet the minimum ultimate pullout strength in accordance with Sec 1039 but shall not be less than 5″.

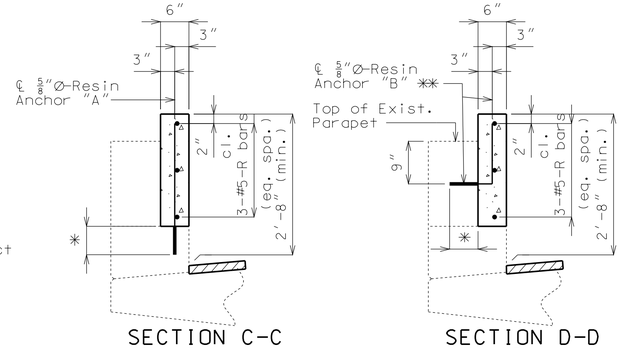
An epoxy coated #5 Grade 60 reinforcing bar shall be substituted for the 5/8″Ø threaded rod.

For Details of Resin Anchors, see Sheet No. 4.



SECTION A-A
(Modified Curb Blockout)

SECTION B-B
(Modified Curb Blockout)



SECTION C-C
(Curb Blockout)

SECTION D-D
(Curb Blockout)

Notes:

(1) Estimated 30% of left (south) curb length is Modified Curb Blockout. Final quantity to be determined by the Engineer.

(2) Remove existing curb concrete and reinforcement to roadway face of parapet. Cost of this curb removal will be completely covered by the contract unit price for "Modified Curb Blockout".

DETAILS OF LEFT CURB BLOCKOUT

Note: This drawing is not to scale. Follow dimensions.

GENERAL NOTES:

DESIGN SPECIFICATIONS:
A.A.S.H.O. 1965

DESIGN LOADING:
H S20-44, 15#/sq.ft. Future Wearing Surface
Modified 24,000# Tandem Axle
Earth 120#, Equivalent Fluid Pressure 30#

DESIGN UNIT STRESSES:
Class B Concrete (substructure) fc = 1,200 p.s.i.
Class B1 Concrete (superstructure) fc = 1,600 p.s.i.
Reinforcing Steel fs = 20,000 p.s.i.
Structural Steel (A.S.T.M. A36-66) fs = 20,000 p.s.i.
Steel Piles (A.S.T.M. A36-66) fb = 9,000 p.s.i.

SURFACE SEAL:
Superstructure deck to be surface sealed.

PAINTING:
Structural steel bearings, expansion devices, and access doors shall be cleaned and painted in the field or may be cleaned and painted one coat of red lead in the shop with the two remaining coats applied in the field except that final coat on access doors shall be gray. No paint shall be applied to top surface of top plate and bottom surface of bottom plate of bearings. In lieu of painting, the contractor may, if he prefers, galvanize any or all of these items. All galvanizing shall be done after fabrication. Cost of painting or galvanizing to be included in price bid for other items.

CONSTRUCTION CLEARANCE:
Falsework over Outer Roadway shall be constructed with a minimum vertical clearance of 14'-6" from crown of pavement and a minimum lateral clearance of 28'-0".

BORING DATA:
For Boring Data, see Sheet No. 3 of 19.
⊗ Indicates location of boring.

BENCH MARK:

SE	0.08 Ft/Ft.

QUANTITY NOTES:

All concrete and reinforcement above footings is included in superstructure quantities.

No payment for excavation will be allowed at End Bents 1 and 9.

PILE NOTES

Minimum energy requirement of hammer based on plan length and design bearing value of piles. Increase by the factor (W+w)/2W when the weight of the ram (W) is less than the weight of the pile (w).

All piles shall be driven to practical refusal.

Compacted roadway fill (full roadway width) shall be placed up to elevation of bottom of concrete beam in front of and not less than 25'0" in back of End Bents 1 and 9 before steel piles are driven.

HORIZONTAL CURVE

Bents cannot be accurately located from the reference point on the tangent by conventional survey methods based on 100' chords.

LIGHT STANDARD DETAILS

CURVE OFFSETS

CONDUIT SYSTEM NOTES:

Cost of furnishing and placing conduit expansion fittings, junction boxes and anchor bolts for light standard shall be included in contract unit price of conduit system (on structures).
Anchor bolts to be furnished complete with Standard Hex. nuts and washers, all galvanized.
Light standards, wiring and fixtures to be furnished and installed by others.
All conduit to be rigid galvanized steel with 3" minimum cover in concrete.
Shift reinforcing steel in field where necessary to clear conduit and junction boxes.

Top of light standard supports to be made horizontal, anchor bolts to be placed vertically.

Galvanized Expansion Fittings shall provide a minimum of movement in either direction of 4" at open joints and 1" at filled joints. Fittings shall be equal to O.Z. Elect. Mfg. Co. Expansion Fitting "EX" with approved bonding jumper. (See Sheet 8 of 19.)
Junction boxes to be flush mounted shall be equal to O.Z. Elect. Mfg. Co. Type "YR".
Junction box to be surface mounted shall be equal to O.Z. Elec. Mfg. Co. Type "YL" (Waterfight).
Junction boxes to be fastened to columns with ⅜" bolts in expansion anchors or concrete inserts.
Place ½" ϕ drain holes at low points in conduits and junction boxes.
For details of sign lighting and wiring see Electrical Plans.

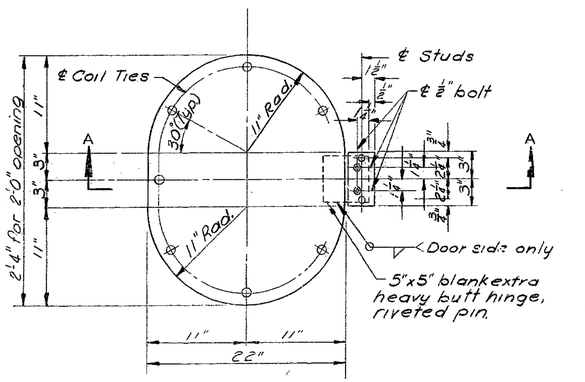
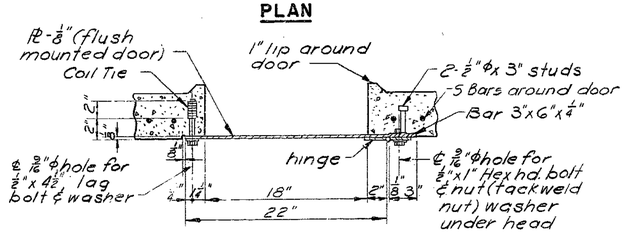
SECTION B-B

AIR INLET DETAIL



PLAN



SECTION A-A

ACCESS DOOR DETAILS

(8 Required)

NOTES:

Numbers in circles indicate the basic pouring sequence. Longitudinal joints in roadway slabs, unless specifically on plans, will not be permitted.

The contractor shall use an approved oscillating screed type, self-propelled mechanical finishing machine and shall pour roadway slabs at a rate of not less than 25 cubic yards per hour. He shall observe the basic pouring sequence unless he can demonstrate to the engineer that he can pour and satisfactorily finish the superstructure concrete at a rate which will permit the combining of such of the basic pours as may be specifically designated by the engineer as being compatible with design. Finishing machine loads will not be permitted on concrete less than 48 hours old.

With use of forms and basic falsework meeting the approval of the engineer, the girder webs and diaphragms may be poured with the bottom slab sections on which they bear.

All forms shall be removed from the interior of box girders except top slab forms which may be left in place.

Payment for furnishing and placing fiber tube, copper screen, and caulking compound shall be included in price bid for other items of work.

Access doors shall be assembled and in place while slab is being poured. Weight of access door is included in Estimated Weight of Fabricated Structural Carbon Steel.

Bottom surface of door to be flush with bottom slab. For location of access doors see sheet number 10 of 19.

GENERAL HANDRAIL NOTES:

All handrail posts shall be set normal to grade.

Aluminum tube handrail shall be bent to conform to vertical and horizontal alignment of parapet.

Aluminum washer shims between top of parapet and post base may be used for adjusting handrail alignment. Maximum thickness of shims to be 1/8". Where more tilting of post is required for proper alignment, concrete bearing areas shall be ground down.

All parts of handrail, except anchor bolts, nuts, washers, and set screws are to be of aluminum material.

The contract unit price per linear foot of "Bridge Rail" shall include furnishing and erecting the handrail complete with anchor bolts, shims and insulating compound.

All fillets 1/4" except as noted.

All drafts 3° except as noted.

Pipe rail to be fabricated in a minimum of 2 panel lengths.

Omit set screw on side adjacent to filled joint in parapet and curb at all expansion posts.

Top of curbs and parapets to be built parallel to grade with curb and parapet joints (except at end posts) normal to grade.

Concrete end posts to be vertical.

All exposed edges of end posts shall have 1/2" bevel. All exposed edges of curbs and parapets shall have 1/2" radius or 3/8" bevel unless otherwise noted.

If the contractor desires, he may use drive fit cast aluminum end caps in lieu of welded aluminum closure plates.

Integrally cast test coupons and a coat of clear lacquer specified in Std. Spec. 56.2.4 and 56.3.5 respectively will not be required for these rail posts.

Class B1 Concrete (superstructure) f_c = 1,600 p.s.i.
Reinforcing Steel f_s = 20,000 p.s.i.
Structural Steel (A.S.T.M. A36-66) f_s = 20,000 p.s.i.
Steel Pile (A.S.T.M. A36-66) f_b = 9,000 p.s.i.

SURFACE SEAL:
Superstructure deck to be surface sealed.

PAINTING:
Structural steel bearings, expansion devices, and access doors cleaned and painted one coat of red lead in the shop with the two remaining coats applied in the field except that final coat on access doors was gray. No paint applied to top surface of top plate and bottom surface of bottom plate of bearings.

Cost of painting to be included in price bid for other items.

CONSTRUCTION CLEARANCE:
Falsework over Outer Rdwy. shall provide a minimum vertical clearance of 14'-6" from crown of pavement and minimum lateral clearance of 29'-0".

BORING DATA:
For Boring Data, see Sheet No 3 of 19.
● Indicates location of boring.

BENCH MARK:

FINAL PLANS

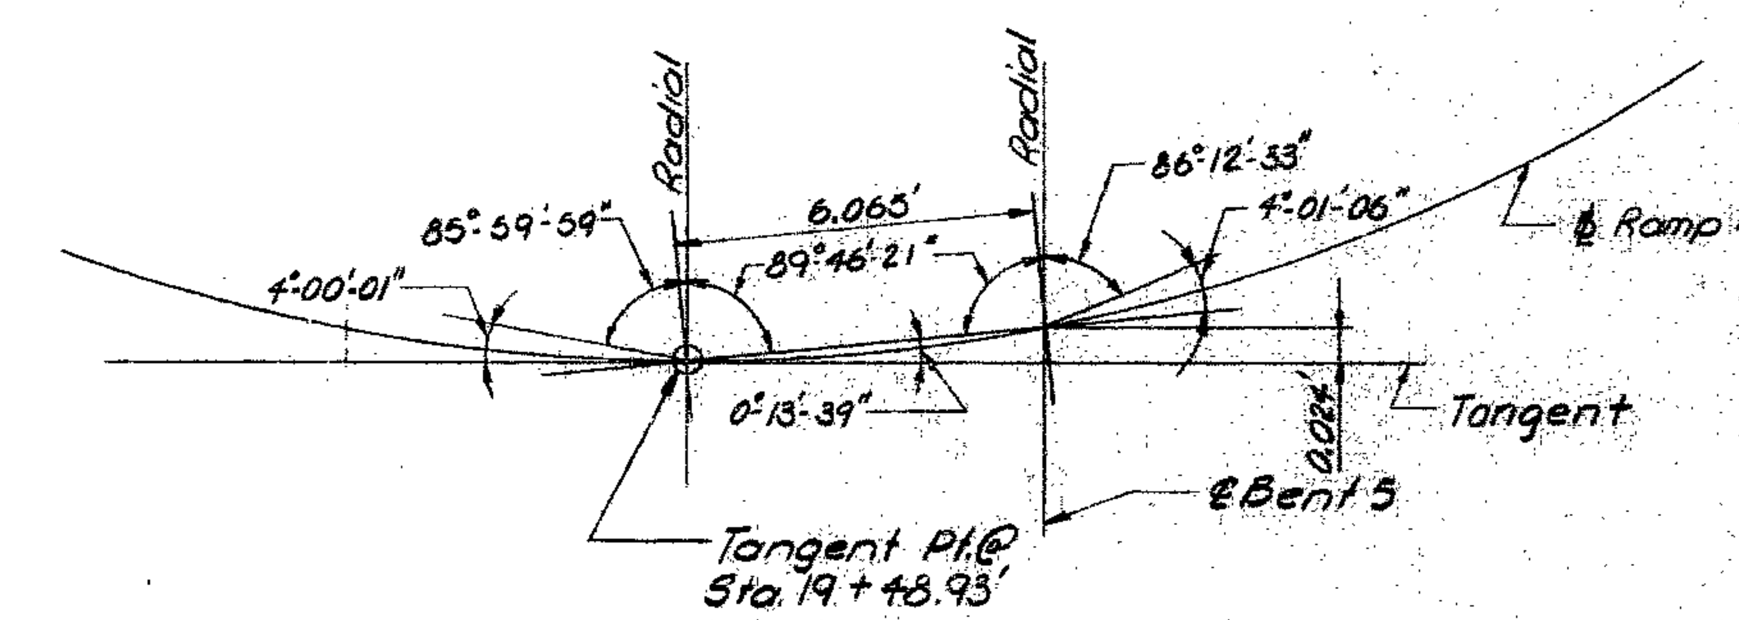
LAYOUT PLAN



DETAIL "A"

QUANTITY NOTES:

All concrete and reinforcement above footings is included in superstructure quantities.
No payment for excavation allowed at End Bents 1 and 9.

PILE NOTES

Minimum energy requirement of hammer based on plan length and design bearing value of piles. Increase by the factor (W+w)/2W when the weight of the ram (W) is less than the weight of the pile (w).
All piles driven to practical refusal.
Compacted roadway fill (full roadway width) placed up to elevation of bottom of concrete beam in front of and not less than 25'-0" in back of End Bents 1 and 9 before steel piles were driven.

HORIZONTAL CURVE

Bents cannot be accurately located from the reference point on the tangent by conventional survey methods based on 100' chords.

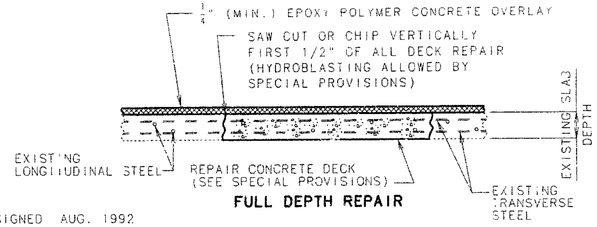
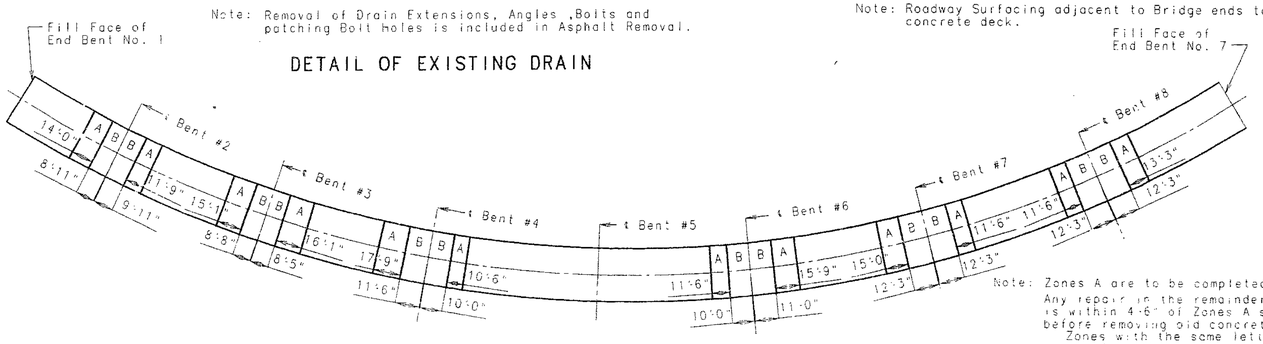
HALF-SOLED AREA



FULL DEPTH REPAIR



PLAN OF EXISTING SLAB SHOWING SPECIAL REPAIR ZONES

Note: Zones A are to be completed before Zones B. Any repair in the remainder of the bridge that is within 4'-6" of Zones A shall be completed before removing old concrete in Zones A.

Zones with the same letter designation may be repaired at the same time except for the zones directly adjacent to the centerline of bent. If either of the zones adjacent to centerline of bent has a single repair area of over 10 square feet or a total repair area of over 20 square feet, that zone shall be repaired before removing concrete in the other zone of the same designation at that bent.

GENERAL NOTES:

DESIGN UNIT STRESSES:
Class B1 Concrete f'c= 4,000 psi
Reinforcing Steel Grade 60 f'y= 60,000 psi

OLD WORK:
Outline of old work is indicated by light dashed lines. Heavy lines indicate new work."

MAINTAIN TRAFFIC:
Maintain one lane of traffic on structure during construction.

VERIFY DIMENSIONS:
Contractor shall verify all dimensions in field before ordering new steel.

PLAN DIMENSIONS:
Plan dimensions are based on installation at 60° F. The expansion gap and other dimensions shall be adjusted during installation for compliance with any temperature change.

RESIN ANCHOR SYSTEM:
The contractor shall use one of the resin anchor systems listed in the job special provisions.
These anchor systems shall be installed according to the manufacturer's specifications, except as modified by the job Special Provisions.
Cost of furnishing and installing the anchor system complete in place shall be included in the price bid for "Strip Seal Expansion Device".

The ½" diameter resin anchor systems shall have a minimum ultimate pullout strength of 9800 lbs. in concrete with f'c = 4000 psi, see special provisions.

BARS BONDED IN OLD CONCRETE:
Bars bonded in old concrete not removed shall be cleanly stripped and embedded into new concrete where possible.

Note: Roadway Surfacing adjacent to Bridge ends to match existing concrete deck.

NOTE: THIS DRAWING IS NOT TO SCALE. FOLLOW DIMENSIONS.

SHEET NO. 4 OF 4

PLATTE COUNTY A2281R

SEC/SUR 5 TWP 50N RGE 33W

MISSOURI HIGHWAYS AND TRANSPORTATION COMMISSION

General Notes:

U.I.P. AND REDECK EXISTING (58'-75'-114'-95')(5'-69'-114'-71'-54') CONT. COMP. CURVED PLATE GIRDER SPANS

Design Specifications:
2002 - AASHTO 17th Edition
Load Factor Design
Seismic Performance Category A

Design Loading:
HS20 Modified (New Construction)
15#/sq. ft. Future Wearing Surface
Earth - 120 #/Cu. Ft., Equivalent Fluid Pressure 45#/Cu. Ft.
Fatigue Stress - Case I

Design Unit Stresses:
Class B-1 Concrete (Safety Barrier Curb) f'c = 4,000 psi
Class B-2 Concrete (Superstructure, except Safety Barrier Curb) f'c = 4,000 psi
Reinforcing Steel (Grade 60) fy = 60,000 psi

Joint Filler:
All joint filler shall be in accordance with Sec 1057 for preformed sponge rubber expansion and partition joint filler, except as noted.

Reinforcing Steel:
Minimum clearance to reinforcing steel shall be 1-1/2", unless otherwise shown.

Miscellaneous:
Protective coating for concrete bents and piers (Epoxy) shall be applied as shown on the bridge plans and in accordance with Sec 711.

Bars bonded in old concrete not removed shall be cleanly stripped and embedded into new concrete where possible. If length is available, old bars shall extend into new concrete at least 40 diameters for smooth bars and 30 diameters for deformed bars, unless otherwise noted.

Roadway surfacing adjacent to bridge ends shall match new bridge slab surface (Roadway Item).

Outline of old work is indicated by light dashed lines. Heavy lines indicate new work.

Contractor shall verify all dimensions in field before ordering new material.

The area exposed by the removal of concrete and not covered with new concrete shall be coated with an approved qualified special mortar in accordance with Sec 704.

Dimensions shown are horizontal unless otherwise shown.

Sign Support:
Existing sign support on bridge shall be removed and reattached in similar manner to the existing sign support. All existing connection bolts shall be replaced with new A325 H.S. bolts. Cost of removal and any new materials required for reattaching existing sign support will be considered completely covered by the contract unit price for other items.

Traffic Handling:
Structure to be closed during construction.

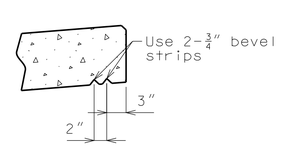
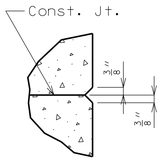
* Safety barrier curb shall be cast-in-place option or slip-form option.

Cost of any required excavation for bridge will be considered completely covered by the contract unit price for other items.



DETAIL "B"



DETAIL "A"

Estimated Quantities for Slab on Steel		
Item		Total
Class B-2 Concrete	cu. yard	505.5
Reinforcing Steel (Epoxy Coated)	pound	215,100

The table of Estimated Quantities for Slab on Steel represents the quantities used by the State in preparing the cost estimate for concrete slabs. The area of the concrete slab will be measured to the nearest square yard from end of slab to end of slab and the overall width shown in the Typical Section Thru Slab. Payment for conventional forms or optional stay-in-place forms, all concrete and coated reinforcing steel will be considered completely covered by the contract unit price for the slab.

Method of forming the slab shall be in accordance with Sec 703. All hardware for forming the slab to be left in place as a permanent part of the structure shall be coated in accordance with ASTM A123 or ASTM B633 with a thickness class SC 4 and a finish type I, II or III.

Slab shall be cast-in-place with conventional forming or stay-in-place corrugated steel forms. Precast prestressed panels will not be permitted.

For optional Stay-In-Place Form Details, see Sheet No. 2.

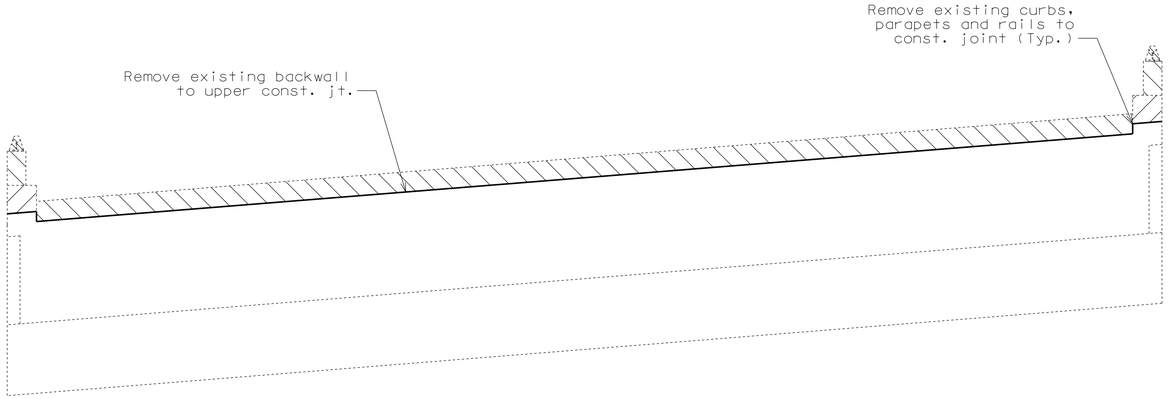
ELEVATION OF WING SHOWING CONCRETE REMOVAL LIMITS

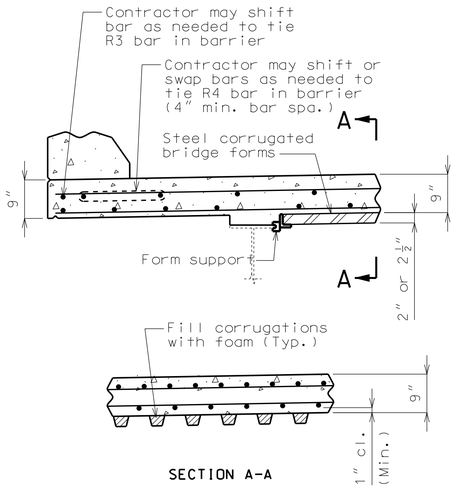
Note:
Exist. power running thru conduit on bridge shall be shut-off prior to construction. Exist. conduit on wing shall be cut-off at const. joint elevation.



DETAILS OF CONCRETE REMOVAL @ END BENTS

(Looking parallel to ℄ of Roadway)

Note:
Cost of removing curbs, parapets, rails and end posts, as shown will be considered completely covered by the contract unit price for "Removal of Existing Bridge Decks".



OPTIONAL STAY-IN-PLACE FORM DETAILS

Notes:
Corrugated steel bridge deck forms, supports closure elements and accessories shall be in accordance with grade requirement and coating designation G165 of ASTM A653. Complete shop drawings of the permanent steel deck forms shall be required in accordance with Sec 1080.

Corrugations of stay-in-place forms shall be filled with an expanded polystyrene material. The polystyrene material shall be placed in the forms with an adhesive in accordance with the manufacturer's recommendations.

Form sheets shall not rest directly on the top of girders, stringers or floorbeams flanges. Sheets shall be securely fastened to form supports with a minimum bearing length of one inch on each end. Form supports shall be placed in direct contact with the flange. Welding on or drilling holes in the flanges of the girders, stringers or floorbeams will not be permitted. All steel fabrication and construction shall be in accordance with Sec's 1080 and 712. MoDOT certified field welders will not be required for welding of the form supports.

The contractor shall provide temporary bracing as necessary to prevent girders from rotating during slab pour. The cost for temporary bracing shall be considered completely covered by the contract unit price for Slab on Steel.

Slab shall be poured upgrade from end to end at a minimum rate of 25 cu. yd./ hr.

Alternate pour sequences may be submitted to the engineer for approval. Keyed construction joints shall be provided between pours.

Slab is to be considered at a uniform depth as shown on the plans. Haunching will vary.

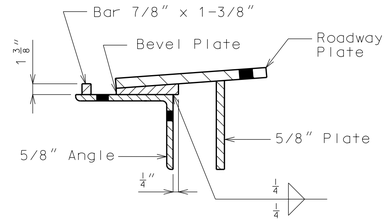
TYPICAL BEVEL PLATE



PART SECTION THRU BEVEL PLATE

Note: Bevel plates shall be used at End Bent No. 9 only.

GENERAL NOTES:

Expansion device shall be fabricated in one section, except for stage construction and when the length is over 50 feet. A complete joint penetration groove weld splice shall be required. Welds shall be ground flush to provide a smooth surface. The expansion device shall be fabricated and installed to the crown and grade of the roadway.

Plan dimensions are based on installation at 60°F. The expansion gap and other dimensions shall be increased or decreased 1/8" for each 10° fall or rise in temperature at installation.

Material for the expansion device shall be ASTM A709 Grade 36 structural steel. Anchors for the expansion device shall be in accordance with Sec 1037.

Structural steel for the expansion device and curb plate shall be coated with a minimum of two coats of inorganic zinc primer (5 mils minimum) or galvanized in accordance with ASTM A123. Anchors need not be protected from overspray.

Payment for furnishing, coating or galvanizing and installing the structural steel for the expansion device will be considered completely covered by the contract unit price for Expansion Device (Flat Plate) per linear foot.

Concrete shall be forced under and around flat plate, anchors and angles. Proper consolidation shall be achieved by localized internal vibration. Finishing of the concrete shall be achieved by hand finishing within one foot of the expansion device. The vertical and horizontal concrete vent holes shall be offset from each other. Do not alternate holes at the 12" spacing.

Longitudinal reinforcing steel shall be cut/bent so that ends shall not be more than ±1" from vertical plate and the vertical leg of the angle at the expansion device.

Complete joint penetration welds utilized in the fabrication of the expansion device shall be nondestructively tested by an approved method.

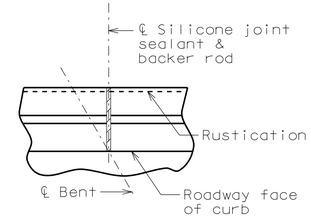
Plastic waterstop shall not be used with slip-form option.

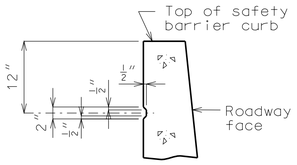
C Bars (Slip-form option only) shall be used in addition to cast-in-place conventional forming reinforcement for bridge safety barrier curb.

For Slip-Form option, all sides of the safety barrier curb shall have a vertically broomed finish and the curb top shall have a transversely broomed finish.

Concrete traffic barrier delineators shall be placed on top of the safety barrier curb as shown on Missouri Standard Plans 617.10 and in accordance with Sec 617. Concrete traffic barrier delineators will be considered completely covered by the contract unit price for "Safety Barrier Curb".

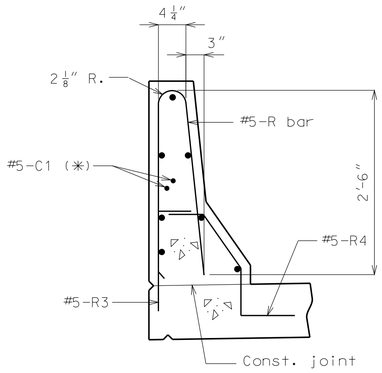


PART PLAN SHOWING SAFETY BARRIER CURB JOINT



PART SECTION SHOWING RUSTICATION DETAILS

RUSTICATION DETAIL
(Use on highway grade separation only)



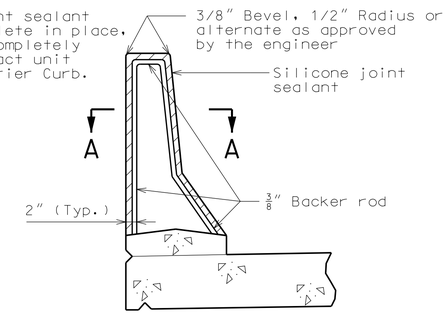
PART SECTION B-B

Note:

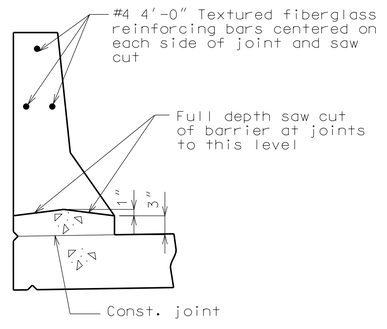
(*) Each side of joint location.

Note:

Cost of silicone joint sealant and backer rod, complete in place, will be considered completely covered by the contract unit price for Safety Barrier Curb.



SECTION THRU JOINT



PART SECTION C-C

OPTIONAL SLIP-FORM BRIDGE SAFETY BARRIER CURB

(Left barrier curb shown, right barrier curb similar.)

#11	12"	19"	14 3/4"	2'-0"
#14	18 1/4"	2'-3"	21 3/4"	2'-7"

TWO ADDITIONAL #7-S12, #6-S13, #4-K4 & #5-R5 ARE INCLUDED IN THE BAR BILL FOR TESTING.

NOTE:

ALL STANDARD HOOKS AND BENDS OTHER THAN 180 DEGREE ARE TO BE BENT WITH SAME PROCEDURE AS FOR 90 DEGREE STANDARD HOOKS.
HOOKS AND BENDS SHALL BE IN ACCORDANCE WITH THE PROCEDURES AS SHOWN ON THIS SHEET.
E = EPOXY COATED REINFORCEMENT.
S = STIRRUP.
X = BAR IS INCLUDED IN SUBSTRUCTURE QUANTITIES.
V = BAR DIMENSIONS VARY IN EQUAL INCREMENTS BETWEEN DIMENSIONS SHOWN ON THIS LINE AND THE FOLLOWING LINE.
NO. EA. = NUMBER OF BARS OF EACH LENGTH.
NOMINAL LENGTHS ARE BASED ON OUT TO OUT DIMENSIONS SHOWN IN BENDING DIAGRAMS AND ARE LISTED FOR FABRICATORS USE. (NEAREST INCH)
ACTUAL LENGTHS ARE MEASURED ALONG CENTERLINE BAR TO THE NEAREST INCH.
PAYWEIGHTS ARE BASED ON ACTUAL LENGTHS.
FOUR ANGLE OR CHANNEL SPACERS ARE REQUIRED FOR EACH COLUMN SPIRAL. SPACERS ARE TO BE PLACED ON INSIDE OF SPIRALS. LENGTH AND WEIGHT OF COLUMN SPIRALS DO NOT INCLUDE SPLICES OR SPACERS.
REINFORCING STEEL (GRADE 60) FY = 60.000 PSI.

PLAN

GENERAL NOTES

Design Specifications: AASHO 1969

Design Loading:
HS20-44

Earth 120# Equivalent Fluid Pressure 30#
Fatigue Stress - Case 1

Design Unit Stresses:

Class B Concrete (substructure)	fc = 1,200 psi
Class B1 Concrete (superstructure)	fc = 1,600 psi
Reinforcing Steel	fs = 20,000 psi
Structural Steel (ASTM . 36)	fs = 20,000 psi
Structural Steel (ASTM A572) Grade 50	fs = 27,000 psi
Steel Pile	fb = 9,000 psi

Field connections, High Strength Bolts ⅞", holes 15/16" except as noted.

Paint: Shop none; Field, by contractor in accordance with Std. Spec. 712.12.

Minimum clearance to reinforcing steel shall be 1½" unless otherwise shown.

All reinforcing bars in tops of substructure beams or caps shall be spaced to clear anchor bolts for bearings by at least ½".

PILE DATA

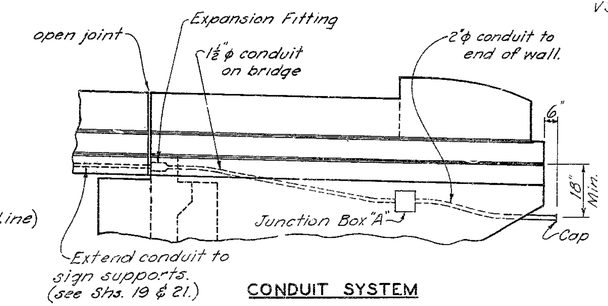
ANCHOR BOLT LAYOUT



CONDUIT SYSTEM

Conduit System Notes:-

All conduit to be rigid galvanized steel with 2¾" minimum cover in concrete.

Shift reinforcing steel in field where necessary to clear conduit and junction boxes. Do not cut reinforcing steel.

Wiring and fixtures to be furnished and installed by others.

Galvanized Expansion Fittings shall provide a minimum movement in either direction of 4" at open joints. Fittings shall be equal to O.Z. Elec. Mgf. Co. Expansion Fittings "EX" with approved bonding jumper.

All junction boxes in end bent and bridge slab shall be flush mounted and equal to O.Z. Mgf. Co. Type "YR". Wall thickness to be sufficient to provide 5 full threads for watertight conduit joint. Junction boxes required: 2 Boxes "A", 10"x10"x6", and 1 Box "B", 6"x4"x4".

For additional details for conduit system see Sheets 19, 20, & 21.

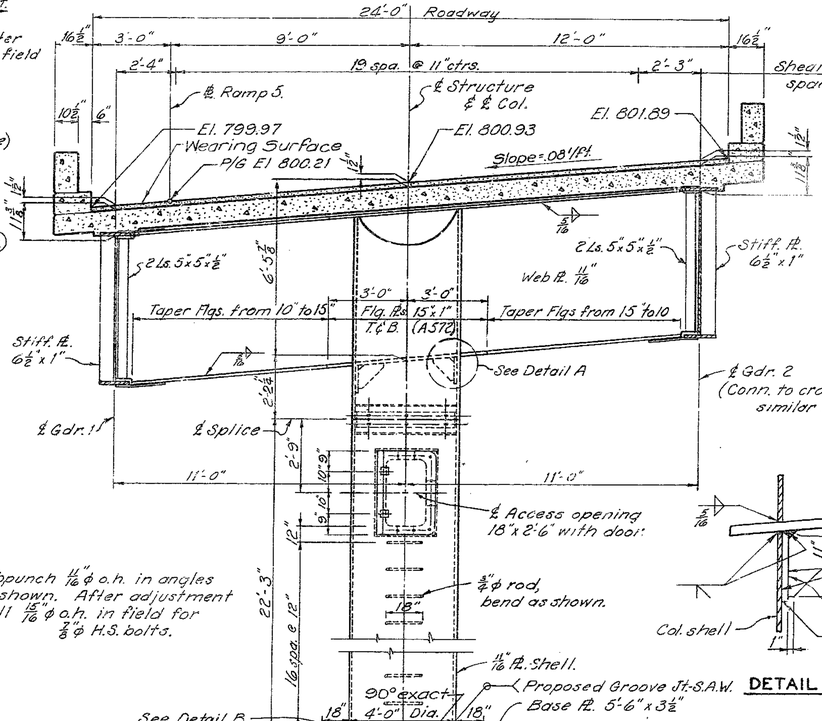
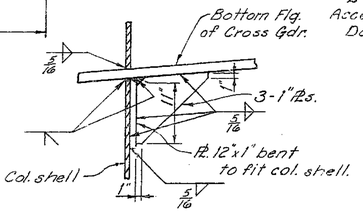
END CONNECTION OF CROSS GIRDER

SECTION B-B

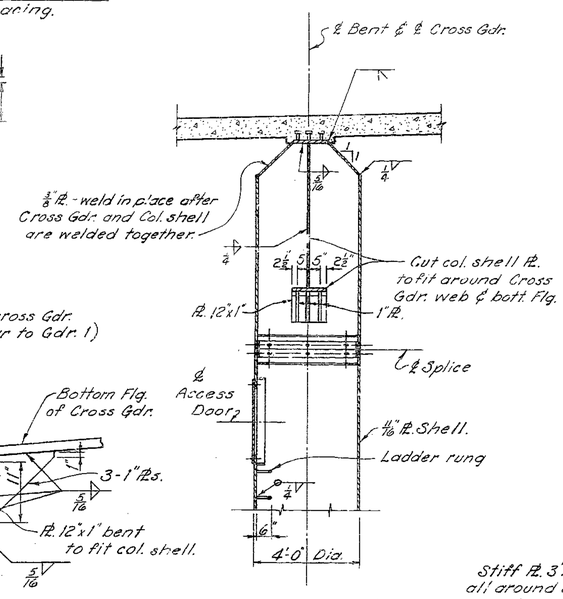


ELEVATION

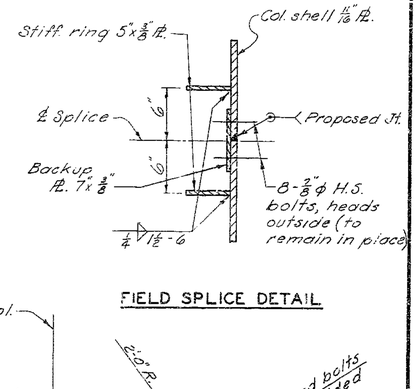


DETAIL A

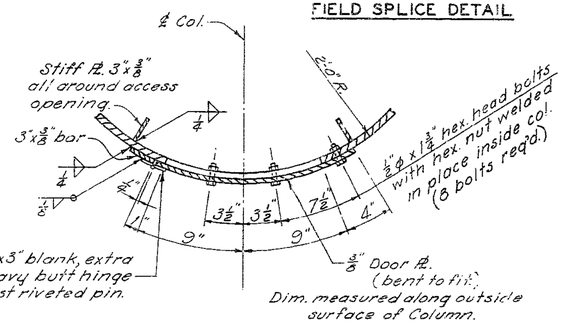
Note X:
Shop fabricate the anchor bolt cage to provide a rigid member for handling and erection. Immediately prior to encasing in conc. the top annular Pl. shall be level and at the correct elev.
The 1½" ϕ rods (A307) upset to 2" ϕ at top end and threaded 12½" shall be provided with 1 washer and 3 hex. nuts. Bend ½" ϕ rod (A307) in a spiral on outside of anchor bolts as shown and weld to each bolt.



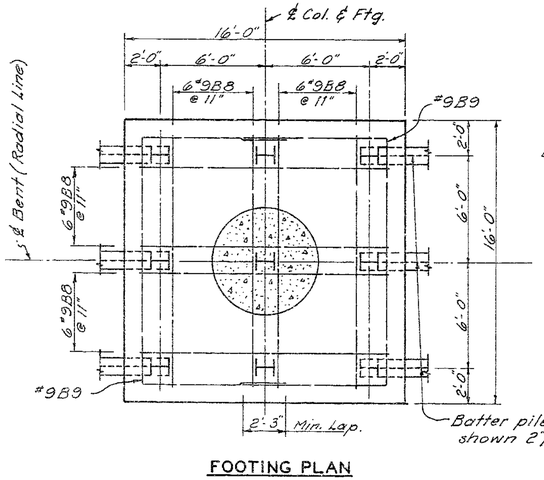
SECTION AT ℄



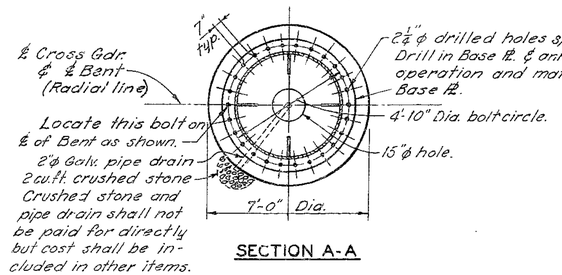
FIELD SPLICE DETAIL



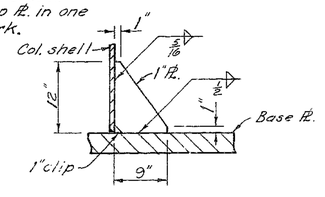
SECTION THRU ACCESS DOOR



FOOTING PLAN



SECTION A-A



DETAIL B

Notes:-

Cross girder and full height column shall be completely shop fabricated, welded and welds inspected. This includes access door, base plate, ladder rungs and stiffening rings. The column shall then be cut with a mechanically-guided torch at the field splice location after which the backup plate shall be fitted and bolt holes drilled with all parts assembled and then match-marked.

Edge of column shell plates at field splice shall be protected during shipping and details for the same shall be shown on shop drawings.

Procedure and sequence of making field column splice shall be approved by the Engineer before any welding is done.

Field splice shall be completed and x-rayed before main longitudinal girders are connected to the cross girder.

All welded shop splices required in fabricating the column shall be made with the approval of the Engineer, and finished welds shall be ground smooth.

All steel shall be A36 unless otherwise noted.

For details of shear connectors see Sheet 16.

90	8"	9¾"	1⅛"
70	8⅜"	10"	1⅛"
60	8⅝"	10¼"	1⅛"
50	8⅝"	10⅜"	2"
40	8¾"	10½"	2⅛"
30	9"	10⅝"	2⅜"
10	9¼"	11"	2⅝"
-10°F	9⅜"	11⅛"	3"

Joint Seal for 2" movement

Note: Plan dimensions are based on installation at 60°F. Expansion joint width shall be adjusted during installation for compliance with the above table. See Special Provisions.

Note: The expansion joint shall be set, anchored, bonded and sealed as recommended by the manufacturer and as set forth in the Special Provisions. Anchors shall be cone expansion type. Payment for furnishing and installing the expansion joint, including anchor bolt assembly, shall be made under unit price bid per lineal foot of joint.

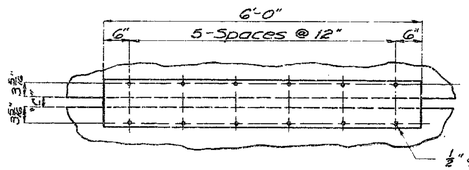
Accurately locate the hole spacing for ½" studs (expanding anchor type), on both sides of the expansion void at a distance of 3⅝" from the edge of the concrete and snap a chalk line on both sides of the expansion void. Layout transverse hole spacing along the chalk line in accordance with the shop drawings and the Typical Layout as shown on this sheet. Insure that the holes are directly opposite each other (square). Drill holes ½" ϕ x 2½" deep.

Holes shall not be drilled nor anchor bolts set until the concrete is at least 7 days old.

First section of expansion joint shall be installed starting at ℄ of roadway.

Tighten all nuts to 40 foot pounds. Retighten to 40 foot pounds 30 minutes after initial tightening.

Wire brush bolt cavity and coat with sealant. Fill cavity with sealant to a depth of ½" and push plug down to snap lock. Scrape off all excess sealant.



PART PLAN SHOWING TYPICAL LAYOUT FOR HOLE SPACING

NOTES: TYPE "D" BEARINGS

Lead plates under bearings shall be approximately ⅛" thickness and weigh 8# / sq. ft. Cost of lead plates shall be included in price bid for other items. "Estimated weight" does not include weight of anchor bolts.

Anchor Bolts for Type "D" Bearings shall be 1½" ϕ swedged bolts and shall extend 15" into concrete, with hexagon nuts and plain washers for Fixed Bearings, no nuts for Expansion Bearings.

SECTION C-C

Note A:
Ream or drill all holes to 15/16" ø in field after erection.

SIGN SUPPORT NOTES:

All structural steel shall be ASTM A36.

Pipe for railing and posts shall be 1 1/4" galvanized steel standard weight, ASTM A53 with a minimum yield of 30,000 psi. 3/8" diam. vent holes are permissible in railing.

All tubing shall be hollow structural tubing.

All connection bolts shall be 7/8" ø H.S. bolts, open holes 15/16" ø, except as noted on details.

Grating shall have 1 1/2" x 3/16" bearing bars spaced at 1 3/16" centers, 1/2" x 3/16" cross bars spaced at 4" centers.

Grating shall be attached to WF supports with 4" ø bolts and saddle clips.

All material in sign support shall be galvanized.

The cost of furnishing and erecting all materials for the sign support including exposed Conduit and Luminaires shall be included in Lump Sum price bid for "Fabricated Sign Support Brackets."

For additional information on Lighting System and Signs, See Standard Plans 903.09.

GENERAL BRIDGE RAIL NOTES:

All bridge rail posts shall be set normal to grade.

Aluminum tube bridge rail shall be bent to conform to vertical and horizontal alignment of parapet.

Aluminum washer shims between top of parapet and post base may be used for adjusting bridge rail alignment. Maximum thickness of shims to be $\frac{1}{2}$". Where more tilting of post is required for proper alignment, concrete bearing areas shall be ground down.

All parts of bridge rail, except anchor bolts, nuts, washers, and set screws are to be of aluminum material.

All fillets $\frac{1}{4}$" except as noted.

All drafts 3° except as noted.

Omit set screw in side of rail posts adjacent to filled joints in curb and parapet at rail expansion points. Omit set screw in each side of rail post on end bents except where a gap is shown in rail over an expansion device.

Top of curbs and parapet to be built parallel to grade with curb and parapet joints (except at end bents) normal to grade.

Concrete end posts to be vertical.

All exposed edges of end posts shall have $\frac{1}{2}$" bevel. All exposed edges of curbs and parapets shall have $\frac{1}{2}$" radius or $\frac{1}{8}$" bevel unless otherwise noted.

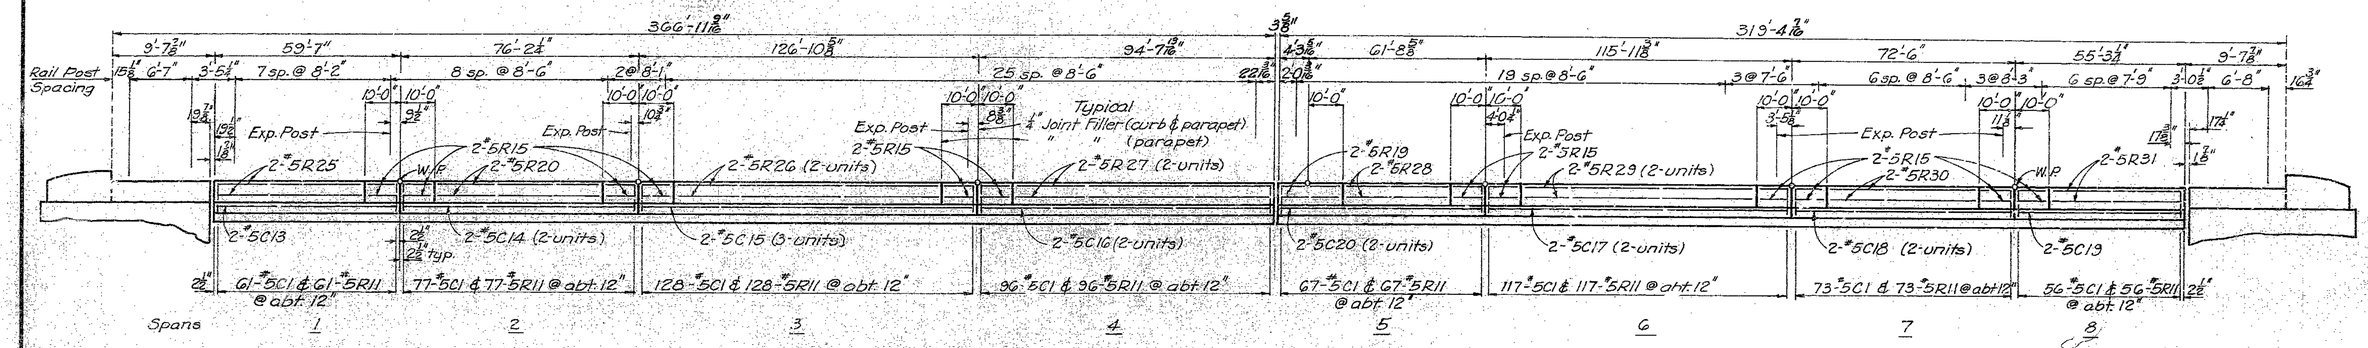
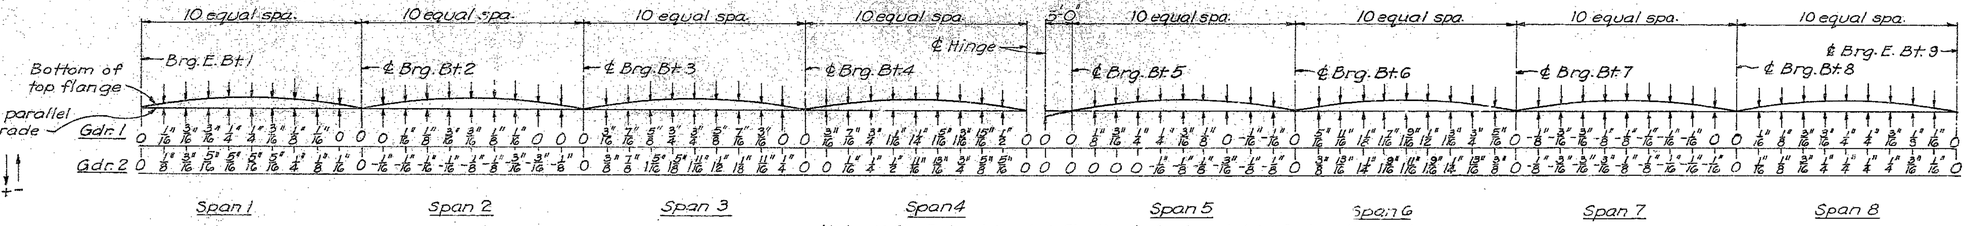
CURVE ORDINATES



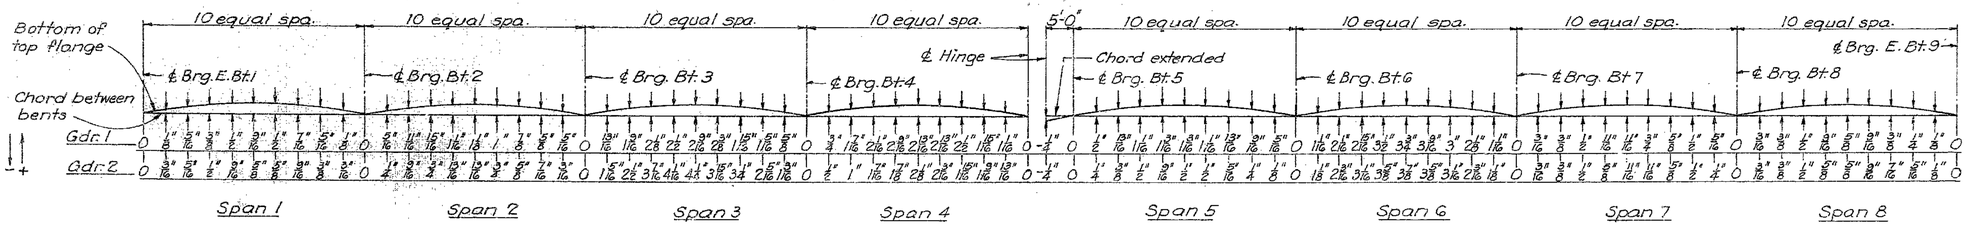
Note: For details of Rail see Sh. 22.

ELEVATION OF RIGHT CURB AND PARAPET



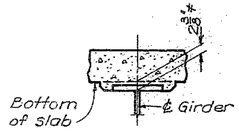
Note: 16 % of dead load deflection is due to weight of structural steel.

DEAD LOAD DEFLECTION



Note: Camber shown is for vertical curve and dead load deflection of concrete slab and structural steel.

PLATE GIRDER CAMBER DIAGRAM



THEORETICAL SLAB HAUNCH

* Dimension may vary if girder camber after erection differs from plan camber by more than the % of D.L. deflection due to weight of structural steel. No payment will be made for additional forming or concrete required for variable haunching.

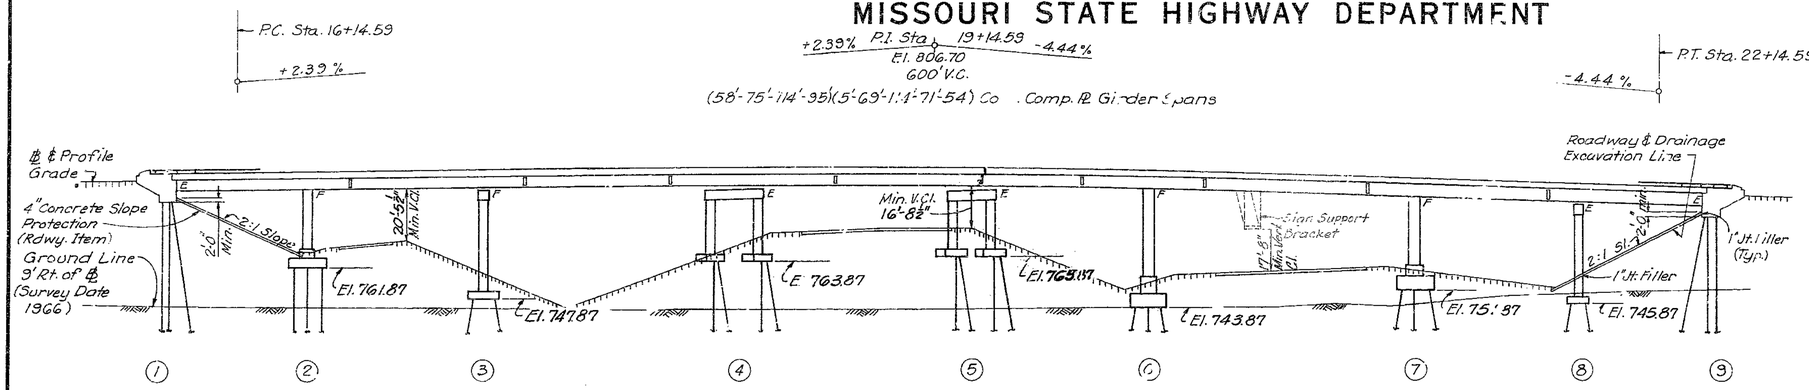
FINAL PLANS

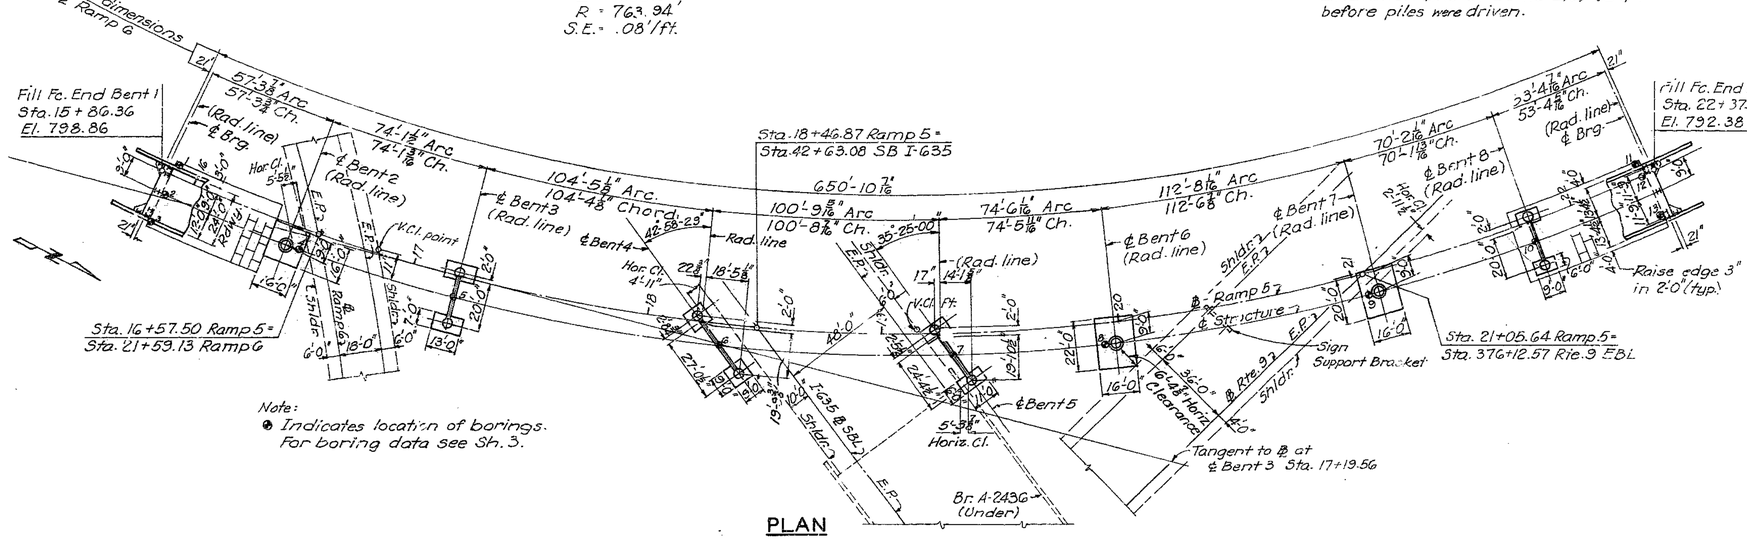


ELEVATION

Note: Bents can not be accurately located from the reference point on the tangent by conventional survey methods based on 100' chords.
For substructure layout see Sheet 2.

Ramp 5 Curve Data
P.I. Sta. 24+34.23
Δ = 104°-51'-13" Lt.
D = 7°-30'
T = 992.96'
L = 1398.04'
R = 763.94'
S.E. = .08'/ft.

Note:
Compacted roadway fill (full roadway width) was placed up to elevation of bottom of concrete beam in front of and not less than 25' in back of End Bents 1 & 9 and up to Roadway & Drainage Excavation Line at Bents 2, 3, 4, 5 & 7 before piles were driven.



Note:
● Indicates location of borings.
For boring data see Sh. 3.

PLAN

GENERAL NOTES

Design Specifications: AASHO 1969

Design Loading:
HS20-44

Earth 120# Equivalent Fluid Pressure 30#.
Fatigue Stress - Case 1

Design Unit Stresses:

Class B Concrete (substructure)	fc = 1,200 psi
Class B1 Concrete (superstructure)	fc = 1,600 psi
Reinforcing Steel	fs = 20,000 psi
Structural Steel (ASTM A36)	fs = 20,000 psi
Structural Steel (ASTM A572) Grade 50	fs = 27,000 psi
Steel Pile	fb = 9,000 psi

Field connections, High Strength Bolts 7/8", holes 15/16" ϕ except as noted.
Paint: Shop none; Field, by contractor in accordance with Std. Spec. 712.12.
Minimum clearance to reinforcing steel 1½" unless otherwise shown.
All reinforcing bars in tops of substructure beams or caps spaced to clear anchor bolts for bearings by at least ½".

PILE DATA

Bent No.		1	2	3	4	5	6	7	8	9
Pile Type & Size		10BP42	12BP53	10BP42	10BP42	10BP42	12BP53	12BP53	10BP42	10BP42
Number each Bent		7	9	12	16	10	12	12	8	8
Final Length	Ft.	101-116	57-87	50-52	60-87	63-67	40-41	27-37	10-20	42-47
Design Bearing	Tons	43	61	54	49	48	70	66	39	43
Hammer Energy	Ft. Lbs.	13,200	13,700	12,200	11,000	10,800	15,800	14,900	8,300	9,900

Minimum energy requirement of hammer based on plan length and design bearing value of piles.
All piles were driven to practical refusal.

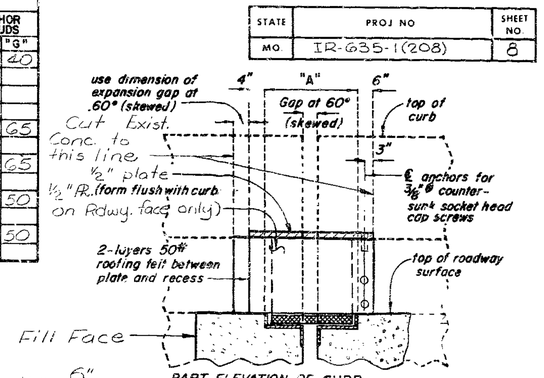
NOTE: *All dimensions are at right angles.*
Expansion gap and dimension "A" shall be increased ⅛" for each 10° fall in temperature and decreased ⅛" for each 10° rise in temperature.



PART ELEVATION OF CURB

GENERAL NOTES:

THE EXPANSION JOINT SEAL SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS SHOWN ON THE SHOP DRAWINGS AND IN ACCORDANCE WITH THE SPECIAL PROVISIONS.

THE CERTIFIED NUTS AND BOLTS FOR THE ANCHOR STUDS OR WING TYPE THREADED INSERTS SHALL BE TIGHTENED TO THE FOOT POUNDS "G" SPECIFIED IN THE TABLE OF DIMENSIONS. RETIGHTEN TO "G" FOOT POUNDS A MINIMUM OF 30 MINUTES AFTER INITIAL TIGHTENING. THE WELDED ANCHOR STUDS SHALL BE THE REDUCED BASE TYPE.

MATERIAL FOR THE ARMORED JOINT SHALL BE A36 STRUCTURAL GRADE STEEL. APPROVED STUD WELDED ANCHORS (C-1010 THRU C-1020) SHALL BE USED.

SEE SPECIAL PROVISIONS FOR PAINTING.

ANCHOR BOLTS IN THE Brush CURB SHALL BE CAST-IN-PLACE, GROUTED OR CONE-EXPANSION TYPE. HOLES IN THE Brush CURB FOR ANCHORS SHALL NOT BE DRILLED UNTIL THE CONCRETE IS AT LEAST 7 DAYS OLD.

PLAN DIMENSIONS ARE BASED ON INSTALLATION AT 60°F. THE EXPANSION GAP AND OTHER DIMENSIONS SHALL BE ADJUSTED DURING INSTALLATION FOR COMPLIANCE WITH ANY TEMPERATURE CHANGE.

CONTACT SURFACE OF STEEL TO ALUMINUM SHALL BE INSULATED WITH THE MATERIAL SPECIFIED ON THE SHOP DRAWINGS.

FURNISHING AND INSTALLING THE ELASTOMERIC EXPANSION JOINT SEAL WILL BE PAID FOR AT THE CONTRACT UNIT PRICE PER LINEAR FOOT.

FURNISHING, PAINTING AND INSTALLING THE STRUCTURAL STEEL ARMORED JOINT WILL BE INCLUDED IN THE CONTRACT UNIT PRICE FOR OTHER ITEMS.

PLATES SHALL BE FIELD ADJUSTED BY ADDING OR REMOVING METAL SHIMS (2"± 3"), AS REQUIRED FOR TEMPERATURE CORRECTION. THE EXPANSION GAP SHALL BE ADJUSTED FOR ANY TEMPERATURE CORRECTION PRIOR TO POURING TOP OF END BENT BACKWALL.

Alternate methods of supporting Exp. Device during installation may be submitted to the Engineer for approval.

Details & location of armor splices shall be shown on shop drawings.

Existing reinforcement exposed shall be cleanly stripped and reused. Where reinforcement interferes with installation of Exp. Joint Seal it shall be shifted or removed for clearance. Minimum clearance to reinforcement shall be 1½".

Outline of old work is indicated by light dashed lines. Heavy lines indicate new work.

MISSOURI HIGHWAYS AND TRANSPORTATION COMMISSION

105 WEST CAPITOL
JEFFERSON CITY, MO 65102
1-888-ASK-MODOT (1-888-275-6636)

IF A SEAL IS PRESENT ON THIS SHEET IT HAS BEEN ELECTRONICALLY SEALED AND DATED.

General Notes:

Design Specifications:
2002 - AASHTO 17th Edition
Load Factor Design
Seismic Performance Category A

Design Loading:
HS20-44 (1969), HS20 Modified (New Construction)
15#/Sq. Ft. Future Wearing Surface
Fatigue Stress - Case I

Design Unit Stresses:

Class B-1 Concrete (Safety Barrier Curb)	f′c = 4.000 psi
Class B-2 Concrete (Superstructure except Safety Barrier Curb)	f′c = 4.000 psi
Reinforcing Steel (Grade 60)	fy = 60.000 psi

Reinforcing Steel:
Minimum clearance to reinforcing steel shall be 1-1/2″, unless otherwise shown.

Miscellaneous:

All joint filler shall be in accordance with Sec 1057 for preformed sponge rubber expansion and partition joint filler, except as noted.

Bars bonded in old concrete not removed shall be cleanly stripped and embedded into new concrete where possible. If length is available, old bars shall extend into new concrete at least 40 diameters for smooth bars and 30 diameters for deformed bars, unless otherwise noted.

Roadway surfacing adjacent to bridge ends shall match new bridge slab surface (Roadway Item).

Outline of old work is indicated by light dashed lines. Heavy lines indicate new work.

Contractor shall verify all dimensions in field before ordering new material.

The area exposed by the removal of concrete and not covered with new concrete shall be coated with an approved qualified special mortar in accordance with Sec 704.

Refer to existing bridge plans for other dimensions and information not shown.

Dimensions shown are horizontal unless otherwise noted.

Traffic Handling:
Structure to be closed during construction.

Designed
Detailed Oct. 2012
Checked

✱✱✱ spaced along outside edge of Right Curb.

Estimated Quantities

	Item		Total
	Removal of Existing Bridge Decks	sq. foot	5536
	Slab on Steel	sq. yard	605
✱	Safety Barrier Curb	linear foot	457

✱ Safety barrier curb shall be cast-in-place option or slip-form option.

Cost of any required excavation for bridge will be considered completely covered by the contract unit price for other items.

REQUIRED LAP LENGTH FOR BAR SPLICES ✱✱

Bar Size	Splice Length
5	3′-3″
6	3′-10″
7	4′-11″

✱✱ Unless otherwise shown.

Estimated Quantities for Slab on Steel

Item		Total
Class B-2 Concrete	cu. yard	156.3
Reinforcing Steel (Epoxy Coated)	pound	68120

The table of Estimated Quantities for Slab on Steel represents the quantities used by the State in preparing the cost estimate for concrete slabs. The area of the concrete slab will be measured to the nearest square yard from end of slab to end of slab and the overall width shown in the Typical Section Thru Slab. Payment for conventional forms or optional stay-in-place forms, all concrete and coated reinforing steel will be considered completely covered by the contract unit price for the slab.

Method of forming the slab shall be in accordance with Sec 703. All hardware for forming the slab to be left in place as a permanent part of the structure shall be coated in accordance with ASTM A123 or ASTM B633 with a thickness class SC 4 and a finish type I, II or III.

Slab shall be cast-in-place with conventional forming or stay-in-place corrugated steel forms. Precast prestressed panels will not be permitted.

For optional Stay-In-Place Form Details, see Sheet No. 2.

REPAIRS TO BRIDGE: RAMP 6 (RTE. 69 SB TO I-635 SB) OVER RTE. 9 SB

STATE ROAD FROM MISSOURI RIVER TO I-29

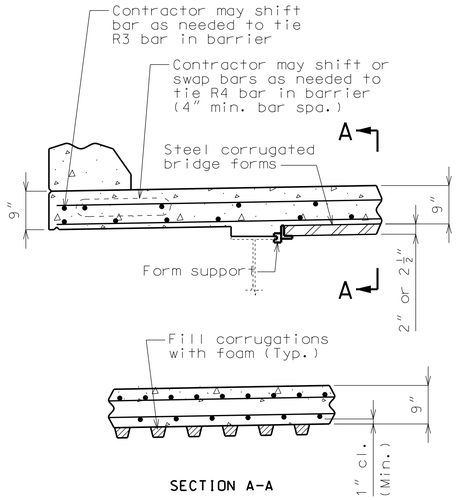
IN RIVERSIDE

STA. 17+34.75± (Match Existing)

STD. 617.10
STD. 706.35

Note: This drawing is not to scale. Follow dimensions.

Note:
Cost of removing curbs, parapets, rails and end posts, as shown will be considered completely covered by the contract unit price for "Removal of Existing Bridge Decks".



SECTION A-A

OPTIONAL STAY-IN-PLACE FORM DETAILS

Notes:
Corrugated steel bridge deck forms, supports closure elements and accessories shall be in accordance with grade requirement and coating designation G165 of ASTM A653. Complete shop drawings of the permanent steel deck forms shall be required in accordance with Sec 1080.

Corrugations of stay-in-place forms shall be filled with an expanded polystyrene material. The polystyrene material shall be placed in the forms with an adhesive in accordance with the manufacturer's recommendations.

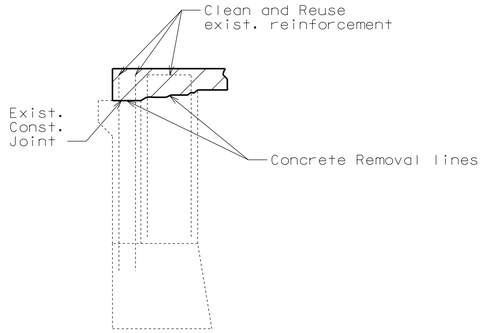
Form sheets shall not rest directly on the top of girders, stringers or floorbeams flanges. Sheets shall be securely fastened to form supports with a minimum bearing length of one inch on each end. Form supports shall be placed in direct contact with the flange. Welding on or drilling holes in the flanges of the girders, stringers or floorbeams will not be permitted. All steel fabrication and construction shall be in accordance with Sec's 1080 and 712. MoDOT certified field welders will not be required for welding of the form supports.

The contractor shall provide temporary bracing as necessary to prevent girders from rotating during slab pour. The cost for temporary bracing shall be considered completely covered by the contract unit price for Slab on Steel.

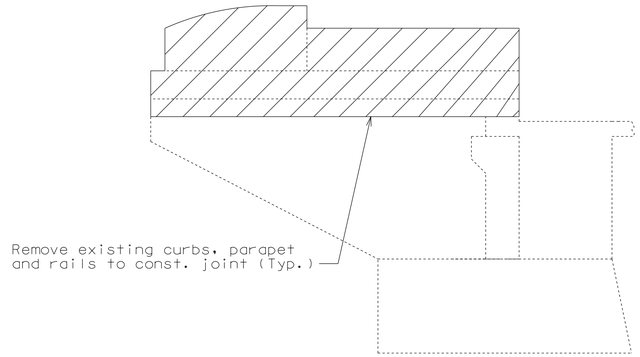
Slab shall be poured upgrade from end to end at a minimum rate of 25 cu. yd./ hr.

Alternate pour sequences may be submitted to the engineer for approval. Keyed construction joints shall be provided between pours.

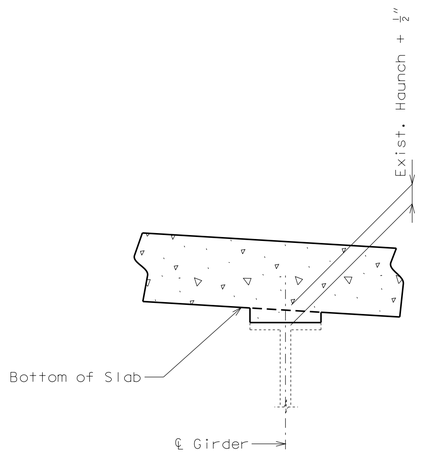
Slab is to be considered at a uniform depth as shown on the plans. Haunching will vary.



PART SECTION THRU SLAB AT END BENTS SHOWING CONCRETE REMOVAL LIMITS



ELEVATION OF WING SHOWING CONCRETE REMOVAL LIMITS



THEORETICAL SLAB HAUNCH

Deflection Note:
The contractor shall determine dead load deflections and haunching based on field measurements and/or existing bridge plans and may be adjusted based on the difference between the new and existing dead load weights.

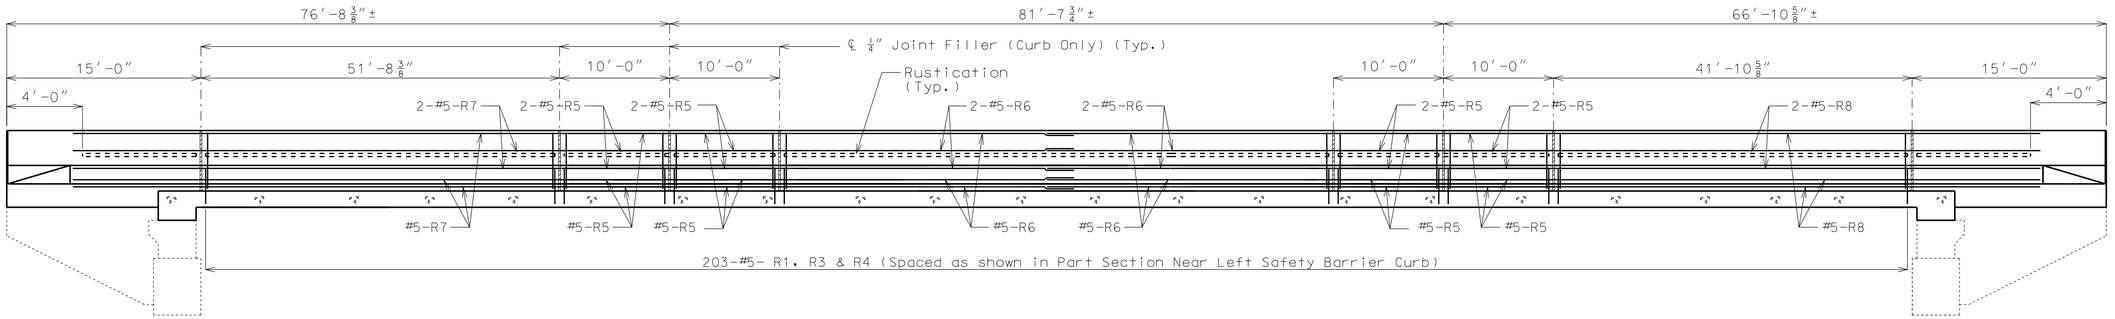
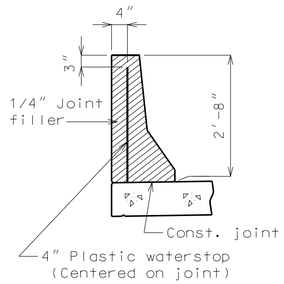
IF A SEAL IS PRESENT ON THIS SHEET IT HAS BEEN ELECTRONICALLY SEALED AND DATED.



SECTION NEAR LEFT SAFETY BARRIER CURB

Note: Dimensions shown are parallel to grade.

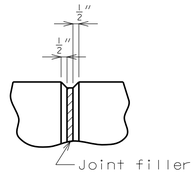


DETAILS OF PLASTIC WATERSTOP

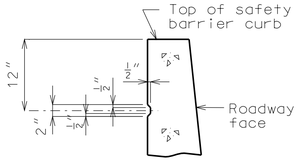
Notes:

Plastic waterstop shall be placed in all safety barrier curb filled joints, except structures with superelevation, use on all lower safety barrier curb joints only.

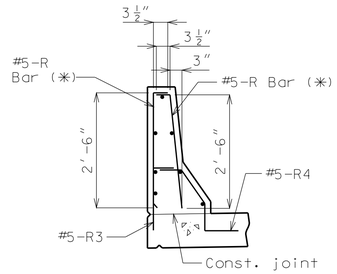
Cost of plastic waterstop, complete in place, will be considered completely covered by the contract unit price for Safety Barrier Curb.



FILLED JOINT DETAIL

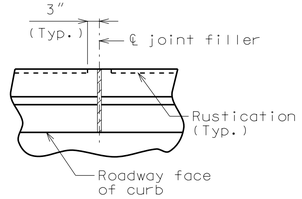


PART SECTION SHOWING RUSTICATION DETAILS



R-BAR PERMISSIBLE ALTERNATE SHAPE

(*) The R1 bar may be separated into two bars as shown, at the contractor's option, only when slip forming is not used. (All dimensions are out to out.)



PART PLAN SHOWING SAFETY BARRIER CURB JOINT

Notes:

Top of safety barrier curb shall be built parallel to grade with barrier curb joints (except at end bents) normal to grade.

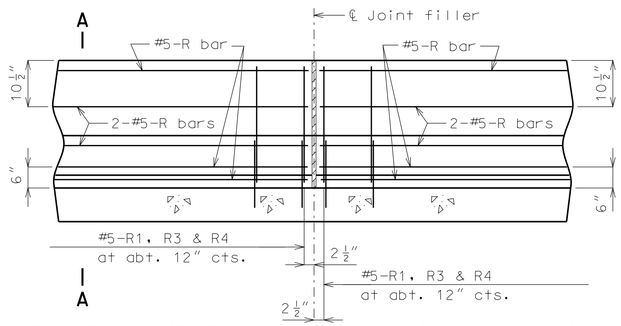
All exposed edges of safety barrier curb shall have either a 1/2″ radius or a 3/8″ bevel, unless otherwise noted.

Payment for all concrete and reinforcement, complete in place, will be considered completely covered by the contract unit price for safety barrier curb per linear foot.

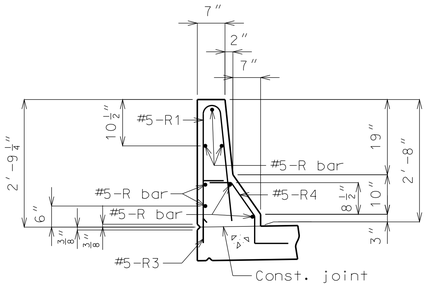
Concrete in the safety barrier curb shall be Class B-1.

Measurement of safety barrier curb is to the nearest linear foot for each structure, measured along the outside top of slab from end of wing to end of wing.

Concrete traffic barrier delineators shall be placed on top of the safety barrier curb as shown on Missouri Standard Plans 617.10 and in accordance with Sec 617. Concrete traffic barrier delineators will be considered completely covered by the contract unit price for "Safety Barrier Curb".



PART SECTION NEAR LEFT SAFETY BARRIER CURB (CAST-IN-PLACE CONVENTIONAL FORMING OPTION)



PART SECTION A-A

Notes:

Use a minimum lap of 2′-11″ for #5 horizontal safety barrier curb bars.

The cross-sectional area above the slab = 2.28 sq. ft.

TYPICAL SECTION NEAR LEFT SAFETY BARRIER CURB AT SUPPORT LOCATIONS (OPTIONAL SLIP-FORM BRIDGE SAFETY BARRIER CURB)

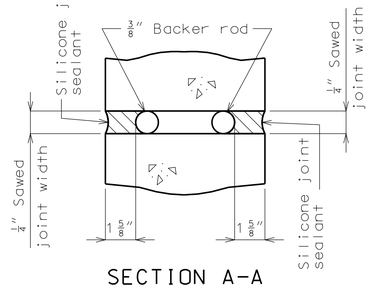
Notes:

Top of safety barrier curb shall be built parallel to grade with barrier curb joints (except at end bents) normal to grade.

Payment for all concrete and reinforcement, complete in place, will be considered completely covered by the contract unit price for safety barrier curb per linear foot.

Concrete in the safety barrier curb shall be Class B-1.

Measurement of safety barrier curb is to the nearest linear foot for each structure, measured along the outside top of slab from end of wing to end of wing.



SECTION A-A

Notes:

Joint sealant and backer rods shall be used on all slip-form barrier curbs instead of joint filler and shall be in accordance with Sec 717 for silicone joint sealant for saw cut and formed joints.

Plastic waterstop shall not be used with slip-form option.

C Bars (Slip-form option only) shall be used in addition to cast-in-place conventional forming reinforcement for bridge safety barrier curb.

For Slip-Form option, all sides of the safety barrier curb shall have a vertically broomed finish and the curb top shall have a transversely broomed finish.

Concrete traffic barrier delineators shall be placed on top of the safety barrier curb as shown on Missouri Standard Plans 617.10 and in accordance with Sec 617. Concrete traffic barrier delineators will be considered completely covered by the contract unit price for "Safety Barrier Curb".

BENDING DIAGRAMS

Note: All bending dimensions are out to out. Hooks and bends shall be in accordance with the CRSI Manual of Standard Practice for detailing reinforced concrete structures.

T- tie or stirrup
S- bar is included in substructure quantities.
Length - Total lengths are measured along centerline bar to the nearest inch.

V- bar dimensions vary in equal increments between dimensions shown on this line and the following line.
No. Ea. Number of bars of each length.

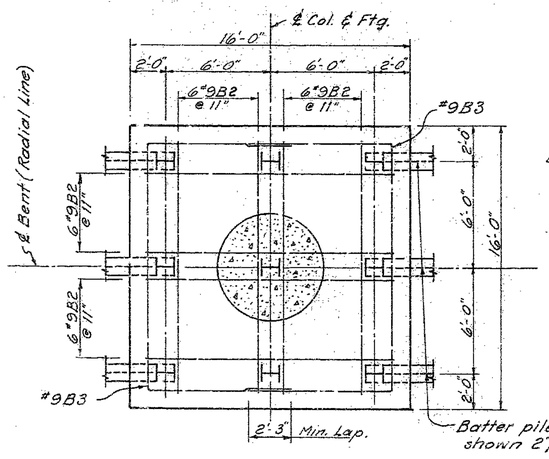
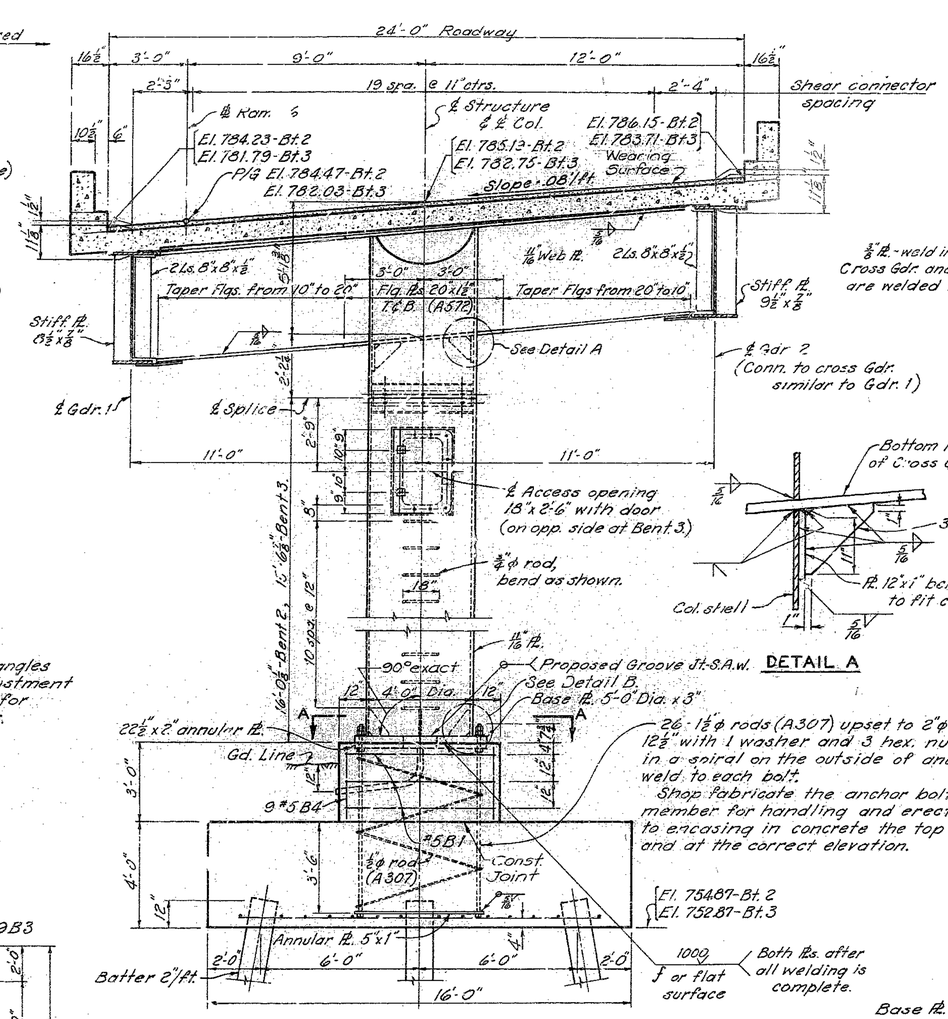
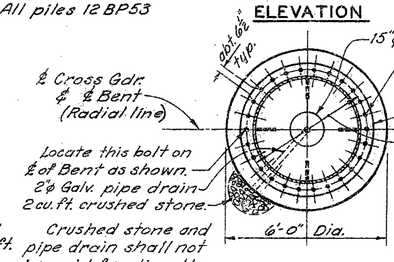
SECTION B-B



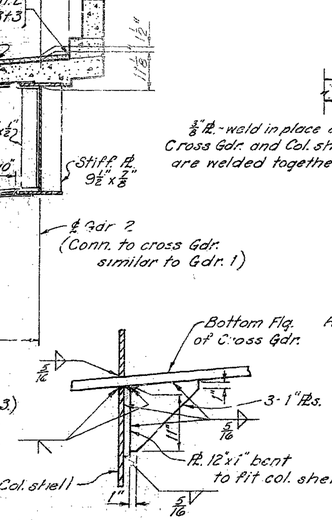
FOOTING PLAN



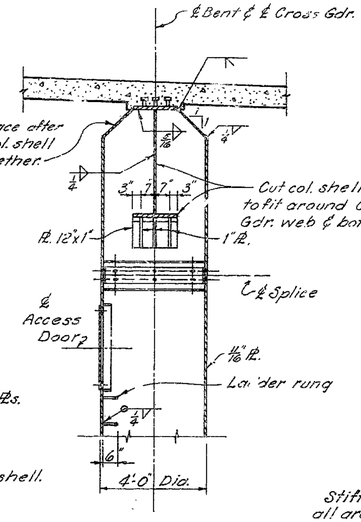
ELEVATION



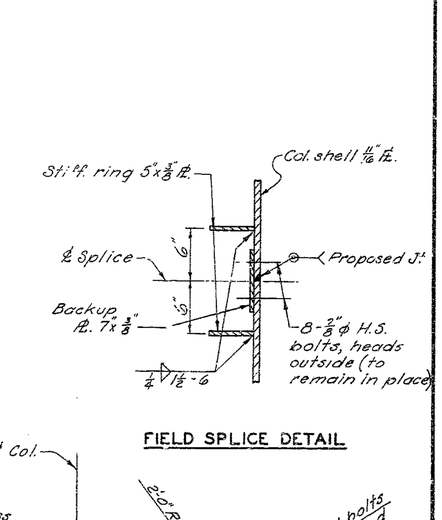
SECTION A-A



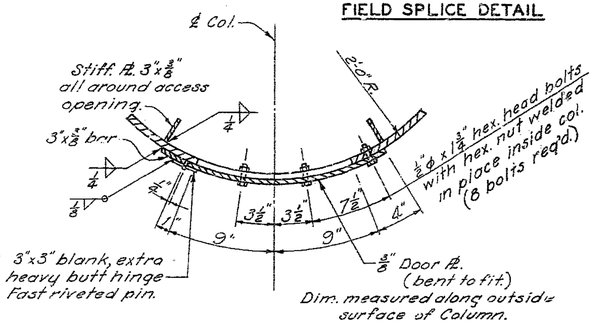
DETAIL A



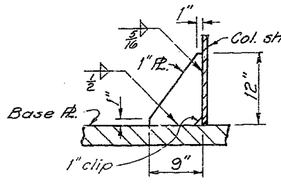
SECTION AT ℄



FIELD SPLICE DETAIL



SECTION THRU ACCESS DOOR



DETAIL B

Notes:-

Cross girder and full height column shall be completely shop fabricated, welded and welds inspected. This includes access door, base plate, ladder rungs and stiffening rings. The column shall then be cut with a mechanically-guided torch at the field splice location after which the backup plate shall be fitted and bolt holes drilled with all parts assembled and then match-marked.

Edge of column shell plates at the field splice shall be protected during shipping and details for the same shall be shown on shop drawings.

Procedure and sequence of making field column splice shall be approved by the Engineer before any welding is done.

Field splice shall be completed and x-rayed before main longitudinal girders are connected to the cross girder.

All welded shop splices required in fabricating the column shall be made with the approval of the Engineer, and finished welds shall be ground smooth.

All steel shall be A36 unless otherwise noted.

For details of shear connectors see Sheet 8.

-10°F	9 3/8"	11 1/8"	3"

Joint Seal for 2" movement

Note: Plan dimensions are based on installation at 60° F. Expansion joint width shall be adjusted during installation for compliance with the above table. See Special Provisions.

Note: The expansion joint shall be set, anchored, bonded and sealed as recommended by the manufacturer and as set forth in the Special Provisions. Anchors shall be cone expansion type. Payment for furnishing and installing the expansion joint, including anchor bolt assembly, shall be made under unit price bid per lineal foot of joint.

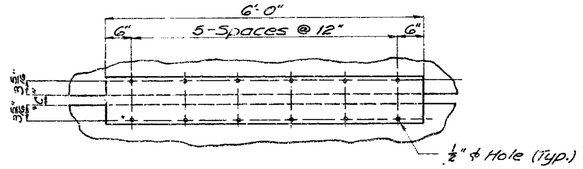
Accurately locate the hole spacing for 1/2" studs (expanding anchor type), on both sides of the expansion void at a distance of 3 5/16" from the edge of the concrete and snap a chalk line on both sides of the expansion void. Layout transverse hole spacing along the chalk line in accordance with the shop drawings and the Typical Layout as shown on this sheet. Insure that the holes are directly opposite each other (square). Drill holes 1/2" ϕ x 2 1/2" deep.

Holes shall not be drilled nor anchor bolts set until the concrete is at least 7 days old.

First section of expansion joint shall be installed starting at ℄ of roadway.

Tighten all nuts to 40 foot pounds. Retighten to 40 foot pounds 30 minutes after initial tightening.

Wire brush bolt cavity and coat with sealant. Fill cavity with sealant to a depth of 2" and push plug down to snap lock. Scrape off all excess sealant.



PART PLAN SHOWING TYPICAL LAYOUT FOR HOLE SPACING

DETAILS OF STEEL REINFORCED ELASTOMERIC EXPANSION JOINT SEAL BENTS NO. 1 & 4

Note: This drawing is not to scale. Follow dimensions.

NOTES: TYPE "D" BEARINGS

Lead plates under bearings shall be approximately 1/8" thickness and weigh 8#/sq. ft. Cost of lead plates shall be included in price bid for other items. "Estimated weight" does not include weight of anchor bolts.

Rockers and pedestals shall be machined after welding.

Where flat surface is indicated, tolerance shall be .003 in/in in any direction.

Anchor Bolts for Type "D" Bearings shall be 1 1/2" ϕ swedged bolts and shall extend 15" into concrete, with hexagon nuts and plain washers for Fixed Bearings, no nuts for Expansion Bearings.

GENERAL BRIDGE RAIL NOTES:

All bridge rail posts shall be set normal to grade.

Aluminum tube bridge rail shall be bent to conform to vertical and horizontal alignment of parapet.

Aluminum washer shims between top of parapet and post base may be used for adjusting bridge rail alignment. Maximum thickness of shims to be ⅜". Where more tilting of post is required for proper alignment, concrete bearing areas shall be ground down.

All parts of bridge rail, except anchor bolts, nuts, washers, and set screws are to be of aluminum material.

All fillets ¼" except as noted.

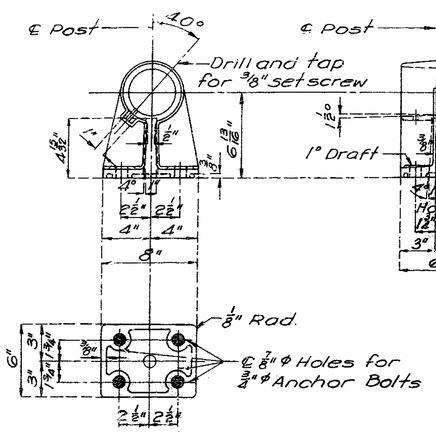
All drafts 3° except as noted.

Omit set screw in side of rail posts adjacent to filled joints in curb and parapet at rail expansion points. Omit set screw in each side of rail post on end bents except where a gap is shown in rail over an expansion device.

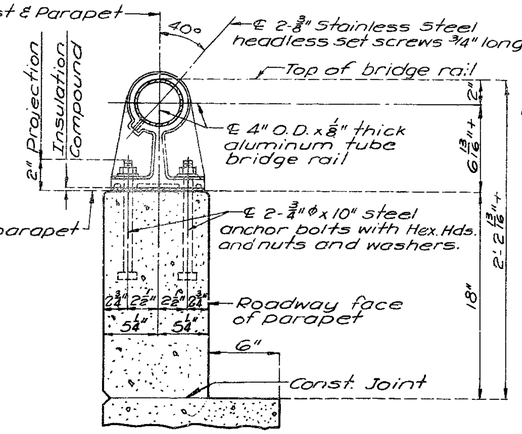
Top of curbs and parapet to be built parallel to grade with curb and parapet joints (except at end bents) normal to grade.

Concrete end posts to be vertical.

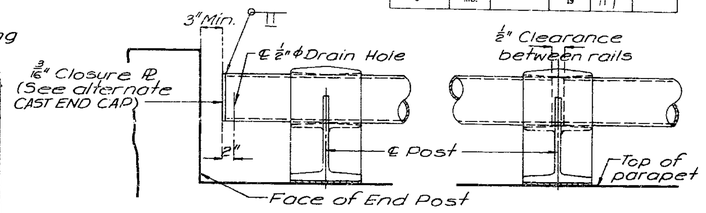
All exposed edges of end posts shall have ½" bevel. All exposed edges of curbs and parapets shall have ½" radius or ⅜" bevel unless otherwise noted.

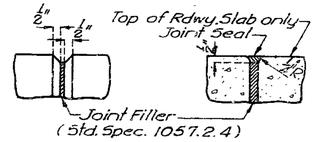


POST DETAILS



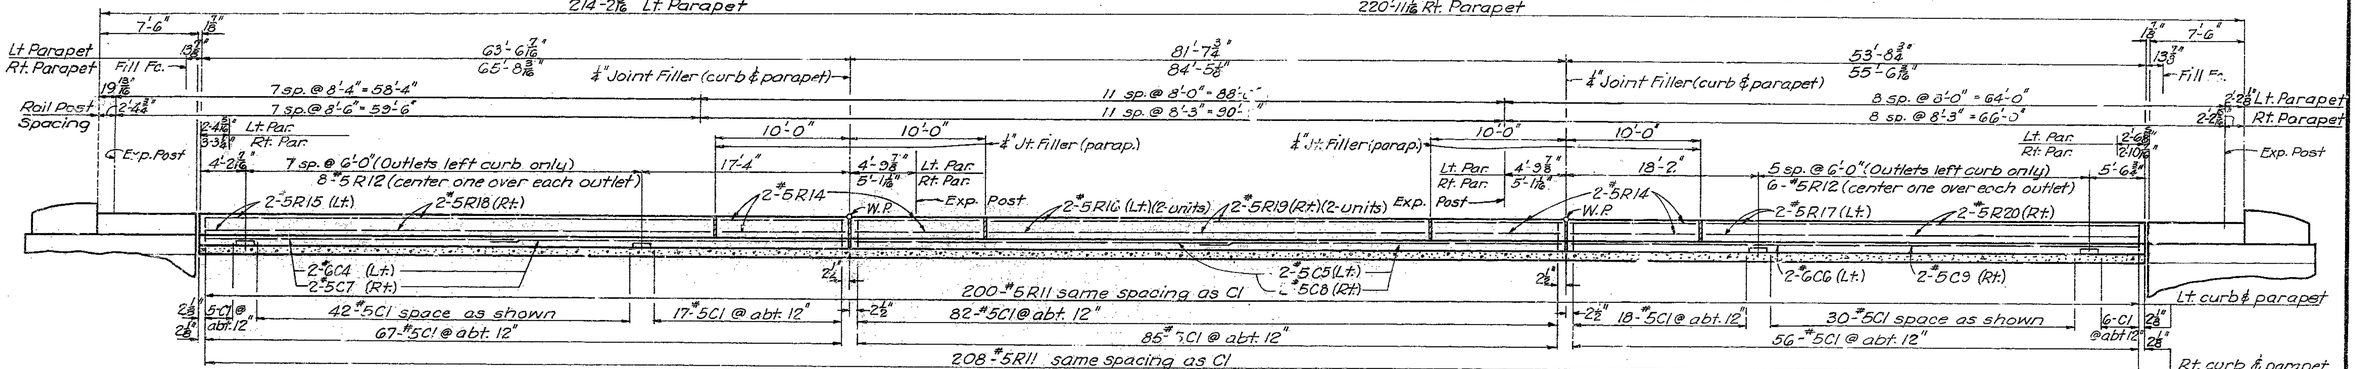
SECTION THRU BRIDGE RAIL





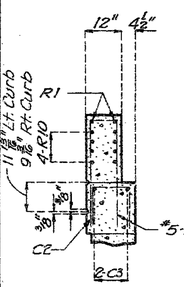
FILLED JOINT DETAILS

ONE TUBE ALUMINUM RAILING

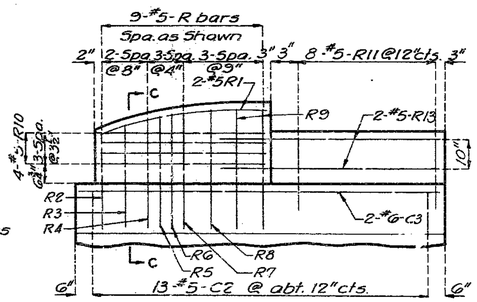


SECTION NEAR LEFT CURB AND PARAPET (Detail for Rt. Curb as noted)

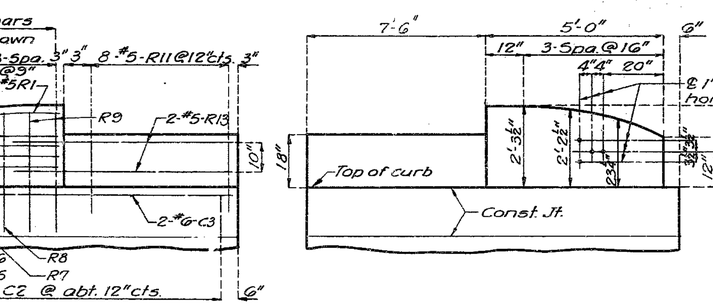
Note: Longitudinal dimensions are slope dimensions taken at top of and along ℄ of parapet.

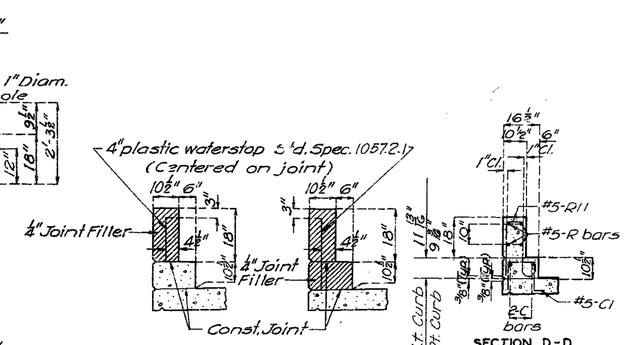


SECTION C-C



ELEVATION OF END POSTS



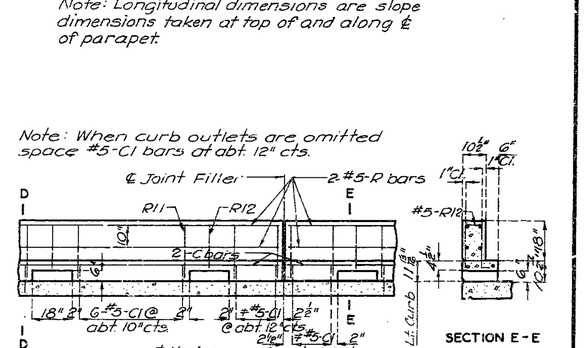


Note: Plastic waterstop shall be placed in all parapet & curb filled joints except on high side super-elevated structures.

Cost of plastic waterstop complete in place to be included in unit price bid for concrete.

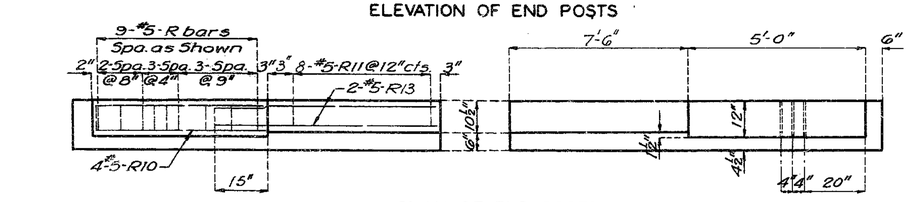
DETAILS OF PLASTIC WATERSTOP

Note: When curb outlets are omitted space #5-C1 bars at abt. 12" cts.



ELEVATION OF CURB & PARAPET

Note: For horizontal curb and parapet bars use a minimum lap of 15" for #5 and 18" for #6.



PLAN OF END POSTS

Note: This drawing is not to scale. Follow dimensions.

PART ELEVATION OF CURB

GENERAL NOTES:

THE EXPANSION JOINT SEAL SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS SHOWN ON THE SHOP DRAWINGS AND IN ACCORDANCE WITH THE SPECIAL PROVISIONS.

THE CERTIFIED NUTS AND BOLTS FOR THE ANCHOR STUDS OR WING TYPE THREADED INSERTS SHALL BE TIGHTENED TO THE FOOT POUNDS "G" SPECIFIED IN THE TABLE OF DIMENSIONS. RETIGHTEN TO "G" FOOT POUNDS A MINIMUM OF 30 MINUTES AFTER INITIAL TIGHTENING. THE WELDED ANCHOR STUDS SHALL BE THE REDUCED BASE TYPE.

MATERIAL FOR THE ARMORED JOINT SHALL BE A36 STRUCTURAL GRADE STEEL. APPROVED STUD WELDED ANCHORS (C-1010 THRU C-1020) SHALL BE USED

SEE SPECIAL PROVISIONS FOR PAINTING

ANCHOR BOLTS IN THE BRUSH CURB SHALL BE CAST-IN-PLACE, GROUTED OR CONE-EXPANSION TYPE. HOLES IN THE BRUSH CURB FOR ANCHORS SHALL NOT BE DRILLED UNTIL THE CONCRETE IS AT LEAST 7 DAYS OLD.

PLAN DIMENSIONS ARE BASED ON INSTALLATION AT 60°F. THE EXPANSION GAP AND OTHER DIMENSIONS SHALL BE ADJUSTED DURING INSTALLATION FOR COMPLIANCE WITH ANY TEMPERATURE CHANGE.

CONTACT SURFACE OF STEEL TO ALUMINUM SHALL BE INSULATED WITH THE MATERIAL SPECIFIED ON THE SHOP DRAWINGS.

FURNISHING AND INSTALLING THE ELASTOMERIC EXPANSION JOINT SEAL WILL BE PAID FOR AT THE CONTRACT UNIT PRICE PER LINEAR FOOT.

FURNISHING, PAINTING AND INSTALLING THE STRUCTURAL STEEL ARMORED JOINT WILL BE INCLUDED IN THE CONTRACT UNIT PRICE FOR OTHER ITEMS.

PLATES SHALL BE FIELD ADJUSTED BY ADDING OR REMOVING METAL SHIMS (2" x 3"), AS REQUIRED FOR TEMPERATURE CORRECTION. THE EXPANSION GAP SHALL BE ADJUSTED FOR ANY TEMPERATURE CORRECTION PRIOR TO POURING TOP OF END BENT BACKWALL.

Note: Alt. methods of supporting Exp. Device during installation may be submitted to the engineer for approval.

Details and location of splice in armor shall be shown on shop drawings.

Existing reinforcement exposed shall be cleanly stripped and reused. Where reinforcement interferes with installation of Exp. Joint Seal it shall be shifted or removed for clearance. Minimum clearance to reinforcement shall be 1½".

Outline of old work is indicated by light dashed lines. Heavy lines indicate new work.

General Notes:

Design Specifications:
2002 - AASHTO 17th Edition
Load Factor Design
Seismic Performance Category A

Design Loading:
HS20-44 (1969), HS20 Modified (New Construction)
15#/Sq. Ft. Future Wearing Surface
Fatigue Stress - Case I

Design Unit Stresses:

Class B-1 Concrete (Safety Barrier Curb)	f'c = 4,000 psi
Class B-2 Concrete (Superstructure except Safety Barrier Curb)	f'c = 4,000 psi
Reinforcing Steel (Grade 60)	fy = 60,000 psi

Reinforcing Steel:
Minimum clearance to reinforcing steel shall be 1-1/2", unless otherwise shown.

Concrete Protective Coatings:
Protective coating for concrete bents and piers (Epoxy) shall be applied as shown on the bridge plans and in accordance with Sec 711.

Miscellaneous:

All joint filler shall be in accordance with Sec 1057 for preformed sponge rubber expansion and partition joint filler, except as noted.

Bars bonded in old concrete not removed shall be cleanly stripped and embedded into new concrete where possible. If length is available, old bars shall extend into new concrete at least 40 diameters for smooth bars and 30 diameters for deformed bars, unless otherwise noted.

Roadway surfacing adjacent to bridge ends shall match new bridge slab surface (Roadway Item).

Outline of old work is indicated by light dashed lines. Heavy lines indicate new work.

Contractor shall verify all dimensions in field before ordering new material.

The area exposed by the removal of concrete and not covered with new concrete shall be coated with an approved qualified special mortar in accordance with Sec 704.

Refer to existing bridge plans for other dimensions and information not shown.

Dimensions shown are horizontal unless otherwise noted.

Traffic Handling:
Structure to be closed during construction.

Structural Steel Protective Coating
(All structural steel and bearings)

Protective Coating: System G in accordance with Sec 1081.

Surface Preparation: Surface preparation of the existing steel shall be in accordance with Sec 1081 for "Recoating of Structural Steel (System G, H or I)". The cost of surface preparation will be considered completely covered by the contract unit price for "Surface Preparation for Recoating Structural Steel".

Prime Coat: The cost of the prime coat will be considered completely covered by the contract unit price for "Field Application of Inorganic Zinc Primer". Tint of the prime coat for System G shall be similar to the color of the field coat to be used.

Field Coat: The color of the finish field coat shall be Gray (Federal Standard #26373). The cost of the intermediate field coat will be considered completely covered by the contract unit price for "Intermediate Field Coat (System G)". The cost of the finish field coat will be considered completely covered by the contract unit price for "Finish Field Coat (System G)".

DETAIL "A"

Estimated Quantities for Slab on Steel

Item		Total
Class B-2 Concrete	cu. yard	266.8
Reinforcing Steel (Epoxy Coated)	pound	88420

The table of Estimated Quantities for Slab on Steel represents the quantities used by the State in preparing the cost estimate for concrete slabs. The area of the concrete slab will be measured to the nearest square yard from end of slab to end of slab and the overall width shown in the Typical Section Thru Slab. Payment for conventional forms or optional stay-in-place forms, all concrete and coated reinforing steel will be considered completely covered by the contract unit price for the slab.

Method of forming the slab shall be in accordance with Sec 703. All hardware for forming the slab to be left in place as a permanent part of the structure shall be coated in accordance with ASTM A123 or ASTM B633 with a thickness class SC 4 and a finish type I, II or III.

Slab shall be cast-in-place with conventional forming or stay-in-place corrugated steel forms. Precast prestressed panels will not be permitted.

For optional Stay-In-Place Form Details, see Sheet No. 2.

Estimated Quantities

	Item		Total
	Removal of Existing Bridge Decks	sq. foot	9905
	Slab on Steel	sq. yard	1089
*	Safety Barrier Curb	linear foot	540
	Protective Coating - Concrete Bents (Epoxy)	lump sum	1
	Expansion Device (Flat Plate)	linear foot	55
	Surface Preparation for Recoating Structural Steel	sq. foot	15000
	Field Application of Inorganic Zinc Primer	sq. foot	15000
	Intermediate Field Coat (System G)	sq. foot	15000
	Finish Field Coat (System G)	sq. foot	4200
	Rehabilitate Bearing	each	1

* Safety barrier curb shall be cast-in-place option or slip-form option.

Cost of any required excavation for bridge will be considered completely covered by the contract unit price for other items.

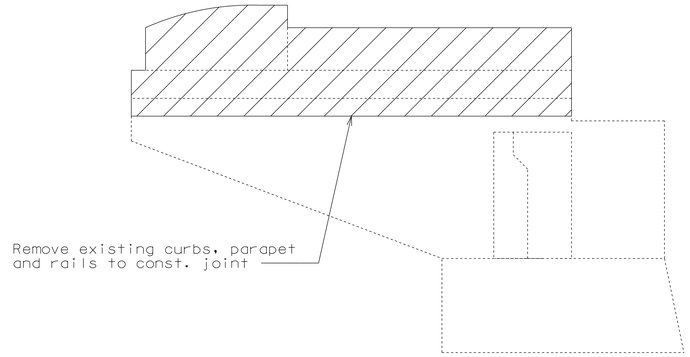
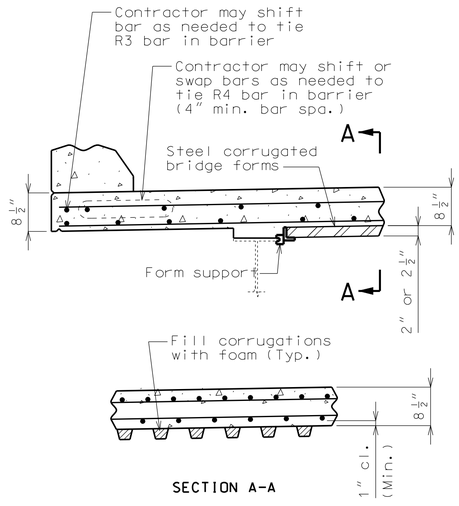
DETAILS OF CONCRETE REMOVAL @ END BENTS

(Looking parallel to ℄ of Roadway)

Note:
Cost of removing curbs, parapets, rails and end posts, as shown will be considered completely covered by the contract unit price for "Removal of Existing Bridge Decks".



ELEVATION OF WING SHOWING CONCRETE REMOVAL LIMITS



SECTION A-A

OPTIONAL STAY-IN-PLACE FORM DETAILS

Notes:
Corrugated steel bridge deck forms, supports closure elements and accessories shall be in accordance with grade requirement and coating designation G165 of ASTM A653. Complete shop drawings of the permanent steel deck forms shall be required in accordance with Sec 1080.

Corrugations of stay-in-place forms shall be filled with an expanded polystyrene material. The polystyrene material shall be placed in the forms with an adhesive in accordance with the manufacturer's recommendations.

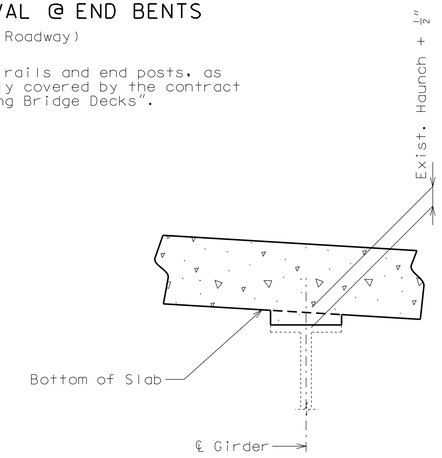
Form sheets shall not rest directly on the top of girders, stringers or floorbeams flanges. Sheets shall be securely fastened to form supports with a minimum bearing length of one inch on each end. Form supports shall be placed in direct contact with the flange. Welding on or drilling holes in the flanges of the girders, stringers or floorbeams will not be permitted. All steel fabrication and construction shall be in accordance with Sec's 1080 and 712. MoDOT certified field welders will not be required for welding of the form supports.

The contractor shall provide temporary bracing as necessary to prevent girders from rotating during slab pour. The cost for temporary bracing shall be considered completely covered by the contract unit price for Slab on Steel.

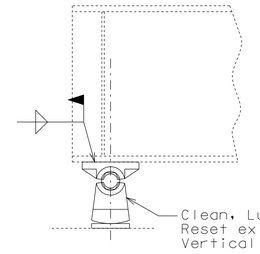
Slab shall be poured upgrade from end to end at a minimum rate of 25 cu. yd./ hr.

Alternate pour sequences may be submitted to the engineer for approval. Keyed construction joints shall be provided between pours.

Slab is to be considered at a uniform depth as shown on the plans. Haunching will vary.



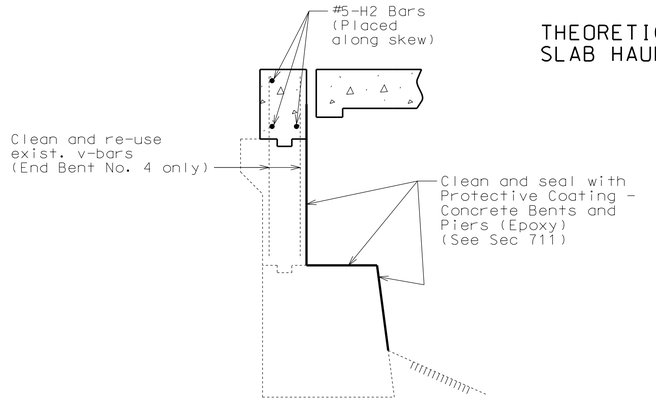
THEORETICAL SLAB HAUNCH



DETAIL SHOWING RESET BEARING AT END BENT 1 - GIRDER NO. 3

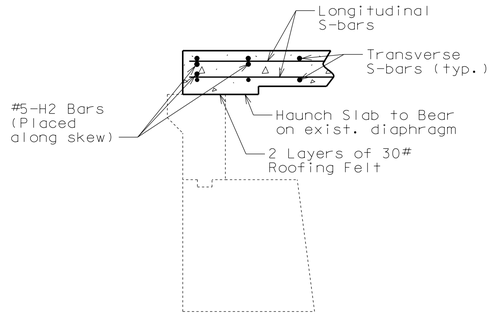
Note: All materials and labor to clean, lubricate and reset bearings as shown will be considered completely covered in the contract unit price for "Rehabilitate Bearing" per each.

Bearings shall be adjusted from vertical $\frac{1}{16}$" towards backwall or away from backwall for every 10° F rise or fall in temperature from 60°F.



TYPICAL SECTION THRU END BENT NO. 4 SHOWING PROTECTIVE COATING

(End Bent No. 1 similar)



PART SECTION THRU SLAB AT END BENT NO. 1

Deflection Note:
The contractor shall determine dead load deflections and haunching based on field measurements and/or existing bridge plans and may be adjusted based on the difference between the new and existing dead load weights.

DETAILS OF FLAT PLATE EXPANSION DEVICE AT END BENT NO. 4

GENERAL NOTES:

Expansion device shall be fabricated in one section, except for stage construction and when the length is over 50 feet. A complete joint penetration groove weld splice shall be required. Welds shall be ground flush to provide a smooth surface.The expansion device shall be fabricated and installed to the crown and grade of the roadway.

Plan dimensions are based on installation at 60°F. The expansion gap and other dimensions shall be increased or decreased 1/8" for each 10° fall or rise in temperature at installation.

Material for the expansion device shall be ASTM A709 Grade 36 structural steel. Anchors for the expansion device shall be in accordance with Sec 1037.

Structural steel for the expansion device and curb plate shall be coated with a minimum of two coats of inorganic zinc primer (5 mils minimum) or galvanized in accordance with ASTM A123. Anchors need not be protected from overspray.

Payment for furnishing, coating or galvanizing and installing the structural steel for the expansion device will be considered completely covered by the contract unit price for Expansion Device (Flat Plate) per linear foot.

Concrete shall be forced under and around flat plate, anchors and angles. Proper consolidation shall be achieved by localized internal vibration. Finishing of the concrete shall be achieved by hand finishing within one foot of the expansion device. The vertical and horizontal concrete vent holes shall be offset from each other. Do not alternate holes at the 12" spacing.

Longitudinal reinforcing steel shall be placed so that ends shall not be more than ±1" from vertical plate and the vertical leg of the angle at the expansion device.

Complete joint penetration welds utilized in the fabrication of the expansion device shall be nondestructively tested by an approved method.

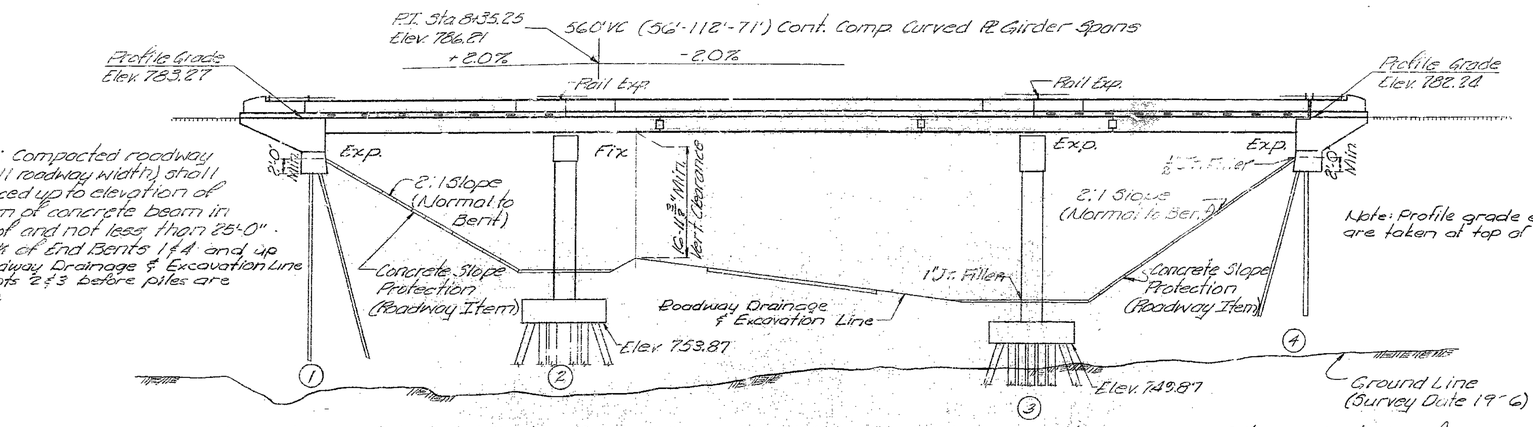
MISSOURI STATE HIGHWAY DEPARTMENT

FED. ROAD DIST. NO.	STATE	FED. AID PROJ. NO.	FISCAL YEAR	SHEET NO.	TOTAL SHEETS
5	MO.		19	17	



Note: Compacted roadway fill (full roadway width) shall be placed up to elevation of bottom of concrete beam in front of and not less than 25'-0" in back of End Bents 1 & 4 and up to Roadway Drainage & Excavation Line at Bents 2 & 3 before piles are driven.

Note: Profile grade elevations are taken at top of wearing surface.

Note: For Curve Data see Sheet 2 of 17.
For Footing Data Table See Sheet 2 of 17.

GENERAL ELEVATION

Notes: For Boring Data see sheet No. 3 of 17.
"●" Indicates location of borings.
For substructure Layout see sheet 2 of 17.
All dimensions shown on plans are horizontal.

GENERAL NOTES:

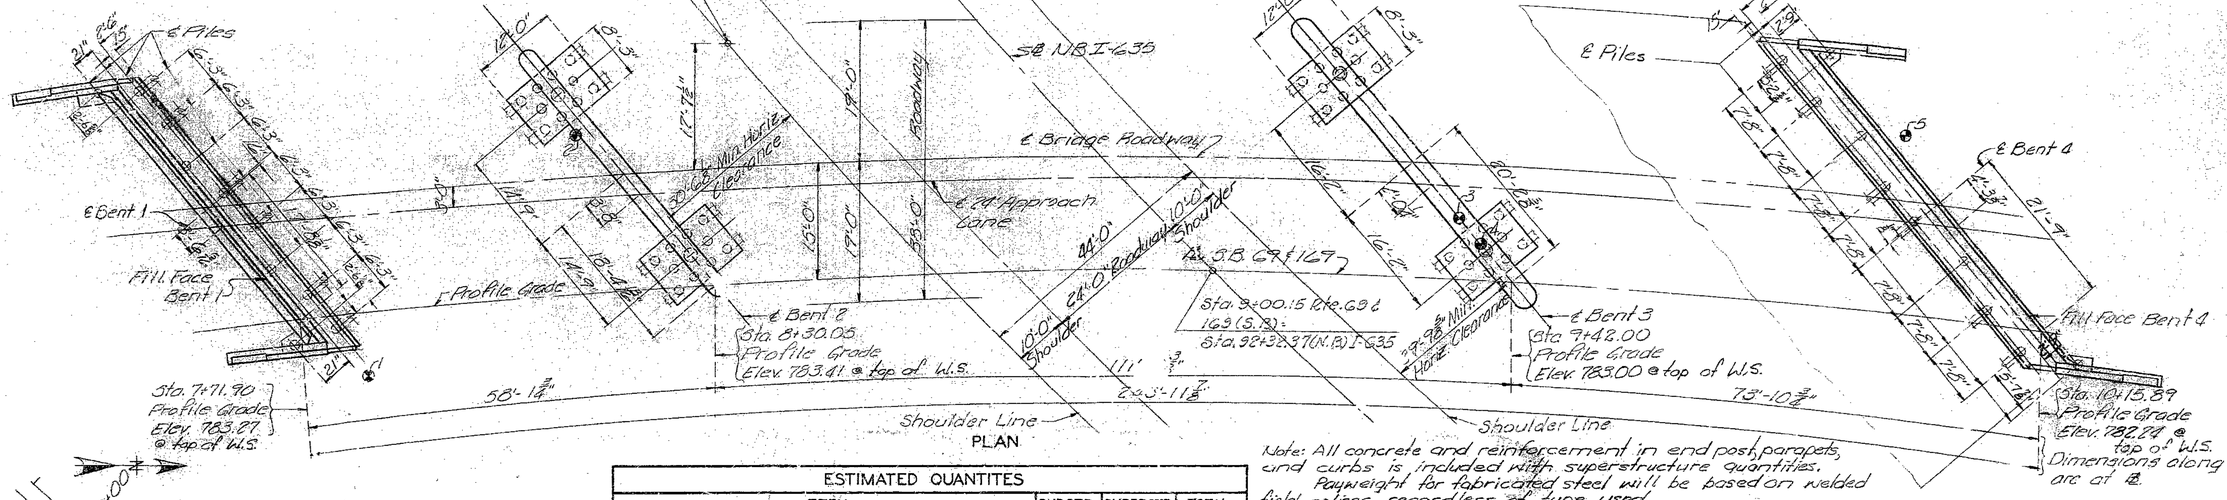
Design Specification:
A.A.S.H.O.-1969
Design Loading:
H S 20-44

Earth 120# Equivalent Fluid Pressure 30#
Fatigue Stress - Case I
Design Unit Stresses:
Class B Concrete (substructure) f_c = 1200 psi
Class B1 Concrete (superstructure) f_c = 1600 psi
Reinforcing Steel f_s = 20,000 psi
Structural Steel f_s = 20,000 psi
Structural Steel (A.S.T.M. A-572-66 Gr. 50) f_s = 27,000 psi

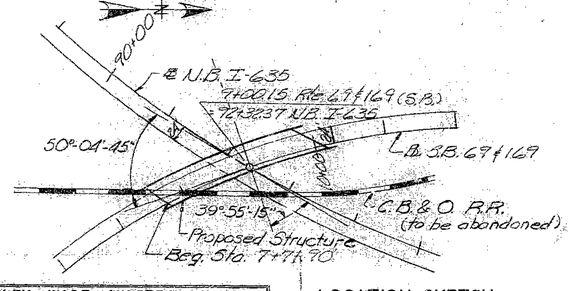
Field connections: High Strength Bolts ¾" ϕ, holes 15/16" ϕ except as noted.
Paint: Shop, none; Field, by contractor in accordance with Std. Spec. 712.12.
Minimum clearance to reinforcing steel shall be 1½" unless otherwise shown.

*See Special Provisions for optional use of Timber Piles or Cast-in-Place for the Int. Bts. Bents cannot be accurately located from the reference point on the tangent by conventional survey methods based on 100' chords (All bents are parallel).

Note: All reinforcing bars in tops of substructure beams or caps shall be spaced to clear anchor bolts for bearings by at least ½".



PLAN



LOCATION SKETCH

Note: All concrete and reinforcement in end post, parapets, and curbs is included with superstructure quantities. Payweight for fabricated steel will be based on welded field splices regardless of type used.

ESTIMATED QUANTITES

ITEM		SUBSTR.	SUPERSTR.	TOTAL
Class A Excavation	Cu.Yd.	120		120
Cast-in-Place Concrete Piles (End Bents Only)	Lin.Ft.	1730		1730
* Piles (Int. Bts. Only)	Lin.Ft.	2712		2712
Class B Concrete	Cu.Yd.	2195		2195

GENERAL BRIDGE RAIL NOTES:

All bridge rail posts shall be set normal to grade.

Aluminum tube bridge rail shall be bent to conform to vertical and horizontal alignment of parapet.

Aluminum washer shims between top of parapet and post base may be used for adjusting bridge rail alignment. Maximum thickness of shims to be $\frac{1}{8}$". Where more tilting of post is required for proper alignment, concrete bearing areas shall be ground down.

All parts of bridge rail, except anchor bolts, nuts, washers, and set screws are to be of aluminum material.

All fillets $\frac{1}{4}$" except as noted.

All drafts 3° except as noted

Omit set screw in side of rail posts adjacent to filled joints in curb and parapet at rail expansion points. Omit set screw in each side of rail post on end bents except where a gap is shown in rail over an expansion device.

Top of curbs and parapet to be built parallel to grade with curb and parapet joints (except at end bents) normal to grade.

Concrete end posts to be vertical.

All exposed edges of end posts shall have $\frac{1}{2}$" bevel. All exposed edges of curbs and parapets shall have $\frac{1}{2}$" radius or $\frac{3}{4}$" bevel unless otherwise noted.

-10°F	9 5/8"	11 3/8"	3"

Joint Seal for 2" movement

Note: Plan dimensions are based on installation at 60° F. Expansion joint width shall be adjusted during installation for compliance with the above table. See Special Provisions.

Note: The expansion joint shall be set, anchored, bonded and sealed as recommended by the manufacturer and as set forth in the Special Provisions. Anchors shall be cone expansion type. Payment for furnishing and installing the expansion joint, including anchor bolt assembly, shall be made under unit price bid per lineal foot of joint.

Accuately locate the hole spacing for 1/2" studs (expanding anchor type), on both sides of the expansion void at a distance of 3 3/16" from the edge of the concrete and snap a chalk line on both sides of the expansion void. Layout transverse hole spacing along the chalk line in accordance with the shop drawings and the Typical Layout as shown on this sheet. Insure that the holes are directly opposite each other (square). Drill holes 1/2" ϕ x 2 1/4" deep.

Holes shall not be drilled nor anchor bolts set until the concrete is at least 7 days old.

First section of expansion joint shall be installed starting at ℄ of roadway.

Tighten all nuts to 40 foot pounds. Retighten to 40 foot pounds 30 minutes after initial tightening.

Wire brush bolt cavity and coat with sealant. Fill cavity with sealant to a depth of 1/2" and push plug down to snap lock. Scrape off all excess sealant.

TABLE OF DIMENSIONS

NOTE: All dimensions are at right angles. Expansion gap and dimension "A" shall be increased ⅛" for each 10° fall in temperature and decreased ⅛" for each 10° rise in temperature.

GENERAL NOTES:

THE EXPANSION JOINT SEAL SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS SHOWN ON THE SHOP DRAWINGS AND IN ACCORDANCE WITH THE SPECIAL PROVISIONS.

THE CERTIFIED NUTS AND BOLTS FOR THE ANCHOR STUDS OR WING TYPE THREADED INSERTS SHALL BE TIGHTENED TO THE FOOT POUNDS "G" SPECIFIED IN THE TABLE OF DIMENSIONS. RETIGHTEN TO "G" FOOT POUNDS A MINIMUM OF 30 MINUTES AFTER INITIAL TIGHTENING. THE WELDED ANCHOR STUDS SHALL BE THE REDUCED BASE TYPE.

MATERIAL FOR THE ARMORED JOINT SHALL BE A36 STRUCTURAL GRADE STEEL. APPROVED STUD WELDED ANCHORS (C-1010 THRU C-1020) SHALL BE USED.

SEE SPECIAL PROVISIONS FOR PAINTING.

ANCHOR BOLTS IN THE BRUSH CURB SHALL BE CAST-IN-PLACE, GROUTED OR CONE-EXPANSION TYPE. HOLES IN THE BRUSH CURB FOR ANCHORS SHALL NOT BE DRILLED UNTIL THE CONCRETE IS AT LEAST 7 DAYS OLD.

PLAN DIMENSIONS ARE BASED ON INSTALLATION AT 60°F. THE EXPANSION GAP AND OTHER DIMENSIONS SHALL BE ADJUSTED DURING INSTALLATION FOR COMPLIANCE WITH ANY TEMPERATURE CHANGE.

CONTACT SURFACE OF STEEL TO ALUMINUM SHALL BE INSULATED WITH THE MATERIAL SPECIFIED ON THE SHOP DRAWINGS.

FURNISHING AND INSTALLING THE ELASTOMERIC EXPANSION JOINT SEAL WILL BE PAID FOR AT THE CONTRACT UNIT PRICE PER LINEAR FOOT.

FURNISHING, PAINTING AND INSTALLING THE STRUCTURAL STEEL ARMORED JOINT WILL BE INCLUDED IN THE CONTRACT UNIT PRICE FOR OTHER ITEMS.

PLATES SHALL BE FIELD ADJUSTED BY ADDING OR REMOVING METAL SHIMS (2" x 3"), AS REQUIRED FOR TEMPERATURE CORRECTION. THE EXPANSION GAP SHALL BE ADJUSTED FOR ANY TEMPERATURE CORRECTION PRIOR TO POURING TOP OF END BENT BACKWALL.

Alt. methods of supporting Exp. Device during Installation may be submitted to the Engineer for approval.

Details and locations of armor splices for Exp. Device shall be shown on Shop drawings.

Existing Reinforcement exposed shall be cleanly stripped and reused. Where reinforcement interferes with installation of Exp. Jt. Seal it shall be shifted or removed for clearance. Minimum clearance to reinforcement shall be 1½".

Outline of old work is indicated by light dashed lines. Heavy lines indicate new work.

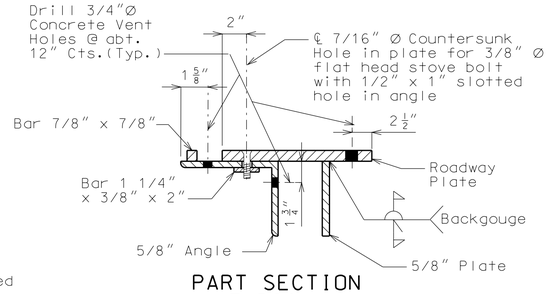
PART PLAN

Note: Concrete vent holes not shown for clarity.



PART SECTION (TYPICAL)

GENERAL NOTES:

Expansion device shall be fabricated in one section, except for stage construction and when the length is over 50 feet. A complete joint penetration groove weld splice shall be required. Welds shall be ground flush to provide a smooth surface. The expansion device shall be fabricated and installed to the crown and grade of the roadway.

Plan dimensions are based on installation at 60°F. The expansion gap and other dimensions shall be increased or decreased 5/16" for each 10° fall or rise in temperature at installation.

Material for the expansion device shall be ASTM A709 Grade 36 structural steel. Anchors for the expansion device shall be in accordance with Sec 1037.

Structural steel for the expansion device and curb plate shall be coated with a minimum of two coats of inorganic zinc primer (5 mils minimum) or galvanized in accordance with ASTM A123. Anchors need not be protected from overspray.

Payment for furnishing, coating or galvanizing and installing the structural steel for the expansion device will be considered completely covered by the contract unit price for Expansion Device (Flat Plate) per linear foot.

Concrete shall be forced under and around flat plate, anchors and angles. Proper consolidation shall be achieved by localized internal vibration. Finishing of the concrete shall be achieved by hand finishing within one foot of the expansion device. The vertical and horizontal concrete vent holes shall be offset from each other. Do not alternate holes at the 12" spacing.

Longitudinal reinforcing steel shall be placed so that ends shall not be more than ±1" from vertical plate and the vertical leg of the angle at the expansion device.

Complete joint penetration welds utilized in the fabrication of the expansion device shall be nondestructively tested by an approved method.

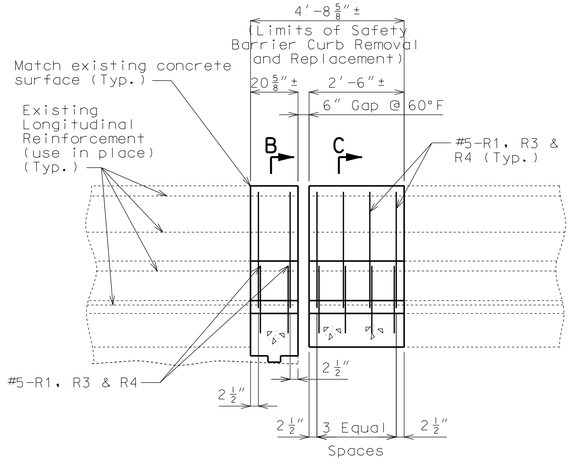
SECTION A-A

Notes:
The contractor shall use a mechanical bar splice for #6-S1 & S2 bars at the specified location. The total bar lengths for bars indicated in the bill of reinforcing steel are determined based on the end of the bars being located flush to the face of the construction joint. No additional payment will be made for any additional bar lengths required for the mechanical bar splices. Mechanical bar splices shall be in accordance with Sec 706 except that no measurement will be made for mechanical bar splice and will be considered completely covered by the contract unit price for the reinforcing steel.

Payment for all concrete and reinforcement for safety barrier curb, complete-in-place, will be considered completely covered by the contract unit price for Remove and Replace Barrier Curb per linear foot.



PART SECTION NEAR LEFT SAFETY BARRIER CURB

GIRDER AS FABRICATED

Notes:

*** Indicates Flange Plates subject to notch toughness requirements. All web plates shall be subject to notch toughness requirements.

* See Sheet 14 for End Bearing Stiffener detail and connection.

Camber includes allowance for vertical curve and for dead load deflection due to concrete slab, curb, and structural steel.

1/8 of dead load deflection due to weight of structural steel.

Dimensions may vary if girder camber after erection differs from plan camber by more than the 1/8 of dead load deflection due to weight of structural steel. No payment will be made for additional forming or concrete required for variation in haunching.

Deflection at hinge connection is -3/8" Interior Girder, -1/2" Exterior Girder.

Notes:
Hooks and bends shall be in accordance with ACI procedure.
All lengths shown are based on out to out dimensions.
1" shall be deducted for each 90° bend.
* Two additional bars are included for testing.

All S501, S503, S504, S507, S509, S512, S513, S514 S515, S517, S520, S522, and S524 bars shall be epoxy coated.

All Reinforcing in Barrier Rail to be epoxy coated.

GENERAL NOTES

DESIGN SPECIFICATIONS: AASHTO, 1977 Load Factor Design.

DESIGN LOADING:
HS20-44, 15 lbs./sq. ft. Future Wearing Surface.
Modified 20,000 Tandem Axle.
Earth 120 lbs., Equivalent Fluid Pressure 35 lbs.
Fatigue Stress, Case I.

DESIGN UNIT STRESSES:

Class B Concrete (Substructure)	f'c = 3,000 psi
Class B1 Concrete (Safety Barrier Curb)	f'c = 4,000 psi
Class B2 Concrete (Superstructure except Safety Barrier Curb)	f'c = 4,000 psi
Reinforcing Steel (Grade 60)	fy = 60,000 psi
Structural Carbon Steel	fy = 36,000 psi
Steel Pile	fb = 9,000 psi

FABRICATED STEEL:
Field Connections, High Strength Bolts ¾" ϕ holes 13/16" ϕ except as noted.

REINFORCING STEEL:
Minimum clearance to reinforcing steel is 1½" unless shown otherwise.
All reinforcing bars in tops of substructure beam or caps were spaced to clear anchor bolts for bearings by at least ½.

PAINT:
System A or B by Contractor in accordance with Std. Spec. 712.12. Color of final field coat shall be Aluminum.

CONSTRUCTION CLEARANCE:
A minimum vertical clearance of 14'-6" from crown of existing lanes and a minimum lateral clearance of 28'-10" centered on existing lanes of existing Route I-29 maintained during construction.

TRAFFIC MAINTAINED:
Traffic on existing Route I-29 maintained during construction.

DETAILS OF FLAT PLATE EXPANSION DEVICE AT END BENTS NO. 1 & 5

Detailed Sep. 2012
Checked Oct. 2012

Note: This drawing is not to scale. Follow dimensions.

GENERAL NOTES:

Expansion device shall be fabricated in one section, except for stage construction and when the length is over 50 feet. A complete joint penetration groove weld splice shall be required. Welds shall be ground flush to provide a smooth surface.The expansion device shall be fabricated and installed to the crown and grade of the roadway.

Plan dimensions are based on installation at 60°F. The expansion gap and other dimensions shall be increased or decreased 1/8" (Bt. 1), 3/16" (Bt. 5) for each 10° fall or rise in temperature at installation.

Material for the expansion device shall be ASTM A709 Grade 36 structural steel. Anchors for the expansion device shall be in accordance with Sec 1037.

Structural steel for the expansion device and curb plate shall be coated with a minimum of two coats of inorganic zinc primer (5 mils minimum) or galvanized in accordance with ASTM A123. Anchors need not be protected from overspray.

Payment for furnishing, coating or galvanizing and installing the structural steel for the expansion device will be considered completely covered by the contract unit price for Expansion Device (Flat Plate) per linear foot.

Concrete shall be forced under and around flat plate, anchors and angles. Proper consolidation shall be achieved by localized internal vibration. Finishing of the concrete shall be achieved by hand finishing within one foot of the expansion device. The vertical and horizontal concrete vent holes shall be offset from each other. Do not alternate holes at the 12" spacing.

Longitudinal reinforcing steel shall be placed so that ends shall not be more than ±1" from vertical plate and the vertical leg of the angle at the expansion device.

Complete joint penetration welds utilized in the fabrication of the expansion device shall be nondestructively tested by an approved method.

NOTES: TYPE "D" BEARINGS

ANCHOR BOLTS FOR TYPE "D" BEARINGS SHALL BE 1-1/4"Ø SWEDGED BOLTS AND SHALL EXTEND 12" INTO CONCRETE, WITH HEXAGON NUTS AND PLAIN WASHERS FOR FIXED BEARINGS, NO NUTS FOR EXPANSION BEARINGS.

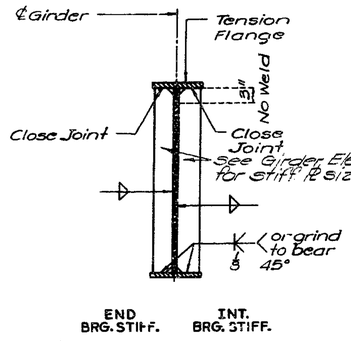
LEAD PLATES (8#/sq. ft.) OR PREFORMED FABRIC PADS UNDER BEARINGS SHALL BE APPROXIMATELY 1 8" THICKNESS. PREFORMED FABRIC PADS SHALL CONSIST OF FABRIC AND RUBBER BODY MADE FROM NEW UNVULCANIZED RUBBER AND UNUSED FABRIC FIBERS IN PROPER PROPORTION TO MAINTAIN STRENGTH AND STABILITY. THE VULCANIZED AND CURED PAD SHALL HAVE A SURFACE HARDNESS OF 80 SHORE "A" DUROMETER ±10 WITH AN ULTIMATE BREAKDOWN LIMIT UNDER COMPRESSIVE LOADS OF NO LESS THAN 7000 PSI.

SHOP DRAWINGS ARE NOT REQUIRED FOR LEAD PLATES AND OR PREFORMED FABRIC PADS.

LEAD PLATES OR PREFORMED FABRIC PADS SHALL BE 1/2" GREATER IN LENGTH AND WIDTH THAN BOTTOM BEARING PLATES.

"ESTIMATED WEIGHT" DOES NOT INCLUDE WEIGHT OF ANCHOR BOLTS.

" ✓ " INDICATES MACHINE FINISH SURFACE.



② Weld to compression flange as located on Elevation of Girder: * 1½" Typical for all Int. Web Stiff., Int. Diaph. Conn. Pl. and Brg. Stiff.

SLAB DRAIN DETAILS

GENERAL NOTES:

SLAB DRAINS MAY BE FABRICATED OF EITHER 1/4" WELDED SHEETS OF A.S.T.M. A36 STEEL OR FROM 1/4" STRUCTURAL STEEL TUBING A.S.T.M. A500 OR A501.

OUTSIDE DIMENSIONS OF DRAINS ARE 8"x4".

THE DRAINS SHALL BE CAST IN THE CONCRETE WITH THE TOP OF THE DRAINS BEING 1/8" BELOW THE FINISHED CONCRETE LINE.

LOCATE DRAINS IN THE SLAB BY DIMENSIONS SHOWN IN THE PART ELEVATION.

SHIFT REINFORCING STEEL IN FIELD WHERE NECESSARY TO CLEAR DRAINS.

THE DRAINS SHALL BE GALVANIZED IN ACCORDANCE WITH A.S.T.M. A123.

SHOP DRAWINGS WILL NOT BE REQUIRED FOR THE SLAB DRAINS.

351

Note: See Sheet No. 10 for location of drains.
Slab drains will be placed on the left side of Spans (1-2) & (4-5) only.

NOTE: All dimensions are at right angles. Expansion gap and dimension "A" shall be increased for each 10° fall in temperature and decreased for each 10° rise in temperature.

GENERAL NOTES:

THE EXPANSION JOINT SEAL SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS SHOWN ON THE SHOP DRAWINGS AND IN ACCORDANCE WITH THE SPECIAL PROVISIONS.

THE NUTS ON THE ANCHOR STUDS SHALL BE TIGHTENED TO THE FOOT POUNDS "G" SPECIFIED IN THE TABLE OF DIMENSIONS. RETIGHTEN TO "G" FOOT POUNDS A MINIMUM OF 30 MINUTES AFTER INITIAL TIGHTENING. THE WELDED ANCHOR STUDS SHALL BE THE REDUCED BASE TYPE.

MATERIAL FOR THE ARMORED JOINT SHALL BE A36 STRUCTURAL GRADE STEEL. NO. 4 BARS FOR ANCHORS SHALL BE STRUCTURAL GRADE STEEL. APPROVED STUD WELDED ANCHORS OR DEFORMED BAR ANCHORS (ASTM A496) MAY BE USED IN LIEU OF NO. 4 BARS SHOWN.

SEE SPECIAL PROVISIONS FOR PAINTING.

ANCHOR BOLTS IN THE BARRIER CURB SHALL BE CAST-IN-PLACE, GROUTED OR CONE-EXPANSION TYPE. HOLES IN THE BARRIER CURB FOR ANCHORS SHALL NOT BE DRILLED UNTIL THE CONCRETE IS AT LEAST 7 DAYS OLD.

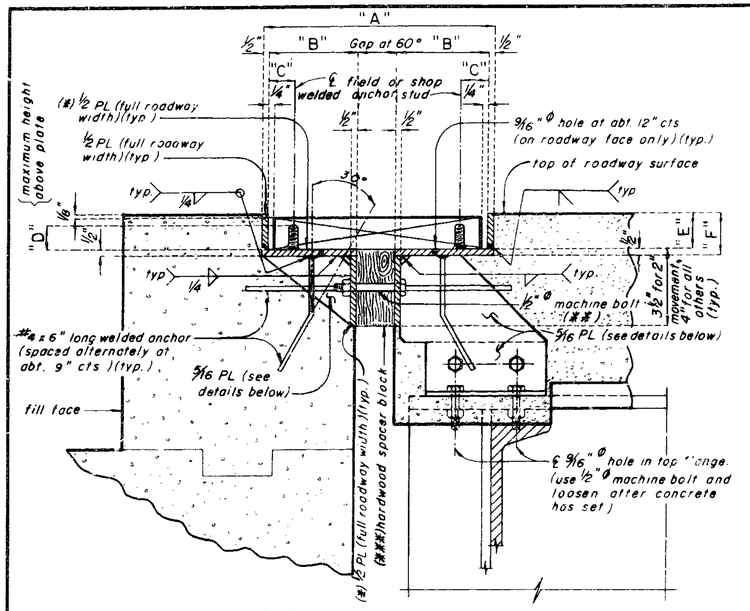
PLAN DIMENSIONS ARE BASED ON INSTALLATION AT 60°F. THE EXPANSION GAP AND OTHER DIMENSIONS SHALL BE ADJUSTED DURING INSTALLATION FOR COMPLIANCE WITH ANY TEMPERATURE CHANGE.

PLATES SHALL BE FIELD ADJUSTED BY ADDING OR REMOVING METAL SHIMS (2 x 3), AS REQUIRED FOR TEMPERATURE CORRECTION. THE EXPANSION GAP SHALL BE ADJUSTED FOR ANY TEMPERATURE CORRECTION PRIOR TO POURING TOP OF END BENT BACKWALL.

CONTACT SURFACE OF STEEL TO ALUMINUM SHALL BE INSULATED WITH THE MATERIAL SPECIFIED ON THE SHOP DRAWINGS.

FURNISHING AND INSTALLING THE ELASTOMERIC EXPANSION JOINT SEAL WILL BE PAID FOR AT THE CONTRACT BID PRICE PER LINEAR FOOT.

FURNISHING, PAINTING AND INSTALLING THE STRUCTURAL STEEL ARMORED JOINT WILL BE INCLUDED IN THE CONTRACT PRICE BID FOR OTHER ITEMS.



PART SECTION THRU ARMORED JOINT

(*) these plates may be one piece by using legs of equal or unequal angles.

NOTES: ALL STANDARD HOOKS AND BENDS OTHER THAN 180 DEG. TO BE BENT WITH SAME PROCEDURE AS FOR 90 DEG. STD. HOOKS.

HOOKS AND BENDS SHALL BE IN ACCORDANCE WITH THE PROCEDURES AS SHOWN ON THIS SHEET.

S - STIRRUP.

X - BAR IS INCLUDED IN SUBSTRUCTURE QUANTITIES.

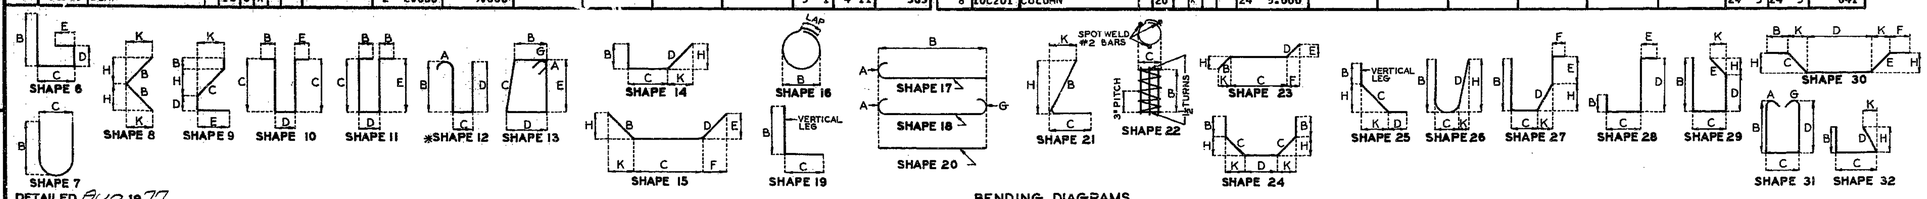
V - BAR DIMENSIONS VARY IN EQUAL INCREMENTS BETWEEN DIMENSIONS SHOWN ON THIS LINE AND THE FOLLOWING LINE.

NO. EA. - NUMBER OF BARS OF EACH LENGTH.

NOMINAL LENGTHS - ARE BASED ON OUT TO OUT DIMENSIONS SHOWN IN BENDING DIAGRAMS AND ARE LISTED FOR FABRICATORS USE. (NEAREST INCH)

ACTUAL LENGTHS - ARE MEASURED ALONG CENTERLINE BAR TO THE NEAREST INCH.

* ALL HOOKS AND BENDS FOR SHAPE NO. 12 - GRADE 40 (ONLY) ARE BASED ON D = 5d.



BENDING DIAGRAMS

NOTES:
ALL STANDARD HOOKS AND BENDS OTHER THAN 180 DEG. TO BE BENT WITH SAME PROCEDURE AS FOR 90 DEG. STD. HOOKS.
HOOKS AND BENDS SHALL BE IN ACCORDANCE WITH THE PROCEDURES AS SHOWN ON THIS SHEET.
E - EPOXY COATED BARS
S - STIRRUP.
X - BAR IS INCLUDED IN SUBSTRUCTURE QUANTITIES.
V - BAR DIMENSIONS VARY IN EQUAL INCREMENTS BETWEEN DIMENSIONS SHOWN ON THIS LINE AND THE FOLLOWING LINE.
NO. EA. - NUMBER OF BARS OF EACH LENGTH.
NOMINAL LENGTHS - ARE BASED ON OUT TO OUT DIMENSIONS SHOWN IN BENDING DIAGRAMS AND ARE LISTED FOR FABRICATORS USE. (NEAREST INCH)
ACTUAL LENGTHS - ARE MEASURED ALONG CENTERLINE BAR TO THE NEAREST INCH.
* ALL HOOKS AND BENDS FOR SHAPE NO. 12 - GRADE 40 (ONLY) ARE BASED ON D = 5d.

FINAL PLANS

GENERAL NOTES:

Design Specifications
A.A.S.H.T.O. - 1973

Design Loading:
HS20-44
Future wearing surface - 15#/sq. ft.
Modified 24,000# Tandem Axle
Earth 120# Equivalent Fluid Pressure 30#
Fatigue Stress - case II - Interim 1974

Design Unit Stresses:
Class B Concrete (Substructure) fc = 1,200 p.s.i.
Class B2 Concrete (Superstructure) fc = 1,400 p.s.i.
Reinforcing Steel fs = 20,000 p.s.i. (Substructure)
Reinforcing Steel (Grade 60) fy = 60,000 p.s.i. (Superstructure)

Structural Carbon Steel fs = 20,000 psi
Steel Pile fb = 9000 psi

Fabricated Steel:
Field connections, High Strength Bolts 3/4" ϕ, holes 13/16" ϕ except as noted.

Paint: System B by contractor in accordance with Std. Spec. 1712.12 Color for final field coat for System B aluminum.

Reinforcing Steel: Minimum clearance to reinforcing steel 1½" unless otherwise shown.
All reinforcing bars in tops of substructure beams or caps spaced to clear anchor bolts by at least ½".

Joint Filler: All joint filler meet the requirements of Std. Spec. 1057.2.4.

FINAL QUANTITIES

ITEM		SUBSTR	SUPERSTR	TOTAL
Class I Excavation	Cu. Yd.	325.5	-	325.5
Structural Steel Pile (HP10x42)	Lin. Ft.	2137		2137
Class B Concrete	Cu. Yd.	235.7		235.7
Class B2 Concrete	Cu. Yd.		434.0	434.0
Slab Drains	Each		12	12
Elastomeric Exp. Jt. Seal (2")	Lin. Ft.		108	108
Reinforcing Steel (Grade 60)	Lb.	38,370	61,850	100,220
Reinforcing Steel (Epoxy)	Lb.		49,810	49,810
Fabricated Structural Carbon Steel	Lb.		310,270	310,270
Painting (System B) Aluminum	Ton		154.5	154.3

Note: All concrete and reinforcement in Safety Barrier curbs included with Superstructure quantities

PILE & FOOTING DATA

BENT NO.		1	2	3	4	5
Bearing Pile	Pile Type and Size	HP10x42	HP10x42	HP10x42	HP10x42	HP10x42
	Number	8	12	12	12	9
	Approximate Length Ft.	55	30	37	35	54
	Design Bearing ton	38	52	56	52	40
	Hammer Energy Reqd. (Ft-Lbs)	9,400	12,300	14,000	12,300	9,800

Minimum energy requirement of hammer based on plan length and design bearing value of piles; All pile driven to practical refusal.

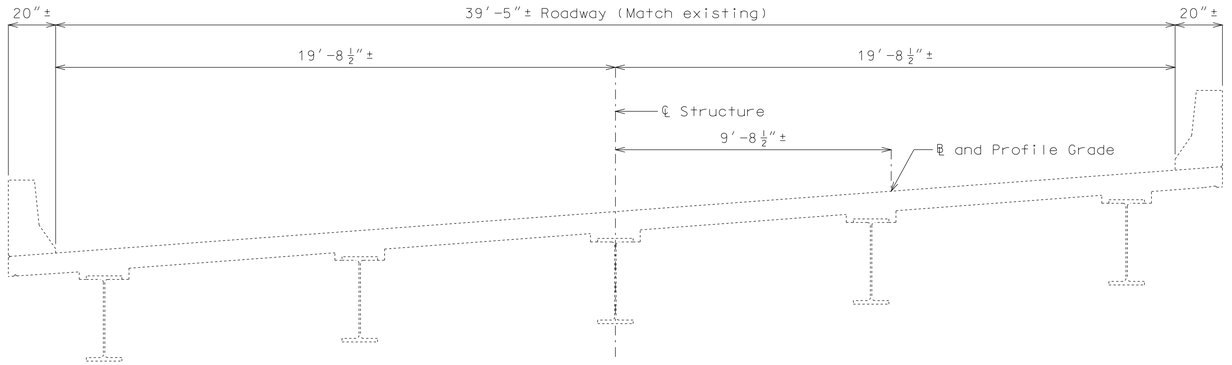
MISSOURI HIGHWAYS AND TRANSPORTATION COMMISSION

U.I.P. & Rehabilitate Existing (103'-146'-132'-91'-57') Continuous Composite Plate Girder Spans



SECTION THRU EXISTING SLAB

General Notes:

Design Specifications:
2002 - AASHTO 17th Edition
Load Factor Design
Seismic Performance Category A

Design Loading:
HS20-44 Military 24,000# Tandem Axle (1979 & New Construction)
15#/Sq. Ft. Future Wearing Surface
Fatigue Stress - Case II

Design Unit Stresses:
Class B-2 Concrete (Superstructure and Safety Barrier Curb) f'c = 4,000 psi
Reinforcing Steel (Grade 60) fy = 60,000 psi

Reinforcing Steel:
Minimum clearance to reinforcing steel shall be 1-1/2", unless otherwise shown.

General Notes (Cont.):

Concrete Protective Coatings:
Protective coating for concrete bents and piers (Epoxy) shall be applied as shown on the bridge plans and in accordance with Sec 711.

Miscellaneous:
Outline of old work is indicated by light dashed lines. Heavy lines indicate new work.

Contractor shall verify all dimensions in field before ordering new material.

Bars bonded in old concrete not removed shall be cleanly stripped and embedded into new concrete where possible. If length is available, old bars shall extend into new concrete at least 40 diameters for smooth bars and 30 diameters for deformed bars, unless otherwise noted.

Traffic Handling:
Structure to be closed to traffic during construction.

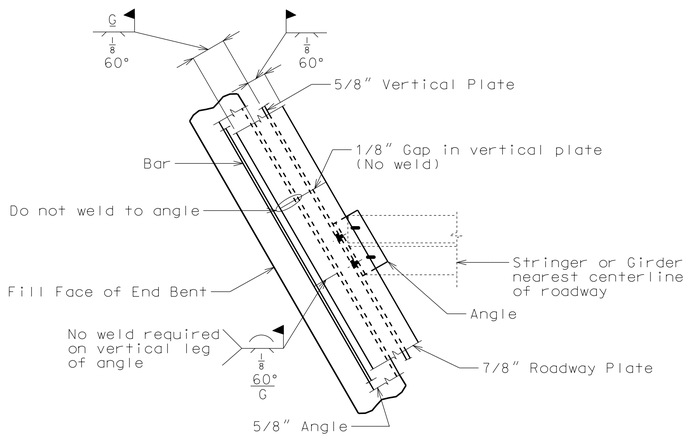
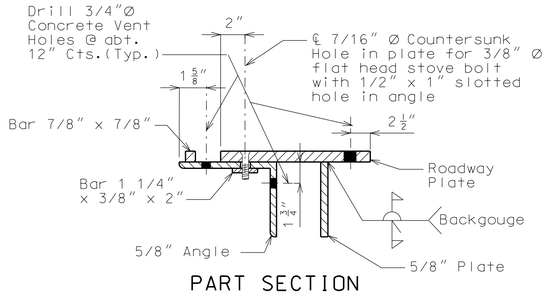
PART SECTION AT END BENT (NORMAL TO GAP)



PERMISSIBLE FIELD SPLICE AT END BENT



PART SECTION (TYPICAL)

	Bent 1 Left	Bent 1 Right	Bent 6 Left	Bent 6 Right
1	4 5/8"	4 1/8"	2 1/2"	2 1/2"
2	8 3/8"	7 7/8"	4 3/4"	4 5/8"
3	6 1/2"	6 1/8"	3 5/8"	3 5/8"
4	7 3/8"	7"	4 1/8"	4 1/8"
5	22 1/4"	21"	12 1/2"	12 3/8"

GENERAL NOTES:

Expansion device shall be fabricated in one section, except for stage construction and when the length is over 50 feet. A complete joint penetration groove weld splice shall be required. Welds shall be ground flush to provide a smooth surface.The expansion device shall be fabricated and installed to the crown and grade of the roadway.

Plan dimensions are based on installation at 60°F. The expansion gap and other dimensions shall be increased or decreased 3/8" (Bt. 1), 1/4" (Bt. 6) for each 10° fall or rise in temperature at installation.

Material for the expansion device shall be ASTM A709 Grade 36 structural steel. Anchors for the expansion device shall be in accordance with Sec 1037.

Structural steel for the expansion device and curb plate shall be coated with a minimum of two coats of inorganic zinc primer (5 mils minimum) or galvanized in accordance with ASTM A123. Anchors need not be protected from overspray.

Payment for furnishing, coating or galvanizing and installing the structural steel for the expansion device will be considered completely covered by the contract unit price for Expansion Device (Flat Plate) per linear foot.

Concrete shall be forced under and around flat plate, anchors and angles. Proper consolidation shall be achieved by localized internal vibration. Finishing of the concrete shall be achieved by hand finishing within one foot of the expansion device. The vertical and horizontal concrete vent holes shall be offset from each other. Do not alternate holes at the 12" spacing.

Longitudinal reinforcing steel shall be placed so that ends shall not be more than ±1" from vertical plate and the vertical leg of the angle at the expansion device.

Complete joint penetration welds utilized in the fabrication of the expansion device shall be nondestructively tested by an approved method.

NO. REQ'D.	MARK NO. SIZE	MARK	LOCATION	EPOXY (E)	SHAPE NO.	STIRRUP (S)	SUBSTR. (X)	VARIES (V)	NO. EACH	DIMENSIONS B FT. IN.	C FT. IN.	D FT. IN.	E FT. IN.	F FT. IN.	H FT. IN.	K FT. IN.	NOMINAL LENGTH FT. IN.	ACTUAL LENGTH FT. IN.	WEIGHT LBS.

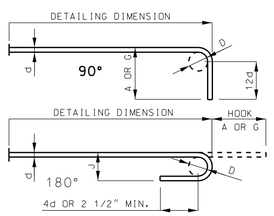
STIRRUP HOOK DIMENSIONS				
GRADES 40 - 50 - 60 KSI				
BAR SIZE	D (IN.)	90° HOOK	135° HOOK	
		HOOK A OR G	HOOK A OR G	APPROX. H
#4	2"	4 1/2"	4 1/2"	3"
#5	2 1/2"	6"	5 1/2"	3 3/4"
#6	4 1/2"	12"	8"	4 1/2"

NOTE: UNLESS OTHERWISE NOTED DIAMETER "D" IS THE SAME FOR ALL BENDS AND HOOKS ON A BAR.



END HOOK DIMENSIONS				
BAR SIZE	D (IN.)	ALL GRADES		
		180° HOOKS		90° HOOKS
		A OR G	J	A OR G
#3	2 1/4"	5"	3"	6"
#4	3"	6"	4"	8"
#5	3 3/4"	7"	5"	10"
#6	4 1/2"	8"	6"	12"
#7	5 1/4"	10"	7"	14"
#8	6"	11"	8"	16"
#9	9 1/2"	15"	11 3/4"	19"
#10	10 3/4"	17"	13 1/4"	22"
#11	12"	19"	14 3/4"	2'-0"
#14	18 1/4"	2'-3"	21 3/4"	2'-7"

TWO ADDITIONAL #6-S2 ARE INCLUDED IN THE BAR BILL FOR TESTING.

NOTE:
ALL STANDARD HOOKS AND BENDS OTHER THAN 180 DEGREE ARE TO BE BENT WITH SAME PROCEDURE AS FOR 90 DEGREE STANDARD HOOKS.
HOOKS AND BENDS SHALL BE IN ACCORDANCE WITH THE PROCEDURES AS SHOWN ON THIS SHEET.
E = EPOXY COATED REINFORCEMENT.
S = STIRRUP.
X = BAR IS INCLUDED IN SUBSTRUCTURE QUANTITIES.
V = BAR DIMENSIONS VARY IN EQUAL INCREMENTS BETWEEN DIMENSIONS SHOWN ON THIS LINE AND THE FOLLOWING LINE.
NO. EA. = NUMBER OF BARS OF EACH LENGTH.
NOMINAL LENGTHS ARE BASED ON OUT TO OUT DIMENSIONS SHOWN IN BENDING DIAGRAMS AND ARE LISTED FOR FABRICATORS USE. (NEAREST INCH)
ACTUAL LENGTHS ARE MEASURED ALONG CENTERLINE BAR TO THE NEAREST INCH.
PAYWEIGHTS ARE BASED ON ACTUAL LENGTHS.
FOUR ANGLE OR CHANNEL SPACERS ARE REQUIRED FOR EACH COLUMN SPIRAL. SPACERS ARE TO BE PLACED ON INSIDE OF SPIRALS. LENGTH AND WEIGHT OF COLUMN SPIRALS DO NOT INCLUDE SPLICES OR SPACERS.
REINFORCING STEEL (GRADE 60) FY = 60,000 PSI.

ALL PILE SHALL BE DRIVEN TO PRACTICAL REFUSAL.

ESTIMATED QUANTITIES

ITEM			SUBSTR.	SUPERSTR.	TOTAL
CLASS 1 EXCAVATION		(CU. YD.)	270		270
STRUCTURAL STEEL PILES (HP10X42)		(LIN. FT.)	3,258		3,258
CLASS B CONCRETE		(CU. YD.)	380.6		380.6
CLASS B2 CONCRETE		(CU. YD.)		798.8	798.8
REINFORCING STEEL	(EPOXY)	(POUND)		93650	93650
ELASTOMERIC EXPANSION JOINT SEAL (4")		(LIN. FT.)		117	117
SLAB DRAINS		EACH		15	15
REINFORCING STEEL (GRADE 60)		(POUND)	63070	11200	74270
FABRICATED STRUCTURAL CARBON STEEL		(POUND)		765190	765190
PAINTING (SYSTEM A OR B) ALUMINUM		(TON)		38.5	38.5

NOTE: ALL CONCRETE AND REINFORCEMENT IN SAFETY BARRIER CURBS IS INCLUDED IN SUPERSTRUCTURE QUANTITIES.
PAYWEIGHT FOR FABRICATED STRUCTURAL CARBON STEEL WILL BE BASED ON WELDED SPLICES REGARDLESS OF TYPE USED.

GENERAL NOTES:

DESIGN SPECIFICATIONS:
A.A.S.H.T.O. - 1973

DESIGN LOADING:
HS20 - 44
15 LBS. / SQ. FT.
FUTURE WEARING SURFACE
MODIFIED 24,000 LBS. TANDEM AXLE
EARTH 120 LBS.
EQUIVALENT FLUID PRESSURE 30 LBS.
FATIGUE STRESS - CASE II - INTERIM 1974

DESIGN UNIT STRESSES:
CLASS B CONCRETE (SUBSTRUCTURE) f'_c = 1,200 psi
CLASS B2 CONCRETE (SUPERSTRUCTURE) f'_c = 1,600 psi
REINFORCING STEEL f_s = 20,000 psi (SUBSTRUCTURE)
REINFORCING STEEL (GRADE 60) f_y = 60,000 psi (SUPERSTRUCTURE)
STRUCTURAL CARBON STEEL f_a = 20,000 psi
STEEL PILE f_b = 9,000 psi

JOINT FILLER:
ALL JOINT FILLER SHALL MEET THE REQUIREMENTS OF STD. SPEC. 1057.2.4.

FABRICATED STEEL:
FIELD CONNECTIONS, HIGH STRENGTH BOLTS 3/4" DIAMETER, HOLES 13/16" DIAMETER EXCEPT AS NOTED.

PAINT:
PAINT: SYSTEM A OR B BY CONTRACTOR IN ACCORDANCE WITH STD. SPEC. 712.12. (COLOR OF THE FINAL FIELD COAT SHALL BE ALUMINUM).

REINFORCING STEEL:
MINIMUM CLEARANCE TO REINFORCING STEEL SHALL BE 1-1/2" UNLESS OTHERWISE SHOWN.

ALL REINFORCING BARS IN TOPS OF SUBSTRUCTURE BEAMS OR CAPS SHALL BE SPACED TO CLEAR ANCHOR BOLTS FOR BEARINGS BY AT LEAST 1/2".

TABLE OF DIMENSIONS

NOTE: *All dimensions are at right angles. Expansion gap and dimension "A" shall be increased 1/16" for each 10° fall in temperature and decreased 1/16" for each 10° rise in temperature.*

GENERAL NOTES:

THE EXPANSION JOINT SEAL SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS SHOWN ON THE SHOP DRAWINGS AND IN ACCORDANCE WITH THE SPECIAL PROVISIONS.

THE NUTS ON THE ANCHOR STUDS SHALL BE TIGHTENED TO THE FOOT POUNDS "G" SPECIFIED IN THE TABLE OF DIMENSIONS. RETIGHTEN TO "G" FOOT POUNDS A MINIMUM OF 30 MINUTES AFTER INITIAL TIGHTENING. THE WELDED ANCHOR STUDS SHALL BE THE REDUCED BASE TYPE.

MATERIAL FOR THE ARMORED JOINT SHALL BE A36 STRUCTURAL GRADE STEEL. NO. 4 BARS FOR ANCHORS SHALL BE STRUCTURAL GRADE STEEL. APPROVED STUD WELDED ANCHORS OF DEFORMED BAR ANCHORS (ASTM A496) MAY BE USED IN LIEU OF NO. 4 BARS SHOWN.

SEE SPECIAL PROVISIONS FOR PAINTING.

ANCHOR BOLTS IN THE BARRIER CURB SHALL BE CAST-IN-PLACE, GROUTED OR CONE-EXPANSION TYPE. HOLES IN THE BARRIER CURB FOR ANCHORS SHALL NOT BE DRILLED UNTIL THE CONCRETE IS AT LEAST 7 DAYS OLD.

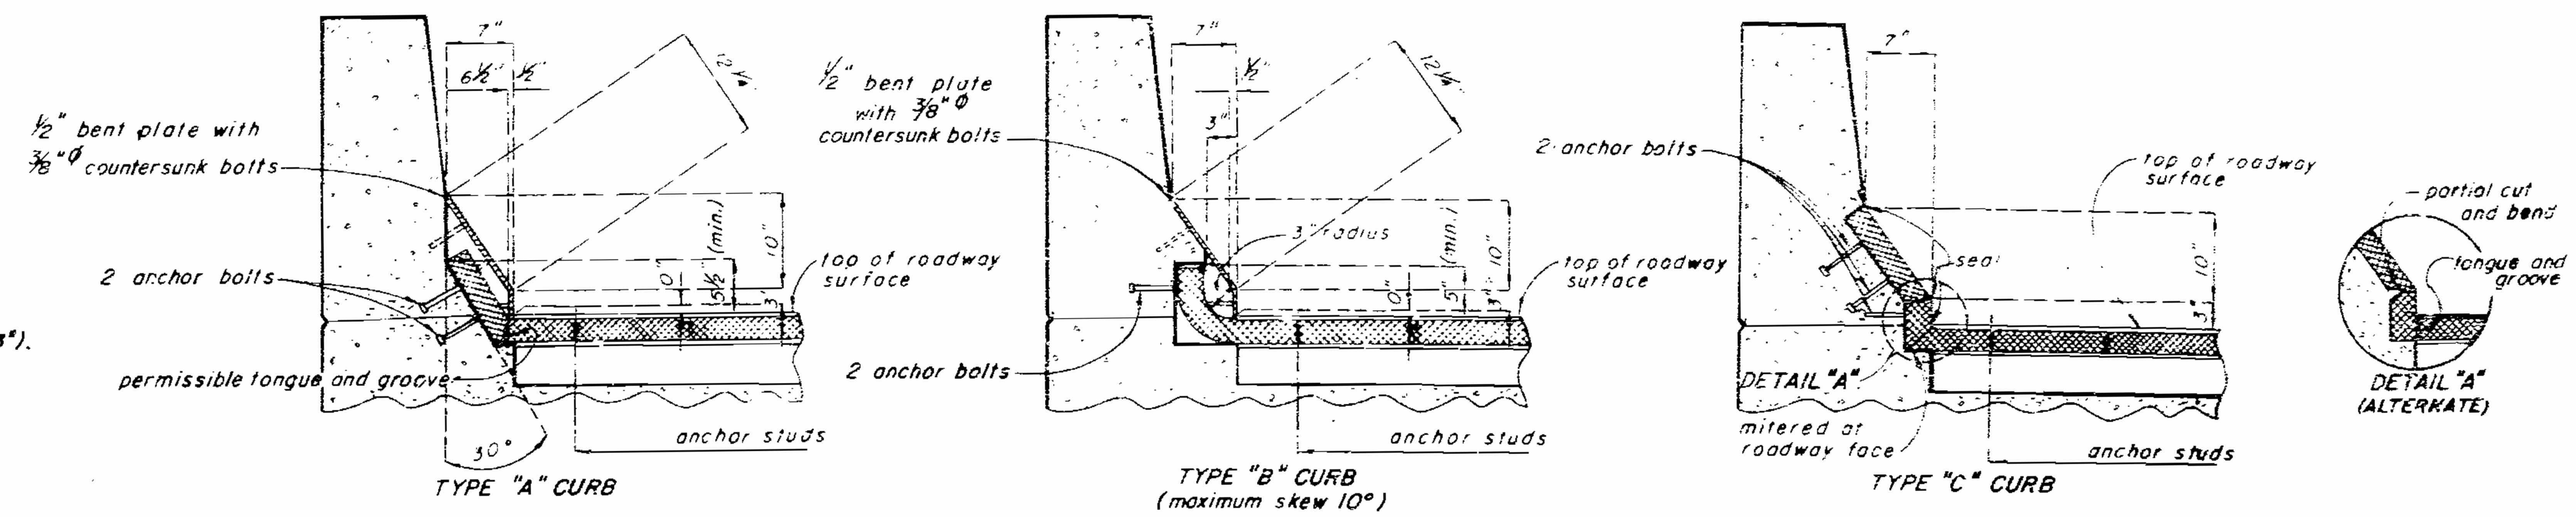
PLAN DIMENSIONS ARE BASED ON INSTALLATION AT 60°F. THE EXPANSION GAP AND OTHER DIMENSIONS SHALL BE ADJUSTED DURING INSTALLATION FOR COMPLIANCE WITH ANY TEMPERATURE CHANGE.

PLATES SHALL BE FIELD ADJUSTED BY ADDING OR REMOVING METAL SHIMS (2 x 3), AS REQUIRED FOR TEMPERATURE CORRECTION. THE EXPANSION GAP SHALL BE ADJUSTED FOR ANY TEMPERATURE CORRECTION PRIOR TO POURING TOP OF END BENT BACKWALL.

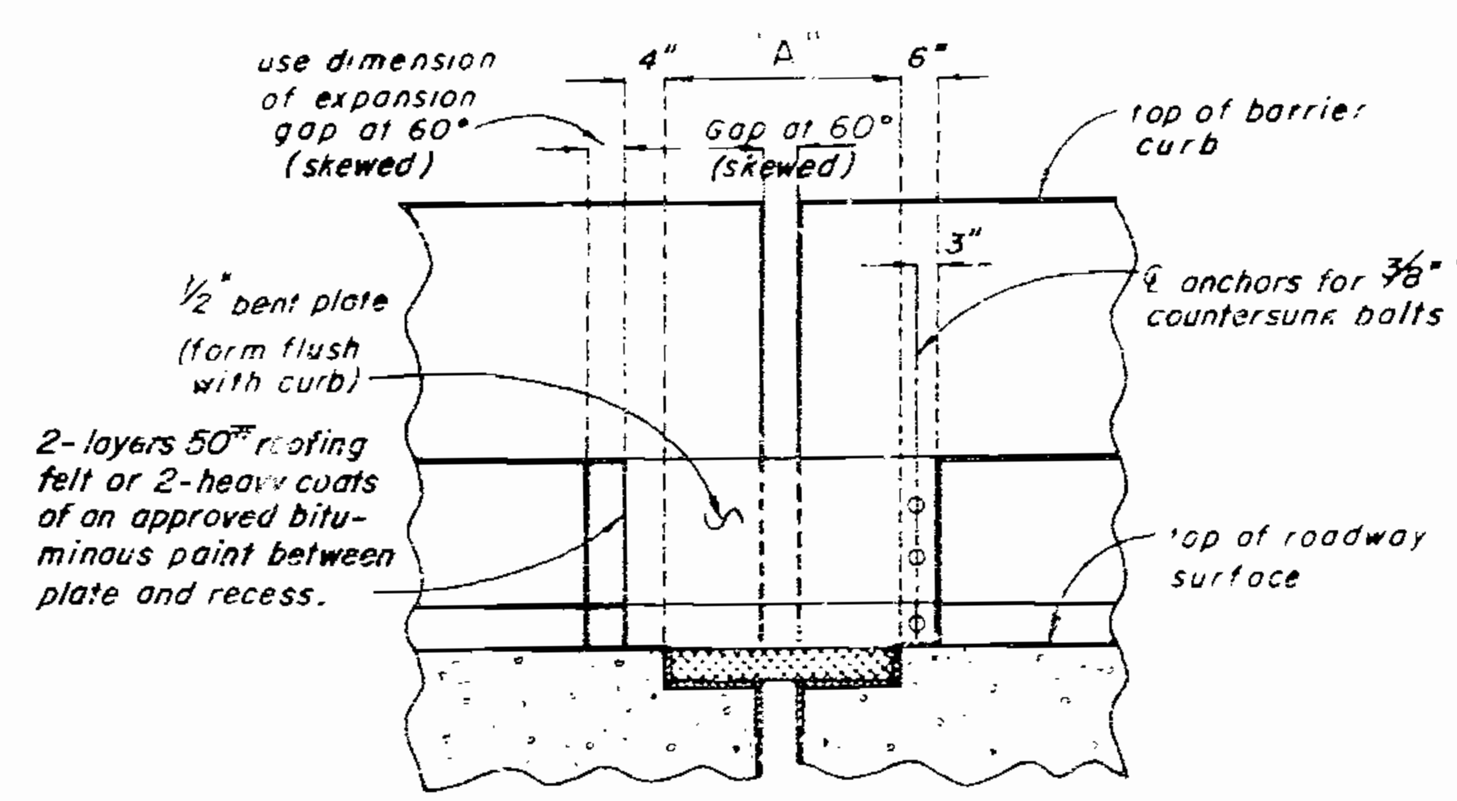
CONTACT SURFACE OF STEEL TO ALUMINUM SHALL BE INSULATED WITH THE MATERIAL SPECIFIED ON THE SHOP DRAWINGS.

FURNISHING AND INSTALLING THE ELASTOMERIC EXPANSION JOINT SEAL WILL BE PAID FOR AT THE CONTRACT BID PRICE PER LINEAR FOOT.

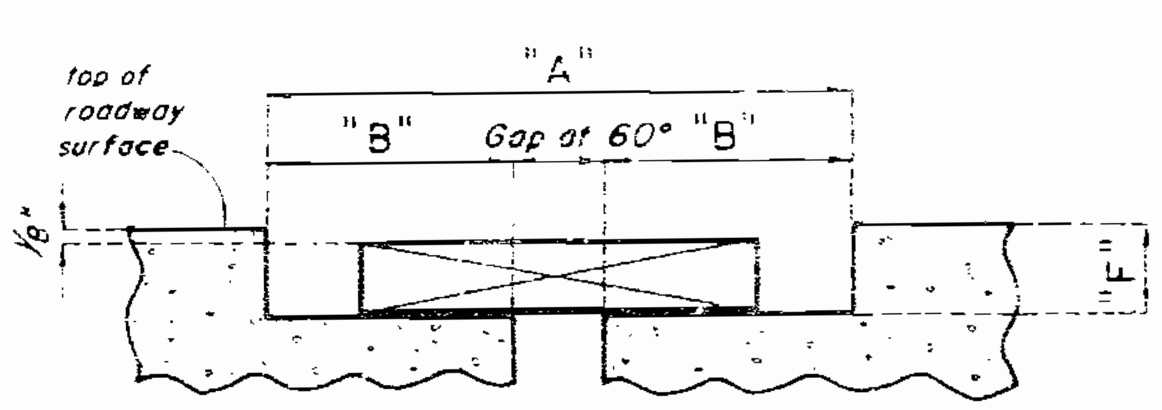
FURNISHING, PAINTING AND INSTALLING THE STRUCTURAL STEEL ARMORED JOINT WILL BE INCLUDED IN THE CONTRACT PRICE BID FOR OTHER ITEMS.



ALTERNATE CURB TREATMENTS



PART ELEVATION OF BARRIER CURB



BLOCKOUT FOR MODULAR UNITS

NOTES:
ALL STANDARD HOOKS AND BENDS OTHER THAN 180 DEG. TO BE BENT WITH SAME PROCEDURE AS FOR 90 DEG. STD. HOOKS.

HOOKS AND BENDS SHALL BE IN ACCORDANCE WITH THE PROCEDURES AS SHOWN ON THIS SHEET.

E - EPOXY COATED REINFORCEMENT

S - STIRRUP

X - BAR IS INCLUDED IN SUBSTRUCTURE QUANTITIES.

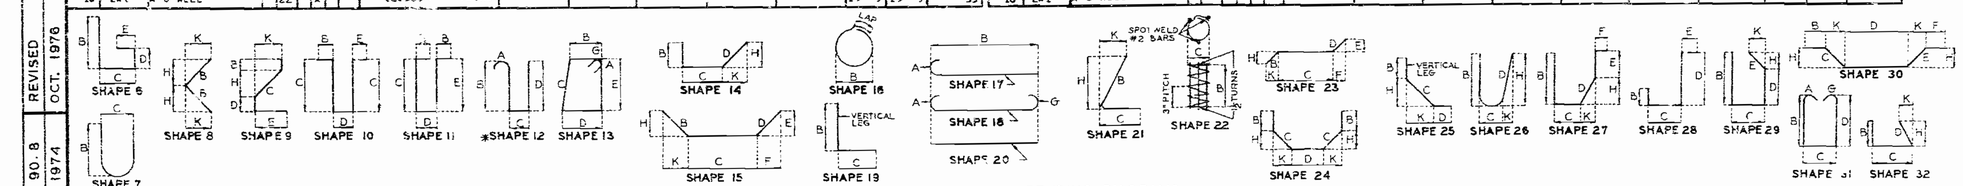
V - BAR DIMENSIONS VARY IN EQUAL INCREMENTS BETWEEN DIMENSIONS SHOWN ON THIS LINE AND THE FOLLOWING LINE.

NO. EA. - NUMBER OF BARS OF EACH LENGTH.

NOMINAL LENGTHS - ARE BASED ON OUT TO OUT DIMENSIONS SHOWN IN BENDING DIAGRAMS AND ARE LISTED FOR FABRICATORS USE. (NEAREST INCH)

ACTUAL LENGTHS - ARE MEASURED ALONG CENTERLINE BAR TO THE NEAREST INCH.

* ADJUSTMENTS TO BENDS FOR S[illegible] (ONLY) ARE BASED ON D = 5d.



BENDING DIAGRAMS

NOTES: ALL STANDARD HOOKS AND BENDS OTHER THAN 180 DEG. TO BE BENT WITH SAME PROCEDURE AS FOR 90 DEG. STD. HOOKS.

HOOKS AND BENDS SHALL BE IN ACCORDANCE WITH THE PROCEDURES AS SHOWN ON THIS SHEET.

E - EPOXY COATED REINFORCEMENT

S - STIRRUP.

X - BAR IS INCLUDED IN SUBSTRUCTURE QUANTITIES.

V - BAR DIMENSIONS VARY IN EQUAL INCREMENTS BETWEEN DIMENSIONS SHOWN ON THIS LINE AND THE FOLLOWING LINE.

NO. EA. - NUMBER OF BARS OF EACH LENGTH.

NOMINAL LENGTHS - ARE BASED ON OUT TO OUT DIMENSIONS SHOWN IN BENDING DIAGRAMS AND ARE LISTED FOR FABRICATORS USE. (NEAREST INCH)

ACTUAL LENGTHS - ARE MEASURED ALONG CENTERLINE BAR TO THE NEAREST INCH.

* ALL HOOKS AND BENDS FOR SHAPE NO. 12 - GRADE 40 (ONLY) ARE BASED ON D = 5d.
