	Authorized Representative for this Bid Package who is authorized to sign the KCSCIV Attachment A for this bid.			
Name - Print	Signature	Initials	Date	

Inclusions:	
1	Furnish all labor, equipment, materials and supplies for the bid items listed herein and per the Prime Contract documents / Specifications
2	Payment based on actual quantity/services rendered.
3	This project is a Buy America project and subcontractor is required to submit material certifications.
4	This contract will be subject to a 5% retention until project close out.
5	All mobilizations necessary to complete work in order to maintain project-wide schedule.
6	Provide and maintain continuous access to businesses, homes, parking lots, sidewalks, temporary pedestrian bridges and driveways as required.
7	Coordination with the designer/City of Kansas City/third party utilities/Kansas City Streetcar Constructors including their designated QC Manager(s), technicians and inspectors for all required tests and inspections during installation.
8	Submittals and resubmittals per the contract documents.
9	Compliance with Kansas City Streetcar Constructors Project QA/QC Plan.
10	Compliance with storm water pollution control regulations and/or KCMO standard and best management practices.
11	Contractor's site specific safety plan and supply of MSDS sheets for all products before starting work with specified products.
12	Coordination with Contractor and other subcontractors to complete work in accordance with the Project Schedule.
13	Contract insurances including General Liability, Worker Compensation, Automobile, and Railroad (if applicable) per contract requirements.

INITIAL: _____

DATE: _____

14	Payment and Performance Bonds
15	Street sweeping, general housekeeping of work zones and storage sites.
16	Temporary water and power, contractors on-site yard facility, employee parking as required per scope of work.
17	All trucking, offhaul and fees. Includes water trucks as well.
18	Include any and all applicable taxes.
19	Coordination with track construction and systems.
20	Submittal of Best Management Practices (BMP) and residue disposal plan for slurry and debris containment during construction including identified "no discharge zones." All requirements outlined in the plans are inclusive to the unit prices as listed above.
21	Operations may be suspended by the Engineer during rainfall or freezing temperatures. Provisions may be required, such as heaters, blankets, and tents to maintain the project schedule.
22	Frame and grate modifications including any touch up painting, welding, and shimming.
23	All drilling, dowelling, and epoxy as called out in the project drawings, including any additional as a result of damage during demolition.
24	Item M-9 is for the pipe connection and pressure injected cavities thru the deck and all work under deck. Track drain frame and grate are excluded and will be installed during track construction.
25	Includes all rebar, bolts, plates, washers, pressure injection of cavities, concrete, and joint filler for foundation and barrier
26	Epoxy rebar repairs in accordance with MoDOT Standard Specification Section 710
27	Contractor will be responsible for all railroad coordination, included permits, track flagging, and work plans. Permit fees and track flagger costs will be direct billed against the listed Lump Sum item.
28	Bridge conduits shall include all required expansion conduits, hangers, struts, all thread, boxes, attachments, etc., and coordinate the mandrelling and tagging with mainline ductbank
29	Bridge conduits shall include attachments to encased PVC conduits at bridge side wall.
30	Bridge conduits will include any coring, deck penetrations, nipples, etc required.
31	Bridge conduits include cable trough on Z101B.
32	Coring drilling and installation of negative return conduits on sheet Z103A notes 10 & 11
33	New concrete deck overlay shall be class B-2 concrete. FC' = 4,000 PSI In accordance with section 501 of the MoDOT standard specifications.
Exclusions:	
1	Initial project control survey
2	Quality Control Testing (coordination is required)
3	Traffic Control (other than track flaggers. Track flaggers are included)
4	Track Construction and track concrete encasement
5	Item M-9 track frame and grate.
6	Z103A conduits and boxes other than those listed in inclusion #32
7	Hazardous Waste Removal and Disposal
8	8ft wide concrete track slab to be installed by others.

PAYMENT BOND

Project Number _____

Project Title _____

KNOW ALL MEN BY THESE PRESENTS: That _____, as PRINCIPAL (CONTRACTOR), and _____, (SURETY), licensed to do business as such in the State of Missouri, hereby bind themselves and their respective heirs, executors, administrators, successors, and assigns unto Kansas City, Missouri, a constitutionally chartered municipal corporation, (OWNER), as obligee, in the penal sum of _____ Dollars (\$_____) for the payment whereof CONTRACTOR and SURETY bind themselves, their heirs, executors, administrators, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS,

CONTRACTOR has entered into a contract with OWNER for _____, which Contract, including any present or future amendment thereto, is incorporated herein by reference and is hereinafter referred to as the Contract.

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION is such that, if in connection with the Contract, including all duly authorized modifications thereto, prompt payment shall be made to all laborers, subcontractors, teamsters, truck drivers, owners or other suppliers or for equipment employed on the job, and other claimants, for all labor performed in such work whether done for CONTRACTOR, a subcontractor, SURETY, a completion contractor or otherwise (at the full wage rates required by any law of the United States or of the State of Missouri, where applicable), for services furnished and consumed, for repairs on machinery, for equipment, tools, materials, lubricants, oil, gasoline, water, gas, power, light, heat, oil, telephone service, grain, hay, feed, coal, coke, groceries and foodstuffs, either consumed, rented, used or reasonably required for use in connection with the construction of the work or in the performance of the Contract and all insurance premiums, both for compensation and for all other kinds of insurance on the work, for sales taxes and for royalties in connection with, or incidental to, the completion of the Contract, in all instances whether the claim be directly against CONTRACTOR, against SURETY or its completion contractor, through a subcontractor or otherwise, and, further, if CONTRACTOR shall defend, indemnify and hold harmless OWNER from all such claims, demands or suits by any such person or entity, then this obligation shall be void; otherwise, it shall remain in full force and effect.

Any conditions legally required to be included in a Payment Bond on this Contract, including but not limited to those set out in §107.170 RSMo. are included herein by reference.

SURETY agrees that, in the event that CONTRACTOR fails to make payment of the obligations covered by this Bond, it will do so and, further, that within forty-five (45) days of receiving, at the address given below, a claim hereunder stating the amount claimed and the basis for the claim in reasonable detail, it (a) will send an answer to the claimant, with a copy to OWNER stating the amounts that are undisputed and the basis for challenging any amounts that are disputed, and (b) will pay any amounts that are undisputed. The amount of this Bond shall be reduced by and to the extent of any payment or payments made in good faith hereunder.

While this Bond is in force, it may be sued on at the instance of any party to whom any such payment is due, in the name of OWNER to the use for such party. OWNER shall not be liable for the payment of any costs or expenses of any such suit.

No suit shall be commenced or pursued hereunder other than in a state court of competent jurisdiction in Jackson, Clay or Platte County, Missouri, or in the United States District Court for the Western District of Missouri.

WAIVER. That SURETY, for value received, hereby expressly agrees that no change, extension of time, alteration or addition to the terms of the Contract or to the Work to be performed thereunder, shall in any way affect the obligations of this Bond; and it does hereby waive notice of any such change, extension of time, or alteration or addition to the terms of the Contract or the Work to be performed thereunder.

IN WITNESS WHEREOF, the above parties have executed this instrument the _____ day of _____, 200__.

Project Number _____ Project Title _____

Prime Contractor _____

STATE OF _____)
) SS
COUNTY OF _____)

I, _____, of lawful age and upon my oath state as follows:

1. This Affidavit is made for the purpose of complying with the provisions of the Disadvantaged Business Enterprise (DBE) submittal requirements on the above project and the DBE Program and is given on behalf of the Bidder/Proposer listed below. It sets out the Bidder/Proposer's commitment to utilize DBE contractors on the project.
2. The project goal for DBE Participation is _____ %. Bidder/Proposer assures that it will utilize a minimum of the following percentages of DBE participation in the above project:

BIDDER/PROPOSER DBE PARTICIPATION COMMITMENT: _____%

3. The following are the DBE subcontractors whose utilization Bidder/Proposer warrants will meet or exceed the above-listed Bidder/Proposer Participation. Bidder/Proposer warrants that it will utilize the DBE subcontractors to provide the goods/services described in the applicable Letter(s) of Intent to Subcontract, (copies of which shall collectively be deemed incorporated herein). ***All firms must currently be certified with the Missouri Regional Certification Committee (MRCC) under 49 CFR Part 26. List additional DBEs, if any, on an additional page and attach to this form.***

- a. Name of DBE Firm _____ % of Work _____
Address _____
Telephone No. _____
Taxpayer ID No. _____
- b. Name of DBE Firm _____ % of Work _____
Address _____
Telephone No. _____
Taxpayer ID No. _____
- c. Name of DBE Firm _____ % of Work _____
Address _____
Telephone No. _____
Taxpayer ID No. _____

TOTAL DBE \$ AMOUNT ON PROJECT: \$ _____

TOTAL DBE % COMMITTED TO PROJECT: _____ %

4. Bidder/Proposer acknowledges that the monetary amount to be paid each listed DBE for their work, and which is approved herein, is an amount corresponding to the percentage of the total contract amount allocable to each listed DBE as calculated in the **Schedule of Participation by Contractor and Subcontractors** form. Bidder/Proposer further acknowledges that this amount may be higher than the subcontract amount listed therein as change orders and/or amendments changing the total contract amount may correspondingly increase the amount of compensation due a DBE for purposes of meeting or exceeding the Bidder/Proposer participation commitment.
5. Bidder/Proposer acknowledges that it is responsible for considering the effect that any change orders and/or amendments changing the total contract amount may have on its ability to meet or exceed the Bidder/Proposer participation. Bidder/Proposer further acknowledges that it is responsible for submitting a **Request for Modification or Substitution** form if it will be unable to meet or exceed the Bidder/Proposer participation set forth herein.
6. If Bidder/Proposer has not achieved the DBE commitment set for this Project, Bidder/Proposer hereby requests a waiver of the DBE commitment that Bidder/Proposer has failed to achieve.
7. Bidder/Proposer will present documentation of its good faith efforts, a narrative summary detailing its efforts and the reasons its efforts were unsuccessful when requested by CITY OF KANSAS CITY MISSOURI.
8. I hereby certify that I am authorized to sign this Affidavit on behalf of the Bidder/Proposer named below and who shall abide by the terms set forth herein:

**KANSAS CITY MISSOURI
REQUEST FOR MODIFICATION, REPLACEMENT OR TERMINATION
OF DISADVANTAGED BUSINESS ENTERPRISE (DBE)
PROJECT PARTICIPATION**

This form must be submitted to request substitutions for a DBE listed in the Schedule of Participation By Contractor and Subcontractors form submitted as part of Contractor's Bid Documents as amended by any Change Orders or previously approved Requests for Modification/Substitution. This executed document shall be an amendment to the Contractor's DBE utilization plan.

CONTRACTOR _____

ADDRESS _____

PROJECT NUMBER AND NAME _____

1. As the duly authorized representative of the above Contractor, I am authorized to request this substitution or modification on behalf of the Contractor and hereby request that the Kansas City MISSOURI (CITY OF KANSAS CITY MISSOURI) recommend or approve:

_____ SUBSTITUTION OF DBE FIRM

Name of Current DBE Firm To Be Removed _____

Scope of Work _____

Contracted Amount \$ _____ Amount of Work Completed To Date \$ _____

Name of Proposed DBE Firm _____

Scope of Work _____

Amount of Proposed Work \$ _____ Date Scheduled To Begin Work _____

_____ MODIFICATION OF THE AMOUNT OF WORK BY DBE FIRM

Name of DBE Firm _____

Current % of Contract Commitment _____ Changed % of Contract Commitment _____

2. This Substitution/Modification is necessary because (check all applicable)

_____ The DBE Subcontractor failed or refuses to execute a written contract.

_____ The DBE Subcontractor failed or refuses to perform the work of its normal industry standards without good cause and that failure or refusal of the DBE is not a result of bad faith or discriminatory action of the Contractor.

_____ The DBE Subcontractor failed or refuses to comply with reasonable, non-discriminatory bonding requirements.

_____ The DBE Subcontractor has become bankrupt, insolvent, or exhibits credit unworthiness (supporting documentation is attached).

_____ The DBE Subcontractor has committed a material default or breach of its contract.

_____ The DBE Subcontractor has voluntarily withdrawn from the project (DBE's written notice of withdrawal is attached).

_____ The DBE owner has died or has become disabled and is unable to complete its work on this Project.

_____ A Change Order and/or Amendment of the Project was issued that modifies the amount Contractor is to be compensated and correspondingly impacts the amount of compensation due to the DBE Subcontractor.

3. I affirm that written notice has been given to the DBE Subcontractor of Contractor's intent to request a substitution or modification (copy attached) and the DBE Subcontractor has been given five (5) business days to respond to the notice (a copy of DBE firm's response is attached).

EXCEPTION: If required in a particular case as a matter of public necessity (e.g., safety) the response period may be shortened.

4. The following is a narrative summary of Contractor's good faith efforts (as listed in Part A of the City's Bid Documents) exhausted in attempts to substitute the DBE firm named above with other qualified, certified DBE firms for the listed scope of work or any other scope of work on the project. Supporting documentation is attached.

5. Contractor hereby affirms that it has not intentionally attempted to evade the requirements of the Contract or the DBE Program and it is in CITY OF KANSAS CITY MISSOURI's best interest to approve this Request for Substitution or Modification. Additional documentation will be presented when requested by CITY OF KANSAS CITY MISSOURI in order to make its determination.

On this _____ day of _____, 20____, before me appeared _____, personally known by me or otherwise proven to be the person whose name is subscribed on this affidavit and who, being duly sworn, stated as follows: I am the _____ (title) of _____ (business entity) and I am duly authorized, directed or empowered to act with full authority on behalf of the business entity in making this affidavit.

I hereby swear or affirm that the business entity does not knowingly employ any person in connection with the contracted services who does not have the legal right or authorization under federal law to work in the United States as defined in 8 U.S.C. §1324a(h)(3).

I hereby additionally swear or affirm that the business entity is enrolled in an electronic verification of work program operated by the United States Department of Homeland Security (E-Verify) or an equivalent federal work authorization program operated by the United States Department of Homeland Security to verify information of newly hired employees, under the Immigration Reform and Control Act of 1986, and that the business entity will participate in said program with respect to any person hired to perform any work in connection with the contracted services.

I have attached hereto documentation sufficient to establish the business entity's enrollment and participation in the required electronic verification of work program. I shall require that the language of this affidavit be included in the award documents for all sub-contracts exceeding \$5,000.00 at all tiers and that all subcontractors at all tiers shall affirm and provide documentation accordingly.

**ATTACHMENT H-1
CERTIFICATION OF PRIMARY PARTICIPANT
REGARDING DEBARMENT, SUSPENSION, AND OTHER
RESPONSIBILITY MATTERS**

The Primary Participant (applicant for an FTA grant or cooperative agreement, or potential Contractor for a major third party contract), _____ certifies to the best of its knowledge and belief, that it and its principals:

1. Are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Federal department or agency;
2. Have not within a three-year period preceding this bid, been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, or receiving stolen property;
3. Are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated in paragraph (2) of this certification; and
4. Have not within a three-year period preceding this application/bid had one or more public transactions (Federal, State or local) terminated for cause or default.

If the primary participant (applicant for FTA grant, or cooperative agreement, or potential third party Contractor) is unable to certify to any of the statements in this certification, the participant shall attach an explanation to this certification.

THE PRIMARY PARTICIPANT (APPLICANT FOR AN FTA GRANT OR COOPERATIVE AGREEMENT, OR POTENTIAL CONTRACTOR FOR A MAJOR THIRD PARTY CONTRACT), _____ CERTIFIES OR AFFIRMS THE TRUTHFULNESS AND ACCURACY OF THE CONTENTS OF THE STATEMENTS SUBMITTED ON OR WITH THIS CERTIFICATION AND UNDERSTANDS THAT THE PROVISIONS OF 31 U.S.C., SECTIONS 3801 *ET SEQ.* ARE APPLICABLE THERETO.

ATTACHMENT I-1
CERTIFICATION OF PRIMARY PARTICIPANTS
REGARDING RESTRICTIONS ON LOBBYING

I, _____ (Name and Title of Grantee Official or Potential Contractor for a Major Third Party Contract), hereby certify on behalf of _____
_____ (Name of Grantee or Potential Contractor) that:

1. No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.
2. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.
3. The undersigned shall require that the language of this certification be included in the award documents for all sub-awards at all tiers (including subcontracts, sub-grants, and contracts under grants, loans, and cooperative agreements) and that all sub-recipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance is placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by Section 1352, Title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than \$10,000 and not more than \$100,000 for each such failure.

EXEMPTION FROM MISSOURI SALES AND USE TAX ON PURCHASES

Issued to:

CITY OF KANSAS CITY
414 E 12TH ST 3RD FLOOR
KANSAS CITY MO 64106

Missouri Tax ID
Number: 12490466

Effective Date:
07/11/2002

Your application for sales/use tax exempt status has been approved pursuant to Section 144.030.1, RSMo. This letter is issued as documentation of your exempt status.

Purchases by your Agency are not subject to sales or use tax if within the conduct of your Agency's exempt functions and activities. When purchasing with this exemption, furnish all sellers or vendors a copy of this letter. This exemption may not be used by individuals making personal purchases.

A contractor may purchase and pay for construction materials exempt from sales tax when fulfilling a contract with your Agency only if your Agency issues a project exemption certificate and the contractor makes purchases in compliance with the provisions of Section 144.062, RSMo.

Sales by your Agency are subject to all applicable state and local sales taxes. If you engage in the business of selling tangible personal property or taxable services at retail, you must obtain a Missouri Retail Sales Tax License and collect and remit sales tax.

This is a continuing exemption subject to legislative changes and review by the Director of Revenue. If your Agency ceases to qualify as an exempt entity, this exemption will cease to be valid. This exemption is not assignable or transferable. It is an exemption from sales and use taxes only and is not an exemption from real or personal property tax.

Any alteration to this exemption letter renders it invalid.

If you have any questions regarding the use of this letter, please contact the Division of Taxation and Collection, P.O. Box 3300, Jefferson City, MO 65105-3300, phone 573-751-2836.

GENERAL CONDITIONS TABLE OF CONTENTS

ARTICLE 1 DEFINITIONS AND TERMINOLOGY

- 1.01 Defined Terms
- 1.02 Terminology

ARTICLE 2 PRELIMINARY MATTERS

- 2.01 Delivery of Bonds
- 2.02 Evidence of Insurance
- 2.03 Copies of Documents
- 2.04 Commencement of Contract Times; Notice to Proceed
- 2.05 Starting the Work
- 2.06 Before Starting Construction
- 2.07 Initially Acceptable Schedules

ARTICLE 3 CONTRACT DOCUMENTS: INTENT, AMENDING, REUSE

- 3.01 Intent
- 3.02 Reference to Standards and Specifications of Technical Societies
- 3.03 Reporting and Resolving Discrepancies
- 3.04 Amending and Supplementing Contract Documents
- 3.05 Reuse of Documents

ARTICLE 4 AVAILABILITY OF LANDS; SUBSURFACE AND PHYSICAL CONDITIONS; REFERENCE POINTS

- 4.01 Availability of Lands
- 4.02 Subsurface and Physical Conditions
- 4.03 Differing Subsurface or Physical Conditions
- 4.04. Physical Conditions - Underground Facilities
- 4.05 Reference Points
- 4.06 Asbestos, Lead-Based Paint, PCBs, Petroleum, Hazardous Waste or Radioactive Material

ARTICLE 5 BONDS AND INSURANCE

- 5.01 Performance, Payment and Other Bonds
- 5.02 Licensed Sureties and Insurers
- 5.03 Certificates of Insurance
- 5.04 CONTRACTOR's Liability Insurance
- 5.05 CITY's Liability Insurance
- 5.06 Property Insurance
- 5.07 Waiver of Rights
- 5.08 Receipt and Application of Insurance Proceeds
- 5.09 Partial Utilization - Property Insurance

ARTICLE 6 CONTRACTOR'S RESPONSIBILITIES

- 6.01 Indemnification

- 6.02 Supervision and Superintendence
- 6.03 Services, Working Hours, Labor, Materials and Equipment
- 6.04 Progress Schedule
- 6.05 Recovery Schedules
- 6.06 Substitutes and "Or-Equal" Items
- 6.07 Concerning Subcontractors, Suppliers and Others
- 6.08 Patent Fees and Royalties
- 6.09 Permits
- 6.10 Laws or Regulations
- 6.11 Taxes
- 6.12 Use of Site and Other Areas
- 6.13 Record Documents
- 6.14 Safety and Protection
- 6.15 Safety Representative
- 6.16 Hazard Communication Programs
- 6.17 Emergencies
- 6.18 Shop Drawings and Samples
- 6.19 Continuing the Work
- 6.20 CONTRACTOR's General Warranty and Guarantee

ARTICLE 7 OTHER WORK

- 7.01 Related Work at Site
- 7.02 Coordination

ARTICLE 8 CITY's RESPONSIBILITIES

- 8.01 Communications to CONTRACTOR
- 8.02 Replacement of DESIGN PROFESSIONAL
- 8.03 Furnish Data and Prompt Payment
- 8.04 Lands and Easements; Reports and Tests
- 8.05 Insurance
- 8.06 Change Orders
- 8.07 Inspections, Tests and Approvals
- 8.08 Limitations on CITY's Responsibilities
- 8.09 Undisclosed Hazardous Environmental Condition
- 8.10 Evidence of Financial Arrangements
- 8.11 CITY's Representative
- 8.12 Visits to Site

ARTICLE 9 DESIGN PROFESSIONAL's STATUS DURING CONSTRUCTION

- 9.01 General Scope of DESIGN PROFESSIONAL's Duties
- 9.02 Resident Project Representative
- 9.03 Clarifications and Interpretations
- 9.04 Rejecting Defective Work
- 9.05 Shop Drawings, Change Orders and Payments
- 9.06 Determinations for Unit Prices
- 9.07 Decisions on Requirements of Contract Documents and Acceptability of Work
- 9.08 Limitations on DESIGN PROFESSIONAL's Authority and Responsibilities

ARTICLE 10 CHANGES IN THE WORK

- 10.01 Authorized Changes in the Work
- 10.02 Unauthorized Changes in the Work
- 10.03 Execution of Change Orders
- 10.04 Notification to Surety

ARTICLE 11 CHANGE OF CONTRACT PRICE

- 11.01 Change of Contract Price
- 11.02 Cost of the Work
- 11.03 Cash Allowances
- 11.04 Unit Price Work
- 11.05 Dispute Resolution

ARTICLE 12 CONTRACT TIMES

- 12.01 Time of the Essence
- 12.02 Change of Contract Times
- 12.03 Proof Required To Justify An Extension of Time For Excusable and Compensable Delays
- 12.04 Delays Within CONTRACTOR's Control
- 12.05 Delays Beyond the CITY's and CONTRACTOR's Control
- 12.06 Delay Damages
- 12.07 Dispute Resolution

ARTICLE 13 TESTS AND INSPECTIONS; CORRECTION, REMOVAL OR ACCEPTANCE OF DEFECTIVE WORK

- 13.01 Access to Work
- 13.02 Tests and Inspections
- 13.03 Notice of Defects
- 13.04 Uncovering Work
- 13.05 CITY May Stop the Work
- 13.06 Correction or Removal of Defective Work
- 13.07 Correction Period
- 13.08 Acceptance of Defective Work
- 13.09 CITY May Correct Defective Work

ARTICLE 14 PAYMENTS TO CONTRACTOR AND COMPLETION

- 14.01 Schedule of Values
- 14.02 Application for Progress Payments
- 14.03 Contractor's Warranty of Title
- 14.04 Substantial Completion
- 14.05 Partial Utilization
- 14.06 Final Inspection
- 14.07 Final Payment
- 14.08 Final Completion Delayed
- 14.09 Waiver of Claims
- 14.10 Completion of Work by City

ARTICLE 15 SUSPENSION OF WORK AND TERMINATION

- 15.01 CITY May Suspend Work
- 15.02 CITY May Terminate for Default
- 15.03 CITY May Terminate for Convenience

ARTICLE 16 CLAIMS AND DISPUTES

- 16.01 Definition
- 16.02 Written Notice and Burden of Proof
- 16.03 Time Limits on Claims
- 16.04 Continuing Contract Performance
- 16.05 Injury or Damage to Person or Property
- 16.06 Initial Resolution of Claims and Disputes

16.07 Final Resolution of Claims and Disputes

ARTICLE 17 MISCELLANEOUS

17.01 Giving Notice

17.02 Computation of Times

17.03 Cumulative Remedies

17.04 Survival of Obligations

17.05 Controlling Law

ARTICLE 1 DEFINITIONS AND TERMINOLOGY

1.01 Defined Terms

A. Wherever used in these General Conditions or in the other Contract Documents, the following terms have the meanings indicated which are applicable to both the singular and plural thereof:

1. Addenda - Written or graphic instruments issued prior to the opening of Bids that clarify, correct or change the Bidding Requirements or the Contract Documents.

2. Agreement—The written Contract between CITY and CONTRACTOR governing the Work to be performed; other Contract Documents are attached to the Agreement and made a part thereof as provided therein.

3. Application for Payment—The form accepted by CITY's Representative which is to be used by CONTRACTOR in requesting progress or final payments and which is to be accompanied by such supporting documentation as is required by the Contract Documents.

4. Asbestos - Any material that contains more than one percent (1%) Asbestos and is friable or is releasing Asbestos fibers into the air above current action levels established by the United States Occupational Safety and Health Administration.

5. Bid- The offer or proposal of the Bidder submitted on the Bid Form/Contract setting forth the prices for the Work to be performed. A Bidder's Bid becomes a Contract with CITY if the CITY executes the Bid Form/Contract submitted by Bidder. If the CITY executes the Bid Form/Contract submitted by Bidder, the term "Bidder" shall mean CONTRACTOR.

6. Bidder- One who submits a Bid directly to CITY, as distinct from a sub-bidder who submits a bid to a Bidder. If the CITY executes the Bid Form/Contract submitted by Bidder, the term "Bidder" shall mean CONTRACTOR in both the Bidding Documents and Contract Documents unless the context clearly indicates otherwise.

7. Bidding Documents- The advertisement or Invitation to Bid, Instructions to Bidders, the Bid Form/Contract, and the proposed Contract Documents (including all Addenda issued prior to receipt of Bids).

8. Bidding Requirements- The advertisement or invitation to bid, Instructions to Bidders, Bid security, and the Bid Form/Contract with any supplements.

9. Bonds- Payment Bond and Performance and Maintenance Bond and other instruments of security.

10. Calendar Day- Any day shown on the calendar, including Saturdays, Sundays, and holidays.

11. Change Order- A written document issued by CITY that authorizes an addition, deletion or revision in the Work, or an adjustment in the Contract Price or the Contract Times, issued on or after the Effective Date of the Contract.

12. CITY/OWNER- Kansas City, Missouri, a constitutionally chartered municipal corporation, with which CONTRACTOR has entered into the Contract and for whom the Work is to be provided.

13. CITY's Representative- Person or agency designated to act for the Director as provided in these Contract Documents.

14. Consultant- Person, firm or corporation having a contract with CITY or DESIGN PROFESSIONAL to furnish services as an independent professional associate or Consultant with respect to the Project and who's identified as such in the Supplementary Conditions.

The Consultant(s) is identified and their seals affixed on the Certification Page(s). The certifications describe the respective responsibilities for the Drawings and Specifications prepared by the Consultant(s) and are incorporated into this Contract.

15. Contract- The entire and integrated written agreement between CITY and CONTRACTOR concerning the Work that incorporates all Contract Documents. The Bid Form/Contract submitted by Bidder is the Contract between CITY and CONTRACTOR upon execution by CITY. The Contract supersedes prior negotiations, representations, or agreements, whether written or oral.

16. Contract Documents- The Contract Documents establish the rights and obligations of the parties and include the Contract, Addenda (which pertain to the Contract Documents), CONTRACTOR's Bid Form/Contract (including documentation accompanying the Bid and any post Bid documentation submitted prior to the Notice of Intent to Contract), the HRD Construction Project Instructions, the Contractor's Utilization Plan/Request for Waiver, the Notice to Proceed, the Bonds, these General Conditions, the Supplementary Conditions, the Specifications and the Drawings as the same are more specifically identified in the Project Manual and the certification page(s) of the DESIGN PROFESSIONAL and Consultant(s), together with approved project baseline schedule and amendments thereto and all Written Amendments, Change Orders, Work Change Directives, and DESIGN PROFESSIONAL's written interpretations and clarifications issued on or after the Effective Date of the Contract, and approved Shop Drawings. Reports and drawings of subsurface and physical conditions are not Contract Documents. Only printed or hard copies of the items listed in this Paragraph are Contract Documents. Files in electronic media format of text, data, graphics, and the like that may be furnished by CITY to CONTRACTOR are not Contract Documents, except project schedules submitted by CONTRACTOR and approved by CITY.

17. Contract Price- The money payable by CITY to CONTRACTOR for completion of the Work in accordance with the Contract Documents as stated in the Agreement.

18. Contract Times- The number of days or the dates stated in the Supplementary Conditions: (a) to achieve Substantial Completion, and (b) to complete the Work so that it is ready for final payment as evidenced by CITY's Representative's written recommendation of final payment.

19. CONTRACTOR- The person, firm, partnership, company, corporation or association licensed or otherwise authorized by law to do business in Missouri, with whom CITY has entered into the Agreement.

20. Day- Shall constitute a Calendar Day.

21. DESIGN PROFESSIONAL- Architect, Engineer or other licensed professional who is either employed by or has contracted with CITY to serve in a design capacity and whose Consultants, members, partners, employees or agents have prepared and sealed the Drawings and Specifications.

The DESIGN PROFESSIONAL(s) is identified and their seals affixed on the Certification Page(s). The certifications describe the respective responsibilities for the Drawings and Specifications prepared by the DESIGN PROFESSIONAL and are incorporated into this Contract.

22. DESIGN PROFESSIONAL's Project Representative- The authorized representative of DESIGN PROFESSIONAL who may be assigned to the Site or any part thereof.

23. Director- The term Director shall mean the duly appointed executive officer of a department of City who is empowered by the City Charter or by the City Council to enter into a contract on behalf of City, or to grant a permit for improvements to land owned by City. A Director is authorized to delegate this authority to a City employee so designated in writing.

24. Drawings- The drawings which graphically show the scope, extent and character of the Work to be furnished and performed by CONTRACTOR and which have been prepared by DESIGN PROFESSIONAL and are included in the Contract Documents. Shop Drawings are not Drawings as so defined.

25. Effective Date of the Contract- The date indicated in the Contract on which it becomes effective, but if no such date is indicated it means the date on which the Contract is fully executed by CITY.

26. General Requirements- Sections of Division 1 of the Specifications. The General Requirements pertain to all sections of the Specifications.

27. Hazardous Environmental Condition- The presence at the Site of Asbestos, Lead-Based Paint, PCBs, Petroleum, Hazardous Waste, or Radioactive Material in such quantities or circumstances that may present a substantial danger to persons or property exposed thereto in connection with the Work.

28. Hazardous Waste- The term Hazardous Waste shall have the meaning provided in Section 1004 of the Solid Waste Disposal Act (42 USC Section 6903) as amended from time to time.

29. Laws or Regulations- Any and all applicable laws, rules, regulations, ordinances, codes and orders of any and all governmental bodies, agencies, authorities and courts having jurisdiction.

30. Lead-Based Paint- Any paint, varnish, stain, or other applied coating that has one (1) mg or more of lead per square centimeter. The terms "leaded paint" and "lead-containing paint" are synonymous with Lead-Based Paint.

31. Liens- Liens, charges, security interests or encumbrances upon real property or personal property.

32. Milestone- A principal event specified in the Contract Documents relating to an intermediate completion date or time prior to Substantial Completion of all the Work.

33. Notice of Intent to Contract- The written notice by CITY to the apparent successful Bidder stating that upon compliance by that apparent successful Bidder with the conditions in the Bid Documents enumerated, within the time specified, and upon enactment of an appropriate ordinance or resolution, CITY will sign and deliver the Contract.

34. Notice to Proceed- A written notice given by CITY to CONTRACTOR fixing the date on which the Contract Times will commence to run and on which CONTRACTOR shall start to perform CONTRACTOR's obligations under the Contract Documents.

35. Partial Utilization- Use by CITY of a substantially completed part of the Work for the purpose for which it is intended (or a related purpose) prior to Substantial Completion of all the Work.

36. PCBs- Polychlorinated biphenyls.

37. Petroleum- Petroleum, including crude oil or any fraction thereof which is liquid at standard conditions of temperature and pressure (60 degrees Fahrenheit and 14.7 pounds per square inch absolute), such as oil, petroleum, fuel oil, oil sludge, oil refuse, gasoline, kerosene, and oil mixed with other non-Hazardous Wastes and crude oils.

38. Project- The total construction of which the Work to be provided under the Contract Documents may be the whole, or a part as indicated elsewhere in the Contract Documents.

39. Project Manual- The documentary information prepared for bidding and constructing the Work. A listing of the contents of the Project Manual may be issued in one or more volumes and is contained in the table(s) of contents.

40. Radioactive Material- Source, special nuclear, or byproduct material as defined by the Atomic Energy Act of 1954 (42 USC Section 2011 et seq.) as amended from time to time.

41. Samples- Physical examples of materials, equipment, or workmanship that are representative of some portion of the Work and which establish the standards by which such portion of the Work will be judged.

42. Shop Drawings- All drawings, diagrams, illustrations, schedules and other data or information which are specifically prepared or assembled by or for CONTRACTOR and submitted by CONTRACTOR to illustrate some portion of the Work.

43. Site- Lands or areas indicated in the Contract Documents as being furnished by CITY upon which the Work is to be performed, including rights-of-way and easements for access thereto, and such other lands furnished by CITY which are designated for the use of CONTRACTOR.

44. Specifications- Those portions of the Contract Documents consisting of written technical descriptions of materials, equipment, construction systems, standards and workmanship as applied to the Work and certain administrative details applicable thereto.

45. Subcontractor- Any individual, firm, partnership, company, corporation or association licensed or otherwise authorized by law to do business in Missouri, to whom CONTRACTOR, with written notification to CITY, has entered into an agreement to perform a part of the Work.

46. Substantial Completion- When Work (or a specified part thereof) has progressed to the point where, in the opinion of DESIGN PROFESSIONAL as evidenced by DESIGN PROFESSIONAL's definitive certificate of Substantial Completion, it is sufficiently complete, in accordance with the Contract Documents, so that the Work (or specified part) can be utilized for the purposes for which it is intended. The terms "substantially complete" and "substantially completed" as applied to all or part of the Work refer to Substantial Completion thereof.

47. Supplementary Conditions- The part of the Contract Documents which amends and/or supplements these General Conditions.

48. Supplier- A manufacturer, fabricator, supplier, distributor, materialman or vendor having a direct contract with CONTRACTOR or with any Subcontractor to furnish materials or equipment to be incorporated into the Work by CONTRACTOR or any Subcontractor.

49. Underground Facilities- All pipelines, conduits, ducts, cables, wires, manholes, vaults, tanks, tunnels or other such facilities or attachments, and any encasements containing such facilities which have been installed underground to furnish any of the following services or materials: electricity, gases, steam, liquid petroleum products, telephone or other communications, cable television, water, wastewater, storm water, other liquids or chemicals, or traffic or other control systems.

50. Unit Price Work- Work to be paid for on the basis of unit prices.

51. Work- The entire completed construction or the various separately identifiable parts thereof required to be furnished under the Contract Documents. Work includes and is the result of performing or furnishing labor, and furnishing and incorporating material and equipment into the construction, and furnishing documents, all as required by the Contract Documents.

52. Work Change Directive- A written directive to CONTRACTOR, issued on or after the Effective Date of the Contract, signed by CITY and recommended by DESIGN PROFESSIONAL, ordering an addition, deletion or revision in the Work, or responding to differing or unforeseen subsurface or physical conditions under which the Work is to be performed, or to emergencies. A Work Change Directive will not change the Contract Price or the Contract Times, but is evidence that the parties expect that the change directed or

documented by a Work Change Directive will be incorporated in a subsequently issued Change Order following negotiations by the parties as to its effect, if any, on the Contract Price or Contract Times.

53. Work Day - Any day during which the CONTRACTOR is able to work a period of six (6) hours or more. Days that are not Work Days are days during which the CONTRACTOR is unable to work for a period of six (6) hours by reason of strikes, boycotts, labor disputes, embargoes, unusual delays in transportation or shortage of material, acts of God, acts of the public enemy, acts of superior governmental authority, weather conditions, riots, rebellion, sabotage, or any other circumstances for which CONTRACTOR is not responsible or which is not within its control. Saturdays, Sundays, and holidays on which the CONTRACTOR's forces engage in Work requiring the presence of an inspector, will be considered as Work Days.

54. Written Amendment- A written statement modifying the Contract Documents, signed by CITY and CONTRACTOR on or after the Effective Date of the Contract and normally dealing with the non-engineering or non-technical rather than strictly construction-related aspects of the Contract Documents.

1.02 Terminology

A. Intent of Certain Terms or Adjectives

1. Whenever in the Contract Documents the terms "as ordered," "as directed," "as required," "as allowed," "as approved," or terms of like effect or import are used, or the adjectives "reasonable," "suitable," "acceptable," "proper" or "satisfactory" or adjectives of like effect or import are used to describe a requirement, direction, review or judgment of DESIGN PROFESSIONAL as to the Work, it is intended that such requirement, direction, review or judgment will be solely to evaluate, in general, the completed Work for compliance with the requirements of and information in the Contract Documents and conformance with the design concept of the completed Project as a functioning whole as shown or indicated in the Contract Documents (unless there is a specific statement indicating otherwise). The use of any such term or adjective shall not be effective to assign to DESIGN PROFESSIONAL any duty or authority to supervise or direct the furnishing or performance of the Work or any duty or authority to undertake responsibility contrary to the provisions of Paragraph 9.08 or any other provision of the Contract Documents.

B. Defective

1. The word "defective," when modifying the word "Work," refers to Work that is unsatisfactory, faulty or deficient, in that it does not conform to the Contract Documents, or does not meet the requirements of any inspection, reference standard, test or approval referred to in the Contract Documents, or has been damaged prior to CITY 's Representative's recommendation of final payment (unless responsibility for the protection thereof has been assumed by CITY at Substantial Completion in accordance with Paragraph 14.04 or 14.05).

C. Furnish, Install, Perform, Provide

1. The word "furnish," when used in connection with services, materials, or equipment, shall mean to supply and deliver said services, materials, or equipment to the Site (or some other specified location) ready for use or installation and in usable or operable condition.

2. The word "install," when used in connection with services, materials, or equipment, shall mean to put into use or place in final position said services, materials, or equipment complete and ready for intended use.

3. The words "perform" or "provide," when used in connection with services, materials, or equipment, shall mean to furnish and install said services, materials, or equipment complete and ready for intended use.

4. When “furnish,” “install,” “perform,” or “provide” is not used in connection with services, materials, or equipment in a context clearly requiring an obligation of CONTRACTOR, “provide” is implied.

D. Unless stated otherwise in the Contract Documents, words and phrases which have a well-known technical or construction industry or trade meanings are used in the Contract Documents in accordance with such recognized meaning.

ARTICLE 2 PRELIMINARY MATTERS

2.01 Delivery of Bonds

A. CONTRACTOR shall deliver to CITY such Bonds as CONTRACTOR may be required to furnish.

2.02 Evidence of Insurance

A. CONTRACTOR shall deliver to CITY certificates of insurance or other evidence of insurance that CITY may request, which CONTRACTOR is required to purchase and maintain in accordance with Article 5 or any other applicable provision in the Contract Documents.

2.03 Copies of Documents

A. CITY shall furnish to CONTRACTOR one (1) copy of the Drawings and Specifications, including addenda.

2.04 Commencement of Contract Times; Notice to Proceed

A. The Contract Times will commence to run on the date indicated in the Notice to Proceed.

2.05 Starting the Work

A. CONTRACTOR shall start to perform the Work on the date when the Contract Times commence to run, but no Work shall be done at the Site prior to the date on which the Contract Times commence to run, unless otherwise indicated in the Notice to Proceed.

2.06 Before Starting Construction

A. CONTRACTOR's Review of Contract Documents: Before undertaking each part of the Work, CONTRACTOR shall carefully study and compare the Contract Documents and check and verify pertinent figures shown thereon and all applicable field measurements. CONTRACTOR shall promptly report in writing to DESIGN PROFESSIONAL any conflict, error, ambiguity or discrepancy which CONTRACTOR may discover and shall obtain a written interpretation or clarification from DESIGN PROFESSIONAL before proceeding with any Work affected thereby. CONTRACTOR shall not be liable to CITY or DESIGN PROFESSIONAL for failure to report any conflict, error, ambiguity or discrepancy in the Contract Documents, unless CONTRACTOR knew or reasonably should have known thereof.

B. Preliminary Schedules: Within ten (10) days after the Effective Date of the Contract, or on such later date as CITY's Representative shall provide in writing, CONTRACTOR shall submit to CITY's Representative for review:

1. Preliminary Project Schedule: CONTRACTOR shall submit a proposed project schedule for CITY's acceptance. The proposed project schedule shall include a detailed and comprehensive construction schedule utilizing a critical path method diagram network that (a) shows all major procurement and construction elements and phases of the Project; (b) breaks down each element or phase by trade; (c) shows early and late starts so that all float time will be accurately identified; (d) all other activities necessary for the timely completion of the Project in accordance with the scheduled dates for Substantial and Final Completion; and (e) highlights the project's critical path. CITY's acceptance is expressly limited to CITY's acknowledgement that, based upon CITY's limited review, the dates of Substantial

Completion and Milestone dates are acceptable. After final acceptance of the preliminary project schedule by the CITY, it shall be considered the project baseline schedule pursuant to Paragraph 2.07(B).

2. Preliminary schedule of Shop Drawings and Sample submittals which will list each required submittal and the times for submitting, reviewing and processing such submittal; and

3. Preliminary 01290.02 Schedule of Values for all of the Work which will include quantities and prices of items which when added together equals the Contract Price and will subdivide the Work into component parts in sufficient detail to serve as the basis for progress payments during performance of the Work. Such prices will include an appropriate amount of overhead and profit applicable to each item of Work.

C. Preconstruction Conference: Before any Work at the Site may be started, a conference attended by CONTRACTOR, DESIGN PROFESSIONAL and others, as appropriate, will be scheduled by CITY's Representative to establish a working understanding among the parties as to the Work and to discuss the schedules referred to in Paragraph 2.06 B, procedures for handling Shop Drawings and other submittals, processing Applications for Payment, maintaining required records, Claims process, dispute resolution or any other applicable provisions of the Contract Documents.

2.07 Acceptable Schedules

A. Acceptable schedule: The Contractor shall update and submit to the CITY for review the preliminary schedule within seven (7) Calendar Days after the Notice to Proceed.

1. The CITY shall review and make any necessary comments and/or adjustments to the updated preliminary schedule. The Contractor shall incorporate the CITY's comments and resubmit the updated preliminary schedule within seven (7) Calendar Days from receipt of the CITY's comments.

B. Project Baseline Schedule: The accepted updated preliminary schedule shall be considered the project baseline schedule and shall be used by the CONTRACTOR for planning, scheduling, managing, and executing the Work. The project baseline schedule shall not be changed without the written consent of CITY. The project baseline schedule may be further modified by the Supplemental Conditions.

C. CONTRACTOR's schedule of values will be acceptable to CITY's Representative as to form and substance if it provides a reasonable allocation of the Contract Price to component parts of the Work.

ARTICLE 3 CONTRACT DOCUMENTS : INTENT, AMENDING, REUSE

3.01 Intent

A. The Contract Documents comprise the entire Contract between CITY and CONTRACTOR concerning the Work.

B. It is the intent of the Contract Documents to describe a functionally complete Project (or part thereof) to be constructed in accordance with the Contract Documents. Any Work, materials or equipment that may reasonably be inferred from the Contract Documents or from prevailing custom or trade usage as being required to produce the intended result will be furnished and performed whether or not specifically called for at no additional cost to CITY. Clarifications and interpretations of the Contract Documents shall be issued by DESIGN PROFESSIONAL as provided in Paragraph 9.03.

C. Correlation and intent of documents: The Drawings and Specifications are intended to supplement each other. Any Work shown on the Drawings and not mentioned in the Specifications (or vice versa) shall be as binding and shall be completed the same as if mentioned or shown on both. In the event of conflicts or discrepancies among the Contract Documents, interpretations will be based on the following priorities:

1. Change Orders and Written Amendments
2. Project Baseline Schedule Requirements
3. Approved Shop Drawings
4. Addenda, with those of later date having precedence over those of earlier date
5. The Supplementary Conditions
6. The General Conditions
7. Drawings and Specifications

D. In the case of an inconsistency between Drawings and Specifications, the requirements of the Specifications shall govern. If Drawings are in conflict, larger scale details shall govern over smaller or no-scale Drawings. If Specification sections are in conflict with each other, the conflict shall be resolved by DESIGN PROFESSIONAL in accordance with reasonable interpretation of such documents.

E. The general character of the detailed Work is shown on the Drawings, but minor modifications may be made in the full size or scale details. Where the word "similar" occurs on the Drawings, it shall be used in its general sense and not as meaning identical, and all details shall be worked out in relation to their location and their connection to the other parts of the Work. Where on any Drawings a portion of the Work is drawn out and the remainder is indicated in outline, the parts drawn out shall apply also to all other like portions of the Work. Where ornaments or other details are indicated by starting only, such details shall be continued throughout the courses or parts in which they occur and shall also apply to all other similar parts in the Work, unless otherwise indicated.

3.02 Reference to Standards and Specifications of Technical Societies

A. Reference to standards, specifications, manuals or codes of any technical society, organization or association, or to Laws or Regulations, whether such reference be specific or by implication, shall mean the latest standard, specification, manual, code or Laws or Regulations in effect at the time of opening of Bids (or on the date of CONTRACTOR's proposal if there are no Bids), except as may be otherwise specifically stated in the Contract Documents.

1. No provision of any such standard, specification, manual, code or instruction of Supplier shall be effective to change the duties or responsibilities of CITY, CONTRACTOR or DESIGN PROFESSIONAL, or any of their Subcontractors, Consultants, agents, or employees from those set forth in the Contract Documents, nor shall it be effective to assign to CITY or DESIGN PROFESSIONAL or any of their Consultants, agents or employees any duty or authority to supervise or direct the furnishing or performance of the Work or any duty or authority to undertake responsibility inconsistent with the provisions of the Contract Documents.

3.03 Reporting and Resolving Discrepancies

A. Reporting Discrepancies: If, during the performance of the Work, CONTRACTOR discovers any conflict, error, ambiguity or discrepancy within the Contract Documents or between the Contract Documents and any provision of any Laws or Regulations applicable to the performance of the Work or of any standard, specification, manual, code or any instruction of any Supplier referred to in Paragraph 6.07, CONTRACTOR shall report it immediately to DESIGN PROFESSIONAL in writing. CONTRACTOR shall not proceed with the Work affected thereby (except in an emergency as authorized by Paragraph 6.17) until an amendment or supplement to the Contract Documents has been issued by one of the methods indicated in Paragraph 3.04; provided, however, that CONTRACTOR shall not be liable to CITY or DESIGN PROFESSIONAL for failure to report any such conflict, error, ambiguity or discrepancy unless CONTRACTOR knew or reasonably should have known thereof.

B. Resolving Discrepancies. The provisions of the Contract Documents shall take precedence in resolving any conflict, error, ambiguity or discrepancy between the provisions of the Contract Documents and:

1. the provisions of any standard, specification, manual, code or instruction (whether or not specifically incorporated by reference in the Contract Documents); or
2. the provisions of any Laws or Regulations applicable to the performance of the Work.

3.04 Amending and Supplementing Contract Documents

A. The Contract Documents may be amended to provide for additions, deletions and revisions in the Work or to modify the terms and conditions thereof in one or more of the following ways:

1. a Written Amendment or
2. a Change Order (pursuant to Article 10), whether pursuant to a Work Change Directive or otherwise.

B. The requirements of the Contract Documents may be supplemented and minor variations and deviations in the Work may be authorized, in one or more of the following ways

1. DESIGN PROFESSIONAL's approval of a Shop Drawing or Sample (pursuant to Paragraph 6.18), or
2. DESIGN PROFESSIONAL's written interpretation or clarification (pursuant to Paragraph 9.03).

3.05 Reuse of Documents

A. CONTRACTOR and any Subcontractor or Supplier or other person or organization performing or furnishing any of the Work under this Contract:

1. shall not have or acquire any title to or ownership rights in any of the Drawings, Specifications or other documents (or copies of any thereof) prepared by or bearing the seal of DESIGN PROFESSIONAL or Consultant, and
2. shall not reuse any of such Drawings, Specifications, other documents or copies thereof on extensions of the Project or any other project without written consent of CITY, and of DESIGN PROFESSIONAL or Consultant, as applicable, and specific written verification or adaptation by DESIGN PROFESSIONAL or Consultant.

This prohibition will survive final payment, completion, and acceptance of the Work, or termination or completion of the Contract. Nothing herein shall preclude CONTRACTOR from retaining copies of the Contract Documents for record purposes.

ARTICLE 4 AVAILABILITY OF LANDS; SUBSURFACE AND PHYSICAL CONDITIONS; REFERENCE POINTS

4.01 Availability of Lands

A. CITY shall furnish the Site. CITY shall identify any encumbrances or restrictions not of general application but specifically related to use of lands so furnished with which CONTRACTOR will have to comply in performing the Work. Easements for permanent structures or permanent changes in existing facilities will be obtained and paid for by CITY, unless otherwise provided in the Contract Documents. If CONTRACTOR and CITY are unable to agree on entitlement to or the amount or extent of any adjustments in the Contract Price or the Contract Times or both as a result of any delay in CITY's furnishing these lands, rights-of-way or easements, CONTRACTOR may make a Claim as provided in Article 16. CONTRACTOR shall provide for all additional lands and access thereto that may be required for temporary construction facilities or storage of materials and equipment.

4.02 Subsurface and Physical Conditions

A. Reports and Drawings: Reference is made to the Supplementary Conditions for identification of:

1. Subsurface Conditions: Those reports of explorations and tests of subsurface conditions at or contiguous to the Site that have been utilized by DESIGN PROFESSIONAL in preparing the Contract Documents; and
2. Physical Conditions: Those drawings of physical conditions in or relating to existing surface or subsurface structures at or contiguous to the Site (except Underground Facilities) that have been utilized by DESIGN PROFESSIONAL in preparing the Contract Documents.

B. Limited Reliance by CONTRACTOR on Technical Data Authorized: CONTRACTOR may rely upon the general accuracy of the technical data contained in reports and drawings of subsurface or physical conditions, but such reports and drawings are not Contract Documents. The technical data is identified in the Supplementary Conditions. Except for reliance on such technical data, CONTRACTOR may not rely upon or make any Claim against CITY, DESIGN PROFESSIONAL or any Consultant with respect to:

1. the completeness of such reports and drawings for CONTRACTOR's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences and procedures of construction to be employed by CONTRACTOR and safety precautions and programs incident thereto; or
2. other data, interpretations, opinions and information contained in such reports or shown or indicated in such drawings, or
3. any CONTRACTOR interpretation of or conclusion drawn from any technical data or any such other data, interpretations, opinions or information.

4.03 Differing Subsurface or Physical Conditions

A. Notice of Differing Subsurface or Physical Conditions. If CONTRACTOR believes that any subsurface or physical condition at or contiguous to the Site that is uncovered or revealed either:

1. is of such a nature as to establish that any technical data on which CONTRACTOR is entitled to rely as provided in Paragraphs 4.02 A and 4.02 B is materially inaccurate; or
2. is of such a nature as to require a change in the Contract Documents; or
3. differs materially from that shown or indicated in the Contract Documents; or
4. is of an unusual nature, and differs materially from conditions ordinarily encountered and generally recognized as inherent in work of the character provided for in the Contract Documents; then CONTRACTOR shall, promptly after becoming aware thereof and before further disturbing the subsurface or physical conditions or performing any Work in connection therewith (except in an emergency as required by Paragraph 6.17), notify CITY and DESIGN PROFESSIONAL in writing about such condition(s). CONTRACTOR shall not further disturb such conditions or perform any Work in connection therewith (except as aforesaid) until receipt of written order to do so.

B. DESIGN PROFESSIONAL's Review: After receipt of notice as required by Paragraph 4.03 A, DESIGN PROFESSIONAL will promptly review the pertinent conditions, determine the necessity for CITY to obtain additional exploration or tests with respect thereto and notify CITY in writing (with a copy to CONTRACTOR) of DESIGN PROFESSIONAL's findings and conclusions.

C. Possible Contract Documents Change: If CITY concludes that a change in the Contract Documents is required as a result of a condition that meets one or more of the categories in Paragraph 4.03 A, a Work Change Directive or a Change Order will be issued as provided in Article 10 to reflect and document the consequences of such change.

D. Possible Price or Times Adjustments: An equitable adjustment in the Contract Price or in the Contract Times, or both, will be allowed to the extent that the existence of a subsurface or physical condition causes an increase or decrease in CONTRACTOR's cost of, or time required for, performance of the Work; subject, however, to the following:

1. the condition must meet any one or more of the categories described in Paragraphs 4.03 A.1 through 4.03 A.4, inclusive;
2. a change in the Contract Documents pursuant to Paragraph 4.03 C will not be an automatic authorization of, nor a condition precedent to, entitlement to any such adjustments;
3. with respect to Work that is paid for on a unit price basis, any adjustment in Contract Price will be subject to the provisions of Paragraphs 9.06 and 11.04; and
4. CONTRACTOR shall not be entitled to any adjustment in the Contract Price or Contract Times if;
 - a. CONTRACTOR knew, or by the exercise of ordinary care could have known, of such conditions at the time CONTRACTOR made a final commitment to CITY with respect to Contract Price and Contract Times by the submission of a Bid; or
 - b. the existence of such condition could reasonably have been discovered or revealed as a result of any examination, investigation, exploration, test or study of the Site and contiguous areas required by the Bidding Requirements or Contract Documents to be conducted by or for CONTRACTOR prior to CONTRACTOR's making such final commitment; or
 - c. CONTRACTOR failed to give the written notice as required by Paragraph 4.03 A.

E. If CITY and CONTRACTOR are unable to agree on entitlement to, or magnitude of, an equitable adjustment in the Contract Price pursuant to Article 11 and/or Contract Times pursuant to Article 12, a Claim may be made therefore as provided in Article 16. However, CITY, DESIGN PROFESSIONAL and Consultants shall not be liable to CONTRACTOR for any costs, losses or damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all other dispute resolution costs) sustained by CONTRACTOR on or in connection with any other project or anticipated project.

4.04. Physical Conditions – Underground Facilities

A. Shown or Indicated: The information and data shown or indicated in the Contract Documents with respect to existing Underground Facilities at or contiguous to the Site is based on information and data furnished to CITY or DESIGN PROFESSIONAL by the owners of such Underground Facilities or by others.

1. CITY and DESIGN PROFESSIONAL shall not be responsible for the accuracy or completeness of any such information or data; and
2. The cost of all of the following will be included in the Contract Price and CONTRACTOR shall have full responsibility for:
 - a. reviewing and checking all such information and data,
 - b. locating all Underground Facilities shown or indicated in the Contract Documents,
 - c. coordination of the Work with the owners of such Underground Facilities during construction, and
 - d. the safety and protection of all such Underground Facilities as provided in Paragraph 6.14 and repairing any damage thereto resulting from the Work.

B. Not Shown or Indicated: If an Underground Facility is uncovered or revealed at or contiguous to the Site, and was not shown or indicated in the Contract Documents, or was

shown or indicated incorrectly in the Contract Documents, CONTRACTOR shall, promptly after becoming aware thereof and before further disturbing conditions affected thereby or performing any Work in connection therewith (except in an emergency as required by Paragraph 6.17), identify the owner of such Underground Facility and give written notice to that owner and to CITY and DESIGN PROFESSIONAL.

C. DESIGN PROFESSIONAL's Review: After receipt of notice as required by Paragraph 4.04 B, DESIGN PROFESSIONAL will promptly review the consequences of the existence of the Underground Facility and notify CITY in writing (with a copy to CONTRACTOR) of DESIGN PROFESSIONAL's findings and conclusions.

D. Possible Contract Documents Change: If CITY concludes that a change in the Contract Documents is required as a result of the existence of an Underground Facility that either was not shown, or was shown incorrectly, in the Contract Documents, a Work Change Directive or Change Order will be issued as provided in Article 10 to reflect and document the consequences of such change.

E. Possible Price or Times Adjustments: An equitable adjustment in the Contract Price or in the Contract Times, or both, will be allowed to the extent that the existence of the Underground Facility causes an increase or decrease in CONTRACTOR's cost of, or time required for, performance of the Work; subject, however, to the following:

1. a change in the Contract documents pursuant to Paragraph 4.04 D will not be an automatic authorization of, nor a condition precedent to, entitlement to any such adjustments;
2. with respect to Work that is paid for on a unit price basis, any adjustment in Contract Price will be subject to the provisions of Paragraphs 9.06 and 11.04; and
3. CONTRACTOR shall not be entitled to any adjustment in the Contract Price or Contract Times if;
 - a. CONTRACTOR knew, or by the exercise of ordinary care could have known, of the existence of the Underground Facility at the time CONTRACTOR made a final commitment to CITY with respect to Contract Price and Contract Times by the submission of a Bid; or
 - b. the existence of the Underground Facility could reasonably have been discovered or revealed as a result of any examination, investigation, exploration, test or study of the Site and contiguous areas required by the Bidding Requirements or Contract Documents to be conducted by or for CONTRACTOR prior to CONTRACTOR's making such final commitment; or
 - c. CONTRACTOR failed to give the written notice as required by Paragraph 4.04 B.

F. If CITY and CONTRACTOR are unable to agree on entitlement to, or magnitude of, an equitable adjustment in the Contract Price pursuant to Article 11 and/or Contract Times pursuant Article 12, a Claim may be made therefore as provided in Article 16. However, CITY, DESIGN PROFESSIONAL and Consultants shall not be liable to CONTRACTOR for any costs, losses or damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all other dispute resolution costs) sustained by CONTRACTOR on or in connection with any other project or anticipated project.

4.05 Reference Points

A. CITY shall provide engineering surveys to establish reference points for construction that in DESIGN PROFESSIONAL's judgment are necessary to enable CONTRACTOR to proceed with the Work. CONTRACTOR shall be responsible for laying out the Work, shall protect and preserve the established reference points and property monuments, and shall make no changes or relocations without the prior written approval of CITY. CONTRACTOR shall report to DESIGN PROFESSIONAL whenever any reference point or property monument is lost or destroyed or requires relocation because of necessary changes in grades or locations, and shall be

responsible for the accurate replacement or relocation of such reference points or property monuments by professionally qualified personnel.

4.06 Asbestos, Lead-Based Paint, PCBs, Petroleum, Hazardous Waste or Radioactive Material

A. Reports and Drawings: Reference is made to the Supplementary Conditions for the identification of those reports and drawings relating to a Hazardous Environmental Condition identified at the Site, if any, that have been utilized by the DESIGN PROFESSIONAL in the preparation of the Contract Documents.

B. Limited Reliance by CONTRACTOR on Technical Data Authorized: CONTRACTOR may rely upon the general accuracy of the technical data contained in reports and drawings relating to a Hazardous Environmental Condition at the Site, but such reports and drawings are not Contract Documents. Such technical data is identified in the Supplementary Conditions. Except for such reliance on such technical data, CONTRACTOR may not rely upon or make any Claim against CITY, DESIGN PROFESSIONAL or any Consultant with respect to:

1. the completeness of such reports and drawings for CONTRACTOR's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences and procedures of construction to be employed by CONTRACTOR and safety precautions and programs incident thereto; or
2. other data, interpretations, opinions and information contained in such reports or shown or indicated in such drawings; or
3. any CONTRACTOR interpretation of or conclusion drawn from any technical data or any such other data, interpretations, opinions or information.

C. CONTRACTOR shall not be responsible for any Hazardous Environmental Condition uncovered or revealed at the Site which was not shown or indicated in Drawings or Specifications or identified in the Contract Documents to be within the scope of the Work. CONTRACTOR shall be responsible for all Hazardous Environmental Conditions created with any materials brought to the Site by CONTRACTOR, Subcontractors, Suppliers, or anyone else for whom CONTRACTOR is responsible. CONTRACTOR shall not be entitled to an extension of the Contract Times or an increase in the Contract Price if CONTRACTOR, Subcontractor, Supplier or anyone for whom CONTRACTOR is responsible created any Hazardous Environmental Condition at the Site or in connection with the Work.

D. If CONTRACTOR encounters a Hazardous Environmental Condition at the Site or if CONTRACTOR or anyone for whom CONTRACTOR is responsible creates a Hazardous Environmental Condition at the Site, CONTRACTOR shall immediately:

1. secure or otherwise isolate such condition;
2. stop all Work in connection with such condition and in any area affected thereby (except in an emergency as required by Paragraph 6. 15); and
3. notify CITY and DESIGN PROFESSIONAL (and promptly thereafter confirm such notice in writing). CITY shall promptly consult with DESIGN PROFESSIONAL concerning the necessity for CITY to retain a qualified expert to evaluate such condition or take corrective action, if any.

E. CONTRACTOR shall neither resume Work nor be required to resume Work in connection with such condition or in any affected area until after CITY has obtained any required permits related thereto and delivered to CONTRACTOR written notice:

1. specifying that such condition and any affected area is or has been rendered safe for the resumption of Work; or
2. specifying any special conditions under which such Work may be resumed safely. If CITY and CONTRACTOR cannot agree as to entitlement to or on the amount or extent, if any, of any adjustment in Contract Price pursuant to Article 11 and/or Contract Times to

pursuant to Article 12 as a result of such Work stoppage or such special conditions under which Work is agreed to be resumed by CONTRACTOR, a Claim may be made therefore as provided in Article 16.

F. If after receipt of written notice as required in Paragraph 4.06 E, CONTRACTOR does not agree to resume Work based on a reasonable belief it is unsafe, or does not agree to resume such Work under special conditions specified in the notice, then CITY may order the portion of the Work that is in the area affected by such condition to be deleted from the Work. If CITY and CONTRACTOR cannot agree as to entitlement to or magnitude of an equitable adjustment in Contract Price pursuant to Article 11 and/or Contract Times pursuant to Article 12 as a result of deleting such portion of the Work, then a Claim may be made therefore as provided in Article 16. CITY may have such deleted portion of the Work performed by CITY's own forces or others in accordance with Article 7.

G. The provisions of Paragraphs 4.02, 4.03, and 4.04 are not intended to apply to a Hazardous Environmental Condition uncovered or revealed at the Site.

H. All materials used, whether new or salvaged, shall be asbestos-free materials. CONTRACTOR shall immediately call to the attention of the CITY's Representative any specified material or product which the CONTRACTOR knows or suspects to contain asbestos, whether new or salvaged.

ARTICLE 5 BONDS AND INSURANCE

5.01 Performance, Payment and Other Bonds

A. CONTRACTOR shall furnish Performance and Maintenance and Payment Bonds, each in an amount at least equal to the Contract Price, as set out in the Contract Documents, as security for the faithful performance and payment of all CONTRACTOR's obligations under the Contract Documents. These Bonds shall remain in effect at least until one (1) year after the date when final payment of the Contract becomes due, except as provided otherwise by Laws or Regulations or by the Contract Documents. CONTRACTOR shall also furnish such other Bonds as are required by the Supplementary Conditions.

B. All Bonds shall be in the form prescribed by the Contract Documents except as provided otherwise by Laws or Regulations. A certified copy of the agent's authority to act must accompany all Bonds signed by an agent.

C. If the surety on any Bond furnished by CONTRACTOR is declared bankrupt or becomes insolvent, or its right to do business is terminated in any state where any part of the Project is located or it ceases to meet the requirement of Paragraph 5.01 B, CONTRACTOR shall within twenty (20) days thereafter substitute another Bond and surety, both of which must be acceptable to CITY.

5.02 Licensed Sureties and Insurers

A. All Bonds and insurance required by the Contract Documents to be purchased and maintained by CITY or CONTRACTOR shall be obtained from surety or insurance companies that are duly licensed in the State of Missouri and in the jurisdiction in which the Project is located, if not in Missouri, to issue Bonds or insurance policies for the limits and coverages so required. All surety and insurance companies shall hold an A.M. Best rating of A-, V, or better.

5.03 Certificates of Insurance

A. CONTRACTOR shall deliver to CITY and DESIGN PROFESSIONAL, prior to the start of any Work at the Project Site, properly completed certificates of insurance or other evidence that the required insurance is in full force and effect, in a form acceptable to CITY. The receipt or acceptance of a certificate of insurance that does not incorporate the required terms and coverage shall not constitute a waiver by the City of the insurance requirements contained in the Contract Documents.

B. All policies of insurance (and the certificates or other evidence thereof) required to be purchased and maintained by CONTRACTOR in accordance with Paragraphs 5.04 and 5.06 will contain waiver provisions in accordance with Paragraph 5.07 A. The certificates of insurance will contain a provision stating that should any of the policies described in the certificate be cancelled before the expiration date thereof, notice will be delivered in accordance with the policy provisions.

C. If the coverage afforded is cancelled or changed or its renewal is refused, CONTRACTOR shall give at least thirty (30) days prior written notice to CITY and to each other additional insured to whom a certificate of insurance has been issued.

5.04 CONTRACTOR's Liability Insurance

A. CONTRACTOR shall purchase and maintain such liability and other insurance as is appropriate for the Work being performed and furnished, and will provide protection from claims set forth below which may arise out of or result from CONTRACTOR's performance and furnishing of the Work and CONTRACTOR's other obligations under the Contract Documents, whether it is to be performed or furnished by CONTRACTOR, any Subcontractor or Supplier, or by anyone directly or indirectly employed by any of them to perform or furnish any of the Work, or by anyone for whose acts any of them may be liable:

1. claims under workers' compensation, disability benefits and other similar employee benefit acts;
2. claims for damages because of bodily injury, occupational sickness or disease, or death of CONTRACTOR's employees;
3. claims for damages because of bodily injury, sickness or disease, or death of any person other than CONTRACTOR's employees;
4. claims for damages insured by customary personal injury liability coverage;
5. claims for damages, other than to the Work itself, because of injury to or destruction of tangible property wherever located, including loss of use resulting therefore; and
6. claims for damages because of bodily injury or death of any person or property damage arising out of the ownership, maintenance or use of any motor vehicle.

B. The policies of insurance so required by Paragraph 5.04 A, to be purchased and maintained shall:

1. with respect to insurance required by Paragraphs 5.04 A.3 through 5.04 A.5 inclusive, include as additional insureds (subject to any customary exclusion for professional liability) CITY, DESIGN PROFESSIONAL, Consultants and any other individuals or entities identified in the Supplementary Conditions to be listed as additional insureds, and include coverage for the respective officers, directors, partners, employees, agents, and other consultants and subcontractors of each and any of all such additional insureds, and the insurance afforded to these additional insureds shall provide primary coverage for all claims covered thereby;
2. include at least the specific coverages and be written for not less than the limits of liability provided in Paragraph 5.04 C or required by Laws or Regulations, whichever is greater;
3. include completed operations insurance;
4. include contractual liability insurance covering CONTRACTOR's indemnity obligations;
5. remain in effect at least until final payment and at all times thereafter when CONTRACTOR may be correcting, removing or replacing defective Work in accordance with Paragraphs 13.06 and 13.07;

6. with respect to completed operations insurance, and any insurance coverage written on a claims-made basis, remain in effect for at least two (2) years after final payment (and CONTRACTOR shall furnish CITY and each other additional insured identified in the Supplementary Conditions to whom a certificate of insurance has been issued evidence satisfactory to CITY and any such additional insured of continuation of such insurance);

7. contain a cross-liability or severability of interest clause or endorsement. Insurance covering the specified additional insureds shall be primary insurance, and all other insurance carried by the additional insureds shall be excess insurance;

8. with respect to commercial automobile liability, commercial general liability, and umbrella liability insurance, CONTRACTOR shall require its insurance carrier(s) to waive all rights of subrogation against CITY, and CITY's officers, directors, partners, employees and agents; and

9. contain a provision or endorsement that the costs of providing the insureds a defense and appeal, including attorneys fees, as insureds, shall be supplementary and shall not be included as part of the policy limits but shall remain the insurer's responsibility.

C. Specific policies of insurance required by this Paragraph 5.04 shall include:

1. Workers' Compensation and Employers' Liability Insurance. This insurance shall protect CONTRACTOR against all claims under applicable state workers' compensation laws, including coverage as necessary for the benefits provided under the United States Longshoremen's and Harbor Workers' Act and the Jones Act. CONTRACTOR shall also be protected against claims for injury, disease, or death of employees which, for any reason, may not fall within the provisions of workers' compensation laws. This policy shall include an "all states" or "other states" endorsement. The liability limits shall be not less than:

Workers' Compensation: Statutory

Employers' liability: \$1,000,000 each occurrence

2. Commercial Automobile Liability Insurance. This insurance shall be occurrence type written in comprehensive form and shall protect CONTRACTOR, and CITY, DESIGN PROFESSIONAL and Consultants against all claims for injuries to members of the public and damage to property of others arising from the use of motor vehicles, either on or off the Project Site, whether they are owned, non-owned, or hired.

The liability limits shall be not less than: \$2,000,000

3. Commercial General Liability Insurance. This insurance shall be occurrence type written in comprehensive form acceptable to CITY. This insurance shall protect CONTRACTOR, and CITY, DESIGN PROFESSIONAL and Consultants as additional insureds, against claims arising from injuries, sickness, disease, or death of any person or damage to property arising out of performance of the Work. The policy shall also include coverage for personal injury liability; contractual liability; completed operations and products liability; and for blasting, explosion, and collapse of buildings; and damage to underground property. The liability limits for bodily injury and property damage shall be not less than:

\$2,000,000 combined single limit for each occurrence

\$2,000,000 general aggregate.

4. The insurer's costs of providing the insureds a defense and appeal as additional insureds, including attorney's fees, shall be supplementary and shall not be included as part of the policy limits but shall remain the insurer's separate responsibility.

5.05 CITY's Liability Insurance

A. In addition to the insurance required to be provided by CONTRACTOR under Paragraph 5.04, CITY, at CITY's option, may purchase and maintain at CITY's expense liability insurance

that will protect CITY against claims which may arise from operations under the Contract Documents.

5.06 Property Insurance

A. Unless otherwise provided in the Supplementary Conditions, CONTRACTOR shall purchase and maintain property insurance on the Work at the Site in the amount of the full replacement cost thereof (subject to such deductible amounts as may be provided in the Supplementary Conditions or required by Laws or Regulations). This insurance shall:

1. include the interests of CITY, CONTRACTOR, Subcontractors, and any other persons or entities identified in the Supplementary Conditions, each of whom is deemed to have an insurable interest and shall be listed as an insured or additional insured;
2. be written on a Builder's Risk "all-risk" or open peril or special causes of loss policy form that shall at least include insurance for physical loss or damage to the Work, temporary buildings, falsework and materials and equipment in transit, and shall insure against at least the following perils or causes of loss: fire, lightning, extended coverage, theft, vandalism and malicious mischief, earthquake, tornado, collapse, debris removal, demolition occasioned by enforcement of Laws or Regulations, water damage, damage caused by frost and freezing, and acts of God;
3. be maintained in effect until final payment is made unless otherwise agreed to in writing by CITY with thirty (30) days written notice to each other additional insured to whom a certificate of insurance has been issued.

B. CITY shall not be responsible for purchasing and maintaining any property insurance to protect the interests of CONTRACTOR, Subcontractors or others involved in the Work to the extent of any deductible amounts. The risk of loss within the deductible amounts will be borne by CONTRACTOR, Subcontractor or others suffering any such loss and if any of them wishes property insurance coverage within the limits of such amounts, each may purchase and maintain it at the purchaser's own expense.

5.07 Waiver of Rights

A. CITY and CONTRACTOR intend that all policies purchased in accordance with Paragraphs 5.04 and 5.06 will protect CITY, CONTRACTOR, DESIGN PROFESSIONAL Consultants, Subcontractors, and all other persons or entities identified in the Supplementary Conditions to be listed as insureds or additional insureds in such policies and will provide primary coverage for all losses and damages caused by the perils covered thereby. All such policies shall contain provisions to the effect that in the event of payment of any loss or damage the insurers will have no rights of recovery against any of the insureds or additional insureds thereunder. CITY and CONTRACTOR waive all rights against each other and their respective officers, directors, partners, employees and agents for all losses and damages caused by, arising out of or resulting from any of the perils covered by such policies and any other property insurance applicable to the Work, but only to the extent of insurance coverage; and, in addition, waive all such rights against DESIGN PROFESSIONAL, Consultants, Subcontractors, and all other persons or entities identified in the Supplementary Conditions to be listed as insureds or additional insureds (and the officers, directors, partners, employees, agents, and other consultants and subcontractors of any and each of them) under such policies for losses and damages so caused and covered by insurance. None of the above waivers shall extend to the rights that any party making such waiver may have to the proceeds of insurance held by CITY as trustee or otherwise payable under any policy so issued. None of the above waivers shall apply if specifically in conflict with Laws and Regulations.

5.08 Receipt and Application of Insurance Proceeds

A. Any insured loss under the property insurance will be adjusted with CITY and made payable to CITY as fiduciary for the insureds, as their interests may appear, subject to the requirements of any indentures of indebtedness entered into by CITY.

B. CITY as fiduciary shall have power to adjust and settle any loss with the insurers unless one of the parties in interest shall object to CITY's exercise of this power in writing within fifteen (15) days after the occurrence of loss. If such objection is made, CITY as fiduciary shall make settlement with the insurers in accordance with such agreement as the parties in interest may reach. If no such agreement among the parties in interest is reached, CITY as fiduciary shall adjust and settle the loss with the insurers.

5.09 Partial Utilization – Property Insurance

A. If CITY finds it necessary to occupy or use a portion or portions of the Work prior to Substantial Completion of all the Work, such use or occupancy may be accomplished in accordance with Paragraph 14.05; provided that no such use or occupancy shall commence before the insurers providing the property insurance have acknowledged notice thereof and in writing effected any changes in coverage necessitated thereby. The insurers providing the property insurance shall consent by endorsement on the policy or policies, but the property insurance shall not be canceled or permitted to lapse on account of any such partial use or occupancy.

ARTICLE 6 CONTRACTOR'S RESPONSIBILITIES

6.01 Indemnification

A. For purposes of this Paragraph 6.01 only, the following terms shall have the meanings listed:

1. Claims means all claims, damages, liability, losses, costs and expenses, including court costs and reasonable attorneys' fees, including attorney's fees incurred by the City in the enforcement of this indemnity obligation.

2. CONTRACTOR'S Agents means CONTRACTOR's officers, employees, sub-consultants, subcontractors, successors, assigns, invitees, and other agents.

3. CITY means CITY, its Program Manager/Construction Advisor and any of their agents, officials, officers, employees and program managers or construction advisors.

B. CONTRACTOR's obligations under this Paragraph with respect to indemnification for acts or omissions, including negligence, of CITY, shall be limited to the coverage and limits of insurance that CONTRACTOR is required to procure and maintain under this Contract. CONTRACTOR affirms that it has had the opportunity to recover the costs of the liability insurance required in this Contract in its contract price.

C. CONTRACTOR shall defend, indemnify and hold harmless CITY from and against all Claims arising out of or resulting from all acts or omissions in connection with this Contract caused in whole or in part by CONTRACTOR or CONTRACTOR's Agents, regardless of whether or not caused in part by any act or omission, including negligence, of OWNER.

D. In any and all Claims against CITY, DESIGN PROFESSIONAL, CONSULTANT, or any of their respective agents, officers, directors or employees by any employee (or the survivor or personal representative of such employee) of CONTRACTOR, any Subcontractor, any Supplier, any person or organization directly or indirectly employed by any of them to perform or furnish any of the Work, or anyone for whose acts any of them may be liable, the indemnification obligation under Paragraph 6.01 C shall not be limited in any way by any limitation on the amount or type of damages, compensation or benefits payable by or for CONTRACTOR or any such Subcontractor, Supplier or other person or organization under workers' compensation acts, disability benefit acts or other employee benefit acts.

E. The indemnification obligations of CONTRACTOR under Paragraph 6.01 C shall not extend to liability arising out of, resulting from, or caused by the professional negligence, errors or omissions of DESIGN PROFESSIONAL, CONSULTANT, or any of their respective agents, officers, directors or employees.

6.02 Supervision and Superintendence

A. CONTRACTOR shall supervise, inspect and direct the Work competently and efficiently, devoting such attention thereto and applying such skills and expertise as may be necessary to perform the Work in accordance with the Contract Documents. CONTRACTOR shall be solely responsible for the means, methods, techniques, sequences and procedures of construction, but CONTRACTOR shall not be responsible for the negligence of others in the design or specification of a specific means, method, technique, sequence or procedure of construction which is shown or indicated in and expressly required by the Contract Documents. CONTRACTOR shall be responsible to see that the completed Work complies accurately with the Contract Documents.

B. At all times during the progress of the Work, CONTRACTOR shall assign a competent resident superintendent of the Work, who shall not be replaced without written request to and approval by CITY except under extraordinary circumstances. The superintendent will be CONTRACTOR's representative at the Site and shall have authority to act on behalf of CONTRACTOR. All communications given to or received from the superintendent shall be binding on CONTRACTOR.

C. If it is determined to be in the best interest of the Work, CONTRACTOR shall replace the project manager, resident superintendent or any other employee of the CONTRACTOR, Subcontractors, Suppliers or other persons or organizations performing or furnishing any of the Work on the project upon written request by the CITY.

6.03 Services, Working Hours, Labor, Materials and Equipment

A. CONTRACTOR shall provide competent, suitably qualified personnel to survey, lay out and construct or perform the Work as required by the Contract Documents. CONTRACTOR shall at all times maintain good discipline and order at the Site. Except as otherwise required for the safety or protection of persons or the Work or property at the Site or adjacent thereto, and except as otherwise indicated in the Contract Documents, all Work at the Site shall be performed during regular working hours. CONTRACTOR shall not permit overtime work or the performance of Work on Saturday, Sunday or any legal holiday without CITY's written consent given after prior written notice to DESIGN PROFESSIONAL.

B. Unless otherwise specified in Division 1, General Requirements, CONTRACTOR shall furnish and assume full responsibility for all services, materials, equipment, labor, transportation, construction equipment and machinery, tools, appliances, fuel, power, light, heat, telephone, water, sanitary facilities, temporary facilities and all other facilities and incidentals necessary for the furnishing, performance, testing, start-up and completion of the Work.

C. All materials and equipment shall be of good quality and new, except as otherwise provided in the Contract Documents. All warranties and guarantees specifically called for by the Specifications shall expressly run to the benefit of CITY. If required by DESIGN PROFESSIONAL, CONTRACTOR shall furnish satisfactory evidence (including reports of required tests) as to the source, kind, and quality of materials and equipment. All materials and equipment shall be stored, applied, installed, connected, erected, used, cleaned and conditioned in accordance with instructions of the applicable Supplier, except as otherwise provided in the Contract Documents.

D. It is the policy of the CITY that any manufactured goods or commodities used or supplied in the performance of this Contract and any subcontract hereto shall be manufactured or produced in the United States whenever possible.

6.04 Progress Schedule

A. CONTRACTOR shall adhere to the progress schedule established in accordance with Article 2 as it may be adjusted from time to time as provided below:

1. CONTRACTOR shall provide, at least once every thirty (30) calendar days, updated information on the project schedule, including thirty (30) day look ahead schedules, projected variances per event category and per Subcontractor, identification of all variances and calculation of the number of Days difference between the as-built critical path and the project schedule critical path

2. CONTRACTOR shall, with each application for payment, provide completed monthly updated status report for the previous month on the project schedule and updated information indicating as-built and as-planned conditions. The updated information on the project schedule shall not modify any Milestone dates in the project schedule that CITY has previously approved. The updated information required is a condition precedent to payment pursuant to paragraph 14.02 and shall include at a minimum:

- a. a concise statement of the outlook for meeting project schedule dates and the reasons for any change in outlook from the previous report;
- b. a review of any significant technical problems encountered during the month;
- c. an explanation of any corrective action taken or proposed; and
- d. a summary of any Claims anticipated by CONTRACTOR with respect to the Work, including the anticipated costs and schedule impacts of any such Claims.

6.05 Recovery Schedules

A. If the CONTRACTOR should:

1. fail, refuse or neglect to supply a sufficient number of workers or to deliver the materials or equipment with such promptness as to prevent the delay in the progress of the Work;

2. fail in any respect to commence and diligently prosecute the Work in accordance with the approved baseline project schedule in order to achieve substantial completion;

3. fail to commence, prosecute, finish, deliver or install the different portions of the Work on time as specified in the approved baseline project schedule; or

4. fail in the performance of any of the material covenants of the Contract Documents;

CITY shall have the right to direct the CONTRACTOR, upon seven (7) calendar days notice, to prepare a written recovery plan, for CITY's approval, to accelerate the Work in order to conform to the approved baseline project schedule, including, without limitation, providing additional labor or expediting delivery of materials, performing overtime or re-sequencing the Work without adjustments to the Contract value. Upon CITY's approval of the recovery plan, CONTRACTOR shall accelerate the Work in accordance with the plan.

B. Proposed recovery schedules shall be submitted to the CITY as a separate project plan for review and approval by CITY prior to incorporation into the approved baseline schedule. The recovery schedule shall be submitted in a format compatible with the baseline schedule format. Each proposed revision shall be submitted as a separate schedule, with the following minimum requirements:

1. A critical path method diagram showing revised and affected activities or Milestones.
2. An activity report for all revised and affected activities or Milestones.

C. Upon acceptance of the recovery schedule by CITY, data shall be added or revised for all new or revised activities and incorporated into the approved baseline project schedule.

6.06 Substitutes and “Or-Equal” Items

A. Materials or equipment: Whenever an item of material or equipment is specified or described in the Contract Documents by using the name of a proprietary item or the name of a particular Supplier, the specification or description is intended to establish the type, function, appearance and quality required. Unless the specification or description contains, or is followed by, words reading that no like, equivalent or ““or-equal”” item or no substitution is permitted, other items of material or equipment or material or equipment of other Suppliers may be submitted to CITY for review by CITY’s Representative under the following circumstances:

1. “Or-Equal”: If, prior to receipt of Bids, Bidder proposes an item of material or equipment as functionally equal to that named and sufficiently similar so that no change in related Work will be required, CITY’s Representative may request DESIGN PROFESSIONAL to consider it as an “or-equal” item. DESIGN PROFESSIONAL will review and recommend the acceptance, or rejection, of the proposed item to the CITY’s Representative. For the purposes of this Paragraph, a proposed item of material or equipment will be considered functionally equal to an item so named if:

a. in the exercise of reasonable judgment DESIGN PROFESSIONAL determines that:

(1) it is at least equal in quality, durability, appearance, strength, and design characteristics; and

(2) it will reliably perform at least equally well the function imposed by the design concept of the completed Project as a functioning whole; and

b. Bidder certifies that:

(1) there is no increase in cost to the CITY; and

(2) it will conform substantially, even with deviations, to the detailed requirements of the item named in the Contract Documents.

If the CITY’s Representative approves the proposed item, it may be accepted by CITY.

2. Substitute Items: If CONTRACTOR proposes an item of material or equipment as a substitute item, then CONTRACTOR shall submit sufficient information as provided below to allow CITY’s Representative to determine that the item of material or equipment proposed is essentially equivalent to that named and an acceptable substitute therefore. The procedure for review by the CITY’s Representative will include the following as supplemented in the General Requirements and as CITY’s Representative may determine is appropriate under the circumstances:

a. Requests for review of proposed substitute items of material or equipment will not be accepted by CITY’s Representative from anyone other than CONTRACTOR.

b. If CONTRACTOR wishes to furnish or use a substitute item of material or equipment, CONTRACTOR shall first make written application to CITY’s Representative for acceptance thereof.

c. In the application, CONTRACTOR shall certify that the proposed substitute will perform adequately the functions and achieve the results called for by the general design, be similar in substance to that specified and be suited to the same use as that specified. The application will state the extent, if any, to which the evaluation and acceptance of the proposed substitute will impact CONTRACTOR’s achievement of Substantial Completion, whether or not acceptance of the substitute for use in the Work will require a change in any of the Contract Documents (or in the provisions of any other direct contract with CITY for work on the Project) to adapt the design to the proposed substitute and whether or not incorporation or use of the substitute in connection with the Work is subject to payment of any license fee or royalty.

d. All variations of the proposed substitute from that specified will be identified in the application and available maintenance, repair and replacement service will be indicated. The application will also contain an itemized estimate of all costs or credits that will result directly or indirectly from acceptance of such substitute, including costs of redesign and claims of other contractors affected by the resulting change, all of which will be considered by CITY's Representative in evaluating the proposed substitute. CITY's Representative may require CONTRACTOR to furnish additional data about the proposed substitute.

If the CITY's Representative approves the proposed item, CITY may accept it.

B. Substitute Construction Methods or Procedures: If a specific means, method, technique, sequence or procedure of construction is shown or indicated in and expressly required by the Contract Documents, CONTRACTOR may furnish or utilize a substitute means, method, technique, sequence or procedure of construction acceptable to DESIGN PROFESSIONAL. CONTRACTOR shall notify CITY and submit sufficient information to allow DESIGN PROFESSIONAL, in DESIGN PROFESSIONAL's sole discretion, to determine that the substitute proposed is equivalent to that expressly called for by the Contract Documents.

C. Expenses: Bidder shall provide all data in support of any "or equal" at Bidder's expense, and CONTRACTOR shall provide all data in support of any proposed substitute at CONTRACTOR's expense.

D. Evaluation: DESIGN PROFESSIONAL and CITY's Representative will be allowed a reasonable time within which to evaluate each proposal or submittal made pursuant to Paragraphs 6.06 A, and 6.06 B. CITY will be the sole judge of acceptability. No "or-equal" or substitute will be ordered, installed or utilized without CITY's prior written acceptance which will be evidenced by either a Change Order or an approved Shop Drawing. CITY may require CONTRACTOR to furnish at CONTRACTOR's expense, a special performance guarantee or other surety with respect to any "or-equal" substitute. DESIGN PROFESSIONAL will record time required by DESIGN PROFESSIONAL and Consultants in evaluating substitutes proposed or submitted by CONTRACTOR pursuant to Paragraphs 6.06 A and 6.06 B and in making changes in the Contract Documents (or in the provisions of any other direct contract with CITY for work on the Project) occasioned thereby. Whether or not CITY accepts a substitute so proposed or submitted by CONTRACTOR, CONTRACTOR shall reimburse CITY for the reasonable charges of DESIGN PROFESSIONAL and Consultants for evaluating each such proposed substitute.

6.07 Concerning Subcontractors, Suppliers and Others

A. CONTRACTOR shall not employ or retain any Subcontractor, Supplier or other person or organization (including those acceptable to CITY as indicated in Paragraph 6.07 B), whether initially or as a substitute, against whom CITY has a reasonable objection, including but not limited to debarment by City or another governmental entity or decertification of the Subcontractor from the City's Minority and Women's Business Enterprise Program as a result of the Subcontractor's failure to comply with any of the requirements of the provisions of Chapter 38 of the City's Code as determined by the Director of the Human Relations Department. Contractor shall insert this provision in any subcontractor agreement associated with this Contract. CONTRACTOR shall not be required to employ any Subcontractor, Supplier or other person or organization to furnish or perform any of the Work against whom CONTRACTOR has reasonable objection. CONTRACTOR shall submit required information for all Subcontractors on Form 01290.09 - Sub-contractor and Major Material Suppliers List, provided in these Contract Documents, prior to Subcontractor beginning Work at the Site.

B. The Supplementary Conditions require the identity of certain Subcontractors, Suppliers or other persons or organizations (including those who are to furnish the principal items of materials or equipment) to be submitted to CITY on or before the date specified in the Supplementary Conditions, for acceptance by CITY. If CONTRACTOR has submitted a list

thereof in accordance with the Supplementary Conditions, CITY may accept (either in writing or by failing to make written objection thereto by the date indicated for acceptance or objection in the Contract Documents) any such Subcontractor, Supplier or other person or organization so identified, or may reject same on the basis of reasonable objection after due investigation, in which case CONTRACTOR shall submit an acceptable replacement for the rejected Subcontractor, Supplier or other person or organization. The Contract Price will be adjusted by the difference in the cost occasioned by such substitution, and an appropriate Change Order will be issued or Written Amendment signed. No acceptance by CITY of any such Subcontractor, Supplier or other person or organization shall constitute a waiver of any right of CITY or DESIGN PROFESSIONAL to reject defective Work.

C. CONTRACTOR shall be fully responsible to CITY for all acts and omissions of the Subcontractors, Suppliers and other persons and organizations performing or furnishing any of the Work under a direct or indirect contract with CONTRACTOR just as CONTRACTOR is responsible for CONTRACTOR's own acts and omissions. Nothing in the Contract Documents shall create for the benefit of any such Subcontractor, Supplier or other person or organization any contractual relationship between CITY or DESIGN PROFESSIONAL and any such Subcontractor, Supplier or other person or organization, nor shall it create any obligation on the part of CITY or DESIGN PROFESSIONAL to pay or to see to the payment of any moneys due any such Subcontractor, Supplier or other person or organization except as may otherwise be required by Laws or Regulations.

D. CONTRACTOR shall be solely responsible for scheduling and coordinating the Work of Subcontractors, Suppliers and other persons and organizations performing or furnishing any of the Work under a direct or indirect contract with CONTRACTOR.

E. CONTRACTOR shall contractually require all Subcontractors, Suppliers and such other persons and organizations performing or furnishing any of the Work to communicate with CITY and DESIGN PROFESSIONAL through CONTRACTOR.

F. The divisions and sections of the Specifications and the identifications of any Drawings shall not control CONTRACTOR in dividing the Work among Subcontractors or Suppliers or delineating the Work to be performed by any specific trade.

G. All Work performed for CONTRACTOR by a Subcontractor or Supplier shall be pursuant to an appropriate written agreement between CONTRACTOR and the Subcontractor or Supplier that specifically binds the Subcontractor or Supplier to the applicable terms and conditions of the Contract Documents for the benefit of CITY. Whenever any such agreement is with a Subcontractor or Supplier who is listed as an additional insured on the property insurance provided in Paragraph 5.06, the agreement between the CONTRACTOR and the Subcontractor or Supplier will contain provisions whereby the Subcontractor or Supplier waives all rights against CITY, CONTRACTOR, DESIGN PROFESSIONAL, Consultants and all other additional insureds for all losses and damages caused by, arising out of or resulting from any perils, to the extent covered by such policies and any other property insurance applicable to the Work. If the insurers on any such policies require separate waiver forms to be signed by any Subcontractor or Supplier, CONTRACTOR will obtain the same.

H. Except as otherwise provided in this subsection H and in accordance with the provisions of subsection C hereof, the agreement between CONTRACTOR and the Subcontractor or Supplier referred to in subsection G, shall provide that the CONTRACTOR and the Subcontractor or Supplier agree not to request CITY or CITY's Representative to intervene in or facilitate the resolution of claims or contract disputes arising out of or related to the agreement between CONTRACTOR and the Subcontractor or Supplier. Furthermore, the Contracts between CONTRACTOR and Subcontractors or Suppliers shall provide that all unresolved claims and disputes between CONTRACTOR and the Subcontractor or Supplier that remain unresolved after thirty (30) calendar days from the notice of claim, shall be subject to mediation as a condition precedent to the institution of legal proceedings by either party. Any such mediation shall be conducted in accordance with the CITY's Code Section 38-100.7.

I. CONTRACTOR shall not insert any provision in any subcontractor agreement associated with this Contract that explicitly states or implies that the subcontractor shall only be paid for work performed if or when the general CONTRACTOR is paid by the CITY . Contractor's compliance with this provision is a material term of this Contract.

6.08 Patent Fees and Royalties

A. CONTRACTOR shall pay all license fees and royalties and assume all costs incident to the use in the performance of the Work or the incorporation into the Work of any invention, design, process, product or device which is the subject of patent rights or copyrights held by others. If a particular invention, design, process, product or device is specified in the Contract Documents for use in the performance of the Work, and if to the actual knowledge of CITY or DESIGN PROFESSIONAL its use is subject to patent rights or copyrights calling for the payment of any license fee or royalty to others, the existence of such rights shall be disclosed by CITY in the Contract Documents. To the fullest extent permitted by Laws or Regulations, CONTRACTOR shall defend, indemnify and hold harmless CITY, DESIGN PROFESSIONAL, Consultants and the officers, directors, employees, agents and other consultants of each and any of them from and against all claims, costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or resulting from any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation into the Work of any invention, design, process, product or device not specified in the Contract Documents.

6.09 Permits

A. Unless otherwise provided in the Supplementary Conditions, CONTRACTOR shall obtain and pay for all construction permits and licenses. CITY shall assist CONTRACTOR, when necessary, in obtaining such permits and licenses. CONTRACTOR shall pay all governmental charges and inspection fees necessary for the prosecution of the Work, which are applicable at the time of opening of Bids, or, if there are no Bids, on the Effective Date of the Contract. CONTRACTOR shall pay all charges of utility owners for connections to the Work.

B. CONTRACTOR, at its own expense, shall comply with all Federal, State and local laws and regulations, including, but not limited to the Missouri Clean Water Law (Chapter 644 RSMo) together with any accompanying regulation(s) contained in the Missouri Code of State Regulations (CSR Title 10), as well as any implementing permits, together with any CITY Provisions during the life of this Contract including but not limited to:

1. Approvals and permits as required for construction or land disturbance activities.
2. Compliance with the State of Missouri – Department of Natural Resources (“MDNR”) Missouri State Operating Permit (“Land Disturbance Permit”), MO-R100006 for all construction or land disturbance activity.
3. Development and implementation of a Storm Water Pollution Prevention Plan (SWPPP).
 - (a) Contractor shall not commence land disturbance activity until the initial SWPPP has been finalized.
 - (b) Preparation and submittal of all applications, documentation and exhibits required to obtain MDNR approvals for uninterrupted Work at the Site.
 - (c) Amending/Updating SWPPP.
 - (d) Site Inspections and submittal of Inspection Reports
 - (e) Proper Operation and Maintenance to achieve compliance with the terms of the Permit.

(f) Maintenance of required records in accordance with MDNR requirements and requirements included in Article 6 of these Contract Documents.

4. In addition to requirements of Article 6, Contractor shall also provide record access to Missouri Department of Natural Resources (MDNR).

5. Failure to control erosion and water pollution is a permit violation. CONTRACTOR shall have 24 hours after receiving notice of the violation to correct the problem. If the CONTRACTOR fails to correct the problem after the time prescribed, the City will hire a remediation expert to fix the problem. In such an event, the CONTRACTOR shall be liable to the City for the remediation costs plus a 10% mark-up of the total contract price. If the CONTRACTOR receives three (3) notices of violation of the erosion control plan and the City's MS4 permit, the Director may issue a stop work order and delay any payment until control measures are properly functioning and stream damage has been mitigated. In such an event, any delay to the project schedule will result in liquidated damages assessed against the CONTRACTOR.

6.10 Compliance with Laws and Regulations

A. CONTRACTOR shall give all notices and comply with all Laws or Regulations applicable to furnishing and performing the Work. Except where otherwise expressly required by applicable Laws or Regulations, neither CITY nor DESIGN PROFESSIONAL shall be responsible for monitoring CONTRACTOR's compliance with any Laws or Regulations. The Laws or Regulations included in this Paragraph shall include, but not be limited to, those set forth in the Supplementary Conditions.

B. Failure to Comply. If CONTRACTOR performs any Work in violation of applicable Laws or Regulations, CONTRACTOR shall bear all claims, costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) caused by, arising out of or resulting therefrom; however, it shall not be CONTRACTOR's primary responsibility to make certain that the Specifications and Drawings are in accordance with Laws or Regulations, but this shall not relieve CONTRACTOR of CONTRACTOR's obligations under Paragraph 3.03.

C. Conflicts of Interest. The provisions of City's Code Sections 2-1015 and 2-1764, prohibiting City officers and employees from having a financial or personal interest in any contract with City, and Code Sections 2-1016 and 2-1770, imposing sanctions for violations, shall apply to this Contract. CONTRACTOR certifies that no officer or employee of City has, or will have, a direct or indirect financial or personal interest in this Contract, and that no officer or employee of City, or member of such officer's or employee's immediate family, either has negotiated, or has or will have an arrangement concerning employment to perform services on behalf of CONTRACTOR on this Contract.

D. Licenses and Permits. CONTRACTOR, at its own expense, shall secure or cause to be secured all licenses and permits from public or private sources necessary for the fulfillment of its obligations under this Contract. All references in this Contract to the "Code" shall mean City's Code of Ordinances, including any amendments thereto or re-codification thereof unless the context clearly indicates otherwise. CONTRACTOR shall obtain copies of all necessary licenses and permits from Subcontractors required for the Work before Subcontractors begin Work at the Site. CONTRACTOR shall retain such evidence in its files and make available to CITY within ten (10) days after CITY's written request.

E. Americans with Disabilities Act. CONTRACTOR agrees to comply, during the course of this Contract, with all provisions of the Americans with Disabilities Act, 42 U.S.C. Sec. 12101 et seq., as well as 28 CFR Parts 35 and 36 and 29 CFR Part 1630, as applicable and as amended from time to time.

F. Affirmative Action. If the Contract Price exceeds \$300,000.00 and CONTRACTOR employs fifty (50) or more people, CONTRACTOR shall comply with City's Affirmative Action requirements in accordance with the provisions of Chapter 38 of City's Code, the rules and

regulations relating to those sections, and any additions or amendments thereto. CONTRACTOR shall not discriminate against any employee or applicant for employment because of race, color, sex, religion, national origin or ancestry, disability, sexual orientation, gender identity or age in a manner prohibited by Chapter 38 of City's Code.

CONTRACTOR shall:

1. Submit, in print or electronic format, a copy of CONTRACTOR'S current certificate of compliance to the City's Human Relations Department (HRD) prior to receiving the first payment under the contract, unless a copy has already been submitted to HRD at any point within the previous two calendar years. If, and only if, CONTRACTOR does not possess a current certification of compliance, CONTRACTOR shall submit, in print or electronic format, a copy of its affirmative action program to HRD prior to receiving the first payment under the contract, unless a copy has already been submitted to HRD at any point within the previous two calendar years.

2. Require any Subcontractor awarded a subcontract exceeding \$300,000.00 to affirm that Subcontractor has an affirmative action program in place and will maintain the affirmative action program in place for the duration of the subcontract.

3. Obtain from any Subcontractor awarded a subcontract exceeding \$300,000.00 a copy of the Subcontractor's current certificate of compliance and tender a copy of the same, in print or electronic format, to HRD within thirty (30) days from the date the subcontract is executed. If, and only if, Subcontractor does not possess a current certificate of compliance, CONTRACTOR shall obtain a copy of the Subcontractor's affirmative action program and tender a copy of the same, in print or electronic format, to HRD within thirty (30) days from the date the subcontract is executed.

City has the right to take action as directed by City's Human Relations Department to enforce this provision. If CONTRACTOR fails, refuses or neglects to comply with the provisions of Chapter 38 of City's Code, then such failure shall be deemed a total breach of this Contract and this Contract may be terminated, canceled or suspended, in whole or in part, and CONTRACTOR may be declared ineligible for any further contracts funded by City for a period of one (1) year. This is a material term of this Contract.

G. Minority and Women Business Enterprises and Workforce. City is committed to ensuring that minorities and women participate to the maximum extent possible in the performance of City's construction contracts. If minority and women business enterprise (M/WBE) goals have been set for this Contract, CONTRACTOR agrees to comply with all requirements of City's Minority and Women's Business Enterprise Program as enacted in City's Code, Sections 38-84 through 38-100.8 and as hereinafter amended. CONTRACTOR shall meet or exceed both the MBE and WBE goals set forth in its Contractor Utilization Plan/Request for Waiver. If workforce utilization goals are applicable to this Contract, CONTRACTOR agrees to comply with all requirements of City's Construction Employment Program as enacted in City's Code, Sections 38-83.1 through 38-83.13 and as hereinafter amended. CONTRACTOR shall meet or exceed the construction employment goals unless the same shall have been waived in the manner provided by law. CONTRACTOR's compliance with this provision is a material part of this Contract.

H. Records.

1. For purposes of this section:

(a) "City" shall mean the City Auditor, the City's Internal Auditor, the City's Director of Human Relations, the City Manager, the City department administering this Contract and their delegates and agents.

(b) "Record" shall mean any document, book, paper, photograph, map, sound recordings or other material, regardless of physical form or characteristics, made or received in connection with this Contract and all Contract amendments and renewals.

2. Contractor shall maintain and retain all Records for a term of five (5) years that shall begin after the expiration or termination of this Contract and all Contract amendments. City

shall have a right to examine or audit all Records and Contractor shall provide access to City of all records upon ten (10) days written notice from the City.

I. Prevailing Wage.

1. CONTRACTOR shall comply and require its Subcontractors to comply with;
 - a. sections 290.210 to 290.340, RSMO the State of Missouri Prevailing Wage Law (the "Law"); and
 - b. 8 CSR 30-3.010 to 8 CSR 30-3.060, the Prevailing Wage Law Rules (the "Rules"); and
 - c. the Annual Wage Order (Wage Order) issued by the State of Missouri's Department of Labor and Industrial Relations; and
 - d. any applicable Annual Incremental Wage Increase (Wage Increase) to the Annual Wage Order.

2. The Law, Rules, Annual Wage Order and any Wage Increase are incorporated into and made part hereof this Contract and shall be collectively referred to in this Section as the "Prevailing Wage Requirements."

3. CONTRACTOR shall pay and require its Subcontractors to pay to all workers performing work under this Contract not less than the prevailing hourly rate of wages for the class or type of work performed by the worker in accordance with the Law, Rules, Wage Order and any applicable Wage Increase. CONTRACTOR shall take whatever steps are necessary to insure that the prevailing hourly wage rates are paid and that all workers for CONTRACTOR and each of its Subcontractors are paid for the class or type of work performed by the worker in accordance with the Prevailing Wage Requirements. If CONTRACTOR shall fail to start to perform CONTRACTOR's obligations under the Contract Documents within sixty (60) days from the Effective Date of the Contract, CONTRACTOR and each of its subcontractors shall be obligated to pay all workers in accordance with any new Wage Order, as subsequently amended by any applicable Wage Increase, issued by the Department of Labor and Industrial Relations within the aforementioned sixty (60) day period. The new Wage Order and any applicable Wage Increase shall govern notwithstanding the fact that the Wage Order being replaced might be physically attached or incorporated in the Contract Documents.

4. Prior to each of its Subcontractors beginning Work on the Site, CONTRACTOR shall require each Subcontractor to complete CITY's Form 00490 entitled "Pre-contract Certification" that sets forth the Subcontractor's prevailing wage and tax compliance history for the two (2) years prior to the bid. CONTRACTOR shall retain one (1) year and make the Pre-contract Certifications available to CITY within five (5) days after written request.

5. CONTRACTOR shall keep and require each of its Subcontractors engaged in the construction of public works in performance of the Contract to keep full and accurate records on CITY's:

- a. "Certified Payroll Report" Form indicating the worker's name, address, social security number, occupation(s) and craft(s) of every worker employed in connection with the public work together with the number of hours worked by each worker and the actual wages paid in connection with the Project; and
- b. "Daily Labor Force Report" Form indicating the worker's name, occupational title or classification group & skill and the workers' hours. CITY shall furnish blank copies of the Daily Labor Force Report Form to CONTRACTOR for its use and for distribution to Subcontractors; and
- c. "Payroll Certification" Form. CONTRACTOR shall prepare and shall require each Subcontractor to prepare a "Payroll Certification" Form to accompany the Certified Payroll Report. The Payroll Certification must be signed by the employee or agent who

pays or supervises the payment of the workers employed under the Contract for the CONTRACTOR and each Subcontractor.

d. Copies of CITY's "Certified Payroll Report" form, the Daily Labor Force Report and Payroll Certification Form are included in the Project Manual and are collectively referred to in this Section as the "Records."

6. CONTRACTOR shall submit its and its Subcontractors Daily Labor Force Reports to CITY each day. CONTRACTOR shall make all of CONTRACTOR's and Subcontractors' Records open to inspection by any authorized representatives of OWNER and the Missouri Department of Labor and Industrial Relations at any reasonable time and as often as they may be necessary and such Records shall not be destroyed or removed from the State of Missouri for a period of one (1) year following the completion of the public work in connection with which the Records are made. CONTRACTOR shall have its and its Subcontractors Certified Payroll Reports and Payroll Certifications available at the CONTRACTOR's office and shall provide the Records to the City electronically at City's sole discretion. In addition, all Records shall be considered a public record and CONTRACTOR shall provide the Records to the CITY in the format required by the CITY within three (3) working days of any request by CITY at the CONTRACTOR's cost. CITY, in its sole discretion, may require CONTRACTOR to send any of the Records directly to the person who requested the Record at CONTRACTOR's expense.

7. CONTRACTOR shall post and keep posted a clearly legible statement of all prevailing hourly wage rates to be paid to all workers employed by CONTRACTOR and each of its Subcontractors in the performance of this Contract in a prominent and easily accessible place at the Site of the Work by all workers.

8. If the Contract Price exceeds \$250,000.00, CONTRACTOR shall and shall require each Subcontractor engaged in any construction of public works to have its name, acceptable abbreviation or recognizable logo and the name of the city and state of the mailing address of the principal office of the company, on each motor vehicle and motorized self-propelled piece of equipment which is used in connection with the Project during the time the CONTRACTOR or Subcontractor is engaged on the project. The sign shall be legible from a distance of twenty (20') feet, but the size of the lettering need not be larger than two (2") inches. In cases where equipment is leased or where affixing a legible sign to the equipment is impractical, the CONTRACTOR may place a temporary stationary sign, with the information required pursuant to this section, at the main entrance of the Project in place of affixing the required information on the equipment so long as such sign is not in violation of any state or federal statute, rule or regulation. Motor vehicles which are required to have similar information affixed thereto pursuant to requirements of a regulatory agency of the state or federal government are exempt from the provisions of this subsection.

9. CONTRACTOR must correct any errors in CONTRACTOR's or any Subcontractors' Records, or CONTRACTOR's or any Subcontractors' violations of the Law, Rules, Annual Wage Order and any Wage Increase within fourteen (14) calendar days after notice from CITY.

10. CONTRACTOR shall and shall require its Subcontractors to cooperate with the CITY and the Department of Labor and Industrial Relations in the enforcement of this Section, the Law, Rules, Annual Wage Order and any Wage Increase. Contractor shall and shall require its Subcontractors to permit CITY and the Department of Labor and Industrial Relations to interview any and all workers during working hours on the Project at CONTRACTOR's sole cost and expense.

11. CONTRACTOR shall file with CITY, upon completion of the Project and prior to final payment therefore, affidavits from CONTRACTOR and each of its Subcontractors, stating that each has fully complied with the provisions and requirements of the Missouri Prevailing Wage Law. CITY shall not make final payment until the affidavits, in proper form and order, from CONTRACTOR and each of its Subcontractors, are filed by CONTRACTOR.

12. CONTRACTOR shall forfeit as a statutory penalty to the CITY one hundred dollars (\$100.00) for each worker employed, for each calendar day, or portion thereof, such worker is paid less than the prevailing hourly rates for any work done under this Contract, by CONTRACTOR or by any of CONTRACTOR's Subcontractors. If CONTRACTOR or any of its Subcontractors have violated any section(s) of 290.210 to 290.340, RSMo, in the course of the execution of the Contract, CITY shall when making payments to the CONTRACTOR becoming due under this Contract, withhold and retain therefrom all sums and amounts due and owing as a result of any violation of sections 290.210 to 290.340, RSMo.

J. Prevailing Wage Damages. CONTRACTOR acknowledges and agrees that, based on the experience of CITY, violations of the Missouri Prevailing Wage Act, whether by CONTRACTOR or its Subcontractors, commonly result in additional costs to CITY. CONTRACTOR agrees that additional costs to CITY for any particular violation are difficult to establish and include but are not limited to: costs of construction delays, additional work for CITY, additional interest expenses, investigations, and the cost of establishing and maintaining a special division working under the City Manager to monitor prevailing wage compliance.

1. In the event of the failure by CONTRACTOR or any of its Subcontractors to pay wages as provided in the Missouri Prevailing Wage Act, CITY shall be entitled to deduct from the Contract Price, and shall retain as liquidated damages, one hundred dollars (\$100.00) per day, per worker who is paid less than the prevailing hourly rate of wages, to approximate the additional costs. The sum shall be deducted, paid or owed whether or not the Contract Times have expired.

2. CITY shall give written notice to CONTRACTOR setting forth the workers who have been underpaid, the amount of the statutory penalty and the amount of the liquidated damages as provided for in this Subparagraph J. CONTRACTOR shall have fourteen (14) calendar days to respond, which time may be extended by CITY upon written request. If CONTRACTOR fails to respond within the specified time, the CITY's original notice shall be deemed final. If CONTRACTOR responds to CITY's notice, CITY will furnish CONTRACTOR a final decision in writing within five (5) days of completing any investigation.

K. Missouri Secretary of State Business Entity Registration. CONTRACTOR shall obtain from all Subcontractors for the Project, a copy of their current certificate of good standing or fictitious name registration from the Missouri Secretary of State before they begin work on the Site. CONTRACTOR shall retain such documents in its files and make available to CITY within ten (10) days after written request.

L. Tropical Hardwoods. The provisions of Code Section 2-1872, restricting the use of tropical hardwoods, shall apply to this Contract.

M. Preference for Missouri Products. Pursuant to Section 71.140 RSMo., preference shall be given to materials, products, supplies and all other articles produced, manufactured, made or grown within the State of Missouri.

N. Guidelines for Open Excavations.

1. CONTRACTOR shall restore required excavations to the level of the adjacent surfaces as soon as practicable. Unsupervised open excavations on public properties are discouraged at all times. If CONTRACTOR, in performance of the Work, makes or causes to be made any excavation in, upon, under, through or adjoining any street, sidewalk, alley, park, boulevard, parkway or any other public properties, and shall leave any part or portion thereof open, CONTRACTOR shall provide effective protection to the public.

2. CONTRACTOR shall protect and secure all excavations in roadways in compliance with existing federal, state and local codes and standards, including, but not limited to the most current edition of the Manual of Uniform Traffic Control Devices. CONTRACTOR shall protect and secure all unsupervised excavations not within roadways, either by covering or fencing.

a. Covering. A protective cover that can sustain the weight of persons or of objects that are placed upon it may be installed over an unsupervised excavation. The cover shall be secured to the ground to prevent movement. Protective covers shall have no opening(s) or protuberance(s) of sufficient size to cause a fall and/or injury. Advance warning devices shall be installed as necessary.

b. Fencing. Fencing to prevent entry may be installed surrounding an unsupervised excavation not protectively covered in its entirety. The fencing shall be a minimum of 42" in height. The fencing shall be constructed in such a manner that it is adequately secured and will remain upright at all times under normal Site conditions. All protective coverings and fences over and around excavations shall be inspected at least daily to assure integrity. Protective coverings and/or fences in heavily trafficked areas shall be inspected more often as necessary.

O. Notification of Utilities. CONTRACTOR shall adhere to the provisions of Sections 319.010 et seq., RSMo., which requires that a person or firm making an excavation in any public street, road or alley, right of way dedicated to public use, utility easement of record, or within any private street or private property do so only after giving notice to, and obtaining information from, owners of Underground Facilities. The 24-hour, toll-free accident prevention hotline number in Missouri is 1-800-344-7483 (1-800-Digrite).

P. Employee Eligibility Verification. CONTRACTOR shall adhere to the provisions of Sections 285.525 et seq., RSMo., which requires that for any contract exceeding five thousand dollars (\$5,000.00), CONTRACTOR shall execute and submit an affidavit, in a form prescribed by CITY, affirming that CONTRACTOR does not knowingly employ any person in connection with the contracted services who does not have the legal right or authorization under federal law to work in the United States as defined in 8 U.S.C. § 1324a(h)(3). CONTRACTOR shall attach to the affidavit documentation sufficient to establish CONTRACTOR'S enrollment and participation in an electronic verification of work program operated by the United States Department of Homeland Security (E-Verify) or an equivalent federal work authorization program operated by the United States Department of Homeland Security to verify information of newly hired employees, under the Immigration Reform and Control Act of 1986. CONTRACTOR may obtain additional information about E-Verify and enroll at <https://e-verify.uscis.gov/enroll/StartPage.aspx?JS=YES>. For those Contractors enrolled in E-Verify, the first and last pages of the E-Verify Memorandum of Understanding that CONTRACTOR will obtain upon successfully enrolling in the program shall constitute sufficient documentation for purposes of complying with this Section. CONTRACTOR shall submit the affidavit and attachments to CITY prior to execution of the Contract, or at any point during the term of the Contract if requested by City.

Q. OSHA 10-Hour Training Requirement. CONTRACTOR and any subcontractor working under this Contract shall require every employee on the Site to complete a ten-hour construction safety program which meets the requirements of Section 292.675, RSMo, except for those employees who shall have previously completed the required program and hold documentation to that effect. CONTRACTOR shall remove or require the removal of any person from the Site who is subject to this requirement and who does not complete or is unable to produce documentation of their successful completion of the required program within the time limitations prescribed by Section 292.675, RSMo. CONTRACTOR shall forfeit the sum of two thousand five hundred dollars (\$2,500.00), in addition to one hundred dollars (\$100.00) per employee each calendar day, or portion thereof, the employee(s) shall continue to be employed without having completed the required program within the time limitations prescribed by Section 292.675, RSMo. CITY shall be entitled to withhold and retain any amounts due and owing hereunder when making payment to CONTRACTOR.

R. Clean Air Act and Clean Water Act. CONTRACTOR shall comply with requirements of the Clean Air Act (42 U.S.C. 7401 et seq.); Clean Water Act (33 U.S.C. 1251 et seq.), Missouri Clean Water Law (Chapter 644 RSMo), Code of Federal regulations (Title 40: Protection of

Environment, Title 33: Navigation and Navigable Waters) and the rules of the Missouri Code of State Regulations (CSR Title 10).

6.11 Taxes

A. CONTRACTOR shall pay all sales, consumer, use and other similar taxes required to be paid by CONTRACTOR in accordance with the Laws or Regulations of the place of the Project which are applicable during the performance of the Work.

B. Tax Compliance.

1. As a condition precedent to CITY making its first payment to CONTRACTOR under this Contract, CONTRACTOR shall furnish to CITY sufficient proof from City's Commissioner of Revenue, dated not more than one (1) year prior to the date provided to CITY, verifying that CONTRACTOR is in compliance with the license and tax ordinances administered by City's Revenue Division of the Finance Department.

2. As a condition precedent to Subcontractors performing any Work under this Contract, CONTRACTOR shall obtain from Subcontractor sufficient proof from City's Commissioner of Revenue, dated not more than one (1) year before the date Subcontractor begins Work, verifying that the Subcontractor is in compliance with the license and tax ordinances administered by City's Revenue Division of the Finance Department. CONTRACTOR shall retain such documentation in its files and make available to CITY within ten (10) days after a written request.

3. As a condition precedent to CITY making final payment under this Contract, if this Contract is longer than one (1) year and exceeds the dollar threshold established by ordinance and included in the Supplementary Conditions, CONTRACTOR shall furnish to CITY sufficient proof from City's Commissioner of Revenue, dated not more than one (1) year before the filing of a final Application for Payment, verifying that CONTRACTOR is in compliance with the license and tax ordinances administered by City's Revenue Division of the Finance Department.

4. If this Contract is longer than one (1) year and exceeds the dollar threshold established by ordinance and included in the Supplementary Conditions, CONTRACTOR shall obtain from Subcontractors sufficient proof from City's Commissioner of Revenue, dated not more than one (1) year before the date of CONTRACTOR's final payment to the Subcontractor, that the Subcontractor was or is in compliance with the license and tax ordinances administered by City's Revenue Division of the Finance Department. CONTRACTOR shall retain such documentation in its files and make available to CITY within ten (10) days after written request.

5. If, at the time of final payment to CONTRACTOR, CONTRACTOR is unable to obtain from all its Subcontractors, if any, and furnish to CITY sufficient proof from City's Commissioner of Revenue that all its Subcontractors are in compliance with the license and tax ordinances administered by City's Revenue Division of the Finance Department, CITY may approve final payment to CONTRACTOR if CITY determines that CONTRACTOR has made a good faith effort to furnish evidence or that there are other extenuating circumstances which make it impossible for CONTRACTOR to furnish sufficient proof.

C. Missouri Sales Tax Exemption. Pursuant to Section 144.062, RSMo, CITY is a Missouri exempt entity and tangible personal property to be incorporated or consumed in the construction of this Project may be purchased without sales tax. CITY shall furnish CONTRACTOR a Missouri Project Exemption Certificate for Sales Tax at the time of issuance of the Notice to Proceed.

6.12 Use of Site and Other Areas

A. CONTRACTOR shall confine construction equipment, the storage of materials and equipment, and the operations of workers to the Site and other areas identified in and permitted by the Contract Documents and other areas permitted by Laws or Regulations. CONTRACTOR

shall not unreasonably encumber the Site and the other areas with construction equipment or other materials or equipment. CONTRACTOR shall assume full responsibility for any damage to the Site or the other areas, or to the owner or occupant thereof, or of any adjacent land or areas, resulting from the performance of the Work.

B. Should any claim be made by any such owner or occupant because of the performance of the Work, CONTRACTOR shall promptly settle with such other party by negotiation or otherwise resolve the claim by arbitration or other dispute resolution proceeding or at law. In case of a failure on the part of the CONTRACTOR to restore such property or to make good such damage or injuries, the CITY may, upon forty-eight (48) hours written notice to the CONTRACTOR, repair, rebuild or otherwise restore such property as the CITY may deem necessary, and the cost thereof will be deducted from any moneys due or which may become due the CONTRACTOR under this Contract.

C. CONTRACTOR shall, to the fullest extent permitted by Laws or Regulations, defend, indemnify and hold harmless CITY, DESIGN PROFESSIONAL, Consultants and the officers, directors, employees, agents and other consultants of each and any of them from and against all claims, costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or resulting from any claim or action, legal or equitable, brought by any such owner or occupant against CITY, DESIGN PROFESSIONAL or any other party indemnified hereunder to the extent caused by or based upon CONTRACTOR's performance of the Work.

D. During the progress of the Work, CONTRACTOR shall keep the Site and the other areas free from accumulations of waste materials, rubbish and other debris resulting from the Work. At the completion of the Work CONTRACTOR shall remove all waste materials, rubbish and debris from Site and other areas as well as all tools, appliances, construction equipment and machinery and surplus materials. CONTRACTOR shall leave the Site clean and ready for utilization or occupancy by CITY at Substantial Completion of the Work. CONTRACTOR shall restore to all property not designated for alteration by the Contract Documents to its pre-Work condition.

E. CONTRACTOR shall not load nor permit any part of any structure to be loaded in any manner that will endanger the structure, nor shall CONTRACTOR subject any part of the Work or adjacent property to stresses or pressures that will endanger it.

6.13 Record Documents

A. CONTRACTOR shall maintain in a safe place at the Site one record copy of all Drawings, Specifications, Addenda, the Contract, Written Amendments, Change Orders, Work Change Directives, and written interpretations and clarifications in good order and annotated to show all changes made during construction. These record documents, together with all approved Samples and a counterpart of all approved Shop Drawings, will be available to CITY and DESIGN PROFESSIONAL for reference. Upon completion of the Work, these record documents, Samples and Shop Drawings will be delivered to DESIGN PROFESSIONAL for CITY.

6.14 Safety and Protection

A. CONTRACTOR shall be solely responsible for initiating, maintaining and supervising all safety precautions and programs in connection with the Work. CONTRACTOR shall comply with all applicable Laws or Regulations relating to the safety of persons or property to protect them from damage, injury or loss; and shall erect and maintain all necessary safeguards for safety and protection. CONTRACTOR shall deliver to CITY a copy of CONTRACTOR'S Health and Safety Plan as provided in the Notice of Intent to Contract.

B. CONTRACTOR shall notify owners of adjacent property and of Underground Facilities and other utility owners when prosecution of the Work may affect them, and shall cooperate with them in the protection, removal, relocation and replacement of their property. All damage, injury

or loss to any property referred to in Paragraph 6.14 B.2 or 6.14 B.3 caused, directly or indirectly, in whole or in part, by CONTRACTOR, any Subcontractor, Supplier or any other person or organization directly or indirectly employed by any of them to perform or furnish any of the Work or anyone for whose acts any of them may be liable, shall be remedied by CONTRACTOR (except damage or loss attributable to the fault of Drawings or Specifications or to the acts or omissions of CITY, DESIGN PROFESSIONAL, Consultant, or anyone employed by any of them or anyone for whose acts any of them may be liable, and not attributable, directly or indirectly, in whole or in part, to the fault or negligence of CONTRACTOR, Subcontractor, Supplier or other person or organization directly or indirectly employed by any of them). CONTRACTOR's duties and responsibilities for safety and for protection of the Work shall continue until such time as all the Work is completed and DESIGN PROFESSIONAL has issued a notice to CONTRACTOR in accordance with Paragraph 14.07 that the Work is acceptable (except as otherwise expressly provided in connection with Substantial Completion). CONTRACTOR shall take all necessary precautions for the safety of, and shall provide the necessary protection to prevent damage, injury or loss to:

1. all persons on the Site or who may be affected by the Work;
2. all the Work and materials and equipment to be incorporated therein, whether in storage on or off the Site; and
3. other property at the Site or adjacent thereto, including trees, shrubs, lawns, walks, pavements, roadways, structures, utilities and Underground Facilities not designated for removal, relocation or replacement in the course of the Work.

6.15 Safety Representative

A. In accordance with OSHA standards, CONTRACTOR shall designate a qualified and experienced safety representative whose duties and responsibilities shall be the prevention of accidents and the maintaining and supervising of safety precautions and programs. CONTRACTOR's safety representative shall remain at the Site whenever there is Work in progress and shall immediately notify CITY of any emergencies or accidents occurring at the Site

6.16 Hazard Communication Programs

A. CONTRACTOR shall be responsible for coordinating any exchange of material safety data sheets or other hazard communication information required to be made available to or exchanged between or among employers at the Site in accordance with Laws or Regulations.

6.17 Emergencies

A. In emergencies affecting the safety or protection of persons or the Work or property at the Site or adjacent thereto, CONTRACTOR, without special instruction or authorization from CITY or DESIGN PROFESSIONAL, is obligated to act to prevent threatened damage, injury or loss. CONTRACTOR shall give CITY and DESIGN PROFESSIONAL prompt written notice if CONTRACTOR believes that any significant changes in the Work or variations from the Contract Documents have been caused thereby or are required as a result thereof. If CITY determines that a change in the Contract Documents is required because of the action taken by CONTRACTOR in response to an emergency, a Work Change Directive or Change Order will be issued.

B. A change in the Contract Documents pursuant to Paragraph 6.15 A will not be an automatic authorization of, nor a condition precedent to, entitlement to adjustment in the Contract Price or Contract Times. If CITY and CONTRACTOR are unable to agree on entitlement to, or magnitude of, an equitable adjustment in the Contract Price or Contract Times, a Claim may be made therefore as provided in Article 16. However, OWNER, DESIGN PROFESSIONAL and Consultants shall not be liable to CONTRACTOR for any costs, losses or damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all other dispute resolution costs) sustained by CONTRACTOR on or in connection with any other project or anticipated project.

6.18 Shop Drawings and Samples

A. CONTRACTOR shall submit Shop Drawings to DESIGN PROFESSIONAL for review and approval in accordance with the accepted schedule of Shop Drawings and Sample submittals (see Paragraph 2.07). All submittals shall be identified as DESIGN PROFESSIONAL may require and in the number of copies specified in the General Requirements. The data shown on the Shop Drawings shall be complete with respect to quantities, dimensions, specified performance and design criteria, materials and similar data to show DESIGN PROFESSIONAL the services, materials and equipment CONTRACTOR proposes to provide and to enable DESIGN PROFESSIONAL to review the information for the limited purposes required by Paragraph 6.18 D.

B. CONTRACTOR shall also submit Samples to DESIGN PROFESSIONAL for review and approval in accordance with said accepted schedule of Shop Drawings and Sample submittals. Each Sample shall be identified clearly as to material, Supplier, pertinent data such as catalog numbers and the use for which intended and otherwise as DESIGN PROFESSIONAL may require to enable DESIGN PROFESSIONAL to review the submittal for the limited purposes required by Paragraph 6.18 D. The numbers of each Sample to be submitted will be as specified in the Specifications.

C. Submittal Procedures:

1. Before submitting each Shop Drawing or Sample, CONTRACTOR shall have determined and verified:

a. all field measurements, quantities, dimensions, specified performance criteria, installation requirements, materials, catalog numbers and similar information with respect thereto;

b. all materials with respect to intended use, fabrication, shipping, handling, storage, assembly and installation pertaining to the performance of the Work;

c. all information relative to means, methods, techniques, sequences and procedures of construction and safety precautions and programs incident thereto; and

d. CONTRACTOR shall also have reviewed and coordinated each Shop Drawing or Sample with other Shop Drawings and Samples and with the requirements of the Work and the Contract Documents.

2. Each submittal shall bear a stamp or specific written indication that CONTRACTOR has satisfied CONTRACTOR's obligations under the Contract Documents with respect to CONTRACTOR's review and approval of that submittal.

3. At the time of each submission, CONTRACTOR shall give DESIGN PROFESSIONAL specific written notice of such variations, if any, that the Shop Drawing or Sample submitted may have from the requirements of the Contract Documents, the notice to be in a written communication separate from the submittal, and, in addition, shall cause a specific notation to be made on each Shop Drawing and Sample submitted to DESIGN PROFESSIONAL for review and approval of each such variation.

D. DESIGN PROFESSIONAL's Review:

1. DESIGN PROFESSIONAL will review and approve Shop Drawings and Samples in accordance with the schedule of Shop Drawings and Sample submittals accepted by DESIGN PROFESSIONAL as required by Paragraph 2.06. DESIGN PROFESSIONAL's review and approval will be only to determine if the items covered by the submittals will, after installation or incorporation into the Work, conform to the information given in the Contract Documents and be compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents.

2. DESIGN PROFESSIONAL's review and approval will not extend to means, methods, techniques, sequences or procedures of construction (except where a particular means,

method, technique, sequence or procedure of construction is specifically and expressly called for by the Contract Documents) or to safety precautions or programs incident thereto. The review and approval of a separate item as such will not indicate approval of the assembly in which the item functions.

3. DESIGN PROFESSIONAL's review and approval of Shop Drawings or Samples shall not relieve CONTRACTOR from responsibility for any variation from the requirements of the Contract Documents unless CONTRACTOR has in writing called DESIGN PROFESSIONAL's attention to each such variation at the time of submission as required by Paragraph 6.18 C.3, and DESIGN PROFESSIONAL has given written approval of each such variation by specific written notation thereof incorporated into or accompanying the Shop Drawing or Sample approval; nor will any approval by DESIGN PROFESSIONAL relieve CONTRACTOR from responsibility for complying with the requirements of Paragraph 6.18 C.1.

E. Where a Shop Drawing or Sample is required by the Contract Documents or the schedule of Shop Drawings and Sample submissions accepted by DESIGN PROFESSIONAL as required by Paragraph 2.06, any related Work performed prior to DESIGN PROFESSIONAL's review and approval of the pertinent submittal will be at the sole expense and responsibility of CONTRACTOR.

F. CONTRACTOR shall make corrections required by DESIGN PROFESSIONAL and shall return the required number of corrected copies of Shop Drawings and submit as required new Samples for review and approval. CONTRACTOR shall direct specific attention in writing to revisions other than the corrections called for by DESIGN PROFESSIONAL on previous submittals.

6.19 Continuing the Work

A. CONTRACTOR shall carry on the Work and adhere to the progress schedule during all disputes or disagreements with CITY. No Work shall be delayed or postponed pending resolution of any disputes or disagreements, except as permitted by Paragraph 15.04 or as CITY and CONTRACTOR may otherwise agree in writing.

6.20 CONTRACTOR's General Warranty and Guarantee

A. CONTRACTOR warrants and guarantees to CITY, DESIGN PROFESSIONAL and Consultants that all Work will be in accordance with the Contract Documents and will not be defective. CONTRACTOR's warranty and guarantee hereunder excludes defects or damage caused by:

1. abuse, modification or improper maintenance or operation by persons other than CONTRACTOR, Subcontractors, Suppliers or any other individual or entity for whom CONTRACTOR is responsible; or
2. normal wear and tear under normal usage.

B. CONTRACTOR's obligation to perform and complete the Work in accordance with the Contract Documents shall be absolute. None of the following will constitute an acceptance of Work that is not in accordance with the Contract Documents or a release of CONTRACTOR's obligation to perform the Work in accordance with the Contract Documents:

1. observations by DESIGN PROFESSIONAL;
2. recommendation of any progress or final payment by DESIGN PROFESSIONAL;
3. the issuance of a certificate of Substantial Completion or any payment related thereto by CITY to CONTRACTOR;
4. use or occupancy of the Work or any part thereof by OWNER;
5. any review and approval of a Shop Drawing or Sample submittal or the issuance of a notice of acceptability by DESIGN PROFESSIONAL;

6. any inspection, test or approval by others; or
7. any correction of defective Work by CITY.

C. Nonconforming Work is rejected unless expressly accepted in writing by the CITY's Representative.

ARTICLE 7 OTHER WORK

7.01 Related Work at Site

A. CITY may perform other work related to the Project at the Site by CITY's own forces, or let other direct contracts therefore, or have other work performed by utility owners. If such other work is to be performed and such fact was not noted in the Contract Documents, then:

1. Written notice thereof will be given to CONTRACTOR prior to starting any such other work, and

2. CONTRACTOR may make a Claim therefore as provided in Article 16 if CONTRACTOR believes that such performance involves additional expense to CONTRACTOR or requires additional time and the parties are unable to agree as to the amount or extent thereof.

B. CONTRACTOR shall afford each other contractor who is a party to such a direct contract, and each utility owner (and CITY, if CITY is performing the additional work with CITY's employees) proper and safe access to the Site and a reasonable opportunity for the introduction and storage of materials and equipment and the execution of such other work and shall properly connect and coordinate the Work with theirs. Unless otherwise provided in the Contract Documents, CONTRACTOR shall do all cutting, fitting and patching of the Work that may be required to properly connect or otherwise make its several parts come together and properly integrate with such other work. CONTRACTOR shall not endanger any work of others by cutting, excavating or otherwise altering their work and will only cut or alter their work with the written consent of CITY and the others whose work will be affected. The duties and responsibilities of CONTRACTOR under this Paragraph are for the benefit of such utility owners and other contractors to the extent that there are comparable provisions for the benefit of CONTRACTOR in said direct contracts between CITY and such utility owners and other contractors.

C. If the proper execution or results of any part of CONTRACTOR's Work depends upon work performed by others under this Article 7, CONTRACTOR shall inspect such other work and promptly report to CITY and DESIGN PROFESSIONAL in writing any delays, defects or deficiencies in such other work that render it unavailable or unsuitable for the proper execution or results of CONTRACTOR's Work. CONTRACTOR's failure to report same will constitute an acceptance of such other work as fit and proper for integration with CONTRACTOR's Work, except for latent or non-apparent defects and deficiencies in such other work.

7.02 Coordination

A. If CITY contracts with others for the performance of other work on the Project at the Site, the following will be set forth in Supplementary Conditions:

1. the person, firm or corporation who will have authority and responsibility for coordination of the activities among the various prime contractors will be identified;
2. the specific matters to be covered by such authority and responsibility will be itemized; and
3. the extent of such authority and responsibilities will be provided.

B. Unless otherwise provided in the Supplementary Conditions, CITY shall have sole authority and responsibility in respect of such coordination.

ARTICLE 8 CITY'S RESPONSIBILITIES

8.01 Communications to CONTRACTOR

A. Except as otherwise provided in these General Conditions, CITY shall issue all communications to CONTRACTOR.

8.02 Replacement of DESIGN PROFESSIONAL

A. In case of termination of the employment of DESIGN PROFESSIONAL, CITY shall appoint a DESIGN PROFESSIONAL whose status under the Contract Documents shall be that of the former DESIGN PROFESSIONAL.

8.03 Furnish Data and Prompt Payment

A. CITY shall promptly furnish the data required of OWNER under the Contract Documents and shall make payments to CONTRACTOR when they are due.

8.04 Lands and Easements; Reports and Tests

A. CITY's duties in respect of providing lands and easements and providing engineering surveys to establish reference points are set forth in Paragraphs 4.01 and 4.05. Paragraph 4.02 refers to CITY's duty to identify and make available to CONTRACTOR copies of reports of explorations and tests of subsurface conditions at the Site and drawings of physical conditions in existing structures at or contiguous to the Site that have been utilized by DESIGN PROFESSIONAL in preparing the Contract Documents.

8.05 Insurance

A. CITY's responsibilities, if any, for purchasing and maintaining liability and property insurance are set forth in Article 5 and the Supplementary Conditions.

8.06 Change Orders

A. CITY is obligated to execute Change Orders as indicated in Paragraph 10.03.

8.07 Inspections, Tests and Approvals

A. CITY's responsibility for certain inspections, tests and approvals is set forth in Paragraph 13.02 F.

8.08 Limitations on CITY's Responsibilities

A. The CITY shall not supervise, direct or have control or authority over, nor be responsible for, CONTRACTOR's means, methods, techniques, sequences or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of CONTRACTOR to comply with Laws or Regulations applicable to the furnishing or performance of the Work. CITY will not be responsible for CONTRACTOR's failure to perform or furnish the Work in accordance with the Contract Documents.

8.09 Undisclosed Hazardous Environmental Condition

A. CITY's responsibility for an undisclosed Hazardous Environmental Condition uncovered or revealed at the Site is set forth in Paragraph 4.06.

8.10 Evidence of Financial Arrangements

A. CITY will furnish CONTRACTOR reasonable evidence that financial arrangements have been made to satisfy OWNER's obligations under the Contract.

8.11 CITY's Representative

A. CITY will provide a representative during the construction period. The duties, responsibilities and the limitations of authority of the CITY "s Representative during construction are set forth in the Contract Documents.

8.12 Visits to Site

A. CITY's Representative will make visits to the Site at intervals appropriate to the various stages of construction as CITY's Representative deems necessary in order to observe the progress that has been made and the quality of the various aspects of CONTRACTOR's executed Work. Based on information obtained during such visits and observations, CITY's Representative will endeavor to determine, in general, if the Work is proceeding in accordance with the Contract Documents. CITY's Representative will not be required to make exhaustive or continuous on-Site inspections to check the quality or quantity of the Work.

ARTICLE 9 DESIGN PROFESSIONAL's STATUS DURING CONSTRUCTION

9.01 General Scope of DESIGN PROFESSIONAL's Duties

A. DESIGN PROFESSIONAL's efforts will be directed toward providing for CITY a greater degree of confidence that the completed Work will conform generally to the Contract Documents. On the basis of visits to the Site and on-Site observations, DESIGN PROFESSIONAL will keep CITY informed of the progress of the Work and will endeavor to guard CITY against defective Work. DESIGN PROFESSIONAL's visits to the Site and on-Site observations are subject to all the limitations on DESIGN PROFESSIONAL's authority and responsibility set forth in Paragraph 9.08.

9.02 Resident Project Representative

A. If CITY and DESIGN PROFESSIONAL agree, DESIGN PROFESSIONAL will furnish a resident Project representative to assist DESIGN PROFESSIONAL in providing more extensive observation of the Work. The responsibilities, authority and limitations thereon of any such resident Project representative and assistants will be as provided in Paragraph 9.08 and in the Supplementary Conditions.

9.03 Clarifications and Interpretations

A. DESIGN PROFESSIONAL will issue with reasonable promptness written clarifications or interpretations (which may be in the form of Drawings) of the requirements of the Drawings and Specifications prepared by the DESIGN PROFESSIONAL as DESIGN PROFESSIONAL may determine necessary, which shall be consistent with the intent of and reasonably inferable from the Contract Documents. Such written clarifications and interpretations will be binding on CITY and CONTRACTOR. If CITY or CONTRACTOR believes that a written clarification or interpretation justifies an adjustment in the Contract Price pursuant to Article 11 and/ or the Contract Times pursuant to Article 12 and the parties are unable to agree to the amount or extent thereof, if any, a Claim may be made therefore as provided in Article 16.

9.04 Rejecting Defective Work

A. DESIGN PROFESSIONAL will have authority to disapprove or reject Work which DESIGN PROFESSIONAL believes to be defective, that DESIGN PROFESSIONAL believes will not produce a completed Project that conforms to the Contract Documents, or that will prejudice the integrity of the design concept of the completed Project as a functioning whole as indicated by the Contract Documents. DESIGN PROFESSIONAL will also have authority to require special inspection or testing of the Work as provided in Paragraph 13.04 B, whether or not the Work is fabricated, installed or completed.

9.05 Shop Drawings, Change Orders and Payments

A. In connection with DESIGN PROFESSIONAL's authority as to Shop Drawings and Samples, see Paragraph 6.18.

B. In connection with DESIGN PROFESSIONAL's authority as to Change Orders, see Article 10.

C. In connection with DESIGN PROFESSIONAL's authority as to Applications for Payment, see Article 14.

9.06 Determinations for Unit Prices

A. DESIGN PROFESSIONAL will initially determine the actual quantities and classifications of Unit Price Work performed by CONTRACTOR. DESIGN PROFESSIONAL will review with CONTRACTOR the DESIGN PROFESSIONAL's preliminary determinations on such matters before rendering a written opinion thereon (by recommendation of an Application for Payment or otherwise to the CITY). CITY reserves the right to make a final determination of the actual quantities and classifications of Unit Price Work in reviewing an Application for Payment. Within ten (10) days after the date of receipt of any such decision, CONTRACTOR may deliver to CITY and to DESIGN PROFESSIONAL written notice of intention to appeal CITY's decision pursuant to Article 16.

9.07 Decisions on Requirements of Contract Documents and Acceptability of Work

A. DESIGN PROFESSIONAL will be the initial interpreter of the requirements of the Drawings and Specifications prepared by DESIGN PROFESSIONAL and judge of the acceptability of the Work thereunder.

B. When functioning as interpreter and judge under this Paragraph 9.07, DESIGN PROFESSIONAL will not show partiality to OWNER or CONTRACTOR.

C. Claims, disputes and other matters relating to the acceptability of the Work, quantities and classifications of Unit Price Work, or the interpretation of the requirements of the Contract Documents pertaining to the performance and furnishing of the Work will be referred initially to CITY's Representative in writing with a request for a formal decision in accordance with Article 16.

9.08 Limitations on DESIGN PROFESSIONAL's Authority and Responsibilities

A. Neither DESIGN PROFESSIONAL's authority or responsibility under this Article 9 or under any other provision of the Contract Documents nor any decision made by DESIGN PROFESSIONAL in good faith either to exercise or not exercise such authority or responsibility or the undertaking, exercise or performance of any authority or responsibility by DESIGN PROFESSIONAL shall create, impose or give rise to any duty owed by DESIGN PROFESSIONAL to CONTRACTOR, any Subcontractor, any Supplier, any other person or organization, or to any surety for or employee or agent of any of them.

B. DESIGN PROFESSIONAL will not supervise, direct, control or have authority over or be responsible for CONTRACTOR's means, methods, techniques, sequences or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of CONTRACTOR to comply with Laws or Regulations applicable to the furnishing or performance of the Work. DESIGN PROFESSIONAL will not be responsible for CONTRACTOR's failure to perform or furnish the Work in accordance with the Contract Documents.

C. DESIGN PROFESSIONAL will not be responsible for the acts or omissions of CONTRACTOR or of any Subcontractor, any Supplier, or of any other person or organization performing or furnishing any of the Work.

D. DESIGN PROFESSIONAL's review of the final Application for Payment and accompanying documentation, and all maintenance and operating instructions, schedules, guarantees, Bonds and certificates of inspection, tests and approvals and other documentation required to be delivered by Paragraph 14.07 will only be to determine generally that their content complies with the requirements of, and in the case of certificates of inspections, tests and approvals, that the results certified indicate compliance with, the Contract Documents.

E. The limitations upon authority and responsibility set forth in this Paragraph 9.08 shall also apply to DESIGN PROFESSIONAL's Consultants, resident Project representative and assistants as identified in the Supplementary Conditions.

ARTICLE 10 CHANGES IN THE WORK

10.01 Authorized Changes in the Work

A. Without invalidating the Contract and without notice to any surety, CITY may, at any time or from time to time, order additions, deletions or revisions in the Work. Such additions, deletions or revisions will be authorized by a Written Amendment, a Change Order, or a Work Change Directive. Upon receipt of any such document, CONTRACTOR shall promptly proceed with the Work involved that will be performed under the applicable conditions of the Contract Documents (except as otherwise specifically provided).

B. If CITY and CONTRACTOR are unable to agree on entitlement to, or on the amount or extent, if any, of an adjustment in the Contract Price pursuant to Article 11 or an adjustment of the Contract Times pursuant to Article 12 or both that should be allowed as a result of a Work Change Directive, a Claim may be made therefore as provided in Article 16.

10.02 Unauthorized Changes in the Work

A. CONTRACTOR shall not be entitled to an increase in the Contract Price or an extension of the Contract Times with respect to any work performed that is not required by the Contract Documents as amended, modified or supplemented as provided in Paragraph 3.04, except in the case of an emergency as provided in Paragraph 6.17 or in the case of uncovering Work as provided in Paragraph 13.04.

10.03 Signing of Change Orders

A. CITY and CONTRACTOR, and DESIGN PROFESSIONAL shall sign appropriate Change Orders covering:

1. changes in the Work which are:
 - a. ordered by CITY pursuant to Paragraph 10.01 A; or
 - b. required because of acceptance of defective Work under Paragraph 13.08 or correcting defective Work under Paragraph 13.09; or
 - c. agreed to by the parties;
2. changes in the Contract Price or Contract Times or both which are agreed to by the parties, including any undisputed sum or amount of time for Work actually performed in accordance with a Work Change Directive; and
3. changes in the Contract Price or Contract Times or both which embody the substance of any written decision recommended by DESIGN PROFESSIONAL and approved by CITY pursuant to Paragraph 9.06, provided that, in lieu of signing any such Change Order, an appeal may be taken from any such decision in accordance with the provisions of the Contract Documents and applicable Laws or Regulations, but during any such appeal, CONTRACTOR shall carry on the Work and adhere to the progress schedule as provided in Paragraph 6.19.

10.04 Notification to Surety

A. If notice of any change affecting the general scope of the Work or the provisions of the Contract Documents (including, but not limited to, Contract Price or Contract Times or both) is required by the provisions of any Bond to be given to a surety, the giving of any such notice will be CONTRACTOR's responsibility, and the amount of each applicable Bond will be adjusted accordingly.

ARTICLE 11 CHANGE OF CONTRACT PRICE

11.01 Change of Contract Price

A. The Contract Price constitutes the total compensation (subject to authorized adjustments) payable to CONTRACTOR for performing the Work. All duties, responsibilities and obligations assigned to or undertaken by CONTRACTOR shall be at CONTRACTOR's expense without change in the Contract Price.

B. The Contract Price may only be changed by a Change Order. Any request for an adjustment in the Contract Price shall be based on written notice delivered within fourteen (14) calendar days after occurrence of the event giving rise to the request or within fourteen (14) calendar days after first recognition of the conditions giving rise to the request. Prior notice is not required for requests or claims relating to an emergency endangering life or property as described in Paragraph 6.16. Thereafter, the CONTRACTOR shall submit written documentation of its request, including appropriate supporting documentation, within ten (10) calendar days after giving notice, unless the CITY grants an extension based on good cause shown by the CONTRACTOR that such additional time is warranted.

C. The value of any Work covered by a Change Order or of any request for an adjustment in the Contract Price will be determined as follows:

1. where the Work involved is covered by Unit Prices contained in the Contract Documents, by application of such Unit Prices to the quantities of the items involved (subject to the provisions of Paragraph 11.04); or

2. where the Work involved is not covered by Unit Prices contained in the Contract Documents, by a mutually agreed lump sum; or

3. where the Work involved is not covered by Unit Prices contained in the Contract Documents and agreement to a lump sum is not reached under Paragraph 11.01 C.2, on the basis of the Cost of the Work (determined as provided in Paragraphs 11.02 A and B) plus a CONTRACTOR's fee for overhead and profit (determined as provided in Paragraph 11.01 D).

D. The CONTRACTOR's fee allowed to CONTRACTOR for overhead and profit shall be determined as follows:

1. a mutually acceptable fixed fee; or

2. if a fixed fee is not agreed upon, then a fee based on the following percentages of the various portions of the Cost of the Work:

a. for costs incurred under Paragraphs 11.02 A.1 and 11.02 A.2, the CONTRACTOR's fee shall be ten percent (10%);

b. for costs incurred under Paragraph 11.02 A.3, the CONTRACTOR's fee shall be five percent (5%);

c. where one or more tiers of subcontracts are on the basis of the Cost of the Work plus a fee and no fixed fee is agreed upon, the intent of Paragraphs 11.01 D.2 and 11.02 A.1 through A.3 is that the Subcontractor who actually performs or furnishes the Work, at whatever tier, will be paid a fee of ten percent (10%) of the costs incurred by such Subcontractor under Paragraphs 11.02 A.1 and 11.02 A.2 and that any higher tier Subcontractor and CONTRACTOR will each be paid a fee of five percent (5%) of the amount paid to the next lower tier Subcontractor;

d. no fee shall be payable on the basis of costs itemized under Paragraphs 11.02 A.4, 11.02 A.5 and 11.02 B;

e. the amount of credit to be allowed by CONTRACTOR to CITY for any change which results in a net decrease in cost will be the amount of the actual net decrease in costs plus a deduction in CONTRACTOR's fee by an amount equal to five percent (5%) of such net decrease; and

f. when both additions and credits are involved in any one change, the adjustment in CONTRACTOR's fee shall be computed on the basis of the net change in accordance with Paragraphs 11.01 D.2.a through 11.01 D.2.e, inclusive.

E. Whenever the Cost of the Work is to be determined pursuant to Paragraphs 11.02 A and B, CONTRACTOR shall establish and maintain records thereof in accordance with generally

accepted accounting practices and submit in form acceptable to CITY an itemized cost breakdown together with supporting data.

11.02 Cost of the Work

A. The term “Cost of the Work” means the sum of all costs necessarily incurred and paid by CONTRACTOR in the proper performance of the Work. When the value of any Work covered by a Change Order or when a request for an adjustment in Contract Price is determined on the basis of Cost of the Work, the costs to be reimbursed to CONTRACTOR will be only those additional or incremental costs required because of the change in the Work or because of the event giving rise to the request. Except as otherwise agreed to in writing by CITY, costs covered by Change Orders or requests shall be in amounts no higher than those prevailing in the locality of the Project, shall include only the following items and shall not include any costs itemized in 11.02 B:

1. Payroll costs for employees in the direct employ of CONTRACTOR in the performance of the Work, using occupational titles and job classifications agreed upon by CITY and CONTRACTOR. Such employees shall include, without limitation, job Site superintendents, foremen and other personnel employed full time at the Site. Payroll costs for employees not employed full time on the Work shall be apportioned on the basis of their time spent on the Work. Payroll costs shall include, but not be limited to, salaries and wages plus the cost of fringe benefits which shall include social security contributions, unemployment, excise and payroll taxes, workers’ compensation, health and retirement benefits, bonuses, sick leave, vacation and holiday pay applicable thereto. The expenses of performing the Work after regular working hours, on Saturdays, Sundays or legal holidays, shall be included in the above to the extent authorized by OWNER.

2. Cost of all materials and equipment furnished and incorporated into the Work, including costs of transportation and storage thereof, and Suppliers’ field services required in connection therewith. All cash discounts shall accrue to CONTRACTOR unless CITY deposits funds with CONTRACTOR with which to make payments, in which case the cash discounts shall accrue to CITY. All trade discounts, rebates and refunds and returns from sale of surplus materials and equipment shall accrue to CITY, and CONTRACTOR shall make provisions so that they may be obtained.

3. Payments made by CONTRACTOR to Subcontractors for Work performed or furnished by Subcontractors. If required by CITY, CONTRACTOR shall obtain competitive bids from Subcontractors acceptable to OWNER and CONTRACTOR and shall deliver such bids to CITY who will then determine, with the advice of DESIGN PROFESSIONAL, which bids, if any, will be accepted. If any subcontract provides that the Subcontractor is to be paid on the basis of the Cost of the Work plus a fee, the Subcontractor’s Cost of the Work and fee shall be determined in the same manner as CONTRACTOR’s Cost of the Work and fee as provided in Paragraphs 11.01 D and E and 11.02 A and B. All subcontracts shall be subject to the other provisions of the Contract Documents insofar as applicable.

4. Costs of special consultants (including but not limited to engineers, architects, testing laboratories, surveyors, attorneys and accountants) employed for services specifically related to the Work when such services are approved in advance by CITY in writing.

5. Other costs including the following:

a. The proportion of necessary transportation, travel and subsistence expenses of CONTRACTOR’s employees incurred in discharge of duties connected with the Work.

b. Cost, including transportation and maintenance, of all materials, supplies, equipment, machinery, appliances, office and temporary facilities at the Site and hand tools not owned by the workers, which are consumed in the performance of the Work, and cost, less market value of such items used but not consumed which remain the property of CONTRACTOR.

c. Rentals of all construction equipment and machinery and the parts thereof whether rented from CONTRACTOR or others in accordance with rental agreements approved by CITY with the advice of DESIGN PROFESSIONAL, and the costs of transportation, loading, unloading, installation, assembly, dismantling and removal thereof, all in accordance with the terms of said rental agreements. The rental of any such equipment, machinery or parts shall cease when the use thereof is no longer necessary for the Work.

d. Applicable sales, consumer, use or similar taxes related to the Work, and for which CONTRACTOR is liable, imposed by Laws or Regulations.

e. Deposits lost for causes other than negligence of CONTRACTOR, any Subcontractor or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, and royalty payments and fees for permits and licenses required to perform the Work.

f. Losses and damages (and related expenses) caused by damage to the Work, not compensated by insurance or otherwise, sustained by CONTRACTOR in connection with the performance and furnishing of the Work (except losses and damages within the deductible amounts of property insurance established by CITY in accordance with Article 5), provided they have resulted from causes other than the negligence of CONTRACTOR, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable. Such losses shall include settlements made with the written consent and approval of CITY. No such losses, damages and expenses shall be included in the Cost of the Work for the purpose of determining CONTRACTOR's fee. If, however, any such loss or damage requires reconstruction and CONTRACTOR is placed in charge thereof, CONTRACTOR shall be paid for those services a fee proportionate to that stated in Paragraph 11.01 D.2.

g. The cost of utilities, fuel and sanitary facilities at the Site.

h. Minor expenses such as telegrams, long distance telephone calls, telephone service at the Site, expressage and similar petty cash items in connection with the Work.

i. Cost of premiums for additional or increased Bonds, or for insurance required because of approved changes in the Work.

B. Costs excluded: The term "Cost of the Work" shall not include any of the following:

1. Payroll costs and other compensation of CONTRACTOR's officers, executives, principals (of partnership and sole proprietorships), general managers, engineers, architects, estimators, attorneys, auditors, accountants, purchasing and contracting agents, expeditors, timekeepers, clerks and other personnel employed by CONTRACTOR whether at the Site or in CONTRACTOR's principal or a branch office for general administration of the Work (if not specifically included in the agreed upon occupational titles and job classifications referred to in Paragraph 11.02 A.1 or specifically covered by Paragraph 11.02 A.4), all of which are to be considered administrative costs covered by the CONTRACTOR's fee.

2. Expenses of CONTRACTOR's principal and branch offices other than CONTRACTOR's office at the Site.

3. Any part of CONTRACTOR's capital expenses, including interest on CONTRACTOR's capital employed for the Work and charges against CONTRACTOR for delinquent payments.

4. Costs due to the negligence of CONTRACTOR, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, including but not limited to, the correction of defective Work, disposal of materials, or equipment wrongly supplied, and making good any damage to property.

5. Other overhead or general expense costs of any kind and the costs of any item not specifically and expressly included in Paragraph 11.02 A.

11.03 Cash Allowances

A. It is understood that CONTRACTOR has included in the Contract Price all allowances so named in the Contract Documents and shall cause the Work so covered to be furnished and performed for such sums as may be acceptable to CITY. CONTRACTOR agrees that:

1. the allowances include the cost to CONTRACTOR (less any applicable trade discounts) of materials and equipment required by the allowances to be delivered at the Site, and all applicable taxes; and

2. CONTRACTOR's costs for unloading and handling on the Site, labor, installation costs, overhead, profit and other expenses contemplated for the allowances have been included in the Contract Price and not in the allowances, and no demand for additional payment on account of any of the foregoing will be valid.

B. Prior to final payment, an appropriate Change Order will be issued by CITY to reflect actual amounts due CONTRACTOR on account of Work covered by allowances, and the Contract Price shall be correspondingly adjusted.

11.04 Unit Price Work

A. Where the Contract Documents provide that all or part of the Work is to be Unit Price Work, initially the Contract Price will be deemed to include for all Unit Price Work an amount equal to the sum of the established unit price for each separately identified item of Unit Price Work times the estimated quantity of each item as indicated in the Contract. The estimated quantities of items of Unit Price Work are not guaranteed and are solely for the purpose of comparison of Bids and determining an initial Contract Price. Determinations of the actual quantities and classifications of Unit Price Work performed by CONTRACTOR will be made in accordance with Paragraph 9.06.

B. Each unit price will be deemed to include an amount considered by CONTRACTOR to be adequate to cover CONTRACTOR's overhead and profit for each separately identified item.

C. CITY or CONTRACTOR may negotiate an adjustment of the price per unit of Unit Price Work stated in the Contract if:

1. the quantity of any item of Unit Price Work performed by CONTRACTOR differs by twenty percent (20%) or more from the estimated quantity of such item indicated in the Contract; and

2. there is no corresponding adjustment with respect to any other item of Work; and

3. CONTRACTOR believes that CONTRACTOR is entitled to an increase in Contract Price as a result of having incurred additional expense or CITY believes that CITY is entitled to a decrease in Contract Price.

11.05 Dispute Resolution

A. If CITY and CONTRACTOR are unable to agree on entitlement to, or magnitude of, an equitable adjustment in the Contract Price in accordance with Article 11 within fourteen (14) calendar days from the receipt of supporting documentation of the request pursuant to 11.01.B., unless the CITY grants an extension based on good cause shown by the CONTRACTOR that such additional time is warranted, then a Claim for such adjustment may be made pursuant to Article 16.

ARTICLE 12 CONTRACT TIMES

12.01 Time of the Essence

A. All times stated in the Contract Documents are of the essence of the Contract.

12.02 Change of Contract Times

A. The Contract Times (or Milestones) may only be changed by a Change Order. Any request for an adjustment in the Contract Times shall be based on written notice delivered within fourteen (14) calendar days after occurrence of the event giving rise to the request or within fourteen (14) calendar days after first recognition of the conditions giving rise to the request. Thereafter, the CONTRACTOR shall submit written documentation of its requests, including appropriate supporting documentation, within ten (10) days after giving notice, unless the CITY grants an extension based on good cause shown by the CONTRACTOR that such additional time is warranted.

12.03 Proof Required To Justify an Extension of Time For Excusable and Compensable Delays

A. In support of any request for an extension of the Contract Times pursuant to this Article, CONTRACTOR must demonstrate to the reasonable satisfaction of the CITY that the critical path of the approved baseline project schedule was delayed. CONTRACTOR shall be entitled to an increase in contract time for the number of days that the critical path was delayed solely as a result of the compensable or excusable event. A compensable or excusable event includes, but is not limited to:

1. unreasonable delay of issuance of Notice to Proceed by CITY;
2. CITY's unreasonable delay of delivery furnished materials, equipment, or work;
3. unreasonable delay responding to shop drawings and submittals;
4. CITY's unreasonable delay in issuing a Change Order;
5. an order by the CITY to stop the Work where the CONTRACTOR was not at fault;
and
6. other reasonable grounds as determined by the City in its sole discretion.

B. CONTRACTOR shall compare the critical path of the approved baseline project schedule to the actual critical path of the Work, identifying the specific impact of the compensable or excusable event.

C. CONTRACTOR shall submit to the CITY a written time impact analysis illustrating the influence of each compensable or excusable event on the date of Substantial Completion. The time impact analysis shall demonstrate the time impact based on the date of the delay in time and the event time computations or all affected activities.

D. If the critical path of the Work is delayed by "Force Majeure", the CONTRACTOR shall be entitled only to an extension of the Contract Times for the number of days of delay to the critical path. For purposes of this paragraph, "Force Majeure" shall mean fire, tornado, flood, earthquake, war, act of terrorism, civil disturbance, or labor strikes away from the project site.

E. Extensions of contract time pursuant to the this section will be granted only to the extent that the time adjustments exceed the total float time available when the event causing the delay occurred.

12.04 Delays Within CONTRACTOR's Control

A. The Contract Times (or Milestones) will not be extended due to delays within the control of CONTRACTOR. Delays attributable to and within the control of a Subcontractor or Supplier shall be deemed to be delays within the control of CONTRACTOR.

12.05 Delays Beyond the CITY's and CONTRACTOR's Control

A. Where CONTRACTOR is prevented from completing any part of the Work within the Contract Times (or Milestones) due to delay beyond the control of both CITY and CONTRACTOR, an extension of the Contract Times (or Milestones) in an amount equal to the time lost due to such delay shall be CONTRACTOR's sole and exclusive remedy for such delay.

12.06 Delay Damages

A. In no event shall CITY be liable to CONTRACTOR, any Subcontractor, any Supplier, any other person or organization, or to any surety for or employee or agent of any of them, for damages arising out of or resulting from:

1. delays caused by or within the control of CONTRACTOR, or

2. delays beyond the control of CITY or CONTRACTOR including but not limited to fires, floods, epidemics, abnormal weather conditions, acts of God or acts or neglect by utility owners or other contractors performing other work as contemplated by Article 7.

B. Nothing in this Paragraph 12.06 bars a change in Contract Price pursuant to this Article 12 to compensate CONTRACTOR due to delay, interference, or disruption directly attributable to actions or inaction of CITY, DESIGN PROFESSIONAL, Consultant or anyone for whom CITY, DESIGN PROFESSIONAL or Consultant is responsible.

12.07 Dispute Resolution

A. If CITY and CONTRACTOR are unable to agree on entitlement to, or magnitude of, an equitable adjustment in the Contract Time in accordance with Article 12 within fourteen (14) calendar days from the receipt of supporting documentation of the request pursuant to 12.02, unless the CITY grants an extension based on good cause shown by the CONTRACTOR that such additional time is warranted, then a Claim for such adjustment may be made pursuant to Article 16.

ARTICLE 13 TESTS AND INSPECTIONS; CORRECTION, REMOVAL OR ACCEPTANCE OF DEFECTIVE WORK

13.01 Access to Work

A. CITY, DESIGN PROFESSIONAL, Consultants, other representatives and personnel of CITY, independent testing laboratories and governmental agencies with jurisdictional interests will have access to the Site and Work at reasonable times for their observation, inspecting and testing. CONTRACTOR shall provide them proper and safe conditions for such access and advise them of CONTRACTOR's Site safety procedures and programs so that they may comply therewith as applicable.

13.02 Tests and Inspections

A. CONTRACTOR shall give DESIGN PROFESSIONAL and CITY's Representative timely notice of readiness of the Work for all required inspections, tests or approvals, and shall cooperate with inspection and testing personnel to facilitate required inspections or tests.

B. If any Work (or the work of others at the Site) that is to be inspected, tested or approved is covered by CONTRACTOR without written approval required by Paragraphs 13.02 D or 13.02 E, it must, if requested by CITY's Representative, be uncovered for observation.

C. Uncovering Work as provided in Paragraph 13.02 B, shall be at CONTRACTOR's expense unless CONTRACTOR has given DESIGN PROFESSIONAL and CITY's Representative timely notice of CONTRACTOR's intention to cover the same and DESIGN PROFESSIONAL and CITY's Representative have not acted with reasonable promptness in response to such notice.

D. If Laws or Regulations of any public body (including City) having jurisdiction require any Work (or part thereof) specifically to be inspected, tested or approved by an employee or other representative of such public body, CONTRACTOR shall assume full responsibility for arranging and obtaining such inspections, tests or approvals, pay all costs in connection therewith, and furnish DESIGN PROFESSIONAL and CITY's Representative the required certificates of inspection or approval.

E. CONTRACTOR shall be responsible for arranging and obtaining and shall pay all costs in connection with any inspections, tests or approvals required for CITY's and DESIGN

PROFESSIONAL's acceptance of materials or equipment to be incorporated into the Work, or acceptance of materials, mix designs, or equipment submitted for approval prior to CONTRACTOR's purchase thereof for incorporation into the Work. Such inspections, tests, or approvals shall be performed by organizations acceptable to CITY and DESIGN PROFESSIONAL.

F. CITY shall employ and pay for the services of an independent testing laboratory to perform all inspections, tests, or approvals required by the Contract Documents except:

1. for inspections, tests or approvals covered by Paragraph 13.02 D and E;
2. that costs incurred in connection with tests or inspections conducted pursuant to Paragraph 13.04 B shall be paid as provided in said Paragraph 13.04 B; and
3. as otherwise specifically provided in the Contract Documents.

13.03 Notice of Defects

A. Prompt notice of all defective Work of which either CITY or DESIGN PROFESSIONAL has actual knowledge will be given to CONTRACTOR. Defective Work may be rejected, corrected or accepted as provided in this Article 13.

13.04 Uncovering Work

A. If any Work (or the work of others at the Site) is covered contrary to the written request of DESIGN PROFESSIONAL or CITY's Representative, it must, if requested by CITY's Representative, be uncovered for DESIGN PROFESSIONAL's or CITY's Representative's observation and replaced at CONTRACTOR's expense.

B. If CITY considers it necessary or advisable that covered Work be observed by DESIGN PROFESSIONAL or CITY's Representative or be inspected or tested by others, CONTRACTOR, at CITY's request, shall uncover, expose or otherwise make available for observation, inspection or testing as may be required, that portion of the Work in question, furnishing all necessary labor, material and equipment. If it is found that such Work is defective, CONTRACTOR shall pay all costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) caused by, arising out of or resulting from such uncovering, exposure, observation, inspection and testing and of satisfactory replacement or reconstruction (including but not limited to all costs of repair or replacement of work of others); and CITY shall be entitled to an appropriate decrease in the Contract Price. If the parties are unable to agree as to the amount thereof, CITY may make a Claim therefore as provided in Article 16. If, however, such Work is not found to be defective, CONTRACTOR shall be allowed an increase in the Contract Price or an extension of the Contract Times (or Milestones), or both, directly attributable to such uncovering, exposure, observation, inspection, testing, replacement and reconstruction. If the parties are unable to agree as to the amount or extent thereof, CONTRACTOR may make a Claim therefore as provided in Article 16.

13.05 CITY May Stop the Work

A. If the Work is defective, or CONTRACTOR fails to supply sufficient skilled workers or suitable materials or equipment, or fails to furnish or perform the Work in such a way that the completed Work will conform to the Contract Documents, CITY may order CONTRACTOR to stop the Work, or any portion thereof, until the cause for such order has been eliminated; however, this right of CITY to stop the Work shall not give rise to any duty on the part of CITY to exercise this right for the benefit of CONTRACTOR, any Subcontractor, Supplier, other individual or entity or any surety or employee or agent of any of them.

13.06 Correction or Removal of Defective Work

A. If required by CITY, CONTRACTOR shall promptly, as directed, either correct all defective Work, whether or not fabricated, installed or completed, or, if the Work has been rejected by either DESIGN PROFESSIONAL or CITY's Representative, remove it and replace it

with Work that is not defective. CONTRACTOR shall pay all costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) caused by or resulting from such correction or removal (including but not limited to all costs of repair or replacement of work of others).

13.07 Correction Period

A. If within one (1) year after the date of Substantial Completion, or such longer period of time as may be prescribed by Laws or Regulations, by the terms of any applicable special guarantee required by the Contract Documents, or by any specific provision of the Contract Documents, any Work is found to be defective, or if the repair of any damages to the land or areas made available for CONTRACTOR's use by CITY or permitted by Laws and Regulations as contemplated in Paragraph 6.10 is found to be defective, CONTRACTOR shall promptly, without cost to CITY and in accordance with CITY's written instructions:

1. correct the repair of damages to such land or areas; or
2. correct such defective Work, or if it has been rejected by CITY, remove it from the Site and replace it with Work that is not defective; and
3. satisfactorily correct or remove and replace any damage to other Work or to the work of others or damage to other lands or areas resulting therefrom. If CONTRACTOR does not promptly comply with the terms of such instructions, or in the event of an emergency where delay by CONTRACTOR would cause serious risk of loss or damage, CITY may have the defective Work corrected or the rejected Work removed and replaced, and all costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) caused by or resulting from such removal and replacement (including but not limited to all costs of repair or replacement of work of others) will be paid by CONTRACTOR.

B. In special circumstances where a particular item of equipment is placed in continuous service before Substantial Completion of all the Work, the correction period for that item may start to run from an earlier date if so provided in the Specifications or by Written Amendment.

C. Where defective Work (and damage to other Work resulting therefrom) has been corrected or removed and replaced under this Paragraph 13.07, the correction period hereunder with respect to such Work will be extended for an additional period of one (1) year, or such longer period of time as may be prescribed within Paragraph 13.07 A, after such correction or removal and replacement has been satisfactorily completed.

D. CONTRACTOR's obligations under this Paragraph 13.07 are in addition to any other obligation or warranty. The provisions of this Paragraph 13.07 shall not be construed as a substitute for or waiver of the provisions of any applicable statute of limitation or repose.

13.08 Acceptance of Defective Work

A. If, instead of requiring correction or removal and replacement of defective Work, CITY prefers to accept it, CITY may do so. CONTRACTOR shall pay all costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) attributable to CITY's evaluation of and determination to accept such defective Work and shall pay OWNER for the diminished value of the Work. If any such acceptance occurs prior to DESIGN PROFESSIONAL's recommendation of final payment, a Change Order will be issued incorporating the necessary revisions into the Contract Documents with respect to the Work and, due to the diminished value of the Work, CITY shall be entitled to an appropriate decrease in the Contract Price. If the parties are unable to agree as to the amount thereof, CITY may make a Claim therefore as provided in Article 16. If the acceptance of defective Work occurs after such recommendation, an appropriate amount shall be paid by CONTRACTOR to CITY.

13.09 CITY May Correct Defective Work

A. If CONTRACTOR fails within a reasonable time after written notice from DESIGN PROFESSIONAL or CITY's Representative to correct defective Work or to remove and replace rejected Work as required by CITY in accordance with Paragraph 13.06, or if CONTRACTOR fails to perform the Work in accordance with the Contract Documents, or if CONTRACTOR fails to comply with any other provision of the Contract Documents, CITY may, after seven (7) days written notice to CONTRACTOR, correct and remedy any such deficiency.

B. CITY shall proceed expeditiously when exercising the rights and remedies under this Paragraph 13.09. In connection with such corrective and remedial action, CITY may exclude CONTRACTOR from all or part of the Site; take possession of all or part of the Work and suspend CONTRACTOR's services related thereto; take possession of CONTRACTOR's tools, appliances, construction equipment and machinery at the Site; and incorporate into the Work all materials and equipment stored at the Site or for which CITY has paid CONTRACTOR but which are stored elsewhere. CONTRACTOR shall allow CITY, CITY's Representative, agents and employees, CITY's other contractors, DESIGN PROFESSIONAL and Consultants access to the Site to enable CITY to exercise the rights and remedies under this Paragraph 13.09.

C. All costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) incurred or sustained by CITY in exercising such rights and remedies will be charged against CONTRACTOR and a Change Order will be issued incorporating the necessary revisions into the Contract Documents with respect to the Work; and CITY shall be entitled to an appropriate decrease in the Contract Price. If CITY and CONTRACTOR are unable to agree as to the amount thereof, CITY may make a Claim therefore as provided in Article 16. Such Claims for costs, losses and damages will include but not be limited to all costs of repair or replacement of work of others destroyed or damaged by correction, removal and replacement of CONTRACTOR's defective or rejected Work.

D. CONTRACTOR shall not be allowed an extension of the Contract Times (or Milestones) because of any delay in the performance of the Work attributable to the exercise by CITY of CITY's rights and remedies under Paragraphs 13.06 and 13.09.

ARTICLE 14 PAYMENTS TO CONTRACTOR AND COMPLETION

14.01 Schedule of Values

A. 01290.02 Schedule of Values established as provided in Article 2 will serve as the basis for progress payments and will be incorporated into form 01290.01 Application for Payment acceptable to DESIGN PROFESSIONAL and CITY. Progress payments for Unit Price Work will be based on the number of units completed.

14.02 Application for Progress Payments

A. Application for Payment

1. At least twenty (20) days before the date stipulated in the Supplementary Conditions for each progress payment (but not more often than once a month), CONTRACTOR shall submit to DESIGN PROFESSIONAL for review an Application for Payment filled out and signed by CONTRACTOR covering the Work completed as of the date of the Application and accompanied by such supporting documentation as is required by the Contract Documents. If payment is requested on the basis of materials and equipment not incorporated into the Work but delivered and suitably stored at the Site or at another location agreed to in writing, the Application for Payment shall also be accompanied by a bill of sale, paid invoice or other documentation warranting that CITY has received the materials and equipment free and clear of all Liens and evidence that the materials and equipment are covered by appropriate property insurance and other arrangements to protect CITY's interest therein, all of which will be subject to CITY's approval.

2. Beginning with the second Application for Payment, each Application shall include:

a. an affidavit of CONTRACTOR stating that all previous progress payments received for the Work have been applied to discharge CONTRACTOR's legitimate obligations associated with prior Applications for Payment, and

b. a copy of the most recent 00485.01 M/WBE Monthly Utilization Report CONTRACTOR has submitted to the CITY's Human Relations Department.

c. a copy of the most recent 00485.02 Project Workforce Monthly Report and 00485.03 Company-Wide Workforce Monthly Report CONTRACTOR has submitted to the OWNER's Human Relations Department.

d. an update to the approved schedule pursuant to paragraphs 6.04 and 6.05.

3. The amount of retainage with respect to progress payments will be stated in the Supplementary Conditions.

B. Review of Applications

1. DESIGN PROFESSIONAL will, within ten (10) days after receipt of each Application for Payment, either indicate in writing a recommendation of payment and present the Application to CITY, or return the Application to CONTRACTOR indicating in writing DESIGN PROFESSIONAL's reasons for refusing to recommend payment. In the latter case, CONTRACTOR shall make the necessary corrections and resubmit the Application.

a. After presentation of the Application for Payment to CITY, and if CITY's Representative agrees with DESIGN PROFESSIONAL's recommendation, the amount recommended will (subject to the provisions of Paragraph 14.02 B.4) become due and will be paid by CITY to CONTRACTOR, subject to the provisions of Laws or Regulations.

b. No payment shall be approved until the CONTRACTOR has submitted with the Application accompanying documentation as required by the Contract Documents, including, but not limited to, the documentation required by paragraphs 6.04 and 6.05.

2. DESIGN PROFESSIONAL's recommendation of any payment requested in an Application for Payment will constitute a representation by DESIGN PROFESSIONAL to CITY, based on DESIGN PROFESSIONAL's observations of the executed Work as an experienced and qualified DESIGN PROFESSIONAL and on DESIGN PROFESSIONAL's review of the Application for Payment and the accompanying data and schedules, that to the best of DESIGN PROFESSIONAL's knowledge, information and belief:

a. the Work has progressed to the point indicated;

b. the quality of the Work is generally in accordance with the Contract Documents (subject to an evaluation of the Work as a functioning whole prior to or upon Substantial Completion, to the results of any subsequent tests called for in the Contract Documents, to a final determination of quantities and classifications for Unit Price Work under Paragraph 9.06, and to any other qualifications stated in the recommendation); and

c. the conditions precedent to CONTRACTOR being entitled to such payment appear to have been fulfilled in so far as it is DESIGN PROFESSIONAL's responsibility to observe the Work.

3. DESIGN PROFESSIONAL's recommendation of any payment, including final payment, shall not mean that DESIGN PROFESSIONAL is responsible for CONTRACTOR's means, methods, techniques, sequence or procedures of construction, safety precautions and programs incident thereto, or any failure of CONTRACTOR to comply with Laws or Regulations applicable to the furnishing or performance of Work.

4. DESIGN PROFESSIONAL may refuse to recommend the whole or any part of any payment if, in DESIGN PROFESSIONAL's opinion, it would be incorrect to make the representations to CITY referred to in Paragraph 14.02 B.2. DESIGN PROFESSIONAL may also refuse to recommend any such payment or, because of subsequently discovered

evidence or the results of subsequent inspections or tests, nullify any such payment previously recommended, to such extent as may be necessary in DESIGN PROFESSIONAL's opinion to protect CITY from loss because:

- a. the Work is defective, or completed Work has been damaged requiring correction or replacement;
- b. the Contract Price has been reduced by Written Amendment or Change Orders;
- c. CITY has been required to correct defective Work or complete Work in accordance with Paragraph 13.09; or
- d. DESIGN PROFESSIONAL has actual knowledge of the occurrence of any of the events enumerated in Paragraph 15.02.

C. Reduction in Payment

1. CITY may refuse to make payment of the full amount recommended by DESIGN PROFESSIONAL because:

- a. Claims have been made by third parties against CITY on account of CONTRACTOR's performance or furnishing of the Work; or
- b. Claims have been made by CITY against CONTRACTOR in connection with the Work, except where CONTRACTOR has delivered a specific Bond satisfactory to CITY to secure the satisfaction and discharge of such Claims;
- c. there are other items entitling CITY to a set-off against the amount recommended; or
- d. CITY has actual knowledge of the occurrence of any of the events enumerated in Paragraphs 14.02 B.4.a through c or 15.02 A.1 through 4; but CITY must give CONTRACTOR written notice (with a copy to DESIGN PROFESSIONAL) stating the reasons for such action and promptly pay CONTRACTOR the amount so withheld, or any adjustment thereto agreed to by CITY and CONTRACTOR, when CONTRACTOR corrects to CITY's satisfaction the reasons for such action; or
- e. CITY has made a different determination of the actual quantities and classifications of Unit Price Work.

14.03 CONTRACTOR's Warranty of Title

A. CONTRACTOR warrants and guarantees that title to all Work, materials and equipment covered by any Application for Payment, whether incorporated into the Project or not, will pass to CITY no later than the time of payment, free and clear of all Liens.

14.04 Substantial Completion

A. When CONTRACTOR considers the entire Work ready for its intended use CONTRACTOR shall notify CITY and DESIGN PROFESSIONAL in writing that the entire Work is substantially complete (except for items specifically listed by CONTRACTOR as incomplete) and request that CITY issue a certificate of Substantial Completion. Within a reasonable time thereafter, CITY, together with CONTRACTOR and DESIGN PROFESSIONAL, shall make an inspection of the Work to determine the status of completion. If DESIGN PROFESSIONAL does not consider the Work substantially complete, DESIGN PROFESSIONAL will notify CONTRACTOR and CITY in writing giving the reasons therefore. If DESIGN PROFESSIONAL considers the Work substantially complete, DESIGN PROFESSIONAL will prepare and deliver to CITY a recommended certificate of Substantial Completion that shall establish the date of Substantial Completion. There shall be attached to the certificate a tentative list of items to be completed or corrected before final payment. CITY shall have seven (7) days after receipt of the recommended certificate during which to make written objection to DESIGN PROFESSIONAL as to any provisions of the certificate or attached list. At the time of delivery of the recommended certificate of Substantial Completion, DESIGN PROFESSIONAL will deliver to

CITY and CONTRACTOR a written recommendation as to division of responsibilities pending final payment between CITY and CONTRACTOR with respect to security, operation, safety, protection of the Work, maintenance, heat, utilities, insurance and warranties and guarantees.

B. CITY shall have the right to exclude CONTRACTOR from the Site after the date of Substantial Completion, but CITY shall allow CONTRACTOR reasonable access to complete or correct items on the tentative list.

14.05 Partial Utilization

A. Use by CITY at CITY's option of any substantially completed part of the Work which has specifically been identified in the Contract Documents, or which CITY, DESIGN PROFESSIONAL and CONTRACTOR agree constitutes a separately functioning and usable part of the Work that can be used by CITY for its intended purpose without significant interference with CONTRACTOR's performance of the remainder of the Work, may be accomplished prior to Substantial Completion of all the Work subject to the following:

1. CITY at any time may request CONTRACTOR in writing to permit CITY to use any such part of the Work which CITY believes to be ready for its intended use and substantially complete. If CONTRACTOR agrees that such part of the Work is substantially complete, CONTRACTOR will certify to CITY and DESIGN PROFESSIONAL that such part of the Work is substantially complete and request CITY to issue a certificate of Substantial Completion for that part of the Work. CONTRACTOR at any time may notify CITY and DESIGN PROFESSIONAL in writing that CONTRACTOR considers any such part of the Work ready for its intended use and substantially complete and request CITY to issue a certificate of Substantial Completion for that part of the Work. Within a reasonable time after either such request, CITY, together with CONTRACTOR and DESIGN PROFESSIONAL, shall make an inspection of that part of the Work to determine its status of completion. If DESIGN PROFESSIONAL does not consider that part of the Work to be substantially complete, DESIGN PROFESSIONAL will notify CITY and CONTRACTOR in writing, giving the reasons therefore. If DESIGN PROFESSIONAL considers that part of the Work to be substantially complete, the provisions of Paragraph 14.04 will apply with respect to certification of Substantial Completion of that part of the Work and the division of responsibility in respect thereof and access thereto.

2. No occupancy or separate operation of part of the Work will be accomplished prior to compliance with the requirements of Paragraph 5.09 with respect to property insurance.

14.06 Final Inspection

A. Upon written notice from CONTRACTOR that the entire Work or an agreed portion thereof is complete, DESIGN PROFESSIONAL will make a final inspection with CITY and CONTRACTOR and will notify CONTRACTOR in writing of all particulars in which this inspection reveals that the Work is incomplete or defective. CONTRACTOR shall immediately take such measures as are necessary to complete such Work or remedy such deficiencies.

14.07 Final Payment

A. Application for Payment

1. After CONTRACTOR has completed all corrections required by Paragraph 14.06 to the satisfaction of DESIGN PROFESSIONAL and CITY's Representative and delivered in accordance with the Contract Documents all maintenance and operating instructions, schedules, guarantees, Bonds, certificates or other evidence of insurance required by Paragraph 5.04, certificates of inspection, marked-up record documents (as provided in Paragraph 6.13) and other documents, CONTRACTOR may make application for final payment following the procedure for progress payments.

2. The final Application for Payment shall be accompanied (except as previously delivered) by:

- a. all documentation required by the Contract Documents, including but not limited to the evidence of insurance required by Subparagraph 5.04 B.7; and
- b. 01290.14 "Contractor Affidavit for Final Payment" from CONTRACTOR and 01290.15 "Subcontractor Affidavit for Final Payment" from all Subcontractors, regardless of tier.

B. Review of Application and Acceptance

1. If, on the basis of DESIGN PROFESSIONAL's and CITY's Representative's observation of the Work during construction and final inspection, and DESIGN PROFESSIONAL's and CITY's Representative's review of the final Application for Payment and accompanying documentation as required by the Contract Documents, DESIGN PROFESSIONAL and CITY's Representative are satisfied that the Work has been completed and CONTRACTOR's other obligations under the Contract Documents have been fulfilled, DESIGN PROFESSIONAL will, within ten (10) days after receipt of the final Application for Payment, indicate in writing DESIGN PROFESSIONAL's and CITY's Representative's recommendation of payment and present the Application to CITY for payment. At the same time DESIGN PROFESSIONAL will also give written notice to CITY and CONTRACTOR that the Work is acceptable subject to the provisions of Paragraph 14.09.

2. Otherwise, DESIGN PROFESSIONAL will return the Application to CONTRACTOR, indicating in writing the reasons for refusing to recommend final payment, in which case CONTRACTOR shall make the necessary corrections and resubmit the Application to DESIGN PROFESSIONAL. After the presentation to CITY of the Application and accompanying documentation, in appropriate form and substance, including applicable federal and state prevailing wage provisions, and with DESIGN PROFESSIONAL's recommendation and notice of acceptability, the amount recommended by DESIGN PROFESSIONAL will become due and will be paid by CITY to CONTRACTOR in accordance with Laws and Regulations.

14.08 Final Completion Delayed

A. If, through no fault of CONTRACTOR, final completion of the Work is significantly delayed and if DESIGN PROFESSIONAL so recommends and CITY concurs, CITY shall, upon receipt of CONTRACTOR's final Application for Payment and recommendation of DESIGN PROFESSIONAL, and without terminating the Contract, make payment of the balance due for that portion of the Work fully completed and accepted. If the remaining balance to be held by CITY for Work not fully completed or corrected is less than the retainage stipulated in the Supplementary Conditions, and if Bonds have been furnished as required in Paragraph 5.01, the written consent of the surety to the payment of the balance due for that portion of the Work fully completed and accepted shall be submitted by CONTRACTOR to DESIGN PROFESSIONAL with the Application for Payment. Payment shall be made under the terms and conditions governing final payment, except that it shall not constitute a waiver of Claims.

14.09 Waiver of Claims

A. The making and acceptance of final payment will constitute:

1. a waiver of all claims by CITY against CONTRACTOR, except claims previously made in writing and still unsettled, or claims arising from defective Work appearing after final inspection pursuant to Paragraph 14.06, from failure to comply with the Contract Documents or the terms of any special guarantees specified therein, or from CONTRACTOR's continuing obligations under the Contract Documents; and

2. a waiver of all Claims by CONTRACTOR against CITY other than those previously made in writing pursuant to Paragraphs 16.02 and 16.03 and still unsettled.

14.10 Completion of Work by CITY

A. If CITY must complete the Work, all costs and charges incurred by CITY, together with the cost of completing the Work under the Contract, will be deducted from any monies due or which may become due CONTRACTOR. If such expense exceeds the sum which would have been payable under the Contract, then CONTRACTOR and the surety shall be liable and shall pay to CITY the amount of such excess.

ARTICLE 15 SUSPENSION OF WORK AND TERMINATION

15.01 CITY May Suspend Work

A. Notwithstanding any other provision of this Contract, at any time and without cause, and at its sole and absolute discretion, CITY, may suspend the Work or any portion of the Work by written notice to CONTRACTOR, which will initially fix the date on which Work will be resumed. CONTRACTOR shall resume the Work on the date so fixed in the notice unless the date is changed by a subsequent written notice from CITY. CONTRACTOR may be allowed an adjustment in the Contract Price or an extension of the Contract Times, or both, directly attributable to any suspension if CONTRACTOR makes a Claim therefore in accordance with Article 16.

B. CONTRACTOR will not be allowed an adjustment in the Contract Price or an extension of the Contract Times if CITY suspends the Work because CONTRACTOR's acts or omissions create or cause an emergency that CITY believes affects the safety or protection of persons, the Work, or property at the Site or adjacent thereto. CITY may order CONTRACTOR to stop the Work, or any portion thereof, until the cause for such order has been adequately addressed by CONTRACTOR; however, this right of CITY to stop the Work shall not give rise to any duty on the part of CITY to exercise this right for the benefit of CONTRACTOR, any Subcontractor, Supplier, other individual or entity or any surety or employee or agent of any of them.

15.02 CITY May Terminate for Default

A. CONTRACTOR may be deemed in default and CITY may terminate the services of CONTRACTOR upon the occurrence of any one or more of the following events:

1. CONTRACTOR fails to perform the Work in accordance with the Contract Documents (including, but not limited to, failure to supply sufficient skilled workers or suitable materials or equipment or failure to adhere to the progress schedule established under Paragraph 2.06 and 2.07 as adjusted from time to time pursuant to Paragraphs 6.04, 6.05, 12.02 and 12.03);
2. CONTRACTOR abandons the Work or declares its intention to abandon the Work;
3. CONTRACTOR assigns or attempts to assign its rights or obligations under this Contract or any part thereof to any third party without the prior written consent of CITY;
4. CONTRACTOR fails to make prompt payment duly owing to any subcontractor for Work completed in accordance to the Contract Documents or material supplier for materials delivered for incorporation into the Work within thirty (30) calendar days after payment was due;
5. CONTRACTOR fails to achieve the required dates of substantial and final completion;
6. CONTRACTOR disregards Laws or Regulations of any public body having jurisdiction;
7. CONTRACTOR disregards the authority of DESIGN PROFESSIONAL or OWNER;
or
8. CONTRACTOR otherwise violates in any substantial way any provisions of the Contract Documents.

B. CITY may, after giving CONTRACTOR (and the surety) seven (7) days written notice and to the extent permitted by Laws or Regulations, terminate the services of CONTRACTOR, exclude CONTRACTOR from the Site and take possession of the Work and of all CONTRACTOR's tools, appliances, construction equipment and machinery at the Site and use the same to the full extent they could be used by CONTRACTOR (without liability to

CONTRACTOR for trespass or conversion), incorporate into the Work all materials and equipment stored at the Site or for which CITY has paid CONTRACTOR but which are stored elsewhere, and finish the Work as CITY may deem expedient. In such case, CONTRACTOR shall not be entitled to receive any further payment until the Work is finished. If the unpaid balance of the Contract Price exceeds all costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) sustained by CITY arising out of or resulting from completing the Work, such excess may be paid to CONTRACTOR. If such costs, losses and damages exceed such unpaid balance, CONTRACTOR shall pay the difference to CITY within fourteen (14) calendar days of CITY'S demand for payment. When exercising any rights or remedies under this Paragraph CITY shall not be required to competitively bid this work unless required by law.

C. Where CONTRACTOR'S services have been so terminated by CITY, the termination will not affect any rights or remedies of CITY against CONTRACTOR then existing or which may thereafter accrue. Any retention or payment of moneys due CONTRACTOR by CITY will not release CONTRACTOR from liability.

D. If, after a default termination, it is determined that the CONTRACTOR was not in default, the rights and obligations of the parties shall be the same as if the termination had been issued for the convenience of the CITY. The CITY shall then be liable to CONTRACTOR for only those costs enumerated in paragraph 15.03.

15.03 CITY May Terminate for Convenience

A. Notwithstanding any other provision of this Contract, upon seven (7) calendar days written notice to CONTRACTOR, CITY may, at its sole and absolute discretion, without cause and without prejudice to any other right or remedy of CITY, elect to terminate the Contract. In such case, CONTRACTOR shall, with thirty (30) calendar days of receiving notice of termination under this paragraph, submit to CITY its statement of costs and expenses and shall be paid:

1. for completed and acceptable Work executed in accordance with the Contract Documents prior to the effective date of termination, including fair and reasonable sums for overhead and profit on such Work;

2. for expenses sustained prior to the effective date of termination in performing services and furnishing labor, materials or equipment as required by the Contract Documents in connection with uncompleted Work, plus fair and reasonable sums for overhead and profit on such expenses;

3. for all costs, losses and damages incurred in settlement of terminated contracts with Subcontractors, Suppliers and others; and

4. for reasonable expenses directly attributable to termination if approved in advance by CITY.

B. CONTRACTOR shall not be paid on account of loss of anticipated profits or revenue or other economic loss arising out of or resulting from such termination.

C. CONTRACTOR waives any costs not submitted to CITY pursuant to paragraph 15.03.A.

D. CITY shall, within thirty (30) calendar days after receipt of CONTRACTOR'S statement, pay CONTRACTOR all amounts it determines are properly determined.

ARTICLE 16 CLAIMS AND DISPUTES

16.01 Definition

A. A Claim is a demand or assertion by the CONTRACTOR seeking, as a matter of right, the adjustment of Contract price and/or times with respect to the terms of the Contract.

16.02 Written Notice and Burden of Proof

A. Claims must be made by written notice pursuant to Paragraph 17.01. The written notice shall clearly indicate that the CONTRACTOR is making a claim. The responsibility to substantiate Claims shall rest with the CONTRACTOR. No Claim may be made under this Contract except as provided in this Article.

B. Certification of Claim: The written notice of Claim shall include the following statement signed by the CONTRACTOR's representative: "The CONTRACTOR certifies that all statements made and the facts set out in this claim are true and correct and that no false records have been submitted in support of this claim." **Strict compliance with this paragraph shall be a condition precedent to the creation, existence or validity of any Claim.**

16.03 Time Limits on Claims

A. The CONTRACTOR must give notice to the CITY within fourteen (14) calendar days after the denial of a request for or failure to reach an agreement on a change in Contract Price and/or change in Contract Time pursuant to Article 11 and Article 12 respectively. After the fourteen (14) day period for making Claims has expired, the Claim shall be considered waived.

B. The CONTRACTOR shall submit the Claim to the CITY's Representative.

16.04 Continuing Contract Performance

A. Pending final resolution of a Claim, unless otherwise agreed in writing, the CONTRACTOR shall proceed diligently with performance of the Work and the CITY shall continue to make payments in accordance with the Contract Documents. The CITY may, but is not obligated to, notify the Surety of the nature and amount of the Claim.

16.05 Injury or Damage to Person or Property

A. If either party to the Contract suffers injury or damage to person or property because of an act or omission of the other party, of any of the other party's employees or agents, or of others for whose acts that party is legally liable, written notice of the injury or damage, whether or not insured, shall be given to the other party within a reasonable time not exceeding thirty (30) days after first observance. The notice shall provide sufficient detail to enable the other party to investigate the matter.

16.06 Initial Resolution of Claims and Disputes

A. After the CONTRACTOR has submitted the Claim to the CITY's Representative, the CITY'S Representative and CONTRACTOR'S Representative shall conduct a settlement conference within fourteen (14) calendar days from the date of receipt of the Claim. If the Claim is not settled within seven (7) calendar days following the date of the settlement conference, the CITY'S Representative and the CONTRACTOR's Representative shall state, in writing, following the conclusion of the seven (7) calendar day period, their respective position as to the matters in dispute.

B. The CITY'S and CONTRACTOR'S statement of positions shall state all known factual grounds for each party's position. If the dispute remains unresolved at the end of the seven (7) calendar days from submission of the parties' written position statements, the CONTRACTOR shall have the right to proceed with the pursuit of Claims pursuant to paragraph 16.07.

C. If a Claim has been resolved, the OWNER will prepare or obtain appropriate documentation.

16.07 Final Resolution of Claims and Disputes

A. All administrative procedures set forth in this contract must first be exhausted before suit is filed.

B. If the CITY'S Representative and the CONTRACTOR'S Representative are unable to resolve the dispute pursuant to 16.06, the parties must submit their statements of position to the Director, who shall review the Claim and make a decision within fourteen (14) calendar days.

C. Absent fraud, gross mistake or bad faith, the Director's decision shall be final and binding on CITY and CONTRACTOR within fourteen (14) calendar days after issuance. The CONTRACTOR shall give written notice to the CITY stating its intent to submit its Claim to a court of law pursuant to paragraph 17.05.A. within thirty (30) calendar days after notice of Director's decision.

D. The time frames for the Director's decision and for CONTRACTOR'S written notice of intent may be tolled by participation in voluntary mediation. Mediator selection and the procedures to be employed in voluntary mediation shall be mutually acceptable to the parties. Costs of the mediator shall be shared equally among the parties participating in the mediation. In no event shall any time frame be tolled more than 30 days for mediation. However, mediation may be employed at any time at the discretion and mutual agreement of the parties.

E. If the dispute is not resolved during voluntary mediation, The CONTRACTOR agrees that it will file no suit based on facts or evidentiary materials that were not presented for consideration to the CITY during the mediation process or of which the CONTRACTOR had knowledge and failed to present during the administrative procedures.

ARTICLE 17 MISCELLANEOUS

17.01 Giving Notice

A. Whenever any provision of the Contract Documents requires the giving of written notice, it will be given by personal delivery, by registered or certified mail, postage prepaid, to the last business address known to the giver of the notice or by confirmed electronic facsimile transmission. Notice is effective on the date of personal delivery, deposit of registered or certified mail, postage prepaid, or confirmed electronic facsimile transmission.

17.02 Computation of Times

A. When any period of time is referred to in the Contract Documents by days, it will be computed to exclude the first and include the last calendar day of such period. If the last day of such period falls on a Saturday or Sunday or on a day made a legal holiday by the law of the applicable jurisdiction, such day will be omitted from the computation.

17.03 Cumulative Remedies

A. The duties and obligations imposed by these General Conditions and the rights and remedies available hereunder to the parties hereto, and, in particular but without limitation, the warranties, guarantees and obligations imposed upon CONTRACTOR and all of the rights and remedies available to CITY and DESIGN PROFESSIONAL hereunder are in addition to, and are not to be construed in any way as a limitation of, any rights and remedies available to any or all of them which are otherwise imposed or available by Laws or Regulations, by special warranty or guarantee or by other provisions of the Contract Documents, and the provisions of this Paragraph will be as effective as if repeated specifically in the Contract Documents in connection with each particular duty, obligation, right and remedy to which they apply.

17.04 Survival of Obligations

A. All representations, indemnifications, warranties, and guarantees made in, required by, or given in accordance with the Contract Documents, as well as all continuing obligations indicated in the Contract Documents will survive final payment, completion, and acceptance of the Work or termination or completion of the Contract.

17.05 Controlling Law

A. This Contract shall be construed and governed in accordance with the laws of the State of Missouri without giving effect to Missouri's choice of law provisions. The CITY and CONTRACTOR: (1) shall submit exclusively to the jurisdiction of the state and federal courts located in Jackson County, Missouri and no other; (2) shall waive any and all objections to jurisdiction and venue; and (3) shall not raise forum non conveniens as an objection to the location of any litigation.

SUPPLEMENTARY CONDITIONS

Project Number 89022000

Project Title CM @ RISK Kansas City Downtown Streetcar

These Supplementary Conditions amend or supplement the General Conditions of the Construction Contract and other provisions of the Contract Documents as indicated below. All provisions that are not so amended or supplemented remain in full force and effect.

SC-1.01 Article 1, Paragraph 1.01, Defined Terms; Definition 16. Contract Documents is supplemented as follows:

16. Contract Documents- The Contract Documents establish the rights and obligations of the parties and include the Contract, Addenda (which pertain to the Contract Documents), CONTRACTOR's Bid Form/Contract (including documentation accompanying the Bid and any post Bid documentation submitted prior to the Notice of Intent to Contract), the Notice to Proceed, the Bonds, these General Conditions, the Supplementary Conditions, the Federal Transit Administration Required Contract Clauses and Certifications, the Specifications and the Drawings as the same are more specifically identified in the Project Manual and the certification page(s) of the DESIGN PROFESSIONAL and Consultant(s), together with approved Project baseline schedule and amendments thereto and all Written Amendments, Change Orders, Work Change Directives, and DESIGN PROFESSIONAL's written interpretations and clarifications issued on or after the Effective Date of the Contract, and approved Shop Drawings. Reports and drawings of subsurface and physical conditions are not Contract Documents. Only printed or hard copies of the items listed in this Paragraph are Contract Documents. Files in electronic media format of text, data, graphics, and the like that may be furnished by CITY to CONTRACTOR are not Contract Documents, except Project schedules submitted by CONTRACTOR and approved by CITY.

SC-1.01 Article 1, Paragraph 1.01, Defined Terms, Subparagraph 1.01 is amended by deleting Paragraph 19 and replacing with the following:

19. **CONTRACTOR/CM @Risk** - The person, firm, partnership, company, corporation or association licensed or otherwise authorized by law to do business in Missouri, with whom CITY has entered into the Agreement.

SC-1.01 Article 1, Paragraph 1.01, Defined Terms, Subparagraph 1.01 amended by adding the following Paragraphs:

55. **Construction Manager/General Contractor at Risk (CM@Risk)** – The CONTRACTOR.

56. **Construction Manager Fee (CM Fee)** – The amount CONTRACTOR is charging the CITY for overhead costs and profit associated with the Work.

57. **Construction Manager General Conditions Price (CM GC Price)** – The amount CONTRACTOR is charging City for Indirect Costs excluding the overhead and profit. This amount shall not contain Project contingency.

58. **Direct Costs** – Cost of all direct labor, equipment and materials required to complete CONTRACTOR’S Work.

59. **IGMP** – Initial Guaranteed Maximum Price of the Project that is established prior to DESIGN PROFESSIONAL’s development of the final design and scope of documents for the Project. This amount is the sum of the CM Fee CM/GC, and initial estimate of the Direct Costs.

60. **FGMP** – Final Guaranteed Maximum Price of the Project that is established after Preconstruction Phase 1 and upon completion of DESIGN PROFESSIONAL’s detailed design development for the Project. This amount is the sum of the CM Fee, CM GC, and CONTRACTOR’s estimate of the Direct Costs (including any contingency agreed upon by CM/GC@Risk and CITY.

61. **Cost of the Work** – The actual total Cost of the Work, including actual Direct Costs, but excluding the CM Fee, and any contingency, as more fully defined in Section 11.02.

62. **Project Management Oversight Consultant (PMOC)** – FTA Appointed Consultant to provide Project management oversight.

SC-4.02 Article 4, Paragraph 4.02, Subsurface and Physical Conditions; Subparagraphs A and B are supplemented as follows:

In the preparation of the Contract Documents, no reports of explorations and tests of subsurface conditions at or contiguous to the Site of the Work *are available*

In the preparation of the Contract Documents, no drawings of physical conditions in or relating to existing surface or subsurface structures which are at or contiguous to the Site of the Work are available.

SC-4.06 Article 4, Paragraph 4.06, Asbestos, Lead-Based Paint, PCBs, Petroleum Waste or Radioactive Material, Subparagraphs A and B are supplemented as follows:

In the preparation of the Contract Documents, the following reports and drawings relating to a Hazardous Environmental Condition identified at the Site of the Work were utilized:

1. Report dated September 2012, prepared by HDR Inc.; entitled Environmental Assessment Kansas City Downtown Streetcar Project , which may be reviewed at **414 East 12th Street 18th Floor, Kansas City Missouri** The technical data contained in such report upon which CONTRACTOR may rely is included in the document. .

SC- 5.01 A. Article 5, Paragraph 5.01, Performance, Payment and Other Bonds, Subparagraph A, second sentence, is revised as follows:

These Bonds shall remain in effect at least until **(2) years** after the date when final payment becomes due, except as provided otherwise by Laws or Regulations or by the Contract Documents. CONTRACTOR shall furnish the following additional Bonds, which shall remain in effect as stated

SC-5.03 A. Article 5, Paragraph 5.03 Certificates of Insurance, Subparagraph A is amended by adding the following Subparagraph 1:

1. CONTRACTOR shall obtain evidence that all Subcontractors have in force the required coverage in the amounts required by these Contract Documents, and evidence that each is current on its unemployment insurance payments before Subcontractors begin Work at the

Site. CONTRACTOR shall retain such evidence in its files and make available to CITY within ten (10) days after written request.

SC-5.04 B.1. Article 5, Paragraph 5.04, CONTRACTOR's Liability Insurance, Subparagraph B.1 is amended as follows:

With respect to insurance required by Paragraphs 5.04 A.3 through 5.04 A.5, the following additional individuals or entities shall be listed as additional insureds:

With respect to Commercial Automobile Liability Insurance and Commercial General Liability Insurance, the Federal Transit Administration (FTA), Downtown Transportation Development District (TDD), Kansas City Streetcar Authority (KCSA) and the Project Management Oversight Consultant (PMOC) - Kansas City Area Transportation Authority (KCATA) and each of their respective employees shall be listed as additional insureds.

SC-5.04 C. Article 5, Paragraph 5.04, CONTRACTOR's Liability Insurance, Subparagraph C is amended as follows:

The following additional policies of insurance are required:

5. Railroad Protective Liability Insurance. This insurance shall be issued in the name of the Railroad Company specified below and shall protect and defend the railroad against claims arising as a result of the operations of CONTRACTOR. This insurance shall be acceptable to the railroad and shall be maintained in force throughout the period when CONTRACTOR is working on or adjacent to property owned by the railroad. CONTRACTOR shall not enter upon the Railroad Company's premises until this insurance is in effect. The aggregate liability limits per job site for bodily injury and property damage shall be not less than those limits required by the respective Railroad Company.

Railroad Protective Liability Insurance shall be issued in the name of the following railroad(s):
Kansas City Terminal Railway Company only for work required to be performed outside of the bridge deck over the tracks south of 20th Street

SC-5.06 A. Article 5, Paragraph 5.06, Property Insurance, Paragraph A, is amended by adding the following after the first sentence:

Property Insurance on the Work at the Site shall be written with a deductible amount not to exceed \$10,000.00.

SC-6.01. Article 6, Paragraph 6.01, Indemnification, is supplemented by adding Subparagraph F as follows:

- F. CONTRACTOR shall defend, indemnify and hold harmless the Federal Transit Administration (FTA), Downtown Transportation Development District (TDD), Kansas City Streetcar Authority (KCSA) and the Project Management Oversight Consultant (PMOC) - Kansas City Area Transportation Authority (KCATA) and each of their respective employees from and against all Claims arising out of or resulting from all acts or omissions in connection with this Contract caused in whole or in part by CONTRACTOR or CONTRACTOR'S Agents, regardless of whether or not caused in part by any act or omission, including negligence, of OWNER. CONTRACTOR'S obligations under this subparagraph shall be limited to the coverage and limits of insurance that CONTRACTOR is required to procure and maintain under this Contract. CONTRACTOR affirms that it has had the opportunity to recover the costs of the liability insurance required in this Contract in its contract price. For purposes of this subparagraph, Claims as defined in subparagraph A.1 shall be expanded to also mean all claims, damages, liability, losses, costs and expenses, including court costs and reasonable attorney's fees, incurred by MoDOT and MHTC.

SC-6.06 A.1 Article 6, Paragraph 6.06 Substitutes and "Or-Equal" Items, Paragraph A is amended by adding the following at the end of Paragraph A.1:

Proposed "or-equal" items must be submitted to CITY at least 10 days prior to Bid date at the following address:

414 E 12th Street 18th Floor City Hall
Kansas City, Missouri 64106
Attn: Ralph Davis, Project Manager

Only Bidders may submit proposed "or-equal" items and such items must require no change in related Work. Acceptance by CITY of any proposed "or-equal" items will be made by Addendum only.

SC-6.06 A.2. Article 6, Paragraph 6.06 Substitutes and "Or-Equal" Items, Paragraph A is amended by adding the following at the end of Paragraph A.2:

Proposed substitute items must be submitted to CITY's Representative not later than 10_ days prior to the time the item is to be incorporated into the Work. Only CONTRACTOR may submit proposed substitute items, and such items must be submitted to CITY's Representative on the standard City form 01630 - Substitution Request. Acceptance by CITY of any proposed substitute item will be made by Change Order.

SC-6.09. Article 6, Paragraph 6.09, Permits, Subparagraph A is supplemented as follows:

CONTRACTOR shall secure a permit from the Missouri Highway and Transportation Commission's District Engineer prior to performing any work in state-controlled Right-of-Way.

CONTRACTOR does not need to obtain and pay for the following construction permits and licenses, which have been paid for by CITY:

SC-6.10. Article 6, Paragraph 6.10, Compliance with Laws and Regulations, is amended by adding the following new Subparagraphs immediately following Subparagraph 6.10 I 2:

a. CONTRACTOR will be required to comply with wage rates as follows:

County –	Jackson,
Work Type:	Federal – Heavy
	State – Heavy

SC-6.11. Article 6, Paragraph 6.11, Taxes, is amended by adding the following sentence to Subparagraph 6.11 B:

A. Tax Compliance. The following subparagraphs apply if the Contract is over \$127,000.00.

SC-12.01 Article 12, Paragraph 12.01, Time of the Essence is amended by adding the following new Subparagraphs immediately following Subparagraph 12.01 A:

B. Starting and Completion

1. The Work to be performed under this Contract shall begin on the date specified in the written Notice to Proceed issued by the Director of Public Works, and the Work shall be substantially complete, in accordance with Paragraph 14.04, on or before May 31, 2015 or date agreed upon at FGMP. Once the Work starts, CONTRACTOR shall continuously pursue completion of the Work.

2. The Work shall be completed and ready for final payment in accordance with Paragraph 14.07 within 60 Calendar Days after the date of Substantial Completion of the Work.

B. Liquidated Damages

1. If the Work is not substantially completed, in accordance with Paragraph 14.04, on or before Date Agreed upon at FGMP within the period stated in Paragraph 12.01 B.1, CONTRACTOR shall pay to CITY the amount of *Amount to be negotiated at FGMP* as liquidated damages and not as a penalty for each Calendar Day until the Work is substantially complete. The amount of liquidated damages shall be deducted from any payments due or to become due CONTRACTOR.
2. If the Work is not completed and ready for final payment in accordance with Paragraph 14.07, within the period stated in Paragraph 12.01 B.2, CONTRACTOR shall pay to CITY the amount of *Amount to be negotiated at FGMP* as liquidated damages and not as a penalty for each Calendar Day until the Work is completed and ready for final payment. The amount of liquidated damages shall be deducted from any payments due or to become due CONTRACTOR.

SC-14.02 A. Article 14, Paragraph 14.02, Application for Progress Payments, Subparagraph A is amended by deleting Item 3 and adding the following:

3. CITY shall make payments to CONTRACTOR monthly on or about the 30th day of each month. Payments to CONTRACTOR will be made on the basis of the value of the Work satisfactorily completed plus the value of properly stored and insured, unused materials on hand on the Site of the Work. All Work covered by a payment becomes CITY's property, provided that the Work paid for remains the sole responsibility of CONTRACTOR until all terms and conditions of the Contract have been met.

SC-18.01 The General Conditions are amended by adding the following Article(s):

ARTICLE 18 The Federal Transit Administration Required Contract Provisions and Kansas City Area Transportation Authority.

- A. FTA requires that award can only be made to responsible contractors possessing the ability, willingness, and integrity to perform successfully under the terms and conditions of the contract. Responsibility criteria include administrative and technical capacity, production capability, timeliness, and satisfactory current or past performance record.
- B. The following FTA Requirements apply to this Contract:
 1. **No Federal Government Obligations to Third Parties.** In connection with the Project, the Recipient agrees that, absent the Federal Government's express written consent, the Federal Government shall not be subject to any obligations or liabilities to any sub-recipient, lessee, third party contractor, or other participant at any tier of the Project, or other person or entity that is not a party to the Grant Agreement or Cooperative Agreement for the Project. Notwithstanding that the Federal Government may have concurred in or approved any solicitation, sub-agreement, lease, third party contract, or arrangement at any tier, the Federal Government has no obligations or liabilities to any entity other than the Recipient, including any sub-recipient, lessee, third party contractor, or other participant at any tier of the Project.
 2. **False or Fraudulent Statements or Claims.** The Recipient acknowledges and agrees that:

- (a) **Civil Fraud.** The Program Fraud Civil Remedies Act of 1986, as amended, 31 U.S.C. §§ 3801 *et seq.*, and U.S. DOT regulations, “Program Fraud Civil Remedies,” 49 C.F.R. Part 31, apply to the Recipient’s activities in connection with the Project. By executing the Grant Agreement or Cooperative Agreement for the Project, the Recipient certifies or affirms the truthfulness and accuracy of each statement it has made, it makes, or it may make in connection with the Project. In addition to other penalties that may apply, the Recipient also acknowledges that if it makes a false, fictitious, or fraudulent claim, statement, submission, certification, assurance, or representation to the Federal Government, the Federal Government reserves the right to impose on the Recipient the penalties of the Program Fraud Civil Remedies Act of 1986, as amended, to the extent the Federal Government deems appropriate.
 - (b) **Criminal Fraud.** If the Recipient makes a false, fictitious, or fraudulent claim, statement, submission, certification, assurance, or representation to the Federal Government or includes a false, fictitious, or fraudulent statement or representation in any agreement with the Federal Government in connection with a Project authorized under 49 U.S.C. chapter 53 or any other Federal law, the Federal Government reserves the right to impose on the Recipient the penalties of 49 U.S.C. § 5323(1), 18 U.S.C. § 1001, or other applicable Federal law to the extent the Federal Government deems appropriate.
3. **Access to Third Party Contract Records.** The Recipient agrees to require, and assures that its sub-recipients require, their third party contractors and third party subcontractors at each tier to provide to the U.S. Secretary of Transportation and the Comptroller General of the United States or their duly authorized representatives, access to all third party contract records as required by 49 U.S.C. § 5325(g). The Recipient further agrees to require, and assures that its sub-recipients require, their third party contractors and third party subcontractors, at each tier, to provide sufficient access to third party procurement records as needed for compliance with Federal laws and regulations or to assure proper Project management as determined by FTA.
4. **Changes in Project Performance (i.e., Disputes, Breaches, Defaults, or Litigation).** The Recipient agrees to notify FTA immediately, in writing, of any change in local law, conditions (including its legal, financial, or technical capacity), or any other event that may adversely affect the Recipient’s ability to perform the Project in accordance with the terms of the Grant Agreement or Cooperative Agreement for the Project and this Master Agreement. The Recipient also agrees to notify FTA immediately, in writing, of any current or prospective major dispute, breach, default, or litigation that may adversely affect the Federal Government’s interests in the Project or the Federal Government’s administration or enforcement of Federal laws or regulations; and agrees to inform FTA, also in writing, before naming the Federal Government as a party to litigation for any reason, in any forum. At a minimum, the Recipient agrees to provide each notice to FTA required by this subsection of this Master Agreement to the FTA Regional Counsel for the Region in which the Recipient operates its public transportation system or implements the Project.
5. **Civil Rights.** The Recipient agrees to comply with all applicable civil rights laws and regulations, in accordance with applicable Federal directives, except to the

extent that the Federal Government determines otherwise in writing. These include, but are not limited to, the following:

- (a) **Nondiscrimination in Federal Public Transportation Programs.** The Recipient agrees to comply, and assures the compliance of each sub-recipient, lessee, third party contractor, or other participant at any tier of the Project, with the provisions of 49 U.S.C. § 5332, which prohibit discrimination on the basis of race, color, creed, national origin, sex, or age, and prohibits discrimination in employment or business opportunity.
- (b) **Nondiscrimination – Title VI of the Civil Rights Act.** The Recipient agrees to comply, and assures the compliance of each sub-recipient, lessee, third party contractor, or other participant at any tier of the Project, with all provisions prohibiting discrimination on the basis of race, color, or national origin of Title VI of the Civil Rights Act of 1964, as amended, 42 U.S.C. §§ 2000d *et seq.*, and with U.S. DOT regulations, “Nondiscrimination in Federally-Assisted Programs of the Department of Transportation – Effectuation of Title VI of the Civil Rights Act,” 49 C.F.R. Part 21. Except to the extent FTA determines otherwise in writing, the Recipient agrees to follow all applicable provisions of the most recent edition of FTA Circular 4702.1A, “Title VI and Title VI-Dependent Guidelines for Federal Transit Administration Recipients,” and any other applicable Federal directives that may be issued.
- (c) **Equal Employment Opportunity.** The Recipient agrees to comply, and assures the compliance of each sub-recipient, lessee, third party contractor, or other participant at any tier of the Project, with all equal employment opportunity (EEO) provisions of 49 U.S.C. § 5332, with Title VII of the Civil Rights Act of 1964, as amended, 42 U.S.C. § 2000e *et seq.*, and implementing Federal regulations and any later amendments thereto. Except to the extent FTA determines otherwise in writing, the Recipient also agrees to follow all applicable Federal EEO directives that may be issued. Accordingly:
 - (1) **General.** The Recipient agrees that it will not discriminate against any employee or applicant for employment because of race, color, creed, sex, disability, age, or national origin. The Recipient agrees to take affirmative action to ensure that applicants are employed and that employees are treated during employment without regard to their race, color, religion, sex, disability, age, or national origin. Such action shall include, but not be limited to, employment, upgrading, demotions or transfers, recruitment or recruitment advertising, layoffs or terminations; rates of pay or other forms of compensation; and selection for training, including apprenticeship.
 - (2) **Equal Employment Opportunity Requirements for Construction Activities.** For activities determined by the U.S. Department of Labor (U.S. DOL) to qualify as “construction,” the Recipient agrees to comply and assures the compliance of each sub-recipient, lessee, third party contractor, or other participant, at any tier of the Project, with all requirements of U.S. DOL regulations, “Office of Federal Contract Compliance Programs, Equal Employment Opportunity, Department of Labor,” 41

C.F.R. Parts 60 *et seq.*; with implementing Executive Order No. 11246, "Equal Employment Opportunity," as amended by Executive Order No. 11375, "Amending Executive Order No. 11246 Relating to Equal Employment Opportunity," 42 U.S.C. § 2000e note, and with other applicable EEO laws and regulations, and also agrees to follow applicable Federal directives, except as the Federal Government determines otherwise in writing.

- (d) **Disadvantaged Business Enterprise.** To the extent authorized by Federal law, the Recipient agrees to facilitate participation by Disadvantaged Business Enterprises (DBEs) in the Project and assures that each sub-recipient, lessee, third party contractor, or other participant at any tier of the Project will facilitate participation by DBEs in the Project to the extent applicable as follows:
- (1) The Recipient agrees and assures that it shall comply with section 1101(b) of SAFETEA-LU, 23 U.S.C. § 101 note, and U.S. DOT regulations, "Participation by Disadvantaged Business Enterprises in Department of Transportation Financial Assistance Programs," 49 C.F.R. Part 26.
 - (2) The Recipient agrees and assures that it shall not discriminate on the basis of race, color, sex, or national origin in the award and performance of any sub-agreement, lease, third party contract, or other arrangement supported with Federal assistance derived from U.S. DOT in the administration of its DBE program and shall comply with the requirements of 49 C.F.R. Part 26. The Recipient agrees to take all necessary and reasonable steps as set forth in 49 C.F.R. Part 26 to ensure nondiscrimination in the award and administration of all sub-agreements, leases, third party contracts, and other arrangements supported with Federal assistance derived from U.S. DOT. As required by 49 C.F.R. Part 26, the Recipient's DBE program approved by U.S. DOT, if any, is incorporated by reference and made part of the Grant Agreement or Cooperative Agreement for the Project. The Recipient agrees that it has a legal obligation to implement its approved DBE program, and that its failure to carry out that DBE program shall be treated as a violation of the Grant Agreement or Cooperative Agreement for the Project and this Master Agreement. Upon notification by U.S. DOT to the Recipient of the Recipient's failure to implement its approved DBE program, U.S. DOT may impose the sanctions as set forth in 49 C.F.R. Part 26 and may, in appropriate cases, refer the matter to the appropriate Federal authorities for enforcement under 18 U.S.C. § 1001, or the Program Fraud Civil Remedies Act, 31 U.S.C. §§ 3801 *et seq.*, or both.
- (e) **Nondiscrimination on the Basis of Sex.** The Recipient agrees to comply with all applicable requirements of Title IX of the Education Amendments of 1972, as amended, 20 U.S.C. §§ 1681 *et seq.*, and with implementing U.S. DOT regulations, "Nondiscrimination on the Basis of Sex in Education Programs or Activities Receiving Federal Financial Assistance," 49 C.F.R. Part 25, that prohibit discrimination on the basis of sex.

- (f) **Nondiscrimination on the Basis of Age.** The Recipient agrees to comply with all applicable requirements of:
- (1) The Age Discrimination Act of 1975, as amended, 42 U.S.C. §§ 6101 *et seq.*, and with implementing U.S. Health and Human Services regulations, “Nondiscrimination on the Basis of Age in Programs or Activities Receiving Federal Financial Assistance,” 45 C.F.R. Part 90, which prohibit discrimination against individuals on the basis of age in the administration of programs or activities receiving Federal financial assistance.
 - (2) The Age Discrimination in Employment Act (ADEA) 29 U.S.C. §§ 621 through 634 and with implementing U.S. Equal Employment Opportunity Commission (U.S. EEOC) regulations, “Age Discrimination in Employment Act,” 29 C.F.R. Part 1625, which prohibits discrimination against individuals on the basis of age.
- (g) **Access for Individuals with Disabilities.** The Recipient agrees to comply with 49 U.S.C. § 5301(d), which states the Federal policy that elderly individuals and individuals with disabilities have the same right as other individuals to use public transportation services and facilities, and that special efforts shall be made in planning and designing those services and facilities to implement transportation accessibility rights for elderly individuals and individuals with disabilities. The Recipient also agrees to comply with all applicable provisions of section 504 of the Rehabilitation Act of 1973, as amended, 29 U.S.C. § 794, which prohibits discrimination on the basis of disability in the administration of programs or activities receiving Federal financial assistance; with the Americans with Disabilities Act of 1990 (ADA), as amended, 42 U.S.C. §§ 12101 *et seq.*, which requires that accessible facilities and services be made available to individuals with disabilities; with the Architectural Barriers Act of 1968, as amended, 42 U.S.C. §§ 4151 *et seq.*, which requires that buildings and public accommodations be accessible to individuals with disabilities; and with other laws and amendments thereto pertaining to access for individuals with disabilities that may be applicable. In addition, the Recipient agrees to comply with applicable implementing Federal regulations, and any later amendments thereto, and agrees to follow applicable Federal implementing directives, except to the extent FTA approves otherwise in writing. Among those regulations and directives are:
- (1) U.S. DOT regulations, “Transportation Services for Individuals with Disabilities (ADA),” 49 C.F.R. Part 37;
 - (2) U.S. DOT regulations, “Nondiscrimination on the Basis of Handicap in Programs and Activities Receiving or Benefiting from Federal Financial Assistance,” 49 C.F.R. Part 27;
 - (3) Joint U.S. Architectural and Transportation Barriers Compliance Board (U.S. ATBCB)/U.S. DOT regulations, “Americans With Disabilities (ADA) Accessibility Specifications for Transportation Vehicles,” 36 C.F.R. Part 1192 and 49 C.F.R. Part 38;

- (4) U.S. DOJ regulations, “Nondiscrimination on the Basis of Disability in State and Local Government Services,” 28 C.F.R. Part 35;
 - (5) U.S. DOJ regulations, “Nondiscrimination on the Basis of Disability by Public Accommodations and in Commercial Facilities,” 28 C.F.R. Part 36;
 - (6) U.S. General Services Administration (U.S. GSA) regulations, “Accommodations for the Physically Handicapped,” 41 C.F.R. Subpart 101-19;
 - (7) U.S. EEOC, “Regulations to Implement the Equal Employment Provisions of the Americans with Disabilities Act,” 29 C.F.R. Part 1630;
 - (8) U.S. Federal Communications Commission regulations, “Telecommunications Relay Services and Related Customer Premises Equipment for the Hearing and Speech Disabled,” 47 C.F.R. Part 64, Subpart F;
 - (9) U.S. ATBCB regulations, “Electronic and Information Technology Accessibility Standards,” 36 C.F.R. Part 1194;
 - (10) FTA regulations, “Transportation for Elderly and Handicapped Persons,” 49 C.F.R. Part 609; and
 - (11) Federal civil rights and nondiscrimination directives implementing those Federal laws and regulations, except to the extent the Federal Government determines otherwise in writing.
- (h) **Drug or Alcohol Abuse - Confidentiality and Other Civil Rights Protections.** To the extent applicable, the Recipient agrees to comply with the confidentiality and civil rights protections of the Drug Abuse Office and Treatment Act of 1972, as amended, 21 U.S.C. §§ 1101 *et seq.*, the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment and Rehabilitation Act of 1970, as amended, 42 U.S.C. §§ 4541 *et seq.*, and the Public Health Service Act of 1912, as amended, 42 U.S.C. §§ 290dd through 290dd-2, and any amendments thereto.
- (i) **Access to Services for Persons with Limited English Proficiency.** The Recipient agrees to facilitate compliance with the policies of Executive Order No. 13166, “Improving Access to Services for Persons with Limited English Proficiency,” 42 U.S.C. § 2000d-1 note, and follow applicable provisions of U.S. DOT Notice, “DOT Policy Guidance Concerning Recipients’ Responsibilities to Limited English Proficiency (LEP) Persons,” 70 *Fed. Reg.* 74087, December 14, 2005, except to the extent that FTA determines otherwise in writing.
- (j) **Environmental Justice.** The Recipient agrees to facilitate compliance with the policies of Executive Order No. 12898, “Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations,” 42 U.S.C. § 4321 note; and DOT Order 5620.3, “Department of Transportation Actions To Address Environmental Justice in Minority Populations and Low-Income Populations,” 62 *Fed. Reg.* 18377 *et seq.*, April 15, 1997, except to the extent that the Federal Government determines otherwise in writing.
- (k) **Other Nondiscrimination Laws.** The Recipient agrees to comply with applicable provisions of other Federal laws and regulations, and follow

applicable Federal directives prohibiting discrimination, except to the extent the Federal Government determines otherwise in writing.

6. **Disadvantaged Business Enterprise.** To the extent authorized by Federal law, the Recipient agrees to facilitate participation by Disadvantaged Business Enterprises (DBEs) in the Project and assures that each sub-recipient, lessee, third party contractor, or other participant at any tier of the Project will facilitate participation by DBEs in the Project to the extent applicable as follows:
 - (a) The Recipient agrees and assures that it shall comply with section 1101(b) of SAFETEA-LU, 23 U.S.C. § 101 note, and U.S. DOT regulations, "Participation by Disadvantaged Business Enterprises in Department of Transportation Financial Assistance Programs," 49 C.F.R. Part 26.
 - (b) The Recipient agrees and assures that it shall not discriminate on the basis of race, color, sex, or national origin in the award and performance of any sub-agreement, lease, third party contract, or other arrangement supported with Federal assistance derived from U.S. DOT in the administration of its DBE program and shall comply with the requirements of 49 C.F.R. Part 26. The Recipient agrees to take all necessary and reasonable steps as set forth in 49 C.F.R. Part 26 to ensure nondiscrimination in the award and administration of all sub-agreements, leases, third party contracts, and other arrangements supported with Federal assistance derived from U.S. DOT. As required by 49 C.F.R. Part 26, the Recipient's DBE program approved by U.S. DOT, if any, is incorporated by reference and made part of the Grant Agreement or Cooperative Agreement for the Project. The Recipient agrees that it has a legal obligation to implement its approved DBE program, and that its failure to carry out that DBE program shall be treated as a violation of the Grant Agreement or Cooperative Agreement for the Project and this Master Agreement. Upon notification by U.S. DOT to the Recipient of the Recipient's failure to implement its approved DBE program, U.S. DOT may impose the sanctions as set forth in 49 C.F.R. Part 26 and may, in appropriate cases, refer the matter to the appropriate Federal authorities for enforcement under 18 U.S.C. § 1001, or the Program Fraud Civil Remedies Act, 31 U.S.C. §§ 3801 *et seq.*, or both.
7. **Right of the Federal Government to Terminate.** Upon written notice, the Recipient agrees that the Federal Government may suspend or terminate all or any part of the Federal assistance to be provided for the Project if the Recipient has violated the terms of the Grant Agreement or Cooperative Agreement for the Project including this Master Agreement, or if the Federal Government determines that the purposes of the laws authorizing the Project would not be adequately served by the continuation of Federal assistance for the Project. The Recipient understands and agrees that any failure to make reasonable progress on the Project or any violation of the Grant Agreement or Cooperative Agreement for the Project, or this Master Agreement that endangers substantial performance of the Project shall provide sufficient grounds for the Federal Government to terminate the Grant Agreement or Cooperative Agreement for the Project. In general, termination of Federal assistance for the Project will not invalidate obligations properly incurred by the Recipient before the termination date to the extent those obligations cannot be canceled. If, however, the Federal Government

determines that the Recipient has willfully misused Federal assistance by failing to make adequate progress, by failing to make reasonable and appropriate use of Project property, or by failing to comply with the terms of the Grant Agreement or Cooperative Agreement for the Project including this Master Agreement, the Federal Government reserves the right to require the Recipient to refund the entire amount of Federal assistance provided for the Project or any lesser amount as the Federal Government may determine. Expiration of any Project time period established for the Project does not, by itself, constitute an expiration or termination of the Grant Agreement or Cooperative Agreement for the Project.

8. **Equal Employment Opportunity Requirements for Construction Activities.** For activities determined by the U.S. Department of Labor (U.S. DOL) to qualify as “construction,” the Recipient agrees to comply and assures the compliance of each sub-recipient, lessee, third party contractor, or other participant, at any tier of the Project, with all requirements of U.S. DOL regulations, “Office of Federal Contract Compliance Programs, Equal Employment Opportunity, Department of Labor,” 41 C.F.R. Parts 60 *et seq.*; with implementing Executive Order No. 11246, “Equal Employment Opportunity,” as amended by Executive Order No. 11375, “Amending Executive Order No. 11246 Relating to Equal Employment Opportunity,” 42 U.S.C. § 2000e note, and with other applicable EEO laws and regulations, and also agrees to follow applicable Federal directives, except as the Federal Government determines otherwise in writing.
9. **Debarment and Suspension.** The Recipient agrees to comply with applicable provisions of Executive Orders Nos. 12549 and 12689, “Debarment and Suspension,” 31 U.S.C. § 6101 note, and U.S. DOT regulations, “Non-procurement Suspension and Debarment,” 2 C.F.R. Part 1200, which adopt and supplement the provisions of U.S. Office of Management and Budget (U.S. OMB) “Guidelines to Agencies on Government-wide Debarment and Suspension (Non-procurement),” 2 C.F.R. Part 180. To the extent required by these U.S. DOT regulations and U.S. OMB guidance, the Recipient agrees to review the “Excluded Parties Listing System” at <http://epls.gov/> and to include a similar term or condition in each lower tier covered transaction, assuring that, to the extent required by the U.S. DOT regulations and U.S. OMB guidance, each sub-recipient, lessee, third party contractor, and other participant at a lower tier of the Project, will review the “Excluded Parties Listing System” at <http://epls.gov/>, and will include a similar term or condition in each of its lower tier covered transactions.
10. **Buy America.** The Recipient agrees to comply with 49 U.S.C. § 5323(j) and FTA regulations, “Buy America Requirements,” 49 C.F.R. Part 661, and any amendments thereto.
11. **Changes in Project Performance (i.e., Disputes, Breaches, Defaults, or Litigation).** The Recipient agrees to notify FTA immediately, in writing, of any change in local law, conditions (including its legal, financial, or technical capacity), or any other event that may adversely affect the Recipient’s ability to perform the Project in accordance with the terms of the Grant Agreement or Cooperative Agreement for the Project and this Master Agreement. The Recipient also agrees to notify FTA immediately, in writing, of any current or prospective major dispute, breach, default, or litigation that may adversely affect the Federal Government’s interests in the Project or the Federal Government’s administration or enforcement of Federal laws or regulations; and agrees to inform FTA, also in

writing, before naming the Federal Government as a party to litigation for any reason, in any forum. At a minimum, the Recipient agrees to provide each notice to FTA required by this subsection of this Master Agreement to the FTA Regional Counsel for the Region in which the Recipient operates its public transportation system or implements the Project.

12. **Lobbying Restrictions.** The Recipient agrees that:

- (a) In compliance with 31 U.S.C. § 1352(a), it will not use Federal assistance to pay the costs of influencing any officer or employee of a Federal agency, Member of Congress, officer of Congress or employee of a member of Congress, in connection with making or extending the Grant Agreement or Cooperative Agreement;
- (b) In addition, it will comply with other applicable Federal laws and regulations prohibiting the use of Federal assistance for activities designed to influence Congress or a State legislature with respect to legislation or appropriations, except through proper, official channels; and
- (c) It will comply, and will assure the compliance of each sub-recipient, lessee, third party contractor, or other participant at any tier of the Project with U.S. DOT regulations, “New Restrictions on Lobbying,” 49 C.F.R. Part 20, modified as necessary by 31 U.S.C. § 1352, as amended.

13. **National Environmental Policy.** Federal assistance is contingent upon the Recipient’s facilitating FTA’s compliance with all applicable requirements and implementing regulations of the National Environmental Policy Act of 1969, as amended (NEPA), 42 U.S.C. §§ 4321 through 4335 (as restricted by 42 U.S.C. § 5159, if applicable); Executive Order No. 11514, as amended, “Protection and Enhancement of Environmental Quality,” 42 U.S.C. § 4321 note; FTA statutory requirements at 49 U.S.C. § 5324(b); U.S. Council on Environmental Quality regulations pertaining to compliance with NEPA, 40 C.F.R. Parts 1500 through 1508; and joint FHWA/FTA regulations, “Environmental Impact and Related Procedures,” 23 C.F.R. Part 771 and 49 C.F.R. Part 622, and other applicable Federal environmental protection regulations that may be promulgated at a later date. The Recipient agrees to comply with the applicable provisions of 23 U.S.C. § 139 pertaining to environmental procedures, and, as applicable, 23 U.S.C. § 326, pertaining to State responsibility for categorical exclusions, in accordance with the provisions of joint FHWA/FTA final guidance, “SAFETEA-LU Environmental Review Process (Public Law 109-59),” 71 *Fed. Reg.* 66576 *et seq.*, November 15, 2006, and any applicable Federal directives that may be issued at a later date, except to the extent that FTA determines otherwise in writing.

14. **Air Quality.** Except to the extent the Federal Government determines otherwise in writing, the Recipient agrees to comply with all applicable Federal laws and regulations and follow applicable Federal directives implementing the Clean Air Act, as amended, 42 U.S.C. §§ 7401 through 7671q. Specifically:

- (a) The Recipient agrees to comply with the applicable requirements of subsection 176(c) of the Clean Air Act, 42 U.S.C. § 7506(c); with U.S. EPA regulations, “Determining Conformity of Federal Actions to State or Federal Implementation Plans,” 40 C.F.R. Part 93, Subpart A; and with any other applicable Federal conformity regulations that may be promulgated at a later date. To support the requisite air quality conformity finding for the Project, the Recipient agrees to implement each air quality

mitigation or control measure incorporated in the applicable documents accompanying the approval of the Project. The Recipient further agrees that any Project identified in an applicable State Implementation Plan (SIP) as a Transportation Control Measure will be wholly consistent with the design concept and scope of the Project described in the SIP.

- (b) U.S. EPA also imposes requirements implementing the Clean Air Act, as amended, that may apply to public transportation operators, particularly operators of large public transportation bus fleets. Accordingly, to the extent they apply to the Project, the Recipient agrees to comply with U.S. EPA regulations, "Control of Air Pollution from Mobile Sources," 40 C.F.R. Part 85; U.S. EPA regulations, "Control of Air Pollution from New and In-Use Motor Vehicles and New and In-Use Motor Vehicle Engines," 40 C.F.R. Part 86; and U.S. EPA regulations "Fuel Economy of Motor Vehicles," 40 C.F.R. Part 600, and any revisions thereto.
- (c) The Recipient agrees to comply with the notice of violating facility provisions of section 306 of the Clean Air Act, as amended, 42 U.S.C. § 7414, and facilitate compliance with Executive Order No. 11738, "Administration of the Clean Air Act and the Federal Pollution Control Act with Respect to Federal Contracts, Grants, or Loans," 42 U.S.C. § 7606 note.

15. **Clean Water.** Except to the extent the Federal Government determines otherwise in writing, the Recipient agrees to comply with all applicable Federal laws and regulations and follow applicable Federal directives implementing the Clean Water Act, as amended, 33 U.S.C. §§ 1251 through 1377. Specifically:

- (a) The Recipient agrees to protect underground sources of drinking water in compliance with the Safe Drinking Water Act of 1974, as amended, 42 U.S.C. §§ 300f through 300j-6.
- (b) The Recipient agrees to comply with the notice of violating facility provisions of section 508 of the Clean Water Act, as amended, 33 U.S.C. § 1368, and facilitate compliance with Executive Order No. 11738, "Administration of the Clean Air Act and the Federal Water Pollution Control Act with Respect to Federal Contracts, Grants, or Loans," 42 U.S.C. § 7606 note.

(When Applicable)

16. **Cargo Preference** - Use of United States-Flag Vessels. To the extent applicable, the Recipient agrees to comply with 46 U.S.C. § 55305 and U.S. Maritime Administration regulations, "Cargo Preference - U.S.-Flag Vessels," 46 C.F.R. Part 381.

17. **Fly America.** The Recipient agrees that the Federal Government will not participate in the costs of international air transportation of any individuals involved in or property acquired for the Project unless that air transportation is provided by U.S.-flag air carriers to the extent such service is available, in compliance with section 5 of the International Air Transportation Fair Competitive Practices Act of 1974, as amended, 49 U.S.C. § 40118, and U.S. GSA regulations, "Use of United States Flag Air Carriers," 41 C.F.R. §§ 301-10.131 through 301-10.143.

18. **Section 24. Employee Protections.**

- (a) Construction Activities. The Recipient agrees to comply, and assures the compliance of each sub-recipient, lessee, third party contractor, and other

participant at any tier of the Project, with the following Federal laws and regulations providing protections for construction employees:

- (1) Davis-Bacon Act, as amended, 40 U.S.C. §§ 3141 *et seq.*, pursuant to FTA enabling legislation requiring compliance with the Davis-Bacon Act at 49 U.S.C. § 5333(a), and implementing U.S. DOL regulations, “Labor Standards Provisions Applicable to Contracts Governing Federally Financed and Assisted Construction (also Labor Standards Provisions Applicable to Non-construction Contracts Subject to the Contract Work Hours and Safety Standards Act),” 29 C.F.R. Part 5;
- (2) Contract Work Hours and Safety Standards Act, as amended, 40 U.S.C. §§ 3701 *et seq.*, specifically, the wage and hour requirements of section 102 of that Act at 40 U.S.C. § 3702, and implementing U.S. DOL regulations, “Labor Standards Provisions Applicable to Contracts Governing Federally Financed and Assisted Construction (also Labor Standards Provisions Applicable to Non-construction Contracts Subject to the Contract Work Hours and Safety Standards Act),” 29 C.F.R. Part 5; and the safety requirements of section 107 of that Act at 40 U.S.C. § 3704, and implementing U.S. DOL regulations, “Safety and Health Regulations for Construction,” 29 C.F.R. Part 1926; and
- (3) Copeland “Anti-Kickback” Act, as amended, 18 U.S.C. § 874 and 40 U.S.C. § 3145, and implementing U.S. DOL regulations, “Contractors and Subcontractors on Public Building or Public Work Financed in Whole or in part by Loans or Grants from the United States,” 29 C.F.R. Part 3.

19. **Activities Not Involving Construction.** The Recipient agrees to comply, and assures the compliance of each sub-recipient, lessee, third party contractor, and other participant at any tier of the Project, with the employee protection requirements for non-construction employees of the Contract Work Hours and Safety Standards Act, as amended, 40 U.S.C. §§ 3701 *et seq.*, in particular with the wage and hour requirements of section 102 of that Act at 40 U.S.C. § 3702, and with implementing U.S. DOL regulations, “Labor Standards Provisions Applicable to Contracts Governing Federally Financed and Assisted Construction (also Labor Standards Provisions Applicable to Non-construction Contracts Subject to the Contract Work Hours and Safety Standards Act),” 29 C.F.R. Part 5.

20. **Public Transportation Employee Protective Arrangements.** If the Grant Agreement or Cooperative Agreement for the Project indicates that public transportation employee protective arrangements required by U.S. DOL apply to public transportation operations performed in connection with the Project, the Recipient agrees to comply with the following requirements:

- (a) **Standard Public Transportation Employee Protective Arrangements.** To the extent that the Project involves public transportation operations and to the extent required by Federal law, the Recipient agrees to implement the Project in accordance with the terms and conditions that the U.S. Secretary of Labor has determined to be fair and equitable to protect the interests of any employees affected by the Project and that comply with the requirements of 49 U.S.C. § 5333(b), in accordance with U.S. DOL guidelines, “Section 5333(b), Federal Transit Law,” 29 C.F.R. Part 215,

and any amendments thereto. These terms and conditions are identified in U.S. DOL's certification of public transportation employee protective arrangements to FTA, the date of which appears in the Grant Agreement or Cooperative Agreement for the Project. The Recipient agrees to implement the Project in accordance with the conditions stated in that U.S. DOL certification. That certification and any documents cited therein are incorporated by reference and made part of the Grant Agreement or Cooperative Agreement for the Project. The requirements of this Paragraph 24.d(1) of this Master Agreement do not apply to Projects for elderly individuals or individuals with disabilities authorized by 49 U.S.C. § 5310(a)(2) or subsection 3012(b) of SAFETEA-LU, Projects for nonurbanized areas authorized by 49 U.S.C. § 5311; or Projects for the over-the-road bus accessibility program authorized by section 3038 of TEA-21, as amended by section 3039 of SAFETEA-LU, 49 U.S.C. § 5310 note. Separate requirements for those Projects are set forth in Paragraphs 24.d(2), (3), and (4), respectively, of this Master Agreement.

- (b) Public Transportation Employee Protective Arrangements for the Elderly Individuals and Individuals with Disabilities Formula Program and for the Elderly Individuals and Individuals with Disabilities Formula Program Pilot Program. To the extent that the U.S. Secretary of Transportation has determined or determines in the future that employee protective arrangements required by 49 U.S.C. § 5333(b) are necessary or appropriate for a governmental authority sub-recipient participating in a Project authorized by 49 U.S.C. § 5310(b)(2) or subsection 3012(b) of SAFETEA-LU, 49 U.S.C. § 5310 note, the Recipient agrees to carry out the Project in compliance with the terms and conditions determined by the U.S. Secretary of Labor necessary to comply with the requirements of 49 U.S.C. § 5333(b), in accordance with U.S. DOL guidelines, "Section 5333(b), Federal Transit Law," at 29 C.F.R. Part 215, and any amendments thereto. These terms and conditions, if any, are identified in the U.S. DOL's certification of public transportation employee protective arrangements to FTA, the date of which appears in the Grant Agreement. The Recipient agrees to implement the Project in compliance with the conditions stated in that U.S. DOL certification, to the extent that certification is required. Any U.S. DOL certification that may be provided and any documents cited therein are incorporated by reference and made part of the Grant Agreement.
- (c) Public Transportation Employee Protective Arrangements for Projects in Nonurbanized Areas Authorized by 49 U.S.C. § 5311. The Recipient agrees to comply with the terms and conditions of the Special Warranty for the Nonurbanized Area Program that is most current as of the date of execution of the Grant Agreement or Cooperative Agreement for the Project, and any alternative comparable arrangements specified by U.S. DOL for application to the Recipient's project, in accordance with U.S. DOL guidelines, "Section 5333(b), Federal Transit Law," 29 C.F.R. Part 215, and any revisions thereto. Any U.S. DOL Special Warranty that may be provided and any documents cited therein are incorporated by reference and made part of the Grant Agreement.

- (d) **Employee Protective Arrangements for Projects Financed by the Over-the-Road Bus Accessibility Program.** The Recipient agrees to comply with the terms and conditions of the Special Warranty for the Over-the-Road Bus Accessibility Program that is most current as of the date of execution of the Grant Agreement or Cooperative Agreement for the Project, and any alternative comparable arrangements specified by U.S. DOL for application to the Recipient's project, in accordance with U.S. DOL guidelines, "Section 5333(b), Federal Transit Law," 29 C.F.R. Part 215, and any revisions thereto. Any U.S. DOL Special Warranty that may be provided and any documents cited therein are incorporated by reference and made part of the Grant Agreement.

21. **Seismic Safety.** The Recipient agrees to comply with the Earthquake Hazards Reduction Act of 1977, as amended, 42 U.S.C. §§ 7701 *et seq.*, in accordance with Executive Order No. 12699, "Seismic Safety of Federal and Federally-Assisted or Regulated New Building Construction," 42 U.S.C. § 7704 note, and comply with implementing U.S. DOT regulations, "Seismic Safety," 49 C.F.R. Part 41 (specifically, 49 C.F.R. § 41.117).

Patent Rights and Rights in Data and Copyrights only apply if R&D is involved.

22. **Patent Rights.**

- (a) **General.** If any invention, improvement, or discovery of the Recipient or of any sub-recipient, lessee, third party contractor, or other participant at any tier of the Project is conceived or first actually reduced to practice in the course of or under the Project, and that invention, improvement, or discovery is patentable under the laws of the United States of America or any foreign country, the Recipient agrees to notify FTA immediately and provide a detailed report in a format satisfactory to FTA.
- (b) **Federal Rights.** The Recipient agrees that its rights and responsibilities, and those of each sub-recipient, lessee, third party contractor, or other participant at any tier of the Project, pertaining to that invention, improvement, or discovery will be determined in accordance with applicable Federal laws and regulations, including any waiver thereof. Absent a determination in writing to the contrary by the Federal Government, the Recipient agrees to transmit to FTA those rights due the Federal Government in any invention, improvement, or discovery resulting from that sub-agreement, third party contract, third party subcontract, or arrangement, as specified in 35 U.S.C. §§ 200 *et seq.*, and U.S. Department of Commerce regulations, "Rights to Inventions Made by Nonprofit Organizations and Small Business Firms Under Government Grants, Contracts and Cooperative Agreements," 37 C.F.R. Part 401, irrespective of the status of the Recipient, sub-recipient, lessee, third party contractor or other participant in the Project (*i.e.*, a large business, small business, State government, State instrumentality, local government, Indian tribe, nonprofit organization, institution of higher education, or individual).
- (c) **License Fees and Royalties.** FTA considers income earned from license fees and royalties for patents, patent applications, and inventions produced under the Project to be program income. Except to the extent FTA determines otherwise in writing, as provided in 49 C.F.R. Parts 18 and 19, the Recipient has no obligation to the Federal Government with

respect to that program income, apart from compliance with 35 U.S.C. §§ 200 *et seq.*, which applies to patent rights developed under a research project.

23. Rights in Data and Copyrights.

- (a) **Definition.** The term “subject data,” as used in this Section 18 of this Master Agreement means recorded information, whether or not copyrighted, that is delivered or specified to be delivered under the Grant Agreement or Cooperative Agreement for the Project. Examples include, but are not limited to: computer software, standards, specifications, engineering drawings and associated lists, process sheets, manuals, technical reports, catalog item identifications, and related information. “Subject data” do not include financial reports, cost analyses, or other similar information used for Project administration.
- (b) **General.** The following restrictions apply to all subject data first produced in the performance of the Grant Agreement or Cooperative Agreement for the Project:
 - (1) Except for its own internal use, the Recipient may not publish or reproduce subject data in whole or in part, or in any manner or form, nor may the Recipient authorize others to do so, without the prior written consent of the Federal Government, unless the Federal Government has previously released or approved the release of such data to the public.
 - (2) The restrictions on publication of Paragraph 18.b(1) of this Master Agreement, however, do not apply to a Grant Agreement or Cooperative Agreement with an institution of higher learning.
- (c) **Federal Rights in Data and Copyrights.** The Recipient agrees to provide to the Federal Government a royalty-free, non-exclusive, and irrevocable license to reproduce, publish, or otherwise use, and to authorize others to use, for Federal Government purposes the subject data described in this Subsection 18.c of this Master Agreement. As used herein, “for Federal Government purposes,” means use only for the direct purposes of the Federal Government. Without the copyright owner’s consent, the Federal Government may not provide or otherwise extend to other parties the Federal Government’s license to:
 - (1) Any subject data developed under the Grant Agreement or Cooperative Agreement for the Project, or under a sub-agreement, lease, third party contract or other arrangement at any tier of the Project, supported with Federal assistance derived from the Grant Agreement or Cooperative Agreement for the Project, whether or not a copyright has been obtained; and
 - (2) Any rights of copyright to which a Recipient, sub-recipient, lessee, third party contractor, or other participant at any tier of the Project purchases ownership using Federal assistance.
- (d) **Special Federal Rights in Data for Research, Development, Demonstration, and Special Studies Projects.** In general, FTA’s purpose in providing Federal assistance for a research, development, demonstration, or special studies Project is to increase transportation knowledge, rather than limit the benefits of the Project to Project participants. Therefore, when the Project is completed, the Recipient

agrees to provide a Project report that FTA may publish or make available for publication on the Internet. In addition, the Recipient agrees to provide other reports pertaining to the Project that FTA may request. The Recipient agrees to identify clearly any specific confidential, privileged, or proprietary information it submits to FTA. In addition, except to the extent that FTA determines otherwise in writing, the Recipient of Federal assistance to support a research, development, demonstration, or a special studies Project agrees that, in addition to the rights in data and copyrights that it must provide to the Federal Government as set forth in Subsection 18.c of this Master Agreement, FTA may make available to any FTA recipient, sub-recipient, third party contractor, third party subcontractor or other participant at any tier of the Project, either FTA's license in the copyright to the subject data or a copy of the subject data. If the Project is not completed for any reason whatsoever, all data developed under the Project shall become subject data as defined in Subsection 18.a of this Master Agreement and shall be delivered as the Federal Government may direct. This Subsection 18.d, however, does not apply to adaptations of automatic data processing equipment or programs for the Recipient's use when the costs thereof are financed with Federal assistance through an FTA capital program.

- (e) License Fees and Royalties. FTA considers income earned from license fees and royalties for copyrighted material, or trademarks produced under the Project to be program income. Except to the extent FTA determines otherwise in writing, as provided in 49 C.F.R. Parts 18 and 19, the Recipient has no obligation to the Federal Government with respect to that program income, apart from compliance with 35 U.S.C. §§ 200 *et seq.*, which applies to patent rights developed under a research project.
- (f) Hold Harmless. Except as prohibited or otherwise limited by State law or except to the extent that FTA determines otherwise in writing, upon request by the Federal Government, the Recipient agrees to indemnify, save, and hold harmless the Federal Government and its officers, agents, and employees acting within the scope of their official duties against any liability, including costs and expenses, resulting from any willful or intentional violation by the Recipient of proprietary rights, copyrights, or right of privacy, arising out of the publication, translation, reproduction, delivery, use, or disposition of any data furnished under the Project. The Recipient shall not be required to indemnify the Federal Government for any such liability caused by the wrongful acts of Federal employees or agents.
- (g) Restrictions on Access to Patent Rights. Nothing in Section 18 of this Master Agreement pertaining to rights in data shall either imply a license to the Federal Government under any patent or be construed to affect the scope of any license or other right otherwise granted to the Federal Government under any patent.
- (h) Data Developed Without Federal Funding or Support. In connection with the Project, the Recipient may find it necessary to provide data to FTA developed without any Federal funding or support by the Federal Government. The requirements of Subsections 18.b, 18.c, and 18.d of this Master Agreement do not apply to data developed without Federal

funding or support by the Federal Government, even though that data may have been used in connection with the Project. Nevertheless, the Recipient understands and agrees that the Federal Government will not be able to protect data from unauthorized disclosure unless that data is clearly marked “Proprietary” or “Confidential.”

- (i) **Requirements to Release Data.** To the extent required by U.S. DOT regulations, “Uniform Administrative Requirements for Grants and Agreements with Institutions of Higher Education, Hospitals, and Other Non-Profit Organizations,” at 49 C.F.R. § 19.36(d), or other applicable Federal laws or Federal regulations, the Recipient understands and agrees that the data and information it submits to the Federal Government may be required to be released in accordance with the Freedom of Information Act (or another Federal law or Federal regulation providing access to such records).

- 24. **Energy Conservation.** The Recipient agrees to comply with applicable mandatory energy standards and policies of State energy conservation plans under the Energy Policy and Conservation Act, as amended, 42 U.S.C. §§ 6321 *et seq.*, except to the extent that the Federal Government determines otherwise in writing. As applicable, the Recipient agrees to perform an energy assessment for any building constructed, reconstructed, or modified with FTA assistance, in compliance with FTA regulations, “Requirements for Energy Assessments,” 49 C.F.R. Part 622, Subpart C.
- 25. **Special Notification Requirements for States.** To the extent required by Federal law, the State agrees that, in administering any Federal assistance Program or Project supported by the Grant Agreement or Cooperative Agreement, any request for proposals, solicitation, grant application, form, notification, press release, or other publication involving the distribution of FTA assistance for the Program or the Project shall indicate that FTA is the Federal agency that is providing the Federal assistance, the Catalog of Federal Domestic Assistance Number of the program from which the Federal assistance is authorized, as may be applicable, and the amount of Federal assistance FTA provided.
- 26. **National Intelligent Transportation Systems Architecture and Standards.** To the extent applicable, the Recipient agrees to conform to the National Intelligent Transportation Systems (ITS) Architecture and Standards as required by SAFETEA-LU § 5307(c), 23 U.S.C. § 512 note, and follow the provisions of FTA Notice, “FTA National ITS Architecture Policy on Transit Projects,” 66 *Fed. Reg.* 1455 *et seq.*, January 8, 2001, and any other implementing directives FTA may issue at a later date, except to the extent FTA determines otherwise in writing.
- 27. **Access for Individuals with Disabilities.** The Recipient agrees to comply with 49 U.S.C. § 5301(d), which states the Federal policy that elderly individuals and individuals with disabilities have the same right as other individuals to use public transportation services and facilities, and that special efforts shall be made in planning and designing those services and facilities to implement transportation accessibility rights for elderly individuals and individuals with disabilities. The Recipient also agrees to comply with all applicable provisions of section 504 of the Rehabilitation Act of 1973, as amended, 29 U.S.C. § 794, which prohibits discrimination on the basis of disability in the administration of programs or

activities receiving Federal financial assistance; with the Americans with Disabilities Act of 1990 (ADA), as amended, 42 U.S.C. §§ 12101 *et seq.*, which requires that accessible facilities and services be made available to individuals with disabilities; with the Architectural Barriers Act of 1968, as amended, 42 U.S.C. §§ 4151 *et seq.*, which requires that buildings and public accommodations be accessible to individuals with disabilities; and with other laws and amendments thereto pertaining to access for individuals with disabilities that may be applicable. In addition, the Recipient agrees to comply with applicable implementing Federal regulations, and any later amendments thereto, and agrees to follow applicable Federal implementing directives, except to the extent FTA approves otherwise in writing. Among those regulations and directives are:

- (a) U.S. DOT regulations, "Transportation Services for Individuals with Disabilities (ADA)," 49 C.F.R. Part 37;
- (b) U.S. DOT regulations, "Nondiscrimination on the Basis of Handicap in Programs and Activities Receiving or Benefiting from Federal Financial Assistance," 49 C.F.R. Part 27;
- (c) Joint U.S. Architectural and Transportation Barriers Compliance Board (U.S. ATBCB)/U.S. DOT regulations, "Americans With Disabilities (ADA) Accessibility Specifications for Transportation Vehicles," 36 C.F.R. Part 1192 and 49 C.F.R. Part 38;
- (d) U.S. DOJ regulations, "Nondiscrimination on the Basis of Disability in State and Local Government Services," 28 C.F.R. Part 35;
- (e) U.S. DOJ regulations, "Nondiscrimination on the Basis of Disability by Public Accommodations and in Commercial Facilities," 28 C.F.R. Part 36;
- (f) U.S. General Services Administration (U.S. GSA) regulations, "Accommodations for the Physically Handicapped," 41 C.F.R. Subpart 101-19;
- (g) U.S. EEOC, "Regulations to Implement the Equal Employment Provisions of the Americans with Disabilities Act," 29 C.F.R. Part 1630;
- (h) U.S. Federal Communications Commission regulations, "Telecommunications Relay Services and Related Customer Premises Equipment for the Hearing and Speech Disabled," 47 C.F.R. Part 64, Subpart F;
- (i) U.S. ATBCB regulations, "Electronic and Information Technology Accessibility Standards," 36 C.F.R. Part 1194;
- (j) FTA regulations, "Transportation for Elderly and Handicapped Persons," 49 C.F.R. Part 609; and
- (k) Federal civil rights and nondiscrimination directives implementing those Federal laws and regulations, except to the extent the Federal Government determines otherwise in writing.

C. To the extent applicable, the Recipient agrees to comply with the following third party procurement provisions:

1. **Federal Standards.** The Recipient agrees to comply with applicable third party procurement requirements of 49 U.S.C. chapter 53 and Federal laws in effect now or subsequently enacted; with applicable U.S. DOT third party procurement regulations at 49 C.F.R. § 18.36 or 49 C.F.R. §§ 19.40 through 19.48, and with other applicable Federal regulations pertaining to third party procurements and later amendments thereto. The Recipient also agrees to follow the provisions of

the most recent edition and revisions of FTA Circular 4220.1F, “Third Party Contracting Guidance,” except to the extent FTA determines otherwise in writing. The Recipient agrees that it may not use FTA assistance to support its third party procurements unless its compliance with Federal laws and regulations is satisfactory. Although the FTA “Best Practices Procurement Manual” provides additional third party contracting information, the Recipient understands and agrees that the FTA “Best Practices Procurement Manual” may omit certain Federal requirements applicable to specific third party contracts.

- D. The Contractor shall comply with the specific requirements of the Federal Transit Administration (Section 00486.0 – Disadvantaged Business Enterprise (DBE) Requirements).

RFQ015 – Structure Modifications

Attachment B – Pre-Qualification / Evidence of
Competency To Perform

December 18th, 2013

KANSAS CITY STREETCAR

ATTACHMENT B

Pre-Qualification / Evidence of Competency to Perform

City of Kansas City – Structure Modifications

December 18th, 2013

Introduction

This document (Attachment B) serves as a *Pre-Qualification / Evidence of Competency* to perform the *Structure Modification* scope of work on the Kansas City Streetcar Project. As stated in the solicitation letter, pre-qualification ensures that the successful subcontractor will adequately understand, manage, staff, bond and perform the technical structural modification portion of the project. It is necessary to select a pre-qualified list of subcontractors due to the project's complex design and multiple phases of work, and the highly technical work that will be required to be performed. Also of note are the strict schedule requirements. There will be several other scopes of work occurring simultaneously including (but not limited to) private utility relocations (gas, power, street lighting, telecom, etc.), trackway excavation and construction, ductbank construction, and other phases and scopes of work, all of which will require close coordination with all parties.

The sensitive nature of working adjacent to downtown businesses needs to be taken into account during all phases of the work from the planning phase to the final punchlist work. The coordination of community impact, Union Station, KCTRR railroad, and MoDOT coordination, and effective and safe pedestrian controls is of the utmost importance to the project and the Owner.

The subcontractor should also provide opportunities and complete the outreach to DBE subcontractors. The Project has a goal of 24% DBE participation overall and it should be the understanding by the bidder this 24% goal shall pertain to all phases of work, including this portion of the work. KCSCJV is committed to assisting both the bidders, and the DBE contractors wishing to perform work on the Project. Additionally KCSCJV will provide resources, information, and assistance to assist in identifying scopes and portions of work on the Project for DBE contractors.

Emphasis should also be made on the work as it pertains to the overall project schedule. This means the successful bidder should, at a minimum, have the necessary equipment, management, and field staff available to support the project at all times.

Below find the 'Evidence of Competency to Perform' specifications which are similar to what would be provided in a City of Kansas City bid package. The below **BOLDED** text includes notations and additional clarifications provided by KCSC, and/or additional items requested for this scope specific document. Additionally, failure to provide a complete package with information and documentation may result in disqualification. Some sections have maximum number of pages, please follow these. All pages are defined as one (1) single-sided 8.5" x 11" sheet of paper, minimum size 12 fonts.

Responses will be reviewed for completeness and content by a panel that will include (but will not be limited to) persons from the City of Kansas City and Project Management from KCSCJV. Pre-qualified firms will then provide pricing for the work within the bid package. Additionally, a scoring matrix will be utilized in the pre-qualification process. The categories will be based on **Safety Program, DBE Program, and Key Personnel / Experience**. Points will be awarded based on evaluation by KCSCJV and KCMO. Please reference further down in this document for an example of the scoring matrix. There will be a minimum score of 45 points required to be pre-qualified for bidding the work. The maximum possible points will be 60.

Each subcontractor that desires to bid on the water construction scope of work shall furnish satisfactory evidence of Bidder's competency to perform the proposed work. Such evidence of competency shall consist of the following:

1. Experience Reference Summary for similar projects performed within the past 5 years, including reference information. **[Maximum 3 pages total for a-d below]** **[Key Personnel / Experience Scoring – 25 pts]**
 - a. **Information regarding previous bridge constructions or modifications similar in scope.**
 - b. **Relevant experience working around KCTRR and other railroad systems.**
 - c. **Relevant experience working above active interstates or major roadways.**
 - d. **Relative experience with MoDOT and KCMO projects.**
 - e. Identify the following Key Personnel proposed for the Project. (NOTE: Key Personnel must be committed to the Project for its duration, and may not be removed or substituted without KCMO's prior written consent.) **[Maximum 3 pages total for all items below]**
 - (1) Project Manager
 - (2) On-Site Field Superintendent
 - (3) Safety Officer
 - (4) Project Engineer
 - (a) For each of the Key Personnel, provide the following background information.
 - Years of employment with current employer
 - City of residence
 - Identify any other projects this person will be involved with concurrently with the Project, and state the time commitment for the Project and each other project
 - Discuss professional registrations, education, certifications, and credentials held by this person that are applicable to the Project
 - f. Discuss generally the tasks involved in the Project: **[Maximum 3 pages total for items below]**
 - (1) Illustrate clearly and concisely the understanding of the technical elements that must be addressed for successful completion of the Project.
 - (2) Describe key issues that might affect the Project schedule and how Bidder proposes to address them.

2. DBE / Workforce Program – A 24% DBE Goal, 10% Minority Workforce and 2% Female Workforce are required. [Maximum 2 pages] [DBE Program Scoring – 15 pts]

- a. Provide a listing of key DBE/MBE/WBE subcontractors and the proposed scopes of work they would be performing.
- b. MBE / WBE past project performance and compliance with participation goals in comparable size commercial projects.

3. Summary of the Project Safety Plan for the Project [Maximum 3 pages] [Safety Program Scoring – 20 pts]

- a. Describe how Bidder proposes to address any unique safety issues for the Project
- b. Describe your safety record and environmental compliance record along with your Firm's OSHA reportable accident rates on recent comparable size projects
- c. Statement of Bidder's Experience Modification Ratio (EMR)
- d. Discuss Bidder's understanding of the traffic control required for the Project, if applicable, and how traffic control will impact the Project schedule. Discuss any major traffic control issues that need to be addressed and Bidder's proposed solutions.
- e. Identify any other special issues or problems that are likely to be encountered. Outline the manner in which Bidder suggests resolving them.
- f. Outline key community relations issues and how they might be resolved **and coordinated with KCSCJV Public Involvement Officer.**
- g. Describe any difficulties Bidder anticipates encountering in serving the City, in light of the City's status as a municipality and public entity. Explain how Bidder plans to manage them.

4. Summary of Bidder's Quality Assurance/Quality Control Plan for this project. [Maximum 2 pages]

5. Statement regarding all work performed two (2) years immediately preceding the date of the Bid, that contains either (a) a contract by contract listing of any written notices of violations of any federal or state prevailing wage statute in which prevailing wage penalties were assessed against the Bidder or paid by the Bidder; or (b) a statement that there have been no such written notices of violations or such penalties assessed; and a statement that Bidder is current on payment of Federal and State income tax withholdings and unemployment insurance payments. **[No page limit]**

6. Statement regarding all work performed two (2) years immediately preceding the date of the Bid, that contains either (a) a contract by contract listing of any written notices of violations of any federal, state or local DBE/MBE/WBE Program and any damages assessed; or (b) a statement that there have been no such written notices of violations or such penalties assessed; and a statement that Program requirements have been met. **[No page limit]**

7. Statement that the Bidder has not been rescinded or debarred from any bidding, contractual, procurement, or other such programs by federal, state or local entities. **[No page limit]**

8. Statement that Bidder is current on payment of Federal and State income tax withholdings and unemployment insurance payments. **[No page limit]**

9. Statement of Bidder's litigation and/or arbitration history over the past five (5) years including final ruling. **[No page limit]**
10. Statement of Bidder's bond history over the past five (5) years including any incidences of failure to perform. **[No page limit]**
11. All contractors will be required to have a payment and performance bond; No Exceptions. Accordingly, provide single project bonding limit and aggregate bonding limit and proof thereof from your company's Surety. **[No page limit]**

Selection of Pre-Qualified Bidders

As noted above, some of the categories will be scored with a point system. Below is an example of how the scoring will be made.

Selection Criteria	Maximum Available Points
Safety Record	20
Key Personnel / Relative Experience	25
DBE Program / Workforce Training	15

The above qualifications and information is due on January 14th, 2014 at 2:00 PM at the below address (NOTE: No email or fax submissions will be accepted):

_____ Name - Print		_____ Signature		_____ Initials	_____ Date
Note: Final quantities to be based on actual work in place or as mutually agreed between Subcontractor, Contractor, Agency and the Owner's Representative					
Inclusions:					
1	Furnish all labor, equipment, materials and supplies for the bid items listed herein and per the Prime Contract documents / Specifications				
2	Payment based on actual quantity/services rendered.				
3	This project is a Buy America project and subcontractor is required to submit material certifications.				
4	This contract will be subject to a 5% retention until project close out.				
5	All mobilizations necessary to complete work in order to maintain project-wide schedule.				
6	Provide and maintain continuous access to businesses, homes, parking lots, sidewalks, temporary pedestrian bridges and driveways as required.				
7	Coordination with the designer/City of Kansas City/third party utilities/Kansas City Streetcar Constructors including their designated QC Manager(s), technicians and inspectors for all required tests and inspections during installation.				
8	Submittals and resubmittals per the contract documents.				
9	Compliance with Kansas City Streetcar Constructors Project QA/QC Plan.				
10	Compliance with storm water pollution control regulations and/or KCMO standard and best management practices.				
11	Contractor's site specific safety plan and supply of MSDS sheets for all products before starting work with specified products.				
12	Coordination with Contractor and other subcontractors to complete work in accordance with the Project Schedule.				
13	Contract insurances including General Liability, Worker Compensation, Automobile, and Railroad (if applicable) per contract requirements.				
14	Payment and Performance Bonds				
15	Street sweeping, general housekeeping of work zones and storage sites.				
16	Temporary water and power, contractors on-site yard facility, employee parking as required per scope of work.				
17	All trucking, offhaul and fees. Includes water trucks as well.				
18	Include any and all applicable taxes.				
19	Coordination with track construction and systems.				
20	Submittal of Best Management Practices (BMP) and residue disposal plan for slurry and debris containment during construction including identified "no discharge zones." All requirements outlined in the plans are inclusive to the unit prices as listed above.				
21	Operations may be suspended by the Engineer during rainfall or freezing temperatures. Provisions may be required, such as heaters, blankets, and tents to maintain the project schedule.				
22	Frame and grate modifications including any touch up painting, welding, and shimming.				
23	All drilling, dowelling, and epoxy as called out in the project drawings, including any additional as a result of damage during demolition.				
24	Item M-9 is for the pipe connection and pressure injected cavities thru the deck and all work under deck. Track drain frame and grate are excluded and will be installed during track construction.				
25	Includes all rebar, bolts, plates, washers, pressure injection of cavities, concrete, and joint filler for foundation and barrier				
26	Epoxy rebar repairs in accordance with MoDOT Standard Specification Section 710				
27	Contractor will be responsible for all railroad coordination, included permits, track flagging, and work plans. Permit fees and track flagger costs will be direct billed against the listed Lump Sum item.				
28	Bridge conduits shall include all required expansion conduits, hangers, struts, all thread, boxes, attachments, etc., and coordinate the mandrelling and tagging with mainline ductbank subcontractor.				
29	Bridge conduits shall include attachments to encased PVC conduits at bridge side wall.				
30	Bridge conduits will include any coring, deck penetrations, nipples, etc required.				
31	Bridge conduits include cable trough on Z101B.				
32	Coring drilling and installation of negative return conduits on sheet Z103A notes 10 & 11				
Exclusions:					
1	Initial project control survey				
2	Quality Control Testing (coordination is required)				
3	Traffic Control (other than track flaggers. Track flaggers are included)				
4	Track Construction and track concrete encasement				
5	Item M-9 track frame and grate.				
6	Z103A conduits and boxes other than those listed in inclusion #32				
7	Hazardous Waste Removal and Disposal				

RFQ015 – Structure Modifications

Scope / Bid Package Narrative and Solicitation
Information

December 18th, 2013

KANSAS CITY STREETCAR
Structure Modifications Pre-Qualification and Bid Package
City of Kansas City - Water
December 20th, 2013

KC Streetcar Project Overview

The above stated project runs generally from the intersection of Pershing Rd on the south end, heading north along Main St. At the intersection of 5th St and Delaware St a loop begins which runs east along 5th St, turning north on Grand Blvd, west on 3rd St and south on Delaware St intersecting again at 5th St and Delaware St. At the intersection of 3rd St and Grand Blvd there is a spur track that runs to the Vehicle Maintenance Facility (VMF). The alignment of the VMF spur runs along Grand Blvd turning east on Oak St and continuing east on the 2nd St corridor approximately 600 ft east of the termination of Oak St.

Throughout the project alignment work will consist of waterline relocations, sewer relocations, sewer rehabilitation, roadway and trackway drainage, earthwork, ductbanks, TPSS buildings and foundations, Overhead Catenary System (OCS) foundations, street lighting, traffic signals, landscaping, track construction, sidewalk restoration, station platforms, overhead catenary systems, traffic signage and striping. The duration of the project is expected to be from 2014 to 2015.

The City of Kansas City has elected to employ a Construction Manager at Risk (CM@Risk) contracting method for the construction of the Project. Herzog/Stacy and Witbeck, Inc. make up the Kansas City Streetcar Constructors, Joint Venture team, and have a long history with the CM@Risk type contracting method. The CM@Risk contracting method allows the Owner and Contractor to work together for the final design phases and deliver the project within a Guaranteed Maximum Price (GMP). During construction, the CM@Risk contractor, their subcontractors, the Owner, designers and stakeholders work together to avoid conflicts, extra costs, time delays and unnecessary impacts to the public. As such, it will be expected of subcontractors on the Project to become part of the overall 'Team'. This means providing proposed solutions to conflicts, value-engineering for cost savings, and construction phasing alternatives.

RFQ015 – Structure Modifications Scope Information

The work consists of:

- Street cleaning and site maintenance
- Expansion Joint Modifications
- Preformed Joint Filler
- Deck Drainage Modifications
- Mudjacking of Approach Slabs
- Concrete Barrier Removal
- CIP Barrier Replacement
- Structural OCS Foundations
- Deck Demolition for Track Turnout
- Bridge Conduits

- Containment Systems
- Track Flagging/Railroad Permits

Attached is a schedule of the materials and the estimated quantity needed for each. All prices quoted for this package should be quoted FOB project.

See attachment A1 for required bid items / schedule of materials.

Referenced Documents

Drawings, specifications, geotechnical report and scheduling/phasing details are attached and incorporated by reference. They are:

1. *Kansas City Streetcar Construction 100% Design Submittal Plans (Volumes 2 & 4)*
 - a. *Dated December 2013*
2. *Kansas City Streetcar Technical Specifications*
 - a. *Dated December 2013*

Scope Narratives

Street cleaning and site maintenance

The subcontractor will be responsible to cleanup all work areas at the end of each work day. This work shall include cleaning of sidewalk, traffic lanes and other surfaces.

Expansion Joint Modifications

Removal of the existing structure expansion joints extrusions and installation of expansion joint sealing system, including the sealing around new rails. The longitudinal expansion joints include the concrete removal around the existing joint, the removal of joint armoring, and the replacement expansion sealing system. Deck concrete grinding will be part of a separate bid package.

Preformed Joint Sealer

The subcontractor is to install preformed joint sealers at Main St. Viaduct north abutment and the Delaware Street Bridge abutments. Work shall include any removal of existing filler as needed to perform the work.

Deck Drainage Modifications

The subcontractor will be responsible for the adjustment/modification of existing scuppers and inlets, including the necessary concrete deck demolition, frame and grate modifications, rebar doweling and placement, concrete placement to adjust inlets and scuppers, pipe, pipe connections and modifications on the under deck. Subcontractor will be required to plumb track drain pipes through deck slab and pressure inject cavities. Track drain frame and grates are excluded. Subcontractor is responsible for coordination and development of work plans for the underdeck access and containment of the work. Work plans are to be submitted and approved before work begins.

Mudjacking of Approach Slabs

Subcontractor is responsible for the mudjacking of existing approach slab. Work includes any coring and containment required. Mudjacking shall be in accordance with Missouri Department of Transportation Engineering Policy Guide Section 771.1 “Mudjacking Bridge Approach.”

Concrete Barrier Removal

Work shall include the safe removal of existing concrete barrier on the structure. Provisions are to include the necessary protection of blunt edges, the proper containment of debris and slurry. Subcontractor will be responsible for the off haul and disposal of the material.

CIP Barrier Replacement

Subcontractor shall cast in place concrete barrier as detailed on the plans. Work includes any demolition of existing deck or sidewalk. Rebar installation including the dowelling and splices of rebar shall be included. Placement of concrete and all concrete embeds, including anchor bolts are the responsibility of the subcontractor.

Structural OCS Foundation

Work includes the installation of all structural foundations including blister foundations, OCS foundations type A, B, and C. Anchor bolts, plates, washers, and conduits shall be included. Subcontractor is responsible for coordination and development of work plans for the underdeck access and containment of the work. Work plans are to be submitted and approved before work begins.

Deck Demolition for Track Turnout

Subcontractor is responsible for the deck demolition for the track turnout on Main St., including the sawcutting, dowelling and rebar splicing, any hand chipping required to protect existing rebar and concrete as required. Work will include laying new rebar as shown. Subcontractor shall develop a support deck to contain the deck demolition, but also support the weight of the track turnout during construction and concrete placement. Subcontractor should plan to have the support deck in place a minimum of 60 days following deck removal to allow for the turnout to be constructed and concrete to cure. Work plans are to be submitted and approved before work begins.

Bridge Conduits

Subcontractor is to install under deck conduits, boxes, and penetrations on the bridge structures, including OCS sweep conduits and connects. Work includes but is not limited to conduits, boxes, hangers, attachment assemblies, core drilling, and cable trough. Subcontractor will be required to coordinate with mainline ductbank subcontractor for connection and mandrelling and tagging of conduits.

Containment Systems

Subcontractor is responsible for coordination and development of work plans for the underdeck access and containment of the work. Plan shall be drafted in accordance with Missouri Department of Transportation Standard Specifications and shall address public access and environmental controls. Work plans are to be submitted and approved before work begins.

Track Flagging/Railroad Permit

Selected subcontractor will be required to apply for track access permits for the adjacent railroad at the Main St. Viaduct. Permit fees and required flagging hours will be included under the lump sum item. Item includes costs for work plans and railroad insurance requirements.

Narratives are provided for bidders' convenience, are general descriptions of the work and not intended to replace or modify scope of work shown in drawings, specifications and other referenced documents.

Buy America Policies

To the extent applicable to the project, the Contractor agrees to comply with 49 U.S.C. §5323 (j), and FTA's Buy America Regulations, "Buy America Requirements," at 49 C.F.R. part 661 and any amendments thereto, which provide that Federal funds may not be obligated unless steel, iron, and manufactured products used in this project are produced in the United States, unless a waiver has been granted.

Schedule

The bulk of the Main Street Viaduct structural modifications will be constructed in the early calendar year of 2014, beginning in February 2014. The track turnout deck demolition and south end expansion joint and scuppers will take place in late 2014 or early 2015 in conjunction with the delivery of the track turnout.

The Delaware Street Viaduct Modifications will take place following the bulk of the Main Street Viaduct work.

All work schedules shall take into account the following:

- Holiday & Special Event Moratorium's
- Property Procurements
- Specific Project Sequencing

It will be important for bidders to be able to be flexible in regards to schedule and sequence of work. It should be reiterated that subcontractors should have the equipment, skilled labor, supervision and vendor/supplier resources to maintain project schedule.

DBE Goal:

The KC Streetcar Project has an overall DBE goal of 24% for the project, as such the selected contractor will be required to meet or exceed the 24% DBE goal. All good faith efforts are to be documented per the contract specifications.

Selection of Bidder

The contractor will be selected in a two phase process as outlined below:

- **Phase One – Pre-Qualification of Bidders**
 - This process will consist of pre-qualify bidders whom will be scored and selected by a panel consisting of the KCSC project management and KCMO project management. The reasoning of the pre-qualification is to ensure that the successful subcontractor can adequately understand, manage, staff, bond and perform the overall structural modifications of the project is selected. Due to the highly complex design, the nature of work in a dense urban environment, the safety elements to the work, multiple facets of work and scheduling with other contractors and private parties, and to maintain the overall project schedule it is necessary to select a pre-qualified list of subcontractors.
- **Phase Two – Bid Selection**
 - This process will consist of the pre-qualified bidders providing pricing for the overall scope of work on the project as it is related to this specific bid package.

Schedule of Bidder Selections

- Phase One
 - Pre-Qualification Packages will be due on 1/14/2013 at 2:00 PM
 - Notification to pre-qualified bidders will be completed by 1/15/2013 unless otherwise noted
- Phase Two – Bid Selection
 - Bid Packages will be due on 1/22/2014 at 2:00 PM
 - Last date for RFI's will be 1/17/2014 at 2:00 PM

Pre-Qualification Packages and Bid Packages shall be submitted to:

Kansas City Streetcar Constructors

Attn: Andy Auxier, Senior Project Manager

**SUBCONTRACT
AGREEMENT**

Job No. 49574
Subcontract No. ???

THIS AGREEMENT, made this _____ day of _____ 2013, by and between _____, whose address is _____ and Phone: _____ and Fax: _____, hereinafter called the "Subcontractor", and **KC Streetcar Constructors**, whose address and telephone number is 1828 Walnut Street, Suite 500, Kansas City, MO 64108- Phone (816) - 448-2110 and Fax (816)-448-2111, hereinafter called "Contractor."
WITNESSETH:

For good and valuable consideration, Contractor and Subcontractor agree as follows:

Section 1. Contract Documents. The Subcontractor agrees to furnish all supervision, labor, tools, equipment, materials and supplies necessary to perform, and to perform, all work set forth in Section 2 hereof in connection with the construction of **Kansas City Downtown Streetcar** for **City of Kansas City, MO** the Owner, at **1st Floor, 102 W, City Hall 414 East 12th Street Kansas City, MO 64106**, in accordance with the terms and provisions of the Contract between the Owner and the Contractor dated 10-28-13, including all the General and Special Conditions, Drawings, Specifications, Schedules and other documents forming or by reference made a part of the Contract between the Contractor and the Owner, all of which shall be considered part of this Subcontract by reference thereto, and the Subcontractor agrees to be bound to the Contractor and the Owner by the terms and provisions thereof.

Section 2. Scope of Work. The Subcontractor agrees to perform the following described work:

ITEM#	DESCRIPTION/WORK	EST. QTY	UNIT	UNIT PRICE	AMOUNT
-------	------------------	----------	------	------------	--------

All in conformance with the contract specifications and drawings as approved by the Owner

No exclusion from the Scope of Subcontractor's Work shall be recognized unless it is expressly and clearly set forth in detail in Subcontractor's description of work as stated in section 2 above.

When the Subcontractor does not install all material furnished under this Subcontract, such material that is not installed is to be delivered F.O.B. Jobsite or as required by the Contract Documents.

Section 3. Payment. (a) The Contractor agrees to pay the Subcontractor for the performance of this Subcontract, as specified herein, the sum of _____ Dollars (\$_____) subject to additions and deductions for changes agreed upon or determined, as hereinafter provided. Partial payments will be made to the Subcontractor each month equal to 95 percent of the value, computed on the basis of the prices set forth above, of the quantity, as estimated by the Owner, Architect or Engineer, of the work performed hereunder, less the aggregate of previous payments, but such partial payments shall not become due to the Subcontractor until 10 days after the Contractor receives payment for such work from the Owner. If the Contractor receives payment from the Owner for material delivered to the site but not yet incorporated into the work, the Subcontractor shall receive its proportionate share of such material allowance, less retainage. No partial payment to the Subcontractor shall operate as approval or acceptance of work done or materials furnished hereunder. Upon complete performance of this Subcontract by the Subcontractor and final approval and acceptance of Subcontractor's work and materials by the Owner, and after receipt of lien waivers, the Contractor will make final payment to the Subcontractor of the balance due under this Subcontract within thirty days after full payment for such work and materials has been received by the Contractor from the Owner. Payment by the Owner to the Contractor is a condition precedent to payment by the Contractor to the Subcontractor.

(b) If at any time prior to final payment hereunder, the Owner reduces the amount of retainage withheld from the Contractor, the Contractor may, in its sole discretion, reduce accordingly the retained percentage withheld from the Subcontractor or make payments to Subcontractor before such payments are due without waiving any provision of Section 3 herein.

(c) The Contractor may deduct from any amounts due or to become due to the Subcontractor any sum or sums owed by the Subcontractor to the Contractor or Contractor may, at its option, make direct payments to the Subcontractor's suppliers, employees, or subcontractors. In the event of any breach by the Subcontractor of any provision or obligation of this Subcontract or in the event of the assertion by other parties of any claim or lien against the Contractor or the premises arising out of the Subcontractor's performance of this Subcontract, the Contractor in its sole discretion shall have the right to retain out of any payments due or to become due to the Subcontractor an amount it deems sufficient to completely protect the Contractor from any and all loss, damage or expense therefrom, including attorney fees and other legal expenses, if any, until the situation has been satisfactorily remedied or adjusted by the Subcontractor.

(d) The acceptance by the Subcontractor of the final payment under this subcontract shall be and shall operate as a complete and unconditional release to the Contractor of any and all existing or future claims or demands by the Subcontractor, or its surety, against the Contractor known or Unknown, hereunder or in connection herewith, whatever they may be or howsoever they may arise as well as for every act and neglect of the Contractor and any person for whom the Contractor shall or may be deemed responsible.

(e) Subcontractor shall forward and Contractor or Owner shall review and approve if applicable the Project Workforce Monthly Report, the Company-Wide Workforce Monthly Report and Certified Payroll Report(s). The before mentioned forms/reports being received and approved as deemed necessary by Contractor is a condition of payment from Contractor to Subcontractor.

Section 4. Taxes and Contributions. Taxes are included in the price to be paid Subcontractor under this Subcontract, and Subcontractor assume and accepts exclusive liability for , and agrees to pay (a) all taxes and contributions required to be withheld from, or in respect of, wages and salaries, under any law or collective bargaining agreement now existing or hereafter imposed, including interest and penalties, (b) all taxes, contributions, interest and penalties under any federal, state municipal or other governmental or private old age benefit, welfare benefit, social security, pension, annuity, or unemployment compensation or insurance law plan or program now existing or hereafter imposed, and (c) all taxes measured by receipts in connection with the work under this Subcontract and all sales, use income, occupation, or excise taxes, including interest and penalties, referable to the Subcontract or anything to be done or furnished hereunder and all permits, fees and licenses relative to the work covered by the Subcontract. If Contractor pays any such taxes, contributions, interest or penalties, Subcontractor on demand shall reimburse Contractor therefore or Contractor may deduct the same from sums otherwise due Subcontractor.

Section 5. Changes. The Contractor may at any time by written order and without notice to the Subcontractor's sureties, make changes in, additions to or deletions from, the work to be performed, or materials to be furnished under this Subcontract, and the Subcontractor shall promptly proceed with the performance of this Subcontract as so changed. Any increase or decrease in the Subcontract price resulting from such changes shall be agreed upon in writing by the parties hereto. Any claim or adjustment of the Subcontract price under this Section must be made in writing within ten days from the day such changes are ordered. The Subcontract price shall be equitably adjusted on account of any such changes, subject to any applicable provisions of the Contract between the Contractor and the Owner. The Contractor, in the event of additional work, shall not be liable for a greater sum than the Contractor obtains from the Owner for such additional work, less reasonable overhead and profit to the Contractor. Subcontractor will pay to Contractor the professional and counsel fees, costs and expenses incurred by the Contractor in the collection of any such sums of money. The recovery by Subcontractor for such work shall be conditional upon a prior recovery by the Contractor from the Owner.

Section 6. Prosecution of Work. (a) The Subcontractor shall furnish all labor, supervision, tools, equipment, materials and supplies necessary for the performance of this Subcontract in a proper, efficient and workmanlike manner. The Subcontractor shall prosecute the work undertaken in a prompt and diligent manner whenever such work, or any part of it, becomes available or at such other time or times as the Contractor may direct, and so as to promote the general progress of the entire project, and shall not, by delay or otherwise, interfere with or hinder the work of the Contractor or any other subcontractor. Time is of the essence. Any materials that are to be furnished by the Subcontractor hereunder shall be furnished in sufficient time to enable the Subcontractor to perform and complete its work within the time or times specified. The Subcontractor

agrees to reimburse the Contractor for any and all liquidated or actual damages that may be assessed against and collected from the Contractor which are attributable to or caused by the Subcontractor's failure to furnish the materials and/or perform the work required by this Subcontract within the time fixed or in the manner provided for herein, and, in addition thereto, agrees to pay to the Contractor such other or additional damages as the Contractor may sustain by reason of such delay by the Subcontractor. Such additional damages shall include reasonable attorney fees, expenses of litigation, and collection of such money. The payment of such damages shall not release the Subcontractor from its obligation to otherwise fully perform this Subcontract. Upon written request by the Contractor, the Subcontractor shall furnish to the Contractor such evidence as the Contractor may require relating to the subcontractor's ability to fully perform this Subcontract in the manner and within the time specified.

(b) In the event the Subcontractor fails to comply, or becomes disabled from complying with the provisions herein as to character or time of performance, and the failure is not corrected within five days after written request by the Contractor to the Subcontractor, the Contractor, by subcontractor or otherwise, may without prejudice to any other right or remedy, take over and complete the performance of this Subcontract at the expense of the Subcontractor, or, without taking over the work, may furnish the necessary materials and/or employ the personnel necessary to remedy the situation at the expense of the Subcontractor. If the Contractor takes over the work pursuant to this paragraph it is specifically agreed that the Contractor may take possession of the premises and of all materials, tools and equipment of the Subcontractor for the purpose of completing the work covered by this Subcontract.

(c) It is agreed that the Subcontractor shall be considered as disabled from so complying with this Subcontract whenever the Subcontractor commits any act of Bankruptcy, or a voluntary or involuntary petition in Bankruptcy is filed against or on behalf of the Subcontractor, or the appointment of a receiver is filed against the Subcontractor.

Section 7. Delays. To the maximum extent permitted by law (a) In the event the Subcontractor's performance of this Subcontract is delayed or interfered with by act of the Owner, Contractor or other subcontractors, it may request an extension of the time for the performance of same, as hereinafter provided, but shall not be entitled to any increase in the Subcontract price or to damages or additional compensation as a consequence of such delays or interference, except to the extent that the Contract entitles the Contractor to compensation for such delays and then only to the extent of any amounts that the Contractor may on behalf of the Subcontractor recover from the Owner for such delays.

(b) No allowance for an extension of time, for any cause whatsoever, shall be claimed by, or made to, the Subcontractor unless the Subcontractor shall have made written request upon the Contractor for such extension within forty-eight hours after the cause of such extension occurred, or, if the Contract between the Contractor and Owner provides for a shorter period, within sufficient time to permit the Contractor to give notice to the Owner within the time allowed by the Contract for such notice.

(c) No allowance of an extension of time shall, in any event, be made to the Subcontractor for delay by the Subcontractor when the Subcontractor by the exercise of reasonable diligence and judgment could have anticipated and avoided the delay.

Section 8. Default. In addition to any other conduct or event designated in this Subcontract as a default, if (a) Subcontractor shall fail to furnish materials of the quantity or to do work in the manner required by the Contractor and the Contract Documents, or (b) Subcontractor shall fail to provide supervisory personnel or workers in numbers and experience or equipment in kind and capacity suitable to the Owner, Engineer or Contractor, or (c) Subcontractor shall fail to diligently prosecute the work required to be done under the Subcontract in the particular order or sequence requested by Contractor or to keep pace with the progress schedule formulated from time to time by Contractor, or (d) Subcontractor shall abandon said work or any part thereof as determined by Contractor, or (e) if Subcontractor should file a petition in bankruptcy or for any arrangement of creditor shall be filed by or against Subcontractor or Subcontractor shall become insolvent or make an assignment for the benefit of creditors or commit any act of bankruptcy, or (f) Subcontractor shall fail to promptly pay for all labor, material and everything else used in connection with the Subcontract, or fail to promptly provide evidence of such payment upon the written request of Contractor or (g) Subcontractor shall fail to maintain insurance or provide proof of insurance as required by the Subcontract, or (h) Subcontractor shall fail in any manner to perform the whole or any part of any term, provision, covenant or agreement contained or assumed herein; then and upon the occurrence of any such event (and Contractor's finding and judgment with respect thereto shall be final and bind the Subcontractor absolutely), in addition to any other right herein, Contractor shall have the right to:

- (a) Withhold any further payment hereunder from Subcontractor until all work to be performed by Subcontractor shall be wholly finished,
- (b) Provide or have others provide such materials, supplies, equipment and labor in addition to any supplied by Subcontractor, as may be necessary to complete Subcontractor's work and pay for the same and deduct the amount thereof from any money which is then or would thereafter otherwise be due Subcontractor,
- (c) Pay for all of the same and deduct the amount so paid from any money which is then or would thereafter otherwise be due Subcontractor,
- (d) Bar Subcontractor from the Project (with or without terminating the Subcontract),
- (e) Enter upon the premises and take possession for use and consumption in completing the work of all the materials, supplies, tools, equipment, appliances, facilities, records and shop drawings of the Subcontractor thereon and complete the work, or have the same completed by others, or any combination of such methods, and/or
- (f) Terminate the Subcontractor's rights under this Subcontract.

On the happening of any such event, Subcontractor shall not be entitled to receive any further payment hereunder, and Contractor shall have no liability to Subcontractor therefore, until final payment for the entire Project has been received by Contractor from Owner, and Subcontractor shall only be entitled to, and Contractor shall only be liable for, the amount, if any, by which the unpaid portion of this Subcontract shall exceed the cost, expense and damage incurred by Contractor (including attorneys' fees and related costs) because of Subcontractor's default and/or delays and in completing the work covered hereby and performing the other obligations of Subcontractor hereunder. If such damages and amounts expended or incurred by Contractor exceed the balance of the Subcontract price, Subcontractor or its sureties or both shall pay Contractor such excess promptly after Contractor's demand therefor, and upon their failure to do so, in addition to Contractor's right on or under any bonds of the Subcontractor, Contractor shall have the right, pursuant to the lien provided for herein, to sell all materials, tools, appliances, equipment and facilities of Subcontractor not previously used or consumed in the performance of said work and to apply the proceeds of such sale(s) to the obligation of Subcontractor and its sureties who nevertheless shall remain liable for any deficiency. Contractor shall not be required to exercise any such lien rights as a condition to receiving full payment from Subcontractor and its sureties.

Section 9 . Termination for Convenience of the Contractor. The performance of work under this Subcontract may be terminated by the Contractor in accordance with this Section in whole, or from time to time in part, whenever the Contractor shall determine that such termination is in the best interest of the Contractor. Any such termination shall be effected by delivery to the Subcontractor of a Notice to Termination specifying the extent to which performance of work under the Subcontract is terminated, and the date upon which termination becomes effective. After receipt of a Notice of Termination, and except as otherwise directed by the Contractor, the Subcontractor shall stop work under the Subcontract on the date and to the extent specified in the Notice of Termination, and using its best effort, close-out Subcontractor's performance in a prudent and economical manner.

Subcontractor shall assign to the Contractor in the manner, at the times, and to the extent directed by Contractor, all of the rights, titles, and interests of the Subcontractor under the orders and subcontracts so terminated, in which case the Contractor shall have the right, in its discretion to settle or pay any claims arising out of the termination of such orders and subcontracts.

Subcontractor must settle all outstanding liabilities and all claims arising out of such termination of orders and subcontracts, with the written approval or ratification of the Contractor, which must not be unreasonably withheld.

Section 10 . Labor. The Subcontractor, in connection with all work covered by this Subcontract, shall comply with and be bound by any labor agreements executed by the Contractor or on Contractor's behalf to the extent that the provisions of such agreements apply to subcontractors. Failure at any time to comply with any of the provisions of such agreements will, at the option of the Contractor, be cause for immediate termination of this Subcontract for default and the Contractor shall have all the rights contained in Section 8 with regard to such termination. If, by reason of strikes, picketing or disputes of any nature between the Subcontractor and any individual group or organization, the Subcontractor should be persistently, repeatedly, or for a period of five (5) consecutive days, unable to supply enough properly skilled employees or proper materials to execute the work of this Subcontract, then the Contractor may terminate the Subcontract for default and proceed in accordance with Section 8 thereof.

Section 11 . Approvals. All submittals of the Subcontractor shall be submitted for the approval of the Owner, Architect, or Engineer through the Contractor.

Section 12 . Communications and Correspondence. All communications and correspondence, written or oral, must be directed through the Contractor, Subcontractor must keep the Contractor fully informed of any communication and correspondence received from the Owner, Architect or Engineer and any other third party.

Section 13. Indemnification. (a) To the fullest extent permitted by law, it is expressly agreed and understood that the Subcontractor shall indemnify, defend, and hold harmless Contractor (including its owners, affiliates and subsidiaries), its officers, directors, agents, shareholders ,employees, successors, sureties, the Project Owner and any other parties which Contractor is required under the Prime Contract or by law to defend, indemnify and/or hold harmless, from and against any and all claims, liability, actions, causes of actions, complaints, laws, expenses and demands whatsoever, in law and equity, including without limitation for bodily injury, personal injury, sickness, disease, death or property damage (including but not limited to the project itself), arising out of, or alleged to arise out of, or as a result of, or alleged as a result of, or to arise out of the performance of the Subcontractor's work under this Subcontract, regardless of negligence. Subcontractor, at Subcontractor's sole expense, shall promptly handle all such claims, defend all lawsuits filed against Contractor on account thereof, pay all judgments rendered against Contractor in such lawsuits (including any prejudgment interest assessed against any Indemnitee hereunder), and reimburse Contractor in cash upon demand for all reasonable expenses incurred by Contractor on account thereof including, but not limited to, attorney fees, expert witness fees and court costs. It is expressly agreed and understood by Subcontractor that Subcontractor shall indemnify Contractor and hold it harmless from the above referenced claims regardless of whether such claim is caused or alleged to be caused in part by any joint or concurrent negligent act (either active or passive) or omission by a party indemnified hereunder.

(b) Subcontractor agrees to indemnify and hold harmless Contractor from any and all claims or suits for infringement of patents, or violations of patent rights by Subcontractor, and further agrees to pay all losses and expenses incurred by Contractor by reason of any such claims or suits including, but not limited to, attorney fees and court costs.

(c) The Subcontractor, its agents, employees, subcontractors or suppliers shall not use the Contractor's equipment without the express written permission of the Contractor's designated representative. If the Subcontract or any of its agents, employees, suppliers or lower tier subcontractors utilize any machinery, equipment, tools, scaffolding, hoists, lifts or similar items owned, leased, or under the control of Contractor, the Subcontractor shall be liable to the Contractor as provided in this Subcontract for any loss or damage (including personal injury or death) which may arise from such use, except where such loss or damage shall be found to have been due solely to the negligence of the Contractor's employees operating such equipment.

(d) Subcontractor agrees to pay for all materials furnished and work and labor performed under this Subcontract, and to satisfy the Contractor thereupon whenever demand is made, and to indemnify the Contractor and the Owner against and save them and the premises harmless from any and all claims, suits or liens by others than the Subcontractor.

(e) Subcontractor agrees to obtain and pay for all permits, licenses and official inspections required by its work and to comply with all laws, ordinances and regulations bearing on its work and the conduct thereof; and in the event that Contractor, or any other entity designated by contractor, obtains such permits, licenses and official inspections, Subcontractor agrees to fully indemnify Contractor for all costs, fees and expenses therefor.

(f) The Subcontractor warrants and guarantees the work and materials covered by this Subcontract and agrees to make good, at its own expense, any defect in materials or workmanship which may occur or develop prior to the Contractor's release from responsibility to the Owner therefor.

(g) The Subcontractor assumes toward the Contractor all the obligations and responsibilities that the Contractor assumes toward the Owner, as set forth in the Contract, General and Special Conditions, Drawings, Specifications, Schedules, and other documents hereinabove referred to insofar as applicable, generally or specifically, to the materials to be furnished and the work to be performed under this Subcontract. The Subcontractor shall indemnify the Contractor and the Owner against, and save them harmless from, any and all loss, damage, costs, expenses and attorney fees suffered or incurred on account of any breach of the

aforsaid obligations and covenants, and any other provision or covenant of this Subcontract.

Section 14. Insurance. (a) Prior to the commencement of the Subcontract work, the Subcontractor shall procure and maintain in force for the duration of the term of the Subcontract the following insurance coverages and minimum limits with insurance companies acceptable to the Contractor:

Worker's Compensation - Shall provide coverage for statutory benefits and Employer's Liability Coverage of not less than \$500,000 per occurrence. The policy shall contain an All States endorsement. The policy shall be endorsed to provide a waiver of subrogation in favor of the Contractor. If the work under the Subcontract is in proximity to a navigatable waterway, then the policy shall be endorsed to include coverage for the United States Longshoremen and Harbor Worker's Act. The policy shall be endorsed to provide 30 days written notice to Contractor of cancellation and/or material change in coverages.

Commercial General Liability - Shall be written on an occurrence basis with limits not less than \$1,000,000. The policy shall include coverage for Premises/Operations (including keeping in force for two years post completion), Independent Contractors, Contractual Liability (sufficient to cover the liability assumed by the Subcontractor under paragraph (a) of this Section), Property Damage arising out of the "XCU" hazards, Completed Operations/Products, Broad Form Property Damage, and Personal Injury. If the policy contains a general aggregate limitation, then the policy shall be endorsed to provide a \$1,000,000 specific aggregate for the work under this Subcontract. The policy shall name the Contractor as an Additional Insured (including completed operations) and be endorsed to state that the insurance provided to Contractor shall be primary insurance with respect to Contractor, and any other insurance policy that the Contractor may have in effect shall be deemed excess and not contributory. Such additional insured endorsement shall be CG-20 10 (11 85) or CG-20 10 (10 01) in combination with CG 20 37 or their equivalent. The policy shall be endorsed to provide 30 days written notice to Contractor of cancellation and/or material change in coverages. Any exclusion pertaining to work within fifty feet (50') of any railroad track shall be deleted.

Comprehensive Automobile Liability - The policy shall contain limits of not less than \$1,000,000 Combined Single Limit and include coverage for all Owned, Hired, and Non-owned vehicles. The policy shall name the Contractor as an Additional Insured and be endorsed to state that the insurance provided to Contractor shall be primary insurance with respect to Contractor, and any other insurance policy that the Contractor may have in effect shall be deemed excess and not contributory. Any exclusion pertaining to work within fifty feet (50') of any railroad track shall be deleted.

Marine Insurance - If the Subcontractor will use marine vessels in the prosecution of the work, the Subcontractor shall purchase Protection and Indemnity insurance with limits of not less than \$500,000. The policy shall name the Contractor as an Additional Insured and be endorsed to state that the insurance provided to Contractor shall be primary insurance with respect to Contractor, and any other insurance policy that the Contractor may have in effect shall be deemed excess and not contributory. The Subcontractor's Worker's Compensation Insurance shall be endorsed to provide coverage for Outer Continental Shelf Operations and liability for disease, wages, maintenance and cure. If the Subcontractor purchases Hull Insurance, such Hull Insurance shall be endorsed to provide a waiver of subrogation in favor of Contractor.

Excess/Umbrella Liability - The policy(ies) shall be written with limits of not less than \$5,000,000 Combined Single Limit and shall be endorsed to be following form of the Comprehensive General Liability, Comprehensive Automobile Liability, Protection and Indemnity Insurance, and Employer's Liability coverages.

(b) It is understood and agreed that the insurance coverages and limits required shall not limit the extent of the Subcontractor's responsibilities and liabilities specified with the in Contract Documents or by law

(c) The policies obtained and maintained to provide the specific insurance must provide that the required coverages and limits will not be altered, canceled, or allow to expire without at least 30 days prior written notice to Contractor

(d) Any deductible amounts which may occur as part of any policy shall be borne by the Subcontractor.

(e) It is understood and agreed that authorization is hereby granted to Contractor to withhold payments to the Subcontractor until a properly executed Certificate of Insurance providing insurance required herein, accompanied by a signed subcontract are received by Contractor

(f) Prior to commencing the work, Subcontractor shall cause to be completed by an authorized representative Exhibit A, **Certificate of Insurance**, as evidence of Subcontractor's compliance to paragraph (b) of this Section. In the event that the Subcontractor fails to obtain and keep in full force and effect any of the insurance requirements under this Subcontract, the Contractor may purchase such coverage and use any funds payable to the Subcontractor to satisfy any premium requirements.

Section 15. Bonds. The Subcontractor shall furnish Performance and Payment Bonds in an amount equal to the full Subcontract price at least fifteen (15) days before commencing work on the Project. The bonds shall be in a form satisfactory to the Contractor, and shall guarantee respectively the faithful performance of the Subcontract, and each and all of its stipulations and agreements, and the payment of all persons furnishing labor, services, equipment or materials used or purchased for use in the work covered by the Subcontract. If Maintenance Bonds are required, the Subcontractor shall furnish such bonds for its portion of the work. Bonds shall be on forms and with a surety satisfactory to the Contractor. Premiums for the bonds shall be paid by the Subcontractor and are included in the Subcontract sum or as stated otherwise herein.

Should any contract modification(s) result in an increase in the amount of this Subcontract, Subcontractor and Surety shall increase the amounts of such bonds accordingly, and it will be the responsibility of Subcontractor to include in its proposal the cost of additional bond premiums to cover the additional amount. If the Subcontractor fails to furnish the aforesaid bonds before commencing work or fails increase the amount of such bonds if required under this subsection, or if the surety is in receivership or otherwise unable to perform its obligations and a replacement surety satisfactory to Contractor is not promptly provided, Contractor may declare Subcontractor to be in default hereunder and to have breached this Subcontract. Should Subcontractor be in default under this provision, all rights and remedies available under Section 7 "Default" are available to Contractor.

Section 16 . Third Party. The parties hereto do not intend by any provisions hereof to create any third-party beneficiaries, nor to confer any benefit upon or enforceable right hereunder or otherwise upon anyone other than the parties hereto.

Any decision concerning the work, the intendment or application of the Contract or claims for payment or compensation thereunder for work done or omitted hereunder which are binding upon the Contractor shall bind the Subcontractor absolutely, whether such decision be made by the Owner, the Architect, the Engineer or any officer, agency or tribunal empowered to render the same by the Contract or any procedure referred to therein or contemplated thereby.

The Contractor may dispute, appeal from and in every manner resist and litigate any and every such decision without being deemed thereby to have admitted any obligation or liability to the Subcontractor, and if the decision shall go against the Contractor then the Subcontractor shall be concluded thereby, and nothing previously said, done, contended or stipulated by the Contractor shall be offered or received in evidence in any proceeding of the Subcontractor against the Contractor.

In any and all events, the Subcontractor shall bear a just part of all costs and expenses incurred by the Contractor in any proceeding, appeal or litigation involving a claim which if allowed would result in a payment(s) to the Subcontractor in the proportion that the amount claimed for the benefit of the Subcontractor shall bear to the whole amount sought in the same proceeding, appeal or litigation.

The Contractor shall not be obligated to assert or continue the prosecution of any claim for the benefit of a Subcontractor, nor to maintain or continue any proceeding, appeal or litigation thereon, and may refrain from asserting or abandon the same at any stage, in the discretion of the Contractor, unless the Subcontractor demands, in writing, presentation or continuation thereof and pays in advance to counsel, designated by the Contractor, a retainer to apply on the final fee, such counsel's estimate of the costs and expenses of the proceeding, appeal or litigation so demanded, and cooperates with such counsel fully in the compilation and presentation of supporting data and evidence. In any and all events the prosecution of any such claim shall be at the risk of the Subcontractor and Contractor shall have no responsibility or liability for or in relation to the outcome thereof.

Section 17 . Possession Prior to Completion. Whenever it may be necessary for the Contractor to do so, the Contractor shall be permitted to occupy and/or use any portion of the project which has been either

partially or fully completed by the Subcontractor before the final inspection and acceptance thereof by the Owner, but such use and/or occupation shall not relieve the Subcontractor of its guarantee of said work and materials or of its obligation to make good at its own expense any defect in materials and/or workmanship which may occur or develop prior to the Contractor's release from responsibility to the Owner. However, the Subcontractor shall not be responsible for the maintenance of such portion of the work as may be used and/or occupied by the Contractor, nor for any damage thereto that is due to or caused by the negligence of the Contractor during such period of use or occupancy.

Section 18 . Other Contracts. It is understood and agreed that the work provided for in this Subcontract constitutes only a part of the work being performed for the Owner by the Contractor and other subcontractors. The Subcontractor, therefore, agrees to perform the work called for in this Subcontract in such a manner that it will not injure, damage or delay any other work performed by the Contractor or any other subcontractor, and further agrees to pay the Contractor for any damage or delay that may be caused to such other work by the Subcontractor or by its agents or employees.

Section 19 . Independent Contractor. The Subcontractor specifically agrees that it is, or prior to the start of work hereunder will become, an independent contractor of an employing unit subject as an employer to all applicable Unemployment Compensation statutes so as to relieve the Contractor of any responsibility or liability for treating Subcontractor's employees as employees of the Contractor for the purpose of keeping records, making reports and payment of Unemployment Compensation taxes, or other taxes or contributions; and the Subcontractor agrees to indemnify and hold the Contractor harmless and reimburse it for any expense, including reasonable attorney fees and expenses of litigation or liability incurred under said statutes in connection with employees of the Subcontractor, including a sum equal to benefits paid to those who were Subcontractor's employees, where such benefit payments are charges to the Contractor under any Merit Plan or its individual Reserve Account pursuant to any state unemployment compensation statute.

Section 20 . Compliance with Law. (a) The Subcontractor further agrees as regards (1) the production, purchase and sale, furnishing and delivering, pricing, and use or consumption of materials, supplies and equipment; (2) the hire, tenure or conditions of employment of employees and their hours of work and rates of and the payment of their wages, and (3) the keeping of records, making of reports, and the payment, collection, and/or deduction of Federal, State and local taxes and contributions, that it will keep and have available all necessary records and make all payments, reports, collections and deductions, and otherwise do any and all things so as to fully comply with all Federal, State and local laws, ordinances and regulations in regard to any and all said matters insofar as they affect or involve the Subcontractor's performance of this Subcontract, including but not limited to, the Occupational Safety and Health Act of 1970, Mine Safety and Health Act, Environmental Protection Agency laws and regulations, the Immigration Reform and Control Act of 1986, Executive Order 11246 dated September 24, 1965 (30FR12319) (Equal Opportunity Clause) and the Contract Work Hours and Safety Standards Act. Subcontractor agrees to immediately remedy any condition causing a violation of any law, code, ordinance, regulation, etc., and shall defend and hold Contractor and Owner harmless from any penalty, fine or liability in connection therewith.

(b) Subcontractor hereby affirmatively states that it does not employ, hire for employment, or continue to employ any person who is unlawfully present and/or unauthorized to work in the United States in connection with the contracted services with Contractor. Subcontractor agrees to promptly (within 10 business days) provide to Contractor a sworn affidavit under penalty of perjury attesting to the fact that Subcontractor's employees are lawfully present in the United States. Failure to promptly provide the requested affidavit (within 10 days) will constitute a breach of this subcontract.

(c) Should Contractor and/or any of its owners or employees or subsidiaries incur any liability, penalty, cost or expense, including legal expenses, in connection with Subcontractor's failure or alleged failure to comply with any United States federal or state immigration laws, Subcontractor agrees to indemnify and hold harmless Contractor (and/or any of its owners or employees or subsidiaries) for any such liability, penalty, cost or expense incurred, including reasonable attorney fees.

(d) The Subcontractor shall be responsible for the layout and survey required for its work and for the safety and traffic control of its work and shall furnish and maintain all lights, guards, signs, barricades, flagmen, temporary passages and other necessary protection and precautions for that purpose.

(e) Subcontractor agrees not to discriminate against any employee or applicant for employment because of race, religion, sex, color, national origin, or handicap. The aforesaid provision shall include, but not be limited to the following: employment, upgrading, demotion or transfer; recruitment or recruitment

advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship.

Section 21. Safety-Responsibility. Subcontractor assumes exclusive responsibility for protection of its personnel, materials, equipment, facilities and work. If Contractor shall maintain first aid service at the site of said Project, Subcontractor shall bear its fair share of the cost thereof. Subcontractor shall provide sufficient, safe and proper facilities for inspection by Contractor and the Engineer of the work and materials of the Subcontractor, whether in the field, at shops, or at any place where such materials may be in preparation, manufacture, storage or installation.

Subcontractor agrees to abide by all safety rules, practices and programs as established by Contractor, the Occupational Safety and Health Act of 1970, as amended, and all other applicable safety rules and regulations whether state, federal or local (collectively referred to as the "Act") and shall be exclusively liable for the safety of its employees and for any violation of the Act either as to the work of Subcontractor or its portion of any jobsite or affecting the agents, employees, subcontractors or representatives of Subcontractor, Contractor or others in its work area.

Subcontractor acknowledges and agrees that its work area on this Project and all places where its employees, agents, materials, supplies, equipment and facilities are at any time or shall be at any time are and shall be under its exclusive control and Subcontractor is and shall be solely responsible for the detection and abatement of any conditions not in compliance with the Act, and Contractor is and shall not be responsible therefore. Notwithstanding the above, if, in the sole opinion of Contractor's representative, the Subcontractor is conducting or performing any of its work in an unsafe manner, the Contractor may direct that the work be discontinued until the unsafe practices are corrected. Should the Subcontractor continue to prosecute the work in an unsafe manner, the Contractor may terminate this Subcontract for default and the Contractor shall have all the rights contained in Section 8 with regard to default and/or termination.

Section 22. Protection of Work. Except as provided in Sections 13 and 14 above, the Subcontractor specifically agrees that it is responsible for the protection of its work until final completion and acceptance thereof by the Owner and that it will make good or replace, at no expense to the Contractor or Owner, any damage to its work which occurs prior to said final acceptance.

Section 23. Architect-Engineer. The words "Architect or Engineer" as used herein refer to the person appointed by the Owner to supervise the work of the Contractor on behalf of the Owner.

Section 24. Assignment. The Contractor expressly reserves the right to reject, in whole or in part, any assignment, subletting or subcontracting of any portion of this Subcontract, including materialmen or suppliers. Subcontractor agrees to advise Contractor promptly when, and if, any such assignment, subletting or subcontracting has occurred, and to provide a copy of the agreement to Contractor.

Contractor, in its sole discretion, may also consent to the assignment of all or a portion of the work remaining under this Subcontract to another that purchases the business of the Subcontractor and/or its assets. Any such consent to assignment by the Contractor must be in writing, and may include a requirement that the purchaser and/or assignee also assume any remaining rights and responsibilities of the Subcontractor under this Subcontract, including all remaining liabilities.

Subcontractor shall ensure that all benefits of its subcontracts, purchase orders and other agreements are assignable to the Contractor, at the option of the Contractor. The terms and provisions of this Subcontract shall be incorporated by reference into any and all agreements between Subcontractor and its subcontractors, materialmen or suppliers.

Section 25. Notice to Proceed. Receipt of the executed Subcontract does not constitute Notice to Proceed. Notice to proceed will be issued in writing at the field level when the proper insurance and bond documents have been received and approved. Notice to proceed will be issued to the Subcontractor ten (10) days prior to starting the work herein. The Subcontractor will proceed with its work within the given time and pursue its work as set forth in the articles of this Subcontract, the Owner's Contract and as otherwise directed by the Contractor. Work per this Subcontract may require progression on individual or successive sets of days as necessitated by project scheduling and completion.

Section 26. Examination of the Project Plans, Specifications, Special Provisions and Site of Work. Subcontractor certifies that it has examined the site of the work and that it is familiar with the Owner's plans,

specifications, and the general and special provisions applicable to the prime contract agreement.

Section 27. It is the intention of the parties to this Subcontract that all the provisions of this Agreement apply effective as of the commencement of any work by the Subcontractor regardless of the date of the execution this agreement, however, no payment will be authorized by the Contractor, until Subcontractor properly executes this Agreement, and provides the insurance certificate on the form attached, and returns to the Contractor.

Section 28. Specific Provisions Inserted. The attachment hereto of specific provisions of the Contract between the Contractor and the Owner is for the purpose of emphasis or to comply with applicable law or regulations and is not be construed as an exclusion of other provisions of that Contract.

Section 29. Prior Understanding or Representation. The Contractor assumes no responsibility for any understanding or representations made by any of its officers or agents prior to the execution of this Subcontract, unless such understanding or representations by the Contractor are expressly stated in the Subcontract.

Section 30. Captions. The captions at the beginning of each Section of this Subcontract are for convenience only and are to be given no weight in construing the provisions of this Subcontract.

Section 31. Law to Govern. When this Subcontract is signed by the Contractor, it is to be deemed executed and delivered in the State of Missouri and shall be governed and construed and interpreted in accordance with the laws of the State of Missouri.

Section 32. Jurisdiction, Venue and Limitations. Should either Contractor or Subcontractor institute any suit or action for the enforcement of any of the obligations under this Subcontract, jurisdiction and venue of such suit or action shall be laid in the County of Buchanan and the State of Missouri.

No action shall be maintained against the Contractor upon any claim arising out of or based upon this Subcontract, or by reason of any action, omission or requirement unless commenced within one year after the last work was performed or the material furnished under this Subcontract, or from any alleged breach of this Subcontract.

Section 33. Legal Fees. Should Contractor employ an attorney to enforce any provision of this Subcontract or to collect damages for default or breach of the Subcontract or to recover on any bond required by paragraph 15 hereof, Subcontractor and its sureties agrees to pay Contractor such attorneys' fees and costs of collection as Contractor may expend with respect thereto, and Subcontractor and its sureties waive all rights of exemption. All attorneys' fees and costs of collection shall be covered by said bond(s) required by paragraph 15, and the amount thereof shall increase, and shall be in addition to the penal amount of the bond(s).

Section 34. Dispute Resolution. The parties agree that any disputes that cannot be resolved promptly through informal negotiations (including such means as non-binding mediation at the mutual option of the parties) shall be submitted to binding arbitration. Except as otherwise herein provided, the arbitration shall be conducted by the Arbitrator under the guidance of the Missouri Rules of Civil Procedure, but the Arbitrator shall not be required to comply strictly with such rules in conducting the arbitration. The Arbitrator shall have the authority to adjudicate any dispute between the parties, including without limitation, the imposition of sanctions for abuse or frustration of the arbitration process. The Arbitrator's decision and award shall be reasoned in writing and counterpart copies thereof shall be delivered to each party. The decision and award of the Arbitrator shall be binding on all parties. The Arbitrator is hereby authorized to grant any type of relief allowed in Missouri as if this matter were tried in Circuit Court.

The parties agree that the arbitration will take place in St. Joseph, Missouri, or such other location as the parties and the Arbitrator all agree. The matter will be arbitrated by one person who will be selected by mutual agreement of the parties. If the parties cannot agree on an arbitrator, then the choice of an arbitrator will be submitted to the American Arbitration Association ("AAA") and its rules for choosing an arbitrator shall be followed. It is the intention of the parties that any Arbitrator chosen have substantial construction litigation experience.

The Arbitrator while acting in the official capacity as an arbitrator in this matter shall have the same immunity from liability accorded to Missouri state court judges while acting in their official capacity. The parties agree

that the arbitration award will be final and binding. The parties hereby agree to waive the right to file a demand for trial de novo, and the right to have the dispute heard by a jury. The parties agree that there will be limited discovery in any arbitration. The discovery schedule will be set by the arbitrator but it is the intention of the parties to complete the discovery within a 120 day period. The parties agree that each will be permitted to propound additional written discovery with no more than 25 interrogatories and 25 requests for production to the other; and may take no more than two depositions per party (including a corporate representative deposition). For good cause shown, the Arbitrator within his or her sole discretion may permit either side to take additional depositions or propound additional written discovery.

Unless otherwise agreed herein, this agreement and all proceedings there under shall be subject to the provisions of Missouri Revised Uniform Arbitration Act. Judgment may be entered on the Award rendered in this case, and such judgment may be enforced pursuant to processes available under Missouri law.

The substantially prevailing party shall be awarded attorney fees and costs. The parties agree that the fees and any other expenses charged by the Arbitrator shall be split equally among the parties.

Section 35. Conditions Precedent. This Subcontract shall become binding on Contractor only after Subcontractor has furnished Contractor with the required bonds, Certificates of Insurance and any other documents or items specified in the Subcontract and Prime Contract, and the Subcontractor has been approved by the Engineer, Owner and any other party required so to do by the Prime Contract, and if any of them shall fail or refuse to approve the Subcontractor or if Subcontractor shall fail to produce any item hereinabove specified to be provided, then and in that event this Subcontract at the option of Contractor shall be null, void and of no force or effect and Contractor shall owe nothing further to Subcontractor.

Section 36. Entire Agreement. This writing constitutes the entire agreement between the Contractor and the Subcontractor, and additions, deletions or modification of this Subcontract must be in writing and signed by the parties.

Section 37. Parties. The parties for themselves, their heirs, successors, personal representatives, and assigns do hereby agree to the full performance of the covenants herein.

Section 38. No Presumption Against Drafter. Counsel being available to both parties, the rule that a document shall be construed most strictly to the drafter shall not apply to this Subcontract.

Section 39. Confidential Information. Subcontractor agrees that if Subcontractor receives information or documents which Contractor regards as confidential or proprietary then Subcontractor shall hold such information or documents in strict confidence and shall not use, disclose or duplicate such information or documents except for the performance of this subcontract.

Section 40. Invalidity or Unenforceability. The invalidity or unenforceability of any provision of this Subcontract shall in no way affect the validity or enforceability of any other portion or provision of this Subcontract. The parties agree to amend this Subcontract to replace any invalid or unenforceable provision with a valid or enforceable provision that comes as close as possible to the intent of the invalid or unenforceable provision.

Section 41. Severability and Savings Clause: Whenever possible, each provision of this subcontract shall be interpreted in such a manner to be effective and valid under applicable law, but if any provisions of this subcontract shall be prohibited or invalid under applicable law, such provision shall be ineffective to the extent of such prohibition or invalidity without invalidating the remainder of such provisions of this subcontract. If any void or invalid provision cannot be construed by utilizing the Savings Clause contained in this subcontract to render it enforceable, then any void or invalid provision shall be deemed severed from this subcontract and the balance of this subcontract shall be construed and enforced as if this subcontract did not contain the particular portion or provision held to be void or invalid. Provided, however, the parties further agree to amend this subcontract retroactively to replace any stricken, void or invalid provision with a valid provision which comes as close as possible to the intent of the stricken provision and such replacement term or provision shall retroactively apply back to the date this subcontract was signed.

Section 42. Additional Provisions.

A. Any required submittals shall be an original and 1 electronic copy sent to:

KC Streetcar Constructors
Attn: Andy Auxier
1828 Walnut Street – Suite 500
Kansas City, MO 64108
aauxier@kcsciv.com

B. Whenever possible, each provision of this Subcontract shall be interpreted in such a manner as to be effective and valid under applicable law, but if any provision of this Subcontract shall be prohibited or invalid under applicable law, such provision shall be ineffective to the extent of such prohibition or invalidity without invalidating the remainder of such provisions of this Subcontract. The parties agree to amend this Subcontract to replace any stricken provision with a valid provision that comes as close as possible to the intent of the stricken provision.

C. Subcontractor shall submit the following schedules to Contractor's field office within 7 days as it applies to Subcontractor's work:

1. Schedule of Values – for progress payment purposes;
2. Construction Schedule;
3. Schedule of Required Submittals.

D. Subcontractor's employees shall wear all required personal protective equipment, including, but not limited to, as applicable: hard hats, safety glasses, proper safety shoes, safety vests, etc.

E. Subcontractor shall submit weekly certified payrolls in triplicate beginning with the first week subcontractor furnishes labor for the project and every week thereafter (including zero activity weeks) until completion of the project.

F. Subcontractor shall obtain, complete and transmit to Contractor for Contractor and Owner's review; Current certificate of compliance to the Owner's human relations department (Section 6.10 F.1), Subcontractors Affirmative Action Plan (Section 6.10 F.3), Subcontractor's daily force reports (Section 6.10 I.6), Subcontractor's current certificate of good standing or fictitious name registration from the Missouri Secretary of State. Payment to Subcontractor maybe delayed for failure to be current on its submittal of the requested forms and obligations.

G. Subcontractor shall have its name, acceptable abbreviation or recognizable logo and the name of the City and State of the mailing address of the principle office of the company on each motor vehicle and each piece of equipment.

THIS SUBCONTRACT CONTAINS A BINDING ARBITRATION PROVISION THAT MAY BE ENFORCED BY THE PARTIES.

IN WITNESS WHEREOF, the parties hereto have executed this Subcontract by their proper officers or duly authorized agents.

DIVISION 41 - MATERIAL PROCESSING AND HANDLING EQUIPMENT

41 22 00 Hoists and Cranes

DIVISION 45 - INDUSTRY-SPECIFIC MANUFACTURING EQUIPMENT

45 39 00 Fabricated Shop Equipment

SECTION 01 10 00**SUMMARY****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY**A. Section Includes:**

- 1. Project information.
- 2. Work covered by Contract Documents.
- 3. Access to site.
- 4. Work restrictions.
- 5. Specification and drawing conventions.
- 6. Miscellaneous provisions.

B. Related Requirements:

- 1. Section 01 50 00 "Temporary Facilities and Controls" for limitations and procedures governing temporary use of Owner's facilities.

1.03 PROJECT INFORMATION**A. Project Identification: Kansas City Downtown Streetcar VMF.**

- 1. Project Location: XXXX Holmes Street, Kansas City, Missouri.

B. Owner: Kansas City, Missouri

- 1. Owner's Representative: Ralph Davis, City Engineer, Kansas City Public Works Department.

C. Architect: RNL Design, 1050 17th Street, Denver, CO 80265**D. The Work of Project is defined by the Contract Documents and consists of the following:**

- 1. The Work consists of a new Vehicle Maintenance Facility for the Kansas City Downtown Streetcar Transit System. The Work will include precast and unit masonry walls, exterior metal panels on cold-formed metal framing, steel structure and metal roof deck. The Work also includes steel and steel grating stairs, an elevator, and a parts lift. The Work includes mechanical and electrical systems, including fire suppression and communications throughout the facility. The Work also includes aluminum storefront system and insulated glazing, all interior finishes, site work, landscaping, and site furnishings.

E. Type of Contract:

- 1. Project will be constructed under a single prime contract.

- F. Buy American: This project is required to abide by the latest update of the Buy American Act.

1.04 ACCESS TO SITE

- A. General: Contractor shall have full use of Project site for construction operations during construction period. Contractor's use of Project site is limited only by Owner's right to perform work or to retain other contractors on portions of Project.

1.05 WORK RESTRICTIONS

- A. Work Restrictions, General: Comply with restrictions on construction operations.
1. Comply with limitations on use of public streets and with other requirements of authorities having jurisdiction.
- B. On-Site Work Hours: Limit work in the existing building to normal business working hours of <Insert time> a.m. to <Insert time> p.m., Monday through Friday, unless otherwise indicated.
- C. Noise, Vibration, and Odors: Coordinate operations that may result in high levels of noise and vibration, odors, or other disruption to Owner occupancy with Owner.
1. Notify Architect not less than two days in advance of proposed disruptive operations.
 2. Obtain Architect's written permission before proceeding with disruptive operations.
- D. Controlled Substances: Use of tobacco products and other controlled substances on Project site is not permitted.
- E. Employee Identification: Provide identification tags for Contractor personnel working on Project site. Require personnel to use identification tags at all times.
- F. Employee Screening: Comply with Owner's requirements for drug and background screening of Contractor personnel working on Project site.
1. Maintain list of approved screened personnel with Owner's representative.

1.06 SPECIFICATION AND DRAWING CONVENTIONS

- A. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:
1. Imperative mood and streamlined language are generally used in the Specifications. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.
 2. Specification requirements are to be performed by Contractor unless specifically stated otherwise.
- B. Division 01 General Requirements: Requirements of Sections in Division 01 apply to the Work of all Sections in the Specifications.
- C. Specification Revisions: From time to time these Specifications may be revised to indicate changes to the Contract Requirements. The following conventions will be used to indicate changes to these Specifications. The Contractor shall post the changes on the Record Specifications.

1. Revision number, date and other information indicating how specification changes are issued to Contractor will be indicated in the upper right-hand corner of header of each section.
 2. Language added to these Specifications will be underlined (underlined).
 3. Language deleted from these Specification will be struck out (struck out).
 4. Revision numbers will be indicated at the end of sentences and paragraphs where language is added, deleted or changed. See upper right-hand corner of page for date of revision.
 5. Language added and deleted will be indicated by vertical bar on right margin of page (|).
 6. Revised specifications may be issued to Contractor by one or more of the following means:
 - a. A complete section including all pages showing changes as well as those not showing changes, usually when revisions are extensive and when page numbering changes.
 - b. Selected pages of a section where revisions do not change pagination.
 - c. Abbreviated section showing language that has been revised and showing additional language for context (to help the reader locate language that has been revised). Language not shown shall remain as indicated on previous versions of the section. Abbreviated sections are issued usually when revisions are indicated on few pages of the complete version of the section.
 7. All persons reading the Specifications shall refer to previous versions and revisions of the Specifications to determine what changes were made to each succeeding version or revision.
- D. Drawing Coordination: Requirements for materials and products identified on Drawings are described in detail in the Specifications. One or more of the following are used on Drawings to identify materials and products:
1. Terminology: Materials and products are identified by the typical generic terms used in the individual Specifications Sections.
 2. Abbreviations: Materials and products are identified by abbreviations published as part of the U.S. National CAD Standard and scheduled on Drawings.
 3. Keynoting: Materials and products are identified by reference keynotes referencing Specification Section numbers found in this Project Manual.

1.07 MISCELLANEOUS PROVISIONS

- A. Correction Period: General Contractor's correction period shall extend for a minimum 2 years from date of Substantial Completion. General Contractor shall coordinate requirements for extended correction period with Work required by the Contract Documents.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 10 00

SECTION 01 11 00**SUMMARY MAIN LINE AND SYSTEMS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the CM/GC Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY**A. Section Includes:**

- 1. Project information.
- 2. Work covered by Contract Documents.
- 3. Access to site.
- 4. Work restrictions.
- 5. Specification and drawing conventions.
- 6. Miscellaneous provisions.

B. Related Requirements:

- 1. Section 01 50 00 "Temporary Facilities and Controls" for limitations and procedures governing temporary use of Owner's facilities.

1.03 PROJECT INFORMATION**A. Project Identification: Kansas City Downtown Streetcar Main Line and Systems.**

- 1. Project Location: Main Street from River Market District to Pershing Road, Kansas City, Missouri.

B. Owner: Kansas City, Missouri

- 1. Owner's Representative: Ralph Davis, City Engineer, Kansas City Public Works Department.

C. Engineer: HDR Engineering, Inc., 4435 Main Street, Suite 1000, Kansas City, MO 64111**D. The Work of Project is defined by the Contract Documents and consists of the following:**

- 1. The Work consists of a new Main Line Tracks and Station Stops for the Kansas City Downtown Streetcar Transit System. The Work will include embedded track in the existing streets, station stops, utility relocation, bridge modifications, OCS, signals, and traction power.

E. Type of Contract:

- 1. Project will be constructed under a single prime CM/GC contract.

F. Buy American: This project is required to abide by the latest update of the Buy American Act.

1.04 ACCESS TO SITE

- A. General: Contractor shall coordinate their use of Project site with vehicle and pedestrian traffic for construction operations during construction period. Contractor's use of Project site is also limited by Owner's right to perform work or to retain other contractors on portions of Project.

1.05 WORK RESTRICTIONS

- A. Work Restrictions, General: Comply with restrictions on construction operations.
 - 1. Comply with limitations on use of public streets and with other requirements of authorities having jurisdiction.
- B. Noise, Vibration, and Odors: Coordinate operations that may result in high levels of noise and vibration, odors, or other disruption to Owner occupancy with Owner.
 - 1. Notify Engineer not less than two days in advance of proposed disruptive operations.
 - 2. Obtain Engineer's written permission before proceeding with disruptive operations.
- C. Controlled Substances: Use of tobacco products and other controlled substances on Project site is not permitted.
- D. Employee Identification: Provide identification tags for Contractor personnel working on Project site. Require personnel to use identification tags at all times.
- E. Employee Screening: Comply with Owner's requirements for drug and background screening of Contractor personnel working on Project site.
 - 1. Maintain list of approved screened personnel with Owner's representative.

1.06 SPECIFICATION AND DRAWING CONVENTIONS

- A. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:
 - 1. Imperative mood and streamlined language are generally used in the Specifications. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.
 - 2. Specification requirements are to be performed by Contractor unless specifically stated otherwise.
- B. Division 01 General Requirements: Requirements of Sections in Division 01 apply to the Work of all Sections in the Specifications.
- C. Specification Revisions: From time to time these Specifications may be revised to indicate changes to the Contract Requirements. The following conventions will be used to indicate changes to these Specifications. The Contractor shall post the changes on the Record Specifications.
 - 1. Revision number, date and other information indicating how specification changes are issued to Contractor will be indicated in the upper right-hand corner of header of each section.
 - 2. Language added to these Specifications will be underlined (underlined).
 - 3. Language deleted from these Specification will be struck out (struck out).

4. Revision numbers will be indicated at the end of sentences and paragraphs where language is added, deleted or changed. See upper right-hand corner of page for date of revision.
 5. Language added and deleted will be indicated by vertical bar on right margin of page (|).
 6. Revised specifications may be issued to Contractor by one or more of the following means:
 - a. A complete section including all pages showing changes as well as those not showing changes, usually when revisions are extensive and when page numbering changes.
 - b. Selected pages of a section where revisions do not change pagination.
 - c. Abbreviated section showing language that has been revised and showing additional language for context (to help the reader locate language that has been revised). Language not shown shall remain as indicated on previous versions of the section. Abbreviated sections are issued usually when revisions are indicated on few pages of the complete version of the section.
 7. All persons reading the Specifications shall refer to previous versions and revisions of the Specifications to determine what changes were made to each succeeding version or revision.
- D. Drawing Coordination: Requirements for materials and products identified on Drawings are described in detail in the Specifications. One or more of the following are used on Drawings to identify materials and products:
1. Terminology: Materials and products are identified by the typical generic terms used in the individual Specifications Sections.
 2. Abbreviations: Materials and products are identified by abbreviations published as part of the U.S. National CAD Standard and scheduled on Drawings.
 3. Keynoting: Materials and products are identified by reference keynotes referencing Specification Section numbers found in this Project Manual.

1.07 MISCELLANEOUS PROVISIONS

- A. Correction Period: General Contractor's correction period shall extend for a minimum 2 years from date of Substantial Completion. General Contractor shall coordinate requirements for extended correction period with Work required by the Contract Documents.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 11 00

SECTION 01 25 00**SUBSTITUTION PROCEDURES****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes administrative and procedural requirements for substitutions.
- B. Related Requirements:
 - 1. Section 01 60 00 "Product Requirements" for requirements for submitting comparable product submittals for products by listed manufacturers.

1.03 DEFINITIONS

- A. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor.
 - 1. Substitutions for Cause: Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.
 - 2. Substitutions for Convenience: Changes proposed by Contractor or Owner that are not required in order to meet other Project requirements but may offer advantage to Contractor or Owner.

1.04 ACTION SUBMITTALS

- A. Substitution Requests: Submit three copies of each request for consideration. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
 - 1. Substitution Request Form: Use [facsimile of form provided in Project Manual].
 - 2. Documentation: Show compliance with requirements for substitutions and the following, as applicable:
 - a. Statement indicating why specified product or fabrication or installation cannot be provided, if applicable.
 - b. Coordination information, including a list of changes or revisions needed to other parts of the Work and to construction performed by Owner and separate contractors, that will be necessary to accommodate proposed substitution.
 - c. Detailed comparison of significant qualities of proposed substitution with those of the Work specified. Include annotated copy of applicable Specification Section. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated. Indicate deviations, if any, from the Work specified.
 - d. Product Data, including drawings and descriptions of products and fabrication and installation procedures.

- e. Samples, where applicable or requested.
 - f. Certificates and qualification data, where applicable or requested.
 - g. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners.
 - h. Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
 - i. Research reports evidencing compliance with building code in effect for Project, from ICC-ES.
 - j. Detailed comparison of Contractor's construction schedule using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.
 - k. Cost information, including a proposal of change, if any, in the Contract Sum.
 - l. Contractor's certification that proposed substitution complies with requirements in the Contract Documents except as indicated in substitution request, is compatible with related materials, and is appropriate for applications indicated.
 - m. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.
3. Architect's Action: If necessary, Architect will request additional information or documentation for evaluation within seven days of receipt of a request for substitution. Architect will notify Contractor of acceptance or rejection of proposed substitution within 15 days of receipt of request, or seven days of receipt of additional information or documentation, whichever is later.
 - a. Forms of Acceptance: Change Order, Construction Change Directive, or Architect's Supplemental Instructions for minor changes in the Work.
 - b. Use product specified if Architect does not issue a decision on use of a proposed substitution within time allocated.

1.05 QUALITY ASSURANCE

- A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage a qualified testing agency to perform compatibility tests recommended by manufacturers.

1.06 PROCEDURES

- A. Coordination: Revise or adjust affected work as necessary to integrate work of the approved substitutions.

PART 2 - PRODUCTS

2.01 SUBSTITUTIONS

- A. Substitutions for Cause: Submit requests for substitution immediately on discovery of need for change, but not later than 15 days prior to time required for preparation and review of related submittals.
 1. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:

- a. Requested substitution is consistent with the Contract Documents and will produce indicated results.
 - b. Requested substitution provides sustainable design characteristics that specified product provided for achieving LEED prerequisites and credits.
 - c. Substitution request is fully documented and properly submitted.
 - d. Requested substitution will not adversely affect Contractor's construction schedule.
 - e. Requested substitution has received necessary approvals of authorities having jurisdiction.
 - f. Requested substitution is compatible with other portions of the Work.
 - g. Requested substitution has been coordinated with other portions of the Work.
 - h. Requested substitution provides specified warranty.
 - i. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.
- B. Substitutions for Convenience: Architect will consider requests for substitution if received within 60 days after the Notice to Proceed. Requests received after that time may be considered or rejected at discretion of Architect.
1. Conditions: Architect will consider Contractor's request for substitution when all of the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:
 - a. Requested substitution offers Owner a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities Owner must assume. Owner's additional responsibilities may include compensation to Architect for evaluation services, increased cost of other construction by Owner, and similar considerations.
 - b. Requested substitution does not require revisions to the Contract Documents.
 - c. Requested substitution is consistent with the Contract Documents and will produce indicated results.
 - d. Requested substitution provides sustainable design characteristics that specified product provided for achieving LEED prerequisites and credits.
 - e. Substitution request is fully documented and properly submitted.
 - f. Requested substitution will not adversely affect Contractor's construction schedule.
 - g. Requested substitution has received necessary approvals of authorities having jurisdiction.
 - h. Requested substitution is compatible with other portions of the Work.
 - i. Requested substitution has been coordinated with other portions of the Work.
 - j. Requested substitution provides specified warranty.
 - k. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 25 00

SECTION 01 26 00**CONTRACT MODIFICATION PROCEDURES****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes administrative and procedural requirements for handling and processing Contract modifications.
- B. Related Requirements:
 - 1. Section 01 25 00 "Substitution Procedures" for administrative procedures for handling requests for substitutions made after the Contract award.

1.03 MINOR CHANGES IN THE WORK

- A. Architect will issue supplemental instructions authorizing minor changes in the Work, not involving adjustment to the Contract Sum or the Contract Time, on form included in Project Manual.

1.04 PROPOSAL REQUESTS

- A. Owner-Initiated Proposal Requests: Architect will issue a detailed description of proposed changes in the Work that may require adjustment to the Contract Sum or the Contract Time. If necessary, the description will include supplemental or revised Drawings and Specifications.
 - 1. Work Change Proposal Requests issued by Architect are not instructions either to stop work in progress or to execute the proposed change.
 - 2. Within time specified in Proposal Request or 20 days, when not otherwise specified, after receipt of Proposal Request, submit a quotation estimating cost adjustments to the Contract Sum and the Contract Time necessary to execute the change.
 - a. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
 - b. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
 - c. Include costs of labor and supervision directly attributable to the change.
 - d. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
 - e. Quotation Form: Use forms acceptable to Architect.
- B. Contractor-Initiated Proposals: If latent or changed conditions require modifications to the Contract, Contractor may initiate a claim by submitting a request for a change to Architect.

1. Include a statement outlining reasons for the change and the effect of the change on the Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and the Contract Time.
2. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
3. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
4. Include costs of labor and supervision directly attributable to the change.
5. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
6. Comply with requirements in Section 01 25 00 "Substitution Procedures" if the proposed change requires substitution of one product or system for product or system specified.
7. Proposal Request Form: Use form acceptable to Architect.

1.05 CHANGE ORDER PROCEDURES

- A. On Owner's approval of a Work Changes Proposal Request, Architect will issue a Change Order for signatures of Owner and Contractor on form included in Project Manual.

1.06 CONSTRUCTION CHANGE DIRECTIVE

- A. Construction Change Directive: Architect may issue a Construction Change Directive on form included in Project Manual. Construction Change Directive instructs Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order.
 1. Construction Change Directive contains a complete description of change in the Work. It also designates method to be followed to determine change in the Contract Sum or the Contract Time.
- B. Documentation: Maintain detailed records on a time and material basis of work required by the Construction Change Directive.
 1. After completion of change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 26 00

SECTION 01 29 00**PAYMENT PROCEDURES****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes administrative and procedural requirements necessary to prepare and process Applications for Payment.
- B. Related Requirements:
 - 1. Section 01 26 00 "Contract Modification Procedures" for administrative procedures for handling changes to the Contract.
 - 2. Section 01 32 00 "Construction Progress Documentation" for administrative requirements governing the preparation and submittal of the Contractor's construction schedule.
 - 3. Section 01 81 13 "Sustainable Design Requirements."

1.03 DEFINITIONS

- A. Schedule of Values: A statement furnished by Contractor allocating portions of the Contract Sum to various portions of the Work and used as the basis for reviewing Contractor's Applications for Payment.

1.04 SCHEDULE OF VALUES

- A. Coordination: Coordinate preparation of the schedule of values with preparation of Contractor's construction schedule.
 - 1. Coordinate line items in the schedule of values with other required administrative forms and schedules, including the following:
 - a. Application for Payment forms with continuation sheets.
 - b. Submittal schedule.
 - c. Items required to be indicated as separate activities in Contractor's construction schedule.
 - 2. Submit the schedule of values to Architect at earliest possible date, but no later than seven days before the date scheduled for submittal of initial Applications for Payment.
- B. Format and Content: Use Project Manual table of contents as a guide to establish line items for the schedule of values. Provide at least one line item for each Specification Section.
 - 1. Identification: Include the following Project identification on the schedule of values:
 - a. Project name and location.
 - b. Name of Architect.

- c. Architect's project number.
 - d. Contractor's name and address.
 - e. Date of submittal.
2. Arrange the schedule of values in tabular form with separate columns to indicate the following for each item listed:
 - a. Related Specification Section or Division.
 - b. Description of the Work.
 - c. Name of subcontractor.
 - d. Name of manufacturer or fabricator.
 - e. Name of supplier.
 - f. Change Orders (numbers) that affect value.
 - g. Dollar value of the following, as a percentage of the Contract Sum to nearest one-hundredth percent, adjusted to total 100 percent.
 - 1) Labor.
 - 2) Materials.
 - 3) Equipment.
3. Provide a breakdown of the Contract Sum in enough detail to facilitate continued evaluation of Applications for Payment and progress reports. Coordinate with Project Manual table of contents. Provide multiple line items for principal subcontract amounts in excess of five percent of the Contract Sum.
 - a. Include separate line items under principal subcontracts for LEED documentation and other Project closeout requirements in an amount totaling five percent of the Contract Sum and subcontract amount.
4. Round amounts to nearest whole dollar; total shall equal the Contract Sum.
5. Provide a separate line item in the schedule of values for each part of the Work where Applications for Payment may include materials or equipment purchased or fabricated and stored, but not yet installed.
 - a. Differentiate between items stored on-site and items stored off-site. If required, include evidence of insurance.
6. Provide separate line items in the schedule of values for initial cost of materials, for each subsequent stage of completion, and for total installed value of that part of the Work.
7. Allowances: Provide a separate line item in the schedule of values for each allowance. Show line-item value of unit-cost allowances, as a product of the unit cost, multiplied by measured quantity. Use information indicated in the Contract Documents to determine quantities.
8. Purchase Contracts: Provide a separate line item in the schedule of values for each purchase contract. Show line-item value of purchase contract. Indicate owner payments or deposits, if any, and balance to be paid by Contractor.
9. Each item in the schedule of values and Applications for Payment shall be complete. Include total cost and proportionate share of general overhead and profit for each item.
 - a. Temporary facilities and other major cost items that are not direct cost of actual work-in-place may be shown either as separate line items in the schedule of values or distributed as general overhead expense, at Contractor's option.
10. Schedule Updating: Update and resubmit the schedule of values before the next Applications for Payment when Change Orders or Construction Change

Directives result in a change in the Contract Sum.

1.05 APPLICATIONS FOR PAYMENT

- A. Each Application for Payment following the initial Application for Payment shall be consistent with previous applications and payments as certified by Architect and paid for by Owner.
 - 1. Initial Application for Payment, Application for Payment at time of Substantial Completion, and final Application for Payment involve additional requirements.
- B. Payment Application Times: The date for each progress payment is indicated in the Agreement between Owner and Contractor. The period of construction work covered by each Application for Payment is the period indicated in the Agreement.
 - 1. Submit draft copy of Application for Payment seven days prior to due date for review by Architect.
- C. Application for Payment Forms: Use forms acceptable to Architect and Owner for Applications for Payment. Submit forms for approval with initial submittal of schedule of values.
- D. Application Preparation: Complete every entry on form. Notarize and execute by a person authorized to sign legal documents on behalf of Contractor. Architect will return incomplete applications without action.
 - 1. Entries shall match data on the schedule of values and Contractor's construction schedule. Use updated schedules if revisions were made.
 - 2. Include amounts for work completed following previous Application for Payment, whether or not payment has been received. Include only amounts for work completed at time of Application for Payment.
 - 3. Include amounts of Change Orders and Construction Change Directives issued before last day of construction period covered by application.
 - 4. Indicate separate amounts for work being carried out under Owner-requested project acceleration.
- E. Stored Materials: Include in Application for Payment amounts applied for materials or equipment purchased or fabricated and stored, but not yet installed. Differentiate between items stored on-site and items stored off-site.
 - 1. Provide certificate of insurance, evidence of transfer of title to Owner, and consent of surety to payment, for stored materials.
 - 2. Provide supporting documentation that verifies amount requested, such as paid invoices. Match amount requested with amounts indicated on documentation; do not include overhead and profit on stored materials.
 - 3. Provide summary documentation for stored materials indicating the following:
 - a. Value of materials previously stored and remaining stored as of date of previous Applications for Payment.
 - b. Value of previously stored materials put in place after date of previous Application for Payment and on or before date of current Application for Payment.
 - c. Value of materials stored since date of previous Application for Payment and remaining stored as of date of current Application for Payment.
- F. Transmittal: Submit three signed and notarized original copies of each Application for Payment to Architect by a method ensuring receipt within 24 hours. One copy shall include waivers of lien and similar attachments if required.

1. Transmit each copy with a transmittal form listing attachments and recording appropriate information about application.
- G. Waivers of Mechanic's Lien: With each Application for Payment, submit waivers of mechanic's lien from entities lawfully entitled to file a mechanic's lien arising out of the Contract and related to the Work covered by the payment.
1. Submit partial waivers on each item for amount requested in previous application, after deduction for retainage, on each item.
 2. When an application shows completion of an item, submit conditional final or full waivers.
 3. Owner reserves the right to designate which entities involved in the Work must submit waivers.
 4. Waiver Forms: Submit executed waivers of lien on forms acceptable to Owner.
- H. Initial Application for Payment: Administrative actions and submittals that must precede or coincide with submittal of first Application for Payment include the following:
1. List of subcontractors.
 2. Schedule of values.
 3. LEED submittal for project materials cost data.
 4. Contractor's construction schedule (preliminary if not final).
 5. Combined Contractor's construction schedule (preliminary if not final) incorporating Work of multiple contracts, with indication of acceptance of schedule by each Contractor.
 6. Products list (preliminary if not final).
 7. LEED action plans.
 8. Schedule of unit prices.
 9. Submittal schedule (preliminary if not final).
 10. List of Contractor's staff assignments.
 11. List of Contractor's principal consultants.
 12. Copies of building permits.
 13. Copies of authorizations and licenses from authorities having jurisdiction for performance of the Work.
 14. Initial progress report.
 15. Report of preconstruction conference.
 16. Certificates of insurance and insurance policies.
 17. Performance and payment bonds.
 18. Data needed to acquire Owner's insurance.
- I. Application for Payment at Substantial Completion: After Architect issues the Certificate of Substantial Completion, submit an Application for Payment showing 100 percent completion for portion of the Work claimed as substantially complete.
1. Include documentation supporting claim that the Work is substantially complete and a statement showing an accounting of changes to the Contract Sum.
 2. This application shall reflect Certificate(s) of Substantial Completion issued previously for Owner occupancy of designated portions of the Work.
- J. Final Payment Application: After completing Project closeout requirements, submit final Application for Payment with releases and supporting documentation not previously submitted and accepted, including, but not limited to, the following:
1. Evidence of completion of Project closeout requirements.
 2. Insurance certificates for products and completed operations where required and proof that taxes, fees, and similar obligations were paid.

3. Updated final statement, accounting for final changes to the Contract Sum.
4. Evidence that claims have been settled.
5. Final meter readings for utilities, a measured record of stored fuel, and similar data as of date of Substantial Completion or when Owner took possession of and assumed responsibility for corresponding elements of the Work.
6. Final liquidated damages settlement statement.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 29 00

SECTION 01 31 00**PROJECT MANAGEMENT AND COORDINATION****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes administrative provisions for coordinating construction operations on Project including, but not limited to, the following:
 - 1. General coordination procedures.
 - 2. Coordination drawings.
 - 3. Requests for Information (RFIs).
 - 4. Project Web site.
 - 5. Project meetings.
- B. Each contractor shall participate in coordination requirements. Certain areas of responsibility are assigned to a specific contractor.
- C. Related Requirements:
 - 1. Section 01 32 00 "Construction Progress Documentation" for preparing and submitting Contractor's construction schedule.
 - 2. Section 01 73 00 "Execution" for procedures for coordinating general installation and field-engineering services, including establishment of benchmarks and control points.
 - 3. Section 01 77 00 "Closeout Procedures" for coordinating closeout of the Contract.
 - 4. Section 01 91 13 "General Commissioning Requirements" for coordinating the Work with Owner's Commissioning Authority.

1.03 DEFINITIONS

- A. RFI: Request from Owner, Architect, or Contractor seeking information required by or clarifications of the Contract Documents.

1.04 INFORMATIONAL SUBMITTALS

- A. Subcontract List: Prepare a written summary identifying individuals or firms proposed for each portion of the Work, including those who are to furnish products or equipment fabricated to a special design. Include the following information in tabular form:
 - 1. Name, address, and telephone number of entity performing subcontract or supplying products.
 - 2. Number and title of related Specification Section(s) covered by subcontract.
 - 3. Drawing number and detail references, as appropriate, covered by subcontract.
- B. Key Personnel Names: Within 15 days of starting construction operations, submit a list of key personnel assignments, including superintendent and other personnel in

attendance at Project site. Identify individuals and their duties and responsibilities; list addresses and telephone numbers, including home, office, and cellular telephone numbers and e-mail addresses. Provide names, addresses, and telephone numbers of individuals assigned as alternates in the absence of individuals assigned to Project.

1. Post copies of list in project meeting room, in temporary field office, on Project Web site, and by each temporary telephone. Keep list current at all times.

1.05 GENERAL COORDINATION PROCEDURES

- A. Coordination: Coordinate construction operations included in different Sections of the Specifications to ensure efficient and orderly installation of each part of the Work. Coordinate construction operations, included in different Sections, that depend on each other for proper installation, connection, and operation.
 1. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
 2. Coordinate installation of different components to ensure maximum performance and accessibility for required maintenance, service, and repair.
 3. Make adequate provisions to accommodate items scheduled for later installation.
- B. Prepare memoranda for distribution to each party involved, outlining special procedures required for coordination. Include such items as required notices, reports, and list of attendees at meetings.
 1. Prepare similar memoranda for Owner and separate contractors if coordination of their Work is required.
- C. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:
 1. Preparation of Contractor's construction schedule.
 2. Preparation of the schedule of values.
 3. Installation and removal of temporary facilities and controls.
 4. Delivery and processing of submittals.
 5. Progress meetings.
 6. Preinstallation conferences.
 7. Project closeout activities.
 8. Startup and adjustment of systems.
- D. Conservation: Coordinate construction activities to ensure that operations are carried out with consideration given to conservation of energy, water, and materials. Coordinate use of temporary utilities to minimize waste.
 1. Salvage materials and equipment involved in performance of, but not actually incorporated into, the Work. See other Sections for disposition of salvaged materials that are designated as Owner's property.

1.06 COORDINATION DRAWINGS

- A. Coordination Drawings, General: Prepare coordination drawings according to requirements in individual Sections, and additionally where installation is not completely shown on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and

materials fabricated or installed by more than one entity.

1. Content: Project-specific information, drawn accurately to a scale large enough to indicate and resolve conflicts. Do not base coordination drawings on standard printed data. Include the following information, as applicable:
 - a. Use applicable Drawings as a basis for preparation of coordination drawings. Prepare sections, elevations, and details as needed to describe relationship of various systems and components.
 - b. Coordinate the addition of trade-specific information to the coordination drawings by multiple contractors in a sequence that best provides for coordination of the information and resolution of conflicts between installed components before submitting for review.
 - c. Indicate functional and spatial relationships of components of architectural, structural, civil, mechanical, and electrical systems.
 - d. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.
 - e. Show location and size of access doors required for access to concealed dampers, valves, and other controls.
 - f. Indicate required installation sequences.
 - g. Indicate dimensions shown on the Drawings. Specifically note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to Architect indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.

B. Coordination Drawing Organization: Organize coordination drawings as follows:

1. Floor Plans and Reflected Ceiling Plans: Show architectural and structural elements, and mechanical, plumbing, fire-protection, fire-alarm, and electrical Work. Show locations of visible ceiling-mounted devices relative to acoustical ceiling grid. Supplement plan drawings with section drawings where required to adequately represent the Work.
2. Plenum Space: Indicate subframing for support of ceiling and wall systems, mechanical and electrical equipment, and related Work. Locate components within ceiling plenum to accommodate layout of light fixtures indicated on Drawings. Indicate areas of conflict between light fixtures and other components.
3. Mechanical Rooms: Provide coordination drawings for mechanical rooms showing plans and elevations of mechanical, plumbing, fire-protection, fire-alarm, and electrical equipment.
4. Structural Penetrations: Indicate penetrations and openings required for all disciplines.
5. Slab Edge and Embedded Items: Indicate slab edge locations and sizes and locations of embedded items for metal fabrications, sleeves, anchor bolts, bearing plates, angles, door floor closers, slab depressions for floor finishes, curbs and housekeeping pads, and similar items.
6. Mechanical and Plumbing Work: Show the following:
 - a. Sizes and bottom elevations of ductwork, piping, and conduit runs, including insulation, bracing, flanges, and support systems.
 - b. Dimensions of major components, such as dampers, valves, diffusers, access doors, cleanouts and electrical distribution equipment.
 - c. Fire-rated enclosures around ductwork.
7. Electrical Work: Show the following:
 - a. Runs of vertical and horizontal conduit 1-1/4 inches in diameter and larger.
 - b. Light fixture, exit light, emergency battery pack, smoke detector, and other

- fire-alarm locations.
 - c. Panel board, switch board, switchgear, transformer, busway, generator, and motor control center locations.
 - d. Location of pull boxes and junction boxes, dimensioned from column center lines.
8. Fire-Protection System: Show the following:
- a. Locations of standpipes, mains piping, branch lines, pipe drops, and sprinkler heads.
9. Review: Architect will review coordination drawings to confirm that the Work is being coordinated, but not for the details of the coordination, which are Contractor's responsibility. If Architect determines that coordination drawings are not being prepared in sufficient scope or detail, or are otherwise deficient, Architect will so inform Contractor, who shall make changes as directed and resubmit.
10. Coordination Drawing Prints: Prepare coordination drawing prints according to requirements in Section 01 33 00 "Submittal Procedures."
- C. Coordination Digital Data Files: Prepare coordination digital data files according to the following requirements:
- 1. File Preparation Format: Same digital data software program, version, and operating system as original Drawings.
 - 2. File Submittal Format: Submit or post coordination drawing files using Portable Data File (PDF) format.
 - 3. BIM File Incorporation: Develop and incorporate coordination drawing files into Building Information Model established for Project.
 - a. Perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve component conflicts prior to submittal. Indicate where conflict resolution requires modification of design requirements by Architect.
 - 4. Architect will furnish Contractor one set of digital data files of Drawings for use in preparing coordination digital data files.
 - a. Architect makes no representations as to the accuracy or completeness of digital data files as they relate to Drawings.
 - b. Digital Data Software Program: Drawings are available in Insert name and version of digital data software program and operating system.
 - c. Contractor shall execute a data licensing agreement in the form of Agreement form acceptable to Owner and Architect.

1.07 REQUESTS FOR INFORMATION (RFIs)

- A. General: Immediately on discovery of the need for additional information or interpretation of the Contract Documents, Contractor shall prepare and submit an RFI in the form specified.
- 1. Architect will return RFIs submitted to Architect by other entities controlled by Contractor with no response.
 - 2. Coordinate and submit RFIs in a prompt manner so as to avoid delays in Contractor's work or work of subcontractors.
- B. Content of the RFI: Include a detailed, legible description of item needing information or interpretation and the following:

1. Project name.
 2. Project number.
 3. Date.
 4. Name of Contractor.
 5. Name of Architect.
 6. RFI number, numbered sequentially.
 7. RFI subject.
 8. Specification Section number and title and related paragraphs, as appropriate.
 9. Drawing number and detail references, as appropriate.
 10. Field dimensions and conditions, as appropriate.
 11. Contractor's suggested resolution. If Contractor's suggested resolution impacts the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.
 12. Contractor's signature.
 13. Attachments: Include sketches, descriptions, measurements, photos, Product Data, Shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.
 - a. Include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments on attached sketches.
- C. RFI Forms: Software-generated form with substantially the same content as indicated above, acceptable to Architect.
1. Attachments shall be electronic files in Adobe Acrobat PDF format.
- D. Architect's Action: Architect will review each RFI, determine action required, and respond. Allow seven working days for Architect's response for each RFI. RFIs received by Architect after 1:00 p.m. will be considered as received the following working day.
1. The following Contractor-generated RFIs will be returned without action:
 - a. Requests for approval of submittals.
 - b. Requests for approval of substitutions.
 - c. Requests for approval of Contractor's means and methods.
 - d. Requests for coordination information already indicated in the Contract Documents.
 - e. Requests for adjustments in the Contract Time or the Contract Sum.
 - f. Requests for interpretation of Architect's actions on submittals.
 - g. Incomplete RFIs or inaccurately prepared RFIs.
 2. Architect's action may include a request for additional information, in which case Architect's time for response will date from time of receipt of additional information.
 3. Architect's action on RFIs that may result in a change to the Contract Time or the Contract Sum may be eligible for Contractor to submit Change Proposal according to Section 01 26 00 "Contract Modification Procedures."
 - a. If Contractor believes the RFI response warrants change in the Contract Time or the Contract Sum, notify Architect in writing within 10 days of receipt of the RFI response.
- E. RFI Log: Prepare, maintain, and submit a tabular log of RFIs organized by the RFI number. Submit log weekly. Use software log that is part of Project Web site. Include the following:
1. Project name.

2. Name and address of Contractor.
 3. Name and address of Architect.
 4. RFI number including RFIs that were returned without action or withdrawn.
 5. RFI description.
 6. Date the RFI was submitted.
 7. Date Architect's response was received.
- F. On receipt of Architect's action, update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify Architect within seven days if Contractor disagrees with response.
1. Identification of related Minor Change in the Work, Construction Change Directive, and Proposal Request, as appropriate.
 2. Identification of related Field Order, Work Change Directive, and Proposal Request, as appropriate.

1.08 PROJECT WEB SITE

- A. Use Owner's Project Web site for purposes of hosting and managing project communication and documentation until Final Completion. Project Web site shall include the following functions:
1. Project directory.
 2. Project correspondence.
 3. Meeting minutes.
 4. Contract modifications forms and logs.
 5. RFI forms and logs.
 6. Task and issue management.
 7. Photo documentation.
 8. Schedule and calendar management.
 9. Submittals forms and logs.
 10. Payment application forms.
 11. Drawing and specification document hosting, viewing, and updating.
 12. Online document collaboration.
 13. Reminder and tracking functions.
 14. Archiving functions.
- B. Contractor, subcontractors, and other parties granted access by Contractor to Project Web site shall execute a data licensing agreement in the form of Agreement acceptable to Owner and Architect.

1.09 PROJECT MEETINGS

- A. General: Schedule and conduct meetings and conferences at Project site unless otherwise indicated.
1. Attendees: Inform participants and others involved, and individuals whose presence is required, of date and time of each meeting. Notify Owner and Architect of scheduled meeting dates and times.
 2. Agenda: Prepare the meeting agenda. Distribute the agenda to all invited attendees.
 3. Minutes: Entity responsible for conducting meeting will record significant discussions and agreements achieved. Distribute the meeting minutes to everyone concerned, including Owner and Architect, within three days of the meeting.
- B. Preconstruction Conference: Architect will schedule and conduct a preconstruction conference before starting construction, at a time convenient to Owner and Architect,

but no later than 15 days after execution of the Agreement.

1. Conduct the conference to review responsibilities and personnel assignments.
 2. Attendees: Authorized representatives of Owner, Owner's Commissioning Authority, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
 3. Agenda: Discuss items of significance that could affect progress, including the following:
 - a. Tentative construction schedule.
 - b. Phasing.
 - c. Critical work sequencing and long-lead items.
 - d. Designation of key personnel and their duties.
 - e. Lines of communications.
 - f. Procedures for processing field decisions and Change Orders.
 - g. Procedures for RFIs.
 - h. Procedures for testing and inspecting.
 - i. Procedures for processing Applications for Payment.
 - j. Distribution of the Contract Documents.
 - k. Submittal procedures.
 - l. Sustainable design requirements.
 - m. Preparation of record documents.
 - n. Use of the premises and existing building.
 - o. Work restrictions.
 - p. Working hours.
 - q. Owner's occupancy requirements.
 - r. Responsibility for temporary facilities and controls.
 - s. Procedures for moisture and mold control.
 - t. Procedures for disruptions and shutdowns.
 - u. Construction waste management and recycling.
 - v. Parking availability.
 - w. Office, work, and storage areas.
 - x. Equipment deliveries and priorities.
 - y. First aid.
 - z. Security.
 - aa. Progress cleaning.
 4. Minutes: Entity responsible for conducting meeting will record and distribute meeting minutes.
- C. LEED Coordination Conference: Owner will schedule and conduct a LEED coordination conference before starting construction, at a time convenient to Owner, Architect, and Contractor.
1. Attendees: Authorized representatives of Owner, Owner's Commissioning Authority, Architect, and their consultants; Contractor and its superintendent and LEED coordinator; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
 2. Agenda: Discuss items of significance that could affect meeting requirements for LEED certification, including the following:
 - a. LEED Project Checklist.
 - b. General requirements for LEED-related procurement and documentation.
 - c. Project closeout requirements and LEED certification procedures.
 - d. Role of LEED coordinator.

- e. Construction waste management.
 - f. Construction operations and LEED requirements and restrictions.
3. Minutes: Entity responsible for conducting meeting will record and distribute meeting minutes.
- D. Preinstallation Conferences: Conduct a preinstallation conference at Project site before each construction activity that requires coordination with other construction.
1. Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise Architect and Owner's Commissioning Authority of scheduled meeting dates.
 2. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:
 - a. Contract Documents.
 - b. Options.
 - c. Related RFIs.
 - d. Related Change Orders.
 - e. Purchases.
 - f. Deliveries.
 - g. Submittals.
 - h. LEED requirements.
 - i. Review of mockups.
 - j. Possible conflicts.
 - k. Compatibility requirements.
 - l. Time schedules.
 - m. Weather limitations.
 - n. Manufacturer's written instructions.
 - o. Warranty requirements.
 - p. Compatibility of materials.
 - q. Acceptability of substrates.
 - r. Temporary facilities and controls.
 - s. Space and access limitations.
 - t. Regulations of authorities having jurisdiction.
 - u. Testing and inspecting requirements.
 - v. Installation procedures.
 - w. Coordination with other work.
 - x. Required performance results.
 - y. Protection of adjacent work.
 - z. Protection of construction and personnel.
 3. Record significant conference discussions, agreements, and disagreements, including required corrective measures and actions.
 4. Reporting: Distribute minutes of the meeting to each party present and to other parties requiring information.
 5. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.
- E. Project Closeout Conference: Schedule and conduct a project closeout conference, at a time convenient to Owner and Architect, but no later than 90 days prior to the scheduled date of Substantial Completion.
1. Conduct the conference to review requirements and responsibilities related to

- Project closeout.
2. Attendees: Authorized representatives of Owner, Owner's Commissioning Authority, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the meeting. Participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
 3. Agenda: Discuss items of significance that could affect or delay Project closeout, including the following:
 - a. Preparation of record documents.
 - b. Procedures required prior to inspection for Substantial Completion and for final inspection for acceptance.
 - c. Submittal of written warranties.
 - d. Requirements for completing LEED documentation.
 - e. Requirements for preparing operations and maintenance data.
 - f. Requirements for delivery of material samples, attic stock, and spare parts.
 - g. Requirements for demonstration and training.
 - h. Preparation of Contractor's punch list.
 - i. Procedures for processing Applications for Payment at Substantial Completion and for final payment.
 - j. Submittal procedures.
 - k. Coordination of separate contracts.
 - l. Owner's partial occupancy requirements.
 - m. Installation of Owner's furniture, fixtures, and equipment.
 - n. Responsibility for removing temporary facilities and controls.
 4. Minutes: Entity conducting meeting will record and distribute meeting minutes.
- F. Progress Meetings: Conduct progress meetings at weekly intervals.
1. Coordinate dates of meetings with preparation of payment requests.
 2. Attendees: In addition to representatives of Owner, Owner's Commissioning Authority and Architect, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
 3. Agenda: Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.
 - a. Contractor's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.
 - 1) Review schedule for next period.
 - b. Review present and future needs of each entity present, including the following:
 - 1) Interface requirements.
 - 2) Sequence of operations.
 - 3) Resolution of BIM component conflicts.
 - 4) Status of submittals.

- 5) Status of LEED documentation.
 - 6) Deliveries.
 - 7) Off-site fabrication.
 - 8) Access.
 - 9) Site utilization.
 - 10) Temporary facilities and controls.
 - 11) Progress cleaning.
 - 12) Quality and work standards.
 - 13) Status of correction of deficient items.
 - 14) Field observations.
 - 15) Status of RFIs.
 - 16) Status of proposal requests.
 - 17) Pending changes.
 - 18) Status of Change Orders.
 - 19) Pending claims and disputes.
 - 20) Documentation of information for payment requests.
4. Minutes: Entity responsible for conducting the meeting will record and distribute the meeting minutes to each party present and to parties requiring information.
 - a. Schedule Updating: Revise Contractor's construction schedule after each progress meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.
- G. Coordination Meetings: Conduct Project coordination meetings at weekly intervals. Project coordination meetings are in addition to specific meetings held for other purposes, such as progress meetings and preinstallation conferences.
1. Attendees: In addition to representatives of Owner, Owner's Commissioning Authority and Architect, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the meetings shall be familiar with Project and authorized to conclude matters relating to the Work.
 2. Agenda: Review and correct or approve minutes of the previous coordination meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.
 - a. Combined Contractor's Construction Schedule: Review progress since the last coordination meeting. Determine whether each contract is on time, ahead of schedule, or behind schedule, in relation to combined Contractor's construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.
 - b. Schedule Updating: Revise combined Contractor's construction schedule after each coordination meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with report of each meeting.
 - c. Review present and future needs of each contractor present, including the following:
 - 1) Interface requirements.
 - 2) Sequence of operations.
 - 3) Resolution of BIM component conflicts.
 - 4) Status of submittals.
 - 5) Deliveries.

- 6) Off-site fabrication.
 - 7) Access.
 - 8) Site utilization.
 - 9) Temporary facilities and controls.
 - 10) Work hours.
 - 11) Hazards and risks.
 - 12) Progress cleaning.
 - 13) Quality and work standards.
 - 14) Change Orders.
3. Reporting: Record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting.

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 31 00

SECTION 01 32 00**CONSTRUCTION PROGRESS DOCUMENTATION****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes administrative and procedural requirements for documenting the progress of construction during performance of the Work, including the following:
1. Startup construction schedule.
 2. Contractor's construction schedule.
 3. Construction schedule updating reports.
 4. Daily construction reports.
 5. Material location reports.
 6. Site condition reports.
 7. Special reports.
 8. LEED log binder.
- B. Related Requirements:
1. Section 01 33 00 "Submittal Procedures" for submitting schedules and reports.
 2. Section 01 40 00 "Quality Requirements" for submitting a schedule of tests and inspections.

1.03 DEFINITIONS

- A. Activity: A discrete part of a project that can be identified for planning, scheduling, monitoring, and controlling the construction project. Activities included in a construction schedule consume time and resources.
1. Critical Activity: An activity on the critical path that must start and finish on the planned early start and finish times.
 2. Predecessor Activity: An activity that precedes another activity in the network.
 3. Successor Activity: An activity that follows another activity in the network.
- B. Cost Loading: The allocation of the schedule of values for the completion of an activity as scheduled. The sum of costs for all activities must equal the total Contract Sum unless otherwise approved by Architect.
- C. CPM: Critical path method, which is a method of planning and scheduling a construction project where activities are arranged based on activity relationships. Network calculations determine when activities can be performed and the critical path of Project.
- D. Critical Path: The longest connected chain of interdependent activities through the network schedule that establishes the minimum overall Project duration and contains no float.
- E. Event: The starting or ending point of an activity.

- F. Float: The measure of leeway in starting and completing an activity.
1. Float time is not for the exclusive use or benefit of either Owner or Contractor, but is a jointly owned, expiring Project resource available to both parties as needed to meet schedule milestones and Contract completion date.
 2. Free float is the amount of time an activity can be delayed without adversely affecting the early start of the successor activity.
 3. Total float is the measure of leeway in starting or completing an activity without adversely affecting the planned Project completion date.
- G. Resource Loading: The allocation of manpower and equipment necessary for the completion of an activity as scheduled.

1.04 INFORMATIONAL SUBMITTALS

- A. Format for Submittals: Submit required submittals in the following formats:
1. Working electronic copy of schedule file, where indicated.
 2. PDF electronic file.
- B. Startup construction schedule.
1. Approval of cost-loaded, startup construction schedule will not constitute approval of schedule of values for cost-loaded activities.
- C. Startup Network Diagram: Of size required to display entire network for entire construction period. Show logic ties for activities.
- D. Contractor's Construction Schedule: Initial schedule, of size required to display entire schedule for entire construction period.
1. Submit a working electronic copy of schedule, using software indicated, and labeled to comply with requirements for submittals. Include type of schedule (initial or updated) and date on label.
- E. CPM Reports: Concurrent with CPM schedule, submit each of the following reports. Format for each activity in reports shall contain activity number, activity description, cost and resource loading, original duration, remaining duration, early start date, early finish date, late start date, late finish date, and total float in calendar days.
1. Activity Report: List of all activities sorted by activity number and then early start date, or actual start date if known.
 2. Logic Report: List of preceding and succeeding activities for all activities, sorted in ascending order by activity number and then early start date, or actual start date if known.
 3. Total Float Report: List of all activities sorted in ascending order of total float.
 4. Earnings Report: Compilation of Contractor's total earnings from the Notice to Proceed until most recent Application for Payment.
- F. Construction Schedule Updating Reports: Submit with Applications for Payment.
- G. Daily Construction Reports: Submit at weekly intervals.
- H. Material Location Reports: Submit at weekly intervals.
- I. Site Condition Reports: Submit at time of discovery of differing conditions.
- J. Special Reports: Submit at time of unusual event.

- K. Qualification Data: For scheduling consultant.
- L. LEED Log Binder, containing completed material tracking spreadsheets.

1.05 QUALITY ASSURANCE

- A. Scheduling Consultant Qualifications: An experienced specialist in CPM scheduling and reporting, with capability of producing CPM reports and diagrams within 24 hours of Architect's request.
- B. Prescheduling Conference: Conduct conference at Project site to comply with requirements in Section 01 31 00 "Project Management and Coordination." Review methods and procedures related to the preliminary construction schedule and Contractor's construction schedule, including, but not limited to, the following:
 - 1. Review software limitations and content and format for reports.
 - 2. Verify availability of qualified personnel needed to develop and update schedule.
 - 3. Discuss constraints, including work stages, interim milestones and partial Owner occupancy.
 - 4. Review delivery dates for Owner-furnished products.
 - 5. Review schedule for work of Owner's separate contracts.
 - 6. Review submittal requirements and procedures.
 - 7. Review time required for review of submittals and resubmittals.
 - 8. Review requirements for tests and inspections by independent testing and inspecting agencies.
 - 9. Review time required for Project closeout and Owner startup procedures, including commissioning activities.
 - 10. Review and finalize list of construction activities to be included in schedule.
 - 11. Review procedures for updating schedule.

1.06 COORDINATION

- A. Coordinate Contractor's construction schedule with the schedule of values, list of subcontracts, submittal schedule, progress reports, payment requests, and other required schedules and reports.
 - 1. Secure time commitments for performing critical elements of the Work from entities involved.
 - 2. Coordinate each construction activity in the network with other activities and schedule them in proper sequence.

PART 2 - PRODUCTS

2.01 CONTRACTOR'S CONSTRUCTION SCHEDULE, GENERAL

- A. Time Frame: Extend schedule from date established for the Notice to Proceed to date of Substantial Completion.
 - 1. Contract completion date shall not be changed by submission of a schedule that shows an early completion date, unless specifically authorized by Change Order.
- B. Activities: Treat each story or separate area as a separate numbered activity for each main element of the Work. Comply with the following:
 - 1. Activity Duration: Define activities so no activity is longer than 20 days, unless specifically allowed by Architect.

2. Procurement Activities: Include procurement process activities for the following long lead items and major items, requiring a cycle of more than 60 days, as separate activities in schedule. Procurement cycle activities include, but are not limited to, submittals, approvals, purchasing, fabrication, and delivery.
 3. Submittal Review Time: Include review and resubmittal times indicated in Section 01 33 00 "Submittal Procedures" in schedule. Coordinate submittal review times in Contractor's construction schedule with submittal schedule.
 4. Startup and Testing Time: Include no fewer than 15 days for startup and testing.
 5. Substantial Completion: Indicate completion in advance of date established for Substantial Completion, and allow time for Architect's administrative procedures necessary for certification of Substantial Completion.
 6. Punch List and Final Acceptance: Include not more than 30 days for completion of punch list items and final completion.
- C. Constraints: Include constraints and work restrictions indicated in the Contract Documents and as follows in schedule, and show how the sequence of the Work is affected.
1. Work under More Than One Contract: Include a separate activity for each contract.
 2. Work by Owner: Include a separate activity for each portion of the Work performed by Owner.
 3. Products Ordered in Advance: Include a separate activity for each product. Include delivery date indicated in Section 01 10 00 "Summary." Delivery dates indicated stipulate the earliest possible delivery date.
 4. Owner-Furnished Products: Include a separate activity for each product. Include delivery date indicated in Section 01 10 00 "Summary." Delivery dates indicated stipulate the earliest possible delivery date.
 5. Work Restrictions: Show the effect of the following items on the schedule:
 - a. Coordination with existing construction.
 - b. Uninterruptible services.
 - c. Partial occupancy before Substantial Completion.
 - d. Use of premises restrictions.
 - e. Provisions for future construction.
 - f. Seasonal variations.
 - g. Environmental control.
 6. Work Stages: Indicate important stages of construction for each major portion of the Work, including, but not limited to, the following:
 - a. Subcontract awards.
 - b. Submittals.
 - c. Purchases.
 - d. Mockups.
 - e. Fabrication.
 - f. Sample testing.
 - g. Deliveries.
 - h. Installation.
 - i. Tests and inspections.
 - j. Adjusting.
 - k. Curing.
 - l. Building flush-out.
 - m. Startup and placement into final use and operation.
 7. Construction Areas: Identify each major area of construction for each major portion of the Work. Indicate where each construction activity within a major area must be sequenced or integrated with other construction activities to provide for

the following:

- a. Structural completion.
 - b. Temporary enclosure and space conditioning.
 - c. Permanent space enclosure.
 - d. Completion of mechanical installation.
 - e. Completion of electrical installation.
 - f. Substantial Completion.
8. Milestones: Include milestones indicated in the Contract Documents in schedule, including, but not limited to, the Notice to Proceed, Substantial Completion, and final completion.
- D. Cost Correlation: Superimpose a cost correlation timeline, indicating planned and actual costs. On the line, show planned and actual dollar volume of the Work performed as of planned and actual dates used for preparation of payment requests.
1. See Section 01 29 00 "Payment Procedures" for cost reporting and payment procedures.
- E. Upcoming Work Summary: Prepare summary report indicating activities scheduled to occur or commence prior to submittal of next schedule update. Summarize the following issues:
1. Unresolved issues.
 2. Unanswered Requests for Information.
 3. Rejected or unreturned submittals.
 4. Notations on returned submittals.
 5. Pending modifications affecting the Work and Contract Time.
- F. Recovery Schedule: When periodic update indicates the Work is 14 or more calendar days behind the current approved schedule, submit a separate recovery schedule indicating means by which Contractor intends to regain compliance with the schedule. Indicate changes to working hours, working days, crew sizes, and equipment required to achieve compliance, and date by which recovery will be accomplished.
- G. Computer Scheduling Software: Prepare schedules using current version of a program that has been developed specifically to manage construction schedules.

2.02 STARTUP CONSTRUCTION SCHEDULE

- A. Bar-Chart Schedule: Submit startup, horizontal, bar-chart-type construction schedule within seven days of date established for the Notice of Award.
- B. Preparation: Indicate each significant construction activity separately. Identify first workday of each week with a continuous vertical line. Outline significant construction activities for first 45 days of construction. Include skeleton diagram for the remainder of the Work and a cash requirement prediction based on indicated activities.

2.03 CONTRACTOR'S CONSTRUCTION SCHEDULE (CPM SCHEDULE)

- A. General: Prepare network diagrams using AON (activity-on-node) format.
- B. Startup Network Diagram: Submit diagram within 14 days of date established for the Notice to Proceed. Outline significant construction activities for the first 45 days of construction. Include skeleton diagram for the remainder of the Work and a cash requirement prediction based on indicated activities.

- C. CPM Schedule: Prepare Contractor's construction schedule using a cost- and resource-loaded, time-scaled CPM network analysis diagram for the Work.
1. Develop network diagram in sufficient time to submit CPM schedule so it can be accepted for use no later than 60 days after date established for the Notice to Proceed.
 - a. Failure to include any work item required for performance of this Contract shall not excuse Contractor from completing all work within applicable completion dates, regardless of Architect's approval of the schedule.
 2. Conduct educational workshops to train and inform key Project personnel, including subcontractors' personnel, in proper methods of providing data and using CPM schedule information.
 3. Establish procedures for monitoring and updating CPM schedule and for reporting progress. Coordinate procedures with progress meeting and payment request dates.
 4. Use "one workday" as the unit of time for individual activities. Indicate nonworking days and holidays incorporated into the schedule in order to coordinate with the Contract Time.
- D. CPM Schedule Preparation: Prepare a list of all activities required to complete the Work. Using the startup network diagram, prepare a skeleton network to identify probable critical paths.
1. Activities: Indicate the estimated time duration, sequence requirements, and relationship of each activity in relation to other activities. Include estimated time frames for the following activities:
 - a. Preparation and processing of submittals.
 - b. Mobilization and demobilization.
 - c. Purchase of materials.
 - d. Delivery.
 - e. Fabrication.
 - f. Utility interruptions.
 - g. Installation.
 - h. Work by Owner that may affect or be affected by Contractor's activities.
 - i. Testing and commissioning.
 - j. Punch list and final completion.
 - k. Activities occurring following final completion.
 2. Critical Path Activities: Identify critical path activities, including those for interim completion dates. Scheduled start and completion dates shall be consistent with Contract milestone dates.
 3. Processing: Process data to produce output data on a computer-drawn, time-scaled network. Revise data, reorganize activity sequences, and reproduce as often as necessary to produce the CPM schedule within the limitations of the Contract Time.
 4. Format: Mark the critical path. Locate the critical path near center of network; locate paths with most float near the edges.
 - a. Subnetworks on separate sheets are permissible for activities clearly off the critical path.
 5. Cost- and Resource-Loading of CPM Schedule: Assign cost to construction activities on the CPM schedule. Do not assign costs to submittal activities. Obtain Architect's approval prior to assigning costs to fabrication and delivery activities. Assign costs under main subcontracts for testing and commissioning

activities, operation and maintenance manuals, punch list activities, Project record documents, LEED documentation, and demonstration and training (if applicable), in the amount of 5 percent of the Contract Sum.

- a. Each activity cost shall reflect an appropriate value subject to approval by Architect.
 - b. Total cost assigned to activities shall equal the total Contract Sum.
- E. Contract Modifications: For each proposed contract modification and concurrent with its submission, prepare a time-impact analysis using a network fragment to demonstrate the effect of the proposed change on the overall project schedule.
- F. Initial Issue of Schedule: Prepare initial network diagram from a sorted activity list indicating straight "early start-total float." Identify critical activities. Prepare tabulated reports showing the following:
1. Contractor or subcontractor and the Work or activity.
 2. Description of activity.
 3. Main events of activity.
 4. Immediate preceding and succeeding activities.
 5. Early and late start dates.
 6. Early and late finish dates.
 7. Activity duration in workdays.
 8. Total float or slack time.
 9. Average size of workforce.
 10. Dollar value of activity (coordinated with the schedule of values).
- G. Schedule Updating: Concurrent with making revisions to schedule, prepare tabulated reports showing the following:
1. Identification of activities that have changed.
 2. Changes in early and late start dates.
 3. Changes in early and late finish dates.
 4. Changes in activity durations in workdays.
 5. Changes in the critical path.
 6. Changes in total float or slack time.
 7. Changes in the Contract Time.
- H. Value Summaries: Prepare two cumulative value lists, sorted by finish dates.
1. In first list, tabulate activity number, early finish date, dollar value, and cumulative dollar value.
 2. In second list, tabulate activity number, late finish date, dollar value, and cumulative dollar value.
 3. In subsequent issues of both lists, substitute actual finish dates for activities completed as of list date.
 4. Prepare list for ease of comparison with payment requests; coordinate timing with progress meetings.
 - a. In both value summary lists, tabulate "actual percent complete" and "cumulative value completed" with total at bottom.
 - b. Submit value summary printouts one week before each regularly scheduled progress meeting.

2.04 REPORTS

- A. Daily Construction Reports: Prepare a daily construction report recording the following information concerning events at Project site:

1. List of subcontractors at Project site.
 2. List of separate contractors at Project site.
 3. Approximate count of personnel at Project site.
 4. Equipment at Project site.
 5. Material deliveries.
 6. High and low temperatures and general weather conditions, including presence of rain or snow.
 7. Accidents.
 8. Meetings and significant decisions.
 9. Unusual events (see special reports).
 10. Stoppages, delays, shortages, and losses.
 11. Meter readings and similar recordings.
 12. Emergency procedures.
 13. Orders and requests of authorities having jurisdiction.
 14. Change Orders received and implemented.
 15. Change Notices received and implemented.
 16. Services connected and disconnected.
 17. Equipment or system tests and startups.
 18. Partial completions and occupancies.
 19. Substantial Completions authorized.
- B. Material Location Reports: At weekly intervals, prepare and submit a comprehensive list of materials delivered to and stored at Project site. List shall be cumulative, showing materials previously reported plus items recently delivered. Include with list a statement of progress on and delivery dates for materials or items of equipment fabricated or stored away from Project site. Indicate the following categories for stored materials:
1. Material stored prior to previous report and remaining in storage.
 2. Material stored prior to previous report and since removed from storage and installed.
 3. Material stored following previous report and remaining in storage.
- C. Site Condition Reports: Immediately on discovery of a difference between site conditions and the Contract Documents, prepare and submit a detailed report. Submit with a Request for Information. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

2.05 LEED LOG BINDER

- A. Maintain LEED log binder at field office.
1. Include copies of updated materials tracking spreadsheet.
 - a. Submit updated copies of materials tracking spreadsheet with Application for Payment in accordance with Section 01 29 00 - Payment Procedures.
 2. Include copies of all LEED-related information submittals required by technical specifications sections.

2.06 SPECIAL REPORTS

- A. General: Submit special reports directly to Owner within one day(s) of an occurrence. Distribute copies of report to parties affected by the occurrence.
- B. Reporting Unusual Events: When an event of an unusual and significant nature

occurs at Project site, whether or not related directly to the Work, prepare and submit a special report. List chain of events, persons participating, response by Contractor's personnel, evaluation of results or effects, and similar pertinent information. Advise Owner in advance when these events are known or predictable.

PART 3 - EXECUTION

3.01 CONTRACTOR'S CONSTRUCTION SCHEDULE

- A. Scheduling: Assign skilled personnel with experience in CPM scheduling and reporting techniques.
- B. Meetings: Scheduling personnel shall attend all meetings related to Project progress, alleged delays, and time impact.
- C. Contractor's Construction Schedule Updating: At monthly intervals, update schedule to reflect actual construction progress and activities. Issue schedule one week before each regularly scheduled progress meeting.
 - 1. Revise schedule immediately after each meeting or other activity where revisions have been recognized or made. Issue updated schedule concurrently with the report of each such meeting.
 - 2. Include a report with updated schedule that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
 - 3. As the Work progresses, indicate final completion percentage for each activity.
- D. Distribution: Distribute copies of approved schedule to Architect, Owner, separate contractors, testing and inspecting agencies, and other parties identified by Contractor with a need-to-know schedule responsibility.
 - 1. Post copies in Project meeting rooms and temporary field offices.
 - 2. When revisions are made, distribute updated schedules to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in performance of construction activities.

END OF SECTION 01 32 00

SECTION 01 33 00

SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

- A. General requirements and procedures for preparing and submitting product data, shop drawings, samples, and other submittals for review and approval.

1.2 DEFINITIONS

- A. Product Data: Includes illustrations, standard schedules, diagrams, performance charts, instructions, and brochures that illustrate physical appearance, size, and other characteristics of materials and equipment for some portion of the work.
- B. Shop Drawings: Drawings, diagrams, schedules and other data specially prepared for the Work by the Contractor or a Subcontractor, Sub-subcontractor, manufacturer, supplier, or distributor to illustrate some portion of the Work.
- C. Samples: Physical examples of materials, equipment, or workmanship that illustrate functional and aesthetic characteristics of a material or product and establish standard by which the work will be judged.
- D. Day: Calendar day.

1.3 SUBMITTALS

- A. Schedule of Submittals: Within 45 Days after the effective date of Notice to Proceed, submit a completed submittal list.
 - 1. Include for each planned submittal:
 - a. Date on which each submittal will be submitted.
 - b. Contract Specifications reference, by Section and Article.
 - c. Intended submission/resubmission date(s).
 - d. Lead time to delivery/anticipated delivery date(s).
 - 2. Highlight submittals that are on the critical path and add each of these submittals as an activity on the CPM Schedule required by Section 01 32 13, Scheduling of Work.
 - 3. Update and resubmit Schedule of Submittals on a monthly basis.

1.4 CONTRACTOR'S RESPONSIBILITIES

- A. Submit in a timely manner:
1. Submit product data and samples not less than 45 days before scheduled procurement. Contractor shall be responsible for scheduling submittals such that the project schedule is not delayed.
 2. Submit shop drawings not less than 30 days before work involving such drawings is to be performed as indicated on the Contractor's CPM Schedule.
 3. Contractor shall bear the risk when products, equipment, or materials are procured before approval of submittals or work is started before approval of shop drawings.
- B. Review Submittals Before Transmitting to Engineer:
1. Stamp and sign submittals as reviewed and approved by the Contractor before submission, including subcontractor submittals.
 2. Coordinate each submittal with the requirements of the Work, placing particular emphasis upon ensuring that each submittal of one trade is compatible with other submittals of that trade and with the submittals of other trades.
 3. Submit complete with all relevant data required for review.
 4. Contractor shall be responsible for the correctness of the drawings, for shop fits and field connections, and for the results obtained by the use of such drawings.
- C. Attend meetings as requested by the Engineer to address issues related to the review of submittals.

1.5 THE ENGINEER'S REVIEW

- A. Each submittal listed in the Specifications shall be submitted for review and approval by the Engineer. The Engineer will indicate the submittal disposition as follows:
1. **NO EXCEPTIONS TAKEN** means submittal appears to conform to requirements of Contract Documents, that manufacture, fabrication, assembly, and installation of submitted product may proceed; and submittal need not be resubmitted.
 2. **EXCEPTIONS AS NOTED - RESUBMISSION NOT REQUIRED** means submittal appears to conform to requirements of Contract Documents upon incorporation of reviewer's corrections, and manufacture, fabrication, assembly, and installation of submitted product may proceed. Submittal need not be resubmitted unless Contractor challenges reviewer's exception.
 3. **EXCEPTIONS AS NOTED - RESUBMISSION REQUIRED** means submittal appears to conform to requirements of Contract Documents upon incorporation of reviewer's corrections, and manufacture, fabrication, assembly, and installation of submitted product may proceed after incorporation of reviewer's corrections and verification by Engineer that reviewer's corrections have been properly incorporated into submittal.
 - a. Resubmission is required.
 - b. Resubmit within 30 days of date of reviewer's transmittal.
 4. **REJECTED** means submittal is deficient to the degree that reviewer cannot correct submittal with a reasonable degree of effort, has not made a thorough review of submittal, and submittal needs revision and is to be corrected and resubmitted.

- B. The Engineer will transmit the disposition of the Contractor's submittal within 30 days after submittals have been received.
- C. Incomplete submittal packages will be returned without review.
- D. Include at least 30 days in the Contractor's CPM schedule for the Engineer and other parties to review submittals, unless otherwise specified.
- E. Allow 30 days for review by the Engineer of all re-submittals.
- F. The Contractor shall not be relieved from liability for form, fit, and function of any item, regardless of the Engineer's approval.

1.6 SUBMITTAL PROCEDURES

- A. Provide each submittal listed in the Submittal Article of each Specification Section.
- B. Identify submittals with the Contract Specification number (34 21 19), followed by the Specification Article number (1.03), paragraph number (B) and subparagraph numbers (2 a), followed by the review cycle number of the submittal (.001).
 - 1. Example: 34 21 19-1.03 B 2 a.001
 - 2. For subsequent resubmittals, the name and number must be identical to that of the original submittal, except that the review cycle number is incremented by 1:
 - a. First submittal: Ends in ".001"
 - b. Second submittal: Ends in ".002"
 - c. Third submittal: Ends in ".003"
- C. Submittal Medium: Provide electronic copy in pdf format with bookmarks to separate sections.
- D. Include the following information in each submittal:
 - 1. Contract title and number.
 - 2. Applicable standards, such as ASTM or IEEE.
 - 3. Identification of deviations from the Contract Drawings and Contract Specifications.
 - 4. Contractor's stamp, initialed or signed, certifying:
 - a. Dimensional compatibility of the product with the space in which it is intended to be used.
 - b. Review of submittals for compliance with the specified requirements.
 - c. Compatibility of the product with other products with which it is to perform or with which it will be contiguous.
 - 5. Professional Engineer's stamp, where required in Specifications.
- E. Attach a transmittal form to each submittal.

1.7 CHANGES

- A. Changes in Reviewed Submittals: Changes in reviewed submittals will not be permitted unless those approved submittals with changes have been resubmitted and reviewed, in the same manner as the original submittal.
- B. Changes in products for which shop drawings, product data, or samples have been submitted will not be permitted unless those changes have been accepted and approved, in writing, by the Engineer. Updated shop drawings, product data, and/or samples shall be provided to the Engineer for review and approval prior to procurement.
- C. Supplemental Submittals: Initiated by the Contractor for consideration of corrective procedures.
 - 1. Shall contain sufficient data for review.
 - 2. Make supplemental submittals in the same manner as initial submittals.

1.8 PRODUCT DATA

- A. Clearly indicate on product selection tables which product and which options are being provided.
- B. Line through or delete information that is not applicable to the Contract.

1.9 SHOP DRAWINGS

- A. Drawings shall be fully legible. Text on 22 x 34 drawings shall not be smaller than 1/8 inch and on 11 x 17 drawings shall not be smaller than 1/16 inch.
- B. Include a title block in the lower right hand corner that identifies the Contractor, Subcontractor, Contract by number and title, subject matter of the drawing, sheet number, date of the original issue of the drawing, and the serial number and date of each revision. Where required by Specification, provide an area in the title block or nearby for Professional Engineer's stamp.
- C. Submittal Stamp and Action Block Space: Include a 5-inch square blank space, in the lower right corner, just above the title block, in which the Engineer may indicate the action taken.
- D. Provide sufficient dimensions on drawings so that size and location may be determined without calculation.
- E. Sample Drawings: The first drawings submitted by Contractor will be reviewed for conformance. Once approval is given, use this approved drawing format as the standard and prepare subsequent drawings to a quality equal to the approved standard.

1.10 SAMPLES

- A. Furnish to the Engineer samples indicated in the Contract Documents or these Specifications. Submit samples without charge, with shipping charges prepaid. Materials for which samples are required shall not be used in the Work until samples are reviewed.
- B. Label each sample with the following data:
 - 1. Name, number, and location of project.
 - 2. Name of Contractor.
 - 3. Material or equipment represented, and location in the project.

4. Name of producer, brand, trade name if applicable, and place of origin.
 5. Date of submittal.
- C. Approval of a sample will be only for characteristics and use named in submittal and approval, and shall not be construed to change or modify any Contract requirement.
 - D. Test samples as required by Contract Specifications.
 - E. Samples of material from local sources shall be taken by or in the presence of the Engineer; otherwise, samples will not be considered for testing.
 - F. Failure of any material to pass specified tests will be sufficient cause for refusal to consider, under this Contract, any further samples of the same brand, make, or source of that material. The Engineer reserves the right to disapprove any material that has previously proven unsatisfactory in service.
 - G. Samples of material delivered on site or in place may be taken by the Engineer for Quality Assurance testing and will not be returned to the Contractor. Failure of samples to meet Contract requirements will annul previous approvals of item tested.

END OF SECTION

SECTION 01 33 00**SUBMITTAL PROCEDURES****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes requirements for the submittal schedule and administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals.
- B. Related Requirements:
 - 1. Section 01 29 00 "Payment Procedures" for submitting Applications for Payment and the schedule of values.
 - 2. Section 01 32 00 "Construction Progress Documentation" for submitting schedules and reports, including Contractor's construction schedule.
 - 3. Section 01 77 00 "Closeout Procedures" for submitting operation and maintenance manuals, record documents, and demonstration and training videos.

1.03 DEFINITIONS

- A. Action Submittals: Written and graphic information and physical samples that require Architect's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."
- B. Informational Submittals: Written and graphic information and physical samples that do not require Architect's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."
- C. File Transfer Protocol (FTP): Communications protocol that enables transfer of files to and from another computer over a network and that serves as the basis for standard Internet protocols. An FTP site is a portion of a network located outside of network firewalls within which internal and external users are able to access files.
- D. Portable Document Format (PDF): An open standard file format licensed by Adobe Systems used for representing documents in a device-independent and display resolution-independent fixed-layout document format.

1.04 ACTION SUBMITTALS

- A. Submittal Schedule: Submit a schedule of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time required for making corrections or revisions to submittals noted by Architect and additional time for handling and reviewing submittals required by those corrections.
 - 1. Coordinate submittal schedule with list of subcontracts, the schedule of values,

- and Contractor's construction schedule.
2. Initial Submittal: Submit concurrently with startup construction schedule. Include submittals required during the first 60 days of construction. List those submittals required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.
 3. Final Submittal: Submit concurrently with the first complete submittal of Contractor's construction schedule.
 - a. Submit revised submittal schedule to reflect changes in current status and timing for submittals.
 4. Format: Arrange the following information in a tabular format:
 - a. Scheduled date for first submittal.
 - b. Specification Section number and title.
 - c. Submittal category: Action; informational.
 - d. Name of subcontractor.
 - e. Description of the Work covered.
 - f. Scheduled date for Architect's final release or approval.
 - g. Scheduled date of fabrication.
 - h. Scheduled dates for purchasing.
 - i. Scheduled dates for installation.
 - j. Activity or event number.

1.05 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

- A. Architect's Digital Data Files: Electronic digital data files of the Contract Drawings will be provided by Architect for Contractor's use in preparing submittals.
 1. Architect will furnish Contractor one set of digital data drawing files of the Contract Drawings for use in preparing Shop Drawings.
 - a. Architect makes no representations as to the accuracy or completeness of digital data drawing files as they relate to the Contract Drawings.
 - b. Digital Drawing Software Program: The Contract Drawings are available in Insert name and version of digital drawing software program and operating system .
 - c. Contractor shall execute a data licensing agreement in the form of Agreement form acceptable to Owner and Architect.
 - d. The following digital data files will be furnished for each appropriate discipline:
 - 1) Floor plans.
 - 2) Reflected ceiling plans.
- B. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
 1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
 2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
 3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
 4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.

- a. Architect reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.
- C. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
1. Initial Review: Allow 15 days for initial review of each submittal. Allow additional time if coordination with subsequent submittals is required. Architect will advise Contractor when a submittal being processed must be delayed for coordination.
 2. Intermediate Review: If intermediate submittal is necessary, process it in same manner as initial submittal.
 3. Resubmittal Review: Allow 15 days for review of each resubmittal.
 4. Sequential Review: Where sequential review of submittals by Architect's consultants, Owner, or other parties is indicated, allow 21 days for initial review of each submittal.
 5. Concurrent Consultant Review: Where the Contract Documents indicate that submittals may be transmitted simultaneously to Architect and to Architect's consultants, allow 15 days for review of each submittal. Submittal will be returned to Architect before being returned to Contractor.
- D. Electronic Submittals: Identify and incorporate information in each electronic submittal file as follows:
1. Assemble complete submittal package into a single indexed file incorporating submittal requirements of a single Specification Section and transmittal form with links enabling navigation to each item.
 2. Name file with submittal number or other unique identifier, including revision identifier.
 - a. File name shall use project identifier and Specification Section number followed by a decimal point and then a sequential number (e.g., LSCE-061000.01). Resubmittals shall include an alphabetic suffix after another decimal point (e.g., LSCE-061000.01.A).
 3. Provide means for insertion to permanently record Contractor's review and approval markings and action taken by Architect.
 4. Transmittal Form for Electronic Submittals: Use electronic form acceptable to Owner, containing the following information:
 - a. Project name.
 - b. Date.
 - c. Name and address of Architect.
 - d. Name of Contractor.
 - e. Name of firm or entity that prepared submittal.
 - f. Names of subcontractor, manufacturer, and supplier.
 - g. Category and type of submittal.
 - h. Submittal purpose and description.
 - i. Specification Section number and title.
 - j. Specification paragraph number or drawing designation and generic name for each of multiple items.
 - k. Drawing number and detail references, as appropriate.
 - l. Location(s) where product is to be installed, as appropriate.
 - m. Related physical samples submitted directly.

- n. Indication of full or partial submittal.
 - o. Transmittal number, numbered consecutively.
 - p. Submittal and transmittal distribution record.
 - q. Other necessary identification.
 - r. Remarks.
5. Metadata: Include the following information as keywords in the electronic submittal file metadata:
- a. Project name.
 - b. Number and title of appropriate Specification Section.
 - c. Manufacturer name.
 - d. Product name.
- E. Options: Identify options requiring selection by Architect.
- F. Deviations and Additional Information: On an attached separate sheet, prepared on Contractor's letterhead, record relevant information, requests for data, revisions other than those requested by Architect on previous submittals, and deviations from requirements in the Contract Documents, including minor variations and limitations. Include same identification information as related submittal.
- G. Resubmittals: Make resubmittals in same form and number of copies as initial submittal.
- 1. Note date and content of previous submittal.
 - 2. Note date and content of revision in label or title block and clearly indicate extent of revision.
 - 3. Resubmit submittals until they are marked with approval notation from Architect's action stamp.
- H. Distribution: Furnish copies of final submittals to manufacturers, subcontractors, suppliers, fabricators, installers, authorities having jurisdiction, and others as necessary for performance of construction activities. Show distribution on transmittal forms.
- I. Use for Construction: Retain complete copies of submittals on Project site. Use only final action submittals that are marked with approval notation from Architect's action stamp.

PART 2 - PRODUCTS

2.01 SUBMITTAL PROCEDURES

- A. General Submittal Procedure Requirements: Prepare and submit submittals required by individual Specification Sections. Types of submittals are indicated in individual Specification Sections.
- 1. Post electronic submittals as PDF electronic files directly to Project Web site specifically established for Project by Owner.
 - a. Architect will return annotated file. Annotate and retain one copy of file as an electronic Project record document file.
 - 2. Submit electronic submittals via email as PDF electronic files.
 - a. Architect will return annotated file. Annotate and retain one copy of file as an

electronic Project record document file.

3. Certificates and Certifications Submittals: Provide a statement that includes signature of entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity.
 - a. Provide a digital signature with digital certificate on electronically submitted certificates and certifications where indicated.
 - b. Provide a notarized statement on original paper copy certificates and certifications where indicated.
- B. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.
 1. If information must be specially prepared for submittal because standard published data are not suitable for use, submit as Shop Drawings, not as Product Data.
 2. Mark each copy of each submittal to show which products and options are applicable.
 3. Include the following information, as applicable:
 - a. Manufacturer's catalog cuts.
 - b. Manufacturer's product specifications.
 - c. Standard color charts.
 - d. Statement of compliance with specified referenced standards.
 - e. Testing by recognized testing agency.
 - f. Application of testing agency labels and seals.
 - g. Notation of coordination requirements.
 - h. Availability and delivery time information.
 4. For equipment, include the following in addition to the above, as applicable:
 - a. Wiring diagrams showing factory-installed wiring.
 - b. Printed performance curves.
 - c. Operational range diagrams.
 - d. Clearances required to other construction, if not indicated on accompanying Shop Drawings.
 5. Submit Product Data before or concurrent with Samples.
 6. Submit Product Data in the following format:
 - a. PDF electronic file.
- C. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data, unless submittal based on Architect's digital data drawing files is otherwise permitted.
 1. Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:
 - a. Identification of products.
 - b. Schedules.
 - c. Compliance with specified standards.
 - d. Notation of coordination requirements.
 - e. Notation of dimensions established by field measurement.
 - f. Relationship and attachment to adjoining construction clearly indicated.

-
- g. Seal and signature of professional engineer if specified.
 2. Sheet Size: Except for templates, patterns, and similar full-size drawings, submit Shop Drawings on sheets at least 8-1/2 by 11 inches, but no larger than 30 by 42 inches.
 3. Submit Shop Drawings in the following format:
 - a. PDF electronic file.
 4. BIM File Incorporation: Develop and incorporate Shop Drawing files into Building Information Model established for Project.
 - a. Prepare Shop Drawings in the following format: Same digital data software program, version, and operating system as the original Drawings.
 - b. Refer to Section 01 31 00 "Project Management and Coordination" for requirements for coordination drawings.
- D. Samples: Submit Samples for review of kind, color, pattern, and texture for a check of these characteristics with other elements and for a comparison of these characteristics between submittal and actual component as delivered and installed.
1. Transmit Samples that contain multiple, related components such as accessories together in one submittal package.
 2. Identification: Attach label on unexposed side of Samples that includes the following:
 - a. Generic description of Sample.
 - b. Product name and name of manufacturer.
 - c. Sample source.
 - d. Number and title of applicable Specification Section.
 - e. Specification paragraph number and generic name of each item.
 3. For projects where electronic submittals are required, provide corresponding electronic submittal of Sample transmittal, digital image file illustrating Sample characteristics, and identification information for record.
 4. Disposition: Maintain sets of approved Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.
 - a. Samples that may be incorporated into the Work are indicated in individual Specification Sections. Such Samples must be in an undamaged condition at time of use.
 - b. Samples not incorporated into the Work, or otherwise designated as Owner's property, are the property of Contractor.
 5. Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available.
 - a. Number of Samples: Submit one full set(s) of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. Architect will return submittal with options selected.
 6. Samples for Verification: Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured and finished in manner specified, and physically identical with material or product proposed for

use, and that show full range of color and texture variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; swatches showing color, texture, and pattern; color range sets; and components used for independent testing and inspection.

- a. Number of Samples: Submit three sets of Samples. Architect will retain two Sample sets; remainder will be returned. Mark up and retain one returned Sample set as a project record sample.
 - 1) Submit a single Sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.
 - 2) If variation in color, pattern, texture, or other characteristic is inherent in material or product represented by a Sample, submit at least three sets of paired units that show approximate limits of variations.
- E. Product Schedule: As required in individual Specification Sections, prepare a written summary indicating types of products required for the Work and their intended location. Include the following information in tabular form:
 1. Type of product. Include unique identifier for each product indicated in the Contract Documents or assigned by Contractor if none is indicated.
 2. Manufacturer and product name, and model number if applicable.
 3. Number and name of room or space.
 4. Location within room or space.
 5. Submit product schedule in the following format:
 - a. PDF electronic file.
- F. Coordination Drawing Submittals: Comply with requirements specified in Section 01 31 00 "Project Management and Coordination."
- G. Contractor's Construction Schedule: Comply with requirements specified in Section 01 32 00 "Construction Progress Documentation."
- H. Application for Payment and Schedule of Values: Comply with requirements specified in Section 01 29 00 "Payment Procedures."
- I. Test and Inspection Reports and Schedule of Tests and Inspections Submittals: Comply with requirements specified in Section 01 40 00 "Quality Requirements."
- J. Closeout Submittals and Maintenance Material Submittals: Comply with requirements specified in Section 01 77 00 "Closeout Procedures."
- K. Maintenance Data: Comply with requirements specified in Section 01 77 00 "Closeout Procedures."
- L. LEED Submittals: Comply with requirements specified in Section 01 81 13 "Sustainable Design Requirements."
- M. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, contact information of architects and owners, and other information specified.

-
- N. **Welding Certificates:** Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of Welding Procedure Specification and Procedure Qualification Record on AWS forms. Include names of firms and personnel certified.
- O. **Installer Certificates:** Submit written statements on manufacturer's letterhead certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.
- P. **Manufacturer Certificates:** Submit written statements on manufacturer's letterhead certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required.
- Q. **Product Certificates:** Submit written statements on manufacturer's letterhead certifying that product complies with requirements in the Contract Documents.
- R. **Material Certificates:** Submit written statements on manufacturer's letterhead certifying that material complies with requirements in the Contract Documents.
- S. **Material Test Reports:** Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.
- T. **Product Test Reports:** Submit written reports indicating that current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.
- U. **Research Reports:** Submit written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:
1. Name of evaluation organization.
 2. Date of evaluation.
 3. Time period when report is in effect.
 4. Product and manufacturers' names.
 5. Description of product.
 6. Test procedures and results.
 7. Limitations of use.
- V. **Preconstruction Test Reports:** Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.
- W. **Compatibility Test Reports:** Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for primers and substrate preparation needed for adhesion.
- X. **Field Test Reports:** Submit written reports indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents.
- Y. **Design Data:** Prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design

criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers.

2.02 DELEGATED-DESIGN SERVICES

- A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
 - 1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.
- B. Delegated-Design Services Certification: In addition to Shop Drawings, Product Data, and other required submittals, submit digitally signed PDF electronic file and three paper copies of certificate, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.
 - 1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.
- C. BIM File Incorporation: Incorporate delegated-design drawing and data files into Building Information Model established for Project.
 - 1. Prepare delegated-design drawings in the following format: Same digital data software program, version, and operating system as the original Drawings.

PART 3 - EXECUTION

3.01 CONTRACTOR'S REVIEW

- A. Action and Informational Submittals: Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to Architect.
- B. Project Closeout and Maintenance Material Submittals: See requirements in Section 01 77 00 "Closeout Procedures."
- C. Approval Stamp: Stamp each submittal with a uniform, approval stamp. Include Project name and location, submittal number, Specification Section title and number, name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

3.02 ARCHITECT'S ACTION

- A. Action Submittals: Architect will review each submittal, make marks to indicate corrections or revisions required, and return it. Architect will stamp each submittal with an action stamp and will mark stamp appropriately to indicate action
- B. Informational Submittals: Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.

- C. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.
- D. Incomplete submittals are unacceptable, will be considered nonresponsive, and will be returned for resubmittal without review.
- E. Submittals not required by the Contract Documents may be returned by the Architect without action.

END OF SECTION 01 33 00

SECTION 01 40 00**QUALITY REQUIREMENTS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes administrative and procedural requirements for quality assurance and quality control.
- B. Testing and inspecting services are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document requirements.
 - 1. Specific quality-assurance and -control requirements for individual construction activities are specified in the Sections that specify those activities. Requirements in those Sections may also cover production of standard products.
 - 2. Specified tests, inspections, and related actions do not limit Contractor's other quality-assurance and -control procedures that facilitate compliance with the Contract Document requirements.
 - 3. Requirements for Contractor to provide quality-assurance and -control services required by Architect, Owner, Commissioning Authority, or authorities having jurisdiction are not limited by provisions of this Section.
 - 4. Specific test and inspection requirements are not specified in this Section.

1.03 DEFINITIONS

- A. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.
- B. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that actual products incorporated into the Work and completed construction comply with requirements. Services do not include contract enforcement activities performed by Architect.
- C. Mockups: Full-size physical assemblies that are constructed on-site. Mockups are constructed to verify selections made under Sample submittals; to demonstrate aesthetic effects and, where indicated, qualities of materials and execution; to review coordination, testing, or operation; to show interface between dissimilar materials; and to demonstrate compliance with specified installation tolerances. Mockups are not Samples. Unless otherwise indicated, approved mockups establish the standard by which the Work will be judged.
 - 1. Laboratory Mockups: Full-size physical assemblies constructed at testing facility to verify performance characteristics.
 - 2. Integrated Exterior Mockups: Mockups of the exterior envelope erected separately from the building but on Project site, consisting of multiple products, assemblies, and subassemblies.
 - 3. Room Mockups: Mockups of typical interior spaces complete with wall, floor, and ceiling finishes, doors, windows, millwork, casework, specialties, furnishings and

equipment, and lighting.

- D. Preconstruction Testing: Tests and inspections performed specifically for Project before products and materials are incorporated into the Work, to verify performance or compliance with specified criteria.
- E. Product Testing: Tests and inspections that are performed by an NRTL, an NVLAP, or a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with specified requirements.
- F. Source Quality-Control Testing: Tests and inspections that are performed at the source, e.g., plant, mill, factory, or shop.
- G. Field Quality-Control Testing: Tests and inspections that are performed on-site for installation of the Work and for completed Work.
- H. Testing Agency: An entity engaged to perform specific tests, inspections, or both. Testing laboratory shall mean the same as testing agency.
- I. Installer/Applicator/Erector: Contractor or another entity engaged by Contractor as an employee, Subcontractor, or Sub-subcontractor, to perform a particular construction operation, including installation, erection, application, and similar operations.
 - 1. Use of trade-specific terminology in referring to a trade or entity does not require that certain construction activities be performed by accredited or unionized individuals, or that requirements specified apply exclusively to specific trade(s).
- J. Experienced: When used with an entity or individual, "experienced" means having successfully completed a minimum of five previous projects similar in nature, size, and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

1.04 CONFLICTING REQUIREMENTS

- A. Referenced Standards: If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer conflicting requirements that are different, but apparently equal, to Architect for a decision before proceeding.
- B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to Architect for a decision before proceeding.

1.05 ACTION SUBMITTALS

- A. Shop Drawings: For laboratory mockups, provide plans, sections, and elevations, indicating materials and size of mockup construction.
 - 1. Indicate manufacturer and model number of individual components.
 - 2. Provide axonometric drawings for conditions difficult to illustrate in two dimensions.

1.06 INFORMATIONAL SUBMITTALS

- A. Contractor's Quality-Control Plan: For quality-assurance and quality-control activities and responsibilities.
- B. Qualification Data : For Contractor's quality-control personnel.
- C. Contractor's Statement of Responsibility: When required by authorities having jurisdiction, submit copy of written statement of responsibility sent to authorities having jurisdiction before starting work on the following systems:
 - 1. Seismic-force-resisting system, designated seismic system, or component listed in the designated seismic system quality-assurance plan prepared by Architect.
 - 2. Main wind-force-resisting system or a wind-resisting component listed in the wind-force-resisting system quality-assurance plan prepared by Architect.
- D. Testing Agency Qualifications: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.
- E. Schedule of Tests and Inspections: Prepare in tabular form and include the following:
 - 1. Specification Section number and title.
 - 2. Entity responsible for performing tests and inspections.
 - 3. Description of test and inspection.
 - 4. Identification of applicable standards.
 - 5. Identification of test and inspection methods.
 - 6. Number of tests and inspections required.
 - 7. Time schedule or time span for tests and inspections.
 - 8. Requirements for obtaining samples.
 - 9. Unique characteristics of each quality-control service.

1.07 CONTRACTOR'S QUALITY-CONTROL PLAN

- A. Quality-Control Plan, General: Submit quality-control plan within 10 days of Notice to Proceed, and not less than five days prior to preconstruction conference. Submit in format acceptable to Architect. Identify personnel, procedures, controls, instructions, tests, records, and forms to be used to carry out Contractor's quality-assurance and quality-control responsibilities. Coordinate with Contractor's construction schedule.
- B. Quality-Control Personnel Qualifications: Engage qualified full-time personnel trained and experienced in managing and executing quality-assurance and quality-control procedures similar in nature and extent to those required for Project.
 - 1. Project quality-control manager may also serve as Project superintendent
- C. Submittal Procedure: Describe procedures for ensuring compliance with requirements through review and management of submittal process. Indicate qualifications of personnel responsible for submittal review.
- D. Testing and Inspection: In quality-control plan, include a comprehensive schedule of Work requiring testing or inspection, including the following:
 - 1. Contractor-performed tests and inspections including subcontractor-performed tests and inspections. Include required tests and inspections and Contractor-elected tests and inspections.
 - 2. Special inspections required by authorities having jurisdiction and indicated on the "Statement of Special Inspections."

3. Owner-performed tests and inspections indicated in the Contract Documents, including tests and inspections indicated to be performed by the Commissioning Authority.
- E. Continuous Inspection of Workmanship: Describe process for continuous inspection during construction to identify and correct deficiencies in workmanship in addition to testing and inspection specified. Indicate types of corrective actions to be required to bring work into compliance with standards of workmanship established by Contract requirements and approved mockups.
- F. Monitoring and Documentation: Maintain testing and inspection reports including log of approved and rejected results. Include work Architect has indicated as nonconforming or defective. Indicate corrective actions taken to bring nonconforming work into compliance with requirements. Comply with requirements of authorities having jurisdiction.

1.08 REPORTS AND DOCUMENTS

- A. Test and Inspection Reports: Prepare and submit certified written reports specified in other Sections. Include the following:
 1. Date of issue.
 2. Project title and number.
 3. Name, address, and telephone number of testing agency.
 4. Dates and locations of samples and tests or inspections.
 5. Names of individuals making tests and inspections.
 6. Description of the Work and test and inspection method.
 7. Identification of product and Specification Section.
 8. Complete test or inspection data.
 9. Test and inspection results and an interpretation of test results.
 10. Record of temperature and weather conditions at time of sample taking and testing and inspecting.
 11. Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.
 12. Name and signature of laboratory inspector.
 13. Recommendations on retesting and reinspecting.
- B. Manufacturer's Technical Representative's Field Reports: Prepare written information documenting manufacturer's technical representative's tests and inspections specified in other Sections. Include the following:
 1. Name, address, and telephone number of technical representative making report.
 2. Statement on condition of substrates and their acceptability for installation of product.
 3. Statement that products at Project site comply with requirements.
 4. Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
 5. Results of operational and other tests and a statement of whether observed performance complies with requirements.
 6. Statement whether conditions, products, and installation will affect warranty.
 7. Other required items indicated in individual Specification Sections.
- C. Factory-Authorized Service Representative's Reports: Prepare written information documenting manufacturer's factory-authorized service representative's tests and inspections specified in other Sections. Include the following:
 1. Name, address, and telephone number of factory-authorized service representative making report.

2. Statement that equipment complies with requirements.
 3. Results of operational and other tests and a statement of whether observed performance complies with requirements.
 4. Statement whether conditions, products, and installation will affect warranty.
 5. Other required items indicated in individual Specification Sections.
- D. Permits, Licenses, and Certificates: For Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents, established for compliance with standards and regulations bearing on performance of the Work.

1.09 QUALITY ASSURANCE

- A. General: Qualifications paragraphs in this article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.
- B. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- C. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- D. Installer Qualifications: A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.
- E. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that are similar in material, design, and extent to those indicated for this Project.
- F. Specialists: Certain Specification Sections require that specific construction activities shall be performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged for the activities indicated.
1. Requirements of authorities having jurisdiction shall supersede requirements for specialists.
- G. Testing Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspecting indicated, as documented according to ASTM E 329; and with additional qualifications specified in individual Sections; and, where required by authorities having jurisdiction, that is acceptable to authorities.
1. NRTL: A nationally recognized testing laboratory according to 29 CFR 1910.7.
 2. NVLAP: A testing agency accredited according to NIST's National Voluntary Laboratory Accreditation Program.
- H. Manufacturer's Technical Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to observe and inspect installation of manufacturer's products that are similar in material, design, and extent

to those indicated for this Project.

- I. **Factory-Authorized Service Representative Qualifications:** An authorized representative of manufacturer who is trained and approved by manufacturer to inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.
- J. **Preconstruction Testing:** Where testing agency is indicated to perform preconstruction testing for compliance with specified requirements for performance and test methods, comply with the following:
 1. **Contractor responsibilities include the following:**
 - a. Provide test specimens representative of proposed products and construction.
 - b. Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.
 - c. Provide sizes and configurations of test assemblies, mockups, and laboratory mockups to adequately demonstrate capability of products to comply with requirements.
 - d. Build site-assembled test assemblies and mockups using installers who will perform same tasks for Project.
 - e. Build laboratory mockups at testing facility using personnel, products, and methods of construction indicated for the completed Work.
 - f. When testing is complete, remove test specimens, assemblies, do not reuse products on Project.
 2. **Testing Agency Responsibilities:** Submit a certified written report of each test, inspection, and similar quality-assurance service to Architect and Commissioning Authority, with copy to Contractor. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.
- K. **Mockups:** Before installing portions of the Work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:
 1. Build mockups in location and of size indicated or, if not indicated, as directed by Architect.
 2. Notify Architect seven days in advance of dates and times when mockups will be constructed.
 3. Employ supervisory personnel who will oversee mockup construction. Employ workers that will be employed during the construction at Project.
 4. Demonstrate the proposed range of aesthetic effects and workmanship.
 5. Obtain Architect's approval of mockups before starting work, fabrication, or construction.
 - a. Allow seven days for initial review and each re-review of each mockup.
 6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 7. Demolish and remove mockups when directed unless otherwise indicated.

1.10 QUALITY CONTROL

- A. **Owner Responsibilities:** Where quality-control services are indicated as Owner's responsibility, Owner will engage a qualified testing agency to perform these services.

1. Owner will furnish Contractor with names, addresses, and telephone numbers of testing agencies engaged and a description of types of testing and inspecting they are engaged to perform.
 2. Payment for these services will be made from testing and inspecting allowances, as authorized by Change Orders.
 3. Costs for retesting and reinspecting construction that replaces or is necessitated by work that failed to comply with the Contract Documents will be charged to Contractor.
- B. Contractor Responsibilities: Tests and inspections not explicitly assigned to Owner are Contractor's responsibility. Perform additional quality-control activities required to verify that the Work complies with requirements, whether specified or not.
1. Unless otherwise indicated, provide quality-control services specified and those required by authorities having jurisdiction. Perform quality-control services required of Contractor by authorities having jurisdiction, whether specified or not.
 2. Where services are indicated as Contractor's responsibility, engage a qualified testing agency to perform these quality-control services.
 - a. Contractor shall not employ same entity engaged by Owner, unless agreed to in writing by Owner.
 3. Notify testing agencies at least 24 hours in advance of time when Work that requires testing or inspecting will be performed.
 4. Where quality-control services are indicated as Contractor's responsibility, submit a certified written report, in duplicate, of each quality-control service.
 5. Testing and inspecting requested by Contractor and not required by the Contract Documents are Contractor's responsibility.
 6. Submit additional copies of each written report directly to authorities having jurisdiction, when they so direct.
- C. Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Section 01 33 00 "Submittal Procedures."
- D. Manufacturer's Technical Services: Where indicated, engage a manufacturer's technical representative to observe and inspect the Work. Manufacturer's technical representative's services include participation in preinstallation conferences, examination of substrates and conditions, verification of materials, observation of Installer activities, inspection of completed portions of the Work, and submittal of written reports.
- E. Retesting/Reinspecting: Regardless of whether original tests or inspections were Contractor's responsibility, provide quality-control services, including retesting and reinspecting, for construction that replaced Work that failed to comply with the Contract Documents.
- F. Testing Agency Responsibilities: Cooperate with Architect, Commissioning Authority and Contractor in performance of duties. Provide qualified personnel to perform required tests and inspections.
1. Notify Architect, Commissioning Authority and Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.
 2. Determine the location from which test samples will be taken and in which in-situ tests are conducted.
 3. Conduct and interpret tests and inspections and state in each report whether

- tested and inspected work complies with or deviates from requirements.
4. Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Contractor.
 5. Do not release, revoke, alter, or increase the Contract Document requirements or approve or accept any portion of the Work.
 6. Do not perform any duties of Contractor.
- G. Associated Services: Cooperate with agencies performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:
1. Access to the Work.
 2. Incidental labor and facilities necessary to facilitate tests and inspections.
 3. Adequate quantities of representative samples of materials that require testing and inspecting. Assist agency in obtaining samples.
 4. Facilities for storage and field curing of test samples.
 5. Delivery of samples to testing agencies.
 6. Preliminary design mix proposed for use for material mixes that require control by testing agency.
 7. Security and protection for samples and for testing and inspecting equipment at Project site.
- H. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and -control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.
1. Schedule times for tests, inspections, obtaining samples, and similar activities.
- I. Schedule of Tests and Inspections: Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents as a component of Contractor's quality-control plan. Coordinate and submit concurrently with Contractor's construction schedule. Update as the Work progresses.
1. Distribution: Distribute schedule to Owner, Architect, Commissioning Authority, testing agencies, and each party involved in performance of portions of the Work where tests and inspections are required.

1.11 SPECIAL TESTS AND INSPECTIONS

- A. Special Tests and Inspections: Owner will engage a qualified special inspector to conduct special tests and inspections required by authorities having jurisdiction as the responsibility of Owner, and as follows:
- B. Special Tests and Inspections: Conducted by a qualified special inspector as required by authorities having jurisdiction, as indicated in individual Specification Sections, and as follows:
1. Verifying that manufacturer maintains detailed fabrication and quality-control procedures and reviews the completeness and adequacy of those procedures to perform the Work.
 2. Notifying Architect, Commissioning Authority, and Contractor promptly of irregularities and deficiencies observed in the Work during performance of its services.
 3. Submitting a certified written report of each test, inspection, and similar quality-control service to Architect and Commissioning Authority with copy to Contractor and to authorities having jurisdiction.
 4. Submitting a final report of special tests and inspections at Substantial

- Completion, which includes a list of unresolved deficiencies.
5. Interpreting tests and inspections and stating in each report whether tested and inspected work complies with or deviates from the Contract Documents.
 6. Retesting and reinspecting corrected work.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.01 TEST AND INSPECTION LOG

- A. Test and Inspection Log: Prepare a record of tests and inspections. Include the following:
 1. Date test or inspection was conducted.
 2. Description of the Work tested or inspected.
 3. Date test or inspection results were transmitted to Architect.
 4. Identification of testing agency or special inspector conducting test or inspection.
- B. Maintain log at Project site. Post changes and revisions as they occur. Provide access to test and inspection log for Architect's and Commissioning Authority's reference during normal working hours.

3.02 REPAIR AND PROTECTION

- A. General: On completion of testing, inspecting, sample taking, and similar services, repair damaged construction and restore substrates and finishes.
 1. Provide materials and comply with installation requirements specified in other Specification Sections or matching existing substrates and finishes. Restore patched areas and extend restoration into adjoining areas with durable seams that are as invisible as possible. Comply with the Contract Document requirements for cutting and patching in Section 01 73 00 "Execution."
- B. Protect construction exposed by or for quality-control service activities.
- C. Repair and protection are Contractor's responsibility, regardless of the assignment of responsibility for quality-control services.

END OF SECTION 01 40 00

SECTION 01 42 00**REFERENCES****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 DEFINITIONS

- A. General: Basic Contract definitions are included in the Conditions of the Contract.
- B. "Approved": When used to convey Architect's action on Contractor's submittals, applications, and requests, "approved" is limited to Architect's duties and responsibilities as stated in the Conditions of the Contract.
- C. "Directed": A command or instruction by Architect. Other terms including "requested," "authorized," "selected," "required," and "permitted" have the same meaning as "directed."
- D. "Indicated": Requirements expressed by graphic representations or in written form on Drawings, in Specifications, and in other Contract Documents. Other terms including "shown," "noted," "scheduled," and "specified" have the same meaning as "indicated."
- E. "Regulations": Laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, and rules, conventions, and agreements within the construction industry that control performance of the Work.
- F. "Furnish": Supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, and similar operations.
- G. "Install": Unload, temporarily store, unpack, assemble, erect, place, anchor, apply, work to dimension, finish, cure, protect, clean, and similar operations at Project site.
- H. "Provide": Furnish and install, complete and ready for the intended use.
- I. "Project Site": Space available for performing construction activities. The extent of Project site is shown on Drawings and may or may not be identical with the description of the land on which Project is to be built.

1.03 INDUSTRY STANDARDS

- A. Applicability of Standards: Unless the Contract Documents include more stringent requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.
- B. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.
- C. Copies of Standards: Each entity engaged in construction on Project should be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.

1. Where copies of standards are needed to perform a required construction activity, obtain copies directly from publication source.

1.04 ABBREVIATIONS AND ACRONYMS

- A. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities indicated in Gale's "Encyclopedia of Associations: National Organizations of the U.S." or in Columbia Books' "National Trade & Professional Associations of the United States."
- B. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities in the following list. This information is subject to change and is believed to be accurate as of the date of the Contract Documents.
1. AABC - Associated Air Balance Council; www.aabc.com.
 2. AAMA - American Architectural Manufacturers Association; www.aamanet.org.
 3. AAPFCO - Association of American Plant Food Control Officials; www.aapfco.org.
 4. AASHTO - American Association of State Highway and Transportation Officials; www.transportation.org.
 5. AATCC - American Association of Textile Chemists and Colorists; www.aatcc.org.
 6. ABMA - American Bearing Manufacturers Association; www.americanbearings.org.
 7. ACI - American Concrete Institute; (Formerly: ACI International); www.concrete.org.
 8. ACPA - American Concrete Pipe Association; www.concrete-pipe.org.
 9. AEIC - Association of Edison Illuminating Companies, Inc. (The); www.aeic.org.
 10. AF&PA - American Forest & Paper Association; www.afandpa.org.
 11. AGA - American Gas Association; www.aga.org.
 12. AHAM - Association of Home Appliance Manufacturers; www.aham.org.
 13. AHRI - Air-Conditioning, Heating, and Refrigeration Institute (The); www.ahrinet.org.
 14. AI - Asphalt Institute; www.asphaltinstitute.org.
 15. AIA - American Institute of Architects (The); www.aia.org.
 16. AISC - American Institute of Steel Construction; www.aisc.org.
 17. AISI - American Iron and Steel Institute; www.steel.org.
 18. AITC - American Institute of Timber Construction; www.aitc-glulam.org.
 19. AMCA - Air Movement and Control Association International, Inc.; www.amca.org.
 20. ANSI - American National Standards Institute; www.ansi.org.
 21. AOSA - Association of Official Seed Analysts, Inc.; www.aosaseed.com.
 22. APA - APA - The Engineered Wood Association; www.apawood.org.
 23. APA - Architectural Precast Association; www.archprecast.org.
 24. API - American Petroleum Institute; www.api.org.
 25. ARI - Air-Conditioning & Refrigeration Institute; (See AHRI).
 26. ARI - American Refrigeration Institute; (See AHRI).
 27. ARMA - Asphalt Roofing Manufacturers Association; www.asphaltroofing.org.
 28. ASCE - American Society of Civil Engineers; www.asce.org.
 29. ASCE/SEI - American Society of Civil Engineers/Structural Engineering Institute; (See ASCE).
 30. ASHRAE - American Society of Heating, Refrigerating and Air-Conditioning Engineers; www.ashrae.org.
 31. ASME - ASME International; (American Society of Mechanical Engineers); www.asme.org.
 32. ASSE - American Society of Safety Engineers (The); www.asse.org.
 33. ASSE - American Society of Sanitary Engineering; www.asse-plumbing.org.
 34. ASTM - ASTM International; (American Society for Testing and Materials)

- International); www.astm.org.
35. ATIS - Alliance for Telecommunications Industry Solutions; www.atis.org.
 36. AWEA - American Wind Energy Association; www.awea.org.
 37. AWI - Architectural Woodwork Institute; www.awinet.org.
 38. AWMAC - Architectural Woodwork Manufacturers Association of Canada; www.awmac.com.
 39. AWPA - American Wood Protection Association; (Formerly: American Wood-Preservers' Association); www.awpa.com.
 40. AWS - American Welding Society; www.aws.org.
 41. AWWA - American Water Works Association; www.awwa.org.
 42. BHMA - Builders Hardware Manufacturers Association; www.buildershardware.com.
 43. BIA - Brick Industry Association (The); www.gobrick.com.
 44. BICSI - BICSI, Inc.; www.bicsi.org.
 45. BIFMA - BIFMA International; (Business and Institutional Furniture Manufacturer's Association); www.bifma.com.
 46. BISSC - Baking Industry Sanitation Standards Committee; www.bissc.org.
 47. BOCA - BOCA; (Building Officials and Code Administrators International Inc.); (See ICC).
 48. BWF - Badminton World Federation; (Formerly: International Badminton Federation); www.bwfbadminton.org.
 49. CDA - Copper Development Association; www.copper.org.
 50. CEA - Canadian Electricity Association; www.electricity.ca.
 51. CEA - Consumer Electronics Association; www.ce.org.
 52. CFFA - Chemical Fabrics & Film Association, Inc.; www.chemicalfabricsandfilm.com.
 53. CFSEI - Cold-Formed Steel Engineers Institute; www.cfsei.org.
 54. CGA - Compressed Gas Association; www.cganet.com.
 55. CIMA - Cellulose Insulation Manufacturers Association; www.cellulose.org.
 56. CISCA - Ceilings & Interior Systems Construction Association; www.cisca.org.
 57. CISPI - Cast Iron Soil Pipe Institute; www.cispi.org.
 58. CLFMI - Chain Link Fence Manufacturers Institute; www.chainlinkinfo.org.
 59. CPA - Composite Panel Association; www.pbmdf.com.
 60. CRI - Carpet and Rug Institute (The); www.carpet-rug.org.
 61. CRRC - Cool Roof Rating Council; www.coolroofs.org.
 62. CRSI - Concrete Reinforcing Steel Institute; www.crsi.org.
 63. CSA - Canadian Standards Association; www.csa.ca.
 64. CSA - CSA International; (Formerly: IAS - International Approval Services); www.csa-international.org.
 65. CSI - Construction Specifications Institute (The); www.csinet.org.

C. Code Agencies: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities in the following list. This information is believed to be accurate as of the date of the Contract Documents.

1. IAPMO - International Association of Plumbing and Mechanical Officials; www.iapmo.org.
2. ICC - International Code Council; www.iccsafe.org.
3. ICC-ES - ICC Evaluation Service, LLC; www.icc-es.org.

D. Federal Government Agencies: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities in the following list. Information is subject to change and is up-to-date as of the date of the Contract Documents.

1. COE - Army Corps of Engineers; www.usace.army.mil.
2. CPSC - Consumer Product Safety Commission; www.cpsc.gov.
3. DOC - Department of Commerce; National Institute of Standards and Technology; www.nist.gov.
4. DOD - Department of Defense; <http://dodssp.daps.dla.mil>.
5. DOE - Department of Energy; www.energy.gov.
6. EPA - Environmental Protection Agency; www.epa.gov.
7. FAA - Federal Aviation Administration; www.faa.gov.
8. FG - Federal Government Publications; www.gpo.gov.
9. GSA - General Services Administration; www.gsa.gov.
10. HUD - Department of Housing and Urban Development; www.hud.gov.
11. LBL - Lawrence Berkeley National Laboratory; Environmental Energy

- Technologies Division; <http://eetd.lbl.gov>.
12. OSHA - Occupational Safety & Health Administration; www.osha.gov.
 13. SD - Department of State; www.state.gov.
 14. TRB - Transportation Research Board; National Cooperative Highway Research Program; www.trb.org.
 15. USDA - Department of Agriculture; Agriculture Research Service; U.S. Salinity Laboratory; www.ars.usda.gov.
 16. USDA - Department of Agriculture; Rural Utilities Service; www.usda.gov.
 17. USDJ - Department of Justice; Office of Justice Programs; National Institute of Justice; www.ojp.usdoj.gov.
 18. USP - U.S. Pharmacopeia; www.usp.org.
 19. USPS - United States Postal Service; www.usps.com.

E. Standards and Regulations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the standards and regulations in the following list. This information is subject to change and is believed to be accurate as of the date of the Contract Documents.

1. CFR - Code of Federal Regulations; Available from Government Printing Office; www.gpo.gov/fdsys.
2. DOD - Department of Defense; Military Specifications and Standards; Available from Department of Defense Single Stock Point; <http://dodssp.daps.dla.mil>.
3. DSCC - Defense Supply Center Columbus; (See FS).
4. FED-STD - Federal Standard; (See FS).
5. FS - Federal Specification; Available from Department of Defense Single Stock Point; <http://dodssp.daps.dla.mil>.
 - a. Available from Defense Standardization Program; www.dsp.dla.mil.
 - b. Available from General Services Administration; www.gsa.gov.
 - c. Available from National Institute of Building Sciences/Whole Building Design Guide; www.wbdg.org/ccb.
6. MILSPEC - Military Specification and Standards; (See DOD).
7. USAB - United States Access Board; www.access-board.gov.
8. USATBCB - U.S. Architectural & Transportation Barriers Compliance Board; (See USAB).

F. State Government Agencies: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities in the following list. This information is subject to change and is believed to be accurate as of the date of the Contract Documents.

1. CBHF - State of California; Department of Consumer Affairs; Bureau of Electronic Appliance and Repair, Home Furnishings and Thermal Insulation; www.bearhfti.ca.gov.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 42 00

SECTION 01 43 00
SYSTEMS QUALITY ASSURANCE

PART 1 - GENERAL

1.1 SUMMARY

- A. Requirements for Contractor to establish, implement and maintain an effective Quality Program to manage, control, document and assure work complies with requirements specified in the Contract Documents.

1.2 REFERENCE STANDARDS

- A. This Section incorporates by reference the latest revisions of the following documents:
1. Federal Transit Administration (FTA)
 - a. FTA Quality Guidelines.
 2. International Organization of Standards
 - a. Quality Management Systems – Fundamentals and Vocabulary - ISO 9000 -2008
 - b. Quality Management Systems – Requirements - ISO 9001 -2008

1.3 SUBMITTALS

- A. Procedures: Section 01 33 00, Submittal Procedures.
- B. Qualifications:
1. Quality Assurance Manager, within 30 days after Notice to Proceed (NTP).
 2. Independent Testing Laboratories, minimum of 30 days before scheduled use.
 3. Quality Control Inspectors.
- C. Quality Program Plan, within 60 Days after NTP.
- D. Testing Laboratory Inspection and Test Reports, within 30 days after completion of the inspection or test.
- E. List of Subcontractors and subconsultants within 45 Days after NTP. Provide updates at least 30 days prior to each new subcontractor or subconsultant beginning work on Contract.
- F. Document Control Procedure, within 15 Days after effective date of Notice to Proceed.

1.4 CONTRACTOR QUALITY ASSURANCE REQUIREMENTS

- A. Quality Assurance (QA) Manager: Assign a QA Manager responsible for managing and acting on all quality matters and who has authority to act on all quality matters as a representative of Contractor.
1. Quality Assurance Manager cannot have responsibilities for this Contract that conflict or appear to conflict with his or her responsibility for quality matters.
 2. Qualification of Contractor QA Manager:
 - a. Minimum 5 years overall quality experience.
 - b. Minimum 2 years prior experience as a QA Manager, on transit project(s) of comparable complexity to this Contract.
 - c. Minimum 2 years as a Quality Control (QC) Manager or Supervisor, Quality Engineer, Quality Auditor or QC Inspector.
 3. QA Manager must be approved by the Engineer. At the sole discretion of the Engineer, Contractor may be required to replace QA Manager.
 4. QA Manager's responsibilities include development and implementation of Quality Program Plan.
- B. Quality Program Plan (QPP):
1. Develop a plan that addresses the 15 quality elements identified in FTA Quality Guidelines.
 2. Provide descriptions of, and references to Quality procedures and work instructions, including specified requirements unique to this Contract, that relate to quality system elements defined in Quality Management Systems – Fundamentals and Vocabulary ISO 9000 and Quality Management Systems – Requirements ISO 9001.
 3. Include the following elements in Contractor QPP:
 - a. QA/QC Organization and staff, including job description and an organizational chart showing relationship between Contractor's General Manager, Project Manager, Quality Manager, Subcontractors, and consultants.
 - b. Documented Quality System.
 - c. Design Control.
 - d. Document Control and Submittal Management.
 - e. Subcontractor, Consultant and Supplier Control.
 - f. Identification, Traceability and Receiving, Handling, Storage and Control of Products, Materials and Equipment.
 - g. Process Control and control of special fabrication processes, i.e. welding, plating, and soldering.
 - h. Inspection and Testing.
 - i. Control of measuring and test equipment.

- j. Inspection and Test Reporting.
 - k. Identification, Control and Correction of Non-conforming Conditions.
 - l. Corrective Actions.
 - m. Quality Records.
 - n. Training.
 - o. Configuration control for software.
 - p. Change control for factory drawings, fabrications, assembly, wiring, testing, and as-built drawings.
- C. Independent Testing Laboratories:
- 1. Employ services of Independent Testing Laboratories if required by Contract Documents, to confirm acceptable quality of materials, parts, and equipment not currently certified by test laboratories.
 - 2. Employ only Independent Testing Laboratories that are currently certified by a nationally or state recognized regulatory agency or an industrial sponsored organization.
 - 3. Obtain approval to use Independent Testing Laboratories from the Engineer before commencing any Work for which testing is required by Contract Documents. Independent Testing Laboratories must have special inspection capability and certification.
- D. Quality Control Inspectors:
- 1. Employ qualified or certified quality control inspectors and test technicians with a minimum of 2 years quality control experience or testing experience for Work they are responsible for inspecting and testing.
 - 2. Upon request from the Engineer, provide qualifications and certifications of the quality control inspectors.
 - 3. Quality control inspectors must report directly to the Contractor's QA Manager and cannot have responsibilities for this Contract that conflict or appear to conflict with his primary responsibility for quality matters.
 - 4. Mobilize the number of experienced quality control inspectors necessary to perform the Quality Control requirements commensurate with the ratio of work crew size to inspectors and the type of work requiring specific types of inspectors.

PART 2 - PRODUCTS

Not Used

PART 3 - EXECUTION

3.1 QUALITY PROGRAM PLAN

- A. Submit ISO 9001 certification or submit a Quality Program Plan, as described.
- B. Documented Quality System:

1. Describe plans, procedures, and organization necessary to design, procure, install, inspect, and test to achieve compliance with the requirements of Contract Documents.
2. Include operations, both on-site and off-site including fabrication, manufacturing and suppliers.

3.2 SYSTEMIC FAILURES

- A. Monitor component failures during the commissioning, testing, and warranty phase.
- B. Systemic Failure: Failure of 10 percent or more of the same components used for the same function during this time period.
- C. Within 30 days of receiving notification of systemic failure, begin a program to repair or replace all components of the type involved in the systemic failure.
- D. Develop the repair or replacement for the components to remedy the nature and probable cause of the component failure.
- E. The proposed repair or replacement shall be submitted to the Engineer for approval.
- F. Components shall be replaced at no cost to the Owner.

PART 4 - MEASUREMENT AND PAYMENT

4.1 MEASUREMENT

END OF SECTION

SECTION 01 50 00**TEMPORARY FACILITIES AND CONTROLS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes requirements for temporary utilities, support facilities, and security and protection facilities.
- B. Related Requirements:
 - 1. Section 01 10 00 "Summary" for work restrictions and limitations on utility interruptions.
 - 2. Section 01 55 26 "Maintenance of Traffic" for control of traffic on and adjacent to the site during construction.

1.03 USE CHARGES

- A. General: Installation and removal of and use charges for temporary facilities shall be included in the Contract Sum unless otherwise indicated. Allow other entities to use temporary services and facilities without cost, including, but not limited to Architect, testing agencies, and authorities having jurisdiction.
- B. Sewer Service: Pay sewer-service use charges for sewer usage by all entities for construction operations.
- C. Water Service: Pay water-service use charges for water used by all entities for construction operations.
- D. Electric Power Service: Pay electric-power-service use charges for electricity used by all entities for construction operations.

1.04 INFORMATIONAL SUBMITTALS

- A. Site Plan: Show temporary facilities, utility hookups, staging areas, and parking areas for construction personnel.
- B. Erosion- and Sedimentation-Control Plan: Show compliance with requirements of EPA Construction General Permit or authorities having jurisdiction, whichever is more stringent.
- C. Fire-Safety Program: Show compliance with requirements of NFPA 241 and authorities having jurisdiction. Indicate Contractor personnel responsible for management of fire-prevention program.
- D. Moisture-Protection Plan: Describe procedures and controls for protecting materials and construction from water absorption and damage.
 - 1. Describe delivery, handling, and storage provisions for materials subject to water absorption or water damage.

2. Indicate procedures for discarding water-damaged materials, protocols for mitigating water intrusion into completed Work, and replacing water-damaged Work.
 3. Indicate sequencing of work that requires water, such as sprayed fire-resistive materials, plastering, and terrazzo grinding, and describe plans for dealing with water from these operations. Show procedures for verifying that wet construction has dried sufficiently to permit installation of finish materials.
- E. Dust- and HVAC-Control Plan: Submit coordination drawing and narrative that indicates the dust- and HVAC-control measures proposed for use, proposed locations, and proposed time frame for their operation. Identify further options if proposed measures are later determined to be inadequate. Include the following:
1. Locations of dust-control partitions at each phase of work.
 2. HVAC system isolation schematic drawing.
 3. Location of proposed air-filtration system discharge.
 4. Waste handling procedures.
 5. Other dust-control measures.

1.05 QUALITY ASSURANCE

- A. Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.
- B. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.
- C. Accessible Temporary Egress: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and ICC/ANSI A117.1.

1.06 PROJECT CONDITIONS

- A. Temporary Use of Permanent Facilities: Engage Installer of each permanent service to assume responsibility for operation, maintenance, and protection of each permanent service during its use as a construction facility before Owner's acceptance, regardless of previously assigned responsibilities.

PART 2 - PRODUCTS

2.01 MATERIALS

- A. Chain-Link Fencing: Minimum 2-inch, 0.148-inch- thick, galvanized-steel, chain-link fabric fencing; minimum 6 feet high with galvanized-steel pipe posts; minimum 2-3/8-inch- OD line posts and 2-7/8-inch- OD corner and pull posts, with 1-5/8-inch- OD top rails.
- B. Portable Chain-Link Fencing: Minimum 2-inch , 0.148-inch- thick, galvanized-steel, chain-link fabric fencing; minimum 6 feet high with galvanized-steel pipe posts; minimum 2-3/8-inch- OD line posts and 2-7/8-inch- OD corner and pull posts, with 1-5/8-inch- OD top and bottom rails. Provide concrete bases for supporting posts.
- C. Polyethylene Sheet: Reinforced, fire-resistive sheet, 10-mil minimum thickness, with flame-spread rating of 15 or less per ASTM E 84 and passing NFPA 701 Test Method 2.
- D. Dust-Control Adhesive-Surface Walk-off Mats: Provide mats minimum 36 by 60

inches .

- E. Insulation: Unfaced mineral-fiber blanket, manufactured from glass, slag wool, or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.

2.02 TEMPORARY FACILITIES

- A. Field Offices, General: Prefabricated or mobile units with serviceable finishes, temperature controls, and foundations adequate for normal loading.
- B. Common-Use Field Office: Of sufficient size to accommodate needs of Owner, Architect, and construction personnel office activities and to accommodate Project meetings specified in other Division 01 Sections. Keep office clean and orderly. Furnish and equip offices as follows:
 - 1. Furniture required for Project-site documents including file cabinets, plan tables, plan racks, and bookcases.
 - 2. Conference room of sufficient size to accommodate meetings of 10 individuals. Provide electrical power service and 120-V ac duplex receptacles, with no fewer than one receptacle on each wall. Furnish room with conference table, chairs, and 4-foot- square tack and marker boards.
 - 3. Drinking water and private toilet.
 - 4. Coffee machine and supplies.
 - 5. Heating and cooling equipment necessary to maintain a uniform indoor temperature of 68 to 72 deg F .
 - 6. Lighting fixtures capable of maintaining average illumination of 20 fc at desk height.
- C. Storage and Fabrication Sheds: Provide sheds sized, furnished, and equipped to accommodate materials and equipment for construction operations.
 - 1. Store combustible materials apart from building.

2.03 EQUIPMENT

- A. Fire Extinguishers: Portable, UL rated; with class and extinguishing agent as required by locations and classes of fire exposures.
- B. HVAC Equipment: Unless Owner authorizes use of permanent HVAC system, provide vented, self-contained, liquid-propane-gas or fuel-oil heaters with individual space thermostatic control.
 - 1. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
 - 2. Heating Units: Listed and labeled for type of fuel being consumed, by a qualified testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.
 - 3. Permanent HVAC System: If Owner authorizes use of permanent HVAC system for temporary use during construction, provide filter with MERV of 8 at each return-air grille in system and remove at end of construction and clean HVAC system as required in Section 01 77 00 "Closeout Procedures".
- C. Air-Filtration Units: Primary and secondary HEPA-filter-equipped portable units with four-stage filtration. Provide single switch for emergency shutoff. Configure to run continuously.

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL

- A. Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required by progress of the Work.
 - 1. Locate facilities to limit site disturbance as specified in Section 01 10 00 "Summary."
- B. Provide each facility ready for use when needed to avoid delay. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

3.02 TEMPORARY UTILITY INSTALLATION

- A. General: Install temporary service or connect to existing service.
 - 1. Arrange with utility company, Owner, and existing users for time when service can be interrupted, if necessary, to make connections for temporary services.
- B. Sewers and Drainage: Provide temporary utilities to remove effluent lawfully.
 - 1. Connect temporary sewers to municipal system as directed by authorities having jurisdiction.
- C. Water Service: Install water service and distribution piping in sizes and pressures adequate for construction.
- D. Water Service: Connect to Owner's existing water service facilities. Clean and maintain water service facilities in a condition acceptable to Owner. At Substantial Completion, restore these facilities to condition existing before initial use.
- E. Sanitary Facilities: Provide temporary toilets, wash facilities, and drinking water for use of construction personnel. Comply with requirements of authorities having jurisdiction for type, number, location, operation, and maintenance of fixtures and facilities.
 - 1. Toilets: Use of Owner's existing toilet facilities will be permitted, as long as facilities are cleaned and maintained in a condition acceptable to Owner. At Substantial Completion, restore these facilities to condition existing before initial use.
- F. Heating and Cooling: Provide temporary heating and cooling required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of low temperatures or high humidity. Select equipment that will not have a harmful effect on completed installations or elements being installed.
- G. Isolation of Work Areas in Occupied Facilities: Prevent dust, fumes, and odors from entering occupied areas.
 - 1. Prior to commencing work, isolate the HVAC system in area where work is to be performed according to coordination drawings.
 - a. Disconnect supply and return ductwork in work area from HVAC systems servicing occupied areas.

- L. Electronic Communication Service: Provide a desktop computer in the primary field office adequate for use by Architect and Owner to access Project electronic documents and maintain electronic communications. Equip computer with not less than the following:
1. Processor: Intel Pentium D or Intel CoreDuo, 3.0 GHz processing speed.
 2. Memory: 4 gigabyte.
 3. Disk Storage: 300 gigabyte hard-disk drive and combination DVD-RW/CD-RW drive.
 4. Display: 22-inch LCD monitor with 256-Mb dedicated video RAM.
 5. Full-size keyboard and mouse.
 6. Network Connectivity: 02/110BaseT Ethernet.
 7. Operating System: Microsoft Windows 8.
 8. Productivity Software:
 - a. Microsoft Office Professional, 2007 or higher, including Word, Excel, and Outlook.
 - b. Adobe Reader 9.0 or higher.
 - c. WinZip 7.0 or higher.
 9. Printer: "All-in-one" unit equipped with printer server, combining color printing, photocopying, scanning, and faxing, or separate units for each of these three functions.
 10. Internet Service: Broadband modem, router and ISP, equipped with hardware firewall, providing minimum 384 Kbps upload and 1 Mbps download speeds at each computer.
 11. Internet Security: Integrated software, providing software firewall, virus, spyware, phishing, and spam protection in a combined application.
 12. Backup: External hard drive, minimum 500 gigabyte, with automated backup software providing daily backups.

3.03 SUPPORT FACILITIES INSTALLATION

- A. General: Comply with the following:
1. Provide construction for temporary offices, shops, and sheds located within construction area or within 30 feet of building lines that is noncombustible according to ASTM E 136. Comply with NFPA 241.
 2. Maintain support facilities until Architect schedules Substantial Completion inspection. Remove before Substantial Completion. Personnel remaining after Substantial Completion will be permitted to use permanent facilities, under conditions acceptable to Owner.
- B. Temporary Roads and Paved Areas: Construct and maintain temporary roads and paved areas adequate for construction operations. Locate temporary roads and paved areas within construction limits indicated on Drawings.
1. Provide dust-control treatment that is nonpolluting and nontracking. Reapply treatment as required to minimize dust.
- C. Temporary Use of Permanent Roads and Paved Areas: Locate temporary roads and paved areas in same location as permanent roads and paved areas. Construct and maintain temporary roads and paved areas adequate for construction operations. Extend temporary roads and paved areas, within construction limits indicated, as necessary for construction operations.
1. Coordinate elevations of temporary roads and paved areas with permanent roads

- and paved areas.
 - 2. Prepare subgrade and install subbase and base for temporary roads and paved areas according to Section 31 20 00 "Earth Moving."
 - 3. Recondition base after temporary use, including removing contaminated material, regrading, proofrolling, compacting, and testing.
 - 4. Delay installation of final course of permanent hot-mix asphalt pavement until immediately before Substantial Completion. Repair hot-mix asphalt base-course pavement before installation of final course according to Section 32 12 16 "Asphalt Paving."
- D. Traffic Controls: Comply with requirements of authorities having jurisdiction.
- 1. Protect existing site improvements to remain including curbs, pavement, and utilities.
 - 2. Maintain access for fire-fighting equipment and access to fire hydrants.
- E. Parking: Provide temporary parking areas for construction personnel.
- F. Dewatering Facilities and Drains: Comply with requirements of authorities having jurisdiction. Maintain Project site, excavations, and construction free of water.
- 1. Dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining properties or endanger permanent Work or temporary facilities.
 - 2. Remove snow and ice as required to minimize accumulations.
- G. Project Signs: Provide Project signs as indicated. Unauthorized signs are not permitted.
- 1. Identification Signs: Provide Project identification signs as indicated on Drawings.
 - 2. Temporary Signs: Provide other signs as indicated and as required to inform public and individuals seeking entrance to Project.
 - a. Provide temporary, directional signs for construction personnel and visitors.
 - 3. Maintain and touchup signs so they are legible at all times.
- H. Waste Disposal Facilities: Comply with requirements specified in Section 01 74 19 "Construction Waste Management and Disposal."
- I. Lifts and Hoists: Provide facilities necessary for hoisting materials and personnel.
- 1. Truck cranes and similar devices used for hoisting materials are considered "tools and equipment" and not temporary facilities.
- J. Temporary Elevator Use: Use of elevators is not permitted.
- K. Temporary Stairs: Until permanent stairs are available, provide temporary stairs where ladders are not adequate.
- L. Temporary Use of Permanent Stairs: Use of new stairs for construction traffic will be permitted, provided stairs are protected and finishes restored to new condition at time of Substantial Completion.

3.04 SECURITY AND PROTECTION FACILITIES INSTALLATION

- A. Protection of Existing Facilities: Protect existing vegetation, equipment, structures, utilities, and other improvements at Project site and on adjacent properties, except

those indicated to be removed or altered. Repair damage to existing facilities.

- B. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction as required to comply with environmental regulations and that minimize possible air, waterway, and subsoil contamination or pollution or other undesirable effects.
 - 1. Comply with work restrictions specified in Section 01 10 00 "Summary."
- C. Temporary Erosion and Sedimentation Control: Comply with requirements specified on Civil Drawings."
- D. Stormwater Control: Comply with requirements of authorities having jurisdiction. Provide barriers in and around excavations and subgrade construction to prevent flooding by runoff of stormwater from heavy rains.
- E. Tree and Plant Protection: Install temporary fencing located as indicated or outside the drip line of trees to protect vegetation from damage from construction operations. Protect tree root systems from damage, flooding, and erosion.
- F. Pest Control: Engage pest-control service to recommend practices to minimize attraction and harboring of rodents, roaches, and other pests and to perform extermination and control procedures at regular intervals so Project will be free of pests and their residues at Substantial Completion. Perform control operations lawfully, using environmentally safe materials.
- G. Site Enclosure Fence: Before construction operations begin, furnish and install site enclosure fence in a manner that will prevent people and animals from easily entering site except by entrance gates.
 - 1. Extent of Fence: As indicated on Drawings.
 - 2. Maintain security by limiting number of keys and restricting distribution to authorized personnel. Furnish one set of keys to Owner
- H. Security Enclosure and Lockup: Install temporary enclosure around partially completed areas of construction. Provide lockable entrances to prevent unauthorized entrance, vandalism, theft, and similar violations of security. Lock entrances at end of each work day.
- I. Barricades, Warning Signs, and Lights: Comply with requirements of authorities having jurisdiction for erecting structurally adequate barricades, including warning signs and lighting.
- J. Temporary Egress: Maintain temporary egress from existing occupied facilities as indicated and as required by authorities having jurisdiction.
- K. Covered Walkway: Erect protective, covered walkway for passage of individuals through or adjacent to Project site. Coordinate with entrance gates, other facilities, and obstructions. Comply with regulations of authorities having jurisdiction and requirements indicated on Drawings.
 - 1. Construct covered walkways using scaffold or shoring framing.
 - 2. Provide overhead decking, protective enclosure walls, handrails, barricades, warning signs, exit signs, lights, safe and well-drained walkways, and similar provisions for protection and safe passage.
 - 3. Paint and maintain appearance of walkway for duration of the Work.
- L. Temporary Enclosures: Provide temporary enclosures for protection of construction,

in progress and completed, from exposure, foul weather, other construction operations, and similar activities. Provide temporary weathertight enclosure for building exterior.

1. Where heating or cooling is needed and permanent enclosure is incomplete, insulate temporary enclosures.
- M. Temporary Partitions: Provide floor-to-ceiling dustproof partitions to limit dust and dirt migration and to separate areas occupied by Owner from fumes and noise.
1. Construct dustproof partitions with gypsum wallboard with joints taped on occupied side, and fire-retardant-treated plywood on construction operations side.
 2. Construct dustproof partitions with two layers of 6-mil polyethylene sheet on each side. Cover floor with two layers of 6-mil polyethylene sheet, extending sheets 18 inches up the sidewalls. Overlap and tape full length of joints. Cover floor with fire-retardant-treated plywood.
 - a. Construct vestibule and airlock at each entrance through temporary partition with not less than 48 inches between doors. Maintain water-dampened foot mats in vestibule.
 3. Where fire-resistance-rated temporary partitions are indicated or are required by authorities having jurisdiction, construct partitions according to the rated assemblies.
 4. Insulate partitions to control noise transmission to occupied areas.
 5. Seal joints and perimeter. Equip partitions with gasketed dustproof doors and security locks where openings are required.
 6. Protect air-handling equipment.
 7. Provide walk-off mats at each entrance through temporary partition.
- N. Temporary Fire Protection: Install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241; manage fire-prevention program.
1. Prohibit smoking in construction areas.
 2. Supervise welding operations, combustion-type temporary heating units, and similar sources of fire ignition according to requirements of authorities having jurisdiction.
 3. Develop and supervise an overall fire-prevention and -protection program for personnel at Project site. Review needs with local fire department and establish procedures to be followed. Instruct personnel in methods and procedures. Post warnings and information.
 4. Provide temporary standpipes and hoses for fire protection. Hang hoses with a warning sign stating that hoses are for fire-protection purposes only and are not to be removed. Match hose size with outlet size and equip with suitable nozzles.

3.05 MOISTURE AND MOLD CONTROL

- A. Contractor's Moisture-Protection Plan: Avoid trapping water in finished work. Document visible signs of mold that may appear during construction.
- B. Exposed Construction Phase: Before installation of weather barriers, when materials are subject to wetting and exposure and to airborne mold spores, protect as follows:
 1. Protect porous materials from water damage.
 2. Protect stored and installed material from flowing or standing water.

3. Keep porous and organic materials from coming into prolonged contact with concrete.
 4. Remove standing water from decks.
 5. Keep deck openings covered or dammed.
- C. Partially Enclosed Construction Phase: After installation of weather barriers but before full enclosure and conditioning of building, when installed materials are still subject to infiltration of moisture and ambient mold spores, protect as follows:
1. Do not load or install drywall or other porous materials or components, or items with high organic content, into partially enclosed building.
 2. Keep interior spaces reasonably clean and protected from water damage.
 3. Periodically collect and remove waste containing cellulose or other organic matter.
 4. Discard or replace water-damaged material.
 5. Do not install material that is wet.
 6. Discard, replace, or clean stored or installed material that begins to grow mold.
 7. Perform work in a sequence that allows any wet materials adequate time to dry before enclosing the material in drywall or other interior finishes.
- D. Controlled Construction Phase of Construction: After completing and sealing of the building enclosure but prior to the full operation of permanent HVAC systems, maintain as follows:
1. Control moisture and humidity inside building by maintaining effective dry-in conditions.
 2. Use permanent HVAC system to control humidity.
 3. Comply with manufacturer's written instructions for temperature, relative humidity, and exposure to water limits.

3.06 OPERATION, TERMINATION, AND REMOVAL

- A. Supervision: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.
- B. Maintenance: Maintain facilities in good operating condition until removal.
1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.
- C. Operate Project-identification-sign lighting daily from dusk until 12:00 midnight.
- D. Temporary Facility Changeover: Do not change over from using temporary security and protection facilities to permanent facilities until Substantial Completion.
- E. Termination and Removal: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.
1. Materials and facilities that constitute temporary facilities are property of Contractor. Owner reserves right to take possession of Project identification signs.
 2. Remove temporary roads and paved areas not intended for or acceptable for

integration into permanent construction. Where area is intended for landscape development, remove soil and aggregate fill that do not comply with requirements for fill or subsoil. Remove materials contaminated with road oil, asphalt and other petrochemical compounds, and other substances that might impair growth of plant materials or lawns. Repair or replace street paving, curbs, and sidewalks at temporary entrances, as required by authorities having jurisdiction.

3. At Substantial Completion, repair, renovate, and clean permanent facilities used during construction period. Comply with final cleaning requirements specified in Section 01 77 00 "Closeout Procedures."

END OF SECTION 01 50 00

SECTION 01 55 26**MAINTENANCE OF TRAFFIC****PART I - GENERAL****1.1 SUMMARY****A. Description**

1. The Contractor shall maintain traffic throughout the project duration in such a manner as to:
 - a. Provide for the safe passage of automobile, train, pedestrian traffic through construction zones.
 - b. Minimize negative impacts on residents, businesses and the traveling public.
 - c. Provide convenient and logical rerouting of traffic including the use of advance warning systems and directional and informational signing, lighting and striping to provide driver friendly detours and maximize safety to the traveling public.
 - d. Maintain and provide access to property owners, customers, visitors, businesses and emergency vehicles.

MoDOT	600	Standard Plans for Highway Construction – Incidental Construction
MUTCD	Part VI	Temporary Traffic Control
ADA		Americans with Disabilities Act
APWA	01 55 26	Traffic Control

1.3 DEFINITIONS

Weekday Peak Hours – Between 7 a.m. and 10 a.m., and between 3:30 p.m. and 6:30 p.m., Monday through Friday.

Weekend Peak Hours – Between 9:00 a.m. to 12:00 noon on Saturdays.

Low Volume Road – Less than 1000 vehicles per day.

Major Construction Activity – A detour, or change of geometric conditions or traffic control on a roadway for vehicular or pedestrian traffic.

Minor construction activity – Short term, no more than two days of work, and where no traffic restriction takes place. It includes shoulder or minor utility work.

1.4 SUBMITTAL

- A. Submittals to the Engineer shall be made in accordance with the requirements of the Project Quality Plan, except as modified herein.
- B. Thirty (30) working days (45 calendar days) prior to the start of any new major construction activity, the Contractor shall submit copies of the following:
 - 1. Approved Traffic Control Plans for each different phase of construction and for each construction zone affecting pedestrian and vehicular traffic.
 - a. Construction sequencing shall coordinate with each local jurisdiction and business for local special events.
 - 2. Permits and notices authorizing street closures and occupancy.
 - 3. Schedule of proposed construction sequence and estimated duration of operations.
- C. For Minor Construction Activity, the Contractor shall obtain Engineers approval 24 hours prior to the start of any work.

PART II - PRODUCTS

2.1 TEMPORARY TRAFFIC CONTROL DEVICES

A. General

Provide traffic signs and traffic control devices in "like new" condition in conformance with Manual on Uniform Traffic Control Devices (MUTCD) and MoDOT Standard Specifications Section 900, except as modified herein.

B. Temporary Signing

- 1. Use signs as indicated on the Contract Drawings.
- 2. All construction warning signs shall be 48 inch x 48 inch minimum size, unless approved by the Engineer.
- 3. Double-face signs will not be allowed except for flagger "STOP/SLOW" sign paddles.

C. Sign Supports

1. Portable Sign Supports: Portable supports shall be:
 - a. Free-standing.
 - b. Capable of supporting signs in vehicle-caused turbulence and in winds common to the area where they are used.

D. Sign Covers

1. Sign covers for temporary signs shall consist of one of the following, as approved by the Engineer:
 - a. One piece plywood or another material, if approved. Polyethylene film or canvas shall not be allowed.
 - b. Large enough to completely cover the sign.
 - c. Easy to attach to and remove from the sign without damaging the sign face.
 - d. Black, non-reflective and opaque.

2.2 TEMPORARY PAVEMENT MARKINGS

- A. Refer to Specification 32 17 23.

2.3 REMOVAL OF EXISTING PAVEMENT MARKINGS

- A. Refer to Specification 32 17 23.

PART III - EXECUTION

3.1 TRAFFIC CONTROL PLAN (TCP)

- A. The Contractor, through the Traffic Control Plan (TCP), shall meet the requirements of MoDOT Standard Specification Section 600. The Contractor shall not begin construction or close any road until the TCP has been approved in writing by the local jurisdiction and the appropriate permits and notices authorizing street closure have been obtained.
- B. If a change to the TCP is deemed necessary during construction, the Contractor must submit a revised plan to the Engineer at least seven (7) days prior to its implementation. The contractor shall also obtain approval of the local jurisdiction for the changed TCP. All proposed traffic control measures shall also be approved in writing by the Engineer prior to starting construction.
- C. Changes to the TCP, necessitated by unforeseen circumstances such as utility conflicts, must be reviewed and authorized by the Engineer at least 48 hours prior to

implementation, unless the Engineer determines an emergency situation exists requiring immediate traffic control adjustments.

- D. The Contractor shall notify the Engineer at least two weeks prior to the beginning of construction and/or the implementation of the approved TCP. The Contractor must have signs in place warning the public of street detours or closures at least seven working days prior to implementing the work. Each detour or closure must have at least two signs with the date of work as well as the street names involved.
- E. A copy of the approved TCP shall be available at each Project site in order that City, County, or State personnel may verify compliance with the specified traffic control requirements.
- F. In addition to the elements of the temporary traffic control measures specified herein, the Contractor's TCP shall also include a list of the following:
 - 1. Number of flaggers to be used, and differentiation between railroad and roadway certified flaggers.
 - 2. Number of hours for uniformed traffic controllers to be provided by the Contractor.
- G. During nonworking hours, the roadways shall be restored to travel conditions acceptable to the Engineer. Any maintenance required to restore the roadways to this condition, including pavement patching and grading or placement of steel plating, shall be done prior to opening the areas to traffic.

3.2 GENERAL REQUIREMENTS

- A. The Contractor shall coordinate with agents of municipal entities; utility owners; subcontractors and other entities to assure that adequate and proper traffic control is maintained at all times during construction in accordance with local codes and standards. The Contractor shall maintain all lanes, turning movement lanes during weekday non-peak hours. For grade crossing construction, the Contractor may reduce lanes during weekday non-peak hours and weekends, avoiding weekend peak hours where feasible. Shoulders shall be maintained where feasible. Work Zone lane widths for thru lanes shall be 11 feet minimum. 10 foot wide right turn lanes may be approved on a case by case basis by the Engineer
- B. Non-construction traffic shall be carried on a paved surface at all times unless otherwise approved by the Engineer.
- C. The Contractor shall maintain a minimum lane width of where temporary pavement is needed, as shown in the TCP or determined by the Engineer, the Contractor will comply with the methods and materials described in in other sections of the project Specifications.
- D. All Traffic Control Devices (TCD) supplied by the Contractor must be maintained in good and clean condition and meet minimum national standards for reflectivity.

-
- E. The Contractor shall not be allowed to begin operations which require traffic control until the setup of traffic control devices is completed. When clearing operations, the contractor shall allow 30 minutes for removal of traffic control devices. Temporary traffic control operations which require one-way traffic under flagger control shall be limited to off-peak hours (between 9 a.m. and 3 p.m.) daily unless approved by the Engineer.
- F. Signs
1. An inventory of all existing signs in the vicinity of each construction zone shall be conducted with the Engineer prior to construction.
 2. Existing traffic control signs may not be removed without prior approval of the Engineer.
 3. The Contractor shall cover all sign panels and sign legends, or portions thereof, that conflict with the construction zone TCP's so that none of the covered legend is readable. Materials used for covering shall be approved by the Engineer, shall be durable enough to resist deterioration due to weathering for the duration of the Project and shall not mar the surface of the sign.
 4. Upon completion of work, it is the responsibility of the Contractor to reset any existing traffic signs which are removed or relocated during construction as part of the existing traffic control plans.
 5. All construction zone traffic control devices shall bear the name, address, and phone number of the company that owns them.
 6. As needed, the Contractor shall remove and reset to a compatible location, as directed by the Engineer, all signs that are affected by construction. Any signs damaged during construction due to any reason including Contractor operations, weather, accident, and vandalism shall be replaced in kind or repaired to the satisfaction of the Engineer.
- G. The Contractor shall keep all travel lanes, sidewalks, and crosswalks free of obstructions and debris. At the end of each working day, the project shall be cleaned and secured as directed by the Engineer.
- H. The Contractor must meet air quality standards stated in the National Ambient Air Quality Standards. Measures for maintaining air quality shall include the following:
1. Control of Transported Materials
Materials with objectionable odors, dirt, soil, or other materials impacting air quality shall be covered during transports.
 2. Maintenance of Streets

- a. Streets under construction or on haul routes shall be kept free of debris or dust by the Contractor. Street sweeping equipment shall be used if necessary to clean heavily impacted streets.
 - b. Construction areas shall be watered to prevent dust blowing from exposed excavation.
3. Control of Construction Traffic
- a. Construction traffic shall be limited to minimize the increases of carbon monoxide.
 - b. Construction vehicles will not be queued or stored as to affect traffic operation in the travel ways of the approved Traffic Control Plan.

3.3 MAINTENANCE OF ACCESS

- A. The Contractor shall maintain access to all private properties, roadways, side streets, walkways, alleyways, driveways, and pedestrian/bike/equestrian paths at all times except during pouring and curing of curb/gutters and sidewalks unless closure is approved by the Engineer. When access cannot be maintained, the Contractor shall notify the affected property owner's, local jurisdiction and KCMO's Community Involvement personnel at least one week in advance of beginning work. Contractor shall update the property owner 72 hours in advance of beginning work.
- B. Access to all private properties including drives, alleys, walks and doors shall be maintained at all times. Where access is temporarily not feasible, written authorization from the Engineer must be procured prior to any interruption of access points. A Plan/schedule, prepared by the Contractor, must be approved by the local jurisdiction and the Engineer prior to any interruption.
- C. During construction, the contractor shall erect and maintain all necessary barricades, barriers, bridges and temporary means of pedestrian access to properties. These access ways shall be non-skid and a minimum of 6 feet wide and conform to current ADA requirements. The Contractor must also provide daily cleaning of pedestrian areas, to eliminate accumulation of dirt, mud, etc. Wood ramps must be constructed to prevent warping of the top surface. Use of plywood sheets or boards without supporting structure is unacceptable.
- D. Work must proceed diligently on any one access to its completion. The Contractor shall inform the property and/or business owners, the local jurisdiction and KCMO's Community Involvement person at least one week in advance when work is to be done in front of or adjacent to their property.

END OF SECTION

SECTION 01 55 26.13**MAINTENANCE OF TRAFFIC****PART I - GENERAL****1.1 SUMMARY****A. Description**

1. The Contractor shall maintain traffic throughout the project duration in such a manner as to:
 - a. Provide for the safe passage of automobile, bicycle, and pedestrian traffic through construction zones.
 - b. Minimize negative impacts on residents, businesses and the traveling public.
 - c. Provide convenient and logical rerouting of traffic including the use of advance warning systems and directional and informational signing, lighting and striping to provide driver friendly detours and maximize safety to the traveling public.
 - d. Maintain and provide access to property owners, customers, visitors, businesses and emergency vehicles.
2. The Contractor shall develop and submit to the Engineer and local jurisdictions for approval a Traffic Control Plan (TCP). The TCP shall be submitted in 11 inches x 17 inches format prepared using CAD software. Plans must be signed and sealed by a professional engineer licensed in the State of Missouri where required. The TCP shall meet the requirements of MODOT 2011 Standard Specifications.
3. The Contractor shall provide a Traffic Control Supervisor that is certified by the Missouri Department of Transportation (MODOT) or by the American Traffic Safety Services Association. The Traffic Control Supervisor oversees all traffic control operations and implements the traffic control according to the approved TCP. The responsibility of the Traffic Control Supervisor shall be in accordance with MODOT 2011 Standard Specifications. The Traffic Control Supervisor shall be available 24 hours a day, 7 days a week by cell phone or have a designated replacement for traffic emergencies.

1.3 DEFINITIONS

Regular Working Hours – Between 7 a.m. and 5 p.m., Monday through Friday

Weekday Peak Hours – Between 7 a.m. and 10 a.m., and between 3:30 p.m. and 6:30 p.m., Monday through Friday.

Weekend Peak Hours – Between 9:00 a.m. to 12:00 noon on Saturdays.

Low Volume Road – Less than 1000 vehicles per day.

Major Construction Activity – A detour, or change of geometric conditions or traffic control on a roadway for vehicular or pedestrian traffic.

Minor construction activity – Short term, no more than two days of work, and where no traffic restriction takes place. It includes shoulder or minor utility work.

1.4 SUBMITTAL

- A. Submittals to the Engineer shall be made in accordance with the requirements of the Project Quality Plan, except as modified herein.
- B. Thirty (30) working days (45 calendar days) prior to the start of any new major construction activity, the Contractor shall submit copies of the following:
 - 1. Approved Traffic Control Plans for each different phase of construction for each grade crossing and for each construction zone affecting pedestrian and vehicular traffic.
 - a. Construction sequencing shall coordinate with each local jurisdiction and business for local special events.
 - 2. Permits and notices authorizing street closures and occupancy.
 - 3. Schedule of proposed construction sequence and estimated duration of operations.
- C. For Minor Construction Activity, the Contractor shall obtain Engineers approval 24 hours prior to the start of any work.

PART II - PRODUCTS

2.1 TEMPORARY TRAFFIC CONTROL DEVICES

- A. General

Provide traffic signs and traffic control devices in "like new" condition in conformance with Manual on Uniform Traffic Control Devices (MUTCD) and MODOT Standard Specifications, except as modified herein.

- B. Temporary Signing
 - 1. Use signs as indicated on the Contract Drawings, and in accordance with the MUTCD.
 - 2. All construction warning signs shall be 48 inch x 48 inch minimum size.
 - 3. Double-face signs will not be allowed except for flagger "STOP/SLOW" sign paddles.
- C. Sign Supports
 - 1. Portable Sign Supports: Portable supports shall be:
 - a. Free-standing.
 - b. Capable of supporting signs in vehicle-caused turbulence and in winds common to the area where they are used.
- D. Sign Covers
 - 1. Sign covers for temporary signs shall be in accordance with MODOT Standard Specifications, except as modified herein:
 - a. One piece plywood or another material, if approved. Polyethylene film or canvas shall not be allowed.
 - b. Large enough to completely cover the sign.
 - c. Easy to attach to and remove from the sign without damaging the sign face.
 - d. Black, non-reflective and opaque.

2.2 TEMPORARY PAVEMENT MARKINGS

- A. Refer to Specification 32 17 23.

2.3 REMOVAL OF EXISTING PAVEMENT MARKINGS

- A. Refer to Specification 32 17 23.

PART III - EXECUTION

3.1 TRAFFIC CONTROL PLAN (TCP)

- A. Restrictions:
 - a. The Contractor shall maintain one lane of vehicular traffic in each direction on Main Street, Grand Boulevard, Delaware Avenue (south of 5th Street), and 5th Street unless otherwise approved by the Engineer.
 - b. The Contractor may close one direction of traffic on 5th Street between Delaware Street and Grand Blvd.
 - c. Delaware Avenue north of 5th Street shall remain open at all times.

- B. Construction work that requires sidewalk closures will be permitted with Engineer approval on one side of the road for a maximum length of one block, provided that an acceptable alternate access can be provided to each affected business.
- C. Construction work that requires a temporary restriction of on-street parking will be permitted with Engineer approval on one or both sides of the road for a maximum of two blocks, plus additional length necessary to taper traffic into a configuration that supports parking.
- D. The Contractor through the Traffic Control Plan (TCP) shall meet the requirements of MODOT Standard Specifications. The Contractor shall not begin construction or close any road until the TCP has been approved in writing by the local jurisdiction and the appropriate permits and notices authorizing street closure have been obtained.
- E. If a change to the TCP is deemed necessary during construction, the Contractor must submit a revised plan to the Engineer at least seven (7) days prior to its implementation. If the change involves a request for a street closure, or closure of all traffic in one direction, the submittal must be made (14) days in advance. The contractor shall also obtain approval of the local jurisdiction for the changed TCP. All proposed traffic control measures shall also be approved in writing by the Engineer prior to starting construction.
- F. Changes to the TCP, necessitated by unforeseen circumstances such as utility conflicts, must be reviewed and authorized by the Engineer at least 48 hours prior to implementation, unless the Engineer determines an emergency situation exists requiring immediate traffic control adjustments.
- G. The Contractor shall notify the Engineer at least two weeks prior to the beginning of construction and/or the implementation of the approved TCP. The Contractor must have signs in place warning the public of street detours or closures at least seven working days prior to implementing the work. Each detour or closure must have at least two signs with the date of work as well as the street names involved.
- H. A copy of the approved TCP shall be available at each Project site in order that City, County, or State personnel may verify compliance with the specified traffic control requirements.
- I. In addition to the elements of the temporary traffic control measures specified herein, the Contractor's TCP shall also include a list of the following:
 - 1. Number of flaggers to be used, and differentiation between railroad and roadway certified flaggers.
 - 2. Number of hours for uniformed traffic controllers to be provided by the Contractor.
 - 3. A statement of compliance with KCMO Construction Safety Program.
- J. During nonworking hours, the roadways shall be restored to travel conditions acceptable to the Engineer. Any maintenance required to restore the roadways to this condition, including pavement patching and grading or placement of steel plating, shall be done prior to opening the areas to traffic.

3.2 GENERAL REQUIREMENTS

- A. Except as otherwise required for the safety or protection of persons or property at or adjacent to the project, and except as otherwise indicated in the Contract Documents, all work shall be performed during Regular Working Hours. The Contractor shall not permit the performance

of work outside of Regular Working Hours or on Saturday, Sunday or any legal holiday without written consent by the Engineer.

- B. The Contractor shall take any and all proper precautions to guard against injury to persons or damage to property until final project acceptance by the Director of Public Works. These precautions should include, but not be limited to, protection of vehicular and pedestrian traffic from injury or damage due to open excavations by the proper placement of appropriate safety devices. The Contractor shall maintain safety devices and their proper placement throughout the needed period. Construction practices should be followed that will eliminate all safety hazards as quickly as possible or practicable.
- C. The Contractor shall provide a traffic control devices and flaggers to protect, warn and guide vehicular and pedestrian traffic, and to protect individuals and equipment within the work zone.
- a. The Contractor shall monitor traffic flow through the project twice daily (once during daylight and one during darkness) and verify that the traffic control devices are in place and functioning properly. If the Contractor identifies a deficiency in any device, the Contractor shall take corrective action. No additional payment will be made for the corrective action.
- b. As soon as possible after observing a traffic control deficiency, the Engineer will report the deficiency, either verbally or in writing. After receiving the notification, if the Contractor does not make the corrective action within the agreed upon timeline, order records or suspension of the work may occur. Regardless of the severity of the deficiency, corrections shall be made as soon as possible to maintain a quality work zone. The severity of a deficiency will be categorized as follows:
- i. Category 1: Presents an immediate danger to the traveling public or works and must be addressed immediately. A Category 1 deficiency requires that temporary measures be taken immediately, and completely corrected within one hour.
- ii. Category 2: The situation doesn't pose an immediate threat to either the public or workers, but can impact the proposer functioning of the work zone. A Category 2 deficiency shall be corrected within 24 hours.
- iii. Category 3: The situation doesn't impact the functioning of the work zone, but is more of a maintenance or aesthetic issue. A Category 3 deficiency shall be corrected within 96 hours.
- c. With the Engineer's approval, the Contractor may add to the TCP any temporary traffic control devices or services the Contractor Considers necessary to adequately protect the public and the work. Device quantities may be adjusted accordingly.
- d. All changes to the TCP resulting from the Contractor staging revisions, including proposed total road closures for the Contractor's convenience, shall be submitted in writing to the Engineer for review and acceptance prior to the implementation. Device quantities may be adjusted accordingly.
- e. If the Engineer determines the need for additional traffic control devices not included in the TCP, the Contractor will be notified in writing to provide the additional devices. Device quantities may be adjusted accordingly.

- f. All traffic control devices shall be removed as soon as practical when the devices are no longer needed. When work is suspended for short periods of time, traffic control devices that are no longer appropriate shall be turned away from traffic, removed or covered.
 - g. All temporary traffic control devices shall be removed after the completion of construction and shall remain the property of the Contractor unless specified otherwise.
- D. Damage to existing utilities during construction of this project which would require immediate repair may be considered as an "emergency", and as such, may not be subject to all of the restrictions contained herein. Therefore, the Contractor should immediately contact the Engineer and the utility company whose facilities are involved whenever any utilities are damaged that may require immediate repair. Such repair work, once declared an "emergency" by the utility company or by the Engineer, shall be pursued on a continuous (24 hours per day) basis until complete or advanced to such a point that use of the roadway can be returned to normal operation and any subsequent repairs can be completed during regular working hours. However, the Engineer reserves the right to determine which utility work will be considered an "emergency". Any costs incurred by the Contractor for such "emergency" utility repair, including the cost of any additional traffic regulation that may be required, will be the Contractor's sole responsibility.
- E. The Contractor shall coordinate with agents of municipal entities; utility owners; subcontractors and other entities to assure that adequate and proper traffic control is maintained at all times during construction in accordance with local codes and standards. The Contractor shall maintain all lanes, turning movement lanes during weekday non-peak hours.
- F. Upon private business request, and approval by the Engineer, the Contractor shall erect signing to guide traffic along alternate routes and/or to alternate entrances to maintain and facilitate business access during construction.
- G. Non-construction traffic shall be carried on a paved surface at all times unless otherwise approved by the Engineer.
- H. The Contractor shall maintain a minimum lane width of eleven (11) feet where temporary pavement is needed. An additional two (2) feet shall be maintained between the edge of the traveled lane and any barrier, barricade or channelizing devices. Specific exceptions to this provision shall be approved by the Engineer prior to submittal of the TCP. The Contractor will comply with the methods and materials described in Sections 02225, 02233 and 02510.
- I. All Traffic Control Devices (TCD) supplied by the Contractor must be maintained in good and clean condition and meet minimum national standards for reflectivity.
- J. The Contractor shall not be allowed to begin operations which require traffic control until the setup of traffic control devices is completed. When clearing operations, the contractor shall allow 30 minutes for removal of traffic control devices. Temporary traffic control operations which require one-way traffic under flagger control shall be limited to off-peak hours (between 9 a.m. and 3 p.m.) daily unless approved by the Engineer.
- K. Signs
- 1. An inventory of all existing signs in the vicinity of each construction zone shall be conducted with the Engineer prior to construction.

2. Existing traffic control signs may not be removed without prior approval of the Engineer.
 3. The Contractor shall cover all sign panels and sign legends, or portions thereof, that conflict with the construction zone TCP's in accordance with the MoDOT Quality Standards for Temporary Traffic Control Devices.
 4. Upon completion of work, it is the responsibility of the Contractor to reset any existing traffic signs which are removed or relocated during construction as part of the existing traffic control plans.
 5. All construction zone traffic control devices shall bear the name, address, and phone number of the company that owns them.
 6. As needed, the Contractor shall remove and reset to a compatible location, as directed by the Engineer, all signs that are affected by construction. Any signs damaged during construction due to any reason including Contractor operations, weather, accident, and vandalism shall be replaced in kind or repaired to the satisfaction of the Engineer.
 7. All traffic control devices shall be mounted on crashworthy supports at a vertical clear height of seven(7) feet above the traveled way.
- L. The Contractor shall keep all travel lanes, sidewalks, and crosswalks free of obstructions and debris. At the end of each working day, the project shall be cleaned and secured as directed by the Engineer.
- M. The Contractor must meet air quality standards stated in the National Ambient Air Quality Standards. Measures for maintaining air quality shall include the following:
1. Control of Transported Materials
Materials with objectionable odors, dirt, soil, or other materials impacting air quality shall be covered during transports.
 2. Maintenance of Streets
 - a. Streets under construction or on haul routes shall be kept free of debris or dust by the Contractor. Street sweeping equipment shall be used if necessary to clean heavily impacted streets.
 - b. Construction areas shall be watered to prevent dust blowing from exposed excavation.
 3. Control of Construction Traffic
 - a. Construction traffic shall be limited to minimize the increases of carbon monoxide.
 - b. Construction vehicles will not be queued or stored as to affect traffic operation in the travel ways of the approved Traffic Control Plan.

3.3 MAINTENANCE OF ACCESS

- A. The Contractor shall maintain access to all private properties, roadways, side streets, walkways, alleyways, driveways, and pedestrian/bike/equestrian paths at all times except during pouring and curing of curb/gutters and sidewalks unless closure is approved by the Engineer. When access cannot be maintained, the Contractor shall notify the affected property owner's, local jurisdiction and KCMO's Community Involvement person at least one week in advance of beginning work. Contractor shall update the property owner 72 hours in advance of beginning work.
- B. At least two east/west access roads, with at least one lane in each direction, shall be open to traffic and maintained at all times through each municipality.
- C. Access to all private properties including drives, alleys, walks and doors shall be maintained at all times. Where access is temporarily not feasible, written authorization from the Engineer must be procured prior to any interruption of access points. A Plan/schedule, prepared by the Contractor, must be approved by the local jurisdiction and the Engineer prior to any interruption.
- D. During construction the contractor shall erect and maintain all necessary barricades, bridges and temporary means of pedestrian access to properties. These access ways shall be non-skid and a minimum of 6 feet wide. The Contractor must also provide daily cleaning of pedestrian areas, to eliminate accumulation of dirt, mud, etc. Wood ramps must be constructed to prevent warping of the top surface. Use of plywood sheets or boards without supporting structure is unacceptable.
- E. Work must proceed diligently on any one access to its completion. The Contractor shall inform the property and/or business owners, the local jurisdiction and KCMO's Community Involvement person at least one week in advance when work is to be done in front of or adjacent to their property.

END OF SECTION

SECTION 01 56 39**TEMPORARY TREE AND PLANT PROTECTION AND PRUNING****PART 1 - GENERAL**

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes general protection and pruning of existing trees and plants that are affected by execution of the Work, whether temporary or permanent construction.
- B. Related Sections:
1. Section 31 13 00 "Tree Removal" for removal of existing trees.
 2. Section 32 93 00 "Plants" for replacement plant installation.

1.3 DEFINITIONS

- A. Caliper: Diameter of a trunk measured by a diameter tape at 6 inches above the ground for trees up to, and including, 4-inch size; and 12 inches above the ground for trees larger than 4-inch size.
- B. Plant-Protection Zone: Area surrounding individual trees, groups of trees, shrubs, or other vegetation to be protected during construction, and indicated on Drawings.
- C. Tree-Protection Zone: Area surrounding individual trees or groups of trees to be protected during construction, and indicated on Drawings.
- D. Vegetation: Trees, shrubs, groundcovers, grass, and other plants.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Samples for Verification: For each type of the following:
1. Protection-Zone Fencing: Assembled Samples of manufacturer's standard size made from full-size components. Sample size 6"x6".
- C. Tree Pruning Schedule: Written schedule detailing scope and extent of pruning of trees to remain that interfere with or are affected by construction.

1. Species and size of tree.
 2. Location on site plan. Include unique identifier for each.
 3. Reason for pruning.
 4. Description of pruning to be performed.
 5. Description of maintenance following pruning.
- D. Qualification Data: For qualified arborist and tree service firm.
- E. Certification: From arborist, certifying that trees indicated to remain have been protected during construction according to recognized standards and that trees were promptly and properly treated and repaired when damaged.
- F. Maintenance Recommendations: From arborist, for care and protection of trees affected by construction during and after completing the Work.
- G. Existing Conditions: Documentation of existing trees and plantings indicated to remain, which establishes preconstruction conditions that might be misconstrued as damage caused by construction activities.
1. Use sufficiently detailed photographs or videotape.
 2. Include plans and notations to indicate specific wounds and damage conditions of each tree or other plants designated to remain.
 3. Coordinate existing conditions meeting/walk with owner for their witness to existing conditions.

1.5 QUALITY ASSURANCE

- A. Arborist Qualifications: Licensed arborist in jurisdiction where Project is located.
- B. Tree Service Firm Qualifications: An experienced tree service firm that has successfully completed temporary tree and plant protection work similar to that required for this Project and that will assign an experienced, qualified arborist to Project site during execution of the Work.
- C. Preinstallation Conference: Conduct conference at Project site.
1. Review methods and procedures related to temporary tree and plant protection including, but not limited to, the following:
 - a. Construction schedule. Verify availability of materials, personnel, and equipment needed to make progress and avoid delays.
 - b. Enforcing requirements for protection zones.
 - c. Arborist's responsibilities.
 - d. Field quality control.

1.6 PROJECT CONDITIONS

- A. The following practices are prohibited within protection zones:
1. Storage of construction materials, debris, or excavated material.
 2. Parking vehicles or equipment.
 3. Foot traffic.
 4. Erection of sheds or structures.

5. Impoundment of water.
 6. Excavation or other digging unless otherwise indicated.
 7. Attachment of signs to or wrapping materials around trees or plants unless otherwise indicated.
- B. Do not direct vehicle or equipment exhaust toward protection zones.
- C. Prohibit heat sources, flames, ignition sources, and smoking within or near protection zones and organic mulch.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Protection-Zone Fencing: Fencing fixed in position and meeting the following requirements. Previously used materials may be used when approved by Landscape Architect.
1. Plastic Protection-Zone Fencing: Plastic construction fencing constructed of high-density extruded and stretched polyethylene fabric with 2-inch maximum opening in pattern and weighing a minimum of 0.4 lb/ft. remaining flexible from minus 60 to plus 200 deg F inert to most chemicals and acids; minimum tensile yield strength of 2000 psi and ultimate tensile strength of 2680 psi secured with plastic bands or galvanized-steel or stainless-steel wire ties; and supported by tubular or T-shape galvanized-steel posts spaced not more than 8 feet apart.
 - a. Height: 4 feet.
 - b. Color: High-visibility orange, nonfading.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Erosion and Sedimentation Control: Examine the site to verify that temporary erosion- and sedimentation-control measures are in place. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross protection zones.
- B. For the record, prepare written report, endorsed by arborist, listing conditions detrimental to tree and plant protection.

3.2 PREPARATION

- A. Locate and clearly identify trees, shrubs, and other vegetation to remain. Tie a 1-inch blue-vinyl tape around each tree trunk at 54 inches above the ground.
- B. Protect tree root systems from damage caused by runoff or spillage of noxious materials while mixing, placing, or storing construction materials. Protect root systems from ponding, eroding, or excessive wetting caused by dewatering operations.

3.3 TREE- AND PLANT-PROTECTION ZONES

- A. Protection-Zone Fencing: Install protection-zone fencing along edges of protection zones before materials or equipment are brought on the site and construction operations begin in a manner that will prevent people and animals from easily entering protected area except by entrance gates. Construct fencing so as not to obstruct safe passage or visibility at vehicle intersections where fencing is located adjacent to pedestrian walkways or in close proximity to street intersections, drives, or other vehicular circulation. See L1.01 notes for limits of protection fence.
1. Fencing: Install to comply with ASTM F 567 and with manufacturer's written instructions.
 2. Posts: Set or drive posts into ground one-third the total height of the fence without concrete footings. Where a post is located on existing paving or concrete to remain, provide appropriate means of post support acceptable to Landscape Architect.
 3. Access Gates: Install where recommended by supervising arborist adjust to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.
- B. Maintain protection zones free of weeds and trash.
- C. Repair or replace trees, shrubs, and other vegetation indicated to remain or be relocated that are damaged by construction operations, in a manner approved by Landscape Architect.
- D. Maintain protection-zone fencing and signage in good condition as acceptable to Landscape Architect and remove when construction operations are complete and equipment has been removed from the site.
1. Do not remove protection-zone fencing, even temporarily, to allow deliveries or equipment access through the protection zone.
 2. Temporary access is permitted subject to preapproval in writing by arborist if a root buffer effective against soil compaction is constructed as directed by arborist. Maintain root buffer so long as access is permitted.

3.4 EXCAVATION

- A. General: Excavate at edge of protection zones and for trenches indicated within protection zones according to requirements in Division 31.
- B. Trenching near Trees: Where utility trenches are required within protection zones, hand excavate under or around tree roots or tunnel under the roots by drilling, auger boring, or pipe jacking. Do not cut main lateral tree roots or taproots; cut only smaller roots that interfere with installation of utilities. Cut roots as required for root pruning.
- C. Redirect roots in backfill areas where possible. If encountering large, main lateral roots, expose roots beyond excavation limits as required to bend and redirect them without breaking. If encountered immediately adjacent to location of new construction and redirection is not practical, cut roots approximately 3 inches back from new construction and as required for root pruning.

- D. Do not allow exposed roots to dry out before placing permanent backfill. Provide temporary earth cover or pack with peat moss and wrap with burlap. Water and maintain in a moist condition. Temporarily support and protect roots from damage until they are permanently relocated and covered with soil.

3.5 ROOT PRUNING

- A. Prune roots that are affected by temporary and permanent construction. Prune roots as follows:
1. Cut roots manually by digging a trench and cutting exposed roots with sharp pruning instruments; do not break, tear, chop, or slant the cuts. Do not use a backhoe or other equipment that rips, tears, or pulls roots.
 2. Cut Ends: Coat cut ends of roots more than 1-1/2 inches in diameter with emulsified asphalt or other coating formulated for use on damaged plant tissues and that is acceptable to arborist.
 3. Temporarily support and protect roots from damage until they are permanently redirected and covered with soil.
 4. Cover exposed roots with burlap and water regularly.
 5. Backfill as soon as possible according to requirements in Division 31 Section "Earth Moving."
- B. Root Pruning at Edge of Protection Zone: Prune roots 12 inches outside of the protection zone, by cleanly cutting all roots to the depth of the required excavation.
- C. Root Pruning within Protection Zone: Clear and excavate by hand to the depth of the required excavation to minimize damage to root systems. Use narrow-tine spading forks, comb soil to expose roots, and cleanly cut roots as close to excavation as possible.

3.6 CROWN PRUNING

- A. Prune branches that are affected by temporary and permanent construction. Prune as follows:
1. Prune trees to remain to compensate for root loss caused by damaging or cutting root system. Provide subsequent maintenance during Contract period as recommended by arborist.
 2. Pruning Standards: Prune trees according to ANSI A300 (Part 1).
 3. Cut branches with sharp pruning instruments; do not break or chop.
 4. Do not apply pruning paint to wounds.
- B. Chip removed branches and dispose of off-site.

3.7 REGRADING

- A. Lowering Grade: Where new finish grade is indicated below existing grade around trees, slope grade beyond the protection zone. Maintain existing grades within the protection zone.
- B. Lowering Grade within Protection Zone: Where new finish grade is indicated below existing grade around trees, slope grade away from trees as recommended by arborist unless otherwise indicated.

1. Root Pruning: Prune tree roots exposed by lowering the grade. Do not cut main lateral roots or taproots; cut only smaller roots. Cut roots as required for root pruning.
- C. Raising Grade: Where new finish grade is indicated above existing grade around trees, slope grade beyond the protection zone. Maintain existing grades within the protection zone.
- D. Minor Fill within Protection Zone: Where existing grade is 2 inches or less below elevation of finish grade, fill with topsoil. Place topsoil in a single uncompacted layer and hand grade to required finish elevations.

3.8 FIELD QUALITY CONTROL

- A. Inspections: Engage a qualified arborist to direct plant-protection measures in the vicinity of trees, shrubs, and other vegetation indicated to remain and to prepare inspection reports.
- B. Contractor to water existing trees as needed or as directed by owner.

3.9 REPAIR AND REPLACEMENT

- A. General: Repair or replace trees, shrubs, and other vegetation indicated to remain or be relocated that are damaged by construction operations, in a manner approved by Landscape Architect.
 1. Submit details of proposed root cutting and tree and shrub repairs.
 2. Have arborist perform the root cutting, branch pruning, and damage repair of trees and shrubs.
 3. Treat damaged trunks, limbs, and roots according to arborist's written instructions.
 4. Perform repairs within 24 hours.
 5. Replace vegetation that cannot be repaired and restored to full-growth status, as determined by Landscape Architect.
- B. Trees: Remove and replace trees indicated to remain that are more than 25 percent dead or in an unhealthy condition before the end of the corrections period or are damaged during construction operations that Landscape Architect determines are incapable of restoring to normal growth pattern.
 1. Provide new trees of same size and species as those being replaced for each tree that measures 6" or smaller in caliper size.
 2. Provide two new trees of 4-inch caliper size for each tree being replaced that measures more than 6 inches in caliper size.
 - a. Species: Species selected by Landscape Architect.
 3. Plant and maintain new trees as specified in Division 32 Section 32 93 00 "Plants."
- C. Soil Aeration: Where directed by Landscape Architect, aerate surface soil compacted during construction. Aerate 10 feet beyond drip line and no closer than 36 inches to tree trunk. Drill 2-inch diameter holes a minimum of 12 inches deep at 24 inches o.c. Backfill holes with an equal mix of augered soil and sand.

3.10 WASTE MANAGMENT

- A. Separate and dispose of waste in accordance with the Project's Waste Management Plan.

PART 4 - MEASUREMENT

4.1 Measurement – No Separate measurement will be made for Work described in this Section.

PART 5 - PAYMENT

5.1 Payment – No separate payment will be made for temporary tree and plant protection and pruning. All costs pertaining thereto shall be included in the Contract Unit Prices for other items as listed in the Bid Form-Unit Prices.

END OF SECTION

SECTION 01 57 13**EROSION CONTROL****PART 1 - GENERAL****1.01 SCOPE OF WORK**

- A. Furnish all labor, materials, equipment and incidentals required and perform all installation, maintenance, removal, and area clean-up related to erosion and sediment control as shown on the Drawings and as specified in American Public Works Association Standard Specifications and Design Criteria Section 2100 and the Kansas City Erosion and Sediment Control Specifications as revised, adopted, and provided by the Director of Kansas City, Missouri Public Works current at the time of bidding. The work shall include, but not necessarily be limited to; installation of temporary access ways and staging areas, temporary construction entrances, silt fences, sediment removal and disposal, device maintenance, removal of temporary devices, temporary mulching, Temporary Erosion Control Blanket, and final clean-up.

1.02 GENERAL REQUIREMENTS

- A. Contractor's Responsibilities & Qualifications: Contractors must take all measures necessary to reduce erosion and sedimentation from occurring on the project. Contracts should include the installation, inspection, and maintenance of erosion and sediment control measures. Contractors should have the proper education, training, and qualifications necessary to properly install and maintain all temporary erosion and sediment control measures.
- B. Compliance with Permits: All construction projects disturbing one or more acres will have obtained a National Pollutant Discharge Elimination System (NPDES) permit from the state. Other Federal, State, or local permits may also need to be obtained for the project.
- C. Inspection and Maintenance of Plan: The Contractor and Subcontractors must maintain the integrity of the temporary erosion and sediment control measures as long as they are in place and necessary. The devices should be inspected immediately after each rainfall of ½ inch or greater and as often as the permits require. Devices should be maintained and devices that are not functioning properly should be corrected or replaced. All pipes that are to be abandoned shall be removed unless otherwise shown on the plans or approved by the Engineer.

1.03 REFERENCE STANDARDS

- A. In addition to complying with all pertinent codes and regulations, comply with the referenced or applicable portions of the American Public Works Association Standard Specifications and Design Criteria, as revised, adopted, and provided by the director of Kansas City, Missouri Public Works current at the time of bidding.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Seed and Mulch

1. Seed and Mulch shall be as specified in Section 32 92 00 entitled, "Prairie Grasses and Wildflowers".

B. Silt Fence

1. Use a synthetic filter fabric or a pervious sheet of polypropylene, nylon, polyester, or polyethylene yard, which is certified by the manufacturer or supplier as conforming to the requirements shown in the Table below:
2. Synthetic filter fabric should contain ultraviolet ray inhibitors and stabilizers to provide a minimum of 6 months of expected usable construction life at a temperature range of 0 to 120°F.

SILT FENCE FABRIC SPECIFICATIONS

<u>Physical Property</u>	<u>Minimum Requirements</u>
Filtering Efficiency	85%
Tensile Strength at (max.) Elongation	20% Standard Strength 30 lb/lin in Extra Strength- 50 lb/lin in
Slurry Flow Rate	0.3 gal/sqft/min

3. Ensure reinforcement of standard strength filter fabric, use wire fence with a minimum 14 gauge and a maximum mesh spacing of 6 inches.
4. For reinforcement of standard strength filter fabric, use wire fence with a minimum 14 gauge and a maximum mesh spacing of 6 inches.

C. Temporary Straw Bale Barrier

1. Temporary straw bale barriers intercept and detain small amounts of sediment from disturbed area of less than one acre in order to prevent sediment from leaving the site and decrease the velocity of sheet flows.
2. See Detail ESC-13 (Straw Bale Barrier) in Division III of Kansas City Metropolitan Chapter of American Public Works Association (APWA) Manual for details of materials.

D. Temporary Construction Entrance

1. A temporary construction entrance is a stabilized layer of large aggregate that is located at any point where traffic leaves a construction site and move directly onto a public road or other paved area.

2. See Detail ESC-01 (Temporary Construction Entrance) in Division III of Kansas City Metropolitan Chapter of American Public Works Association (APWA) Manual for details of materials.

E. Rock Check Dam

1. Rip rap material shall be as specified in Section 31 37 00 entitled "Rip Rap" and in accordance with the detail as shown in the construction plans.

PART 3 - EXECUTION

3.01 CONSTRUCTION DETAILS

A. General

1. All activities pertaining to erosion and sediment control shall be performed as specified in the American Public Works Association Standard Specifications and Design Criteria Section 2100 as revised, adopted, and provided by the director of Kansas City, Missouri Public Works current at the time of bidding.

B. Installation

1. Seed and Mulch Installation. Seed and Mulch shall be as specified in Section 32 92 00 entitled, "Prairie Grasses and Wildflowers".
2. Sediment Fence Installation. Sediment fences shall be positioned as indicated on the Drawings and as necessary to prevent off site movement of sediment produced by construction activities as directed by the Engineer.
 - a. Construct the sediment barrier of standard strength or extra strength synthetic filter fabrics.
 - b. Ensure that the height of the sediment fence does not exceed 18 inches above the ground surface. (Higher fences may impound volumes of water sufficient to cause failure of the structure.)
 - c. Construct the filter fabric from a continuous roll cut to the length of the barrier to avoid joints. When joints are necessary, securely fasten the filter cloth only at a support post with overlap to the next post.
 - d. Support standard strength filter fabric by wire mesh fastened securely to the upslope side of the posts using heavy duty wire staples at least 1 inch long, or tie wires. Extend the wire mesh support to the bottom of the trench.

- e. When a wire mesh support fence is used, space posts a maximum of 8 ft apart. Support posts should be driven securely into the ground to a minimum of 18 inches.
 - f. Extra strength filter fabric with 6-ft post spacing does not require wire mesh support fence. Staple or wire the filter fabric directly to the posts.
 - g. Excavate a trench approximately 4 inches wide and 8 inches deep along the proposed line of posts and upslope from the barrier.
 - h. Backfill the trench with compacted soil or gravel placed over the filter fabric.
 - i. Do not attach filter fabric to existing trees.
3. Temporary Straw Bale Barrier. Bales will be placed in a single row, lengthwise, on the contour and embedded in the soil to a depth of 3 inches.
- a. Bales must be securely anchored in place by stakes or re-bars driven through the bales or by other acceptable means to prevent displacement.
 - b. Inspection must be frequent and repair or replacement must be made promptly as needed.
4. Temporary Construction Entrance. Temporary Construction Entrance shall be installed at the site entrance. Installation shall be in accordance with Detail ESC-01 (Temporary Construction Entrance) in Division III of Kansas City Metropolitan Chapter of American Public Works Association (APWA) Manual.
- a. A temporary construction entrance is a stabilized layer of large aggregate that is located at any point where traffic leaves a construction site and move directly onto a public road or other paved area.
 - b. A temporary construction entrance provides a buffer area where construction vehicles can drop their mud to avoid transporting it onto public roads.
 - c. Avoid locating on steep slopes or at curves on public roads. If possible, locate where permanent roads will eventually be constructed.
 - d. Remove all vegetation and other unsuitable material from the foundation area, grade, and crown for positive drainage.
 - e. Place non-woven geotextile fabric on the graded foundation to improve stability.

- f. If slope towards the public road exceeds 2%, construct a 6- to 8-inch high ridge with 3H:1V side slopes across the foundation approximately 15 feet from the edge of the public road to divert runoff away from it.
 - g. Install pipe under the entrance if needed to maintain drainage ditches along public roads.
 - h. Place stone to dimensions and grade as shown on plans. Leave surface smooth and sloped for drainage.
 - i. Divert all surface runoff and drainage from the entrance to a sediment control device.
5. Rock Check Dams. Rock Check Dams shall be installed as shown on the Drawings.
- a. Rip rap rock check dams are small temporary stone dams constructed across a drainage ditch or creek.
 - b. The maximum height of the dam shall be 3 feet.
 - c. The base of the check dam can be keyed into the soil approximately 6 inches.
 - d. The maximum spacing between the dams should be such that the toe of the upstream dam is at the same elevation as the top of the downstream dam.
 - e. Stone shall be placed according to the configuration as shown in Detail ESC-15 (Rock Check Dam) in Division III of Kansas City Metropolitan Chapter of American Public Works Association (APWA) Manual. Hand or mechanical placement will be necessary to achieve complete coverage of the ditch or creek and to insure that the center of the dam is lower than the edges.
 - f. Geotextile shall be used under the stone to provide a stable foundation and to facilitate removal of the stone.

C. Maintenance and Inspections

- 1. Maintain and Inspect sediment fences at least once a week and after each rainfall and as otherwise stated in this specification. Make any required repairs immediately.
 - a. Should the fabric of a sediment fence collapse, tear, decompose, or become ineffective, replace it promptly.
 - b. Remove sediment deposits as necessary to provide adequate storage volume for the next rain and to reduce pressure on the fence. Take care to avoid undermining the fence during cleanout.

- c. Remove all fencing materials and unstable sediment deposits and bring the area to grade and stabilize it after the contributing drainage area has been properly stabilized.
 2. Maintain and Inspect the temporary construction entrance at least once a week and after each rainfall and as otherwise stated in this specification. Make any required repairs immediately.
 - a. Reshape pad as needed for proper drainage and runoff control.
 - b. Topdress with clean 2- and 3- inch stone as needed.
 - c. Immediately remove mud or sediment tracked or washed onto public road. Repair and broken road pavement immediately.
 3. Maintain and Inspect check dams at least once a week and after each rainfall and as otherwise stated in this specification. Make any required repairs immediately.
 - a. Check dams shall be inspected for sediment accumulation after each storm event of ½ inch or greater. Sediment shall be removed when it reaches one half of the original height of the dam.
 - b. Regular inspections should be made to ensure that the center of the dam is lower than the edges. Erosion caused by high flows around the edges of the dam should be corrected.
 - c. Check dams and filter fabric shall be removed when their useful life has been completed (after final acceptance of stream and associated work).

D. Removal and Final Cleanup

1. Once the site has been fully stabilized against erosion, remove sediment control devices and all accumulated silt. Dispose of silt and waste materials in proper manner. Re-grade all areas disturbed during this process and stabilize against erosion with surfacing materials as indicated on the Drawings.

END OF SECTION 01 57 13

SECTION 01 60 00**PRODUCT REQUIREMENTS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes administrative and procedural requirements for selection of products for use in Project; product delivery, storage, and handling; manufacturers' standard warranties on products; special warranties; and comparable products.
- B. Related Requirements:
 - 1. Section 01 25 00 "Substitution Procedures" for requests for substitutions.
 - 2. Section 01 42 00 "References" for applicable industry standards for products specified.

1.03 DEFINITIONS

- A. Products: Items obtained for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.
 - 1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation shown or listed in manufacturer's published product literature, that is current as of date of the Contract Documents.
 - 2. New Products: Items that have not previously been incorporated into another project or facility. Products salvaged or recycled from other projects are not considered new products.
 - 3. Comparable Product: Product that is demonstrated and approved through submittal process to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.
- B. Basis-of-Design Product Specification: A specification in which a specific manufacturer's product is named and accompanied by the words "basis-of-design product," including make or model number or other designation, to establish the significant qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics for purposes of evaluating comparable products of additional manufacturers named in the specification.

1.04 ACTION SUBMITTALS

- A. Comparable Product Requests: Submit request for consideration of each comparable product. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
 - 1. Include data to indicate compliance with the requirements specified in "Comparable Products" Article.
 - 2. Architect's Action: If necessary, Architect will request additional information or documentation for evaluation within one week of receipt of a comparable product

request. Architect will notify Contractor of approval or rejection of proposed comparable product request within 15 days of receipt of request, or seven days of receipt of additional information or documentation, whichever is later.

- a. Form of Approval: As specified in Section 01 33 00 "Submittal Procedures."
 - b. Use product specified if Architect does not issue a decision on use of a comparable product request within time allocated.
- B. Basis-of-Design Product Specification Submittal: Comply with requirements in Section 01 33 00 "Submittal Procedures." Show compliance with requirements.

1.05 QUALITY ASSURANCE

- A. Compatibility of Options: If Contractor is given option of selecting between two or more products for use on Project, select product compatible with products previously selected, even if previously selected products were also options.
1. Each contractor is responsible for providing products and construction methods compatible with products and construction methods of other contractors.
 2. If a dispute arises between contractors over concurrently selectable but incompatible products, Architect will determine which products shall be used.

1.06 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle products using means and methods that will prevent damage, deterioration, and loss, including theft and vandalism. Comply with manufacturer's written instructions.
- B. Delivery and Handling:
1. Schedule delivery to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.
 2. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
 3. Deliver products to Project site in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
 4. Inspect products on delivery to determine compliance with the Contract Documents and to determine that products are undamaged and properly protected.
- C. Storage:
1. Store products to allow for inspection and measurement of quantity or counting of units.
 2. Store materials in a manner that will not endanger Project structure.
 3. Store products that are subject to damage by the elements, under cover in a weathertight enclosure above ground, with ventilation adequate to prevent condensation.
 4. Protect foam plastic from exposure to sunlight, except to extent necessary for period of installation and concealment.
 5. Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather-protection requirements for storage.
 6. Protect stored products from damage and liquids from freezing.
 7. Provide a secure location and enclosure at Project site for storage of materials and equipment by Owner's construction forces. Coordinate location with Owner.

1.07 PRODUCT WARRANTIES

- A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.
 - 1. Manufacturer's Warranty: Written warranty furnished by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner.
 - 2. Special Warranty: Written warranty required by the Contract Documents to provide specific rights for Owner.
- B. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution.
 - 1. Manufacturer's Standard Form: Modified to include Project-specific information and properly executed.
 - 2. Specified Form: When specified forms are included with the Specifications, prepare a written document using indicated form properly executed.
 - 3. See other Sections for specific content requirements and particular requirements for submitting special warranties.
- C. Submittal Time: Comply with requirements in Section 01 77 00 "Closeout Procedures."

PART 2 - PRODUCTS

2.01 PRODUCT SELECTION PROCEDURES

- A. General Product Requirements: Provide products that comply with the Contract Documents, are undamaged and, unless otherwise indicated, are new at time of installation.
 - 1. Provide products complying with the Buy American Act, 2009.
 - 2. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.
 - 3. Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.
 - 4. Owner reserves the right to limit selection to products with warranties not in conflict with requirements of the Contract Documents.
 - 5. Where products are accompanied by the term "as selected," Architect will make selection.
 - 6. Descriptive, performance, and reference standard requirements in the Specifications establish salient characteristics of products.
- B. Product Selection Procedures:
 - 1. Product: Where Specifications name a single manufacturer and product, provide the named product that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.
 - 2. Manufacturer/Source: Where Specifications name a single manufacturer or source, provide a product by the named manufacturer or source that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.
 - 3. Products:

- a. Restricted List: Where Specifications include a list of names of both manufacturers and products, provide one of the products listed that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered unless otherwise indicated.
 - b. Nonrestricted List: Where Specifications include a list of names of both available manufacturers and products, provide one of the products listed, or an unnamed product, that complies with requirements. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product.
4. Manufacturers:
- a. Restricted List: Where Specifications include a list of manufacturers' names, provide a product by one of the manufacturers listed that complies with requirements. Comparable products or substitutions for Contractor's convenience will be considered unless otherwise indicated.
 - b. Nonrestricted List: Where Specifications include a list of available manufacturers, provide a product by one of the manufacturers listed, or a product by an unnamed manufacturer, that complies with requirements. Comply with requirements in "Comparable Products" Article for consideration of an unnamed manufacturer's product.
5. Basis-of-Design Product: Where Specifications name a product, or refer to a product indicated on Drawings, and include a list of manufacturers, provide the specified or indicated product or a comparable product by one of the other named manufacturers. Drawings and Specifications indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product by one of the other named manufacturers.
- C. Visual Matching Specification: Where Specifications require "match Architect's sample", provide a product that complies with requirements and matches Architect's sample. Architect's decision will be final on whether a proposed product matches.
1. If no product available within specified category matches and complies with other specified requirements, comply with requirements in Section 01 25 00 "Substitution Procedures" for proposal of product.
- D. Visual Selection Specification: Where Specifications include the phrase "as selected by Architect from manufacturer's full range" or similar phrase, select a product that complies with requirements. Architect will select color, gloss, pattern, density, or texture from manufacturer's product line that includes both standard and premium items.

2.02 COMPARABLE PRODUCTS

- A. Conditions for Consideration: Architect will consider Contractor's request for comparable product when the following conditions are satisfied. If the following conditions are not satisfied, Architect may return requests without action, except to record noncompliance with these requirements:
1. Evidence that the proposed product does not require revisions to the Contract Documents, that it is consistent with the Contract Documents and will produce the indicated results, and that it is compatible with other portions of the Work.
 2. Detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.

3. Evidence that proposed product provides specified warranty.
4. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners, if requested.
5. Samples, if requested.

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 60 00

SECTION 01 73 00**EXECUTION****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes general administrative and procedural requirements governing execution of the Work including, but not limited to, the following:

- 1. Construction layout.
- 2. Field engineering and surveying.
- 3. Installation of the Work.
- 4. Cutting and patching.
- 5. Coordination of Owner-installed products.
- 6. Progress cleaning.
- 7. Starting and adjusting.
- 8. Protection of installed construction.

- B. Related Requirements:

- 1. Section 01 10 00 "Summary" for limits on use of Project site.
- 2. Section 01 33 00 "Submittal Procedures" for submitting surveys.
- 3. Section 01 77 00 "Closeout Procedures" for submitting final property survey with Project Record Documents, recording of Owner-accepted deviations from indicated lines and levels, and final cleaning.
- 4. Section 02 41 19 "Selective Demolition" for demolition and removal of selected portions of the building.
- 5. Section 07 84 13 "Penetration Firestopping" for patching penetrations in fire-rated construction.

1.03 DEFINITIONS

- A. Cutting: Removal of in-place construction necessary to permit installation or performance of other work.
- B. Patching: Fitting and repair work required to restore construction to original conditions after installation of other work.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For professional engineer.
- B. Certificates: Submit certificate signed by professional engineer certifying that location and elevation of improvements comply with requirements.
- C. Cutting and Patching Plan: Submit plan describing procedures at least 10 days prior to the time cutting and patching will be performed. Include the following information:
 - 1. Extent: Describe reason for and extent of each occurrence of cutting and patching.

2. Changes to In-Place Construction: Describe anticipated results. Include changes to structural elements and operating components as well as changes in building appearance and other significant visual elements.
 3. Products: List products to be used for patching and firms or entities that will perform patching work.
 4. Dates: Indicate when cutting and patching will be performed.
 5. Utilities and Mechanical and Electrical Systems: List services and systems that cutting and patching procedures will disturb or affect. List services and systems that will be relocated and those that will be temporarily out of service. Indicate length of time permanent services and systems will be disrupted.
 - a. Include description of provisions for temporary services and systems during interruption of permanent services and systems.
- D. Landfill Receipts: Submit copy of receipts issued by a landfill facility, licensed to accept hazardous materials, for hazardous waste disposal.
- E. Certified Surveys: Submit two copies signed by professional engineer.
- F. Final Property Survey: Submit 10 copies showing the Work performed and record survey data.

1.05 QUALITY ASSURANCE

- A. Land Surveyor Qualifications: A professional land surveyor who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing land-surveying services of the kind indicated.
- B. Cutting and Patching: Comply with requirements for and limitations on cutting and patching of construction elements specified in Section 01 73 29 "Cutting and Patching."
- C. Manufacturer's Installation Instructions: Obtain and maintain on-site manufacturer's written recommendations and instructions for installation of products and equipment.

PART 2 - PRODUCTS

2.01 MATERIALS

- A. General: Comply with requirements specified in other Sections.
 1. For projects requiring compliance with sustainable design and construction practices and procedures, use products for patching that comply with requirements in Section 01 81 13.13 "Sustainable Design Requirements - LEED for New Construction and Major Renovations," Section 01 81 13.16 "Sustainable Design Requirements - LEED for Commercial Interiors," Section 01 81 13.19 "Sustainable Design Requirements - LEED for Core and Shell Development," and Section 01 81 13.23 "Sustainable Design Requirements - LEED for Schools."
- B. In-Place Materials: Use materials for patching identical to in-place materials. For exposed surfaces, use materials that visually match in-place adjacent surfaces to the fullest extent possible.
 1. If identical materials are unavailable or cannot be used, use materials that, when installed, will provide a match acceptable to Architect for the visual and functional performance of in-place materials.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Existing Conditions: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities and other construction affecting the Work.
 - 1. Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, and water-service piping; underground electrical services, and other utilities.
 - 2. Furnish location data for work related to Project that must be performed by public utilities serving Project site.
- B. Examination and Acceptance of Conditions: Before proceeding with each component of the Work, examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.
 - 1. Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.
 - 2. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.
 - 3. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
- C. Written Report: Where a written report listing conditions detrimental to performance of the Work is required by other Sections, include the following:
 - 1. Description of the Work.
 - 2. List of detrimental conditions, including substrates.
 - 3. List of unacceptable installation tolerances.
 - 4. Recommended corrections.
- D. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

3.02 PREPARATION

- A. Existing Utility Information: Furnish information to Owner and local utility that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate with authorities having jurisdiction.
- B. Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
- C. Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings.
- D. Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents caused by differing field conditions outside the control of Contractor, submit a request for information to

Architect according to requirements in Section 01 31 00 "Project Management and Coordination."

3.03 CONSTRUCTION LAYOUT

- A. Verification: Before proceeding to lay out the Work, verify layout information shown on Drawings, in relation to the property survey and existing benchmarks. If discrepancies are discovered, notify Architect promptly.
- B. General: Engage a professional engineer to lay out the Work using accepted surveying practices.
 - 1. Establish benchmarks and control points to set lines and levels at each story of construction and elsewhere as needed to locate each element of Project.
 - 2. Establish limits on use of Project site.
 - 3. Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.
 - 4. Inform installers of lines and levels to which they must comply.
 - 5. Check the location, level and plumb, of every major element as the Work progresses.
 - 6. Notify Architect when deviations from required lines and levels exceed allowable tolerances.
 - 7. Close site surveys with an error of closure equal to or less than the standard established by authorities having jurisdiction.
- C. Site Improvements: Locate and lay out site improvements, including pavements, grading, fill and topsoil placement, utility slopes, and rim and invert elevations.
- D. Building Lines and Levels: Locate and lay out control lines and levels for structures, building foundations, column grids, and floor levels, including those required for mechanical and electrical work. Transfer survey markings and elevations for use with control lines and levels. Level foundations and piers from two or more locations.
- E. Record Log: Maintain a log of layout control work. Record deviations from required lines and levels. Include beginning and ending dates and times of surveys, weather conditions, name and duty of each survey party member, and types of instruments and tapes used. Make the log available for reference by Architect.

3.04 FIELD ENGINEERING

- A. Identification: Owner will identify existing benchmarks, control points, and property corners.
- B. Reference Points: Locate existing permanent benchmarks, control points, and similar reference points before beginning the Work. Preserve and protect permanent benchmarks and control points during construction operations.
 - 1. Do not change or relocate existing benchmarks or control points without prior written approval of Architect. Report lost or destroyed permanent benchmarks or control points promptly. Report the need to relocate permanent benchmarks or control points to Architect before proceeding.
 - 2. Replace lost or destroyed permanent benchmarks and control points promptly. Base replacements on the original survey control points.
- C. Benchmarks: Establish and maintain a minimum of two permanent benchmarks on Project site, referenced to data established by survey control points. Comply with authorities having jurisdiction for type and size of benchmark.

1. Record benchmark locations, with horizontal and vertical data, on Project Record Documents.
 2. Where the actual location or elevation of layout points cannot be marked, provide temporary reference points sufficient to locate the Work.
 3. Remove temporary reference points when no longer needed. Restore marked construction to its original condition.
- D. Certified Survey: On completion of foundation walls, major site improvements, and other work requiring field-engineering services, prepare a certified survey showing dimensions, locations, angles, and elevations of construction and sitework.
- E. Final Property Survey: Engage a [land surveyor] [professional engineer] to prepare a final property survey showing significant features (real property) for Project. Include on the survey a certification, signed by [land surveyor] [professional engineer], that principal metes, bounds, lines, and levels of Project are accurately positioned as shown on the survey.
1. Show boundary lines, monuments, streets, site improvements and utilities, existing improvements and significant vegetation, adjoining properties, acreage, grade contours, and the distance and bearing from a site corner to a legal point.
 2. Recording: At Substantial Completion, have the final property survey recorded by or with authorities having jurisdiction as the official "property survey."

3.05 INSTALLATION

- A. General: Locate the Work and components of the Work accurately, in correct alignment and elevation, as indicated.
1. Make vertical work plumb and make horizontal work level.
 2. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.
 3. Conceal pipes, ducts, and wiring in finished areas unless otherwise indicated.
 4. Maintain minimum headroom clearance of 96 inches in occupied spaces and 90 inches in unoccupied spaces.
- B. Comply with manufacturer's written instructions and recommendations for installing products in applications indicated.
- C. Install products at the time and under conditions that will ensure the best possible results. Maintain conditions required for product performance until Substantial Completion.
- D. Conduct construction operations so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy.
- E. Sequence the Work and allow adequate clearances to accommodate movement of construction items on site and placement in permanent locations.
- F. Tools and Equipment: Do not use tools or equipment that produce harmful noise levels.
- G. Templates: Obtain and distribute to the parties involved templates for work specified to be factory prepared and field installed. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.
- H. Attachment: Provide blocking and attachment plates and anchors and fasteners of

adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work. Where size and type of attachments are not indicated, verify size and type required for load conditions.

1. Mounting Heights: Where mounting heights are not indicated, mount components at heights directed by Architect.
 2. Allow for building movement, including thermal expansion and contraction.
 3. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- I. Joints: Make joints of uniform width. Where joint locations in exposed work are not indicated, arrange joints for the best visual effect. Fit exposed connections together to form hairline joints.
- J. Hazardous Materials: Use products, cleaners, and installation materials that are not considered hazardous.

3.06 OWNER-INSTALLED PRODUCTS

- A. Site Access: Provide access to Project site for Owner's construction personnel.
- B. Coordination: Coordinate construction and operations of the Work with work performed by Owner's construction personnel.
1. Construction Schedule: Inform Owner of Contractor's preferred construction schedule for Owner's portion of the Work. Adjust construction schedule based on a mutually agreeable timetable. Notify Owner if changes to schedule are required due to differences in actual construction progress.
 2. Preinstallation Conferences: Include Owner's construction personnel at preinstallation conferences covering portions of the Work that are to receive Owner's work. Attend preinstallation conferences conducted by Owner's construction personnel if portions of the Work depend on Owner's construction.

3.07 PROGRESS CLEANING

- A. General: Clean Project site and work areas daily, including common areas. Enforce requirements strictly. Dispose of materials lawfully.
1. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.
 2. Do not hold waste materials more than seven days during normal weather or three days if the temperature is expected to rise above 80 deg F .
 3. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.
 - a. Use containers intended for holding waste materials of type to be stored.
 4. Coordinate progress cleaning for joint-use areas where Contractor and other contractors are working concurrently.
- B. Site: Maintain Project site free of waste materials and debris.
- C. Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the Work.

1. Remove liquid spills promptly.
 2. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.
- D. Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.
- E. Concealed Spaces: Remove debris from concealed spaces before enclosing the space.
- F. Exposed Surfaces in Finished Areas: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.
- G. Waste Disposal: Do not bury or burn waste materials on-site. Do not wash waste materials down sewers or into waterways. Comply with waste disposal requirements in Section 01 74 19 "Construction Waste Management and Disposal."
- H. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.
- I. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.
- J. Limiting Exposures: Supervise construction operations to assure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

3.08 STARTING AND ADJUSTING

- A. Coordinate startup and adjusting of equipment and operating components with requirements in Section 01 91 13 "General Commissioning Requirements."
- B. Start equipment and operating components to confirm proper operation. Remove malfunctioning units, replace with new units, and retest.
- C. Adjust equipment for proper operation. Adjust operating components for proper operation without binding.
- D. Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- E. Manufacturer's Field Service: Comply with qualification requirements in Section 01 40 00 "Quality Requirements."

3.09 PROTECTION OF INSTALLED CONSTRUCTION

- A. Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.
- B. Comply with manufacturer's written instructions for temperature and relative humidity.

END OF SECTION 01 73 00

SECTION 01 73 29**CUTTING AND PATCHING****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes general administrative and procedural requirements governing cutting and patching Work
- B. Related Requirements:
 - 1. Section 01 73 00 "Execution" for installation of the Work, protection of installed construction, and correction of the Work.
 - 2. Section 07 84 13 "Penetration Firestopping" for patching penetrations in fire-rated construction.

1.03 DEFINITIONS

- A. Cutting: Removal of in-place construction necessary to permit installation or performance of other work.
- B. Patching: Fitting and repair work required to restore construction to original conditions after installation of other work.

1.04 INFORMATIONAL SUBMITTALS

- A. Cutting and Patching Plan: Submit plan describing procedures at least 10 days prior to the time cutting and patching will be performed. Include the following information:
 - 1. Extent: Describe reason for and extent of each occurrence of cutting and patching.
 - 2. Changes to In-Place Construction: Describe anticipated results. Include changes to structural elements and operating components as well as changes in building appearance and other significant visual elements.
 - 3. Products: List products to be used for patching and firms or entities that will perform patching work.
 - 4. Dates: Indicate when cutting and patching will be performed.
 - 5. Utilities and Mechanical and Electrical Systems: List services and systems that cutting and patching procedures will disturb or affect. List services and systems that will be relocated and those that will be temporarily out of service. Indicate length of time permanent services and systems will be disrupted.
 - a. Include description of provisions for temporary services and systems during interruption of permanent services and systems.

1.05 QUALITY ASSURANCE

- A. Cutting and Patching: Comply with requirements for and limitations on cutting and patching of construction elements.

1. Structural Elements: When cutting and patching structural elements, notify Architect of locations and details of cutting and await directions from Architect before proceeding. Shore, brace, and support structural elements during cutting and patching. Do not cut and patch structural elements in a manner that could change their load-carrying capacity or increase deflection
 2. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety
 3. Other Construction Elements: Do not cut and patch other construction elements or components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety
 4. Visual Elements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch exposed construction in a manner that would, in Architect's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.
- B. Cutting and Patching Conference: Before proceeding, meet at Project site with parties involved in cutting and patching, including mechanical and electrical trades. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts before proceeding.

PART 2 - PRODUCTS

2.01 MATERIALS

- A. General: Comply with requirements specified in other Sections.
1. For projects requiring compliance with sustainable design and construction practices and procedures, use products for patching that comply with requirements in Section 01 81 13 "Sustainable Design."
- B. In-Place Materials: Use materials for patching identical to in-place materials. For exposed surfaces, use materials that visually match in-place adjacent surfaces to the fullest extent possible.
1. If identical materials are unavailable or cannot be used, use materials that, when installed, will provide a match acceptable to Architect for the visual and functional performance of in-place materials.

PART 3 - EXECUTION

3.01 CUTTING AND PATCHING

- A. Cutting and Patching, General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.
1. Cut in-place construction to provide for installation of other components or performance of other construction, and subsequently patch as required to restore surfaces to their original condition.
- B. Temporary Support: Provide temporary support of work to be cut.

-
- C. Protection: Protect in-place construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.
- D. Cutting: Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.
1. In general, use hand or small power tools designed for sawing and grinding, not hammering and chopping. Cut holes and slots neatly to minimum size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
 2. Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.
 3. Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond-core drill.
 4. Excavating and Backfilling: Comply with requirements in applicable Sections where required by cutting and patching operations.
 5. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after cutting.
 6. Proceed with patching after construction operations requiring cutting are complete.
- E. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other work. Patch with durable seams that are as invisible as practicable. Provide materials and comply with installation requirements specified in other Sections, where applicable.
1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate physical integrity of installation.
 2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will minimize evidence of patching and refinishing.
 - a. Clean piping, conduit, and similar features before applying paint or other finishing materials.
 - b. Restore damaged pipe covering to its original condition.
 3. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove in-place floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.
 - a. Where patching occurs in a painted surface, prepare substrate and apply primer and intermediate paint coats appropriate for substrate over the patch, and apply final paint coat over entire unbroken surface containing the patch. Provide additional coats until patch blends with adjacent surfaces.
 4. Ceilings: Patch, repair, or rehang in-place ceilings as necessary to provide an even-plane surface of uniform appearance.
 5. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition and ensures thermal and moisture integrity of building enclosure.

- F. Cleaning: Clean areas and spaces where cutting and patching are performed. Remove paint, mortar, oils, putty, and similar materials from adjacent finished surfaces.

END OF SECTION 01 73 29

SECTION 01 74 19**CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes administrative and procedural requirements for the following:
 - 1. Salvaging nonhazardous construction waste.
 - 2. Recycling nonhazardous construction waste.
 - 3. Disposing of nonhazardous construction waste.
- B. Related Requirements:
 - 1. Section 04 20 00 "Unit Masonry" for disposal requirements for masonry waste.
 - 2. Section 31 22 00 "Site Preparation and Grading" for disposition of waste resulting from site clearing and removal of above- and below-grade improvements.

1.03 DEFINITIONS

- A. Construction Waste: Building and site improvement materials and other solid waste resulting from construction, remodeling, renovation, or repair operations. Construction waste includes packaging.
- B. Disposal: Removal off-site of construction waste and subsequent sale, recycling, reuse, or deposit in landfill or incinerator acceptable to authorities having jurisdiction.
- C. Recycle: Recovery of construction waste for subsequent processing in preparation for reuse.
- D. Salvage: Recovery of construction waste and subsequent sale or reuse in another facility.
- E. Salvage and Reuse: Recovery of construction waste and subsequent incorporation into the Work.

1.04 PERFORMANCE REQUIREMENTS

- A. General: Achieve end-of-Project rates for salvage/recycling of 75 percent by weight of total non-hazardous solid waste generated by the Work. Practice efficient waste management in the use of materials in the course of the Work. Use all reasonable means to divert construction and demolition waste from landfills and incinerators. Facilitate recycling and salvage of materials.

1.05 ACTION SUBMITTALS

- A. Waste Management Plan: Submit plan within 30 days of date established for the Notice to Proceed.

1.06 INFORMATIONAL SUBMITTALS

-
- A. Waste Reduction Progress Reports: Concurrent with each Application for Payment, submit report. Use Form CWM-7 for construction waste. Include the following information:
1. Material category.
 2. Generation point of waste.
 3. Total quantity of waste in **tons**.
 4. Quantity of waste salvaged, both estimated and actual in **tons**.
 5. Quantity of waste recycled, both estimated and actual in **tons**.
 6. Total quantity of waste recovered (salvaged plus recycled) in **tons**.
 7. Total quantity of waste recovered (salvaged plus recycled) as a percentage of total waste.
- B. Waste Reduction Calculations: Before request for Substantial Completion, submit calculated end-of-Project rates for salvage, recycling, and disposal as a percentage of total waste generated by the Work.
- C. Records of Donations: Indicate receipt and acceptance of salvageable waste donated to individuals and organizations. Indicate whether organization is tax exempt.
- D. Records of Sales: Indicate receipt and acceptance of salvageable waste sold to individuals and organizations. Indicate whether organization is tax exempt.
- E. Recycling and Processing Facility Records: Indicate receipt and acceptance of recyclable waste by recycling and processing facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.
- F. Landfill and Incinerator Disposal Records: Indicate receipt and acceptance of waste by landfills and incinerator facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.
- G. LEED Submittal: LEED letter template for Credit MR 2, signed by Contractor, tabulating total waste material, quantities diverted and means by which it is diverted, and statement that requirements for the credit have been met.
- H. Qualification Data: For waste management coordinator.

1.07 QUALITY ASSURANCE

- A. Waste Management Coordinator Qualifications: Experienced firm, with a record of successful waste management coordination of projects with similar requirements, that employs a LEED-Accredited Professional, certified by the USGBC, as waste management coordinator. Waste management coordinator may also serve as LEED coordinator.
- B. Regulatory Requirements: Comply with hauling and disposal regulations of authorities having jurisdiction.
- C. Waste Management Conference: Conduct conference at Project site to comply with requirements in Section 01 31 00 "Project Management and Coordination." Review methods and procedures related to waste management including, but not limited to, the following:
1. Review and discuss waste management plan including responsibilities of waste management coordinator.
 2. Review requirements for documenting quantities of each type of waste and its

- disposition.
3. Review and finalize procedures for materials separation and verify availability of containers and bins needed to avoid delays.
 4. Review procedures for periodic waste collection and transportation to recycling and disposal facilities.
 5. Review waste management requirements for each trade.

1.08 WASTE MANAGEMENT PLAN

- A. General: Develop a waste management plan according to ASTM E 1609 and requirements of this Section. Plan shall consist of waste identification, waste reduction work plan, and cost/revenue analysis. Indicate quantities by weight or volume, but use same units of measure throughout waste management plan.
- B. Waste Identification: Indicate anticipated types and quantities of site-clearing and construction waste generated by the Work. Use Form CWM-1 for construction waste. Include estimated quantities and assumptions for estimates.
- C. Waste Reduction Work Plan: List each type of waste and whether it will be salvaged, recycled, or disposed of in landfill or incinerator. Use Form CWM-3 for construction waste. Include points of waste generation, total quantity of each type of waste, quantity for each means of recovery, and handling and transportation procedures.
 1. Salvaged Materials for Reuse: For materials that will be salvaged and reused in this Project, describe methods for preparing salvaged materials before incorporation into the Work.
 2. Salvaged Materials for Sale: For materials that will be sold to individuals and organizations, include list of their names, addresses, and telephone numbers.
 3. Salvaged Materials for Donation: For materials that will be donated to individuals and organizations, include list of their names, addresses, and telephone numbers.
 4. Recycled Materials: Include list of local receivers and processors and type of recycled materials each will accept. Include names, addresses, and telephone numbers.
 5. Disposed Materials: Indicate how and where materials will be disposed of. Include name, address, and telephone number of each landfill and incinerator facility.
 6. Handling and Transportation Procedures: Include method that will be used for separating recyclable waste including sizes of containers, container labeling, and designated location on Project site where materials separation will be located.
- D. Cost/Revenue Analysis: Indicate total cost of waste disposal as if there was no waste management plan and net additional cost or net savings resulting from implementing waste management plan. Use Form CWM-5 for construction waste. Include the following:
 1. Total quantity of waste.
 2. Estimated cost of disposal (cost per unit). Include hauling and tipping fees and cost of collection containers for each type of waste.
 3. Total cost of disposal (with no waste management).
 4. Revenue from salvaged materials.
 5. Revenue from recycled materials.
 6. Savings in hauling and tipping fees by donating materials.
 7. Savings in hauling and tipping fees that are avoided.
 8. Handling and transportation costs. Include cost of collection containers for each type of waste.
 9. Net additional cost or net savings from waste management plan.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.01 PLAN IMPLEMENTATION

- A. General: Implement approved waste management plan. Provide handling, containers, storage, signage, transportation, and other items as required to implement waste management plan during the entire duration of the Contract.
 - 1. Comply with operation, termination, and removal requirements in Section 01 50 00 "Temporary Facilities and Controls."
- B. Waste Management Coordinator: Engage a waste management coordinator to be responsible for implementing, monitoring, and reporting status of waste management work plan. Coordinator shall be present at Project site full time for duration of Project.
- C. Training: Train workers, subcontractors, and suppliers on proper waste management procedures, as appropriate for the Work.
 - 1. Distribute waste management plan to everyone concerned within three days of submittal return.
 - 2. Distribute waste management plan to entities when they first begin work on-site. Review plan procedures and locations established for salvage, recycling, and disposal.
- D. Site Access and Temporary Controls: Conduct waste management operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
 - 1. Designate and label specific areas on Project site necessary for separating materials that are to be salvaged, recycled, reused, donated, and sold.
 - 2. Comply with Section 01 50 00 "Temporary Facilities and Controls" for controlling dust and dirt, environmental protection, and noise control.

3.02 RECYCLING CONSTRUCTION WASTE, GENERAL

- A. General: Recycle paper and beverage containers used by on-site workers.
- B. Recycling Incentives: Revenues, savings, rebates, tax credits, and other incentives received for recycling waste materials shall be shared equally by Authority and Contractor.
- C. Preparation of Waste: Prepare and maintain recyclable waste materials according to recycling or reuse facility requirements. Maintain materials free of dirt, adhesives, solvents, petroleum contamination, and other substances deleterious to the recycling process.
- D. Procedures: Separate recyclable waste from other waste materials, trash, and debris. Separate recyclable waste by type at Project site to the maximum extent practical according to approved construction waste management plan.
 - 1. Provide appropriately marked containers or bins for controlling recyclable waste until removed from Project site. Include list of acceptable and unacceptable materials at each container and bin.

- a. Inspect containers and bins for contamination and remove contaminated materials if found.
2. Stockpile processed materials on-site without intermixing with other materials. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
3. Stockpile materials away from construction area. Do not store within drip line of remaining trees.
4. Store components off the ground and protect from the weather.
5. Remove recyclable waste from Authority's property and transport to recycling receiver or processor.

3.03 RECYCLING CONSTRUCTION WASTE

A. Packaging:

1. Cardboard and Boxes: Break down packaging into flat sheets. Bundle and store in a dry location.
2. Polystyrene Packaging: Separate and bag materials.
3. Pallets: As much as possible, require deliveries using pallets to remove pallets from Project site. For pallets that remain on-site, break down pallets into component wood pieces and comply with requirements for recycling wood.
4. Crates: Break down crates into component wood pieces and comply with requirements for recycling wood.

B. Wood Materials:

1. Clean Cut-Offs of Lumber: Grind or chip into small pieces.
2. Clean Sawdust: Bag sawdust that does not contain painted or treated wood.
 - a. Comply with requirements in Section 32 93 00 "Plants" for use of clean sawdust as organic mulch.

C. Gypsum Board: Stack large clean pieces on wood pallets or in container and store in a dry location.

1. Clean Gypsum Board: Grind scraps of clean gypsum board using small mobile chipper or hammer mill. Screen out paper after grinding.
 - a. Comply with requirements in Section 32 93 00 "Plants" for use of clean ground gypsum board as inorganic soil amendment.

3.04 DISPOSAL OF WASTE

A. General: Except for items or materials to be salvaged, recycled, or otherwise reused, remove waste materials from Project site and legally dispose of them in a landfill or incinerator acceptable to authorities having jurisdiction.

1. Except as otherwise specified, do not allow waste materials that are to be disposed of accumulate on-site.
2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.

B. Burning: Do not burn waste materials.

C. Burning: Burning of waste materials is permitted only at designated areas on Authority's property, provided required permits are obtained. Provide full-time monitoring for burning materials until fires are extinguished.

- D. Disposal: Remove waste materials and dispose of at designated spoil areas on Authority's property.
- E. Disposal: Remove waste materials from Authority's property and legally dispose of them.

3.05 ATTACHMENTS

- A. Form CWM-1 for construction waste identification.
- B. Form CWM-3 for construction waste reduction work plan.
- C. Form CWM-5 cost/revenue analysis of construction waste reduction work plan.
- D. Form CWM-7 for construction waste

SECTION 01 77 00

CLOSEOUT PROCEDURES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes administrative and procedural requirements for contract closeout, including, but not limited to, the following:
 - 1. Substantial Completion procedures.
 - 2. Final completion procedures.
 - 3. Warranties.
 - 4. Project Record Documents.
 - 5. Operation and maintenance manuals.
 - 6. Final cleaning.
 - 7. Repair of the Work.
- B. Related Requirements:
 - 1. Section 01 32 00 "Construction Progress Documentation" for submitting final completion construction photographic documentation.
 - 2. Section 01 73 00 "Execution" for progress cleaning of Project site.

1.03 ACTION SUBMITTALS

- A. Product Data: For cleaning agents.
- B. Contractor's List of Incomplete Items: Initial submittal at Substantial Completion.
- C. Certified List of Incomplete Items: Final submittal at Final Completion.

1.04 CLOSEOUT SUBMITTALS

- A. Certificates of Release: From authorities having jurisdiction.
- B. Certificate of Insurance: For continuing coverage.
- C. Field Report: For pest control inspection.

1.05 MAINTENANCE MATERIAL SUBMITTALS

- A. Schedule of Maintenance Material Items: For maintenance material submittal items specified in other Sections.

1.06 SUBSTANTIAL COMPLETION PROCEDURES

- A. Contractor's List of Incomplete Items: Prepare and submit a list of items to be completed and corrected (Contractor's punch list), indicating the value of each item on the list and reasons why the Work is incomplete.

- B. Submittals Prior to Substantial Completion: Complete the following a minimum of 10 days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.
1. Certificates of Release: Obtain and submit releases from authorities having jurisdiction permitting Owner unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases.
 2. Submit closeout submittals specified in other Division 01 Sections, including project record documents, operation and maintenance manuals, final completion construction photographic documentation, damage or settlement surveys, property surveys, and similar final record information.
 3. Submit closeout submittals specified in individual Sections, including specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.
 4. Submit maintenance material submittals specified in individual Sections, including tools, spare parts, extra materials, and similar items, and deliver to location designated by Architect. Label with manufacturer's name and model number where applicable.
 - a. Schedule of Maintenance Material Items: Prepare and submit schedule of maintenance material submittal items, including name and quantity of each item and name and number of related Specification Section. Obtain Architect's signature for receipt of submittals.
 5. Submit test/adjust/balance records.
 6. Submit sustainable design submittals required in Section 01 81 13 "Sustainable Design Requirements," and in individual Sections.
 7. Submit changeover information related to Owner's occupancy, use, operation, and maintenance.
- C. Procedures Prior to Substantial Completion: Complete the following a minimum of 10 days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.
1. Advise Owner of pending insurance changeover requirements.
 2. Make final changeover of permanent locks and deliver keys to Owner. Advise Owner's personnel of changeover in security provisions.
 3. Complete startup and testing of systems and equipment.
 4. Perform preventive maintenance on equipment used prior to Substantial Completion.
 5. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems. Submit demonstration and training video recordings.
 6. Advise Owner of changeover in heat and other utilities.
 7. Participate with Owner in conducting inspection and walkthrough with local emergency responders.
 8. Terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.
 9. Complete final cleaning requirements, including touchup painting.
 10. Touch up and otherwise repair and restore marred exposed finishes to eliminate visual defects.
- D. Inspection: Submit a written request for inspection to determine Substantial Completion a minimum of 10 days prior to date the work will be completed and ready for final inspection and tests. On receipt of request, Architect will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare the Certificate of Substantial Completion after inspection or will notify Contractor of items,

either on Contractor's list or additional items identified by Architect, that must be completed or corrected before certificate will be issued.

1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.
2. Results of completed inspection will form the basis of requirements for final completion.

1.07 FINAL COMPLETION PROCEDURES

- A. Submittals Prior to Final Completion: Before requesting final inspection for determining final completion, complete the following:
 1. Submit a final Application for Payment according to Section 01 29 00 "Payment Procedures."
 2. Certified List of Incomplete Items: Submit certified copy of Architect's Substantial Completion inspection list of items to be completed or corrected (punch list), endorsed and dated by Architect. Certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
 3. Certificate of Insurance: Submit evidence of final, continuing insurance coverage complying with insurance requirements.
 4. Submit pest-control final inspection report.
- B. Inspection: Submit a written request for final inspection to determine acceptance a minimum of 10 days prior to date the work will be completed and ready for final inspection and tests. On receipt of request, Architect will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare a final Certificate for Payment after inspection or will notify Contractor of construction that must be completed or corrected before certificate will be issued.
 1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.

1.08 LIST OF INCOMPLETE ITEMS (PUNCH LIST)

- A. Organization of List: Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor that are outside the limits of construction.
 1. Organize list of spaces in sequential order, starting with exterior areas first and proceeding from lowest floor to highest floor.
 2. Organize items applying to each space by major element, including categories for ceiling, individual walls, floors, equipment, and building systems.
 3. Include the following information at the top of each page:
 - a. Project name.
 - b. Date.
 - c. Name of Architect.
 - d. Name of Contractor.
 - e. Page number.
 4. Submit list of incomplete items in the following format:
 - a. MS Excel electronic file. Architect will return annotated file.
 - b. PDF electronic file. Architect will return annotated file.

1.09 PROJECT RECORD DOCUMENTS

-
- A. General: Do not use Project Record Documents for construction purposes. Protect Project Record Documents from deterioration and loss. Provide access to Project Record Documents for Architect's reference during normal working hours.
- B. Record Drawings: Maintain and submit one set of blue- or black-line white prints of Contract Drawings and Shop Drawings.
1. Mark Record Prints to show the actual installation where installation varies from that shown originally. Require individual or entity who obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to prepare the marked-up Record Prints.
 - a. Give particular attention to information on concealed elements that cannot be readily identified and recorded later.
 - b. Accurately record information in an understandable drawing technique.
 - c. Record data as soon as possible after obtaining it. Record and check the markup before enclosing concealed installations.
 - d. Mark Contract Drawings or Shop Drawings, whichever is most capable of showing actual physical conditions, completely and accurately. Where Shop Drawings are marked, show cross-reference on Contract Drawings.
 2. Mark record sets with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at the same location.
 3. Mark important additional information that was either shown schematically or omitted from original Drawings.
 4. Note Construction Change Directive numbers, Change Order numbers, alternate numbers, and similar identification where applicable.
 5. Identify and date each Record Drawing; include the designation "PROJECT RECORD DRAWING" in a prominent location. Organize into manageable sets; bind each set with durable paper cover sheets. Include identification on cover sheets.
- C. Record Specifications: Submit one copy of Project's Specifications, including addenda and contract modifications. Mark copy to indicate the actual product installation where installation varies from that indicated in Specifications, addenda, and contract modifications.
1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
 2. Mark copy with the proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.
 3. Note related Change Orders, Record Drawings[, and Product Data], where applicable.
- D. Record Product Data: Submit one copy of each Product Data submittal. Mark one set to indicate the actual product installation where installation varies substantially from that indicated in Product Data.
1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
 2. Include significant changes in the product delivered to Project site and changes in manufacturer's written instructions for installation.
 3. Note related Change Orders, Record Drawings[, and Record Specifications], where applicable.

- E. Miscellaneous Record Submittals: Assemble miscellaneous records required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference.

1.10 OPERATION AND MAINTENANCE MANUALS

- A. Assemble a complete set of operation and maintenance data indicating the operation and maintenance of each system, subsystem, and piece of equipment not part of a system. Include operation and maintenance data required in individual Specification Sections and as follows:
1. Operation Data:
 - a. Emergency instructions and procedures.
 - b. System, subsystem, and equipment descriptions, including operating standards.
 - c. Operating procedures, including startup, shutdown, seasonal, and weekend operations.
 - d. Description of controls and sequence of operations.
 - e. Piping diagrams.
 2. Maintenance Data:
 - a. Manufacturer's information, including list of spare parts.
 - b. Name, address, and telephone number of Installer or supplier.
 - c. Maintenance procedures.
 - d. Maintenance and service schedules for preventive and routine maintenance.
 - e. Maintenance record forms.
 - f. Sources of spare parts and maintenance materials.
 - g. Copies of maintenance service agreements.
 - h. Copies of warranties and bonds.
- B. Organize operation and maintenance manuals into suitable sets of manageable size. Bind and index data in heavy-duty, 3-ring, vinyl-covered, loose-leaf binders, in thickness necessary to accommodate contents, with pocket inside the covers to receive folded oversized sheets. Identify each binder on front and spine with the printed title "OPERATION AND MAINTENANCE MANUAL," Project name, and subject matter of contents.

1.11 SUBMITTAL OF PROJECT WARRANTIES

- A. Time of Submittal: Submit written warranties on request of Architect for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated, or when delay in submittal of warranties might limit Owner's rights under warranty.
- B. Partial Occupancy: Submit properly executed warranties within **[15]** **◀Insert number▶** days of completion of designated portions of the Work that are completed and occupied or used by Owner during construction period by separate agreement with Contractor.
- C. Organize warranty documents into an orderly sequence based on the table of contents of Project Manual.
1. Bind warranties and bonds in heavy-duty, three-ring, vinyl-covered, loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8-1/2-by-11-inch paper.

2. Provide heavy paper dividers with plastic-covered tabs for each separate warranty. Mark tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product and the name, address, and telephone number of Installer.
 3. Identify each binder on the front and spine with the typed or printed title "WARRANTIES," Project name, and name of Contractor.
 4. Warranty Electronic File: Scan warranties and bonds and assemble complete warranty and bond submittal package into a single indexed electronic PDF file with links enabling navigation to each item. Provide bookmarked table of contents at beginning of document.
- D. Provide additional copies of each warranty to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.01 MATERIALS

- A. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.
1. Use cleaning products that comply with Green Seal's GS-37, or if GS-37 is not applicable, use products that comply with the California Code of Regulations maximum allowable VOC levels.

PART 3 - EXECUTION

3.01 DEMONSTRATION AND TRAINING

- A. Instruction: Instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.
1. Provide instructors experienced in operation and maintenance procedures.
 2. Provide instruction at mutually agreed-on times. For equipment that requires seasonal operation, provide similar instruction at the start of each season.
 3. Schedule training with Owner, through Architect with at least seven days' advance notice.
 4. Coordinate instructors, including providing notification of dates, times, length of instruction, and course content.
- B. Program Structure: Develop an instruction program that includes individual training modules for each system and equipment not part of a system, as required by individual Specification Sections. For each training module, develop a learning objective and teaching outline. Include instruction for the following:
1. System design and operational philosophy.
 2. Review of documentation.
 3. Operations.
 4. Adjustments.
 5. Troubleshooting.
 6. Maintenance.
 7. Repair.

3.02 FINAL CLEANING

- A. General: Perform final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.
- B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.
 - 1. Complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a designated portion of Project:
 - a. Clean Project site, yard, and grounds, in areas disturbed by construction activities, including landscape development areas, of rubbish, waste material, litter, and other foreign substances.
 - b. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.
 - c. Rake grounds that are neither planted nor paved to a smooth, even-textured surface.
 - d. Remove tools, construction equipment, machinery, and surplus material from Project site.
 - e. Remove snow and ice to provide safe access to building.
 - f. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.
 - g. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
 - h. Sweep concrete floors broom clean in unoccupied spaces.
 - i. Vacuum carpet and similar soft surfaces, removing debris and excess nap; clean according to manufacturer's recommendations if visible soil or stains remain.
 - j. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Polish mirrors and glass, taking care not to scratch surfaces.
 - k. Remove labels that are not permanent.
 - l. Wipe surfaces of mechanical and electrical equipment, elevator equipment, and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
 - m. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.
 - n. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.
 - o. Clean ducts, blowers, and coils if units were operated without filters during construction or that display contamination with particulate matter on inspection.
 - 1) Clean HVAC system in compliance with NADCA Standard 1992-01. Provide written report on completion of cleaning.
 - p. Clean light fixtures, lamps, globes, and reflectors to function with full efficiency.
 - q. Leave Project clean and ready for occupancy.

- C. Pest Control: Comply with pest control requirements in Section 01 50 00 "Temporary Facilities and Controls." Prepare written report.
- D. Construction Waste Disposal: Comply with waste disposal requirements in Section 01 74 19 "Construction Waste Management and Disposal."

3.03 REPAIR OF THE WORK

- A. Complete repair and restoration operations before requesting inspection for determination of Substantial Completion.
- B. Repair or remove and replace defective construction. Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment. Where damaged or worn items cannot be repaired or restored, provide replacements. Remove and replace operating components that cannot be repaired. Restore damaged construction and permanent facilities used during construction to specified condition.
 - 1. Remove and replace chipped, scratched, and broken glass, reflective surfaces, and other damaged transparent materials.
 - 2. Touch up and otherwise repair and restore marred or exposed finishes and surfaces. Replace finishes and surfaces that already show evidence of repair or restoration.
 - a. Do not paint over "UL" and other required labels and identification, including mechanical and electrical nameplates. Remove paint applied to required labels and identification.
 - 3. Replace parts subject to operating conditions during construction that may impede operation or reduce longevity.
 - 4. Replace burned-out bulbs, bulbs noticeably dimmed by hours of use, and defective and noisy starters in fluorescent and mercury vapor fixtures to comply with requirements for new fixtures.

END OF SECTION 01 77 00

SECTION 01 78 39
PROJECT RECORD DOCUMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Requirements for as-built drawings.

1.2 SUBMITTALS

- A. Procedures: Section 01 33 00, Submittal Procedures.
- B. Incremental Submission of As-Built Drawings
1. Upon request from the Engineer, make available copies of selected as-built drawings in color.
 2. Incremental as-built drawings requested by the Engineer shall be stamped "As-Built", signed, and dated by Contractor.
- C. Final Submission of As-Built Drawings:
1. At completion of Work, and before requesting Final Acceptance of Work, deliver Final as-built drawings to the Engineer.
 2. Stamp drawings "As-Built Record."
 3. Submit five hard copies and three electronic copies on CD or DVD in AutoCAD (latest version) and in PDF formats.
 4. Submit as-built drawings and include the following information:
 - a. Date of submission.
 - b. Project title and number.
 - c. Contractor's name and address.
 - d. Certification that as-built drawings as submitted are complete and accurate.
 - e. Signature of Contractor or its authorized representative.

PART 2 - PRODUCTS

Not Used

PART 3 - EXECUTION

3.1 MAINTENANCE OF AS-BUILT DRAWINGS

- A. During factory wiring and testing of a TPSS, or other equipment, immediately update drawings or documents affected by a change in the circuits or equipment.
- B. During on-site installation and testing, maintain in each TPSS plan books of approved shop drawings, and immediately update drawings affected by a change in the circuits or equipment.
- C. Protect drawings from damage.
- D. Update as-built documents continuously during the course of construction.

PART 4 - MEASUREMENT AND PAYMENT

4.1 MEASUREMENT

Not Used

4.2 PAYMENT

Not Used

END OF SECTION

SECTION 01 81 13**SUSTAINABLE DESIGN REQUIREMENTS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes general requirements and procedures for compliance with certain USGBC LEED prerequisites and credits needed for Project to obtain LEED-Gold-certification based on USGBC's "LEED 2009 for New Construction & Major Renovations."
 - 1. Other LEED prerequisites and credits needed to obtain LEED certification depend on product selections and may not be specifically identified as LEED requirements. Compliance with requirements needed to obtain LEED prerequisites and credits may be used as one criterion to evaluate substitution requests and comparable product requests.
 - 2. Additional LEED prerequisites and credits needed to obtain the indicated LEED certification depend on Architect's design and other aspects of Project that are not part of the Work of the Contract.
 - 3. A copy of the LEED Project checklist is attached at the end of this Section for information only.
 - 4. Specific requirements for LEED are included in greater detail in other Sections.

1.03 DEFINITIONS

- A. Chain-of-Custody Certificates: Certificates signed by manufacturers certifying that wood used to make products was obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship." Certificates shall include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body.
- B. Regional Materials: Materials that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles of Project site. If only a fraction of a product or material is extracted/harvested/recovered and manufactured locally, then only that percentage (by weight) shall contribute to the regional value.
- C. Recycled Content: The recycled content value of a material assembly shall be determined by weight. The recycled fraction of the assembly is then multiplied by the cost of assembly to determine the recycled content value.
 - 1. "Post-consumer" material is defined as waste material generated by households or by commercial, industrial, and institutional facilities in their role as end users of the product, which can no longer be used for its intended purpose.
 - 2. "Pre-consumer" material is defined as material diverted from the waste stream during the manufacturing process. Excluded is reutilization of materials such as rework, regrind, or scrap generated in a process and capable of being reclaimed within the same process that generated it.

1.04 ADMINISTRATIVE REQUIREMENTS

- A. Respond to questions and requests from Architect and the USGBC regarding LEED credits that are the responsibility of the Contractor, that depend on product selection or product qualities, or that depend on Contractor's procedures until the USGBC has made its determination on the project's LEED certification application. Document responses as informational submittals.

1.05 ACTION SUBMITTALS

- A. General: Submit additional LEED submittals required by other Specification Sections.
- B. LEED submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated LEED requirements.
- C. LEED Documentation Submittals:
1. Credit EA 5: Product data and wiring diagrams for sensors and data collection system used to provide continuous metering of building energy-consumption performance over a period of time of not less than one year of postconstruction occupancy.
 2. Credit MR 2: Comply with Section 01 74 19 "Construction Waste Management and Disposal."
 3. Credit MR 4: Product data and certification letter from product manufacturers indicating percentages by weight of post-consumer and pre-consumer recycled content for products having recycled content. Include statement indicating material cost for each product having recycled content.
 4. Credit MR 5: Product data for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
 5. Credit MR 7: Product data and chain-of-custody certificates for products containing certified wood. Include statement indicating cost for each certified wood product.
 6. Credit IEQ 3.1:
 - a. Construction indoor-air-quality management plan.
 - b. Product data for temporary filtration media.
 - c. Product data for filtration media used during occupancy.
 - d. Construction Documentation: Six photographs at three different times during the construction period, along with a brief description of the SMACNA approach employed, documenting implementation of the indoor-air-quality management measures, such as protection of ducts and on-site stored or installed absorptive materials.
 7. Credit IEQ 3.2:
 - a. Signed statement describing the building air flush-out procedures including the dates when flush-out was begun and completed and statement that filtration media was replaced after flush-out.
 - b. Product data for filtration media used during flush-out and during occupancy.
 - c. Report from testing and inspecting agency indicating results of indoor-air-quality testing and documentation showing compliance with indoor-air-quality testing procedures and requirements.
 8. Credit IEQ 4.1: Product data for adhesives and sealants used inside the weatherproofing system indicating VOC content of each product used.
 9. Credit IEQ 4.2: Product data for paints and coatings used inside the weatherproofing system indicating VOC content of each product used.

10. Credit IEQ 4.4: Product data for products containing composite wood or agrifiber products or wood glues indicating that they do not contain urea-formaldehyde resin.

1.06 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For LEED coordinator.
- B. Project Materials Cost Data: Provide statement indicating total cost for materials used for Project. Costs exclude labor, overhead, and profit. Include breakout of costs for the following categories of items:
 1. Furniture.
 2. Plumbing.
 3. Mechanical.
 4. Electrical.
 5. Specialty items such as elevators and equipment.
 6. Wood-based construction materials.
- C. LEED Action Plans: Provide preliminary submittals within seven days of date established for the Notice to Proceed indicating how the following requirements will be met:
 1. Credit MR 2: Waste management plan complying with Section 01 74 19 "Construction Waste Management and Disposal."
 2. Credit MR 4: List of proposed materials with recycled content. Indicate cost, post-consumer recycled content, and pre-consumer recycled content for each product having recycled content.
 3. Credit MR 5: List of proposed regional materials. Identify each regional material, including its source, cost, and the fraction by weight that is considered regional.
 4. Credit MR 7: List of proposed certified wood products. Indicate each product containing certified wood, including its source and cost of certified wood products.
 5. Credit IEQ 3.1: Construction indoor-air-quality management plan.
- D. LEED Progress Reports: Concurrent with each Application for Payment, submit reports comparing actual construction and purchasing activities with LEED action plans for the following:
 1. Credit MR 2: Waste reduction progress reports complying with Section 01 74 19 "Construction Waste Management and Disposal."
 2. Credit MR 4: Recycled content.
 3. Credit MR 5: Regional materials.
 4. Credit MR 7: Certified wood products.

1.07 QUALITY ASSURANCE

- A. LEED Coordinator: Engage an experienced LEED-Accredited Professional to coordinate LEED requirements. LEED coordinator may also serve as waste management coordinator.

PART 2 - PRODUCTS

2.01 MATERIALS, GENERAL

- A. Provide products and procedures necessary to obtain LEED credits required in this Section. Although other Sections may specify some requirements that contribute to

LEED credits, the Contractor shall determine additional materials and procedures necessary to obtain LEED credits indicated.

2.02 RECYCLED CONTENT OF MATERIALS

- A. Credit MR 4: Building materials shall have recycled content such that post-consumer recycled content plus one-half of pre-consumer recycled content for Project constitutes a minimum of 20 percent of cost of materials used for Project.
1. Cost of post-consumer recycled content plus one-half of pre-consumer recycled content of an item shall be determined by dividing weight of post-consumer recycled content plus one-half of pre-consumer recycled content in the item by total weight of the item and multiplying by cost of the item.
 2. Do not include furniture, plumbing, mechanical and electrical components, and specialty items such as elevators and equipment in the calculation.

2.03 REGIONAL MATERIALS

- A. Credit MR 5: Not less than 20 percent of building materials (by cost) shall be regional materials.

2.04 CERTIFIED WOOD

- A. Credit MR 7: Not less than 50 percent (by cost) of wood-based materials shall be produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
1. Wood-based materials include, but are not limited to, the following materials when made from wood, engineered wood products, or wood-based panel products:
 - a. Rough carpentry.
 - b. Miscellaneous carpentry.
 - c. Finish carpentry.
 - d. Architectural woodwork.
 - e. Wood paneling.
 - f. Wood veneer wall covering.
 - g. Wood flooring.
 - h. Wood lockers.
 - i. Wood cabinets.

2.05 LOW-EMITTING MATERIALS

- A. Credit IEQ 4.1: For field applications that are inside the weatherproofing system, adhesives and sealants shall comply with the following VOC content limits when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
1. Wood Glues: 30 g/L.
 2. Metal-to-Metal Adhesives: 30 g/L.
 3. Adhesives for Porous Materials (Except Wood): 50 g/L.
 4. Subfloor Adhesives: 50 g/L.
 5. Plastic Foam Adhesives: 50 g/L.
 6. Carpet Adhesives: 50 g/L.
 7. Carpet Pad Adhesives: 50 g/L.
 8. VCT and Asphalt Tile Adhesives: 50 g/L.
 9. Cove Base Adhesives: 50 g/L.
 10. Gypsum Board and Panel Adhesives: 50 g/L.

11. Rubber Floor Adhesives: 60 g/L.
 12. Ceramic Tile Adhesives: 65 g/L.
 13. Multipurpose Construction Adhesives: 70 g/L.
 14. Fiberglass Adhesives: 80 g/L.
 15. Contact Adhesive: 80 g/L.
 16. Structural Glazing Adhesives: 100 g/L.
 17. Wood Flooring Adhesive: 100 g/L.
 18. Structural Wood Member Adhesive: 140 g/L.
 19. Single-Ply Roof Membrane Adhesive: 250 g/L.
 20. Special-Purpose Contact Adhesive (contact adhesive that is used to bond melamine-covered board, metal, unsupported vinyl, rubber, or wood veneer 1/16 inch or less in thickness to any surface): 250 g/L.
 21. Top and Trim Adhesive: 250 g/L.
 22. Plastic Cement Welding Compounds: 250 g/L.
 23. ABS Welding Compounds: 325 g/L.
 24. CPVC Welding Compounds: 490 g/L.
 25. PVC Welding Compounds: 510 g/L.
 26. Adhesive Primer for Plastic: 550 g/L.
 27. Sheet-Applied Rubber Lining Adhesive: 850 g/L.
 28. Aerosol Adhesive, General-Purpose Mist Spray: 65 percent by weight.
 29. Aerosol Adhesive, General-Purpose Web Spray: 55 percent by weight.
 30. Special-Purpose Aerosol Adhesive (All Types): 70 percent by weight.
 31. Other Adhesives: 250 g/L.
 32. Architectural Sealants: 250 g/L.
 33. Nonmembrane Roof Sealants: 300 g/L.
 34. Single-Ply Roof Membrane Sealants: 450 g/L.
 35. Other Sealants: 420 g/L.
 36. Sealant Primers for Nonporous Substrates: 250 g/L.
 37. Sealant Primers for Porous Substrates: 775 g/L.
 38. Modified Bituminous Sealant Primers: 500 g/L.
 39. Other Sealant Primers: 750 g/L.
- B. Credit IEQ 4.2: For field applications that are inside the weatherproofing system, paints and coatings shall comply with the following VOC content limits when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
1. Flat Paints and Coatings: VOC not more than 50 g/L.
 2. Nonflat Paints and Coatings: VOC not more than 150 g/L.
 3. Dry-Fog Coatings: VOC not more than 400 g/L.
 4. Primers, Sealers, and Undercoaters: VOC not more than 200 g/L.
 5. Anticorrosive and Antirust Paints Applied to Ferrous Metals: VOC not more than 250 g/L.
 6. Zinc-Rich Industrial Maintenance Primers: VOC not more than 340 g/L.
 7. Pretreatment Wash Primers: VOC not more than 420 g/L.
 8. Clear Wood Finishes, Varnishes: VOC not more than 350 g/L.
 9. Clear Wood Finishes, Lacquers: VOC not more than 550 g/L.
 10. Floor Coatings: VOC not more than 100 g/L.
 11. Shellacs, Clear: VOC not more than 730 g/L.
 12. Shellacs, Pigmented: VOC not more than 550 g/L.
 13. Stains: VOC not more than 250 g/L.
- C. Credit IEQ 4.4: Composite wood, agrifiber products, and adhesives shall not contain urea-formaldehyde resin.

PART 3 - EXECUTION

3.01 MEASUREMENT AND VERIFICATION

- A. Credit EA 5: Implement measurement and verification plan consistent with [Option B: Energy Conservation Measure Isolation] [Option D: Calibrated Simulation, Savings Estimation Method 2] in the EVO's "International Performance Measurement and Verification Protocol (IPMVP), Volume III: Concepts and Options for Determining Energy Savings in New Construction," and as further defined by the following:
1. [Insert measurement and verification plan design team submitted for credit].
- B. If not already in place, install metering equipment to measure energy usage. Monitor, record, and trend log measurements.
- C. Evaluate energy performance and efficiency by comparing actual to predicted performance.
- D. Measurement and verification period shall cover at least one year of postconstruction occupancy.

3.02 CONSTRUCTION WASTE MANAGEMENT

- A. Credit MR 2: Comply with Section 01 74 19 "Construction Waste Management and Disposal."

3.03 CONSTRUCTION INDOOR-AIR-QUALITY MANAGEMENT

- A. Credit IEQ 3.1: Comply with SMACNA's "SMACNA IAQ Guideline for Occupied Buildings under Construction."
1. If Owner authorizes use of permanent heating, cooling, and ventilating systems during construction period as specified in Section 01 50 00 "Temporary Facilities and Controls," install filter media having a MERV 8 according to ASHRAE 52.2 at each return-air inlet for the air-handling system used during construction.
 2. Replace all air filters immediately prior to occupancy.
- B. Credit IEQ 3.2: Comply with one of the following requirements:
1. After construction ends, prior to occupancy and with all interior finishes installed, perform a building flush-out by supplying a total volume of 14000 cu. ft. of outdoor air per sq. ft. of floor area while maintaining an internal temperature of at least 60 deg F and a relative humidity no higher than 60 percent.
 - a. [Insert operating requirements].
 2. If occupancy is desired prior to flush-out completion, the space may be occupied following delivery of a minimum of 3500 cu. ft. of outdoor air per sq. ft. of floor area to the space. Once a space is occupied, it shall be ventilated at a minimum rate of 0.30 cfm per sq. ft. of outside air or the design minimum outside air rate determined in Prerequisite IEQ 1, whichever is greater. During each day of the flush-out period, ventilation shall begin a minimum of three hours prior to occupancy and continue during occupancy. These conditions shall be maintained until a total of 14000 cu. ft./sq. ft. of outside air has been delivered to the space.
 - a. [Insert operating requirements].
 3. Air-Quality Testing:
 - a. Conduct baseline indoor-air-quality testing, after construction ends and prior to occupancy, using testing protocols consistent with the EPA's

"Compendium of Methods for the Determination of Air Pollutants in Indoor Air," and as additionally detailed in the USGBC's "Green Building Design and Construction Reference Guide."

- b. Demonstrate that the contaminant maximum concentrations listed below are not exceeded:
 - 1) Formaldehyde: 27 ppb.
 - 2) Particulates (PM10): 50 micrograms/cu. m.
 - 3) Total Volatile Organic Compounds (TVOC): 500 micrograms/cu. m.
 - 4) 4-Phenylcyclohexene (4-PH): 6.5 micrograms/cu. m.
 - 5) Carbon Monoxide: 9 ppm and no greater than 2 ppm above outdoor levels.
- c. For each sampling point where the maximum concentration limits are exceeded, conduct additional flush-out with outside air and retest the specific parameter(s) exceeded to indicate the requirements are achieved. Repeat procedure until all requirements have been met. When retesting noncomplying building areas, take samples from same locations as in the first test.
- d. Air-sample testing shall be conducted as follows:
 - 1) All measurements shall be conducted prior to occupancy but during normal occupied hours, and with building ventilation system starting at the normal daily start time and operated at the minimum outside air flow rate for the occupied mode throughout the duration of the air testing.
 - 2) Building shall have all interior finishes installed including, but not limited to, millwork, doors, paint, carpet, and acoustic tiles. Nonfixed furnishings such as workstations and partitions are encouraged, but not required, to be in place for the testing.
 - 3) Number of sampling locations varies depending on the size of building and number of ventilation systems. For each portion of building served by a separate ventilation system, the number of sampling points shall not be less than one per 25,000 sq. ft. or for each contiguous floor area, whichever is larger, and shall include areas with the least ventilation and greatest presumed source strength.
 - 4) Air samples shall be collected between 3 and 6 feet from the floor to represent the breathing zone of occupants, and over a minimum four-hour period.

SECTION 01 91 13**GENERAL COMMISSIONING REQUIREMENTS**

PART 1 GENERAL

1.01 DESCRIPTION

- A. The work described in this section includes the formal and comprehensive commissioning process and responsibilities of the Owner, CxA (Owner selected Commissioning Authority), General Contractor and subcontractors / vendors. These participants shall work together as a Commissioning Team to complete all commissioning requirements:
1. A Commissioning Authority (CxA) will be designated by the Owner to oversee and approve the completion of all commissioning activities. The CxA has the overall responsibility for planning, coordinating, and executing the commissioning process with all of the parties participating in the commissioning process. This includes the Owner, construction manager, facility operator, architect, engineer, general contractor, subcontractors, specialty subcontractors, equipment suppliers, vendors, authorities having jurisdiction and others entities as required.
 2. The General Contractor is responsible for designating a person as the Contractor Commissioning Specialist (CxC). The CxC has the overall responsibility of policing and coordinating all commissioning tasks assigned to the General Contractor and each Subcontractor Commissioning Coordinator (CC). The CxC shall have the authority to make decisions for the General Contractor in regards to the commissioning process. The CxC shall represent the General Contractor as the liaison between all Subcontractor CC's and the CxA. The CxC shall act as the focal point for gathering and coordinating Subcontractor communications, scheduling and document management directly related to the commissioning process.
- B. Commissioning is the process to verify to the Owner that systems, equipment, mechanical, electrical, controls and special systems function together properly to meet performance requirements and design intent, and as described in the Contract Documents. The General Contractor and CxC shall be responsible for executing and performing the commissioning process as outlined in this specification and in references and attachments throughout the Contract Documents. The Contractor shall furnish labor and materials sufficient to meet all requirements of building commissioning under this contract. The commissioning process is not intended to conflict with applicable building codes. Apparent conflicts shall be brought to the attention of the Owner and CxA for resolution.
- C. The General Contractor and CxC shall identify discipline Commissioning Coordinators (CC). This shall include naming a representative coordinator from each of the subcontractor entities. Each CC shall participate as a member of the project Commissioning Team.
1. Each CC shall coordinate their commissioning efforts and the efforts of their vendors with the CxC. This includes providing timely response to issues regarding their discipline/company.
 2. Each CC is responsible for providing scheduling input to the CxC on all activities that affect installation, start-up, TAB, functional performance testing, operator training, warranty, and project closeout.
 3. The CxC shall coordinate the CC commissioning activities and communicate the status of each activity to the CxA and Commissioning Team.

- D. The CxC will work with the General Contactor and commissioning coordinators to establish a Commissioning Schedule. The CxC will provide a draft schedule of primary commissioning events to the CxA and Owner for review no later than 60 days after Notice to Proceed. The draft schedule will be reviewed at the commissioning kickoff meeting, with a final schedule presented to the CxA for review and to the Owner for approval. As construction progresses, detailed schedules are more fully developed by the commissioning team.
- E. Details of the commissioning process and procedures will be incorporated into a final Commissioning Plan. The plan will be coordinated and implemented by the CxA.
- F. Construction phasing requirements that affect the commissioning process will be addressed in the final Commissioning Plan and adhered to by the General Contractor.

1.02 COMMISSIONING DATA MANAGEMENT (DM) SYSTEM

- A. The CxA shall work with the Owner and CxC to develop and implement a real-time database method of reporting the commissioned status of each piece of equipment, system and building component to be commissioned. CC's shall update the Data Management (DM) system regularly with completed commissioning activities. The DM system shall be provided by the CxA. The CxA shall provide access and orientation for use of the database by all parties. The database shall be accessible during regular construction hours to the CxA, Owner, General Contractor, CxC and CC's.
- B. A secure website will be established by the CxA for storing and organizing Contractor-generated field documents. All documentation shall be uploaded electronically in PDF format. A sample list of typical documents is provided below:
 - 1. Ductwork Air Leakage Tests
 - 2. Pipework Flushing Reports
 - 3. Pipework Pressure Tests
 - 4. Pipework Water Analysis Reports
 - 5. Equipment Diagrams
 - 6. DDC Point-to-Point Checkout Sheets
 - 7. Manufacturer Startup Reports

1.03 COMMISSIONING STANDARDS

- A. The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only. Except where a date is noted, the latest version of the publication at time of contract award shall be used.

AM. SOCIETY OF HEATING, REFRIGERATING & AIR-CONDITIONING ENGINEERS (ASHRAE)

ASHRAE Guideline 0 (2005) The Commissioning Process-P/C: 02/2009

ASHRAE Guideline 1 (2007) HVAC&R Technical Requirements for The Commissioning Process

ASSOCIATED AIR BALANCE COUNCIL (AABC)

ACG Commissioning Guideline (2005) Commissioning Guideline

NATIONAL ENVIRONMENTAL BALANCING BUREAU (NEBB)
NEBB Commissioning Standard (2009) Procedural Standards for Whole
Building Systems Commissioning of New
Construction; 3rd Edition

SHEET METAL AND AIR CONDITIONING CONTRACTORS' NATIONAL
ASSOCIATION (SMACNA)
SMACNA Commissioning Manual (1994, 1st Ed) HVAC Systems
Commissioning Manual

1.04 SIMILAR TERMS

- A. In some instances, terminology differs between the Contract and the Commissioning Standard primarily because the intent of this Section is to use the industry standards specified, along with additional requirements listed herein to produce optimal results. Contract requirements take precedent over the corresponding ACG, NEBB, BCA or TABB requirements where differences exist.
- B. References to Pre-Functional Check (PFC) and Functional Performance Test (FPT) lists are included in other specification sections that are directly related to the commissioning process. The contractor shall be responsible for coordinating all installation, start-up, testing, and verification requirements with the requirements outlined in this specification. Where these requirements overlap or may otherwise result in a duplication of effort, the contractor shall notify the Owner and CxA, complete with supporting documentation, for review and assessment.

1.05 QUALIFICATIONS OF COMMISSIONING SPECIALIST (CXC)

- A. The CxC shall possess the qualifications of an individual specializing in the commissioning of building systems of similar scope and complexity to those of this project.
- B. The CxC shall have a minimum of 10 years experience as a project manager or project superintendent responsible for the coordination of mechanical, electrical, and plumbing systems installation, testing, and warranty repair work. The General Contractor shall immediately notify the Contracting Officer if a change of CxC personal is necessary. The General Contractor shall then resubmit qualifications of the replacement CxC for Owner review and approval.
 1. The CxC shall have documented experience with working on similar projects that include Commissioning requirements and the presence of an Owner selected CxA.
 2. Where a single individual does not have the required experience in commissioning of both mechanical and electrical system, multiple individuals with the necessary qualifications may be submitted for approval as CxC assistants under the direct management of a designated Lead CxC.

1.06 RELATED DOCUMENTS

- A. All provisions of the Contract Documents (drawings/specifications and performance criteria) apply to the work in this section. Conflicting requirements shall be brought to the Owner's attention in writing prior to completion of the bidding phase. Owner shall provide clarification in a timely manner.
- B. The following specifications may contain additional installation, testing and acceptance requirements. Interpretation of these specifications by themselves will not provide relief from the requirements stated in all other areas of the contract documents:

1. Division 01 - GENERAL REQUIREMENTS
2. Division 21 - FIRE SUPPRESSION
3. Division 22 - PLUMBING
4. Division 23 - HEATING, VENTILATING AND AIR CONDITIONING
5. Division 26 - ELECTRICAL
6. Division 27 – COMMUNICATIONS

1.07 SUBMITTALS

- A. Submittals with a "CxA" require Commissioning Authority approval. The General Contractor shall review and approve all submittals before they are reviewed by the CxA. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

Commissioning Plan; CxA

The CxA shall provide the CxC and General Contractor with a draft Commissioning Plan. The CxC and General Contractor shall review the Plan with the construction team and return it within 30 days with any recommended changes. Include contact information for all subcontractors CC's (Commissioning Coordinators). After updates are incorporated by the CxA, a final commissioning plan shall be provided to the General Contractor and Owner.

Commissioning Schedule; CxA

Prepared by the General Contractor and CxC. A preliminary commissioning schedule will be provided by the General Contractor no later than 90 days after Notice to Proceed. The schedule shall include 6 specific milestones for each piece of commissioned equipment; i.e. installation completed, start-up date, point-to-point completed, TAB completed, FPT readiness, and date of operator training. The schedule shall be updated weekly during the commissioning process.

Commissioned Equipment Naming Convention and I.D. Tagging; CxA

The Contractor and subcontractors shall develop an integrated equipment naming convention with unique I.D. tag number for each piece of commissioned equipment. The naming convention used on the Bid Documents shall be revised to comply with the Owner's final naming convention for each type of equipment and location. Electronic drawing files used for the bid documents shall be provided to the Contractor, and the Contractor shall update the electronic drawing files with the new I.D. tag numbers and then submit for approval. The approved I.D. numbering scheme shall be used by the Contractor, subcontractors, vendors and suppliers on all submittals and project closeout documentation, including O&M Manuals and documents provided to the Commissioning Authority (CxA). The updated electronic drawing files with I.D. tag numbers shall be approved prior to submitting other equipment/system submittals scheduled for commissioning.

Pre-Functional Check sheets; CxA

Draft PFC sheets shall be prepared by CxA utilizing the Data Management System. The CxC and General Contractor shall review the material and return with comments within 30 days. The CxC and General Contractor shall be responsible for designating final PFC sheet responsibility during the review. The CxA shall update the DM system check sheets with revisions approved by the Owner and information included in the approved equipment submittals. The DM system updates and check sheets shall be available to the General Contractor for use, no later than 90 days prior to beginning the pre-functional installation and start-up checks. Equipment submittal data shall be incorporated into PFC sheets by the CxA. Draft PFC sheets shall be submitted to the Owner, CxC and CC's for review and comment. Final PFC sheets shall be submitted at least 60 days prior to beginning the pre-functional checks.

Refer to Section 1.8 Systems to be Commissioned for a complete list of all systems and equipment that shall be included within the commissioning scope.

Functional Performance Test sheets; CxA

Draft FPT sheets shall be prepared by CxA utilizing the Data Management system. The FPT sheets shall be similar to the complexity illustrated by the sample FPT sheets included in the Appendix. The CxC and General Contractor shall review the material and return with comments within 30 days. The CxA shall update the DM system test sheets with revisions approved by the Owner and integrated testing information included in the approved control system sequence of operation submittals. Draft FPT sheets shall be completed only after all relevant equipment submittals and control sequences have been approved. Final FPT sheets shall be provided to the contractor at least 45 days prior to beginning the functional acceptance tests.

Refer to Section 1.9 Systems to be Commissioned for a complete list of all systems and equipment that shall be included within the commissioning scope.

Final Control System Sequence of Operations; CxA

The contractor shall provide electronic PDF copies of all final Control System Sequence of Operations. The contractor shall notify the CxA to acknowledge completion.

Equipment Diagrams; CxA

The contractor shall provide electronic PDF copies of all Equipment Diagrams. The contractor shall then update the DM system accordingly to acknowledge completion.

Equipment Submittals; CxA

For commissioned systems and building components only, provide to Owner and CxA for review & comment simultaneously with timing of Owner's review of all other project equipment/material submittals. The CxA shall provide all comments back to the A/E team in advance of the submittal return date. The A/E team shall review and incorporate the CxA submittal comments. The CxA shall incorporate approved data into PFC and FPT sheets.

Testing, Adjusting, Balancing (TAB) Procedures and Reports; CxA

The contractor shall submit test procedures for any specialty testing considered outside of the normal TAB trade association recommended procedures. Preliminary air/hydraulic TAB reports shall be supplied directly to the Owner or CxA upon request. Final TAB report shall be submitted no later than 7 days prior to beginning system functional performance tests.

Duct Air Leakage Test (DALT) Sheets; CxA

The contractor shall provide electronic PDF copies of all completed DALT sheets. The contractor shall then update the DM system accordingly to acknowledge completion.

Pipework Pressure Test Sheets; CxA

The contractor shall provide electronic PDF copies of all completed Pipework Pressure Test sheets. The contractor shall then update the DM system accordingly to acknowledge completion.

Pipework Flushing Report; CxA

The contractor shall provide electronic PDF copies of all completed Pipework Flushing Reports. The contractor shall then update the DM system accordingly to acknowledge completion.

Pipework Water Analysis Report; CxA

The contractor shall provide electronic PDF copies of all completed Pipework Water Analysis Reports. The contractor shall then update the DM system accordingly to acknowledge completion.

Fire Alarm / Smoke Control System Test Plan and Report; CxA

The contractor shall submit the Fire Alarm and Smoke Control system test plan, including FA/smoke control matrix, no later than 90 days prior to beginning field testing. Final test report shall be submitted to the Owner, CxA and the designated Fire Protection Engineer for approval.

Manufacturer Startup Reports; CxA

The contractor shall provide electronic PDF copies of all completed Manufacturer Startup Reports. The contractor shall then update the DM system accordingly to acknowledge completion.

DDC Point-to-Point Checkout Sheets; CxA

The contractor shall provide electronic PDF copies of all completed DDC Point-to-Point checkout sheets. The contractor shall then update the DM system accordingly to acknowledge completion.

Trending Reports; CxA

The contractor shall provide trending information from the Building Management Control System (BMCS). Individual trend graphs for each system and component shall be setup using the appropriate engineering scales and shall be provided in 8-1/2x11 PDF format with title block, name, location and scaling parameters labeled in a legible and usable manner. The individual PDF file names shall be in accordance with the CxA naming conventions used in the Final Commissioning Record.

A complete list of proposed trending fields, complete with sampling rate, shall be submitted to the Owner and CxA for approval, along with sample graphs. Trending requirements shall be continually refined as construction progresses with final approval from the CxA and Owner.

Contractor Commissioning Specialist (CxC); CxA

Submit CxC's qualifications and supporting documentation no later than 21 days after Notice to Proceed. The documentation shall include similar project complexity, supervisory experience, project experience, dates, employers and reference names/phone numbers.

Test Equipment Calibration Certificates; CxA

Submit no later than 30 days prior to beginning the pre-functional installation and start-up checks. Updated certificates shall be provided prior to expiration dates.

Training of Owner's Operating Personnel; CxA

Submit dates and proposed training agenda for each type of equipment and system no later than 90 days prior to scheduled completion of functional acceptance tests. Training shall include the O&M Manuals, as well as hands-on and classroom instruction manuals. Videotape sessions and submit for approval.

Complete training prior to Substantial Completion and commencement of Warranty period.

1.08 SYSTEMS TO BE COMMISSIONED

A. The systems listed below shall include any subsystems, components or peripheral devices that form a complete functional system, including any associated controls and control equipment.

1. Building Automation Systems

- a. Building Management and Control System (BMCS)
- b. Control Panels and Controllers
- c. Wiring and Devices
- d. Instrument Air systems
- e. Sensors, Indicators, Transmitters and Devices
- f. Actuators and Control Valves
- g. Control Dampers and Smoke Dampers
- h. Power Systems (Emergency Power and UPS)
- i. Interface with Fire Alarm System
- j. Interface with 3rd Party Equipment
- k. Fireman's Override Panel
- l. I/O Point Schedule
- m. Sequence of Operation and Programming for all equipment and systems identified
- n. Software for all modes of operation (normal, unoccupied, emergency shutdown, load shedding, failure and alarm)
- o. Equipment alarm points
- p. Graphic user interface

2. Mechanical Systems

- a. All equipment of the heating, ventilating, and air conditioning systems i

3. Plumbing Systems

- a. Plumbing and recirculation pumps
- b. Water heaters

4. Electrical Systems

- a. Interior lighting and control system
- b. Exterior lighting and control system
- c. Emergency power system

1.09 ABBREVIATIONS

- A. A/E: Architect/Engineer
- B. BOD: Basis of Design
- C. Cx: Commissioning
- D. CxA: Commissioning Authority (independent commissioning authority designated by the Owner)

- E. CxC: General Contractor commissioning specialist
- F. CC: Commissioning Coordinator(s)
- G. CM: Construction Manager (the Owner's Representative)
- H. FPT: Functional Performance Test
- I. MEP: Mechanical/Electrical/Plumbing
- J. O&M: Operations and Maintenance
- K. OPR: Owners Project Requirements
- L. PFC: Pre-functional Checklist
- M. PFT: Pre-functional Test
- N. PM: Project Manager (Company Representative)
- O. Sub: Subcontractor(s)
- P. TAB: Testing, Adjusting, and Balancing
- Q. VAV: Variable Air Volume
- R. VFD: Variable Frequency Drive

1.10 DEFINITIONS

- A. Acceptable Performance: A component or system being able to meet specified design parameters under actual load including satisfactory documented completion of all functional performance tests, control system trending and resolution of outstanding issues.
- B. Acceptance Phase: The phase of construction after startup and initial checkout when functional performance tests, O&M documentation review and training occurs.
- C. Architect/Engineer: Architect & Engineer of record
- D. Areas of Conflict: Where commissioning requirements conflict with design provisions or other requirements of the Contract Documents, prompting issuance of a request for clarification.
- E. Basis of Design (BOD): A document prepared by the engineer of record that records concepts, calculations, decisions, and product selections used to meet the Owner's Project Requirements (OPR) and to satisfy applicable regulatory requirements, standards, and guidelines. The document includes both narrative descriptions and lists of individual items that support the design process.
- F. Commissioning: Documented confirmation that building systems function in compliance with criteria set forth in the Contract Documents, OPR and BOD. The process documents all required user training and O&M materials have been properly provided.

- G. Commissioning Authority (CxA): An independent entity designated by the Owner, not associated with the General Contractor. This entity oversees and approves the completion of all General Contractor and CxC commissioning activities.
- H. Commissioning Coordinator (CC): This entity is a representative of contractors/subcontractors who is empowered to make timely decisions, as they pertain to commissioning, for their discipline/company. The CC is responsible for providing scheduling input on all the activities related to their Scope-of-Work that affect installation, start-up, TAB, functional performance testing, operator training, warranty and project closeout.
- I. Commissioning Plan: A document prepared by the CxA and approved by the Owner that outlines the Cx team organization, communication paths, schedule, allocation of resources, matrix of responsibilities, installation/testing requirements, and documentation requirements of the commissioning process. A draft of the plan must be developed and provided to all commissioning team members before the start of construction. The plan shall be updated by the CxC as the construction process evolves.
- J. Commissioning Report: The Commissioning Report is prepared and maintained by the CxC and shall consist of an executive summary of the process. The Commissioning Report includes inspection reports, start-up reports, TAB verification reports, start-up and functional test reports. The results of failed tests shall be included along with a description of the corrective actions taken.
- K. General Contractor Commissioning Specialist (CxC): Hired by the General Contractor, this person or entity coordinates the execution of commissioning activities with all of the parties participating in the commissioning process. This includes the Owner, CxA, construction manager, facility operator, architect, engineer, general contractor, subcontractors, specialty subcontractors, equipment suppliers, vendors, authorities having jurisdiction and other entities as required.
- L. Contract Documents: The documents binding on parties involved in the construction of this project (drawings, specifications, performance criteria, change orders, amendments, contracts, Cx plan, etc.).
- M. Contractor: The General Contractor and subcontractors/vendors.
- N. Control System: The building energy management and automated control system.
- O. Construction Manager: The Owner's representative.
- P. Deferred Functional Tests: Tests that are performed after substantial completion due to partial occupancy, equipment, seasonal requirements, design or other site conditions that disallow the test from being performed prior to substantial completion. Deferred functional test plans must be approved by the CxC and CxA.
- Q. Deficiency: A condition in the installation or function of a component, piece of equipment or system that is not in compliance with the contract documents or OPR.
- R. Design Intent: A dynamic document that provides the explanation of the ideas, concepts and criteria that are considered to be very important to the Owner. It is initially the outcome of the programming and conceptual design phases.
- S. Final Commissioning Report: Document prepared by the CxA and approved by the Owner, which details the actual Cx procedures performed, inspections, testing results,

and the final version of the Issues Log. A copy of the final report is furnished to the Owner and CxA as a menu-driven CD for future reference.

- T. Functional Performance Test (FPT): The FPT checklists are prepared by the CxA utilizing the Data Management system, coordinated with the CxC/General Contractor, and approved by the Owner. The checklists are used by the CxC/General Contractor to document the full range of checks and tests carried out to establish that all components, sub-systems, systems and interfaces between systems function in accordance with the Contract Documents. In this context, "function" includes all modes and sequences of control operation, all interlocks and conditional control responses and all specified responses to abnormal emergency conditions. The CxA develops the written functional test procedures form in a sequential format and then coordinates and documents the actual testing which is usually performed by the installing contractor or vendor. Functional performance testing takes place after pre-functional (installation and start-up) tests have been completed and approved by the CxC and Owner.
- U. Issues Log: A list of systems/equipment or procedural deficiencies and issues that have been noted. The list is prepared by the CxA and provided to the CxC at regular intervals. It includes the current disposition of each issue and the date of final resolution. Deficiencies include products/material, installation, service, or systems/equipment performance that do not comply with the Contract Documents and/or Commissioning Plan.
- V. Monitoring: Recording parameters (i.e. flow, current, status, pressure, temperature, etc.) of equipment operation using data loggers or the trending capabilities of control systems.
- W. O&M Manuals: Manuals used for the training, operations and maintenance of systems & equipment. Manufacturer's data should be edited such that the O&M materials include information specific to this project.
- X. Owner: Entity with the highest level of responsibility for directing the project.
- Y. Owner-Contracted Tests: Tests paid for by the Owner outside the contractor's contract.
- Z. Owner's Representative: Construction Manager or other individuals with the authority to make contractual decisions on behalf of the Owner. The Commissioning Plan should be kept up to date by the CxA to include the names/contact information for each of the Owner's representatives.
- AA. Owner's Project Requirements (OPR): Non-technical document developed by the Owner, architect and engineers. It is updated at regular intervals to state the intended concepts, goals, budget, performance and other criteria to which the completed project must conform. It includes expectations of how the building will be used and operated. This document is the basis for building commissioning. It is used by the engineers to develop their basis of design documentation.
- BB. Pre-functional Checklist (PFC): The PFC sheets are prepared by the CxA utilizing the Data Management system, reviewed by the CxC/General Contractor, and approved by the Owner. They are used to verify systems/equipment that installation and start-up activities comply with the Contract Documents, equipment submittals and manufacturers' instructions. The CxC and General Contractor shall use the checklists to verify completeness of inspections, tests/procedures to prepare equipment for initial start-up and proper/continuous operation (such as cleanliness, belt tension, oil levels OK, labels affixed, gages in place, sensors calibrated, initial settings, etc.). The checksheets shall be used to verify system set points, operating strategies, required component testing, correct rotation, and damper positions. The checksheets are completed by the

CxC/General Contractor, back-checked & approved (fully or by random sample) by the CxA, and then provided to the Owner prior to commencement of the functional performance testing process.

- CC. Project Manager (PM): A staff position for a particular entity with decision making authority.
- DD. Seasonal Performance Tests: Functional performance tests that are deferred until system design conditions can be replicated or simulated.
- EE. Specifications: Part of the contract documents that supplement the design drawings and related performance criteria. Specifications include procedures implied in the Commissioning Plan.
- FF. Start-up: The initial start-up or activation of dynamic equipment.
- GG. Subcontractor: Members of the construction team providing a service or product that are contracted by the General Contractor.
- HH. Test Engineer: This entity is a representative of the contractors/ subcontractors who is empowered to carry out field testing of installed equipment and systems. The Test Engineer is responsible for providing feedback to the commissioning team of any deficiencies affecting installation, start-up, TAB, functional performance testing, operator training and warranty. The Test Engineer may request an equipment vendor representative to attend commissioning meetings to resolve equipment problems or deficiencies, with prior approval from the CxA.
- II. Training: Organized instruction and hands-on demonstration of operating and maintaining systems and equipment.
- JJ. Trending: Monitoring of equipment and sequences using the building control system or data loggers.
- KK. Vendor: Suppliers of equipment or service.

1.11 COMMISSIONING PLAN

- A. The Commissioning Plan is prepared by the CxA, with assistance from the CxC and is a tool through which the commissioning process is described and incorporates the roles of the General Contractor, CC's, CxC and CxA relative to the commissioning process. Commissioning team members are all representatives whose participation is of benefit in the delivery of a fully functioning building.
- B. The plan shall describe the communication, authority and responsibility of commissioning team members. The Preliminary Commissioning Plan shall include the following:
1. The purpose of commissioning
 2. Detail the commissioning process
 3. Commissioning team members' responsibilities
 4. Schedule of Commissioning Activities
 5. Documentation Requirements
 6. Communication and Reporting Protocols
 7. Systems to be Commissioned
 8. Incorporation of electronic Data Management system for documentation of activities
 9. Samples of Pre-functional Checklists (PFC) and Functional Performance Tests (FPT)

- C. The Final Commissioning Plan shall include the following:
1. All items listed in the Preliminary Commissioning Plan updated to reflect proposed changes
 2. Detailed Pre-Functional Checklist sheets; are used to verify systems/equipment that installation and start-up activities comply with the Contract Documents, equipment submittals and manufacturers' instructions.
 3. Detailed Functional Performance Test Procedures; the detailed functional performance test procedures shall explain, step-by-step, the actions and expected results that will demonstrate that the system performs in accordance with the sequences of operation, and other contract documents.
 4. Guidelines for acceptance of each system and equipment piece.
 5. Expected results for each test shall be included.
 6. Updated Issues Log issued at regular intervals to identify deficiencies and issues

1.12 DUTIES OF COMMISSIONING AUTHORITY (CxA)

- A. The primary role of the CxA is to develop and implement the Commissioning Plan and to oversee/recommend acceptance of all commissioning activities assigned to the General Contractor and CxC.
- B. Work with CxC to obtain copies of all shop drawings, manufacturer's literature, maintenance information or other information as may be needed for systems to be commissioned.
- C. Evaluate information provided by the CxC and CC's to document proper execution of the Commissioning Plan and functional performance tests.
- D. Evaluate all proposed start-up and Pre-functional Construction Checklists documentation as supplied by the CxC.
- E. Review and comment on submittals for all systems to be commissioned including controls system, wiring diagrams and narrative sequences of operation, in time for use in preparing the Functional Test Procedures.
- F. Review preliminary TAB report for accuracy prior to initiation of functional testing.
- G. Obtain complete operation and maintenance information and as-built drawings for verification, organization and distribution from the CxC.
- H. Review and participate in site observations to follow installation progress and to verify system installation and readiness for testing.
- I. Review submittal of all required pre-functional and start-up documentation provided by Contractor for completeness and reasonableness. This includes installation documentation, start-up documentation, point-to-point checklists and preliminary TAB report, prior to initiation of functional testing. Make recommendations of acceptance of documentation to the Owner.
- J. Participate in and witness functional testing as defined in the Commissioning Plan and Functional Test Procedures. All testing shall be performed by the Contractor and subcontractors and documented by the CxA. Make recommendations of acceptance of documentation to the Owner.

- K. Lead commissioning meetings and record the minutes of each meeting. Distribute meeting minutes to the Owner, CxC and CC's.
- L. Provide project reports in a timely manner.
- M. Develop and maintain an Issues Log. Review documented inconsistencies or deficiencies in system operations and system compliance. Make recommendations and assist in developing plans to address the open issues.
- N. When commissioning has been successfully completed, make recommendations for acceptance to the Owner.
- O. Develop draft Final Commissioning Report, with assistance from the CxC, of all commissioning activities and test results that occurred during the project and submit to the Owner for review.
- P. Observe and witness training of Owner personnel on commissioning systems and equipment. Make recommendations of acceptance of training to the Owner.
- Q. Participate in seasonal/deferred tests. Oversee activities of all participants and make recommendations of acceptance of testing to the Owner.

1.13 DUTIES OF CONTRACTOR COMMISSIONING SPECIALIST (CXC)

- A. The primary role of the CxC is to coordinate and police execution of the Commissioning Plan with the General Contractor and each Subcontractor Commissioning Coordinator (CC) through the organization and leadership of the project commissioning team.
- B. The CxC is not responsible for the design concepts, design criteria, code compliance, code inspections, construction scheduling, cost estimating, or construction management.
- C. Obtain copies of all shop drawings, manufacturer's literature, maintenance information or other information as may be needed for systems to be commissioned.
- D. Collect the information needed for development of a complete Commissioning Plan and functional performance tests.
- E. Obtain all proposed start-up and Pre-functional Construction Checklists documentation.
- F. Obtain updates to all project documentation to reflect all supplemental instructions, addenda or other revisions to the project construction documents.
- G. Obtain submittals for all systems to be commissioned including control systems, wiring diagrams and narrative sequences of operation, in time for use in preparing the Functional Test Procedures.
- H. Obtain preliminary TAB report, indicating all actual field values recorded, prior to initiation of functional testing.
- I. Obtain complete operation and maintenance information and as-built drawings for verification, organization and distribution.
- J. Coordinate and assist with the Preliminary and Final Commissioning Plans with the CxA.
- K. As part of Final Commissioning Plan, review the draft Pre-functional Checklists and Functional Test Procedures prepared by the CxA, utilizing the Data Management system,

with information gathered from Contract Documents and final equipment submittals including narrative sequences of operation, control diagrams and software code for execution with the assistance of Contractor staff as required. Sample documents, located in the Appendix, are examples representing the scope and rigor of the commissioning procedures required, and shall be used as the basis for developing the detailed checklists and functional performance test procedures.

- L. Perform site observations to follow installation progress and to verify system installation and readiness for testing. The minimum number of site visits shall be sufficient to complete site observations at each of the milestones: 30%, 60% and 90% phase completion. Additional site observation trips may be required to accommodate specific project goals and critical installation activities.
- M. Schedule, direct and witness all 'Pre-Testing' of the FPT scripts prior to final witness and testing by the CxA, as defined in the Commissioning Plan and Functional Test Procedures. All 'Pre-Testing' shall be performed by the Contractor and subcontractors and documented by the Commissioning Specialist.
- N. Attend commissioning scoping meetings. These meetings shall further define the testing requirements and participation of each entity with the CxC and CxA.
- O. Attend regular meetings to facilitate the commissioning process during the installation & startup period, and weekly meetings during the functional testing period. Attend other meetings as required when problems arise.
- P. Provide site observation, FPT 'Pre-Testing' or other project reports in a timely manner.
- Q. Document inconsistencies or deficiencies in system operations and system compliance. System deficiencies shall be forwarded to the Owner and CxA and documented in the CxA Issues Log.
- R. Coordinate the participation of Owner's personnel with equipment, component and systems performance verification and participation in required training.
- S. Coordinate and document training of Owner personnel on commissioning systems and equipment. CxC shall review all training materials prior to actual training sessions.
- T. Coordinate and conduct seasonal/deferred tests. Coordinate activities all participants and report results to the Owner and CxA.

1.14 DUTIES OF GENERAL CONTRACTOR AND COMMISSIONING COORDINATORS (CC)

- A. Attend commissioning scoping meetings. These meetings shall further define the testing requirements and participation of each entity with the CxC and CxA.
- B. Attend regular meetings to facilitate the commissioning process during the installation and startup period, and weekly meetings during the functional testing period. Attend other meetings as required when problems arise.
- C. Coordinate with the CxC and prepare a Commissioning Schedule. Allow sufficient time before functional performance test dates so that testing, adjusting and balancing activities for each system can be completed. Submit the Commissioning Schedule for Owner and CxA review and approval.
- D. The Commissioning Schedule shall include several important milestones for each piece of commissioned equipment & system; Milestones include installation, start-up, point-to-

- point checkout, TAB, functional performance test, and operator training. Provide a separate matrix indicating the length and start of warranty period for each commissioned building component, equipment and system.
- E. Attend special meetings intended to clarify the controls sequences of operation and reconcile any differences with the design intent after the first sequence of operations is submitted and reviewed.
 - F. Provide equipment data required for development and finalization of the pre-functional check (PFC) and functional performance test (FPT) procedures.
 - G. The General Contractor or relevant Subcontractor shall be responsible for operating and manipulating all commissioned systems and equipment throughout the commissioning phase.
 - H. Develop a comprehensive start-up plan. The start-up plan shall be developed with the help of the CxC and integrated with the commissioning plan.
 - I. The controls contractor shall be responsible for coordinating development of a point-to-point verification plan. The plan shall be developed with the help of the CxC and integrated with the commissioning plan.
 - J. The electrical prime contractor shall provide the necessary power to allow mechanical equipment start-up activities to be accomplished according to the approved schedule. Certified personnel shall be provided who are able to conduct specialized testing of electrical power and lighting systems.
 - K. The mechanical prime contractor shall be responsible for installing pressure/temperature test ports (i.e. - Pete's plugs) in all piping systems locations where DDC controls pressure/temperature sensors and transmitters are located.
 - L. Utilize the Pre-Functional Checklists (PFC) and Functional Performance Test (FPT) sheets prepared by the CxA. Coordinate and integrate the content of the PFC/FPT sheets with requirements of electronic Data Management system.
 - M. Provide skilled technicians familiar with the project for start-up, pre-functional and functional performance testing.
 - N. Correct deficiencies found during startup and functional performance testing in a timely manner to allow for re-testing activities within the commissioning schedule.
 - O. Submit the completed Pre-Functional Checklists to the CxC and CxA for review to verify prerequisite requirements are fulfilled before functional performance testing is scheduled to start. Start-up documentation and point-to-point test results are required as a prerequisite to functional performance testing.
 - P. Provide all equipment submittals, equipment start-up forms, field static testing reports (i.e. circuit breaker test reports, megger test reports, torque testing reports, etc.) to the CxC and CxA for review and approval.
 - Q. Report TAB deficiencies to the CxC and CxA. The mechanical contractor shall correct the deficiencies in a timely manner so that functional performance tests can be completed on schedule. The cost of belt and sheave changes shall be included in the bid base price.
 - R. TAB contractor shall coordinate with the CxC and CxA and provide all set-point value requirements for input into the controls system; including minimum outside air damper

positions, return/supply fan VFD speed mapping, pumping loop differential pressure setpoints, duct system static pressure setpoints, air terminal unit flow sensor calibration factors, etc.

- S. Maintain and update as-built drawings each week during construction, including as-builts for the control system.
- T. Final O&M manuals shall incorporate all equipment/system changes, including changes related to the control system sequence of operations.
- U. Provide operations staff training for the commissioned equipment and systems specified under this section. Agendas and content of training sessions shall be pre-approved by the CxA and Owner.

1.15 OWNER'S RESPONSIBILITIES

- A. Provide direction as necessary to the Commissioning Authority (CxA). The CxA is the Owner's independent representative responsible for providing oversight of all commissioning activities. CxA has authority to accept or reject completion of commissioning activities.
- B. Assign operations and maintenance personnel, and schedule them to participate in Commissioning team activities.
- C. Review RFI's and other commissioning submittals in a timely matter.
- D. Make final decisions regarding commissioning process and issues.

1.16 ARCHITECT/ENGINEER OF RECORD RESPONSIBILITIES

- A. Review the Cx documentation and provide comments as necessary to the Owner and CxA.
- B. The architect/engineering team shall provide, in a timely manner, the necessary representatives from the design team as required for completing the commissioning processes. Design team members will be expected to provide prompt replies to RFI's issued during the Cx process. Copies of all submittals pertaining to the building envelope, equipment and systems to be commissioned shall be reviewed and approved by the A/E simultaneously with the CxC, Owner, and CxA review.
- C. Participate in determination of final controls system input/output points list and sequences of operation as required to complete functional test procedures.
- D. Assist the Commissioning team in resolving technical problems that arise during construction, start-up and functional testing.

PART 2 PRODUCTS

2.1 TEST EQUIPMENT

- A. Provide the skilled technicians and all test equipment necessary to complete the start-up and functional performance test commissioning requirements of all commissioned equipment, components and systems. Submit documentation showing calibration certificates are current for all test equipment.

- B. Provide the skilled technicians and all test equipment necessary to complete the preliminary and functional performance test commissioning requirements. Submit documentation showing calibration certificates are current for all test equipment.
- C. Provide all specialized or proprietary test equipment and software required by equipment/system vendors and manufacturer to complete the testing and commissioning requirements. The equipment shall be provided by the contractor at no additional cost to the Owner and shall become the property of the Owner upon system acceptance. When required, the manufacturer/vendor shall demonstrate use of the test equipment and assist the contractor and CxA in the commissioning process.
- D. All test equipment shall utilize Standard measurements unless otherwise required by the CxC or Owner.

PART 3 EXECUTION

3.1 WORK PRIOR TO COMMISSIONING

- A. A commissioning plan will be developed and finalized by the CxA, with assistance from the CxC/General Contractor and submitted to the Owner for approval. The CxC and CC's are obligated to assist the CxA in preparing the commissioning plan by providing all necessary information pertaining to the actual equipment and installation, identification of parties responsible for startup activities, and schedule dates for equipment start-up & testing activities.
- B. Complete all phases of work so each system can be started, tested, adjusted, balanced, and otherwise commissioned to the satisfaction of the CxA. The contractor has primary start-up responsibilities with obligations to complete systems, including all sub-systems, so they are fully functional. This includes the complete installation of all equipment, materials, pipe, duct, wire, insulation, controls, etc., per the contract documents and related directives, clarifications, change orders, etc.
- C. If Contractor-initiated system changes have been made that alter the commissioning process, the CxC shall submit the changes to the CxA for review, who will submit to the Owner for approval.

3.2 PARTICIPATION IN COMMISSIONING

- A. Provide skilled technicians to start-up all systems. These same technicians shall be made available to assist the CxA in completing the commissioning process.
- B. The technicians shall be present for sufficient durations during the agreed-upon commissioning schedule to complete the necessary tests, adjustments, troubleshooting, problems resolution and correction of deficiencies. This process shall continue until required system performance is obtained.
- C. The Owner and CxA reserve the right to judge the appropriateness and qualifications of the technicians relative to each item of equipment or system. Such qualifications include expert knowledge relative to the specific equipment involved, adequate documentation, proper tools, attitude and willingness as a team player to get the job done.

3.3 MISCELLANEOUS SUPPORT

- A. General Contractor, CxC and CC's shall coordinate the removal and replacement of covers for mechanical equipment, open access panels, raised floor panels, flooring, ceiling tiles, etc., to permit the Owner and CxA and/or their representatives to observe

installation and functionality of equipment and controls. The General Contractor shall furnish ladders, lifts, flashlights, and other assistance to maintain safe electrical conditions as required.

3.4 NOTIFICATION OF SYSTEM COMPLETION

- A. Two weeks prior to the beginning of start-up or test activities for each system, the CxC shall provide a detailed look-ahead schedule. This schedule shall be updated weekly and shall provide information to include date, time, beginning location, and anticipated duration of each start-up or test activity. CxC shall notify the CxA in writing at least 72 hours in advance of any changes to this schedule. The Owner and CxA shall reserve the right to witness all equipment start-up by the manufacturer's representative. The CxC shall document start-up of all equipment and provide information to the CxA. The Owner may choose to witness the start-up of equipment.
- B. When systems are ready for final commissioning verification, CxC shall notify the CxA, in writing, at least 72 hours in advance.

3.5 VERIFICATION OF PERFORMANCE

- A. Design and submittal data shall be entered into the DM system Pre-Functional Checklist (PFC) sheets for all commissioned systems and equipment by the CxA.
- B. As-built data shall be entered into the DM system PFC sheets by the Contractor.
- C. Discrepancies between submitted and installed information shall be highlighted and entered into the Cx Issues Log by the CxA for resolution.
- D. Installation and startup information will be entered into the DM system by the Contractor using the PFC sheets.
- E. Completed PFC sheets shall be backchecked by the CxA.
- F. The CxA shall monitor installation progress of commissioned systems and equipment by tracking PFC completion using status reports generated by the DM system.
- G. Verification of performance will take place after formal notice from the CC that the following steps have been completed:
 - 1. All Pre-Functional Check sheets (installation, start-up and operation) have been signed-off.
 - 2. FPT scripts have been 'Pre-Tested' and the system and/or equipment is deemed ready for final witnessing and testing by the CxA.
- H. Performance demonstration will be done by the systems and equipment trade representatives and shall be coordinated by the CxC and witnessed by the CxA.
- I. Verification will include demonstration of performance listed in the FPT sheets prepared by the CxA.
- J. The witnessed performance data will be added to the FPT sheets at the time of verification.
- K. The Contractor shall notify the CxA and Owner as soon as possible of any issues identified during construction that may affect the commissioning process or final system performance.

3.6 WORK TO RESOLVE DEFICIENCIES

- A. Items such as excessive noise, building thermal/air leakage, improper adjustments, misapplied equipment and deficient performance of equipment under varying loads will result in additional work being required to complete commissioning of the systems. Whereas all CC's will have input and the opportunity to discuss the work and resolution of problems with the CxC, the Owner and CxA will have final authority for accepting the work plan for achieving acceptable performance of systems and equipment.
- B. Corrective work shall be completed by the General Contractor in a timely fashion to permit the on time completion of the commissioning process per the approved commissioning schedule. When requested by the Owner or CxA, the GC or relevant Subcontractor shall provide a manufacturer's representative at no additional cost to the Owner.
- C. Experimentation to render system performance will be permitted:
 - 1. If the CxC deems the experimentation work to be ineffective or untimely as it relates to the commissioning process, the CxC will notify the Owner and CxA indicating the nature of the problem, expected steps to be taken, and the deadline for completion of activities.
 - 2. If deadlines pass without resolution of the problem, the CxA and Owner reserve the right to obtain supplementary services and/or equipment to resolve the problem. This process shall not change the General Contractor's warranty obligations for the effected system and/or equipment.
 - 3. Costs incurred to solve the problem in an expeditious manner will be the General Contractor's responsibility.

3.7 SEASONAL AND DEFERRED COMMISSIONING AND OCCUPANCY VARIATIONS

- A. Seasonal commissioning pertains to testing under full-load conditions during peak heating, cooling, and humidification seasons, as well as part-load conditions in the spring and fall:
 - 1. Initial commissioning will be done by the CxC/General Contractor and witnessed by the CxA prior to substantial completion, regardless of season.
 - 2. Commissioning under conditions representing other than the current season shall be undertaken at a later time by the CxC/General Contractor and witnessed by the CxA. The CxC shall coordinate seasonal / deferred testing with TAB Contractor for opposite season testing.
 - 3. Discrepancies discovered after substantial completion with equipment installation, performance or workmanship will be handled as warranty items by the CxC/General Contractor.
 - 4. CxA shall update Final Commissioning Report to include seasonal testing and warranty period activities.
 - 5. CxC shall coordinate the schedule and status of all commissioning activities with the Owner and CxA. CxA shall provide oversight and verify completeness of all commissioning activities, and report status directly to the Owner.
- B. Deferred commissioning pertains to any remaining testing that was disallowed from being performed prior to substantial completion.
 - 1. Discrepancies discovered after substantial completion with equipment installation, performance or workmanship will be handled as warranty items by the CxC/General Contractor.

2. CxA shall update Final Commissioning Report to include deferred testing and warranty period activities.

3.8 COMMISSIONING ACCEPTANCE CRITERIA

- A. The CxA acceptance criteria will be developed from the plans, specifications, and equipment manufacturer's operating criteria. The contractor is responsible for meeting contractual requirements found in the OPR plans and specifications. The contractor is reminded of their responsibility for furnishing a working system. All items logged as deficient need to be corrected per the plans and specifications.

3.9 RETESTING AND RECOMMISSIONING

- A. Any fault with material/equipment, integrated tests, or in any part of the installation revealed by commissioning tests shall be investigated, replaced, or repaired by the General Contractor.
- B. Commissioning tests shall be repeated at the Contractor's expense until no fault appears and until the repeated test results are approved by the CxA and Owner.
- C. The Contractor will be assessed the actual cost to the Owner for the CxA to witness the 2nd, 3rd and any additional re-testing of a particular piece of equipment or system. Such costs will be deducted from the contract amount due to the Contractor.

3.10 OPERATIONS AND MAINTENANCE MANUALS

- A. The General Contractor, with assistance from the CxC, shall provide the approved O&M manuals to the Owner and CxA prior to commencement of training. The manuals shall contain at a minimum the following information:
 1. Design data
 2. Operating data
 - a. Performance curves
 - b. Acceptance criteria
 - c. Control sequence of operations
 - d. Start-up reports
 - e. TAB reports
 - f. Maintenance recommendations and requirements
 - g. Warranty certificates
- B. The General Contractor shall provide menu-driven CD's of the O&M materials to the Owner and CxA. The material will be used in staff training sessions.

3.11 TRAINING OWNER 'S OPERATIONS & MAINTENANCE STAFF

- A. The Owner's operations and maintenance personnel (and, if applicable, the Owner's contracted maintenance vendors) shall be given comprehensive training in the understanding of the systems and the operation, maintenance, and repair of each major piece of equipment and system per the approved agenda and curriculum.
- B. The general contractor will be responsible for coordinating and scheduling the training with the Owner. Hands-on training shall include, but not be limited to, start-up, operation in all modes possible, repair, safety, shutdown and emergency procedures, if any.

- C. On-site classroom training sessions shall be scheduled as part of the training requirements.
- D. The contractor or his representative shall conduct all sessions and shall add to each session any special information relating to the details of installation of the equipment as it might impact the operation, maintenance, and repair.
- E. Training shall include a review of the record as-built drawings and O&M data.
- F. Each sub contractor and vendor responsible for training shall submit a written training plan to the CxA and Owner for review and approval prior to training. The training plan shall cover, at a minimum, the following elements:
 - 1. Equipment included in each training session.
 - 2. Location of the equipment.
 - 3. Intended audience including names and contact information.
 - 4. Location, date/time and duration of each training session.
 - 5. Topics and learning objectives.
 - 6. Instructor including individual's contact information and qualifications for each topic.
 - 7. All training methods shall include a classroom lecture and an actual operational demonstration of start up, turn-down and maintenance procedures.

3.12 FINAL COMMISSIONING REPORT

- A. The CxA will submit a final report to the Owner which includes a statement that the project meets the Owner 's design intent, and includes a narrative of the results of the completed inspections, operational and functional testing. The final report will also include an outline of the Issue Log and dates identifying items found and dates items corrected. All open items will be identified in the report. Technical data from the equipment shall be included as well as all test results, manufacturer's start-up sheets, and testing, adjusting, & balancing (TAB) reports when possible.
- B. At the conclusion of the commissioning process and after the final summary has been completed, the CxA will formally recommend system and equipment performance acceptance to the Owner. The Owner will make formal system acceptance to the Contracting Officer. Copies will be forwarded to the contractor.
- C. The final commissioning report will include:
 - 1. Executive summary
 - 2. Commissioning plan
 - 3. Commissioning site visit reports
 - 4. Submittal reviews
 - 5. O&M data reviews
 - 6. Training record & evaluations
 - 7. Pre-functional and Functional Test procedures and checklists
 - 8. TAB Reports
 - 9. System/equipment data sheets
 - 10. Pre-commissioning checklists with start-up reports
 - 11. Inspection reports
 - 12. Issues Log (cleared and open items)
- D. The CxA will furnish (3) DVD copies of the final report and 10-month warranty review report to the Owner. The DVD's shall be indexed and menu-driven with all required documentation included. Owner comments shall be incorporated into delivery of (3) final DVD copies.

END OF SECTION 01 91 13

SECTION 02 40 00**DEMOLITION AND STRUCTURE MOVING****PART I - GENERAL****1.1 SUMMARY****A. Description**

1. This Section specifies demolition work, including but not limited to, the existing facilities identified for removal on the Contract Drawings and as specified herein.
2. The Work includes complete removal and disposal of existing facilities from the top of the structure to the bottom of its foundations unless otherwise indicated on drawings.
3. Demolition shall occur in areas to be cleared and grubbed, and from other areas shown on the Contract Drawings.
4. Existing facilities include but are not limited to the following: pavements, sidewalks, curbs and gutters, signs, posts, poles and pole foundations, signal mast arms, concrete foundations, railroad track, turnouts and other appurtenances, fences, walls, irrigation lines, storm drain lines, water lines, conduits, manholes, catch basins, pipes, clean out boxes, culverts, headwalls, inlets, street lights, landscape areas, abandoned utility vaults, bollards, barrier, sprinkler systems, concrete grade crossing panels, and other facilities designated to be removed or the removal of which is necessary for the accomplishment of the improvements.

1.2 SUBMITTALS

- A. Submittals shall be made in accordance with the requirements of the Project Quality Plan, except as modified herein.
- B. The following shall be submitted at least five days before any demolition is performed:
 1. A copy of the request to utility companies owning or agency controlling services and appurtenances affected by demolition Work for discontinuance of services along with certificates of severance.
 2. Demolition permits from the city and county agencies, as appropriate.
 3. Traffic permits from the jurisdictional agency for transport of debris.
 4. Permits and releases from each owner of property where demolition debris will be deposited absolving the Engineer of responsibility in connection with such disposal.
 5. Demolition procedures and operations sequence.
 6. For the demolition of any building, the contractor shall comply with the requirements and permitting process of Missouri's Department of Natural Resources.

1.3 JOB CONDITIONS

- A. KCMO assumes no responsibility for the condition of existing structures to be demolished. Plans are not available for structures to be demolished under this Contract. Contractor shall thoroughly investigate each item prior to commencement of demolition to verify that the item is intended for demolition and to determine the best and safest procedure for accomplishing the demolition.
- B. Utilities
- Arrangements shall be made with the appropriate utility owner for the removal, rerouting or capping of utilities and complying with its regulations.
- C. Street and Road Closures
1. Arrangements shall be made with appropriate state, city, or county agency for temporary closing of public streets or highways to traffic as necessary, and for the rerouting of traffic. Closures and rerouting of traffic shall comply with local agency requirements.
 2. Temporary signs, barricades, flashing lights, and flaggers shall be provided as specified in General Provisions or as necessitated by the work and removed upon completion of work.
- D. Maintenance of Traffic
1. Maintain traffic in accordance with applicable codes and the Contract General Provisions to ensure continuous safety of traffic. Construct, maintain and remove on completion of work, temporary canopies and other structures intended for protection for pedestrians and the segregation of vehicular traffic.
 2. Cuts in traffic areas shall be bridged with steel plates of adequate strength and thickness or by other approved means.
 3. Traffic areas shall be kept free from debris and spillage of materials.
- E. Protection and Restoration
1. Prevent damage to pipes, conduits, wires, cables and structures above and below ground which are not designated for removal. Damaged items shall be repaired or replaced at no cost to KCMO.
 2. Explosives of any kind shall not be used in the demolition of the structures.
 3. Safe passageways shall be provided for the public around the demolition area and operations conducted to prevent damage to adjacent buildings, structures, other facilities, and people.
 4. Sidewalks, utilities, and streets, adjacent to the work, shall not settle or be left in a dangerous condition, as a result of the demolition operations. The submittals required in Article 1.2 above shall clearly show how this requirement shall be satisfied. Calculations and details which substantiate adequacy of the method proposed to fulfill this requirement shall be submitted.
 5. Where special procedures are required such as barriers, flaggers, safety devices, insurance for work around the railroad tracks, temporary disconnection of utility

services, and detouring or restricting vehicular traffic, the work shall be performed in accordance with such requirements and in accordance with this article.

6. Utilities shall be maintained, supported, and restored in accordance with the appropriate sections.
7. Protection of Property
 - a. Protect all public and private property, insofar as it may be endangered by operations and take every reasonable precaution to avoid damage to such property.
 - b. Restore and bear the cost of any public or private improvement facility, structure or land and landscaping which is damaged or injured directly or indirectly by or on account of an act, omission, or neglect in the execution of the work. Restore to a condition substantially equivalent to that existing before such damage or injury occurred, by repairing, rebuilding, or otherwise affecting restoration thereof, or if this is not feasible, make a suitable settlement with the owner of the damaged property.
 - c. Give reasonable notice to occupants of buildings on property adjacent to the work to permit the occupants to remove vehicles, trailers and other possessions as well as salvage or relocate plants, trees, fences, sprinkler systems, or other improvements in the right-of-way, or permanent or temporary construction easements, which are designated for removal or which might be destroyed or damaged by work operations.
 - d. Protect all trees, lawns and planted areas within the right-of-way or easements. Restore all on-surface disturbed areas, by seeding, mulching and providing erosion control as set forth in Section 02276 (Temporary Erosion Control), and, if conditions are such that seeding cannot be done, provide erosion control surface covering of such quality and quantity as will prevent erosion from occurring, without adverse impacts to the environment, at no additional cost to the KCMO.
 - e. In existing parkway, strips or landscape areas, where asphalt or compacted earth are indicated on the Contract Drawings for removal and replacement, they shall be replaced with material similar to that removed in thickness, type and appearance.
 - f. The Engineer shall be notified immediately if any suspected hazardous or contaminated materials are encountered.
8. Existing signage, if not identified for removal, shall be protected in place. If, in the way of the work, the sign shall be relocated to a location approved by the Engineer.

PART II - PRODUCTS - NOT USED

PART III - EXECUTION

3.1 PREPARATION

- A. All required protection and safety measures, protective and regulatory devices and personnel shall be in place before demolition commences.
- B. Ingress and egress requirements shall be maintained. The work shall be performed in a manner to cause as little inconvenience to the public as possible.

3.2 DEMOLITION

- A. Where an abutting structure or a part of a structure is to be left in place, clean, smooth, vertical cuts shall be made with a saw or other approved cutting device to lines established or as directed. The part that is left shall be structurally sound and stable, and shall not present a hazard or attractive nuisance to members of the public or Contractor employees.
- B. Removal of pavements, sidewalks, curbs, foundations, and other structures shall extend to the limits shown on the Contract Drawings or the construction limits. Removal beyond these limits must be approved by the Engineer.
- C. Removal of existing pavements shall be removed to the base of the paving material.
- D. Replacement of pavements, sidewalks, curbs and other structures beyond the Contract limits shall not be paid for, and shall be completed at the Contractor's expense unless approved by the Engineer.
- E. Removal of concrete pavement shall be completed by saw cutting to a minimum of 4 inches at the limits as shown on the Contract Drawings and jack hammering to a size needed for excavation and removal.
- F. The Contractor may salvage materials from demolition for use in temporary facilities but these shall not be used in the work unless approved in writing by the Engineer in each specific case.

3.3 DISPOSAL

- A. Unless otherwise stipulated, all materials resulting from the removal of obstructions shall become the property of the Contractor at the place of origin and shall be disposed of by the Contractor in conformance with all laws, regulations and rules legally imposed on such activities.
- B. Materials shall not be disposed of on publicly-owned or publicly-controlled lands except by written permission of the Engineer and, if so permitted, the materials shall be placed only at such locations and in such manner as the Engineer may direct.
- C. Asphalt concrete and Portland cement concrete pavement which is removed shall become the property of the Contractor at the place of origin and shall be disposed of by the Contractor in conformance with all laws, regulations, and rules legally imposed on such activities.
- D. The Contractor is encouraged to separate asphalt pavement and provide to sites for use in recycled asphalt pavement preparation.
- E. Trees, shrubs and plants to be removed shall become the property of the Contractor, and shall be disposed of in accordance with local codes and ordinances.
- F. The Contractor is encouraged to use recycling as a method of disposal whenever possible.

- G. Fences located within the limits of work that are still remaining when the Notice to Proceed (NTP) is issued will become the property of the Contractor. The Contractor will dispose of the materials in accordance with applicable codes and regulations. Prior to the removal of existing fencing, the Contractor shall provide temporary fencing to protect and contain or exclude animals and to provide security to the existing properties. Temporary fencing will be in accordance with Section 02831, Fencing and Gates.

3.4 REPAIRS

Items to remain which are damaged during demolition shall be repaired or replaced as directed by the Engineer at no cost to KCMO.

3.5 REMOVAL OF EXISTING FACILITIES AND MISCELLANEOUS MATERIALS

- A. Removal of existing walks, curbs, walls, driveways, and similar Portland cement concrete structures shall conform to the requirements of this Section. Cuts at structures and pavements to remain shall be clean, smooth and vertical.
- B. All cast iron utility valve and manhole rims and covers not reused by the Project shall be removed and stockpiled by the Contractor at a location to be determined by the Engineer. Each item that is salvaged for stockpiling shall be identified with an attached tag citing the location from which it was removed.
- C. The Contractor shall remove and relocate or salvage existing street lights as shown in the Plans, or as designated by the Engineer.

3.6 ABANDONMENT OF SEWER STRUCTURES AND CONDUITS

Sewer manholes, inlets, pipes, and similar structures shall be removed or abandoned as indicated on the Contract Drawings and specified herein.

Removed pipes and structures shall be removed in entirety with backfill of removed pipes conforming to Sections 02221 (Trench Excavation and Backfill) and Section 02225 (Embankment, Excavation and Backfill Compaction).

Remaining ends of abandoned pipes, or portions of other items partially removed under this work which would be left exposed on side slopes or at subgrade, shall be removed to a minimum of two feet below the finished slope or finished grade and filled with common embankment. Common embankment material shall conform to the requirements of Section 02225.

For pipes that are encountered in the field, which are not shown on the Contract Drawings, and have been proven by the Contractor to be no longer in service, the Contractor shall use the following general criteria as outlined in the Table below to determine if the pipe shall be removed or abandoned. For pipes encountered in the field, the Contractor shall inform the Engineer of the pipe and location. The Contractor shall indicate the course of action for the subject pipe and shall obtain approval and/or confirmation from the Engineer prior to removal and/or abandonment of the pipe.

Existing Pipe Depth (below subgrade to top of existing pipe)	Pipe <= 24 IN diam.	24 < pipe <= 36 IN	Pipe > 36 IN
0 – 4 FT	REMOVE	REMOVE	REMOVE
4 – 6 FT	ABANDON	REMOVE	REMOVE

6 – 8 FT	ABANDON	ABANDON	REMOVE
> 8 FT	ABANDON	ABANDON	ABANDON

Pipes that are to be abandoned as specified in the Table will be required to remain in place, and therefore are not required to be filled and / or plugged as outlined in the Contract Drawings and specified herein.

3.7 REMOVAL OF SIGNS

The Contractor shall remove and relocate existing traffic signs and similar items as indicated on the Contract Drawings. The Contractor shall deliver signs to a location determined by the Engineer.

3.8 EXISTING FACILITIES

Disturbed or damaged existing facilities and appurtenances that are to remain in service upon completion of the Contract shall be cleaned up and restored.

3.9 MATERIALS

1. Unless otherwise stipulated, all materials resulting from the removal of obstructions shall become the property of the Contractor at the place of origin and shall be disposed of by the Contractor in conformance with all laws, regulations and rules legally imposed on such activities.
2. Materials shall not be disposed of on publicly-owned or publicly-controlled lands except by written permission of the Engineer and, if so permitted, the materials shall be placed only at such locations and in such manner as the Engineer may direct.

PART IV – MEASUREMENT

This work will not be measured for payment, but will be considered a lump sum unit. The work will include the demolition and removal of structures as required, regardless of whether the items are shown on the plans or encountered during construction, unless the presence of the improvement encountered could not have been determined by visual inspection prior to bidding. No deductions will be made from the quantities measured for payment of excavation where existing improvements are removed from within the limits of the sections measured for determining pay quantities of excavation.

PART V – PAYMENT

Accepted removal of improvements will be paid for at the contract lump sum price.

END OF SECTION

SECTION 02 41 00**DEMOLITION DISPOSAL****PART 1 – GENERAL****A. Disposal of Demolition Debris**

All demolition debris not to be salvaged shall be disposed of at a legal landfill or at some other site where dumping of such materials is allowed under federal, state and local laws. Such site must be previously approved in writing by the OWNER.

B. Approved Dumpsites

In Kansas City, demolition debris dumpsites are permitted by the Board of Zoning Adjustment. For further information on City approved dumpsites contact:

Michelle Disanto
City Planner
City Development
15th Floor, City Hall
414 East 12th Street
Kansas City, Missouri 64106
Tel: 816-513-2851
Fax: 816-513-2838

C. Earthen Landfills

Soil, rock, and gravel are not considered to be demolition debris and can be placed at properly permitted locations. Obtain grading permits, erosion control permits, and floodplain certificates as applicable (from OWNER).

D. Submittals

At the pre-construction conference, CONTRACTOR shall submit the proposed sites for disposal of demolition debris and earthen material, in writing, to the OWNER. Once work starts, all substitute sites shall be submitted in writing to the OWNER. Submittals shall include a copy of the permit authorizing disposal at each site whether in or out of the City/County Limits.

OWNER'S REPRESENTATIVE will confirm that the proposed sites, both within and out the City/County Limits, are properly authorized. OWNER'S REPRESENTATIVE will advise CONTRACTOR in writing if a disposal site is not properly authorized. Lack of a response to inquiry is sufficient cause to reject a disposal site.

E. Remedy

Failure to abide by these contract requirements to use only approved dumpsites, whether intentional or inadvertent, is deemed to be a major violation of the contract. In the event of such violation, the OWNER shall have two special remedies, in addition to local ordinance penalties. It may, at its sole option:

1. Direct that the materials which have been dumped at a site other than the approved one be moved to the approved location, and that the site where the unapproved dumping took place to be restored to its previous condition, or
2. Terminate the contract immediately by written notice to the CONTRACTOR, in which case the CONTRACTOR shall have no right to cure its default. The CONTRACTOR shall be entitled to be paid for the completed portion of his contract less the expense to remedy the unauthorized dumping. Such payment shall be made only after the work is complete and all costs are finally determined.

Before either of such remedies is invoked, the CONTRACTOR will be given five (5) Working Days written notice of the alleged violation. During the five (5) day period, the contractor may submit information for consideration by the OWNER. Due to the nature of illegal dumping, OWNER need not have proof positive; "alleged" is herewith adjudged sufficient evidence to terminate this contract.

PART 2 – PRODUCTS

None

PART 3 – EXECUTION

None

PART 4 – MEASUREMENT

None

PART 5 – PAYMENT

No separate payment will be made for “Demolition Disposal”. All costs pertaining thereto shall be included in the contract prices for other items as listed in the Bid Form of Unit Prices.

END OF SECTION

SECTION 02 41 13**REMOVAL OF IMPROVEMENTS****PART 1 – GENERAL**

This work shall consist of removing and disposing of all existing improvements for roadway contracts from the right of way and within the limits of any construction easement outside the right of way, except improvements designated to remain in place or to be under other items of work.

Removal of improvements shall include removing, as listed in the plan set, drainage structures, pavement, surfacing and base courses, curb, gutter, sidewalks, driveways, house walks, steps, retaining walls, catch basins, manholes, drainage and sewer pipes, water and gas main pipes, signs, fences, scattered or piled bricks, stones, broken masonry, rubbish, trees, debris, outdoor advertising signs, etc. from existing improvements.

The plans may not show a complete list of all items to be removed. There may be an undetermined number of abandoned utilities, or other improvements encountered. The CONTRACTOR shall determine the extent of the work to be performed under this item.

Related specifications sections include:

- Section 02 41 00 - Demolition Disposal
- Section 03 81 13 - Saw Cutting
- Section 31 13 00 - Tree Removal
- Section 31 13 16 - Tree Root Pruning

Additional reference include "Section 02100 - Grading and Site Preparation" of the American Public Works Association (APWA) as supplemented by Kansas City, Missouri, in most current edition.

The CONTRACTOR shall perform the work in accordance with the State of Missouri and City of Kansas City Public Work's standards.

PART 2 – PRODUCTS

None

PART 3 – EXECUTION

None

PART 4 – MEASUREMENT

This work will not be measured for payment, but will be considered a lump sum unit. The work will include the removal of all items, regardless of whether the items are shown on the plans or encountered during construction, unless the presence of the improvement encountered could not have been determined by visual inspection prior to bidding. No deductions will be made from the quantities measured for payment of excavation where existing improvements are removed from within the limits of the sections measured for determining pay quantities of excavation.

PART 5 – PAYMENT

Accepted removal of improvements will be paid for at the contract lump sum price.

END OF SECTION

SECTION 03 08 16
CONCRETE TESTING AND EVALUATION - CONTRACTOR

PART 1 - GENERAL**1.1 SUMMARY**

- A. Furnish labor, materials, tools, equipment, and services for Concrete Testing and Evaluation - Contractor, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.
- C. Test concrete materials and operations and inspect as work progresses. Failure to detect defective work or material shall not prevent later rejection when such defect is discovered nor shall it obligate Architect/Engineer for final acceptance.

1.2 QUALITY ASSURANCE

- A. ASTM International (ASTM):
 - 1. ASTM C31 Standard Practice for Making and Curing Concrete Test Specimens in Field.
 - 2. ASTM C39 Standard test Method for Compressive Strength of Cylindrical Concrete Specimens.
 - 3. ASTM C42 Standard test Method for Obtaining and Testing Drilled Cores and Sawed Beams of Concrete.
 - 4. ASTM C 138 Standard Test Method for Density (Unit Weight), Yield, and Air Content (Gravimetric) of Concrete
 - 5. ASTM C143 Standard test method for Test for Slump of Hydraulic Cement Concrete.
 - 6. ASTM C172 Standard Practice for Sampling Freshly Mixed Concrete.
 - 7. ASTM C173 Standard Test Method for Air Content of Freshly Mixed Concrete by the Volumetric Method.
 - 8. ASTM C231 Standard Test Method for Air Content of Freshly Mixed Concrete by the Pressure Method.
 - 9. ASTM C1064 Standard Test Method for Temperature of Freshly Mixed Hydraulic - Cement Concrete
 - 10. ASTM E329 Standard Specification for Agencies Engaged in Construction Inspection and/or Testing
- B. American Concrete Institute (ACI):
 - 1. ACI 318 Building Code requirements for Structural Concrete and Commentary
- C. Testing Agency:
 - 1. Acceptable to Architect.
 - 2. Recent evidence of inspection by Cement and Concrete Reference Laboratory of National Institute of Standards and Technology, with cited deficiencies corrected.
 - 3. Meet requirements of ASTM E 329.
 - 4. Agency and its representatives are not authorized to revoke, alter, relax, enlarge or release requirements, nor approve or accept portion of Contract Documents.

1.3 SUBMITTALS

- A. Project information:
 - 1. Testing Agency qualifications.
 - 2. Production sample test reports:
 - a. Include same data as required for mix design reports.

3. Reports of Contractor-optional tests.
4. Test reports for in-place testing, if such testing is performed.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION

3.1 DESCRIPTION - GENERAL

- A. Test concrete materials and inspect operations as work progresses.
- B. Failure to detect defective work or material shall not prevent later rejection when such defect is discovered nor shall it obligate Architect for final acceptance.
- C. Following testing services shall be performed by testing agency:
 1. Review and check-test Contractor's proposed materials for compliance with specifications.
 2. Review and check-test Contractor's proposed mix design.
 3. Secure production samples of materials at plants or stock-piles during course of work and test for compliance with specifications.
 4. Conduct strength tests of concrete during construction in accordance with following procedures:
 - a. Secure composite samples in accordance with ASTM C172.
 - 1) Obtain each sample from a different batch of concrete on a random basis.
 - 2) Select test batch at random before commencement of concrete placement.
 - b. Mold and cure sufficient specimens from samples in accordance with ASTM C31.
 - 1) Report deviations from requirements.
 - c. Test specimens in accordance with ASTM C39.
 - 1) Test two specimens at 28 days for acceptance and one at 7 days for information.
 - 2) Acceptance test results shall be average of strengths of two specimens tested at 28 days.
 - d. If one specimen in a test manifests evidence of improper sampling, molding or testing, discard; strength of remaining cylinder shall be considered test result.
 - 1) Should both specimens in a test indicate above defects, discard entire test.
 - e. Make at least one strength test for each 75 CU YD or fraction thereof, of each mix design of concrete placed in one day.
 - 1) When total quantity of concrete with a given mix design is less than 15 CU YD, strength tests may be waived by Architect.
 5. Determine slump of concrete for each strength test and whenever consistency of concrete appears to vary, in accordance with ASTM C143.
 6. Determine density, unit weight, of concrete for each strength test in accordance with ASTM C138.
 7. Determine air content of normal weight concrete for each strength test in accordance with ASTM C231
 8. Determine air content of lightweight concrete for each strength test in accordance with ASTM C173 .
 9. Determine temperature of concrete in accordance with ASTM C1064 for each strength test.

3.2 ADDITIONAL TESTING SERVICES

- A. Following non-routine services shall be performed on occasions indicated:
 1. Additional testing and inspection, whenever changes in materials or proportions are requested by Contractor.

2. Additional testing of materials or concrete when they fail by test or inspection, to meet specification requirements.
3. Other testing services needed or required by Contractor, such as:
 - a. Field cured test specimens for determining when concrete may be post-tensioned or when forming shoring or reshoring may be removed.

3.3 DUTIES AND AUTHORITIES OF DESIGNATED TESTING AGENCY

- A. Inspect, sample and test materials and production of concrete. When it appears that material furnished or work performed by Contractor fails to fulfill specification requirements, report such deficiency to Architect/Engineer and Contractor.
- B. Report test and inspection results to Architect and Contractor immediately after performed. Include exact location in work at which batch represented by a test was deposited.
 1. Reports shall include detailed information on storage and curing of specimens prior to testing.
- C. Agency and its representatives are not authorized to alter requirements of Contract Documents, nor to approve or accept any portion of work.

3.4 RESPONSIBILITIES AND DUTIES OF CONTRACTOR

- A. Provide testing services for qualification of proposed materials and establishment of mix designs.
- B. Use of testing service shall not relieve Contractor of responsibility to furnish materials and construction in full compliance with Contract Documents.
- C. Submit concrete materials and concrete mix designs, with results of testing performed to qualify materials and to establish mix designs.
 1. Do not place concrete until Contractor has received approval in writing.
- D. Testing and Inspection:
 1. Furnish labor to assist Testing Agency in obtaining and handling samples or other materials at site.
 2. Advise Testing Agency in advance of operations.
 3. Provide and maintain facilities for storage and curing of concrete test specimens on site for first 24 HRS or until sufficient strength is achieved as required by ASTM C31.

3.5 EVALUATION AND ACCEPTANCE OF COMPRESSIVE STRENGTH TEST RESULTS

- A. Evaluate test results for standard molded and cured test cylinders separately for each concrete mix design.
 1. Evaluate each mix design for strength and uniformity by a minimum of five tests.
- B. Strength level of concrete shall be considered acceptable when average of three consecutive strength test sets equal or exceed specified strength (f'c) and no individual strength test result is less than specified strength (f'c) by more than 500 PSI.

3.6 TESTING IN-PLACE CONCRETE

- A. Test concrete in place when compressive strength tests indicate potential strength deficiency to evaluate actual strength.
 1. Pay for concrete tests and engineering time and analysis required to evaluate actual in-place concrete strength made necessary by low strength cylinder tests.
- B. Testing by rebound hammer, ultrasonic, or other non-destructive device:
 1. Tests shall be used to determine relative strengths at various locations in structure as an aid for selecting areas to be cored.

2. Tests, unless properly calibrated and correlated with other test data, will not be used as a basis for acceptance or rejection.
- C. Core tests:
1. Obtain and test largest practical diameter cores, 2 IN minimum, in accordance with ASTM C42.
 - a. Test dry if concrete in structure will be dry under service conditions,
 - 1) Air dry cores at 60 DegF to 80 DegF, relative humidity less than 60 percent for 7 days before test.
 - b. Test cores after moisture conditioning if concrete in structure is more than superficially wet under service conditions.
 2. Take three cores from area of concrete or member considered deficient in strength.
 - a. Location as selected by Architect.
 - b. Replace cores damaged prior or during removal from structure prior to testing.
 3. Concrete core test shall be considered acceptable if average strength of cores is equal to at least 85 percent of, with no single core less than 75 percent of specified strength (f'c).
 4. Fill core holes with low slump patching compound per Section 03 35 00.

3.7 ACCEPTANCE OR REJECTION OF IN-PLACE CONCRETE

- A. General:
1. Completed concrete work which conforms to requirements of Contract Documents will be accepted without qualification.
 2. Concrete work which fails to conform to one or more requirements of Contract Documents shall be rejected and will not be accepted until repaired and proven adequate by concrete testing.
 3. Remedial work includes, but is not necessarily limited to, applicable repairs, replacement, reinforcement, engineering, and testing.
 4. Repair or replacement of concrete in an approved manner and in conformance with Contract Documents constitutes acceptance.
- B. Dimensional tolerances:
1. Formed surfaces resulting in concrete outlines smaller than permitted by tolerances shall be considered potentially deficient in strength and subject to confirmation of safety by structural analysis or load test.
 - a. When deficiencies are confirmed, replace or reinforce structure as directed.
 2. Formed surfaces resulting in concrete outlines larger than permitted by tolerances will be rejected if strength or finish of structure is not acceptable, or function is adversely affected.
 - a. If removal of excess material is permitted, repair of surfaces constitutes acceptance.
 - b. If removal of excess material is not permitted, replacement of surfaces constitute acceptance.
 3. Concrete members cast in wrong location will be rejected if: strength or finish is not acceptable, function is adversely affected, and /or interference is encountered with other construction.
 4. Inaccurately formed concrete surfaces exceeding tolerances and exposed to view will be rejected.
 5. Finished slabs exceeding tolerances may be repaired provided that strength or appearance is not adversely affected. High spots may be removed with a terrazzo grinder, low spots filled with a patching compound, or other remedial measures performed as permitted.
- C. Finish:
1. Architectural concrete with surface exceeding limitations will be rejected.
 2. Concrete exposed to view with defects which adversely affect appearance of specified finish may be repaired only by approved methods.

3. Slabs:
 - a. Finished slabs exceeding tolerance limits specified in Section 03 35 00 will be rejected if finish is not acceptable and function is adversely affected.
 - 1) If rejected, repair of finished surfaces or replacement of slab in an approved manner and in conformance with Contract Documents will constitute acceptance.
 - b. Repair may involve removing high spots by grinding, filling low spots with patching compound, or remedial measures as permitted.
 4. Formed surfaces:
 - a. Concrete exposed to view with defects which adversely affect appearance of specified finish will be rejected.
 - 1) Repair surface defects in conformance with Section 03 35 00.
 5. Concrete not exposed to view is not subject to rejection for defective finish.
- D. Strength of structure:
1. Concrete in place which control strength of structure will be rejected if it fails to comply with requirements of Contract Documents, including but not necessarily limited to:
 - a. Deficient concrete strength based on compressive strength tests.
 - b. Reinforcing steel size, quantity, strength, position, or arrangement at variance with requirements on reinforcement.
 - c. Concrete which differs from required dimensions or location.
 - d. Curing less than that specified.
 - e. Inadequate protection of concrete from extremes of temperature during early stages of hardening and strength development.
 - f. Mechanical injury, construction fires, accidents or premature removal of formwork.
 - g. Substandard workmanship.
 2. When strength of structure is considered potentially deficient, it will not be accepted until one of following is completed and submitted to Architect for approval prior to action by Contractor.
 - a. Confirmation of safety of structure by structural analysis.
 - b. Core tests shall be performed only when safety of structure is not confirmed by structural analysis.
 - c. Confirmation of safety of structure by load tests performed and evaluated in accordance with ACI 318.
 - d. Replacement of structure deficient in strength.
 - e. Reinforce structure with supplement supports as directed by Architect and approved by Owner.

END OF SECTION

SECTION 03 11 00
CONCRETE FORMWORK

PART 1- GENERAL**1.1 SUMMARY**

- A. Furnish labor, materials, tools, equipment, and services for Concrete Formwork, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. Design, engineering, and construction of formwork are responsibility of Contractor.
 - 1. Design, engineer, and construct formwork for applicable gravity and lateral loads and pressures as well as other design considerations or applicable requirements of legal local building code.
 - 2. Develop shoring and re-shoring pattern and sequence so as not to exceed safe structural capacity of supporting structural systems. Confer with Architect, if there is any question, regarding the capacity of the structural system.
- B. Design, prepare formwork drawings and construct formwork in accordance with ACI 347, Guide to Formwork for Concrete.
- C. Layout and measurement of concrete forms and embedment's, required for work, performed by a licensed surveyor employed by the contractor.

1.3 SUBMITTALS**1.4 DESCRIPTION**

- A. Definitions:
 - 1. Formwork: Total system of support for freshly placed concrete including mold or sheathing which contacts concrete as well as supporting members, hardware, and necessary bracing.
 - 2. Exposed construction: Exposed to view.
 - 3. Exposed to view: Concrete surfaces seen by the public from eye level from any walking surface in a public location after completion of building.
 - 4. Public location: Building areas accessible to public and employees not responsible for maintenance. Storerooms, unfinished space and large mechanical rooms are considered public locations. Equipment closets, elevator and mechanical penthouses are not public space.
- B. Use forms, wherever necessary, to confine concrete and shape it to required dimensions. Use forms of sufficient strength to withstand pressure resulting from placement and vibration of concrete, with sufficient rigidity to maintain specified tolerances.
- C. See concrete finish requirements in Section 03 35 00.
- D. Use earth side forms for spread footings, pile caps and unfinished grade beams where earth can be shaped to a straight and true surface. Do not use earth cuts as forms for other vertical surfaces unless permitted.

PART 2 - MATERIALS**2.1 MATERIALS**

- A. Form facing materials: As indicated under description of finishes required.
- B. Form accessories, partially or wholly embedded in concrete, such as ties and hangers: Shall be of a commercially manufactured type. Do not use non-fabricated wire. Use form ties constructed so ends or end fasteners can be removed without causing appreciable spalling of concrete faces. After ends or end fasteners of form ties have been removed, embedded portion of ties shall terminate not less than 2 diameters or twice minimum dimension of tie from formed faces of concrete to be permanently exposed to view, but in no case less than 3/4 IN. When formed face of concrete is not to be permanently exposed to view, form ties may be cut off flush with formed surfaces. Use ties with 3/4 IN diameter cones on both ends for water retaining structures.

2.2 FABRICATION OF FORMS

- A. Make forms sufficiently tight to prevent loss of cement fines. Place chamfer strips in outside corners of forms to produce 45 degree beveled corners on permanently exposed surfaces. Interior corners on such surfaces and edges of formed joints will not require beveling.
- B. To maintain specified finish tolerances, camber formwork to compensate for anticipated formwork deflections prior to hardening of concrete.
- C. Provide positive means of adjustment (wedges or jacks) of shores and struts and take up settlement during concrete placing operation. Securely brace forms against lateral deflection.
- D. Provide temporary openings at base of column and wall forms and at other points where necessary to facilitate cleaning and observation immediately before concrete is placed.
- E. At construction joints, contact surface of form sheathing for flush surfaces exposed to view shall overlap hardened concrete in previous placement minimum 1 IN. Hold forms against hardened concrete to prevent offsets or loss of mortar at construction joint and to maintain a true surface.
- F. Construct wood forms for wall openings to facilitate loosening, if necessary, to counteract swelling.
- G. Fasten wedges (used for final adjustment of forms prior to concrete placement) in position after final check.
- H. Anchor formwork to shores or other supporting surfaces or members so upward or lateral movement of any part of formwork system is prevented during concrete placement.
- I. Provide runways for moving equipment with struts or legs, supported directly on formwork or structural member without resting on reinforcing steel.

2.3 TOLERANCES

- A. Construct formwork so concrete surfaces will conform to tolerance limits listed: Tolerances non-cumulative. Most restrictive tolerance governs. Tolerance limits noted are maximum deviations (plus or minus) on each side of intended line.
 - 1. Deviation from plumb:
 - a. In lines and surfaces of columns, piers, walls, and in arrises:
 - 1) In any length: 1 in 500 but not less than 1/8 IN.
 - 2) In any story: 3/8 IN.
 - 3) Maximum for entire length: 3/4 IN.
 - b. For exposed corner columns, control-joint grooves, and other conspicuous vertical lines:
 - 1) In any length: 1 in 1000 but not less than 1/8 IN.
 - 2) In any story: 3/16 IN.

- 3) Maximum for entire length: 1/2 IN.
 2. Deviation from level or from grades specified:
 - a. In slab soffits, ceilings, beam soffits and in arrises, measured before removal of supporting shores:
 - 1) In any length: 1 in 750 but not less than 1/8 IN.
 - 2) In any bay: 3/8 IN.
 - 3) Maximum for entire length: 1/2 IN.
 - b. In exposed lintels, sills, parapets, horizontal grooves, and other conspicuous horizontal lines:
 - 1) In any length: 1 in 1000, but not less than 1/8 IN.
 - 2) In any bay: 1/4 IN.
 - 3) Maximum for entire length: 1/2 IN.
 3. Deviations from true plane of concrete surface exposed to view caused by bulging of form facing material between supports:
 - a. 3/16 IN or 1/300 of span between supports whichever is smaller.
 4. Deviation from established position in plan of linear building lines, columns, walls:
 - a. In any length: 1 in 500, but not less than 1/8 IN.
 - b. In any bay: 1/2 IN.
 - c. Maximum for entire length: 3/4 IN.
 5. Deviation in sizes and location of sleeves, floor openings, and wall openings: 1/4 IN.
 6. Deviation in cross-sectional dimensions of columns and beams and in thickness of slabs and walls:
 - a. Minus: 1/4 IN.
 - b. Plus: 1/2 IN.
 7. Footings:
 - a. Deviations in dimensions in plan:
 - 1) Minus: 1/2 IN.
 - 2) Plus: 2 IN.
 - b. Misplacement or eccentricity:
 - 1) 2 percent of footing width in direction of misplacement but not more than 2 IN.
 - c. Thickness:
 - 1) Decrease in specified thickness: 5 percent.
 - 2) Increase in specified thickness: No limit (except that which may interfere with other construction).
 8. Deviation in steps:
 - a. In flight of stairs:
 - 1) Rise: 1/8 IN.
 - 2) Tread: 1/4 IN.
 - b. In consecutive steps:
 - 1) Rise: 1/16 IN.
 - 2) Tread: 1/8 IN.
 - c. Deviation from level for any step or landing: 1 in 1000 but not more than 1/8 IN.
- B. Formwork Classifications:
1. Concrete formwork shall meet the following classification requirements:
 - a. Concrete noted as "Architectural Exposed Concrete: Class A."
 - b. Concrete exposed to view or to receive membrane waterproofing: Class B.
 - c. Footings: Class D.
 - d. All other concrete: Class C.
- C. Tolerances apply to concrete dimensions only, not to positioning of vertical reinforcing steel, dowels, or embedded items, except where specifically noted otherwise.

- D. Establish and maintain in undisturbed condition and until final completion of project, sufficient control points and bench marks to be used for reference purposes to check tolerances.
- E. Regardless of tolerances listed allow no portion of building to extend beyond property line of project.

PART 3 - EXECUTION

3.1 PREPARATION OF FORM SURFACES

- A. Clean form surfaces and embedded materials of mortar, grout and foreign material before concrete is placed.
- B. Unless otherwise specified or approved, treat surfaces of forms as follows:
 - 1. Before placing of reinforcing steel or concrete, cover surfaces of forms with coating material that will effectively prevent absorption of moisture and prevent bond with concrete, and not stain concrete. A field applied form release agent or sealer or factory applied non-absorptive liner may be used.
 - 2. Do not allow excess form coating material to stand in puddles in forms nor in contact with hardened concrete against which fresh concrete is to be placed.

3.2 REMOVAL OF FORMS

- A. When repair of surface defects or finishing is required at early age, remove forms as soon as concrete has hardened sufficiently to resist damage from removal operations.
- B. Remove top forms on sloping surfaces of concrete as soon as concrete has attained sufficient stiffness to prevent sagging. Perform needed repairs or treatment required on such sloping surfaces at once, followed by specified curing.
- C. Loosen wood forms for wall openings as soon as this can be accomplished without damage to concrete.
- D. Formwork for columns, walls, sides of beams, and other parts not supporting weight of concrete may be removed as soon as concrete has hardened sufficiently to resist damage from removal.
- E. Where no re-shoring is planned, leave forms and shoring used to support weight of concrete in beams, slabs and other concrete members in place until concrete has attained its specified strength. Where re-shoring is planned, supporting formwork may be removed when concrete has reached 70 percent of specified strength, provided re-shoring is installed immediately.
- F. When shores and other vertical supports are arranged so non-load-carrying form-facing material may be removed without loosening or disturbing shores and supports, facing material may be removed at earlier age as permitted.

3.3 RE-SHORING

- A. When re-shoring is permitted or required, plan operations in advance. Follow sequence indicated on formwork drawings as as directed by forming system design engineer. While re-shoring is underway, allow no live load on new construction.
- B. During re-shoring do not subject concrete in beam, slab, column or other structural member to combined dead and construction loads in excess of loads permitted by forming system design engineer for developed concrete strength at time of re-shoring. Place re-shores as soon as practicable after stripping operations are complete but in no case later than end of working day on which stripping occurs. Tighten re-shores to carry required loads without overstressing construction. Leave re-shores in place until:
 - 1. Tests representative of concrete being supported have reached specified strength.

2. In-place concrete is at least 7 days old and/or meets the strength required by the forming system design engineer.
 3. Loads imposed by construction operations do not exceed design loads.
- C. For floors supporting shores under newly placed concrete leave original supporting shores in place or re-shore. Re-shoring system shall have capacity sufficient to resist anticipated loads and equal to at least one half of capacity of shoring system above. Locate re-shores directly under shore position above unless otherwise permitted.
- D. In multi-story buildings extend re-shoring over sufficient number of stories to distribute weight of newly placed concrete, forms, and construction live loads in such a manner that capacity of floors as determined by design load and developed concrete strength at time of stripping and re-shoring is not exceeded.

3.4 REMOVAL STRENGTH

- A. When removal of formwork or re-shoring is based on concrete reaching specified strength, concrete shall be presumed to have reached this strength when either of following conditions has been met.
1. When test cylinders, field cured along with concrete they represent, have reached specified strength.
 2. When concrete has been cured as specified for same length of time as age at test date of laboratory-cured cylinders which reached specified strength. Determine length of time concrete has been cured in structure by cumulative number of days or fractions thereof, not necessarily consecutive, during which temperature of air in contact with concrete is above 50 degF and concrete has been damp or sealed from evaporation and loss of moisture.

END OF SECTION

SECTION 03 11 10**CONCRETE FORMWORK****PART I - GENERAL****1.1 SUMMARY**

- A. Description: This work includes furnishing, installing and removal of concrete formwork as specified.

1.2 REFERENCES

- A. ACI 347: Guide to Formwork for Concrete

1.3 DEFINITIONS

- A. Shoring: The activity to support formwork.
- B. Reshoring: The activity to reduce the amount of formwork supporting concrete elements. As concrete sets and strength increases, less need for formwork occurs gradually until concrete becomes free standing.

1.4 SUBMITTALS

- A. Shop Drawings: Fabrication and erection drawings of forms for specific finished concrete surfaces, as indicated. Show general construction of forms, jointing, special joints or reveals, location and pattern of form tie placement, and other items affecting exposed concrete visibility.
- B. Form Release Agent: Where concrete surfaces are scheduled to receive special finishes or applied coverings which may be affected by agent submit manufacturer's instructions for use of agent.

1.5 QUALITY ASSURANCE

- A. Designer's Qualifications: Design of forms for shoring or for high risk situations will be signed by a Missouri licensed engineer. Other formwork, i.e. SOG and Box walls may be by Contractor staff.
- B. Design Forms:
 - 1. With sufficient strength to maintain finished tolerances indicated in Section 03 35 10, to support loads, pressures, and allowable stresses as outlined in ACI 347 and for design considerations such as wind loads, allowable stresses, and other applicable requirements of local Laws and Regulations.
 - 2. To permit easy removal.
 - 3. For required finishes.
- C. The design, engineering, and construction of formwork is Contractor's responsibility.

1.6 JOB CONDITIONS

- A. For reference purposes, establish and maintain sufficient control points and bench marks to check tolerances. Maintain in an undisturbed condition and until final completion and acceptance of Work.
- B. Regardless of tolerances specified, allow no portion of Work to extend beyond legal boundaries.

1.7 FIELD SAMPLES

- A. Prepare field samples and submit as required in the Project Quality Plan.
- B. Construct and erect sample formwork panel for architectural concrete surfaces receiving special treatment or finish as a result of formwork. Formwork to include vertical and horizontal form joints and typical rustication joints when required.
- C. Size panel to indicate special treatment or finish required, including form release agent.
- D. Remove formwork after casting concrete.

PART II - PRODUCTS

2.1 FORM MATERIALS

- A. Faced with material which will produce smooth and uniform texture on concrete, unless indicated otherwise.
- B. Arrange facing material orderly and symmetrical, keeping number of seams to a minimum.
- C. Do not use material with raised grain, patches, or other defects which will impair texture of concrete surface.

2.2 FORMWORK ACCESSORIES

- A. Form Ties:
 - 1. Use ties constructed so that end fasteners can be removed without spalling concrete faces.
 - 2. After end fasteners of ties have been removed, embedded portion of ties are to terminate not less than 2 times the diameter or thickness of the fasteners from formed faces of concrete, but in no case greater than 3/4-inch.
 - 3. When the formed face on concrete is not exposed, form ties may be cut off flush with formed surfaces. Use ties with 3/4-inch diameter cones on both ends or an approved equal for water retaining structures.
- B. Premolded Expansion Joint Filler: Unless indicated otherwise, provide Type F1 per APWA Section 03060.
- C. Form Release Agent: Colorless material which will not stain concrete, absorb moisture, impair natural bonding or color characteristics of concrete.
- D. Fillets for Chamfered Corners: Wood strips 3/4 inch x 3/4 inch size; maximum possible length.

PART III - EXECUTION**3.1 INSPECTION**

- A. Verify lines, levels, and measurements before proceeding with formwork.

3.2 FORM CONSTRUCTION

- A. Make forms sufficiently tight to prevent loss of concrete.
- B. Unless indicated otherwise, place chamfer strips in corners of forms to produce beveled edges on permanently exposed exterior corners.
- C. To maintain specified finish tolerances, camber formwork to compensate for anticipated deflections.
- D. Provide positive means of adjustment using wedges, jacks, shores, and struts to take up all settlement during concrete placing operation.
- E. Provide temporary ports in formwork to facilitate cleaning and inspection. Locate openings at bottom of forms to allow flushing water to drain.
- F. At construction joints, overlap forms over hardened concrete at least 6-inches. Hold forms against hardened concrete to prevent offsets or loss of mortar at construction joint and to maintain true surface.
- G. Construct wood forms for wall openings to facilitate loosening, or counteract swelling.
- H. Fasten wedges used for final adjustment of forms prior to concrete placement in position after final check.
- I. Anchor formwork to shores, supporting surfaces or members to prevent upward or lateral movement and deflection of any part of formwork system during concrete placement.
- J. Provide runways for moving equipment with struts or legs, supported directly on formwork or structural member without resting on reinforcing.
- K. Position expansion joint material and other embedded items accurately and support to prevent displacement.
- L. To prevent entry of concrete, fill voids in sleeves, inserts, and anchor slots temporarily with readily removable material.
- M. For architectural concrete, limit deflection of facing materials between studs as well as deflection of studs and walers to 0.0025 times span.
- N. For underground concrete work, do not use soil walls for forming unless authorized by Engineer.

3.3 INSERTS, EMBEDDED PARTS, AND OPENINGS

- A. Provide formed openings for elements embedded in or passing through concrete.
- B. Coordinate work of other sections for the forming and setting of openings, slots, recesses, chases, sleeves, bolts, anchors, and other inserts.

- C. Install accessories per manufacturer's instructions. Ensure items are not disturbed during concrete placement.

3.4 FORM FINISHES

- A. Use forms with smooth rubbed, scrubbed, sand floated finishes that meet ACI 347 unless indicated otherwise.
- B. For As-cast Finishes:
 - 1. Install form panels in orderly arrangement with joints planned in approved relation to building elements.
 - 2. Where panel joints are recessed or otherwise emphasized, locate form ties within joints, not within panel areas.
 - 3. Where an as-cast finish is required, no grouting will be permitted in the finishing operation.
- C. Textured Finishes: As indicated.

3.5 APPLICATION OF FORM RELEASE AGENT

- A. Apply form release agent on formwork per manufacturer's instructions. Apply prior to placing reinforcing steel, anchoring devices, and embedded items.

3.6 FORM REMOVAL

- A. When repair of surface defects or finishing is required at an early age, remove forms as soon as concrete has hardened sufficiently to resist damage from removal operations.
- B. Remove top forms on sloping surfaces of concrete as soon as concrete has attained sufficient stiffness to prevent sagging. Perform needed repairs or treatment required on such sloping surfaces at once, followed by specified curing.
- C. Loosen wood forms for wall openings as soon as it can be accomplished without damage to concrete.
- D. Formwork for columns, walls, sides of beams, and other members not supporting the weight of concrete may be removed as soon as the concrete has hardened sufficiently to resist damage from removal.
- E. Where no reshoring is planned, leave forms and shoring used to support weight of concrete in beams, slabs, and other concrete members in place until concrete has attained its specified strength.
- F. Where reshoring is planned, supporting formwork may be removed when concrete has reached 70-percent of specified strength, provided reshoring is installed immediately.
- G. When shores and other vertical supports are so arranged that nonload carrying, form-facing material may be removed without loosening or disturbing shores and supports, facing material may be removed at an earlier age as directed.

3.7 RESHORING

- A. When reshoring is permitted or required, plan operations in advance and obtain approval.
- B. During reshoring do not subject concrete in beam, slab, column, or any other structural member to combined dead and construction loads and live loads in excess of loads permitted for developed concrete strength at time of reshoring.
- C. Place reshores as soon as practical after stripping operations are complete, but in no case later than end of working day on which stripping occurs.
- D. Tighten reshores to carry required loads without over-stressing.
- E. Leave reshores in place until the concrete being supported has reached its specified strength.
- F. For floors supporting shores under newly placed concrete, level original supporting shore or reshore.
 - 1. Reshoring system shall have a capacity to resist anticipated loads in all cases equal to at least 1/2 the capacity of the shoring system.
 - 2. Unless otherwise specified locate reshores directly under a shore.
 - 3. In multistory buildings, extend reshoring through a sufficient number of stories to distribute the weight of newly placed concrete, forms, and construction live loads in such a manner that design loads of floors and supporting shores are not exceeded.

3.8 REMOVAL STRENGTH

- A. When removal of formwork or reshoring is based on concrete reaching a specified strength, it shall be assumed that concrete has reached this strength when either of the following conditions has been met:
 - 1. When test cylinders, field cured along with the concrete they represent, have reached the specified strength.
 - 2. When concrete has been cured per Section 03 39 00 for the same length of time as the site-cured cylinders that reached specified strength. Determine the length of time the concrete has been cured in the structure by cumulative number of days or fractions thereof, not necessarily consecutive, during which the air temperature is above 50 deg. F. and concrete has been damp or sealed from evaporation and loss of moisture.

3.9 REUSE OF FORMS

- A. Do not reuse forms if there is any evidence of surface wear or defect which would impair quality of concrete surface.
- B. Thoroughly clean and properly coat forms before reuse.

3.10 FIELD QUALITY CONTROL

- A. Before commencing a pour, verify connections, form alignment, ties, inserts and shoring

are placed and secure.

- B. Observe formwork continuously while concrete is being placed to verify that the forms are plumb and there are no deviations from desired elevation, alignment, or camber.
- C. If during construction any weakness develops and false-work shows undue settlement or discoloration, stop work, remove affected construction if permanently damaged, and strengthen false-work.

PART IV - MEASUREMENT

4.1 Measurement – No Separate measurement will be made for Work described in this Section.

PART V - PAYMENT

5.1 Payment – Payment for items in this Section will be incidental to the Contract unit cost of the concrete bid items.

END OF SECTION

SECTION 03 15 10**CONCRETE FLATWORK****PART I - GENERAL****1.1 SUMMARY**

- A. Description: This Section covers the work required to furnish materials and construct concrete flatwork as shown on the Contract Drawings. The work includes grade preparation, setting forms, placing untreated base course, pouring concrete, finishing, and curing of concrete.

1.2 SUBMITTALS

- A. Submittals shall be made in accordance with the requirements of the General Provisions of the Specifications, except as modified herein.

1.3 QUALITY ASSURANCE/QUALITY CONTROL

- A. Quality assurance/quality control shall be performed in accordance with the requirements of the Project Quality Plan, except as modified herein.

PART II - PRODUCTS**2.1 CONCRETE**

- A. Class AA (AE) concrete as specified in Section 03 15 16, Article 3.2, Table 3.
- B. Use high purity, chemically inert, unfading, and alkali-free synthetic pigment coloring material.

2.2 EMBANKMENT MATERIAL

- A. Material shall be in compliance with the requirements stipulated in Section 31 22 00 of the Specifications.

2.3 AGGREGATE BASE COURSE

- A. Material shall be in compliance with the requirements stipulated in Section 32 11 00 of the Specifications.

2.4 FORMS

- A. Concrete forms shall be in accordance with the requirements stipulated in Section 03 11 10 of the Specifications.

2.5 CONCRETE PLACING, FINISHING, AND CURING

- A. Concrete placing, finishing and curing shall be in accordance with the requirements stipulated in Sections 03 30 00, 03 35 10, and 03 39 00 of the Specifications.

PART III - EXECUTION

3.1 STANDARD PROCEDURES

- A. Construct subgrade to the elevations as specified on the Contract Drawings. Subgrade shall be constructed in accordance with the requirements stipulated in Section 31 23 13 of the Specifications.
- B. Place and compact fill material in accordance with the requirements stipulated in Section 31 22 00 of the Specifications.

PART IV - MEASUREMENT

- 4.1 Measurement** – No Separate measurement will be made for Work described in this Section.

PART V - PAYMENT

- 5.1 Payment** – Payment for items in this Section will be incidental to the Contract unit cost of the concrete bid items.

END OF SECTION

SECTION 03 15 16**PORTLAND CEMENT CONCRETE****PART I - GENERAL****1.1 SUMMARY**

- A. Description: The Work in this Section includes the materials and procedures for producing Portland Cement concrete for construction of concrete structures, pre-stressed concrete, precast concrete, and cast-in-place concrete, including footings, foundations, pier columns, pier caps, bridge girders, retaining walls, MSE, and miscellaneous concrete structures as shown on the Contract Drawings.

1.3 SUBMITTALS

- A. Mix design: Submit
1. Date of mix design. If mix design is older than 290 days on day of submittal, the mix design must be recertified. Submit the mix design 10 days prior to use.
 2. Source and type of cement and its percentage of expansion.
 3. Physical properties of coarse, fine and combined aggregate.
 4. Average concrete strength (f_c') per quality control chart.
 5. Size of coarse aggregate.
 6. Allowable range of slump and air content.
 7. Water/cement ratio.
 8. Proportions of materials in the mix.
 9. Unit weight.
 10. Analysis of water to be used unless potable.
 11. Technical data sheets for additives to be used at the plant and at the job site. Certify additives are compatible with each other.
- B. Pre-approved mix design, submit name and address of supplier.
- C. Before changing mix design submit a new mix design and give Engineer 10 days to evaluate the changes.
- D. Quality Control Report: Upon Engineer request, submit a written quality control inspections and testing report describing source quality control activities performed by Contractor and Contractor suppliers.

1.4 QUALITY ASSURANCE

- A. Reject concrete that does not meet requirements of this section.

- B. Do not change material sources, type of cement, air-entraining agent, water reducing agent, other admixtures except as allowed by mix design.
- C. Store bagged and bulk cement in weatherproof enclosures. Exclude moisture and contaminants.
- D. Prevent segregation and contamination of stockpiled aggregate.
- E. Avoid contamination, evaporation, or damage to admixtures. Protect liquid admixtures from freezing.
- F. Use of admixtures will not relax hot or cold weather placement requirements.

PART II - PRODUCTS

2.1 CEMENT

- A. Use Portland Cement conforming to ASTM C150, Type I/II, low alkali for concrete, unless otherwise specified.
- B. Do not use different brands or different types of cement or the same brand of cement from different mills without prior written approval of the Engineer.
- C. Do not use cement that contains lumps or is partially set.
- D. Do not use air-entrained cement.
- E. Cement may be sampled and tested for compliance at any time by the Engineer.

2.2 COARSE AGGREGATE

- A. As specified in AASHTO M 80, and as modified, using one of the gradations found in Table 1.

Table 1

Aggregate Gradations - Percent Passing (by weight)									
Aggregate Size (in)	2.5 in	2 in	1.5 in	1 in	$\frac{3}{4}$ in	$\frac{1}{2}$ in	$\frac{3}{8}$ in	$\frac{3}{16}$ in	
2 to $\frac{3}{16}$	100	95-100		35-70		10-30		0-5	
1.5 to $\frac{3}{16}$		100	95-100		35-70		10-30	0-5	
1 to $\frac{3}{16}$			100	95-100		25-60		0-10	
$\frac{3}{4}$ to $\frac{3}{16}$				100	90-100		20-55	0-10	

- B. Use sieve screens with square openings as specified. Meet ASTM E 11.
- C. Do not exceed percentages of deleterious substances as shown in AASHTO M 80, Table 1, for Class A aggregates.

- D. Determine the suitability of coarse aggregate sources using the requirements for soundness, percentage of wear and potential reactivity as specified in AASHTO M 80.

2.3 FINE AGGREGATE

- A. As specified using the gradation shown in Table 2. Meet AASHTO M 6.

Table 2

Sieve Size	Percent Passing (by weight)
$\frac{3}{8}$ in	100
$\frac{3}{16}$ in	95 to 100
#16	45 to 80
#50	10 to 30
#100	2 to 10

- B. Do not exceed percentages of deleterious substances as outlined in AASHTO M 6 for class A aggregates.
- C. Soundness: As specified to determine suitability of fine aggregate, meet AASHTO M 6.

2.4 COMBINED AGGREGATE

Do not allow the material passing the #200 sieve to exceed 1.75 percent by weight of the combined fine and coarse aggregates.

2.5 WATER

- A. Potable, or water that meets the specified test standard in AASHTO T 26.
- B. Screen out extraneous material when pumping water from streams, ponds, lakes, etc.

2.6 ADMIXTURES

- A. Air Entrainment: as specified, meet ASTM C260, including Section 5.
- B. Water Reducing Agents: as specified, meet ASTM C 494.
1. The chlorides content (as Cl⁻) not exceeding 1 percent by weight of the admixtures.
- C. Do not use calcium chloride.
- D. Protect all admixtures from freezing.

2.7 POZZOLAN

- A. Fly Ash:
1. Class F, as specified.
 - a. Conform to ASTM C 618, Class F.
 - b. Loss on Ignition (LOI): not to exceed 3 percent.

- c. Maximum allowable CaO content: not to exceed 15 percent.
 2. Allowed as a Portland cement replacement under the following conditions:
 - a. If used, replace 15 to 20 percent of the Portland cement by weight.
 - b. Use the minimum cement content in the design formulas before replacement is made.
 - c. Label the storage silo for fly ash to distinguish it from cement.
 - d. Use different size unloading hoses and fittings for cement and fly ash.
- B. Natural Pozzolan (Class N)
 1. Conform to ASTM C 618.
 2. May use instead of fly ash provided that the 14-day expansion test (ASTM C 1260) with job aggregates and job cement does not exceed that for the same aggregates and cement with a MoDOT approved Class F fly ash.
- C. Silica Fume: Conform to ASTM C 1240. Use 5% silica fume in all bridge decks by weight of all cementitious materials.

PART III - EXECUTION

3.1 PREPARATION

- A. Aggregate stockpiles:
 1. Clear, grub, smooth, and compact the site.
 2. Stockpile platforms will be constructed in such a way as to prevent intrusion of subgrade materials into aggregates.
 3. Building stockpiles at least two days before use.
 4. Provide an operator and front-end loader to help the Engineer take aggregate samples.
 5. Acceptance will be made in daily increments, but not more than 30 days before use.
 6. Provide separate stockpiles for coarse and fine aggregate.
 7. Construct stockpiles in thin layers (5 ft maximum) that have uniform thickness and a regular form.
 - a. Do not build high, cone-shaped piles above the maximum height of 10 ft before distribution.
 - b. Do not dump or spill aggregate over the sides of the stockpile.
 - c. Minimize segregation of aggregate.
 8. Allow washed aggregates to drain to a uniform moisture content before use (12 hours minimum).

9. Move conveyor continuously across the stockpile as aggregate is discharged.
 10. Do not drop material more than 10 ft from conveyor.
- B. Heating Aggregate and Water
1. Provide and operate heating devices when heated aggregates are required.
 2. Aggregates must be free of ice.
 3. Heat aggregates uniformly, when required. Avoid overheating or developing hot spots.
 4. Meet temperature control requirements found in Subsection 3.7.
 5. Meet cold weather limitations in Subsection 3.8.
 6. Use either steam or dry heat.
 7. Do not allow the products of fuel combustion to contact the aggregate.
 8. Heat the mixing water to between 70 degrees F and 180 degrees F when introduced into the mixer.

3.2 CONCRETE CLASSES AND MIX REQUIREMENTS

- A. Meet the requirements in Table 3.

Table 3

Concrete Classes and Mix Requirements							
Class	Coarse Aggregate Size (in)	Max. Water/Cement Ratio	Min. Cement Content (lbs/cu yd)	Slump (in)	Air Content Percent (%)	Mix Design Compress f'_{cr} (ksi)	28 Day Minimum Compress f'_c (ksi)
6A(AE)	**	**	**	**	**	10.5	8.0
5A(AE)	**	**	**	**	**	9.0	7.0
4A(AE)	**	**	**	**	**	7.8	6.0
3A(AE)	**	**	**	**	**	6.5	5.0
AA(AE)	2 to $\frac{3}{16}$	0.44	565	1 - 3.5	4.0 - 7.0	5.2	4.0
	1.5 to $\frac{3}{16}$	0.44	565	1 - 3.5	4.5 - 7.5	5.2	4.0
	1 to $\frac{3}{16}$	0.44	611	1 - 3.5	5.0 - 7.5	5.2	4.0
	$\frac{3}{4}$ to $\frac{3}{16}$	0.44	611	1 - 3.5	5.0 - 7.5	5.2	4.0
	1.5 to $\frac{3}{16}$	0.53	470	1 - 3.5	4.5-7.5	3.9	3.0

A(AE)	1 to $\frac{3}{16}$	0.53	470	1 - 3.5	4.5-7.5	3.9	3.0
	$\frac{3}{4}$ to $\frac{3}{16}$	0.48	517	1 - 3.5	4.5-7.5	3.9	3.0
B or B(AE)		0.62	376	2 - 5	-- 3.0-6.0	3.25	2.5
C or C(AE)		0.70	376	2 - 5	-- 3.0-6.0	2.6	2.0

** Design and proportion mixes according to ACI 301 and project specific criteria.

- B. Minimum strength is based on a coefficient of variation of 10 percent, and one test below the minimum strength per 100 tests.
- C. Maximum size of coarse aggregate:
1. Not larger than $\frac{1}{5}$ of the narrowest dimension between sides of forms.
 2. Not larger than $\frac{1}{3}$ the depth of slabs.
 3. Not larger than $\frac{3}{4}$ of the minimum clear distance between reinforcing bars or between bars and forms, whichever is least.
- D. Do not exceed water/cement ratio.
- E. When a pozzolan is used in the mix, calculate the water/cement ratio (w/c) according to the following formula:

$$\frac{W}{C} = \frac{\text{Water}}{\text{Cement} + \text{pozzolan}}$$

- F. When using water reducing admixtures, use the following slump requirements.
1. Slump requirements when using low range water reducers: 1 to 6 in for all classes of concrete.
 2. Slump requirements when using high range water reducers: 4 to 9 in for all classes of concrete.

3.3 ADDITIONAL REQUIREMENTS FOR USING HIGH RANGE WATER REDUCERS (SUPER PLASTICIZERS)

- A. Establish the effective life of the High Range Water Reducer (HRWR) by trial batch.
1. Trial batch will approximate field conditions including time of placement (see Subsection 3.7.A), and concrete temperature.
 2. Engineer may witness the trial batch.
 3. Slowly agitate the mix throughout the test period.

4. Record and plot slump and mix temperature at 15 minimum intervals.
 5. Maintain the required slump (4 in. to 9. in) throughout the time allowed for placement. Re-dose if necessary.
 6. If re-dosing is required, record the time of re-dose and the amount of admixture added.
 7. Do not exceed any manufacturer's recommendations for the use of the HRWR.
- B. High Range Water Reducer (HRWR) may be added at the job site.
1. Record on the batch ticket, the time at which the HRWR was added.
 2. Maintain the mixing period for truck mixers between 70 and 100 revolutions at mixing speed.
 3. Engineer may perform a standard slump test before adding the HRWR to a transit mixer.
 4. Engineer may take additional slump tests at the job site after adding the HRWR.
- C. If the HRWR is added to a central mixer, no preliminary slump test is required.
- D. Show on batch tickets the amount of admixture used.
- E. Do not exceed the requirements established by the trial batch.
- F. The Contractor is responsible for changes in placement and finishing operations due to the addition of admixtures.

3.4 ADDITIONAL REQUIREMENTS FOR USING SET RETARDING ADMIXTURES

- A. If set retarding admixtures are specified due to haul times exceeding the time limitations in Subsection 3.7.A, establish the effective life of the set retarding admixture by trial batch.
1. The trial batch will approximate field conditions including concrete mix temperature.
 2. Engineer may witness the trial batch.
 3. Slowly agitate the mix throughout the test period.
 4. Record and plot slump and mix temperature at 15-minute intervals.
 5. Do not exceed any manufacturers recommendations for the use of the set retarding admixture.
 6. Do not re-dose the concrete with additional set retarding admixture.
- B. Add set retarding admixture at the batch plant at the time of initial batching operations, or immediately after.
- C. Show on batch tickets the amount of admixture used.
- D. Time of placement will be established by the trial batch and will supersede the time requirements in Subsection 3.7.

- E. Do not exceed the requirements established by the trial batch.
- F. The Contractor is responsible for changes in placement and finishing operations due to the addition of admixtures.

3.5 BATCHING MATERIALS

- A. Meet AASHTO M 157.
- B. Meet the requirements of the MoDOT Quality Management Plan for Ready-Mix Concrete.
- C. Operate the batch mixer at the manufacturer's recommended drum speed.
- D. Keep drums and blades free from excessive cement and mortar buildup.
- E. Add the admixtures separately to the mix water.
- F. Do not use any process that will cause "flash set" of the mix.
- G. At central mix plants, mix all materials for at least 80 seconds at recommended drum speed.
 - 1. When adding more water or cement, mix 30 additional seconds.
 - 2. Introduce the cement into the batcher before the fly ash.
- H. Conduct mixing efficiency tests as specified.
 - 1. AASHTO M 157, Annex A-1.
 - 2. The Contract shall order mixing efficiency tests at the beginning of concrete operations, or anytime deemed necessary by Contractors QA staff or Engineer.
- I. Maintain the mixing period for truck mixers between 70 and 100 revolutions at mixing speed.
 - 1. Maintain a minimum of 90 revolutions for front-end discharge trucks.
 - 2. Complete concrete mixing before the truck leaves the batch plant yard.
- J. Hand Mixing:
 - 1. Only Class B and C concrete may be hand mixed.
 - 2. Hand-mixed batches cannot exceed 0.5 yd³ in volume.
 - 3. Hand mix on a watertight platform.
 - 4. Spread the aggregate evenly on the platform, and thoroughly mix in the dry cement until the mixture becomes uniform in color.

3.6 TRANSPORTING

- A. Transport ready-mixed concrete in transit mixers or agitator trucks.
 - 1. Do not load trucks in excess of their rated mixing capacity, or 63 percent of the drum gross volume, or less than 2.0 yd³.

2. The truck rating plate must be readable.
- B. Equip transit mixers or agitator trucks with a visible water meter and revolution counter (electronic or mechanical). Use the water meter to measure all water discharged from the truck's tank.
- C. Obtain approval to add water after the transit mixer or agitator truck leaves the batch plant.
1. Add water within the specified time limits.
 2. Do not add more water than the batch ticket indicates.
 3. Do not add water after more than 0.5 yd³ of concrete has been discharged from the drum and do not exceed the water/cement ratio.
 4. When adding water, rotate the drum at least 30 revolutions at the mixing speed recommended by the manufacturer.

3.7 LIMITATIONS - GENERAL

- A. Reject concrete if:
1. Mix temperature is less than 50 degrees F.
 2. It is not placed within 90 minutes when the air temperature is below 90 degrees F.
 3. It is not placed within 90 minutes after the addition of cement to the aggregates when the mix temperature is between 80 and 85 degrees F.
 4. It is not placed within 45 minutes after mix temperature rises to between 86 and 90 degrees F.
 5. Mix temperature is greater than 90 degrees F.
 6. Initial set has developed.
 7. Revolutions of drum or blades not to exceed 300 (per ASTM C94 and AASHTO M197).
- B. Do not temper concrete by adding water or by any other means after initial set or false set has taken place.
- C. Pumping and Conveying Equipment
1. Do not use equipment, or a combination of equipment and the configuration of that equipment, that causes a loss of entrained air content that exceeds one half of the range of air content allowed by specification.
 2. Contractor is responsible for verification and/or monitoring of air loss.

3.8 LIMITATIONS - COLD WEATHER (ACI 306R)

- A. Cold weather limitations apply when the temperature is likely to fall below 40 degrees F within 14 days of placement.

- B. Comply with the following regulations for placing concrete in cold weather:
1. Submit a written plan for approval 14 calendar days before concrete placement.
 2. Do not use chemical additives in the concrete to prevent freezing.
 3. Provide all necessary cold weather protection for in-place concrete (cover, insulation, heat, etc.).
 4. Do not place concrete in contact with frozen surfaces.
 5. Produce concrete with a temperature between 60 degrees F and 90 degrees F at the time of placing.
 6. Adequately vent combustion-type heaters that produce carbon monoxide.
 7. Maintain the concrete temperature above 50 degrees F for the first 14 days after placing.
 8. Protect the concrete from freezing until a compressive strength of at least 3.5 ksi has been achieved.
 9. Maintain moist conditions for exposed concrete not in contact with forms; avoid loss of moisture from the concrete due to heat applied.
 10. Limit the drop in temperature next to the concrete surfaces when removing heat to 52 degrees F during any 12-hour period until the surface temperature of the concrete reaches that of the atmosphere.
 11. Determine the concrete temperature with a surface thermometer insulated from surrounding air.
- C. Paving:
1. Paving may begin when base surface temperature is 36 degrees F in the shade and ascending.
 2. Maintain the mix temperature at a minimum 60 degrees F.
 3. Cease operations when the ambient temperature is 45 degrees F in the shade and decreasing.
 4. Do not add chemical admixtures to prevent freezing.
 5. Remove and replace concrete damaged by frost action.
 6. Do not use material containing frost or lumps.
 7. Do not heat water or aggregate to more than 150 degrees F.
 8. Protect the concrete from freezing until a compressive strength of at least 3.5 ksi has been achieved.

3.9 LIMITATIONS - HOT WEATHER (ACI 305R)

- A. Begin batching operations when the ambient air temperature in the shade is 84 degrees F and declining.
- B. Discontinue placing when the ambient air temperature reaches 80 degrees F in the shade and is increasing.
- C. Paving: Discontinue paving when mix temperature reaches 90 degrees F either at point of placement or batch plant platform, or when ambient air temperature exceeds 100 degrees F in the shade.

3.10 LIMITATIONS-SURFACE EVAPORATION

- A. Surface evaporation limitations apply and may occur at any time of the year, when any combination of air temperature, relative humidity, and wind velocity, that have the potential to impair the quality of fresh or hardened concrete or otherwise result in abnormal properties. Submit a written plan for approval 14 calendar days before concrete placement that shows proper attention will be given to ingredients, production methods, handling, placing, protection, and curing to prevent excessive concrete temperatures and water evaporation that could impair strength or serviceability of the concrete. Refer to ACI 305R.
- B. The surface evaporation plan may include any of the following actions:
 - 1. Construct windbreaks or enclosures to effectively reduce the wind velocity throughout the area of placement.
 - 2. Use fog sprayers upwind of the placement operations to effectively increase the relative humidity.
 - 3. Reduce the temperature of the concrete by shading the material storage area or production equipment, cool aggregate by sprinkling, cool aggregate and/or water by refrigeration or by replacing a portion or all of the mix water with flaked or crushed ice to the extent that the ice will completely melt during mixing of the concrete.
 - 4. Adjustment of the placement schedule.
 - 5. Use of an approved water-based mono-molecular polymer liquid evaporative reducer at application rates recommended by the manufacturer. Not to be used as a finishing aid.

3.11 FIELD QUALITY CONTROL - SAMPLING

- A. The Contractor shall conduct sampling and testing.
 - 1. When testing concrete from a concrete pump, the Contractor shall take the samples from the hose after all of the priming grout has been wasted.
- B. Provide and maintain cylinder storage devices to control the temperature within the specified range.
 - 1. Maintain cylinders at a temperature range of 50 degrees F to 80 degrees F for the initial 16-hour curing period.
 - 2. Do not move the cylinders during this period.

3. Equip the storage device with an automatic 24-hour temperature recorder with an accuracy of ± 2 degree F.
 4. Have the storage devices available at the point of placement at least 24 hours before placement.
 5. The Contractor shall stop placement of concrete if the storage device cannot accommodate the required number of test cylinders.
 6. Use water containing hydrated lime if water is to be in contact with cylinders.
 7. A 24-hour test run may be required.
- C. Protect cylinders for evaluating in-place strength of concrete prior to applying loads or stresses.
1. Store specimens at or near the structure
 2. Locate specimens where their temperature will be approximately that of the concrete in the structure.
 3. Leave specimens at the structure for as long a period of time as possible before shipping to the laboratory.
 4. Keep specimens in a plywood box (without insulation) and in a shaded location.
 5. Avoid conditions of extreme exposure to wind and sun as well as over protection from weather variations.
 6. Place specimens in field curing location as soon as possible after they are fabricated without disturbing the concrete while in its plastic state.
 7. The curing location must be a firm level surface, free from vibration and otherwise protected from disturbance.
 8. Cure all test specimens with the axis of the cylinder vertical.
- D. Do not place concrete without inspector's approval.

PART IV - MEASUREMENT

4.1 Measurement – No Separate measurement will be made for Work described in this Section.

PART V - PAYMENT

5.1 Payment – Payment for items in this Section will be incidental to the Contract unit cost of the concrete bid items.

END OF SECTION

SECTION 03 15 23
EXPANSION JOINT SEALS IN CONCRETE

PART 1 - GENERAL**1.1 SUMMARY**

- A. Furnish all labor, materials, tools, equipment, and services for Expansion Joint Seals In Concrete, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. Install Expansion Joints in weather-tight, water-tight fashion.
- B. Extruded Neoprene:
 - 1. Quality complying with ASTM D 3542, and the following properties:

Minimum Physical Properties		
Property	Test Method	Required Value
Tensile strength, min.	ASTM D 412	3447 kPa 2000 PSI
Elongation at break, min.	ASTM D 412	250 percent
Hardness, Type A durometer	ASTM D 2240	55 ±5
Oven aging (70 hours at 100 degC 212 degF): Tensile strength, max. Elongation, max. Hardness, Type A durometer	ASTM D 573	20% loss 20% loss 0 to +10 pts
Max Weight Change due to Oil swell; (#3 Oil for 70 hours at 100 degC 212 degF)	ASTM D 471	45 percent
Ozone resistance, 20 percent strain 70 hours aging, ASTM D 573, 3 ppm in air	ASTM D 1149	No cracks

1.3 SUBMITTALS

- A. Project Information:
 - 1. Manufacturer of listed products.
- B. Contract Closeout Information:
 - 1. Flood Test Results.

PART 2 - PRODUCTS**2.1 ACCEPTABLE MANUFACTURERS**

- A. Expansion joint seals:
 - 1. Base:
 - a. D.S. Brown.
 - 2. Optional:
 - a. Watson Bowman Acme Corp
- B. Other manufacturers desiring approval comply with Section 00 26 00.

2.2 MATERIALS

- A. General:

1. Size material for joint width(s) indicated and in accord with current published recommendations of manufacturer.
 2. Use maximum available lengths.
 3. Use factory fabricated joints.
 4. Use types described below where indicated:
- B. Expansion Joint Seal – Type A:
1. Description:
 - a. Elastomeric, neoprene profiles as indicated.
 2. Base Product(s) (refer to plans for where occurs):
 - a. “JP-Series” by D.S. Brown.
- C. Expansion Joint Seals – Type D (Normal-duty Compression Type):
1. Description:
 - a. Elastomeric, neoprene honeycomb profiles as indicated.
 - b. Width(s): As indicated
 2. Base Product:
 - a. “CS-Series” by D.S. Brown.
- D. Lubricant/adhesive:
1. High-strength, 2-part Epoxy Manufacturer’s standard.
 2. Use where required.

2.3 EXPANSION JOINTS TYPES SPECIFIED ELSEWHERE

- A. Expansion Joints at Roofing:
1. Specified in Section 07 62 00 and applicable roofing section(s), or both.
- B. Expansion Joints in Exterior Walls:
1. See Compressible Sealants, Specified in Section 07 92 13.
- C. Expansion Joints in Interior locations:
1. Specified in Section 07 95 13.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Assure that joints to receive seal are free from defects with sides straight and parallel to proper width and depth indicated.
1. Temperature at time of joint construction determines width of working joint.
 2. Form joints allowing for design temperature variations.
 3. Ensure that concrete is cured per manufacturer’s recommendations, prior to installing joint.

3.2 PREPARATION

- A. Clean surfaces to receive seal of material which may be detrimental to effective joint sealing.
- B. Do not apply adhesives at temperatures below 5 DegC 40 DegF.
- C. Do not install seals at temperatures above 30 DegC 85 DegF.
- D. Keep adhesives and solvents away from heat or flame.
- E. Apply in well ventilated area.

3.3 INSTALLATION

- A. General:
1. Where pedestrian traffic is anticipated: Utilize material which are ADA compliant.

2. Miter and splice seal at corners where space does not permit a smooth bend.
 3. Splice seal using adhesive to provide a permanent, watertight joint.
 4. Remove misapplied adhesive immediately, using methylethyl ketone (MEK) or toluene.
- B. Installation – Joint Type A, C, and D:
1. Decompress seals using vacuum suction.
 2. Apply continuous coat of adhesive to both joint interfaces immediately prior to seal installation.
 3. Insert into joint void.
 4. Release suction, allowing material to expand and apply necessary bonding pressure.
 - a. Exception: Use pressurized air, in lieu of suction, where so recommended by manufacturer.
 5. Install with top recessed 3mm 1/8 IN.
- C. Installation – Joint Type B:
1. Embed stainless steel frame rails into concrete.
 2. Coordinate joint void width with drawings and according to manufacturer's recommendations.
 3. Install substantially flush with adjacent slab surfaces.
 4. Seal frame rails to concrete after slabs have cured.

3.4 FIELD TESTING

- A. Flood test installed joints for 24 hours.
1. Minimum depth of water: 50mm 2 IN.
- B. Visually inspect area below for signs of water leakage.
- C. Repair areas which permit passage of water and re-test.

END OF SECTION

SECTION 03 20 00 CONCRETE REINFORCING

PART 1 - GENERAL

1.1 SUMMARY

- A. Furnish all labor, materials, tools, equipment, and services for Concrete Reinforcing, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. Testing of reinforcing steel welding shall be performed by Owner's testing agency at Owner's expense.
- B. Standards:
 - 1. ASTM-A185: Standard Specification for Steel Welded Wire Reinforcement, Plain, for Concrete Reinforcement.
 - 2. ASTM A663: Standard Specification for Steel Bars, Carbon, Merchant Quality, Mechanical Properties.
 - 3. ASTM-A615: Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.
 - 4. ASTM-A675: Standard Specification for Steel Bars, Carbon, Hot-Wrought, Special Quality, Mechanical Properties.
 - 5. ASTM-A706: Standard Specification for Low-Alloy Steel Deformed and Plain Bars for Concrete Reinforcement.
 - 6. ASTM-A775: Standard Specification for Epoxy-Coated Reinforcing Steel Bars.
 - 7. ASTM-A884: Standard Specification for Epoxy-Coated Wire and Welded Wire Reinforcement.
 - 8. ACI 315: Details and Detailing Concrete Reinforcement.
 - 9. American Welding Society ANSI/AWS-D1.4 Structural Welding Code- Reinforcing Steel.
- C. Initial test for reinforcing bar welding will be paid by Owner. Retests due to failed initial tests shall be paid by Contractor.

1.3 SUBMITTALS

- A. Shop Drawings:
 - 1. Shop drawings indicating size, number, dimensions and locations of reinforcing steel and accessories, in sufficient detail to permit installation of reinforcing without reference to Contract drawings.
 - a. Details of concrete reinforcement and accessories not indicated on Contract Documents shall be in accordance with ACI 315.
- B. Project Information:
 - 1. Certification that reinforcing to be welded conforms to ASTM-A706.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. End bearing splice couplers:
 - 1. Base:

- a. Erico Products.
- B. Tension splice couplers:
 - 1. Base:
 - a. Erico Products.
 - b. Dayton Metal Products.
 - c. Dextra America Inc.
- C. Epoxy adhesive for anchoring reinforcing:
 - 1. Base:
 - a. Hilti, HIT System.
- D. Other manufacturers desiring approval comply with Section 00 26 00.

2.2 MATERIALS

- A. Reinforcing - General: Conform to ASTM-A615, Grade-60.
- B. Reinforcing - Welded: Reinforcing to be welded shall conform to ASTM-A706.
- C. Welded wire reinforcement: Flat sheets conforming to ASTM-A185 and to wire size and spacing of smooth wire indicated on drawings.
- D. Smooth dowel bars for construction joints: Conform to ASTM-A663 or ASTM-A675, Grade-60. Where indicated, provide a metal dowel cap at one end of dowel to permit longitudinal movement of dowel within concrete section. Provide for movement which equals joint width plus 13 mm 1/2 IN. Unless otherwise indicated, use 16 mm 5/8 IN diameter dowels spaced 455 mm 18 IN on center.
- E. Slab on Grade Plate Dowels: May be used as an equal substitute for smooth dowel bars at construction joints. Plate material shall be ASTM A36 steel and shall be Diamond Dowel System, by PNA Construction Technologies, size 1/4" x 4 1/2 " dowels or equal . Locate plate dowels per smooth dowel bar requirements. Do not shear plates. Remove burrs at edges of plates.
- F. End bearing splice couplers:
 - 1. Erico Speed-Sleeve Splice by Erico Products.
- G. Tension splice couplers: Shall develop minimum 125 percent of yield strength of bar(s). Where drawings indicate tension splice couplers, provide one of following:
 - 1. "Lenton" threaded tension coupler by Erico Products.
 - 2. "Bar-Grip" tension coupler by Dayton Metal Products of Miamisburg, OH.
 - 3. "Cadweld" tension splice by Erico Products.
 - 4. Bar-Lock lockshear bolt coupling sleeves, manufactured by Dayton Superior
 - 5. "Bartec" Mechanical Couplers as manufactured by Dextra America, Inc.
- H. Epoxy coating for reinforcing: Conform to ASTM-A775. Coat reinforcing specifically noted on drawings as well as applicable splice couplers. Touch up damaged coating areas in field.
- I. Epoxy anchored reinforcing: Install reinforcing anchored in concrete with epoxy adhesive, in accordance with epoxy manufacturer's instructions.

2.3 FABRICATION

- A. Bars used for concrete reinforcement shall meet following requirements for fabricating tolerances:
 - 1. Sheared length: Plus or minus 25 mm 1 IN.
 - 2. Depth of truss bars: Plus 0, minus 13 mm 1/2 IN.
 - 3. Overall dimensions of stirrups, ties, and spirals: Plus or minus 13 mm 1/2 IN.
 - 4. Other bends: Plus or minus 25 mm 1 IN.

- B. For bars with "End Bearing Splice Couplers," bar ends shall terminate in flat surfaces, within 1-1/2 degrees of a right angle to axis of bars and shall be fitted within 3 degrees of full bearing after assembly.

PART 3 - EXECUTION

3.1 WELDING

- A. Perform welding of reinforcing steel in conformance with AWS-D1.4.
- B. Use E70 electrodes.
- C. Each welder shall place an approved identifying mark near each completed weld.
- D. Cut out welds determined to be defective and reweld and retest at Contractor's expense.

3.2 PLACING REINFORCEMENT

- A. Provide minimum concrete covering for reinforcement as follows:
 - 1. Concrete deposited against earth: 75 mm 3 IN.
 - 2. Formed surfaces exposed to weather or in contact with earth: 50 mm 2 IN for reinforcing bars No.19 No.6 or larger; 40 mm 1-1/2 IN for reinforcing bars less than No.19 No.6.
 - 3. Interior surfaces: 40 mm 1-1/2 IN for beams, girders, and columns; 20 mm 3/4 IN for slabs, walls and joists with No.36 No.11 bars or smaller, and 40 mm 1-1/2 IN with No.43 No.14 and No.57 No.18 bars.
- B. Place bars to following tolerances:
 - 1. Clear distance to formed surfaces: Plus or minus 6 mm 1/4 IN.
 - 2. Minimum spacing between bars: Minus 6 mm 1/4 IN.
 - 3. Top bars in slabs and beams:
 - a. Members 205 mm 8 IN deep or less: Plus or minus 6 mm 1/4 IN.
 - b. Members between 205 and 610 mm 8 and 24 IN deep: Plus/minus 13 mm 1/2 IN.
 - c. Members more than 610 mm 2 FT deep: Plus or minus 25 mm 1 IN.
 - 4. Crosswise of members: Spaced evenly within 50 mm 2 IN.
 - 5. Lengthwise of members: Plus or minus 50 mm 2 IN.
- C. Bars may be moved as necessary to avoid interference with other reinforcing steel, conduits, or embedded items. If moved more than one bar diameter, or enough to exceed above tolerances, resulting arrangement of bars subject to approval.
- D. Assure that reinforcement, at time concrete is placed, is free of materials that may adversely affect or reduce bond. Reinforcement with rust, mill scale or a combination of both will be accepted as being satisfactory without cleaning or brushing provided dimensions and weights, including heights of deformations, of a cleaned sample is not less than required by applicable ASTM.
- E. Support reinforcement and fasten together to prevent displacement by construction loads or placing of concrete beyond tolerances indicated. On ground, provide supporting concrete blocks or other approved method. Over formwork, use concrete, metal, plastic or other approved bar chairs and spacers. Where concrete surface will be exposed to weather in finished structure, furnish accessories within 13 mm 1/2 IN of concrete surface of non-corrosive material or protect against corrosion.

-
- F. Overlap welded wire reinforcement wherever successive mats or rolls are continuous, in such a way that overlap measured between outermost cross wires of each fabric sheet is not less than spacing of cross wires plus 50 mm 2 IN. Unless shown otherwise on the drawings, support as required for reinforcing bars by methods of Paragraph E above.
 - G. As indicated on drawings, offset vertical bars in columns at least one bar diameter at lapped splices. To ensure proper placement, furnish templates for column vertical bars and dowels.
 - H. Splices not specifically indicated shall be subject to approval.
 - I. Unless permitted by Architect/Engineer, do not bend reinforcement after embedding in hardened concrete.
 - J. Unless permitted by Architect/Engineer, do not tack weld reinforcing.

END OF SECTION

SECTION 03 20 10**CONCRETE REINFORCING****PART I - GENERAL****1.1 SUMMARY**

- A. Description: This Section covers the work of furnishing and placing concrete reinforcement, either plain, epoxy coated, or hot dip galvanized, as shown on the Contract Drawings. The work includes material, equipment, and labor necessary to procure, fabricate, install, and erect in field the concrete reinforcement.

1.3 SUBMITTALS

- A. Submittals shall be made in accordance with the requirements of the Project Quality Plan, except as modified herein.
- B. Prior to fabrication and before ordering material, submit all order lists and bending diagrams (shop drawings) in compliance with the Contract Drawings to the Engineer for review and approval.

- C. Certified copies of mill test reports shall be submitted for each heat or shipment. The reports shall cover the chemical and mechanical properties of the reinforcing steel as specified in ASTM A 615 or ASTM A 706, as applicable.
- D. Welder qualifications and welding procedure shall be submitted at least 30 days before any welding is to be performed.

1.4 QUALITY CONTROL

- A. Quality control shall be made in accordance with the requirements of the Project Quality Plan, except as modified herein.
- B. Epoxy coating and patching/repair material shall be prequalified according to ASTM D 3963. All testing shall be performed by third party testing laboratory approved by the Engineer. The Engineer will review all test data to determine whether the material meets the prequalification requirements.
- C. Submit together with every epoxy coated reinforcing bar shipment a written statement certifying the coated bars were cleaned, coated, and tested according to ASTM D 3963 and as modified by this Section and that the prequalified coating material is used.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Do not damage the bars during handling and storage.
 - 1. Lift all bundles with strong-back, multiple supports, or a platform bridge.
 - 2. Do not drop or drag bars.
 - 3. Use systems with padded contact areas when handling epoxy coated bars.
 - 4. Pad all bundling bands for epoxy coated bars.

PART II – PRODUCTS

2.1 MATERIALS

- A. Reinforcing steel shall conform to the following requirements:
 - 1. Deformed bars, ASTM A 615, Grade 60.
 - 2. Deformed bars, ASTM A 706, Grade 60.
 - a) These deformed bars are weld-able and shall be used for vertical and horizontal reinforcement in the bridge columns and column structural hinges, including their extensions into the pile cap and bent cap unless noted otherwise on the Contract Drawings.
 - 3. Welded wire fabric, ASTM A 185.
 - 4. Dowels, ASTM A 663, Grade 60. Coat with grease or other approved material for bond prevention where specified.
 - 5. Spiral reinforcement, ASTM A 82, except that f_y shall be the stress corresponding to a strain of 0.35 percent if design yield exceeds 60,000 psi.

- B. Bar Supports
- Bar supports in contact with exposed surfaces and for coated reinforcement shall be plastic or plastic coated. Other supports shall be plastic or concrete stone. Broken stone, metal pipe, brick chips, or wood are prohibited.
- C. Tie wire shall be 16 gage mild steel. Where epoxy coated reinforcing is used a non-metallic coated tie wire specifically produced for use in tying epoxy coated reinforcement shall be used.
- D. Submit manufacturers' printed materials and one set of sample for review and approval by the Engineer for threaded rebar couplers and mechanical couplers, prior to order and procurement. Submit at least not less than three manufacturers who have supplied the same to similar projects of the same magnitude in the last 3 years.
- E. All concrete reinforcing used in concrete structures detailed and shown on the Contract Drawings shall not be epoxy coated, unless noted otherwise.
- F. All smooth round dowels shall not be epoxy coated, unless noted otherwise on the Contract Drawings.

2.2 EPOXY COATING

- A. Epoxy coating applicator shall be CRSI fusion bonded epoxy coating applicator plant certified. The certification is not required for cold-drawn steel wire and welded steel wire reinforcement.
- B. The Engineer may choose to witness coating processes for project work and obtain specimens for testing.
- C. The coating thickness shall be 200 microns to 300 microns. Apply coating after bar bending, unless the fabricator can demonstrate that satisfactory results can be obtained by coating before bending.
- D. Bent bars with visible cracks or damage in the coating shall be rejected outright.

2.3 ZINC GALVANIZATION

- A. Hot dip galvanization shall be Class 1 and shall be applied after bar fabrication. The average coating thickness shall be 150 microns of a minimum of 3 tests. Bending of galvanized rebars is prohibited.
- B. Remove all grease, dirt, mortar, mill scale, injurious rust, or any other foreign substance from the rebars prior to galvanizing. Injurious rust is the rust not firmly bonded to the steel. Rust that is difficult to remove, even by vigorous scrubbing with a wire brush, shall be considered firmly bonded to the steel.
- C. Galvanized materials shall be free from wet storage stains (white rust). These corrosion deposits, if present, shall be removed in a manner satisfactory to the Engineer prior to incorporation of the members in the work. After removal of these deposits, the coating shall have a uniform appearance free from uncoated spots, lumps, blister, gritty areas, acid flux, and black spots.
- D. Materials with the said defects, or not meeting the finish and adherence of coating requirements as defined in ASTM A 767 will be rejected and immediately removed from the work site.

2.4 WIRE AND WIRE REINFORCEMENT

- A. Cold-Drawn Steel Wire: As specified. Meet AASHTO M 55.
- B. Welded Steel Wire Reinforcement: As specified. Meet AASHTO M 55.
- C. Tie Wire: 16 gauge before coating.
 - 1. Use coated wire.

2.5 MECHANICAL ANCHORAGE DEVICE

- A. Splice Coupler (Same coating system as bar)
 - 1. Reinforcing steel splice coupler shown by tests to be capable of developing in tension 175 percent of the strength of the reinforcing bar without damage to the concrete.
 - 2. Steel Plate: Meet ASTM A 36.

2.6 QUALIFICATION OF WELDING AND MECHANICAL SPLICING

- A. Procedures to be used in making splices in reinforcing bars and welders and operators employed to make splices in reinforcing bars shall be qualified by tests performed by the Contractor on sample splices of the type to be used, before making splices to be used in the work.
- B. Welders and weld procedures shall be qualified in conformance with the requirements in AWS D1.4.
- C. Each operator qualification test for mechanical splices shall consist of 2 sample splices. Each mechanical splice procedure test shall consist of 2 sample splices.
- D. Sample splices shall be made on the largest reinforcing bar size to be spliced by the procedure or operator being tested.
- E. When joining new reinforcing bars to existing reinforcement, the qualification test sample bars shall be made using only the deformation patterns of the new reinforcement to be joined.
- F. Each operator qualified for mechanical splicing of reinforcing bars of a given size shall be considered also qualified for all reinforcing bar sizes smaller than those used in making the tests.
- G. The Contractor, at the Contractor's option, may have operator and procedure qualification tests performed simultaneously.
- H. Mechanical splice procedures and operators may be approved by the Engineer, based upon approval of previous tests performed on appropriate sample splices.
- I. Completed sample splices shall be at least 3 feet long with the splice at mid-length.
- J. The sample splices shall be made and tested by the Contractor in the presence of the Engineer. When samples are tested by a commercial agency, the test shall be witnessed by the Engineer.

2.7 JOB CONTROL TEST

- A. When mechanical butt splices, shop produced complete joint penetration butt welded splices or shop produced resistance butt welded splices are used, the Contractor shall furnish job control tests from a qualified testing laboratory. A job control test shall consist of the fabrication, under conditions used to produce the splice, and the physical testing of 3 sample splices for each lot of 150 splices.
- B. A lot of mechanical butt splices is defined as 150, or fraction thereof, of the same type of mechanical butt splices used for each combination of bar size and bar deformation pattern that is used in the work.
- D. A lot of shop produced complete joint penetration butt welded splices, or shop produced resistance butt welded splices, is defined as 150, or fraction thereof, of the same type of welds used for each combination of bar size and bar deformation pattern that is used in the work.
- E. When joining new reinforcing bars to existing reinforcement, the job control test shall be made using only the deformation patterns of the new reinforcement to be joined.
- F. Sample splices shall be made and tested in the presence of the Engineer or the Engineer's authorized representative.
- G. Sample splices shall be suitably identified with weatherproof markings prior to shipment to the testing laboratory.
- H. For shop produced complete joint penetration butt welds, shop produced resistance butt welded splices and all types of mechanical butt splices, the Engineer will designate when samples for job control tests are to be fabricated, and will determine the limits of the lot represented by each job control test.
- I. Should the average of the results of tests made on the 3 sample splices or should more than one sample splice in any job control test fail to meet the requirements for splices, all splices represented by that test will be rejected by the Engineer unless the Contractor, obtains and submits evidence, of a type acceptable to the Engineer, that the strength and quality of the splices in the work are acceptable.

PART III - EXECUTION

3.1 PREPARATION

- A. Before concrete is placed, the reinforcement to be embedded shall be free of mortar, oil, dirt, excessive mill scale and scabby rust and other coatings of any character that would destroy or reduce the bond.
- B. Coated reinforcement shall be protected from nicks, gouges or any deformation of the coating. Coated bars shall be inspected before placement for damage to coating. Patch all visual defects in the coating with a pre-qualified patching/repair material conforming to the requirements of AASHTO M 284 before installation. They shall be promptly treated according to the resin manufacturer's recommendations and before detrimental oxidation occurs. Where oxidation is present, it shall be removed by blast cleaning or power tool cleaning methods immediately before the patching material is applied. The patching material shall be feathered 2 to 3 inches or as recommended by the manufacturer into the undamaged coated areas. The patching material thickness shall be greater than 8 mils. Visual damage found after placement shall be cleaned as specified above.

3.2 INSTALLATION

- A. Reinforcing bars shall be accurately placed and securely held in designated position during the placing and compacting of concrete.
- B. Bars may be moved as necessary to avoid interference with other reinforcing steel, conduits, or embedded items. If bars are moved more than one bar diameter, resulting arrangement of bars is subject to approval of the Engineer.
- C. Use precast concrete bar supports only when the concrete is placed in contact with the soil such as foundation mats, base slabs.
- D. Wire bars together with ties at all intersections where spacing is not less than 9 inches; wire bars together with ties at alternate intersections otherwise. Using tie wire with ends pointed away from forms at all intersections and splices. Tolerances, spacing, splices, and concrete protection shall conform to Chapters 7 and 12 of ACI 318.
- E. Bar laps shall be in contact and securely tied. Length of laps for bars shall conform to requirements of ACI 318, except as otherwise indicated.
- F. Welded wire fabric shall be lap spliced at least one full meshes and staggered to avoid continuous laps in either direction and wired securely.
- G. Reinforcement shall be continuous through construction joints except as otherwise indicated on the Contract Drawings.
- H. Reinforcement or other fixed metal items shall not be continuous through expansion joints. Reinforcement shall have a clearance of 2 inches from each face of expansion joint.
- I. Bars shall not be field bent unless otherwise approved by the Engineer. Bars shall not be bent or straightened in a manner that will damage the bars. The use of heat to bend or straighten bars is prohibited.
- I. Welding of reinforcing steel will be allowed only where indicated and when approved in writing by the Engineer. Welding reinforcing steel shall be performed in accordance with AWS D1.4, and only by operators qualified in accordance with AWS D1.4. Welding shall be performed by qualified welders only. Do not tack-weld reinforcing bars in place.
- K. All reinforcing steel in walls, beams, columns, and slabs of culverts, tanks or other structures containing or transferring water, waste water, or sewage, shall be supported on, or held away from forms, by using precast concrete blocks, so no metal is exposed on the face of the concrete when the forms are stripped.
- L. Any epoxy-coated reinforcement that is field cut shall be coated with epoxy paint as approved by the Engineer.

3.3 FIELD CUTTING

- A. Saw or shear coated bars that are specified to be cut in the field. Do not flame cut.
- B. Repair the sawed or sheared end using the specified patching or repair material.

3.4 SPLICING

-
- A. Furnish all reinforcing steel in the lengths specified.
 - B. Do not splice bars, except where specified.
 - C. Stagger splices as far as possible.
 - D. Place and tie lapped splices in the bars. Maintain the minimum distance to the surface of the concrete shown.
 - E. Do not lap splice No. 14 and No. 18 bars.
 - 1. Use mechanical butt splices when using No. 14 or No. 18 bars.
 - a. Decide the number and location of the splices with the following limitations:
 - 1) Extend bars a minimum of 10 ft above the top of footing.
 - 2) Stagger splices such that no particular bar designation is spliced more than 50 percent in 5 ft.
 - b. Use a standard, approved, exothermic process for mechanical butt splicing where the molten filler metal, contained by a high-strength steel sleeve of larger inside diameter than the bars, is introduced into the annular space between bars and the sleeve and between the ends of the bars.
 - c. After cooling and hardening of the filler metal, the splice must be capable of transferring the minimum ultimate tensile strength of the reinforcing bar from one bar to the other by the mechanical strength of the splice components.
 - d. The splice must not depend on fusion of the filler metal with the bars.
 - 1) Do not heat the bars to their melting point during the splicing process.
 - 2) Do not allow the degree of heat required to affect the splice to decrease the structural properties of the bars or affect their original hardness.
 - e. Splice according to the manufacturer's recommendations using the manufacturer's standard jigs, clamps, ignition devices, and other required accessories to make splices. Preheat bars where required by the manufacturer.
 - F. Use one of the following mechanical butt splices for bars sizes No. 3 through No. 11 when designated on the plans. Follow the manufacturer's published recommendations for equipment and splicing procedures.
 - 1. A full mechanical connection that develops in tension or compression at least 175 percent of the specified yield strength of the bar.
 - 2. As described in this Section, article 3.4, Splicing, paragraph E.
 - G. Individual hoops made continuous with butt welded splices may be substituted for bar

spiral reinforcement.

1. Butt welded splices in reinforcing bars shall be complete joint penetration butt welds conforming to the requirements in AWS D1.4
2. At the option of the Contractor, shop produced resistance butt welds that are produced by a fabricator who is approved by the Engineer, may be used. These welds shall conform to the requirements of these specifications.
3. Only the joint details and dimensions as shown in Figure 3.2, "Direct Butt Joints," of AWS D 1.4, shall be used for making complete joint penetration butt welds of bar reinforcement. Split pipe backing shall not be used.
4. Material used as backing for complete joint penetration butt welds of bar reinforcement shall be a flat plate conforming to the requirements in ASTM Designation: A 709, Grade 36. The flat plate shall be $\frac{1}{4}$ mm thick with a width, as measured perpendicular to the axis of the bar, equal to the nominal diameter of the bar, and a length which does not exceed twice the nominal diameter of the bar. The flat plate backing shall be fitted tightly to the bar with the root of the weld centered on the plate. Any bar deformation or obstruction preventing a tight fit shall be ground smooth and flush with the adjacent surface. Tack welds used to fit backing plates shall be within the weld root area so that they are completely consumed by the finished weld. Backing plates shall not be removed.
5. Butt welds shall be made with multiple weld passes using a stringer bead without an appreciable weaving motion. The maximum stringer bead width shall be 2.5 times the diameter of the electrode and slagging shall be performed between each weld pass. Weld reinforcement shall not exceed $\frac{5}{32}$ inch in convexity.
6. Before any electrodes or flux-electrode combinations are used, the Contractor, shall furnish certified copies of test reports for all the pertinent tests specified in AWS A5.1, AWS A5.5, AWS A5.18 or AWS A5.20, whichever is applicable, made on electrodes or flux-electrode combinations of the same class, brand and nearest specified size as the electrodes to be used. The tests may have been made for process qualification or quality control, and shall have been made within one year prior to manufacture of the electrodes and fluxes to be used. The report shall include the manufacturer's certification that the process and material requirements were the same for manufacturing the tested electrodes and the electrodes to be used.
7. Electrodes for manual shielded metal arc welding of ASTM Designation: A 615, Grade 60 bars shall conform to the requirements in AWS A5.5 for E9018-M or E10018-M electrodes.
8. Electrodes for manual shielded metal arc welding of ASTM Designation: A 706 bars shall conform to the requirements in AWS A5.5 for E8016-C3 or E8018-C3 electrodes.
9. Solid and composite electrodes for semiautomatic gas metal-arc and flux-cored arc welding of Grade 300 reinforcing bars shall conform to the requirements in AWS A5.18 for ER70S-2, ER70S-3, ER70S-6 or ER70S-7 electrodes; or AWS A5.20 for E70T-1, E70T-5, E70T-6 or E70T-8 electrodes.
10. Electrodes for semiautomatic welding of ASTM Designation: A 615, Grade 60 and ASTM Designation: A 706 bars shall produce a weld metal deposit with properties conforming to the requirements of Section 5.3.4 in AWS D1.1 for

ER80S-Ni1, ER80S-Ni2, ER80S-Ni3, ER80S-D2, E90T1-K2 and E91T1-K2 electrodes.

11. Reinforcing bars shall be preheated for a distance of not less than 6 inches on each side of the joint prior to welding.
12. For all welding of ASTM Designation: A 615, Grade 40 or Grade 60 bars, the requirements of Table 5.2, "Minimum Preheat and Interpass Temperatures," of AWS D1.4 are superseded by the following:
 - a. The minimum preheat and interpass temperatures shall be 390°F for Grade 40 bars and 570°F for Grade 60 bars. Immediately after completing the welding, at least 6 inches of the bar on each side of the splice shall be covered by an insulated wrapping to control the rate of cooling. The insulated wrapping shall remain in place until the bar has cooled below 190°F.
13. When welding different grades of reinforcing bars, the electrode shall conform to Grade 40 bar requirements and the preheat shall conform to the Grade 60 bar requirements.
14. In the event that any of the specified preheat, interpass and post weld cooling temperatures are not met, all weld and heat affected zone metal shall be removed and the splice rewelded.
15. Welding shall be protected from air currents, drafts and precipitation to prevent loss of heat or loss of arc shielding. The method of protecting the welding area from loss of heat or loss of arc shielding shall be subject to approval by the Engineer.
16. Reinforcing bars shall not be direct butt spliced by thermite welding.

PART IV - MEASUREMENT

- 4.1 Measurement** – No Separate measurement will be made for Work described in this Section.

PART V - PAYMENT

- 5.1 Payment** – Payment for items in this Section will be incidental to the Contract unit cost of the concrete bid items.

END OF SECTION

SECTION 03 25 10**CONCRETE JOINT CONTROL****PART I - GENERAL****1.1 SUMMARY**

A. Description

1. Joint Filler, Joint Sealer, and Waterstops.

1.2 REFERENCED STANDARDS

<u>Sponsor</u>	<u>Number</u>	<u>Subject</u>
AASHTO	M 148	Liquid Membrane-Forming Compounds for Curing Concrete
AASHTO	M 153	Preformed Sponge Rubber and Cork Expansion Joint Fillers for Concrete Paving and Structural Construction
AASHTO	M 213	Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types)
AASHTO	T 132	Tensile Strength of Hydraulic Cement Mortars
AASHTO		Standard Specifications for Highway Bridges

ASTM	D 2628	Preformed Polychloroprene Elastomeric Joint Seals for Concrete Pavements

ASTM	D5329	Standard Test Methods for Sealants and Fillers, Hot Applied for Joints and Cracks in Asphaltic and Portland Cement Concrete Pavements
ASTM	D 6690	Joint and Crack Sealants, Hot Applied, for Concrete and Asphalt Pavements
FED	TT-S-00230	Sealing Compound: Elastomeric Type, Single Component
MIL	S-8802	Sealing Compound Temperature-Resistant, Integral Fuel Tanks and Fuel Cell Cavities, High Adhesion

1.3 SUBMITTALS AND INFORMATION TO BE RETAINED

- A. For Silicone Joint Sealer: Retain manufacturer's certified test results of each lot of the joint sealant material, except for the bond to cement mortar test. Certificate must show use of primers, where applicable.
- B. Retain Certificate of Compliance when the sealant is delivered to the job site. Certificate must include:
 - 1. Verification of test results
 - 2. Manufacturer's name
 - 3. Lot number
 - 4. Expiration date of the shelf-life warranty
 - 5. Sealer trade name
 - 6. Project destination
 - 7. Representative sealant

1.4 QUALITY ASSURANCE/QUALITY CONTROL

Quality assurance/quality control shall be in accordance with the requirements of the Project Quality Plan, except as modified herein.

PART II - PRODUCTS

2.1 PREFORMED ELASTOMERIC JOINT SEALANTS

- A. Preformed elastomeric joint seal material made of vulcanized elastomeric compound using polymerized chloroprene as the only basic elastomer.
- B. The Engineer will provide a statement of no objection for the shape of any joint sealer prior to submission of the individual production lot.
- C. The Engineer evaluation requirements for any joint seal geometry are:
 - 1. Overall width of sealer: $\frac{7}{16}$ " minimum.
 - 2. Overall depth of sealer: maximum of 1" when compressed to $\frac{7}{32}$ ".
 - 3. Materials Physical Property: Conform to ASTM D 2628.
 - 4. Maintain the force-deflection requirements in Table 1.

Table 1

Deflection Condition	Force Requirement
Seal compressed to $\frac{3}{8}$ " width	1 lb/in minimum
Seal compressed to $\frac{7}{32}$ " width	12 lb/in maximum

5. Heat-age the specimens used for determining the original force-deflection relationship in an oven for 70 hours at 212 degrees F under 50 percent deflection.
6. Subject the specimens to another force-deflection test after heat-aging and comply with the requirements in Table 2.

Table 2

Deflection Condition	Force Requirement
Seal compressed to $\frac{3}{8}$ " width	1 lb/in minimum
Seal compressed to $\frac{7}{32}$ " width	12 lb/in maximum

- D. Use a one-component, polychloroprene, lubricant adhesive containing only soluble phenolic resins blended with anti-oxidants and acid acceptors in an aromatic hydrocarbon solvent mixture with the following properties:
1. Average net weight 7.8 lb/gal.
 2. Solids content by weight of 22-28 percent. Meet ASTM D 1084.
 3. Suitable viscosity for use with installation equipment.
 4. Film strength of 2300 psi minimum tensile strength and 750 minimum percent elongation before breaking. Meet ASTM D 412.
 5. Manufactured within 9 months of use.
 6. Deliver in containers plainly marked with the manufacturer's name or trade mark, lot number, date of manufacture. Send manufacturer's certification of specification compliance.
- E. The Engineer may sample and test materials after delivery to the project site.

2.2 HOT-POURED JOINT SEALANT

- A. As specified for general requirements, physical properties, packing, marking, and sampling. Meet ASTM D 6690 Type II.
- B. Test physical requirements as specified in ASTM D 5329.

2.3 PREMOLDED JOINT FILLERS

- A. As specified.
- B. Meet AASHTO M 153 and AASHTO M 213.

2.4 SILICONE JOINT SEALER

- A. Select and use a prequalified sealant from the Qualified Products Listing, available from UDOT.

- B. Silicone joint sealer and special category for self-leveling: both made of low-modulus silicone specifically formulated to seal Portland Cement Concrete Pavement joints.
- C. Furnish in a one-part, non-acid curing formulation.
- D. Meet the following physical requirements:
1. Refer to the plan details.
 2. Backer rod compatible with the sealant and all components of the joint sealant system. Meet the requirements for Backer Rod.
 3. Prevent any bond or adverse reaction from occurring between the backup materials and the sealant.
- E. Meet the test requirements in Tables 3 and 4.

Table 3

Test Requirements (Silicone Joint Sealer) and Test Methods		
Tensile Stress; 150 percent max elongation, 7 day cure at 77 ± 3 degrees F. And 45-55 percent relative humidity (rh).	45 psi	ASTM D 412 (DIE C)
Flow	0.3 inch maximum	MIL S 8802
Extrusion Rate 100 degrees to 0 degrees F.	0.2 - 0.6 lbs/min	MIL S 8802
Tack-Free Time		
Specific Gravity	1.01 - 1.515	MIL S 8802
Durometer Hardness, shore A: cured 7 days at 77 ±3 degrees F and 45-55 percent relative humidity (rh).	10-25 (0 degrees F)	ASTM D 794 Method A
Shelf life	6 month minimum from date of shipment from plant or point of manufacture.	ASTM D 2240
Ozone and Ultraviolet (UV) Resistance	No chalking, cracking, or bond loss after 5000 hours	
Bond to concrete mortar concrete briquette air cured 14 days 77 ±3 degrees F.	50 psi minimum	
Movement capability and adhesion. Magnitude of cycles movement shall be appropriate for sealant category, cure 7 days in air 77 ±3 degrees F then 7 days in water 77 ±3 degrees F.	+100 percent and -50 percent of joint width. No more than 0.5 square inches (adhesive or cohesive) failure in the 3 specimens combined after 10	

	cycles.	
--	---------	--

Table 4

Test Requirements for Self-Leveling (Silicone Joint Sealer) and Test Methods		
Flow, sag, or slump	Self-leveling	
Extrusion Rate	6-12 lbs/min.	MIL S 8802
Elongation, percent minimum	800 at 21 days	ASTM D 412 DIE C, Mod.
Modulus at 150 percent elongation	30 psi maximum after 21 days	
Tensile Adhesion +0 Concrete (minimum percent elongation)	+600 after 21 days	ASTM D 3569
Accelerated Weathering	No chalking, cracking, or bond loss after 5000 hours	
Shelf Life	Six month min. from date of shipment from plant or point of manufacture.	
Durometer Hardness, Shore OO: cured 14 days at 77 ±3 degrees F and 45-55 percent, rh	20-80 (0 degrees F)	ASTM D 2240
Movement capability and adhesion. Magnitude of cycles movement shall be appropriate for sealant category, cure 14 days in air 77 ±3 degrees F, and then 7 days in water 77 ±3 degrees F	+100 percent and -50 percent of joint width. No more than 0.5 square inches (adhesive or cohesive) failure in the three specimens combined after 10 cycles.	

- F. Department determines the bond to concrete mortar with the following test:
1. Test as specified in AASHTO T 132.
 2. Briquettes molded as specified, sawed in half, and bonded with a thin section of sealant.
 3. Briquettes dried to a constant weight in oven at 100 ± 5 degrees F.
- G. Department uses the following test following ASTM C 719 for movement capability and adhesion:
1. Prepare 1 inch by 1 inch by 3 inch concrete blocks as specified.
 2. Use a sawed face for the bond surface.

3. Seal 2 inches of block, leaving $\frac{1}{2}$ inch on each end of specimen unsealed.
 4. Dimension the sealant to a $\frac{3}{8}$ inch depth and a $\frac{1}{2}$ inch width.
 5. Subject sealant to movement as specified.
 6. Magnitude of the movement must meet each specific category, and the rate of extension or compression must be $\frac{1}{8}$ inch per hour.
- H. Take one or more random samples (minimum of 2 quarts per sample) of each lot and seal in airtight containers.
1. Notify Engineer when stockpiles located at either the job site or the vendor's place of business are ready to be sampled.
 - a. Establish job site stockpiles at least 30 working days prior to use.
 - b. Establish vendor's place of business stockpiles 40 working days prior to use.
 2. The Department may take samples at the sealant manufacturing plant at least 30 days before shipment to the job site.
 3. Laboratory testing may take 30 working days after submitting samples.
- I. Do not place any materials until testing is completed and materials are approved by the Engineer.
- J. Sealant must be delivered in the manufacturer's original sealed container, displaying the lot number, expiration date of the shelf-life warranty, and the sealer trade name.
- K. Submit Certificate of Compliance to the Engineer when the sealant is delivered to the job site. Certificate must include:
1. Verification of test results
 2. Manufacturer's name
 3. Lot number
 4. Expiration date of the shelf-life warranty
 5. Sealer trade name
 6. Project destination
 7. Representative sealant

2.5 BACKER ROD

- A. Use closed-cell, polyethylene-foam rods conforming to the requirements in Table 5.

Table 5

Backer Rod Requirements and Test Methods		
Diameter	Joint width + $\frac{1}{8}$ "	
Density	2 lb/ft ³	ASTM D 1622
Tensile Strength	25 psi	ASTM D 1623
Absorption	0.5 percent by volume	ASTM C 509
Compression Reflection	25 percent at 8 psi	ASTM D 1621

2.6 JOINT SEALER (STRUCTURES)

- A. Cold-applied, gun-grade, single-component, polyurethane base material that cures under field condition to form a rubber-like, non-sag, elastomeric joint seal, as specified in FS TT-S-00230 C Type II, Class A.
- B. Use material that bonds tightly to the sides of the concrete groove and exhibits the physical properties in Table 6 when cured and tested after 21 days at 73 °F.

Table 6

Physical Properties of Joint Sealer (Structures) and Test Methods		
Modulus of Elasticity at 100% Elongation	132 psi	ASTM D 412
Hardness (Shore A)	40 ± 5	
Elongation (at break)	700 %	ASTM D 412
Recovery	Greater than 90%	
Tensile Strength	190 psi	ASTM D 412
Adhesive in Peel	20 lb/in	TT-S00230 C Type II, Class A
Service Range	-40 °F to 150 °F.	TT-S-00230 C
Initial Cure, Tack Free (Depending on Temperature and Humidity)	6 to 8 hours	
Final Cure	5 to 8 days	
Staining Characteristics	Nonstaining	
Color	Gray	

2.7 WATERSTOPS

- A. Provide waterstops as specified.
- B. Meet AASHTO Standard Specifications for Highway Bridges, Division II, Subsection 8.9.2.6.

PART III – EXECUTION

NOT USED

PART IV - MEASUREMENT

4.1 Measurement – No Separate measurement will be made for Work described in this Section.

PART V - PAYMENT

5.1 Payment – Payment for items in this Section will be incidental to the Contract unit cost of the concrete bid items.

END OF SECTION

SECTION 03 30 00**CAST-IN-PLACE CONCRETE****PART I - GENERAL****1.1 SUMMARY**

- A. Description: This work includes furnishing and placing cast-in-place concrete as shown on the Contract Drawings and as specified herein. This work shall be constructed in accordance with these specifications and in conformity with the lines, grades, dimensions and notes shown on the Contract Drawings.

1.3 SUBMITTALS

- A. At least 30 days prior to the start of placing concrete, design mixes shall be submitted to the Engineer for review and approval for each class of concrete, indicating that the concrete ingredients and proportions will result in a concrete mix meeting the requirements specified.
1. With each mix design, submitting laboratory test results including compressive strength at 28 days and mill or manufacturer's certificates attesting to conformance of ingredients with Specifications.
 2. Include the source, brand or characteristic properties of the ingredients need to be varied during the term of the Contract, revised laboratory mix reports shall be submitted for review and approval.
- B. Product data for admixtures shall be submitted with the concrete mix design. Curing compounds, curing-sealer, accessories, and other data shall be submitted or as requested by the Engineer.
- C. A construction joint layout for exposed horizontal surfaces shall be submitted to and approved by the Engineer before beginning field layout and prior to placing concrete.
- D. Certificates of compliance with the Specification shall be submitted to the Engineer for all commercial products, including industry standardized products prior to incorporation in the work.
- F. A placing schedule, within the basic project schedule, shall be submitted before starting placing operations, with dates and sequences of each proposed concrete placement.
- E. Batching and mixing plant certifications shall be submitted to the Engineer.
- F. Batch tickets containing the approved mix number and conforming to the requirements of ASTM C 94, Sections 16.1 and 16.2 shall be submitted with each delivery of concrete. Concrete deliveries without the approved mix number on the tickets will be rejected. Amount of water added in the mixing and any additional amount allowed at the job site to meet mix design requirements shall be shown on the batch ticket.

- G. Daily inspection reports for all work each day and final report for each area or structure.

1.4 QUALITY CONTROL

- A. Batching and mixing plants shall certify compliance with the requirements of ASTM C 94 and shall be certified by the National Ready Mix Concrete Association.
- B. The Contractor shall take such periodic control tests of materials and resultant concrete as specified herein and as are necessary to ensure that concrete produced meets specification requirements.
- C. Re-tempering any partially hardened concrete with additional water will not be permitted.
- D. Prior to and during placement of reinforced structural concrete, Inspector shall inspect formwork, reinforcement, conduit embedments, anchor bolts, and other elements of the work in addition to concrete placement.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. The various materials comprising concrete shall be delivered, handled and stored to preserve their quality for the work.
- B. Cement shall be used in the chronological order of receipt.
- C. Batch bins shall be constructed so as to be self-cleaning during drawdown.
- D. Aggregates shall be stored and handled to prevent contamination and commingling of separate gradations.
- E. Control of uniform moisture content in aggregate and accurate measurement shall be maintained.

PART II - PRODUCTS

2.1 MATERIALS

- A. Cement: Cement shall comply with the requirements of Section 03 15 16, Portland Cement Concrete.
- B. Fly ash: Fly ash shall comply with the requirements of Section 03 15 16, Portland Cement Concrete.
- C. Aggregates: Fine and coarse aggregate shall comply with the requirements of Section 03 15 16, Portland Cement Concrete.
- D. Water used in all work must be clean and free of oil, salt, acid, alkali, sugar, vegetable matter, or other substances deleterious to the finished product. Use water conforming to AASHTO T 26 for mixing and curing Portland cement concrete, mortar or grout. Water of approved potable quality may be used without test.
- E. Admixtures: Air-entraining admixture (AEA) and water reducing agents shall comply with the requirements of Section 03 15 16, Portland Cement Concrete.
- F. Expansion Joint Material: Expansion joint material shall conform to Section 03 15 16.13, Expansion Joint.

- G. Concrete Joint Sealer: Joint sealer shall conform to Section 03 15 16.13, Joint Sealers.
- H. Sheet Materials for Curing Concrete: Sheet materials for curing concrete shall conform to the requirements of ASTM C 171.
- I. Curing Compounds: Curing compounds shall conform to the requirements of ASTM C309, Type I-D, Class A.
- J. Waterstops: Waterstops shall conform to Section 1057.7, Joints for Concrete Structures of the 2011 Missouri Standard Specification Book for Highway Construction (MoDOT).
- K. Cement Mortar: Use either standard premixed mortar conforming to ASTM C 387, or mortar proportioned with one part Portland cement to two parts clean, well-graded sand which passes a $\frac{1}{8}$ inch screen and which conforms to AASHTO M 45. Admixtures may be used, but do not exceed the following percentages of cement by weight: hydrated lime, 10%, and diatomaceous earth or other inert materials, 5%.
- L. Cement, fly ash, aggregates, and embedments shall be free of calcium chloride.

2.2 EQUIPMENT

- A. Spare vibrators in working condition shall be maintained at the site of each placement. The number of the spares shall be dependent upon the volume of the concrete to be placed or the area of structure to be cast.
- B. Equipment having components of aluminum or magnesium alloy, which would have contact with plastic concrete during mixing, transporting or pumping of Portland cement concrete, shall not be used.
- C. The Concrete Supplier shall have sufficient plant capacity and transporting and placing equipment to ensure continuous delivery of concrete at the rate required. The rate of delivery of concrete during concreting operations shall be such as to provide for the proper handling, placing, and finishing of the concrete. The method of delivery and handling of the concrete shall be such to minimize re-handling of the concrete and avoid damage to the structure or the concrete.

2.3 CONCRETE COMPRESSIVE STRENGTH

- A. Compressive Strength: The 28-day compressive strengths (f'_c) of concrete used on the project and the location where they are used shall be as indicated below unless noted otherwise on the Contract Drawings.
 - 1. 4000 psi/AA (AE): Use for all bridge decks, approach slabs, pier bents and abutments, substructure components (including footings), MSE wall panels, and pile caps. Use at all locations where other strengths are not indicated.
 - 2. 3000 psi/A (AE): MSE Wall footings and pipe pile concrete infill.
- B. Mix Design: Mix design shall conform to Section 3304, Portland Cement Concrete.

PART III - EXECUTION

3.1 CONSTRUCTION JOINTS

See Section 1057.7, Joints for Concrete Structures of the 2011 Missouri Standard Specification Book for Highway Construction (MoDOT).

3.2 INSTALLATION OF CONCRETE ACCESSORIES

- A. Comply with manufacturer's written instructions and recommendations for the installation of each type of accessory required, unless more stringent requirements are shown on the Contract Drawings or specified in the Specifications.
- B. Expansion joint filler installation shall conform to Section 03 15 16.13 Expansion Joint for Structures. Joint sealant shall conform to Section 03 15 16.13 Joint Sealers.
- C. Non-Shrink Grout and Drypack
 - 1. Prepare concrete surface as recommended by manufacturer.
 - 2. Mix grout as recommended by manufacturer.
 - 3. Place mixture as recommended by manufacturer.
 - 4. Cure as recommended by manufacturer.
 - 5. Match finish color with surrounding concrete.

3.3 PLACING OF CONCRETE

(See Section 03 31 05 Articles 3.4)

3.4 CONSOLIDATION OF CONCRETE

(See Section 03 31 05 Article 3.6)

3.5 FINISHES AND FINISHING

(See Section 03 31 05 Articles 3.7)

3.6 PROTECTING AND CURING

(See Section 03 39 00)

3.7 TOLERANCES

- A. Tolerances on formed and unformed surfaces shall be in accordance with ACI 301, unless otherwise indicated or specified elsewhere in these Specifications.
- B. Where not otherwise shown or specified tolerances on unformed surfaces shall be Class B, slab tolerances at $\frac{1}{4}$ inch in 10 feet, as determined by a straight edge is acceptable for stations but should not be applied to box culverts.
- C. Bridge decks shall be checked by the Contractor with a straight edge. The surfaces shall not vary more than $\frac{3}{8}$ inches from the lower edge of a 10-foot long straight edge placed in any direction.

- D. The tolerance for the dimension shown on the Contract Drawings between track centerline and nearest structural face is minus zero and plus one half inch, and the variation shall not exceed one-quarter inch in 10 feet.

3.8 FIELD QUALITY CONTROL

- A. Independent Testing Laboratory (ITL): The Contractor shall employ a ITL to cure and test compressive strength test cylinders.
- B. Maintain records of all testing and results of all tests including compression tests. A running average of the 28-Day compression test results shall be maintained and at anytime the average for the last 30 test drops below the required average strength.
- C. Testing frequency shall conform to Section 03 15 16 Portland Cement Concrete.
1. Concrete sampling and testing shall be conducted by the Independent Test Lab as defined in the Project Quality Plan.
 2. At a minimum, for each class of concrete placed, take samples for strength tests each day structural concrete is placed.
 3. In addition, take samples for each 100 cubic yards of concrete placed in any one-day and any time there is a discernable change in the concrete being placed.
 4. Perform air, slump and yield tests and the record results each time cylinders are made.
 5. In addition, perform air and slump tests on the initial loads of concrete delivered for placement.
 6. Reject loads with excessive slump.
- D. Evaluation of Test Results:
1. If the test results show that any part of the structure contains material that is not in conformance with the requirements of the Specifications that portion of the work will be subject to rejection by the Engineer.
 2. Any work so rejected by the Engineer shall be removed and replaced as directed by the Engineer.
- E. Load and core tests in accordance with the requirements of ACI 318 shall be made by the Contractor, for the following reasons:
1. Average 28 day strength of any pair of test cylinders more than 10% below design strength.
 2. Average 28 day strength of 3 consecutive pair of test cylinders below design strength.
 3. Evidence of frozen or cold joint concrete.
 4. Evidence of insufficient thickness.

PART IV - MEASUREMENT

4.1 Measurement – No Separate measurement will be made for Work described in this Section.

PART V - PAYMENT

5.1 Payment – Payment for items in this Section will be incidental to the Contract unit cost of the concrete bid items.

END OF SECTION

SECTION 03 31 00
CONCRETE MATERIALS AND PROPORTIONING

PART 1 - GENERAL

1.1 SUMMARY

- A. Furnish all labor, materials, tools, equipment, and services for Concrete Materials and Proportioning, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. ASTM designated specifications for material quality and test methods appear throughout this specification.
 - 1. The serial designation prefixed with ASTM shall identify the specification which shall be a part of this specification.
- B. Standards for concrete work: Comply with applicable provisions of following ACI publications (latest edition) except as otherwise indicated.
 - 1. ACI 301 "Specifications for Structural Concrete for Buildings."
- C. Concrete Mixture Proportioning:
 - 1. Employ and pay for testing agency acceptable to Architect and Owner to perform materials evaluation, testing and design of concrete mixes.
 - 2. Certificates, signed by material producer and Contractor, may be submitted in lieu of material testing when approved by Architect.
- D. Concrete Testing:
 - 1. Specified in Section 03 08 16 (Contractor Pays).
 - 2. Contractor to assist with related communication and temporary storage of test cylinders at jobsite.
- E. Pre-Concrete Conference
 - 1. At least 35 days prior to the start of the concrete construction schedule, the contractor shall conduct a meeting to discuss the approved mix designs and to discuss the required methods and procedures to achieve the required concrete construction. The contractor shall send a pre-concrete conference agenda to all attendees 20 days prior to the scheduled date of the conference.
 - 2. The contractor shall require responsible representatives of every party who is concerned with the concrete work to attend the conference, including but not limited to the following:
 - a. Architect and/or Engineer
 - b. Contractor's superintendent and quality control representative.
 - c. Laboratory responsible for the concrete design mix
 - d. Owners Testing Agency responsible for field quality control
 - e. Concrete subcontractor
 - f. Ready-mix concrete producer
 - g. Admixture manufacturer(s)
 - h. Concrete pumping equipment manufacturer
 - 3. Minutes of the meeting shall be recorded, typed and printed by the contractor and distributed by him to all parties concerned within 5 days of the meeting. One copy of the minutes shall also be transmitted to the Owner's representative for information purposes.

4. The minutes shall include a statement by the concrete contractor indicating that the proposed mix design, and placing, finishing and curing procedures can produce the concrete quality required by these specifications.

1.3 SUBMITTALS

- A. Product Data:
 1. Concrete Mix Designs:
 - a. Each Mix design shall be submitted individually. Do not combine multiple mix designs into a single submittal
 - b. Submit the following data for each concrete mix proposed for use:
 - 1) Intended use of the mix design.
 - 2) Proportions of materials.
 - 3) Slump.
 - 4) Air content.
 - 5) 7-day and 28-day compression test results of trial mixes or those used for standard deviation analysis of an established mix. Test records for use in standard deviation analysis must have been made within 24 months of the date of the submittal and represent a time span of production of not less than 45 days.
 - c. Submit source and certification or proof of quality (and compatibility of admixtures) for each of the constituents of the proposed concrete mixes. Compatibility of admixture must be certified.
 - 1) Cement.
 - 2) Aggregate.
 - 3) Water.
 - 4) Admixtures:
 - a) Air Entraining Admixture.
 - b) High-Range Water Reducer.
 - c) Fly Ash.
 - d) Other.
 - d. Review and approval of mix designs by Architect does not relieve the Contractor of responsibility to provide concrete of the quality and strengths required by the Contract Documents.
 - 1) The Architect's approval is contingent upon satisfactory performance and strengths being achieved in the field.
 - e. Submit Concrete Mix Designs using the mix design submittal form included at the end of this specification:

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Normal Weight Concrete: Concrete for which density is not a controlled attribute.
 1. Materials ultimately used in production must be of same quality, properties and proportion as indicated in approved concrete mix design (as approved by Architect).
- B. Under-slab Vapor Retarder: Specified in Section 03 31 10.
- C. Cement:
 1. Portland cement conforming to ASTM C150 or blended cements conforming to ASTM C595.
 2. Color: Natural gray.
- D. Aggregates:
 1. General:
 - a. Regard fine and coarse aggregates as separate ingredients.

- b. Each size of coarse aggregate, as well as combination of sizes when two or more are used, shall conform to grading requirements of applicable ASTM specifications.
2. Normal Weight Concrete:
- a. ASTM-C33, also aggregate shall be obtained from a source approved by the State Highway Department for use in concrete for state bridges.
- b. Fine aggregate gradation for slab on grade concrete and other designated concrete shall meet the requirements in the following:
- | | | | |
|----|------------|-----------------|-----------|
| c. | Sieve size | Percent passing | |
| d. | | 3/8 | 100 |
| e. | | No.4 | 85 to 100 |
| f. | | No.8 | 80 to 90 |
| g. | | No. 16 | 50 to 75 |
| h. | | No. 30 | 30 to 50 |
| i. | | No.50 | 10 to 20 |
| j. | | No.100 | 2 to 5 |
- E. Potable Water:
1. Conforming to ASTM C1602/C1602M. Potable
- F. Admixtures:
1. General:
- a. Use only when specifically required or permitted by Contract Documents, otherwise must be approved by Architect.
- b. Trial mixes and tests shall be prepared with job materials, including admixture, to demonstrate that there will be no subsequent reduction in strength or durability of hardened concrete.
- c. Conform to appropriate following specifications:
2. Calcium chloride and admixtures containing more than 0.05 percent chloride ions are not permitted.
3. Air-entraining Admixtures: ASTM C260.
4. Mid-Range Water Reducer: ASTM C494, Type A.
5. High-Range Water Reducer :
- a. ASTM C494, Type F or G. Subject to complying with these specifications, the following manufacturers of High Range Water Reducing Admixtures are approved:
- 1) Daracem – 100 or Adva Flow Series by Grace Construction Products.
 - 2) Rheobuild 1000 , Glenium Series or PS 1466 by BASF Construction Chemicals.
 - 3) Eucon 37 or Eucon SPJ by Euclid Chemical.
 - 4) PSP-N, PSP-N2, PSP-R, and PSP-L by Procrete Industries.
- b. Other manufacturers desiring approval comply with Section 00 26 00.
6. Water-reducing, Retarding, and Accelerating Admixtures: ASTM C494.
7. Supplementary Cementitious Materials:
- a. Fly ash - ASTM C618, Class C or Class F.
- 1) Samples shall be obtained, prepared, and tested in accordance with ASTM C311.
- b. Ground Granulated Blast-Furnace Slag: ASTM C989, Grade 100 or 120.
8. Synthetic Macro Fibers
- a. ASTM C1116 Type III
- b. Fiber Reinforced concrete shall provide equivalent reinforcing to WWR indicated in both direct tension and bending capacity for thickness indicated
- c. Testing per ASTM C1018 and/or ASTM C1399 shall indicate a minimum residual flexural strength of 170 PSI. Submit manufacturers data verifying conformance
- d. Minimum Dosage rate 4 lbs/cu.yd.
- e. Acceptable manufacturers

1) W.R.Grace Co,; Strux 90/40

G. Concrete Cleaning Solutions:

1. Specified in Section 03 31 10.
2. Specified in Section 04 05 10.

2.2 PROPORTIONING CONCRETE MIXES

A. General:

1. Contractor and concrete supplier are responsible to provide concrete, in-place, which satisfies all the requirements listed in the following table.
2. Contractor and concrete supplier are also responsible to adjust the concrete mixes, as needed, to:
 - a. Correct for non-conformance.
 - b. Correct for a variation in the quality of a constituent.
 - c. Compensate for extreme conditions in the field.

B. Establish concrete material proportions by any of the proportioning methods described in AC1-301 guidelines.

Concrete Properties Table – IP Units							
Use	28-day strength (KSI)	Dry Unit Weight (PCF)	Max Aggregate Size (IN)	Air %	Max. W/C Ratio	Slump (IN)	Cement type
Footings ,Grade Beams	3.0		1-1/2	4.5	0.60	4	I
Drilled Piers	3.0		1 1/2		0.45	6	I
Walls	4.0		1	4.5	0.50	5	I
Slabs-on-grade	4.0		1 1/2		0.45	3	I
Structural floors, girders, slabs, columns	3.0		3/4		0.45	9	I
Norm. Wt. Slabs on composite metal deck	3.5		3/4		0.50	6	I
All other uses	4.0		3/4	6	0.50	4	I

C. Instructions for use of Table:

1. General:
 - a. Provide concrete mixes with properties indicated in locations identified in “use” column.
2. 28-day Strength:
 - a. Installed concrete must meet or exceed the minimum 28-day compressive strength indicated.
 - b. Laboratory mix design strengths must exceed this strength by the appropriate amount per AC1-301.
 - c. Determine strength in accordance with ASTM C192 and ASTM C39.
3. Dry Unit Weight:
 - a. If no value is listed, assume normal weight.
4. Maximum Aggregate Size:
 - a. Maximum aggregate size is the design aggregate size.
 - b. Maximum size of coarse aggregate determined in accordance with:
 - 1) ASTM C33 for normal weight concrete.

- c. Some mixes are designated "19mm or 25mm, 3/4 IN or 1 IN, permitting contractor option.
 5. Air Content:
 - a. Required percentage of entrained and entrapped air as measured by ASTM C231, ASTM C173, or ASTM C138, as appropriate.
 - b. Tolerance of air content as delivered is \pm 1-1/2 percent for normal weight and \pm 2 percent for lightweight concrete.
 - c. When left blank, required air content is not specified.
 6. Water Reducer:
 - a. Mid Range Water Reducer or High Range Water Reducer shall be provided as necessary to achieve slump indicated.
 - b. Contractor, as option, may elect to use Water Reducers to improve workability or permit pumping.
 7. Maximum W/C Ratio:
 - a. Maximum ratio of kilograms pounds of water allowed to kilograms pounds of cementitious material used in the concrete mix.
 8. Slump:
 - a. Mixes without Water Reducers:
 - 1) Slump tolerance: Up to 25mm 1 IN above maximum indicated is allowed, provided the average of 5 consecutive batches does not exceed the indicated amount by more than a 13mm 1/2 IN.
 - b. Mixes with Water Reducers:
 - 1) Slump indicated is after dosing.
 - 2) Slump tolerance after dosing: +38mm and -25 mm +1-1/2 IN and -1 IN is permitted for each batch.
 - c. Determine slump in accordance with ASTM C143.
 - d. Where slump is not specified, provide concrete with slump in accordance with approved mix designs
 9. Cement:
 - a. Type: Provide cement type indicated.
 - b. As option, the contractor/supplier may use Fly Ash or Ground Blast Furnace Slag for partial replacement of cement.
 - 1) For each unit of cement that is removed, replace with two units of Class F Fly Ash or one unit of Class C Fly Ash maximum 25% replacement.
 - 2) For each unit of cement that is removed, replace with one unit of Ground Blast Furnace Slag
 - 3) Maximum amount of cement replaced shall not exceed that specified in table 4.2.2.7.b.2 of ACI 301
 - 4) W/C ratio shall be based on total cementitious material content
- D. Admixtures:
1. Use admixtures in accordance with manufacturer's instructions.
 2. Use only approved admixtures.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Material Safety Data Sheet and storage labeling shall be available at the job site and conform to current governing regulations.

3.2 STORAGE OF MATERIALS

- A. Store cement in weather tight buildings, bins, or silos which will exclude moisture and contaminants.

- B. Arrange aggregate stockpiles and use in a manner to avoid excessive segregation and to prevent contamination with other materials or with other sizes of like aggregates.
 - 1. To insure that this condition is met, perform test for determining conformance to requirements for cleanliness and grading on samples secured from aggregates at point of batching.
 - 2. Do not use frozen or partially frozen aggregates.
- C. Allow sand to drain until it has reached relatively uniform moisture content before use.
- D. Store admixtures in manner to avoid contamination, evaporation, or damage.
 - 1. For those used in form of suspensions or non-stable solutions, provide agitating equipment to assure uniform distribution of ingredients.
 - 2. Protect liquid admixtures from freezing and temperature changes which would adversely affect their characteristics.

3.3 MIXING AND DELIVERY

- A. Batch, mix and transport concrete in accordance with ASTM C94.
- B. Batch and mix admixtures in accordance with manufacturer's instructions.
- C. Concrete shall have a slump of 50mm to 100mm 2 to 4 IN when it arrives at job site.
 - 1. Water additions at job site shall be limited to comply with W/C Ratio requirements.
 - 2. Do not allow water to be added to the mix unless the amount allowed is clearly indicated on the truck delivery ticket.
- D. Following addition of High Range Water Reducer, mix for a minimum of 70 revolutions or 5 minutes to assure a consistent mixture.
- E. Reduction of required average strength:
 - 1. During construction, and after sufficient data becomes available, laboratory strength of mixes may be reduced in accordance with Section 3.11 of AC1-301, subject to approval by the Architect.

END OF SECTION

SECTION 03 31 05
STRUCTURAL CONCRETE

PART I - GENERAL**1.1 SUMMARY****A. Description**

This work includes concrete placement operations for cast-in-place slabs on grade, slabs on fill, structural building frame, and other concrete components.

1.2 REFERENCES

- A. ACI 301: Specifications for Structural Concrete for Buildings.
- B. ACI 305: Hot Weather Concreting.
- C. ACI 306.1: Cold Weather Concreting.
- D. ACI 309: Standard Practice for Consolidation of Concrete.
- E. ASTM C 881: Standard Specification for Epoxy-Resin-Base Bonding Systems for Concrete.
- F. ASTM C 1059: Standard Specification for Latex Agents for Bonding Fresh to Hardened Concrete.
- G. ASTM E 1155: Standard Test Method for Determining F_F Floor Flatness and F_L Floor Levelness Numbers.
- H. IBC Section 1905: Concrete Quality, Placing, and Mixing.
- I. AASHTO M 153: Preformed Sponge Rubber and Cork Expansion Joint Fillers for Concrete Paving and Structural Construction.
- J. AASHTO M 213: Preformed Expansion Joint Fillers for Concrete Paving and Structural Construction (Non Extruding and Resilient Bituminous Types).
- K. ASTM C 387: Standard Specification for Packaged, Dry, Combined Materials for Mortar and Concrete.
- L. AASHTO M 45: Aggregate for Masonry Mortar.

1.3 SUBMITTALS

- A. Batch Delivery Ticket: For each batch delivered to site, submit
 - 1. Date.
 - 2. Producer and plant.
 - 3. Job.
 - 4. Name of contractor.

5. Serial number of ticket.
 6. Truck number and time dispatched.
 7. Volume of concrete.
 8. Type of cement.
 9. Amount of cement.
 10. Total water content. (W/C ratio).
 11. Water added for receiver of concrete and receiver's initials.
 12. Admixture types and amounts.
 13. Separate weights of fine and coarse aggregate.
 14. Statement of whether batch is pre-mixed at plant or mixed in transit.
- B. Record of Placed Concrete: Submit record date, location of pour, quantity, air temperature, and Contractor's quality control test samples taken.
- C. Bonding Compound: Submit product name, type, and chemical analysis.
- D. A construction joint layout of exposed horizontal surfaces shall be submitted to and approved by the Engineer before beginning field layout and prior to placing concrete.

1.4 QUALITY ASSURANCE

- A. Remove and replace any placed concrete suffering hot or cold weather damage.
- B. For control testing follow APWA Section 03305 requirements.
- C. Prior to and during placement of reinforced structural concrete, Inspector shall inspect formwork, reinforcement, conduit embedments, anchor bolts, and other elements of the work in addition to concrete placement in compliance with the Project Quality Plan.

1.5 ACCEPTANCE

- A. Concrete work that fails to meet any of the following requirements will be considered defective and shall be replaced.
 1. Placement:
 - a. Reinforcing steel size, quantity, strength, position, damage, or arrangement is not as specified or does not comply with code.
 - b. Formwork differs from required dimensions or location in such a manner as to reduce concrete's strength or load carrying capacity or physical esthetics.
 - c. Workmanship likely to result in deficient strength.
 2. Finishing:

- a. Concrete exposed to view has defects that adversely affect appearance.
 - b. Slab tolerances of Section 03 35 10 are not met.
3. Protection:
- a. Method of curing is not as specified or approved by the Engineer.
 - b. Inadequate protection of concrete from temperature extremes during early stages of hardening and strength development.
 - c. Mechanical injury, construction fires, accidents, or premature removal of formwork likely to result in deficient strength development.

PART II - PRODUCTS

2.1 MATERIALS

- A. Concrete: Class as indicated, material per Section 03 15 16.
 1. For roadway cuts, refer to APWA Section 02985.
- B. Bonding Compound: Type II (Non-redispersible) polyvinyl acetate base or acrylic base latex per ASTM C 1059.
- C. Vapor Retarder: 10 mil thick clear polyethylene sheet. Type recommended for below grade application.
- D. Forms: Refer to Section 03 11 10.
- E. Reinforcement: Refer to Section 03 20 10.
- F. Coverings and Curing Compound: Refer to Section 03 39 00.
- G. Non-shrink Grout: As per APWA Section 03600, Article 2.5, Epoxy Adhesive Grout.
- H. Epoxy Adhesive: Refer to APWA Section 03600.
- I. Station Shade Structures and Marker. Refer to 03 31 00 Concrete Materials and Proportioning.
- J. Station Platform Concrete Work
 1. Expansion Joint Material:
 - a) Filler for expansion joints $\frac{1}{2}$ " or smaller shall be resilient bituminous premolded expansion joint material conforming to ASTM D 1751, width as shown in plans and described in Section 03 15 16.13.
 - b) Filler for expansion joints greater than $\frac{1}{2}$ ": ASTM D 1752 "Preformed Expansion Joint Fillers" (Non-Bituminous)
 - 1) Where required for support of expansion joint, sealant joint and joints indicated as "preformed joint filler". Type I gray sponge rubber

may be used.

- 2) At other locations, provide Type III self-expanding cork.
 - 3) Acceptable manufacturers: Meadows, Horn, Burke or approved equal.
- c) Where specifically called out on the plans, at joints where slabs are placed against concrete walls, or at joints requiring a bond breaker, a 40-pound asphalt saturated felt shall be used.
2. Cement Mortar:
- a) Use either standard premixed mortar conforming to ASTM C 387, or mortar proportioned with one part Portland Cement to two parts clean, well-graded sand which passes a 1/8" screen and which conforms to AASHTO M 45. Admixtures may be used, but do not exceed the following percentages of cement by weight: hydrated lime, 10%, and diatomaceous earth or other inert materials, 5%.

PART III - EXECUTION

3.1 PREPARATION

- A. Notify Engineer minimum 24-hours prior to commencement of concrete placement operations. (Notify testing agency, don't pour without inspection.)
- B. Do not allow construction loads to exceed member capacity.
- C. Clean previously placed concrete. Apply bonding compound per manufacturer's instructions.
- D. At locations where new concrete is dowelled to existing work, drill, insert and pack steel dowels with shrink compensating grout.

3.2 EXAMINATION

- A. Verify items to be cast into concrete are accurately placed and held securely.
- B. Verify slump range on delivery ticket matches mix design.
- C. Verify slab steel mats are supported by steel chairs, precast concrete blocks, or other slab bolsters. Do not pour if absent.

3.3 DELIVERY

- A. Slump: Keep slump within the allowable range.
- B. Placement Time:

Air Temperature

Less than 90, Deg. F.
Greater than 90 Deg. F.
Greater than 90 Deg. F.

Time After Initial Batching

1-1/2-hours
1-hour (without retarder)
1-1/2-hours (with retarder)

- C. Tempering:

1. When concrete arrives at site with slump below specified, water may be added if the maximum approved water/cement ratio and the maximum slump is not exceeded provided that;
 - a. The approved mix design has allowed for addition of water.
 - b. The amount of water added is accurately measured to one gallon of the desired added amount.
 - c. That water addition is followed by 3 minutes of mixing at mixing speed or 30 revolutions prior to discharge.
 2. Do not add water after concrete discharge from the delivery vehicle.
- D. Super-plasticizer: Comply with manufacturer's requirements. If none, then as follows:
1. If added at site, add agent using injection equipment capable of rapidly and uniformly distributing the admixture to the concrete. Prior to discharge, mix for a minimum of 5 minutes at a drum rate not less than 12 rpm or more than 15 rpm.
 2. If added at plant; do not deliver to site unless batch delivery ticket displays water/cement ratio prior to super-plasticizer addition.
 3. Tempering with super-plasticizer after expiration of allowable delivery times is prohibited.

3.4 CONCRETE PLACEMENT

- A. Place concrete per ACI 301.
1. Hot Weather Placement: Place per ACI 305. If the rate of evaporation approaches 0.2 lb./ft²/hr. precautions against plastic shrinkage cracking are necessary. (i.e. dampening subgrade and forms; placing concrete at the lowest possible temperature; erecting windbreaks and sunshades; fog sprays; use of evaporation retardants; or rescheduling time of placement).
 2. Cold Weather Placement: Place per ACI 306.1. Non-chloride accelerating admixture may be used in concrete work placed at ambient temperatures below 50 deg. F. Use of admixtures will not relax cold weather placement requirements.
- B. Concrete Temperature: Keep mixed concrete temperature at time of placement between 60 deg. F. and 90 deg. F.
- C. Do not disturb reinforcement, inserts, embedded parts, and formed joints.
- D. Do not break or interrupt successive pours such that cold joints occur.
- E. Honeycomb or embedded debris in concrete is not acceptable.
- F. Construction Joint Cleaning
- 1) Construction joints shall be cleaned by waterblasting, sandblasting or light bush-hammering after the concrete has reached its final set, unless modifications are permitted as specified below. The cleaning shall be continued until all unsatisfactory

concrete and all laitance, coating, stains, debris and other foreign materials are removed. The surface of the concrete shall be cleaned thoroughly to remove all loose material. Waterblasting equipment shall be operated at a pressure sufficient to permit cutting after the concrete has reached its final set.

3.5 JOINTS AND JOINT SEALING

- A. Section 03 15 16.13 and Section 32 13 73.

3.6 CONSOLIDATION

- A. ACI 309.
- B. Keep spare vibrator available during concrete placement operations.

3.7 FINISHING

- A. Section 03 35 10.
- B. Unless specified otherwise, finish as follows.
 - 1. Sidewalks, garage floors, and ramps: Broom or belt finish.
 - 2. Exterior concrete pavement: Broom or belt finish.
 - 3. Exterior platforms, steps, and landings, exterior and interior pedestrian ramps, not covered by other finish materials: Nonslip finish.
 - 4. Surfaces intended to receive bonded applied cementitious applications: Scratched finish.
 - 5. Surfaces intended to receive roofing, except future floors, waterproofing membranes, and roof surfaces that are future floors or sand bed terrazzo: Floated finish.
 - 6. Floors and roof surfaces that are floors intended as walking surfaces or to receive floor coverings: Troweled finish.
 - 7. Unpainted concrete surfaces not exposed to public view: Rough as-cast form finish.
 - 8. Unpainted concrete surfaces exposed to public view: Smooth as-cast form finish.
 - 9. Concrete surfaces to receive paint or plaster: Grout cleaned finish.

3.8 CURING

- A. Section 03 39 00.
- B. Use a membrane forming compound unless specified otherwise.

3.9 DEFECTIVE CONCRETE

- A. Modify or replace concrete not conforming to required levels, lines, details, and elevations.
- B. Structural analysis and additional testing may be required when the strength of a structure is

considered potentially deficient.

- C. Patch imperfection. Refer to **Section 03732** requirements.

3.10 PROTECTION AND REPAIRS

- A. Follow APWA Section 01 66 00 requirements.
- B. Immediately after placement, protect concrete from premature drying, excessively hot or cold temperatures, and mechanical injury.
- C. Maintain concrete with minimal moisture loss at relatively constant temperature for period necessary for hydration of cement and hardening of concrete.

3.11 NON-SHRINK GROUT AND DRYPACK

- A. Clean dust and foreign matter from area, then moisten concrete surfaces with clean water.
- B. Mix grout as recommended by manufacturer and stir until a smooth, creamy consistency is produced, using a minimum amount of water.
- C. Pour mixture into space until it overflows the hole.
- D. Wipe off excess, flush and level with adjacent surface, or as indicated.
- E. Keep surface moist for at least 30 minutes after placing.

3.12 PLACING CONCRETE UNDER WATER

- A. Place and deposit concrete under water when specified on the plans.
- B. Seal the forms or cofferdams watertight.
- C. Do not pump water while placing concrete or disturb the concrete until it has set at least 24 hours, or attained at least 50 percent of its design strength.
- D. Regulate placing to keep surfaces approximately horizontal at all times.
- E. Place the concrete by beginning at one end of the form and progressing in a zig-zag movement from side to side across the length of the form.
- F. Place the concrete using a tremie or concrete pumping equipment.
- G. Observe the following steps when placing concrete with a tremie:
 - 1. Use an 8-inch to 12-inch diameter steel tube tremie constructed with watertight connections, a hopper to receive concrete, and a device at the bottom to exclude water from entering the tube.
 - 2. Use support that permits the discharge end to move over the entire top work surface and permits the tremie to be rapidly lowered to stop or retard flow when necessary.
 - 3. Minimize the number of tremie location shifts for continuous placement.
 - 4. Keep the tremie tube full to the bottom of the hopper during placement.

5. Slightly raise the tremie when a batch is dumped into the hopper, but do not raise it out of the concrete at the bottom until the batch discharges to the bottom of the hopper. If the concrete seal around the tube is lost, re-plug the end and refill the tube with concrete.

PART IV - MEASUREMENT

- 4.1 **Measurement** – No Separate measurement will be made for Work described in this Section.

PART V - PAYMENT

- 5.1 **Payment** – Payment for items in this Section will be incidental to the Contract unit cost of the concrete bid items.

END OF SECTION

SECTION 03 31 10
CONCRETE MIXING, PLACING, JOINTING, AND CURING

PART 1 - GENERAL**1.1 SUMMARY**

- A. Furnish labor, materials, tools, equipment, and services for Concrete Mixing, Placing, Jointing and Curing as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. Materials standards:
 - 1. ASTM C171 Standard Specification for Sheet Materials for Curing Concrete.
 - 2. ASTM C309 Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete.
 - 3. ASTM C1315 Standard Specification for Liquid Membrane Forming Curing Compounds Having Special Properties for Curing and Sealing Concrete.
 - 4. ASTM D1751 Standard Specification for Preformed Expansion Joint Fillers for Concrete Paving and Structural Construction (Non-extruding and Resilient Bituminous Types).
 - 5. ASTM D1752 Standard specification for Preformed Sponge Rubber and Cork and Recycled PVC Expansion Joint Fillers for Concrete Paving and Structural Construction.
 - 6. ASTM E1643 Standard Practice for Installation of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs.
 - 7. ASTM E1745 Specification for Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs
- B. Production standards:
 - 1. ASTM C94 Standard Specification for Ready-mixed Concrete.
 - 2. ASTM C138 Standard Test Method for Density (Unit Weight), Yield, and Air Content (Gravimetric) of Concrete.
 - 3. ASTM C567 Standard Test Method for Determining the Density of Structural Lightweight Concrete.
 - 4. ACI 305.1 Hot Weather Concreting.
 - 5. ACI 306.1 Cold Weather Concreting.
 - 6. ACI 308 Standard Specification for Curing Concrete.
 - 7. ACI 309 Recommended Practice for Consolidation of Concrete.
 - 8. ACI 304R Guide for Measuring, Mixing, Transporting, and Placing Concrete.
 - 9. ACI 304..2R Placing Concrete by Pumping Methods

1.3 SUBMITTALS

- A. Shop drawings:
 - 1. Placement plans: Indicate proposed locations of construction joints and placement sequence.
 - 2. Screeding and finishing plan.
- B. Product Data:
 - 1. Vapor Retarder.
- C. Samples:
 - 1. Vapor Retarder and sealing products.
 - 2. Joint filler.

3. Waterstops.
- D. Project information:
 1. Joint filler technical data.
 2. Curing compound technical data.
 - a. Interior slabs: Include floor covering manufacturer's written approval for use.
 3. Waterstop technical data.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Strippable Curing Compound:
 1. Base:
 - a. Kurez DR VOX or Kurez W VOX by Euclid Chemical Company.
 - b. Horncrete WB, Horncrete WB 30 by Tamms.
- B. Chemical Curing Compound :
 1. Base:
 - a. L&M Construction Chemicals.
 2. Optional:
 - a. Dayton Superior.
 - b. Euclid.
 - c. Sonneborne.
 - d. WR Meadows.
- C. Curing Sheet Material
 1. Base
 - a. Hydracure M5 by PNA Construction Technologies, Inc., Matthews,
 - b. Transguard 4000 by Reef Industries (Armorlon Division), Incorporated,
- D. Concrete Cleaner:
 1. Base:
 - a. ProSoCo.
 2. Optional:
 - a. L&M Construction Chemicals
- E. Self-Expanding Rubber Strip Waterstops:
 1. Base:
 - a. Greenstreak.
 2. Optional:
 - a. Progress Unlimited, Inc.
 - b. Deneef Construction Chemicals.
 - c. Adeka (Mitsubishi).
- F. Vapor Retarders: As noted.
- G. Other manufacturers desiring approval comply with Section 00 26 00.

2.2 MATERIALS

- A. Concrete materials and proportioning: See Section 03 31 00.
- B. Expansion joint filler, premolded: Type required, conforming to ASTM D1751 or ASTM D1752.
- C. Strippable Curing Compound:
 1. Conform to ASTM C309 (Voc Compliant, 350 g/l).
 2. For use on slabs receiving subsequent applied finishes and where noted on the drawings.

3. Install in strict accordance with the manufacturer's recommendation and supervision.
- D. Curing Sheet Material:
1. Provide where concrete is scheduled to be stained per section 09 67 75.
 2. Moisture-Retaining Cover Conforming to ASTM C171: Naturally colored, non-woven polypropylene fabric with a 4-mil non-perforated reflective (white) polyethylene coating.
 3. Fabric shall exhibit low permeability and high moisture retention.
- E. Granular Fill: See Section 31 23 00.

2.3 UNDER-SLAB VAPOR RETARDER

- A. Under-slab Vapor Retarder, Class A:
1. Meet ASTM E1745 Class A and:
 - a. Maximum Water Vapor Permeance: 0.01 Perms (US).
 - b. Minimum Tensile Strength: 45 FT-LB/IN.
 - c. Minimum Puncture resistance: 2300 Grams, minimum.
 2. Base Product:
 - a. Perminator - 15 mil by WR Meadows
- B. Optional Products:
1. 15-mil Green by Reef Griffolyn
 2. Vapor Block 15 by Raven
 3. Moistop Ultra 15 by Fortifiber
 4. Florprufe 120 by Grace
 5. Stego Wrap 15-mil Class A by Stego
 6. 15-mil Yellow Guard by Poly-America
- C. Tape as recommended by vapor retarder manufacturer.
- D. Other manufacturers desiring approval comply with requirements of Section 00 26 00.

2.4 WATERSTOPS

- A. Self-Expanding Rubber Strip Waterstops:
1. Bentonite-free hydrophilic polymer modified chloroprene rubber, suitable for adhesive bonding to concrete.
 2. Profile: Rectangular or trapezoidal strip unless otherwise indicated.
 3. Minimum Dimensions: 3/8 IN by 3/4 IN thick.
 4. Provide in maximum practicable length to minimize end joints.
 5. Butt splice joints at intersections and at ends of pieces in accordance with manufacturer's instructions.
 - a. Make joints to develop effective water tightness fully equal to that of continuous waterstop material, to permanently develop not less than 50 percent of mechanical strength of parent section, and permanently retain flexibility.
 6. Base Products: Hydrotite by Greenstreak; Ultra Seal by Adeka (Mitsubishi); Swellseal by Deneef Construction Chemicals; Superstop by Progress Unlimited, Inc

PART 3 - EXECUTION

3.1 MIXING AND PRODUCTION OF CONCRETE

- A. Batch, mix and transport ready-mixed concrete in accordance with ASTM C94.
1. Plant equipment and facilities shall conform to Check List for Certification of Ready Mixed Concrete Production Facilities of National Ready Mixed Concrete Association.

- B. Site batched and mixed concrete will be permitted only after ability to control quality has been demonstrated to satisfaction of Architect.

3.2 MIXING - CONTROL OF ADMIXTURES

- A. Admixtures shall be added in accordance with Manufacturers recommendations.
B. If two or more admixtures are used, verify compatibility with manufacturers.

3.3 MIXING - TEMPERING AND CONTROL OF MIXING WATER

- A. Mix concrete only in quantities for immediate use. Discard concrete which has set.
B. When concrete arrives at project with slump below that suitable for placing, water may be added only if neither maximum permissible water-cement ratio nor maximum slump is exceeded.
1. Incorporate water by additional mixing equal to at least half of total mixing required.
 2. Do not add water after discharge commences

3.4 MIXING - WEATHER CONDITIONS

- A. Cold weather:
1. Comply with ACI 306.
 2. In cold weather, temperature of concrete when delivered at site shall conform to following limitations:
 3. For sections with least dimension greater than 36 IN, comply with table 3.1 of ACI 306R

Minimum Concrete Temperature Required at Time of Pour		
Air Temperature @ time of pour	For sections with least dimension less than 12 IN	For sections with least dimension 12 IN to 36 IN
Above 30 DegF	60 DegF	55 DegF
0 to 30 DegF	65 DegF	60 DegF
Below 0 DegF	70 DegF	65 DegF

Minimum Concrete Temperature Required within 24 Hours of Pour		
Air Temp within 24 Hours of pour	For sections with least dimension less than 12 IN	For sections with least dimension 12 IN or greater
Below 32	60 DegF	50 DegF

4. If water or aggregate is heated above 100 DegF, combine water with aggregate in mixer before cement is added.
 - a. Do not mix cement with water or with mixtures of water and aggregate having a temperature greater than 100 DegF.
 - b. Final temperature of combined mix shall not exceed 90 DegF or be high enough to cause flash set or loss of slump or workability.
- B. Hot weather:
1. Comply with ACI 305 if high temperature, low slump, flash set, or cold joints are encountered.
 2. Cool ingredients before mixing, or add flake ice or well-crushed ice of a size that will melt completely during mixing for all or part of mixing water. Account for water contribution by ice when calculating the quantity if mixing water and insure that specified W/C ration is not exceeded.

3.5 PREPARATION BEFORE PLACING

- A. Equipment:

1. Remove hardened concrete and foreign material from inner surfaces of conveying equipment.
 2. Provide spare vibrator on job site during concrete placing operations.
 3. In cold weather, have protective blankets ready and heaters operational and in-place before placing concrete.
- B. Forms:
1. Complete formwork: Remove frost, snow, ice, water and foreign material; secure reinforcement in place, position expansion joint material, anchors, and other embedded items and have entire preparation inspected prior to concrete placement.
 2. In hot weather when temperature of reinforcing or forms is greater than 120 degF spray forms and reinforcement with water just prior to placing concrete.
- C. Screeds and screed rails:
1. General:
 - a. Develop a screed system to accurately strike off fresh concrete to the surfaces defined on drawings.
 - b. Anticipate deflection of formwork and support systems.
 - 1) Provide and place extra concrete as necessary to produce finish surfaces with specified tolerances at designated elevations and contours at no additional cost to the Owner.
 - c. When form work is cambered whether shored or un-shored and screeding is performed perpendicular (i.e., up and over) to crown of camber set screed rails to follow camber and provide a slab of uniform thickness.
 - 1) When screeding parallel with the camber set one screed at midspan along crown of camber and one along girder or support.
 - 2) Two passes of the screed is necessary to cover one full bay.
 - d. Other screeding methods may be used provided deflection of un-shored formwork is taken into consideration.
 - e. On unshored steel framing systems, accurately strike off concrete to produce a level surface after steel supporting system has deflected due to dead weight of fresh concrete.
 - f. Slab thickness on cambered steel shall not be less than that indicated on plan.
 - g. If not required in documents and subjected to approval of Architect, Contractor as option may camber formwork.
 - h. All concrete shall be struck off with a vibrating screed.
 - i. Use of a wet screed system will not be permitted unless:
 - 1) Concrete is struck with a pneumatically vibrated floater screed.
 - 2) A highway straight edge is used to true the surface perpendicular to direction of screeding.
 - 3) A satisfactory finish is produced on a trial slab.
 - j. Submit a screeding and finishing plan for approval.
 - 1) A representative trial slab pour shall be provided to demonstrate that the specified tolerances and a satisfactory surface can be provided by the proposed method of screeding and finishing.
- D. Subgrade for slabs on grade:
1. Subgrade shall be well drained and of adequate and uniform load bearing nature.
 - a. Keep in-place density of subgrade soils at least to minimum indicated.
 2. Keep subgrade free of frost before concrete placing begins.
 - a. If temperature inside a building where concrete is to be placed is below freezing, raise temperature and maintain above 50 degF long enough to remove frost from subgrade and reinforcing.
 3. Keep subgrade moist at time of concreting.
 - a. If necessary, dampen with water in advance of concreting.

- b. Allow no free water standing on subgrade nor muddy or soft spots when concrete is placed.

3.6 UNDER-SLAB VAPOR RETARDER

- A. Place continuous vapor retarder over granular fill.
 1. See Section 31 23 00.
 2. Installation as recommended by manufacturer.
- B. Comply with ASTM E1643 Standard Practice for Selection, Design, Installation, and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs.
 1. Lap vapor retarder at ends and edges of sheets and seal with vapor retarder tape.
 2. Extend to extremities of area.
 3. Turn up at perimeter walls to form bond breaker and tape in place.
 4. Detail sleeved or drilled penetrations as recommended by manufacturer.
 - a. Coordinate detailing at penetrations with subcontractors responsible for penetrations.
- C. Protect vapor retarder. Repair punctures, tears and other damage using vapor retarder tape.
- D. Trim excess material after slab is placed.
- E. Inspect and approve vapor retarder installation prior to concrete placement.
 1. See Section 01 45 23.

3.7 PROTECTION

- A. Unless adequate protection is provided and approval is obtained, do not place concrete when temperature is below freezing or during rain, sleet or snow.
- B. Do not allow rainwater to increase mixing water nor to damage surface finish.
- C. Concrete damaged by rain or weather and judged defective by Architect shall be removed and replaced by Contractor at no additional cost to Owner or corrected by procedures listed in Section 03 08 16.

3.8 CONVEYING

- A. Handle concrete from mixer to place of final deposit as rapidly as practicable by methods which prevent segregation or loss of ingredients and assure that quality is maintained.
- B. Use equipment conforming to ASTM C94.
- C. Use horizontal belt conveyors or mount at a slope which will not cause excessive segregation or loss of ingredients.
 1. Protect concrete against undue drying or rise in temperature.
 2. Handle to prevent segregation.
 3. Do not allow mortar to adhere to belt.
 4. Discharge long runs into a hopper or through a baffle.
- D. Use metal or metal-lined chutes with slope between 1 vertical and 2-3 horizontal.
 1. Chutes more than 20 FT long and chutes not meeting slope requirements may be used provided they discharge into a hopper before distribution.
- E. Pumping or pneumatic conveying equipment shall be of suitable kind with adequate pumping capacity.
 1. Control pneumatic placement so that segregation is not apparent in discharged concrete.
 2. Loss of slump in pumping or pneumatic conveying equipment shall not exceed 2 IN.
 3. Do not convey concrete through pipe made of aluminum or aluminum alloy.

3.9 DEPOSITING IN FORMS

- A. Work includes:
 - 1. Deposit concrete continuously or in layers of such thickness that no concrete is deposited on concrete which has hardened sufficiently to cause formation of seams or planes of weakness within section.
 - 2. Place at such a rate that concrete which is being integrated with fresh concrete is still plastic.
 - 3. Do not deposit concrete which has partially hardened or has been contaminated by foreign materials.
 - 4. Remove temporary spreaders in forms when concrete placing has reached an elevation rendering their service unnecessary.
 - 5. They may remain embedded in concrete only if made of metal or concrete and if prior approval has been obtained.
- B. Do not start placing concrete in supported elements until concrete previously placed in columns and walls is no longer plastic and has been in place at least two hours.
- C. Deposit concrete as nearly as practicable in its final position to avoid segregation due to re-handling or flowing.
 - 1. Do not subject concrete to procedure which will cause segregation.
 - 2. Concrete shall not drop more than 6 FT unless approved by the Architect/Engineer. For greater heights, provide special mix design, chutes, spouts, tremies, or other approved method.
- D. Concrete buckets shall be equipped with rubber discharge tubes.
 - 1. Tube size shall be effective in directing flow of concrete directly downward between reinforcing.
 - 2. Unless it can be demonstrated, no segregation will occur with greater distances, maximum free fall distance of concrete below flexible tube is limited to 4 FT.
- E. Consolidation:
 - 1. Consolidate concrete by vibration, so that concrete is thoroughly worked around reinforcement, around embedded items and into corners of forms eliminating air or stone pockets which may cause honeycombing, pitting, or planes of weakness.
 - 2. Use internal vibrators having a minimum frequency of 8000 vibrations per minute to consolidate concrete effectively.
 - 3. Do not use vibrators to transport concrete within forms.
 - 4. Insert vibrators and withdraw at points approximately 18 IN apart.
 - 5. At each insertion allow duration sufficient to consolidate concrete but not sufficient to cause segregation; generally from 5 to 15 sec.
 - 6. Where concrete is to have an as-cast finish, bring a full surface of mortar against form by vibration process, supplemented if necessary by spading, to work coarse aggregate back from formed surface.

3.10 SLAB PLACEMENT

- A. Coordinate mixing and placing with finishing.
 - 1. Do not place concrete on subgrade or forms more rapidly than it can be spread, straight edged, and darbled or bull floated.
 - 2. Perform these operations before bleed water has an opportunity to collect on surface.
- B. To obtain good surfaces and avoid cold joints, plan size of finishing crews with due regard for effects of concrete temperature and atmospheric conditions on rate of hardening of concrete.
 - 1. If construction joints become necessary, construct as required under joints and embedded items.
- C. Consolidation:

1. Thoroughly consolidate concrete in slabs.
2. Use internal vibration in beams and girders of framed slabs and along bulkheads of slabs on grade.
3. Obtain consolidation of slabs with vibrating screeds, roller pipe screeds, internal vibrators, or other approved means.

3.11 JOINTS AND EMBEDDED ITEMS

- A. Construction joints, other than slab on grade:
 1. Locate joints not indicated so as to least impair strength of structure.
 - a. Place joints in locations approved by Architect/Engineer.
 2. In general, locate near middle of spans of slabs, beams, and girders unless a beam intersects a girder at this point, in which case, offset joint in girder a distance equal to twice width of beam.
 - a. Locate joints in walls and columns at underside of floors, slabs, beams, or girders and at tops of footings or floor slabs.
 - b. Place beams, girders, brackets, column capitals, haunches, and drop panels at same time as slabs.
 - c. Make joints perpendicular to main reinforcement.
 3. Continue reinforcement across joints.
 4. Clean surface of concrete at joints thoroughly and remove laitance.
 - a. Prior to placing adjoining concrete, dampen (but do not saturate) hardened concrete of construction joints.
- B. Joints in slabs-on-grade:
 1. Construction joints:
 - a. Place keyed dowelled or diamond plate construction joints as indicated on plans and at locations where a slab placement is terminated or interrupted.
 - b. Size of placements and sequence of slab placement is Contractor's option, except construction joints shall be located at a control joint location.
 - c. Construction joints act as control joints.
 2. Control joints:
 - a. Provide contraction (control) joints as indicated.
 - b. If not shown, provide along column centerlines.
 3. Control joints:
 - a. Where column centerline spacing or spacing between column centerlines and walls exceeds 30 FT, provide an intermediate joint(s) at intervals not exceeding 30 FT.
 - b. Locate joints to produce panels that are as square as possible with length not exceeding 1.5 times width.
 - c. Also provide joints where change in slab width occurs, such as at block-outs, pits, etc.
 - d. If saw cut joints are required or permitted, time cutting properly with set of concrete by one of the following methods
 - 1) Start cutting as soon as concrete has hardened sufficiently to prevent aggregates being dislodged by saw. Complete sawing within 12 hours after placement.
 - 2) The soff cut saw shall be used within two hours of final finishing.
 - a) Cut depth not less than 10 percent of slab thickness with a 1-inch minimum.
 - b) Remove debris in path of cut and under Skid Plate before cutting. Skid Plate must remain flat on surface.
 - c) Use Soff-Cut blades and Skid Plates, using a new Skid Plate with each new blade.
 - d) Install Soff-Cut joint protector at saw-cut intersection prior to cross-cut.
 - e) Remove dry powder without disturbing finish.

- f) Avoid traffic across saw cut until sufficient strength is gained to protect joint edges.
- 3) If an alternate method or timing is proposed, submit detailed plans for review and acceptance.
- 4. Complete before shrinkage stresses become sufficient to produce cracking.
- 5. Isolation joints:
 - a. Provide isolation joints around columns, and between slab on grade and walls.
 - b. Also provide isolation joints around equipment or machinery isolation pads, pits, pipes, etc., unless detailed otherwise.
- C. Expansion joints:
 - 1. Do not permit reinforcement or other embedded metal items bonded to concrete, except dowels in floors bonded on only one side of joints, to extend continuously through expansion joint.
 - 2. Locate expansion joints as indicated.
- D. Acoustic Isolation Joint:
 - 1. Do not permit any reinforcing or other bonded items to extend through joint.
 - 2. Remove forming material and clean joint thoroughly prior to cover installation. Locate as indicated.
- E. Place sleeves, inserts, anchors, and embedded items required for adjoining work or for its support, prior to placement of concrete.
 - 1. Give Contractors whose work is related to concrete or supported by it ample notice and opportunity to introduce and/or furnish embedded items before concrete placement.
 - 2. Position expansion joint material, waterstops, and other embedded items accurately and support against displacement.
 - 3. Fill voids in sleeves, inserts and anchor slots temporarily with readily removable material to prevent entry of concrete.

3.12 BONDED JOINTS

- A. At construction joints indicated as bonded, obtain bond by one of following methods:
 - 1. Roughen surface of concrete in an approved manner which will expose aggregate uniformly and not leave laitance, loosened particles of aggregate or damaged concrete at surface.
 - a. Dampen (but do not saturate) hardened concrete of joints in exposed work; joints in middle of beams, girders, joists, and slabs; and joints in work designed to contain liquids.
 - b. Thoroughly cover with a coat of cement grout of similar proportions to mortar in concrete.
 - c. Use grout as thick as possible on vertical surfaces and at least 1/2 IN thick on horizontal surfaces.
 - d. Place fresh concrete before grout has attained its initial set.
 - 2. Prepare joints receiving an adhesive and apply adhesive in accordance with manufacturer's recommendations prior to placing of fresh concrete.
 - 3. Prepare surfaces of joints which have been treated with a chemical retarder in accordance with manufacturer's recommendations prior to placing of fresh concrete.

3.13 SLAB FINISHING

- A. See Section 03 35 00.

3.14 CURING AND PROTECTION

- A. Work includes: Beginning immediately after placement, protect concrete from premature drying, hot or cold temperatures, and mechanical injury, and maintain with minimal moisture loss at relatively constant temperature for period necessary for hydration and hardening of concrete. Materials and methods of curing subject to approval.
- B. Preservation of Moisture:
1. Interior Slabs:
 - a. Application of sheet curing materials.
 - b. Application of strippable curing compound.
 - 1) Submit written approval from floor covering manufacturer prior to use.
 - 2) Apply in accord with recommendations of manufacturer immediately after water sheen, which may develop after finishing, has disappeared.
 - 3) Apply continuous film at manufacturer's specified rate.
 - 4) Completely remove prior to application of floor covering material.
 2. Other concrete surfaces not in contact with forms apply one of following procedures immediately after completion of placement and finishing:
 - a. Ponding or continuous sprinkling.
 - b. Application of absorptive mats or fabric kept continuously wet.
 - c. Application of sand kept continuously wet.
 - d. Continuous application of mist spray, not exceeding 150 degF.
 - e. Application of sheet curing materials.
 - f. Application of other moisture-retaining covering as approved.
 - g. Application of curing compound.
 - 1) Apply in accord with recommendations of manufacturer immediately after water sheen, which may develop after finishing, has disappeared.
 - 2) Apply continuous film at manufacturer's specified rate.
 - 3) Do not use on surface against which additional concrete or other material is to be bonded, unless it is proven that curing compound will not prevent bond or positive measures are taken to remove curing compound completely from areas to receive bonded applications.
 3. Minimize moisture loss from surfaces placed against wooden forms or metal forms exposed to heating by sun by keeping forms wet until they can be safely removed.
 - a. After form removal cure concrete until end of time prescribed.
 4. Continue curing in accordance with ACI 318. Seven days for most concrete.
 - a. If tests made of cylinders, kept adjacent to structure and cured by same methods, indicate average compressive strength has reached 70 percent of specified strength, (f_c'), moisture retention methods may be terminated.
 - b. If one of curing procedures indicated above is used initially, it may be replaced by one of other procedures indicated any time after concrete is 1 day old, provided concrete is not permitted to become surface dry during transition.
- C. Temperature, wind and humidity:
1. Cold weather:
 - a. When mean daily outdoor temperature is less than 40 degF maintain temperature of concrete between 50 and 70 degF for required curing period.
 - b. When necessary make arrangements for heating, covering, insulating, or housing concrete work adequate to maintain required temperature without injury.
 - c. Do not use combustion heaters during first 24 hours unless precautions are taken to prevent exposure of concrete to exhaust gases which contain carbon dioxide.
 2. Hot weather:
 - a. When necessary make provision for windbreaks, shading, fog spraying, sprinkling, ponding, or wet covering with a light colored material.

- b. Take such protective measures as quickly as concrete hardening and finishing operations will allow.
- 3. Rate of temperature change:
 - a. Keep changes in temperature of air immediately adjacent to concrete during and immediately following curing period as uniform as possible.
 - b. Do not exceed 5 degF in any 1 hour or 50 degF in any 24-hour period.
- D. Protection from mechanical injury:
 - 1. During curing period, protect concrete from damaging mechanical disturbances, such as load stresses, heavy shock, and excessive vibration.
 - 2. Protect finished concrete surfaces from damage by construction equipment, materials, or methods, and by rain or running water.
 - 3. Do not load self-supporting structures in such a way as to overstress concrete.
- E. Protection of slabs-on-grade from frost:
 - 1. Interior slabs exposed to freezing temperatures shall be adequately protected so that frost does not develop in supporting subgrade.

3.15 ELEVATOR DOOR FRAMES

- A. Elevator Door Frames in concrete shafts:
 - 1. Block-out as required by Elevator Manufacturer to allow for door frames to be set.
 - 2. After door frames have been set, set forms across void between frame and edge of block-out.
 - 3. Fill in with concrete fill.

3.16 CONCRETE CLEANING

- A. Clean Cast-in-Place concrete walls which will remain exposed to view.
 - 1. Including walls which are scheduled for painting.

END OF SECTION

SECTION 03 35 00**CONCRETE FINISHING AND REPAIR OF SURFACE DEFECTS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Furnish labor, materials, tools, equipment, and services for Concrete Finishing and Repair of Surface Defects, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. Floor finish tolerances:
 - 1. Follow F-Number System as defined in ASTM E1155.
 - a. Floor Flatness F-Number: F_F defines maximum floor curvature allowed over 24 IN computed on basis of successive 12 IN elevation differentials.
 - b. Floor Levelness F-Number: F_L defines relative conformity of floor surface to a horizontal plane measured over a 10 FT distance.
 - c. Above number pair to be stated in form: F_F/F_L .
 - d. Specified overall value is enumerated and is based on composite of measured values in a placement.
 - e. Minimum local value (MLV) describes flatness or levelness below which repair or replacement is required. MLV is based on individual placement and applies to minimum local area not crossing construction or control joints.

PART 2 - PRODUCTS**2.1 MATERIALS**

- A. Bonding agent: Approximately one (1) part Portland cement to one (1) part fine sand passing a No.30 mesh sieve. Mix to consistency of thick cream.
- B. Patching compound: Same materials and approximately same proportions as used for concrete, except omit coarse aggregate. Shall consist of not more than one (1) part Portland cement to two and one half (2-1/2) parts sand loose volume. For exposed concrete, part of Portland cement shall be white to produce a color matching color of surrounding concrete, as determined by a trial patch. Add no more water than necessary for handling and placing. Mix compound in advance and allow to stand with frequent manipulation, without addition of water, until it has reached stiffest consistency that will permit placing.
- C. Grout for grout cleaned rubbed finish: Mix one (1) part Portland cement and one and one-half (1-1/2) parts fine sand with sufficient water to produce a grout with a consistency of thick paint.
- D. Grout for cork floated rubbed finish: Mix one (1) part Portland cement and one (1) part fine sand with sufficient water to produce a stiff grout.
- E. Proprietary materials: At Contractor's option, proprietary compounds for adhesion, patching, or finishing may be used in lieu of or in addition to foregoing grouts. Use such compounds in accordance with manufacturer's recommendations.
- F. Chemical hardener:
 - 1. Base manufacturer:

- a. Sonneborn Building Products.
2. Optional manufacturer:
 - a. Pro-Tex-All.
3. Other manufacturers desiring approval comply with Section 00 26 00.

PART 3 - EXECUTION

3.1 FINISHING - GENERAL

- A. After removal of forms, repair and give surfaces of concrete finishes indicated.
 1. Top surface of slabs not included.
- B. Unspecified finish: If finish is not designated, use following finishes as applicable:
 1. Unpainted concrete surfaces not exposed to public view: Rough form finish.
 2. Unpainted concrete surfaces exposed to public view: Smooth form finish.
 3. Concrete surfaces to receive paint: Grout cleaned rubbed finish.
 4. Unformed surfaces (except slabs): As indicated.
 5. Concrete surfaces to be waterproofed in Section 07 14 13 and Section 07 14 16: Smooth form finish.

3.2 REPAIR OF SURFACE DEFECTS

- A. Repair surface defects immediately after form removal. Remove honeycombed and other defective concrete down to sound concrete. Chip if necessary to make edges perpendicular to surface or slightly undercut. No feather edges will be permitted. Dampen area to be patched and an area at least 6 IN wide surrounding it to prevent absorption of water from patching compound. After surface water has evaporated from area to be patched, brush bonding agent into surface. When bonding agent begins to lose water sheen, apply patching compound. Thoroughly consolidate compound into place and strike off so as to leave patch slightly higher than surrounding surface. To permit initial shrinkage, leave undisturbed for at least 1 HR before final finish. Keep patched area damp for 7 days. Do not use metal tools in finishing a patch which will be exposed.
- B. Tie holes: Unless stainless steel, non-corrosive, or acceptably coated ties are used, tie holes shall be filled. Clean and thoroughly dampen tie holes; fill solid with patching compound.

3.3 AS-CAST FINISHES

- A. Rough form finish: No selected form facing materials are specified for rough form finish surfaces. Concrete surfaces must conform to tolerances in Section 03 11 00 Concrete Formwork. Patch defects and tie holes. Chip or rub off fins exceeding 1/4 IN in height. Otherwise, leave surfaces with texture imparted by forms.
- B. Smooth form finish: Use form facing material to produce a smooth, hard, uniform texture on concrete. It may be plastic coated plywood, metal, plastic liners, or other approved material capable of producing desired finish. Arrange facing material orderly and symmetrical, with number of seams kept to practical minimum. Support by studs or other backing capable of preventing excessive deflection. Do not use material with raised grain, patches, or other defects which will impair texture of concrete surface.
 1. Patch tie holes and defects. Remove fins completely.
 2. When surface texture is impaired and form joints misaligned by more than 1/8 IN grind bushhammer, or correct affected concrete as directed by Architect. Slurry grout areas evidencing minor mortar leakage to match adjacent concrete. Repair major mortar leakage as a defective area.
- C. Special architecture finish: Produce finish in accord with requirements of Section 03 45 00, Architectural Precast Concrete.

- D. Finishing of related unformed surfaces: (Except Slabs).
1. Strike smooth tops of walls or buttresses, horizontal offsets, and similar unformed surfaces occurring adjacent to formed surfaces after concrete is placed.
 2. Float to a texture reasonably consistent with that of formed surfaces.
 3. Continue final treatment on formed surfaces uniformly across unformed surfaces.

3.4 RUBBED FINISHES

- A. General: Form and repair concrete surfaces to receive rubbed finishes, in accordance with requirements for smooth form finish. Remove forms and perform necessary patching as soon after placement as possible without jeopardizing structure.
- B. Smooth: Produce smooth rubbed finish on newly hardened concrete no later than day following form removal. Wet surfaces and rub with carborundum brick or other abrasive until uniform color and texture are produced. Use no cement grout other than cement paste drawn from concrete itself by rubbing process.
- C. Grout cleaned: Undertake no cleaning operations until contiguous surfaces are completed and accessible. Wet surface of concrete sufficiently to prevent absorption of water from grout and apply grout uniformly. Immediately after applying grout, scrub surface vigorously with a cork float or stone to coat surface and fill air bubbles and holes. While grout is still plastic, remove excess grout by working surface with a rubber float, sack, or other means. After surface whitens from drying, rub vigorously with clean burlap. Keep finish damp for at least 36 hours after final rubbing.
- D. Cork floated: Remove forms at an early stage, within 2 to 3 days of placement where possible. Remove ties. Remove burrs and fins. Dampen wall surface. Apply grout with firm rubber float or with trowel, filling surface voids. Compress grout into voids. If grout surface dries too rapidly to permit proper compaction and finishing, apply a small amount of water with a fog sprayer. Produce final texture with a cork float using a swirling motion.

3.5 SLAB FINISHING

- A. General:
1. Place slabs to finish tolerances specified.
 2. Slab finish: Use following finishes at building locations noted.
 - a. Scratched finish: Surfaces intended to receive bonded applied cementitious applications, such as setting beds, grout, etc.
 - b. Floated finish (magnesium):
 - 1) Surfaces intended to receive roofing, waterproofing membranes, or sand bed terrazzo.
 - 2) Surfaces of ramps, docks, stairs in which no other covering is specified.
 - c. Broom or Belt finish: Parking garage floors.
 - d. Troweled finish:
 - 1) Floors intended as walking surfaces or to receive floor coverings.
 - e. Non-slip finish (interior and exterior): Ramps, docks, stairs specifically noted on drawings.
- B. Finishing tolerances:
1. For shored construction, measurements for conformance with finishing tolerances shall be made as soon as slab can tolerate foot traffic, and before shores are removed.
 2. The FI levelness tolerance is not applicable to unshored form work such as cast in place topping on prestressed tees, slabs on unshored steel and metal deck, or unshored-postensioned slabs on steel beams.
 3. Horizontal finishes will be accepted provided:
 - a. Applicable specification requirements are satisfied.
 - b. Water does not pond in areas sloped to drain.

- c. Floor finish tolerances Ff/FI conforms to that specified for particular finish and minimum local valves are not less than 75 percent of the floor finish tolerance specified.
 4. Accumulated deviation from intended true plane of finished surface does not exceed 1 IN.
 5. Accuracy of floor finish does not adversely affect installation and operation of movable equipment, floor supported items or items fitted to floor (doors, tracks, etc.).
- C. Finishes:
1. Scratched finish: After concrete has been placed, consolidated, struck off, and leveled to a Ff15/FI13 tolerance, roughen surface with stiff brushes or rakes before final set.
 2. Floated finish: After concrete has been placed, consolidated, struck off, and leveled, do not work further until ready for floating. Using a magnesium float, begin floating when water sheen has disappeared and surface has stiffened sufficiently to permit operation. During or after first floating, check planeness of entire surface with a 10 FT straightedge applied at not less than two different angles. Cut down high spots and fill low spots during this procedure to produce a surface within Ff25/FI20 tolerance throughout, unless otherwise noted as "superflat". Where noted as "superflat" on plan provide Ff60/FI55. Refloat slab immediately to a uniform sandy texture.
 3. Troweled finish: First float-finish surface. Next power trowel, and finally hand trowel. First troweling after power floating shall produce a smooth surface which is relatively free of defects but which may still indicate some trowel marks. Perform additional troweling by hand after surface has hardened sufficiently. Final trowel when a ringing sound is produced as trowel is moved over surface. Thoroughly consolidate surface by hand troweling. Leave finished surface essentially free of trowel marks, uniform in texture and appearance and plane to a Ff25/FI20 tolerance unless otherwise noted as "superflat". Where noted as "superflat" on plan provide Ff60/FI55. On surfaces intended to receive floor coverings, grind off defects which would indicate through floor covering. On surfaces intended to receive waterproofing membranes grind off defects that might tear or otherwise damage membrane.
 4. Broom or belt finish: Immediately after concrete has received float finish, give it a coarse scored texture by drawing a broom or burlap belt across surface transverse to slope or traffic flow.
 5. Non-slip slab finish:
 - a. Aggregate: Crushed ceramically bonded aluminum oxide particles. Apply at 25 LB per 100 SF.
 - b. Blend aggregate with Portland cement in proportions recommended by manufacturer of aggregate.
 - c. Give surface a float finish.
 - d. Apply approximately two-thirds of blended material for required coverage to surface by a method that ensures even coverage without segregation. Begin floating immediately.
 - e. After material has been embedded by floating, apply remainder of blended material to surface at right angles to previous application. Make second application heavier in areas not sufficiently covered by first application. Follow with second floating immediately.
 - f. After selected material has been embedded by two floatings, complete operation with a broomed finish.

END OF SECTION

SECTION 03 35 10**CONCRETE FINISHING****PART I - GENERAL****1.1 SUMMARY**

- A. Description: This work includes concrete finishing requirements and methods.

1.2 REFERENCES

- A. ACI 303: Guide to Cast-in-Place Architectural Concrete Practice.

1.3 SUBMITTALS

- A. Name, type, chemical analysis and manufacturer's recommended rate of application for liquid chemical hardener.

1.4 PROJECT CONDITIONS

- A. Protect adjacent materials and finishes from dust, dirt and other surface or physical damage during finishing operations. Provide protection as required and remove from site at completion of Work.

1.5 QUALITY ASSURANCE

- A. Provide full-scale mock up showing finishes as indicated in the Drawings for the items listed below. The mock-up shall be located at a stop to be determined by the Owner. Approved mock-up will be incorporated into the Work.
 - a. Seat Wall
 - b. Platform flatwork

PART II - PRODUCTS**2.1 MATERIALS**

- A. Dry Shake: Blend of metallic or mineral aggregate with Portland cement concrete in proportions recommended by manufacturer Liquid-Chemical
- B. Proprietary Materials: If permitted or required, proprietary compounds may be used in lieu of or in addition to foregoing materials. Use such compounds per manufacturer's recommendations.
- C. Hardener: Colorless, aqueous solution containing a blend of magnesium fluosilicate, zinc fluosilicate and a wetting agent. Mixture contains not less than 2 pounds fluosilicate per gallon and does not interfere with adhesives and bonding.
- D. Aggregate: Course (Exposed) Aggregate Concrete Slab Finishes
 - a. ASTM C33, washed, clean, graded No. 3 Fine Ballast Aggregate
- E. Sand: Course (Exposed) Aggregate Concrete Slab Finishes:
 - a. Coral Sand

- F. Commercial Packing Mortar: A structural repair mortar may be furnished if appropriate and approved by the Owner

PART III - EXECUTION

3.1 PREPARATION

- A. Examine the areas and conditions under which work of this section will be performed.
- B. Correct conditions detrimental to timely and proper finishing.
- C. Do not proceed until unsatisfactory conditions are corrected.

3.2 FINISHING HORIZONTAL SLABS

- A. Do not apply water (i.e. sprinkle) to any surface of concrete when finishing slabs.
- B. Slab finishing tolerances.
1. Class A finish: 1 in 1000.
 2. Class B finish: 1 in 500.
 3. Class C finish: 1 in 250.
- C. Floated Finish: After concrete has been placed, consolidated, struck-off, and leveled, do not work further until ready for floating.
1. Begin floating when water sheen has disappeared and surface has stiffness sufficient to permit operation.
 2. During or after first floating, check planeness of entire surface with a 10-foot long straightedge applied at 2 or more different angles. This step is not required for structures to be covered by fill or ballast.
 3. Cut down high spots and fill low spots to the required tolerance.
 4. Refloat slab immediately to a uniform sandy texture.
- D. Trowel Finish:
1. Float finish surface.
 2. Power trowel.
 3. Hand trowel as required to provide surface.
 4. First troweling after power floating shall produce smooth surface relatively free of defects but which may still show some trowel marks.
 5. Second trowel by hand after surface has hardened.
 6. Leave finished surface essentially free of trowel marks, uniform in texture and appearance.
 7. On surfaces intended to support floor coverings, grind off defects that would show through floor covering.

- E. Broom or Belt Finish: Sweep surface with brushes, rakes, tines or burlap belt before final set. Finish concrete as specified for monolithic finish above, except omit final troweling and finish surface by drawing a coarse-hair broom across surface. Do all brooming in a direction indicated in the Drawings. If not indicated, brooming shall be parallel to expansion joints, or in cases of inclined slabs, perpendicular to slope.
- Finish concrete on face of platform edge by applying a hand rub finish after stripping form, then apply curing compound.
- F. "Dry Shake" Finish: Give the surface a floated finish. Evenly apply approximately 2/3 of a blended unsegregated material.
1. Begin floating immediately after application of first "dry shake".
 2. After material has been embedded by floating, apply remainder of blended material to surface at right angles to previous application.
 3. Make second application heavier in any areas not sufficiently covered by first application.
 4. Immediately follow with second floating.
 5. After selected material has been embedded by second floating, complete operation with a broomed, floated, or troweled finish, as indicated.
- G. Non-slip Finish: Give surface a "dry shake" application, using crushed ceramically bonded aluminum oxide particles. Apply at 25 pounds per 100 square feet.
- H. Seeded Exposed Aggregate Finish: Immediately after surface of concrete has been leveled to tolerance and surface water has dissipated, spread aggregate uniformly over surface to provide complete coverage to the depth of a single stone.
1. Embed aggregate into surface by light tamping.
 2. Float surface until embedded aggregate is fully coated with mortar and surface has been brought to tolerance.
 3. Start exposure of aggregate after matrix has hardened sufficiently to prevent dislodgment.
 4. Flow ample quantities of water, without force, over surface of concrete while matrix encasing aggregate is removed by brushing with a fine bristle brush.
 5. Continue until aggregate is uniformly exposed.
 6. An approved chemical retarder sprayed onto freshly floated surface may be used to extend working time.
- I. Sand Blast Finish:
1. Apply sandblasted finish to exposed concrete surfaces where indicated.
 2. Perform sandblasting at least 72 hours after placement of concrete. Coordinate with formwork construction, concrete placement schedule, and formwork removal to ensure that surfaces to be blast finish are blasted at the same age for uniform

results.

3. Determine type of nozzle, nozzle pressure, and blasting techniques required to match the approved mock-up.
 4. Abrasive-blast corners and edges of patterns carefully, using back-up boards, to maintain uniform corner or edge line.
 5. Depths of Cut: Use an abrasive grit of the proper type and gradation to expose aggregate and surrounding matrix surface to match approved mock-up.
 6. Generally expose coarse aggregate 3/16" to 1/4-inch reveal.
 7. Surface Continuity: Perform sand blast finishing in as continuous as operation as possible, utilizing the same work crew to maintain continuity of finish on each surface or area of work.
 8. Construction Joints shall be uniform and straight and terminate completely within an intersecting joint line.
 9. Protection and Repair: Protect adjacent materials and finishes from dust, dirt, and other surfaces or physical damage during abrasive-blast finishing operations. Provide protection as required and remove from site at completion of the work. Repair or replace other work damages by finishing operations.
 10. Clean-Up: Maintain control of concrete chips, dust and debris in each work area. Clean up and remove such material at the completion of each day of operation. Prevent migration of airborne materials by use of tarpaulins, wind breaks and similar containing devices.
- J. Non-Slip Finish: Provide non-slip finish in conformance with applicable codes.
- K. Course (Exposed) Aggregate Finishes: Standard gray with light water wash finish
- L. Exposed Aggregate Concrete Slab and Flatwork Finishing:
1. Do not use tools such as jitterbugs that force the aggregate away from top the surface
 2. Exposing Aggregate: Proceed as soon as the surface grout can be removed by simultaneous brushing and flushing with water without overexposing or dislodging the aggregate. Avoid traffic on the concrete during this operation. High pressure water may be used if desired finish is more easily achieved without harm to the concrete. Use same method of exposure, either with or without retarder, throughout the job.
 3. Top Surface Retarder:
 - i. Prepare small test panels to confirm the desired depth of the etch as approved by the Owner
 - ii. Protect surrounding areas from overspray application.
 - iii. Apply and remove pre manufacturer's instruction.
 - iv. In hot weather remove the retarded matrix in the same day.

3.3 FINISHING FORMED SURFACES

- A. General:
1. Allow concrete to cure not more than 72-hours before commencing surface finish operations, unless approved otherwise.
 2. Revise the finishes as needed to secure approval.
- B. As-Cast Form Finish:
1. Rough: Patch defects chip or rub off fins exceeding 1/4-inch height.
 2. Smooth: Patch tie holes and defects and remove fins completely.
 - a. When surface texture is impaired and form joints misaligned, grind, bush-hammer, or correct affected concrete.
 - b. Slurry grout areas evidencing minor mortar leakage to match adjacent concrete.
 - c. Repair major mortar leakage as a defective area.
 - d. When workmanship is less than acceptable standard, provide one of rubbed finishes. Standards must be acceptable to the company or by general consent as a basis of comparison.
 - e. Seat Wall: Corners shall be square with a 1/8" maximum radius
- C. Rubbed Finish:
1. Smooth Rubbed: Remove forms and perform necessary patching as soon after placement as possible.
 - a. Finish newly hardened concrete no later than 24-hours following form removal.
 - b. Wet surfaces and rub with carborundum brick or other abrasive until uniform color and texture are produced.
 2. Grout Cleaned: Undertake no cleaning operations until all contiguous surfaces are completed and accessible.
 - a. Wet surface of concrete sufficiently to prevent absorption of water from grout.
 - b. Apply grout uniformly.
 - c. Immediately after grouting, scrub surface with cork float or stone to coat surface and fill voids.
 - d. While grout is still plastic, remove excess grout by working surface with rubber float or sack.
 - e. After surface whitens from drying, rub vigorously with clean burlap.
 - f. Keep damp for at least 36-hours after final rubbing.

3. Cork Floated: Remove forms within 2 to 3 days of placement where possible.
 - a. Remove ties.
 - b. Remove all burrs and fins.
 - c. Dampen wall surface.
 - d. Apply mortar with firm rubber float or with trowel, filling all surface voids.
 - e. Compress mortar into voids.
 - f. If mortar surface dries too rapidly to permit proper compaction and finishing, apply a small amount of water with fog sprayer.
 - g. Produce final texture with cork float using a swirling motion.
- D. Unformed Finish:
 1. After concrete is placed, strike smooth, tops of walls or buttresses, horizontal offsets, and similar unformed surfaces occurring adjacent to formed surfaces.
 2. Float to texture that is reasonably consistent with formed surfaces.
 3. Continue final treatment on formed surfaces uniformly across unformed surfaces.
- E. Blasted Finish:
 1. Perform abrasive blasting within 24 to 72-hours after casting.
 2. Coordinate with form work construction, concrete placement schedule, and formwork removal to ensure that surfaces are blasted at the same age for uniform results.
 3. Reapply curing protection after blast finishing
- F. Architectural Finish: Refer to ACI 303.
 1. Tooled Finish:
 - a. Dress thoroughly cured concrete surface with electric, air, or hand tools to uniform texture, and give a bush hammered surface texture.
 - b. Remove sufficient mortar to exposed coarse aggregate in relief and to fracture coarse aggregate for tooled finish.
- G. Patched Finish:
 1. Repair defective areas.
 - a. Remove honeycomb and defective concrete to sound concrete.
 - b. Make edges perpendicular to surface or slightly undercut.
 - c. Feathered edges are not permitted.

- d. Dampen area to be patched and at least 6-inches surrounding it to prevent absorption of patching mortar water.
 - e. Prepare bonding grout.
 - f. Mix to consistency of thick cream.
 - g. Brush into surface.
2. Tie Holes: Unless indicated otherwise, after being cleaned and thoroughly dampened, fill tie hole solid with patching mortar.
 3. Make any patches in concrete to closely match color and texture of surrounding surfaces. Determine mix formula for patching mortar by trial and obtain a good color match with concrete when both patch and concrete are cured and dry.
 - a. Mix white and gray Portland cement as required to match surrounding concrete to produce grout having consistency of thick paint.
 - b. Use a minimum amount of mixing water.
 - c. Mix patching mortar in advance and allow to stand without frequent manipulation, without addition of water, until it has reached stiffest placeable consistency.
 - d. After initial set, dress surfaces of patches manually to obtain same texture as surrounding surfaces.
 4. After surface water has evaporated from patch area, brush bond coat into surface.
 - a. When bond coat begins to lose water sheen, apply patching mortar.
 - b. Thoroughly consolidate mortar into place and strike-off to leave patch slightly higher than surrounding surface.
 - c. Leave undisturbed for at least 1-hour before final finish.
 - d. Keep patched area damp for 72-hours or apply curing compound.
 - e. Do not use metal tools in finishing an exposed patch.
 5. Where as-cast finishes are indicated, total patched area may not exceed 1 in 500 of as-cast surface. This is in addition to form tie patches, if ties are permitted to fall within as-cast areas.
 6. In any finishing process which is intended to expose aggregate on surface, patched areas must show aggregate.
 - a. Outer 1-inch of patch shall contain same aggregates as surrounding concrete.
 - b. For aggregate transfer finish, patching mixture shall contain same selected colored aggregates.

- c. After curing, expose aggregates together with aggregates of adjoining surfaces by same process.

PART IV - MEASUREMENT

- 4.1 **Measurement** – No Separate measurement will be made for Work described in this Section.

PART V - PAYMENT

- 5.1 **Payment** – Payment for items in this Section will be incidental to the Contract unit cost of the concrete bid items

END OF SECTION

SECTION 03 35 43**HONED AND POLISHED CONCRETE FINISHING****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. This Section includes finishing cast-in-place architectural concrete surfaces by honing, applying liquid treatment, and polishing. Applications include the following:
 - 1. Slabs-on-grade as identified on Drawings.
- B. Related Sections include the following:
 - 1. Division 03 Section "Cast-In-Place Concrete" for finishing and curing requirements.
 - 2. Division 03 Section "Concrete Floor Curing, Sealing, And Dustproofing."
 - 3. Division 03 Section "Concrete Floor Sealing And Hardening."
 - 4. Division 07 Section "Joint Sealants" for elastomeric joint sealants in contraction and other joints in cast-in-place concrete slabs.

1.03 SUBMITTALS

- A. Product Data: For each type of product indicated. Include manufacturer's technical data, application instructions, and recommendations for each liquid floor treatment component required.
- B. Qualification Data: For Installer.
- C. Installer Certificates: Signed by manufacturer certifying that installers comply with specified requirements.
- D. Material Test Reports: For liquid floor treatment, from a qualified testing agency, indicating compliance with system physical properties specified.
- E. Minutes of preinstallation conference.

1.04 QUALITY ASSURANCE

- A. Installer Qualifications: Engage an experienced installer (applicator) who is experienced in applying liquid floor treatments similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance, and who is acceptable to liquid floor treatment manufacturer.
 - 1. Engage an installer who employs only persons trained and approved by liquid floor treatment manufacturer for applying liquid floor treatment systems indicated.
 - 2. Engage an installer who is certified in writing by liquid floor treatment manufacturer as qualified to apply liquid floor treatment systems indicated.
- B. Source Limitations: Obtain primary liquid floor treatment materials through one

source from a single manufacturer. Provide secondary materials, including honing and polishing material of type and from source recommended by manufacturer of primary materials.

- C. Field Sample Panels: Before casting concrete slab, produce field sample panels to demonstrate typical joints, surface finish, texture, tolerances, and standard of workmanship of specified finish. Produce a minimum of 3 sets of full-scale panels, cast horizontally, approximately 48 by 48 by 4 inches minimum, to demonstrate the expected range of finish, color, and texture variations.
1. Locate panels as indicated or, if not indicated, as directed by Architect.
 2. Demonstrate methods of finishing concrete, curing, cleaning, protecting, honing, applying liquid treatment, and polishing, as applicable. Include contraction joint in panel.
 3. In presence of Architect, damage part of an exposed-face surface for each finish, color, and texture, and demonstrate materials and techniques proposed for repair of surface blemishes to match adjacent undamaged surfaces.
 4. Maintain field sample panels as approved by Architect during construction in an undisturbed condition as a standard for judging the completed Work.
 5. Demolish and remove field sample panels when directed.
- D. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management And Coordination."
1. Require representatives of each entity directly concerned with cast-in-place concrete installation and concrete finishing work to attend.
 2. Review concrete finishes and finishing, concrete repair procedures, and concrete protection of cast-in-place concrete floor surfaces.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage and mixing with other components.
- B. Store materials to prevent deterioration from moisture, heat, cold, direct sunlight, or other detrimental effects.

1.06 PROJECT CONDITIONS

- A. Prior to honing, liquid treatment, and polishing operations comply with following:
1. Concrete shall have cured a minimum of 45 days.
 2. Protect concrete surfaces from staining by operations, materials, and products including the following:
 - a. Petroleum products including hydraulic fluids, oil, metal cutting lubricants, and waxes.
 - b. Rust and similar staining caused by corroding metal.
 - c. Acids and acidic detergents.
 3. Defer application of sealants to contraction and isolation joints until after work of this Section is complete.
- B. Environmental Limitations: Comply with liquid floor treatment manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting liquid floor treatment application.

- C. Lighting: Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during honing, sealer, and polishing operations.
- D. Close spaces to traffic during honing, sealer, and polishing operations and for not less than 24 hours after polishing, unless manufacturer recommends a longer period.

1.07 SEQUENCING

- A. Trowel Finish: Floors receiving honed, sealed and polished finish shall be trowel finished in accordance with Division 03 Section "Cast-In-Place Concrete."

PART 2 - PRODUCTS

2.01 FLOOR AND SLAB TREATMENTS

- A. Penetrating Liquid Floor Treatment: Clear, chemically reactive, waterborne solution of inorganic silicate or silicate materials and proprietary components; odorless; colorless; that penetrates, hardens, and densifies concrete surfaces.
 - 1. Product: Subject to compliance with the requirements provide Advance Floor Products; Retro-Plate 99.
- B. Sheen: Satin finish.
- C. System Physical Properties: Provide liquid floor treatment system with the following comparative physical property requirements when tested according to test methods indicated:
 - 1. Abrasion Resistance: Up to 400 percent increase per ASTM C 779.
 - 2. Impact Strength: Up to 21 percent increase per ASTM C 805.
 - 3. UV and Water Spray: No adverse effect per ASTM G 23-81.
 - 4. Reflectivity: Up to 30 percent increase.

2.02 ACCESSORY MATERIALS

- A. Neutralizing Agent: Tri-sodium phosphate (TSP).
- B. Water: Potable.

PART 3 - EXECUTION

3.01 PREPARATION

- A. General: Prepare and clean substrates according to liquid floor treatment manufacturer's written instructions for substrate indicated. Provide clean, dry, and neutral pH substrate for liquid floor treatment application.
- B. Concrete Substrates: Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with liquid floor treatment flooring.
 - 1. Repair damaged and deteriorated concrete according to liquid floor treatment manufacturer's written recommendations.
 - a. Use patching and fill material to fill holes and depressions in substrates according to liquid floor treatment manufacturer's written instructions.

2. Hone concrete substrates using concrete honing equipment approved by liquid floor treatment manufacturer to produce sheen specified in Part 2 above and to match approved Field Sample Panel.

- C. Liquid Floor Treatment Materials: Mix components and prepare materials according to liquid floor treatment manufacturer's written instructions.

3.02 LIQUID FLOOR TREATMENT APPLICATION

- A. Uniformly apply liquid floor treatment according to manufacturer's written instructions.
 1. Do not apply to concrete that is less than 45 days' old.
 2. Cure liquid floor treatment according to manufacturer's written instructions. Prevent contamination during application and curing processes.

3.03 POLISHING

- A. Polish treated, cured concrete surface using polishing equipment approved by liquid floor treatment manufacturer to produce surface sheen specified in Part 2 above and to match approved Field Sample Panel to satisfaction of Architect.
 1. Maintain uniformity of sheen over contraction, expansion, and construction joints, unless otherwise indicated.

3.04 REPAIRS, PROTECTION, AND CLEANING

- A. Repair and cure damaged finished surfaces of polished concrete when approved by Architect. Match repairs to color, texture, and uniformity of surrounding surfaces and to repairs on approved Field Sample Panel.
 1. Remove and replace polished concrete that cannot be repaired and cured to Architect's approval.
- B. Protect corners, edges, and surfaces of polished concrete from damage; use guards and barricades.
- C. Protect polished concrete from staining, laitance, and contamination during remainder of construction period.
- D. Clean polished concrete surfaces after finish treatment to remove stains, markings, dust, and debris.
- E. Wash and rinse polished surfaces according to liquid treatment manufacturer's written recommendations. Protect other Work from staining or damage due to cleaning operations.
 1. Do not use cleaning materials or processes that could change the appearance of polished concrete finishes.

END OF SECTION 03 35 43

SECTION 03 39 00
CONCRETE CURING**PART I - GENERAL****1.1 SUMMARY**

- A. Description: The work in this Section includes furnishing curing materials and applying the curing materials to fresh green concrete for structural members as stipulated in the Contract Drawings. The work shall include furnishing labor, material, tools, and equipment as necessary to complete the work described herein.

1.2 REFERENCES

<u>Sponsor</u>	<u>Number</u>	<u>Subject</u>
AASHTO	M148	Liquid Membrane-Forming Compounds for Curing Concrete

ASTM	C309	Liquid Membrane-Forming Compounds for Curing Concrete
ASTM	D3960	Determining Volatile Organic Compound (VOC) Content of Paints and Related Coatings
ASTM	E1347	Color and Color-Difference Measurement by Tristimulus (Filter) Colorimeter

1.3 SUBMITTALS

- A. Submittals shall be made in accordance with the requirements of the Project Quality Plan, except as modified herein.
- B. Concrete Curing Compound.
- C. Manufacturer's certificate of compliance.
- D. Product data sheet, instructions, limitations, and track records.
- E. Test results showing no component deleterious to concrete quality.
- F. Steam curing system description.
- G. Materials and curing methods shall be pre-approved by the Engineer 90 calendar days after commencement of the project, or at least 30 calendar days before the commencement of any concrete work.

1.4 QUALITY CONTROL

- A. Quality control shall be made in accordance with the requirements of the Project Quality Plan, except as modified herein.

- B. Use curing compounds that have been successfully applied in projects of similar type and magnitude, in location of similar project conditions.
- C. Curing compounds shall not de-color concrete surfaces after application.

PART II - PRODUCTS

2.1 CURING COMPOUND FOR STRUCTURAL AND ARCHITECTURAL CONCRETE

- A. Compound materials shall comply with AASHTO M 148, Type 1.D, Class A requirements.

2.2 CURING COMPOUND FOR PORTLAND CEMENT CONCRETE PAVEMENT

- A. Compound materials shall be resin type poly-alpha-methylstyrene (PAMS), conforming to ASHTO M 148, Type 2, Class B and the criteria in Table 1.
- B. Compound shall not exhibit significant phase separation for a 24-hour period following thorough agitation.

Table 1

Characteristics (Curing compound for PCC)	Min.	Max.	ASTM
Total Solids, percent by weight compound	35		
TiO ₂ Pigment, percent reflectance	60		E 1347
Drying Time: Set to touch, min. Track Free, min		60 120	C 309
Coverage rate, gallon/ft ²		0.01	
Water Loss, lb/ft ² in 72 hours	7.8		C 156
Flash point, degrees F		660	
V.O.C. Content, g/L <small>N.W.</small>			D 3960

2.3 CURING COMPOUND FOR LEAN CONCRETE BASE COURSE

- A. Compound materials shall be wax base and conform to AASHTO M 148, Type 2.

2.4 CURING COMPOUND FOR CONCRETE BARRIER

- A. Meet AASHTO M 148, Type 1-D, Class B.

PART III - EXECUTION

3.1 PREPARATION

- A. Verify concrete surfaces are ready for curing. Correct conditions detrimental to timely and proper completion of the work. Do not proceed until unsatisfactory conditions are corrected.

- B. Follow product manufacturer's recommendations for preparing surfaces.
- C. For newly placed concrete using membrane-curing compound method:
 - 1. Deliver the curing compound in a ready-mixed form with the pigment uniformly disbursed without diluting or altering the compound. If the compound is chilled and too viscous, warm it to a maximum of 100 degree F.
 - 2. Keep surfaces moist until the curing compound is applied.
 - 3. Complete all patching or surface finishing before applying compound.
- D. For lean concrete base course curing: do not dilute or alter the compound.

3.2 CURING PRESTRESSED CONCRETE

- A. Cure following this Section, article 3.8, Curing Structures or article 3.7, Steam Curing, until concrete has reached a strength of 4,000 psi or as designated on the plans.

3.3 CURING PRE-CAST CONCRETE BARRIER

- A. Cure exposed surfaces immediately after finishing operations are completed. Apply the curing compound in conformance with manufacturer's specifications.
- B. Steam curing may be used for pre-cast barrier.
- C. After removing form, broom clean the surface of the barrier and apply two coats of curing compound in accordance with manufacturer's specifications.

3.4 CURING CAST-IN-PLACE CONCRETE BARRIER

- A. Cure immediately after finishing operations are completed.
- B. Apply two coats of curing compound as specified in 3.3.C.

3.5 CURING LEAN CONCRETE BASE COURSE

- A. After finishing operations are complete, apply curing compound.
 - 1. Spray entire exposed area (top and sides) at a rate specified by manufacturer.
 - 2. Use fully atomizing mechanical sprayers that have a wind-protective hood.
 - 3. Hand spray on small areas and areas inaccessible to mechanical spraying equipment.
 - 4. Provide complete coverage with curing compound at edges, corners, sides, and rough spots.
- B. Damage to the film of curing compound occurring within 72 hours of application must be repaired immediately.

3.6 CURING PORTLAND CEMENT CONCRETE PAVEMENT

- A. Pretest the liquid membrane curing compound using an infrared spectrometer to determine specification compliance.
- B. Delay placing concrete pavement until an acceptable shipment of curing compound is received.
- C. Warm viscous curing-sealing compound to a temperature not to exceed 100 degree F if necessary.
- D. Thoroughly mix the compound during use and uniformly disperse the pigment throughout the vehicle. Stir continuously mechanically during application and do not dilute or alter in any manner.
- E. Apply compound to the entire pavement surface and exposed edges immediately after completing finishing operations in accordance with manufacturers specifications.
 - 1. Apply the curing compound in two approximately equal applications.
 - 2. Apply the second application in the opposite longitudinal direction as the first.
 - 3. Allow at least 30 minutes between applications.
 - 4. Small and irregular areas and areas inaccessible to mechanical spraying equipment may be hand sprayed.
- F. Stop paving operations if the application of the compound behind the paving machine is delayed until the problem is resolved.
 - 1. Keep the pavement moist with water until the compound application process is resumed.
 - 2. Apply the water in a fog-mist spray without damaging the pavement surface texture.
- G. Immediately repair any damage to the compound film occurring until seven days after the initial application.

3.7 STEAM CURING

- A. Provide a complete steam curing system approved by the Engineer including 24 hour temperature control and monitoring devices, and a suitable enclosure to contain live steam and minimize moisture and heat losses.
- B. Do not apply steam until the concrete has set. Wait 4 to 6 hours if retarders are used. If no retarders are used, wait 2 to 4 hours.
- C. Maintain 100 percent relative humidity in the steam curing enclosure.
- D. Do not apply steam directly on the concrete.
- E. When applying steam, increase the ambient air temperature at a rate not to exceed 40 degree F per hour until a temperature range of 140 degree to 160 degree F is reached.
- F. Maintain the temperature range until the concrete has reached the specified strength.

- G. When discontinuing the steam, decrease the ambient air temperature at a rate not to exceed a 40 degree F per hour until reaching a temperature of not more than 20 degree F above the air temperature to which the concrete will be exposed.

3.8 CURING STRUCTURES

- A. Cure bridge decks, approach slabs, curbs, and parapets.
1. Apply an application of membrane-curing compound to concrete bridge decks and approach slabs. Apply the compound so that no portion of the deck or approach slab is exposed to the drying effects of the atmosphere for more than 20 minutes after the timing operation. Have a work bridge follow immediately after the finishing machine to allow application of the curing compound while the concrete is still plastic.
 2. Cover bridge decks, approach slabs, curbs, and parapet walls with cotton or burlap mats, or wet curing blankets (meeting AASHTO M171), without damaging the finish, as soon as the concrete is sufficiently set to support the materials.
 3. Keep concrete moist continuously for 7 days after placement.
 4. Use material that retains moisture such as burlap mats.
 5. Wet curing blanket prior to placing it on the concrete surface.
 6. Keep the entire surface damp through the use of soaker hoses, but do not wash away or erode the surface.
 7. Restrain the cotton or burlap mats, or wet curing blankets, without damaging the surface, to prevent them from blowing off due to the wind or other forces.
- B. Use membrane-curing compound method to cure all other newly placed concrete.
1. Keep surfaces wet and moist until the curing compound is applied.
 2. Complete all patching or surface finishing before applying compound.
 3. Uniformly spray the entire surface of the concrete with membrane curing compound.
 4. Immediately re-spray any portion damaged before the 7-day curing expires.
 5. Deliver the curing compound in a ready-mixed form with the pigment uniformly dispersed without diluting or altering the compound.
 6. Warm chilled compound that it is too viscous to a maximum of 100° F.
 7. Apply the compound at a uniform rate as specified by the manufacturer. If the application is delayed, immediately apply water as provided in this section and continue until application is resumed.

PART IV - MEASUREMENT

4.1 Measurement – No Separate measurement will be made for Work described in this Section.

PART V - PAYMENT

5.1 Payment – Payment for items in this Section will be incidental to the Contract unit cost of the concrete bid items.

END OF SECTION

SECTION 03 45 00**PRECAST ARCHITECTURAL CONCRETE****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY**A. Section Includes:**

- 1. Architectural precast concrete cladding units.
- 2. Insulated, architectural precast concrete units.

B. Related Requirements:

- 1. Section 03 30 00 "Cast-in-Place Concrete" for installing connection anchors in concrete.
- 2. Section 05 12 00 "Structural Steel Framing" for furnishing and installing connections attached to structural-steel framing.
- 3. Section 05 50 10 "Miscellaneous Metal Fabrications" for kickers and other miscellaneous steel shapes.
- 4. Division 08 windows sections for windows set into architectural precast concrete units.

1.03 DEFINITIONS

- A. Design Reference Sample: Sample of approved architectural precast concrete color, finish and texture, preapproved by Architect.

1.04 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.05 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Design Mixtures: For each precast concrete mixture. Include compressive strength and water-absorption tests.
- C. Shop Drawings:
 - 1. Detail fabrication and installation of architectural precast concrete units.
 - 2. Indicate locations, plans, elevations, dimensions, shapes, and cross sections of each unit.
 - 3. Indicate joints, reveals, drips, chamfers, and extent and location of each surface finish.
 - 4. Indicate details at building corners.
 - 5. Indicate separate face and backup mixture locations and thicknesses.
 - 6. Indicate type, size, and length of welded connections by AWS standard symbols. Detail loose and cast-in hardware and connections.

7. Indicate locations, tolerances, and details of anchorage devices to be embedded in or attached to structure or other construction.
 8. Indicate locations, extent, and treatment of dry joints if two-stage casting is proposed.
 9. Include plans and elevations showing unit location and sequence of erection for special conditions.
 10. Indicate location of each architectural precast concrete unit by same identification mark placed on panel.
 11. Indicate relationship of architectural precast concrete units to adjacent materials.
 12. If design modifications are proposed to meet performance requirements and field conditions, submit design calculations and Shop Drawings. Do not adversely affect the appearance, durability, or strength of units when modifying details or materials and maintain the general design concept.
- D. Samples: Design reference samples for initial verification of design intent, for each type of finish indicated on exposed surfaces of architectural precast concrete units, in sets of three, representative of finish, color, and texture variations expected; approximately 12 by 12 by 2 inches. Match Architect's sample.
1. When other faces of precast concrete unit are exposed, include Samples illustrating workmanship, color, and texture of backup concrete as well as facing concrete.
- E. Delegated-Design Submittal: For architectural precast concrete indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Show governing panel types, connections, types of reinforcement, including special reinforcement, and concrete cover on reinforcement. Indicate location, type, magnitude, and direction of loads imposed on the building structural frame from architectural precast concrete.

1.06 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer, fabricator, and testing agency.
- B. Welding certificates.
- C. Material Certificates: For the following items:
 1. Cementitious materials.
 2. Reinforcing materials and prestressing tendons.
 3. Admixtures.
 4. Bearing pads.
 5. Structural-steel shapes and hollow structural sections.
 6. Insulation.
- D. Material Test Reports: For aggregates.
- E. Preconstruction test reports.
- F. Source quality-control test reports.
- G. Field quality-control and special inspection reports.

1.07 QUALITY ASSURANCE

- A. Installer Qualifications: A precast concrete erector who has retained a "PCI-Certified

Field Auditor" to conduct a field audit of a project in same category as this Project and who can produce an Erectors' Post-Audit Declaration.

- B. Fabricator Qualifications: A firm that assumes responsibility for engineering architectural precast concrete units to comply with performance requirements. This responsibility includes preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.
 - 1. Designated as a PCI-certified plant for Group A, Category A1 - Architectural Cladding and Load Bearing Units or designated as an APA-certified plant for production of architectural precast concrete products.
 - 2. Fabricator is located within 500 miles of Project site.
- C. Testing Agency Qualifications: An independent testing agency, acceptable to authorities having jurisdiction, qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.
- D. Quality-Control Standard: For manufacturing procedures and testing requirements, quality-control recommendations, and dimensional tolerances for types of units required, comply with PCI MNL 117, "Manual for Quality Control for Plants and Production of Architectural Precast Concrete Products."
- E. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D.1.1M, "Structural Welding Code - Steel"; and AWS D1.4/D.1.4M, "Structural Welding Code - Reinforcing Steel."
- F. Sample Panels: After sample approval and before fabricating architectural precast concrete units, produce a minimum of two sample panels approximately 16 sq. ft. in area for review by Architect. Incorporate full-scale details of architectural features, finishes, textures, and transitions in sample panels.
 - 1. Locate panels where indicated or, if not indicated, as directed by Architect.
 - 2. Damage part of an exposed-face surface for each finish, color, and texture, and demonstrate adequacy of repair techniques proposed for repair of surface blemishes.
 - 3. After acceptance of repair technique, maintain one sample panel at manufacturer's plant and one at Project site in an undisturbed condition as a standard for judging the completed Work.
 - 4. Demolish and remove sample panels when directed.
- G. Range Samples: After sample panel approval and before fabricating architectural precast concrete units, produce a minimum of three sets of samples, approximately 16 sq. ft. in area, representing anticipated range of each color and texture on Project's units. Maintain one set of range samples at Project site and remaining range sample sets at manufacturer's plant as color and texture approval reference.
- H. Mockups: After range sample approval but before production of architectural precast concrete units, construct full-sized mockups to verify selections made under range sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockup as indicated on Drawings including aluminum framing, glass, sealants, and architectural precast concrete complete with anchors, connections, flashings, and joint fillers.
 - 2. Damage part of an exposed-face surface for each finish, color, and texture, and demonstrate adequacy of repair techniques proposed for repair of surface blemishes.
 - 3. After acceptance of repair technique, maintain mockup at Project site in an

- undisturbed condition as a standard for judging the completed Work.
4. Demolish and remove mockup when directed.

- I. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management And Coordination."

1.08 COORDINATION

- A. Furnish loose connection hardware and anchorage items to be embedded in or attached to other construction without delaying the Work. Provide locations, setting diagrams, templates, instructions, and directions, as required, for installation.

1.09 DELIVERY, STORAGE, AND HANDLING

- A. Deliver architectural precast concrete units in such quantities and at such times to limit unloading units temporarily on the ground or other rehandling.
- B. Support units during shipment on nonstaining shock-absorbing material.
- C. Store units with adequate dunnage and bracing and protect units to prevent contact with soil, to prevent staining, and to prevent cracking, distortion, warping or other physical damage.
- D. Place stored units so identification marks are clearly visible, and units can be inspected.
- E. Handle and transport units in a manner that avoids excessive stresses that cause cracking or damage.
- F. Lift and support units only at designated points indicated on Shop Drawings.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Fabricators: Subject to compliance with requirements, available fabricators offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Stresscon Corporation.
 2. Rocky Mountain Prestress, Inc.

2.02 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design architectural precast concrete units.
- B. Design Standards: Comply with [ACI 318](#) and design recommendations of PCI MNL 120, "PCI Design Handbook - Precast and Prestressed Concrete," applicable to types of architectural precast concrete units indicated.
- C. Calculated Fire-Test-Response Characteristics: Provide architectural precast concrete units with fire-resistance rating indicated as calculated according to [ACI 216.1](#) and acceptable to authorities having jurisdiction.
- D. Structural Performance: Provide architectural precast concrete units and connections

capable of withstanding the following design loads within limits and under conditions indicated:

1. Loads: As indicated.
2. Thermal Movements: Provide for in-plane thermal movements resulting from annual ambient temperature changes of 120 deg F.
3. Fire-Resistance Rating: Select material and minimum thicknesses to provide 1-hour fire rating.

2.03 MOLD MATERIALS

- A. Molds: Rigid, dimensionally stable, non-absorptive material, warp and buckle free, that provides continuous and true precast concrete surfaces within fabrication tolerances indicated; nonreactive with concrete and suitable for producing required finishes.
 1. Mold-Release Agent: Commercially produced form-release agent that does not bond with, stain or adversely affect precast concrete surfaces and does not impair subsequent surface or joint treatments of precast concrete.
- B. Surface Retarder: Chemical set retarder, capable of temporarily delaying final hardening of newly placed concrete mixture to depth of reveal specified.

2.04 REINFORCING MATERIALS

- A. Refer to Division 03 concrete sections for requirements for reinforcing materials.

2.05 PRESTRESSING TENDONS

- A. Prestressing Strand: ASTM A 416/A 416M, Grade 270, uncoated, seven-wire, low-relaxation strand.
 1. Coat unbonded post-tensioning strand with post-tensioning coating complying with ACI 423.7 and sheath with polypropylene tendon sheathing complying with ACI 423.7. Include anchorage devices and coupler assemblies.

2.06 CONCRETE MATERIALS

- A. Regional Materials: Precast architectural concrete shall be manufactured from aggregates and cement that have been extracted or recovered, as well as manufactured, within 500 miles of Project site.
- B. Portland Cement: ASTM C 150/C 150M, Type I or Type III, gray, unless otherwise indicated.
 1. For surfaces exposed to view in finished structure, use white cement, 680, of same type, brand, and mill source.
- C. Supplementary Cementitious Materials:
 1. Fly Ash: ASTM C 618, Class C or F, with maximum loss on ignition of 3 percent.
 2. Metakaolin: ASTM C 618, Class N.
 3. Silica Fume: ASTM C 1240, with optional chemical and physical requirement.
 4. Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or 120.
- D. Normal-Weight Aggregates: Except as modified by PCI MNL 117, ASTM C 33/C 33M, with coarse aggregates complying with Class 5S. Stockpile fine and coarse aggregates for each type of exposed finish from a single source (pit or quarry) for

Project.

1. Face-Mixture-Fine Aggregates: Selected, natural or manufactured sand compatible with coarse aggregate; to match approved finish sample.
- E. Lightweight Aggregates: Except as modified by PCI MNL 117, ASTM C 330/C 330M, with absorption less than 11 percent.
- F. Coloring Admixture: ASTM C 979/C 979M, synthetic or natural mineral-oxide pigments or colored water-reducing admixtures, temperature stable, and nonfading.
- G. Basis of Design Mix Designs: Following mix designs based on design reference sample.

Light Gray Panels		Cubic Yard Amounts
Cement Color	White	680.00 lbs.
Color Admixture	DCS #2703 Black (0.40%)	2.72 lbs.
Coarse Aggregate	Canyon Gray (Salida) 1/4" x 1/2"	1700.00 lbs.
Sand	Light Gray Sand	1250.00 lbs.
Admixtures	As required	
Air Entrainment	5 percent	
Water/Cement Ratio	0.42	
Finish	Flat Acid-Etched (1-4)	

- H. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of concrete and complying with chemical limits of PCI MNL 117.
- I. Air-Entraining Admixture: ASTM C 260, certified by manufacturer to be compatible with other required admixtures.
- J. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and to not contain calcium chloride, or more than 0.15 percent chloride ions or other salts by weight of admixture.
 1. Water-Reducing Admixtures: ASTM C 494/C 494M, Type A.
 2. Retarding Admixture: ASTM C 494/C 494M, Type B.
 3. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
 4. Water-Reducing and Accelerating Admixture: ASTM C 494/C 494M, Type E.
 5. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
 6. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
 7. Plasticizing Admixture: ASTM C 1017/C 1017M, Type I.
 8. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.
 9. Corrosion Inhibiting Admixture: ASTM C 1582/C 1582M.

2.07 STEEL CONNECTION MATERIALS

- A. Carbon-Steel Shapes and Plates: ASTM A 36/A 36M.
- B. Carbon-Steel-Headed Studs: ASTM A 108, AISI 1018 through AISI 1020, cold finished, AWS D1.1/D1.1M, Type A or Type B, with arc shields and with minimum mechanical properties of PCI MNL 117, Table 3.2.3.
- C. Carbon-Steel Plate: ASTM A 283/A 283M, Grade C.
- D. Malleable Iron Castings: ASTM A 47/A 47M, Grade 32510 or Grade 35028.

- E. Carbon-Steel Castings: ASTM A 27/A 27M, Grade 60-30.
- F. High-Strength, Low-Alloy Structural Steel: ASTM A 572/A 572M.
- G. Carbon-Steel Structural Tubing: ASTM A 500/A 500M, Grade B or Grade C.
- H. Wrought Carbon-Steel Bars: ASTM A 675/A 675M, Grade 65.
- I. Deformed-Steel Wire or Bar Anchors: ASTM A 496/A 496M or ASTM A 706/A 706M.
- J. Carbon-Steel Bolts and Studs: ASTM A 307, Grade A or ASTM F 1554, Grade 36; carbon-steel, hex-head bolts and studs; carbon-steel nuts, ASTM A 563; and flat, unhardened steel washers, ASTM F 844.
- K. High-Strength Bolts and Nuts: ASTM A 325, Type 1, heavy hex steel structural bolts; heavy hex carbon-steel nuts, ASTM A 563; and hardened carbon-steel washers, ASTM F 436.
- L. Zinc-Coated Finish: For exterior steel items, steel in exterior walls, and items indicated for galvanizing, apply zinc coating by hot-dip process according to ASTM A 123/A 123M or ASTM A 153/A 153M.
 - 1. For steel shapes, plates, and tubing to be galvanized, limit silicon content of steel to less than 0.03 percent or to between 0.15 and 0.25 percent or limit sum of silicon and 2.5 times phosphorous content to 0.09 percent.
 - 2. Galvanizing Repair Paint: High-zinc-dust-content paint with dry film containing not less than 94 percent zinc dust by weight, and complying with DOD-P-21035B or SSPC-Paint 20.
- M. Welding Electrodes: Comply with AWS standards.

2.08 BEARING PADS

- A. Provide one of the following bearing pads for architectural precast concrete units as recommended by precast fabricator for application:
 - 1. Elastomeric Pads: AASHTO M 251, plain, vulcanized, 100 percent polychloroprene (neoprene) elastomer, molded to size or cut from a molded sheet, Type A durometer hardness of 50 to 70, ASTM D 2240, minimum tensile strength 2250 psi, ASTM D 412.
 - 2. Random-Oriented-Fiber-Reinforced Elastomeric Pads: Preformed, randomly oriented synthetic fibers set in elastomer. Type A durometer hardness of 70 to 90, ASTM D 2240; capable of supporting a compressive stress of 3000 psi with no cracking, splitting, or delaminating in the internal portions of pad. Test one specimen for every 200 pads used in Project.
 - 3. Cotton-Duck-Fabric-Reinforced Elastomeric Pads: Preformed, horizontally layered cotton-duck fabric bonded to an elastomer; Type A durometer hardness of 80 to 100, ASTM D 2240; complying with AASHTO's "AASHTO LRFD Bridge Design Specifications," Division II, Section 18.10.2; or with MIL-C-882E.
 - 4. Frictionless Pads: PTFE, glass-fiber reinforced, bonded to stainless or mild-steel plate, or random-oriented-fiber-reinforced elastomeric pads; of type required for in-service stress.
 - 5. High-Density Plastic: Multimonomer, nonleaching, plastic strip.

2.09 ACCESSORIES

- A. Reglets: Stainless steel, Type 302 or Type 304, felt or fiber filled, or with face opening

of slots covered.

- B. Precast Accessories: Provide clips, hangers, high-density plastic or steel shims, and other accessories required to install architectural precast concrete units.

2.10 GROUT MATERIALS

- A. Sand-Cement Grout: Portland cement, ASTM C 150/C 150M, Type I, and clean, natural sand, ASTM C 144 or ASTM C 404. Mix at ratio of 1 part cement to 2-1/2 to 3 parts sand, by volume, with minimum water required for placement and hydration. Water-soluble chloride ion content less than 0.06 percent by weight of cement when tested according to ASTM C 1218/C 1218M.
- B. Nonmetallic, Nonshrink Grout: Packaged, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, portland cement, shrinkage-compensating agents, plasticizing and water-reducing agents, complying with ASTM C 1107/C 1107M, Grade A for drypack and Grades B and C for flowable grout and of consistency suitable for application within a 30-minute working time. Water-soluble chloride ion content less than 0.06 percent by weight of cement when tested according to ASTM C 1218/C 1218M.
- C. Epoxy-Resin Grout: Two-component, mineral-filled epoxy resin; ASTM C 881/C 881M, of type, grade, and class to suit requirements.

2.11 CONCRETE MIXTURES

- A. Prepare design mixtures for each type of precast concrete required.
 - 1. Use a single design mixture for units with more than one major face or edge exposed.
 - 2. Where only one face of unit is exposed use either a single design mixture or separate mixtures for face and backup.
- B. Limit use of fly ash and ground granulated blast-furnace slag to 20 percent of portland cement by weight; limit metakaolin and silica fume to 10 percent of portland cement by weight.
- C. Design mixtures may be prepared by a qualified independent testing agency or by qualified precast plant personnel at architectural precast concrete fabricator's option.
- D. Limit water-soluble chloride ions to maximum percentage by weight of cement permitted by [ACI 318](#) or [PCI MNL 117](#) when tested according to ASTM C 1218/C 1218M.
- E. Normal-Weight Concrete Mixtures: Proportion face and backup mixtures or full-depth mixtures, at fabricator's option by either laboratory trial batch or field test data methods according to [ACI 211.1](#), with materials to be used on Project, to provide normal-weight concrete with the following properties:
 - 1. Compressive Strength (28 Days): [5000 psi](#) minimum.
 - 2. Maximum Water-Cementitious Materials Ratio: [0.45](#).
- F. Water Absorption: 6 percent by weight or 14 percent by volume, tested according to ASTM C 642, except for boiling requirement.
- G. Lightweight Concrete Backup Mixtures: Proportion mixtures by either laboratory trial batch or field test data methods according to [ACI 211.2](#), with materials to be used on Project, to provide lightweight concrete with the following properties:

1. Compressive Strength (28 Days): 5000 psi.
 2. Unit Weight: Calculated equilibrium unit weight of 115 lb/cu. ft., plus or minus 3 lb/cu. ft., according to ASTM C 567.
- H. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content complying with PCI MNL 117.
- I. When included in design mixtures, add other admixtures to concrete mixtures according to manufacturer's written instructions.

2.12 MOLD FABRICATION

- A. Molds: Accurately construct molds, mortar tight, of sufficient strength to withstand pressures due to concrete-placement operations and temperature changes and for prestressing and detensioning operations. Coat contact surfaces of molds with release agent before reinforcement is placed. Avoid contamination of reinforcement and prestressing tendons by release agent.
- B. Maintain molds to provide completed architectural precast concrete units of shapes, lines, and dimensions indicated, within fabrication tolerances specified.
1. Form joints are not permitted on faces exposed to view in the finished work.
 2. Edge and Corner Treatment: Uniformly chamfered.

2.13 FABRICATION

- A. Cast-in Anchors, Inserts, Plates, Angles, and Other Anchorage Hardware: Fabricate anchorage hardware with sufficient anchorage and embedment to comply with design requirements. Accurately position for attachment of loose hardware, and secure in place during precasting operations. Locate anchorage hardware where it does not affect position of main reinforcement or concrete placement.
1. Weld-headed studs and deformed bar anchors used for anchorage according to AWS D1.1/D1.1M and AWS C5.4, "Recommended Practices for Stud Welding."
- B. Furnish loose hardware items including steel plates, clip angles, seat angles, anchors, dowels, cramps, hangers, and other hardware shapes for securing architectural precast concrete units to supporting and adjacent construction.
- C. Cast-in reglets, slots, holes, and other accessories in architectural precast concrete units as indicated on the Contract Drawings.
- D. Cast-in openings larger than 10 inches in any dimension. Do not drill or cut openings or prestressing strand without Architect's approval.
- E. Reinforcement: Comply with recommendations in PCI MNL 117 for fabricating, placing, and supporting reinforcement.
1. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy the bond with concrete. When damage to epoxy-coated reinforcing exceeds limits specified in ASTM A 775/A 775M, repair with patching material compatible with coating material and epoxy coat bar ends after cutting.
 2. Accurately position, support, and secure reinforcement against displacement during concrete-placement and consolidation operations. Completely conceal support devices to prevent exposure on finished surfaces.
 3. Place reinforcing steel and prestressing strands to maintain at least 3/4-inch minimum concrete cover. Increase cover requirements for reinforcing steel to 1-

- 1/2 inches when units are exposed to corrosive environment or severe exposure conditions. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Direct wire tie ends away from finished, exposed concrete surfaces.
4. Install welded wire reinforcement in lengths as long as practicable. Lap adjoining pieces at least one full mesh spacing and wire tie laps, where required by design. Offset laps of adjoining widths to prevent continuous laps in either direction.
- F. Reinforce architectural precast concrete units to resist handling, transportation, and erection stresses and specified in-place loads.
- G. Prestress tendons for architectural precast concrete units by either pretensioning or post-tensioning methods. Comply with PCI MNL 117.
1. Delay detensioning or post-tensioning of precast, prestressed architectural concrete units until concrete has reached its indicated minimum design release compressive strength as established by test cylinders cured under same conditions as concrete unit.
 2. Detension pretensioned tendons either by gradually releasing tensioning jacks or by heat-cutting tendons, using a sequence and pattern to prevent shock or unbalanced loading.
 3. If concrete has been heat cured, detension while concrete is still warm and moist to avoid dimensional changes that may cause cracking or undesirable stresses.
 4. Protect strand ends and anchorages with bituminous, zinc-rich, or epoxy paint to avoid corrosion and possible rust spots.
- H. Comply with requirements in PCI MNL 117 and requirements in this Section for measuring, mixing, transporting, and placing concrete. After concrete batching, no additional water may be added.
- I. Place face mixture to a minimum thickness after consolidation of the greater of 1 inch or 1.5 times the maximum aggregate size, but not less than the minimum reinforcing cover specified.
- J. Place concrete in a continuous operation to prevent cold joints or planes of weakness from forming in precast concrete units.
1. Place backup concrete mixture to ensure bond with face-mixture concrete.
- K. Thoroughly consolidate placed concrete by internal and external vibration without dislocating or damaging reinforcement and built-in items, and minimize pour lines, honeycombing, or entrapped air voids on surfaces. Use equipment and procedures complying with PCI MNL 117.
1. Place self-consolidating concrete without vibration according to PCI TR-6, "Interim Guidelines for the Use of Self-Consolidating Concrete in Precast/Prestressed Concrete Institute Member Plants." Ensure adequate bond between face and backup concrete, if used.
- L. Comply with PCI MNL 117 for hot- and cold-weather concrete placement.
- M. Identify pickup points of architectural precast concrete units and orientation in structure with permanent markings, complying with markings indicated on Shop Drawings. Imprint or permanently mark casting date on each architectural precast concrete unit on a surface that does not show in finished structure.
- N. Cure concrete, according to requirements in PCI MNL 117, by moisture retention without heat or by accelerated heat curing using low-pressure live steam or radiant

heat and moisture. Cure units until compressive strength is high enough to ensure that stripping does not have an effect on performance or appearance of final product.

- O. Discard and replace architectural precast concrete units that do not comply with requirements, including structural, manufacturing tolerance, and appearance, unless repairs meet requirements in PCI MNL 117 and Architect's approval.

2.14 INSULATED PANEL ACCESSORIES

- A. Product: Subject to compliance with the requirements provide Composite Technologies Corporation; Thermomass Building System.
- B. Extruded-Polystyrene (XPS) Board Insulation: ASTM C 578, Type IV, 1.55 lb/cu. ft; square edges.
 - 1. Compressive resistance: 25 psi minimum at yield or at 10 percent deformation per ASTM D1621.
 - 2. Water Absorption: 0.1 percent maximum by volume per ASTM C272.
 - 3. ISR R-Value: 5.0°F•ft²•h/Btu per inch at 75° F minimum per ASTM C518. Warranted R-Value to retain minimum of 90 percent of its published R-value for 15 years.
 - 4. Manufactured with a blowing agent that provides at least a 90 percent reduction in potential for ozone depletion as compared to standard CFC blowing agents
 - 5. Supplied with holes to identify connector placements at designated spacing through insulation board surfaces. Provide holes sized for close fit with connectors.
- C. Structurally Non-Composite Wythe Connectors: As follows:
 - 1. Non-conductive, non-corrosive, fiber-composite connectors, having a tensile strength of 120,000 psi, minimum, glass content of 76 percent by weight, and a coefficient of thermal expansion of 5x10⁻⁶ in/in/deg F, nominal.
 - 2. ICC-ES Evaluation Service Report based on data submitted in accordance with ICC-ES Acceptance Criteria 320 indicating compliance with the applicable building code.

2.15 INSULATED PANEL CASTING

- A. Cast, screed, and consolidate bottom concrete wythe supported by mold.
- B. Place insulation boards abutting edges and ends of adjacent boards. Insert wythe connectors through insulation holes, and consolidate concrete around connectors according to connector manufacturer's written instructions.
- C. Ensure bottom wythe and insulation layer are not disturbed after bottom wythe reaches initial set.
- D. Cast, screed, and consolidate top wythe to meet required finish.
- E. Maintain temperature below 150 deg F in bottom concrete wythe.

2.16 FABRICATION TOLERANCES

- A. Fabricate architectural precast concrete units to shapes, lines, and dimensions indicated so each finished unit complies with PCI MNL 117 product tolerances as well as position tolerances for cast-in items.
- B. Fabricate architectural precast concrete units to shapes, lines, and dimensions

indicated so each finished unit complies with the following product tolerances:

1. Overall Height and Width of Units, Measured at the Face Exposed to View: As follows:
 - a. 10 feet or under, plus or minus 1/8 inch.
 - b. 10 to 20 feet, plus 1/8 inch, minus 3/16 inch.
 - c. 20 to 40 feet, plus or minus 1/4 inch.
 - d. Each additional 10 feet, plus or minus 1/16 inch.
 2. Overall Height and Width of Units, Measured at the Face Not Exposed to View: As follows:
 - a. 10 feet or under, plus or minus 1/4 inch.
 - b. 10 to 20 feet, plus 1/4 inch, minus 3/8 inch.
 - c. 20 to 40 feet, plus or minus 3/8 inch.
 - d. Each additional 10 feet, plus or minus 1/8 inch.
 3. Total Thickness or Flange Thickness: Plus 1/4 inch, minus 1/8 inch.
 4. Rib Thickness: Plus or minus 1/8 inch.
 5. Rib to Edge of Flange: Plus or minus 1/8 inch.
 6. Distance between Ribs: Plus or minus 1/8 inch.
 7. Variation from Square or Designated Skew (Difference in Length of the Two Diagonal Measurements): Plus or minus 1/8 inch/72 inches or 1/2 inch total, whichever is greater.
 8. Length and Width of Block-outs and Openings within One Unit: Plus or minus 1/4 inch.
 9. Location and Dimension of Block-outs Hidden from View and Used for HVAC and Utility Penetrations: Plus or minus 3/4 inch.
 10. Dimensions of Haunches: Plus or minus 1/4 inch.
 11. Haunch Bearing Surface Deviation from Specified Plane: Plus or minus 1/8 inch.
 12. Difference in Relative Position of Adjacent Haunch Bearing Surfaces from Specified Relative Position: Plus or minus 1/4 inch.
 13. Bowing: Plus or minus L/360, maximum 1 inch.
 14. Local Smoothness: 1/4 inch/10 feet.
 15. Warping: 1/16 inch/12 inches of distance from nearest adjacent corner.
 16. Tipping and Flushness of Plates: Plus or minus 1/4 inch.
 17. Dimensions of Architectural Features and Rustications: Plus or minus 1/8 inch.
- C. Position Tolerances: For cast-in items measured from datum line location, as indicated on Shop Drawings.
1. Weld Plates: Plus or minus 1 inch.
 2. Inserts: Plus or minus 1/2 inch.
 3. Handling Devices: Plus or minus 3 inches.
 4. Reinforcing Steel and Welded Wire Reinforcement: Plus or minus 1/4 inch where position has structural implications or affects concrete cover; otherwise, plus or minus 1/2 inch.
 5. Reinforcing Steel Extending out of Member: Plus or minus 1/2 inch of plan dimensions.
 6. Tendons: Plus or minus 1/4 inch, vertical; plus or minus 1 inch, horizontal.
 7. Location of Rustication Joints: Plus or minus 1/8 inch.
 8. Location of Opening within Panel: Plus or minus 1/4 inch.
 9. Location of Flashing Reglets: Plus or minus 1/4 inch.
 10. Location of Flashing Reglets at Edge of Panel: Plus or minus 1/8 inch.
 11. Reglets for Glazing Gaskets: Plus or minus 1/8 inch.
 12. Electrical Outlets, Hose Bibs: Plus or minus 1/2 inch.
 13. Location of Bearing Surface from End of Member: Plus or minus 1/4 inch.

14. Allowable Rotation of Plate, Channel Inserts, and Electrical Boxes: 2-degree rotation or 1/4 inch maximum over the full dimension of unit.
15. Position of Sleeve: Plus or minus 1/2 inch.
16. Location of Window Washer Track or Buttons: Plus or minus 1/8 inch.

2.17 FINISHES

- A. Exposed faces shall be free of joint marks, grain, and other obvious defects. Corners, including false joints shall be uniform, straight, and sharp. Finish exposed-face surfaces of architectural precast concrete units to match approved design reference sample.
- B. Finish exposed top and back surfaces of architectural precast concrete units with smooth, steel-trowel finish.
- C. Finish unexposed surfaces of architectural precast concrete units with as cast finish.

2.18 SOURCE QUALITY CONTROL

- A. Quality-Control Testing: Test and inspect precast concrete according to PCI MNL 117 requirements. If using self-consolidating concrete, also test and inspect according to PCI TR-6, ASTM C 1610/C 1610M, ASTM C 1611/C 1611M, ASTM C 1621/C 1621M, and ASTM C 1712.
- B. Owner will employ an independent testing agency to evaluate architectural precast concrete fabricator's quality-control and testing methods.
 1. Allow Owner's testing agency access to material storage areas, concrete production equipment, concrete placement, and curing facilities. Cooperate with Owner's testing agency and provide samples of materials and concrete mixtures as may be requested for additional testing and evaluation.
- C. Strength of precast concrete units is considered deficient if units fail to comply with [ACI 318](#) requirements for concrete strength.
- D. Testing: If there is evidence that strength of precast concrete units may be deficient or may not comply with [ACI 318](#) requirements, precaster will employ an independent testing agency to obtain, prepare, and test cores drilled from hardened concrete to determine compressive strength according to ASTM C 42/C 42M and [ACI 318](#).
 1. A minimum of three representative cores shall be taken from units of suspect strength, from locations directed by Architect.
 2. Test cores in an air-dry condition.
 3. Strength of concrete for each series of three cores is considered satisfactory if average compressive strength is equal to at least 85 percent of 28-day design compressive strength and no single core is less than 75 percent of 28-day design compressive strength.
 4. Report test results in writing on same day that tests are performed, with copies to Architect, Contractor, and precast concrete fabricator. Test reports include the following:
 - a. Project identification name and number.
 - b. Date when tests were performed.
 - c. Name of precast concrete fabricator.
 - d. Name of concrete testing agency.
 - e. Identification letter, name, and type of precast concrete unit(s) represented by core tests; design compressive strength; type of break; compressive strength at breaks, corrected for length-diameter ratio; and direction of

applied load to core in relation to horizontal plane of concrete as placed.

- E. Patching: If core test results are satisfactory and precast concrete units comply with requirements, clean and dampen core holes and solidly fill with precast concrete mixture that has no coarse aggregate, and finish to match adjacent precast concrete surfaces.
- F. Defective Units: Discard and replace recast architectural concrete units that do not comply with acceptability requirements in PCI MNL 117, including concrete strength, manufacturing tolerances, and color and texture range. Chipped, spalled, or cracked units may be repaired, subject to Architect's approval. Architect reserves the right to reject precast units that do not match approved samples, sample panels, and mockups. Replace unacceptable units with precast concrete units that comply with requirements.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine supporting structural frame or foundation and conditions for compliance with requirements for installation tolerances, bearing surface tolerances, and other conditions affecting performance of the Work.
- B. Do not install precast concrete units until supporting cast-in-place concrete has attained minimum allowable design compressive strength and supporting steel or other structure is structurally ready to receive loads from precast concrete units.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install clips, hangers, bearing pads, and other accessories required for connecting architectural precast concrete units to supporting members and backup materials.
- B. Erect architectural precast concrete level, plumb, and square within specified allowable tolerances. Provide temporary supports and bracing as required to maintain position, stability, and alignment of units until permanent connections are completed.
 - 1. Install temporary steel or plastic spacing shims as precast concrete units are being erected. Tack weld steel shims to each other to prevent shims from separating.
 - 2. Maintain horizontal and vertical joint alignment and uniform joint width as erection progresses.
 - 3. Remove projecting lifting devices and grout fill voids within recessed lifting devices flush with surface of adjacent precast surfaces when recess is exposed.
 - 4. Unless otherwise indicated, maintain uniform joint widths of $3/4$ inch.
- C. Connect architectural precast concrete units in position by bolting, welding, grouting, or as otherwise indicated on Shop Drawings. Remove temporary shims, wedges, and spacers as soon as practical after connecting and grouting are completed.
 - 1. Do not permit connections to disrupt continuity of roof flashing.
- D. Welding: Comply with applicable requirements in AWS D1.1/D1.1M and AWS D1.4/D1.4M for welding, welding electrodes, appearance, quality of welds, and methods used in correcting welding work.

1. Protect architectural precast concrete units and bearing pads from damage by field welding or cutting operations, and provide noncombustible shields as required.
 2. Welds not specified shall be continuous fillet welds, using no less than the minimum fillet as specified by AWS.
 3. Clean weld-affected metal surfaces with chipping hammer followed by brushing, and apply a minimum 4.0-mil- thick coat of galvanized repair paint to galvanized surfaces according to ASTM A 780/A 780M.
 4. Clean weld-affected metal surfaces with chipping hammer followed by brushing, and reprime damaged painted surfaces.
 5. Visually inspect welds and remove, reweld, or repair incomplete and defective welds.
- E. At bolted connections, use lock washers, tack welding, or other approved means to prevent loosening of nuts after final adjustment.
1. Where slotted connections are used, verify bolt position and tightness. For sliding connections, properly secure bolt but allow bolt to move within connection slot.
 2. For slip-critical connections, use one of the following methods to assure proper bolt pretension:
 - a. Turn-of-Nut: According to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
 - b. Calibrated Wrench: According to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
 - c. Twist-off Tension Control Bolt: ASTM F 1852.
 - d. Direct-Tension Control Bolt: ASTM F 1852.
 3. For slip-critical connections, use method and inspection procedure approved by Architect and coordinated with inspection agency.
- F. Grouting or Dry-Packing Connections and Joints: Grout connections where required or indicated. Retain flowable grout in place until hard enough to support itself. Alternatively, pack spaces with stiff dry-pack grout material, tamping until voids are completely filled. Place grout and finish smooth, level, and plumb with adjacent concrete surfaces. Promptly remove grout material from exposed surfaces before it affects finishes or hardens. Keep grouted joints damp for not less than 24 hours after initial set.

3.03 ERECTION TOLERANCES

- A. Erect architectural precast concrete units level, plumb, square, and in alignment without exceeding the noncumulative erection tolerances of PCI MNL 117, Appendix I.
- B. Erect architectural precast concrete units level, plumb, square, and in alignment, without exceeding the following noncumulative erection tolerances:
1. Plan Location from Building Grid Datum: Plus or minus 1/2 inch.
 2. Plan Location from Centerline of Steel: Plus or minus 1/2 inch.
 3. Top Elevation from Nominal Top Elevation: As follows:
 - a. Exposed Individual Panel: Plus or minus 1/4 inch.
 - b. Non-Exposed Individual Panel: Plus or minus 1/2 inch.
 - c. Exposed Panel Relative to Adjacent Panel: 1/4 inch.
 - d. Non-Exposed Panel Relative to Adjacent Panel: 1/2 inch.

4. Support Elevation from Nominal Support Elevation: As follows:
 - a. Maximum Low: 1/2 inch.
 - b. Maximum High: 1/4 inch.
5. Maximum Plumb Variation over the Lesser of Height of Structure or 100 Feet: 1 inch.
6. Plumb in Any 10 Feet of Element Height: 1/4 inch.
7. Maximum Jog in Alignment of Matching Edges: 1/4 inch.
8. Joint Width (Governs over Joint Taper): Plus or minus 1/4 inch.
9. Maximum Joint Taper: 3/8 inch.
10. Joint Taper in 10 Feet: 1/4 inch.
11. Maximum Jog in Alignment of Matching Faces: 1/4 inch.
12. Differential Bowing or Camber, as Erected, between Adjacent Members of Same Design: 1/4 inch.
13. Opening Height between Spandrels: Plus or minus 1/4 inch.

3.04 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections and prepare reports:
 1. Erection of loadbearing precast concrete members.
- B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections and prepare test reports.
- C. Visually inspect field welds and test according to ASTM E 165 or to ASTM E 709 and ASTM E 1444. High-strength bolted connections are subject to inspections.
- D. Testing agency will report test results promptly and in writing to Contractor and Architect.
- E. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
- F. Additional testing and inspecting, at Contractor's expense, shall be performed to determine compliance of replaced or additional work with specified requirements.

3.05 REPAIRS

- A. Repair architectural precast concrete units if permitted by Architect. Architect reserves the right to reject repaired units that do not comply with requirements.
- B. Mix patching materials and repair units so cured patches blend with color, texture, and uniformity of adjacent exposed surfaces and show no apparent line of demarcation between original and repaired work, when viewed in typical daylight illumination from a distance of 20 feet.
- C. Prepare and repair damaged galvanized coatings with galvanizing repair paint according to ASTM A 780/A 780M.
- D. Wire brush, clean, and paint damaged prime-painted components with same type of shop primer.
- E. Remove and replace damaged architectural precast concrete units when repairs do not comply with requirements.

3.06 CLEANING

- A. Clean surfaces of precast concrete units exposed to view.
- B. Clean mortar, plaster, fireproofing, weld slag, and other deleterious material from concrete surfaces and adjacent materials immediately.
- C. Clean exposed surfaces of precast concrete units after erection and completion of joint treatment to remove weld marks, other markings, dirt, and stains.
 - 1. Perform cleaning procedures, if necessary, according to precast concrete fabricator's recommendations. Protect other work from staining or damage due to cleaning operations.
 - 2. Do not use cleaning materials or processes that could change the appearance of exposed concrete finishes or damage adjacent materials.

END OF SECTION 03 45 00

SECTION 03 53 14**QUARTZ-AGGREGATE CONCRETE TOPPING - LIGHT REFLECTIVE****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.01 SUMMARY

- A. Section Includes monolithic, light-reflective, quartz-aggregate concrete floor topping applied to fresh concrete of base slabs.
- B. Related Sections:
 - 1. Division 03 Section "Cast-In-Place Concrete" for concrete base mix beneath topping, and for joint fillers.

1.02 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Qualification Data: For Installer.
- C. Installer Certificates: Signed by manufacturer certifying that installers comply with specified requirements.
- D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for concrete floor topping.
- E. Field quality-control test reports.

1.03 QUALITY ASSURANCE

- A. Installer Qualifications: Engage an experienced installer (applicator) who is experienced in applying concrete floor toppings similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance, and who is acceptable to concrete topping manufacturer.
 - 1. Engage an installer who employs only persons trained and approved concrete topping manufacturer for applying concrete topping indicated.
 - 2. Engage an installer who is certified in writing by concrete topping manufacturer as qualified to apply concrete topping indicated.
- B. Testing Agency Qualifications: An independent agency qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.
- B. Mockups: Place concrete floor topping mockups to demonstrate typical joints, surface finish, texture, tolerances, and standard of workmanship.
 - 1. Build mockups approximately 100 sq. ft. in the location indicated or, if not indicated, as directed by Architect.
 - 2. If Architect determines that mockups do not meet requirements, demolish and

- remove them from the site and cast others until mockups are approved.
3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

C. Preinstallation Conference: Conduct conference at Project site.

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage, mixing with other components, and application.
- B. Store materials to comply with manufacturer's written instructions to prevent deterioration from moisture or other detrimental effects.

1.05 PROJECT CONDITIONS

- A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature and moisture content, ambient temperature and humidity, ventilation, and other conditions affecting concrete floor topping performance.
 1. Place concrete floor topping only when ambient temperature and temperature of base slabs are between 50 and 86 deg F.
- B. Close areas to traffic during topping application and, after application, for time period recommended in writing by manufacturer.

PART 2 - PRODUCTS

2.01 CONCRETE FLOOR TOPPING

- A. Light Reflective Mineral Dry-Shake Floor Hardener: Factory-prepared and dry-packaged mixture of finely graded quartz aggregate; portland cement or blended hydraulic cement; light reflective pigments; plasticizers; and other admixtures; ready for shake-on application. Use light reflective pigments that are finely ground, nonfading mineral oxides interground with cement.
 1. Light Reflectance: Hardener shall increase by more than 60 percent the light reflective properties of a similarly finished floor surface using concrete base slab mix provided.
 1. Reflectance values for light reflective type hardener shall be submitted in accordance with this Section's Article "Submittals" and shall be determined using the "Known Sample" method. "Known Sample" finish sample shall have a 60 percent light reflective value and shall be used as the basis for determining light reflective value of reflective type surface hardener specified to comply with the reflective value requirements. Luminance shall be measured using an accurate laboratory type instrument.
 2. Available Products:
 - a. Conspec Marketing & Manufacturing Co., Inc., a Dayton Superior Company; Conshake 700.
 - b. Euclid Chemical Company (The); Surfex Light Reflective.
 - c. L&M Construction Chemicals, Inc.; Quartz Plate FF Light Reflective.
 - d. US Mix; US SPEC Densetop LR.
 3. Compressive Strength (28 Days): 10,000 psi; ASTM C 109/C 109M.

2.02 CURING MATERIALS

- A. Clear, Waterborne, Membrane-Forming Curing And Temporary Sealing Compound: Manufacturer's recommended formulation complying with ASTM C 309, Type 1, Class B, 25 percent solids content, minimum; and ASTM C 1315, except for white pigment provisions.
 - 1. Available Products:
 - a. Euclid Chemical Company; Super Aquacare VOX, except provide Kurez DR if recommended by manufacturer for use with permanent sealer.
 - b. L & M Construction Chemicals, Inc.; Dress & Seal WB/#30, except provide L&M Cure DR if recommended by manufacturer for use with permanent sealer.
 - c. Chemrex Inc.; MasterKure.
 - d. US Mix; US SPEC Maxcure Resin Clear.

2.03 RELATED MATERIALS

- A. Semirigid Joint Filler: Two-component, semirigid, 100 percent solids, epoxy resin with a Type A Shore durometer hardness of 80 per ASTM D 2240.
 - 1. Available Products:
 - a. US Mix; US SPEC SR 50-EJF.
 - b. L&M Construction Chemicals, Inc.; Epoflex SL.

2.04 FLOOR SEALING MATERIALS

- A. Penetrating Sealer: Water-based, silicate sealer designed to increase concrete floor resistance to heavy duty abrasion, tire marking and staining.
 - 1. Available Products:
 - a. US Mix; US SPEC Industraseal.
 - b. Euclid Chemical Company; Euco Diamond Hard.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, with Installer present, for conditions affecting performance of concrete floor topping. Verify that joint filler strips have been installed where topping abuts vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.
- B. Proceed with application only after unsatisfactory conditions have been corrected.

3.02 FLOOR TOPPING APPLICATION

- A. Start floor topping application in presence of manufacturer's technical representative.
- B. Float surface of base slab concrete in accordance with Division 03 Section "Cast-In-Place Concrete."
- C. After float finish is applied to fresh base slab concrete, and while concrete is still plastic, shake apply concrete floor topping by evenly distributing a minimum total of

1-1/2 lbs. of aggregate per sq. ft. in not less than 2 applications.

1. Control concrete moisture as recommended by topping manufacturer when floated finish is subject to rapid surface drying by wind, by sunlight, and by abutting construction dry enough to draw moisture from the plastic concrete. Apply topping in these areas first.

D. First Topping Application:

1. Apply not less than 1 lb. of topping to each sq. ft. surface of fresh concrete.
2. Distribute evenly.
3. If topping material breaks through floated surface of concrete, then it is too plastic for topping application.
4. Float topping after it has darkened slightly from moisture absorption. Use only wood floats (do not use metal floats, or combinations of wood and metal floats). Continue floating until moisture from underlying concrete has been worked completely through topping. (If moisture from underlying concrete does not work through first application of topping, second application will delaminate.) Restraighten, cut down high spots, and fill low spots.

E. Second Topping Application: Apply immediately after first application of topping has been floated.

1. Precautions: If any of the following finish blemishes occur during second topping application, obtain immediate instruction from manufacturer's technical representative.
 - a. Premature surface drying.
 - b. Trowel-burn.
 - c. Blistering and bubbling.
2. Apply not less than 1/2 lb. of topping to each sq. ft. of concrete surface.
3. Distribute evenly and at right angles to first topping application.
4. In same manner as first topping, float topping after it has darkened slightly. Continue floating until moisture from underlying surface has been worked completely through topping. Restraighten, cut down high spots, and fill low spots. Repeat float passes and restraightening until concrete floor topping surface has a uniform, smooth, granular texture. Do not add water to aid finishing operations.
5. Hard Trowel Finish: After floating surface, apply trowel finish. Use only stainless steel finishing tools and trowel blades (do not use magnesium metal tools). Continue troweling passes and restraighten until surface is smooth and uniform in texture.
 - a. Finish and measure surface so gap at any point between surface and an unlevelled freestanding 10-foot long straightedge, resting on 2 high spots and placed anywhere on the surface, does not exceed 1/4 inch.

F. Construction Joints: Construct joints true to line with faces perpendicular to surface plane of concrete floor topping, at locations indicated or as approved by Architect.

G. Contraction Joints: Form weakened-plane contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch- wide joints into concrete floor topping when cutting action will not tear, abrade, or otherwise damage surface and before random contraction cracks develop.

1. Construct contraction joints for a combined depth equal to topping thickness and not less than one-fourth of base-slab thickness.

3.03 PROTECTING AND CURING

- A. General: Protect freshly placed concrete floor topping from premature drying and excessive cold or hot temperatures.
- B. Evaporation Retarder: Apply evaporation retarder to concrete floor topping surfaces in hot, dry, or windy conditions before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying floor topping, but before float finishing.
- C. Begin curing immediately after finishing concrete floor topping. Cure by the following method, according to concrete floor topping manufacturer's written instructions:
 - 1. Curing Compound: Apply uniformly in two coats in continuous operations by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

3.04 JOINT FILLING

- A. Prepare and clean contraction joints and install semirigid joint filler, according to manufacturer's written instructions, once topping has fully cured.
- B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joint clean and dry.
- C. Install semirigid joint filler full depth of contraction joints. Overfill joint and trim semirigid joint filler flush with top of joint after hardening.

3.05 REPAIRS

- A. Defective Topping: Repair and patch defective concrete floor topping areas, including areas that have not bonded to concrete substrate.

3.06 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Testing Services: Testing and inspecting of completed applications of concrete floor toppings shall take place in successive stages, in areas of extent and using methods as follows:
 - 1. Concrete floor topping shall be tested for delamination by dragging a steel chain over the surface.
 - 2. Concrete floor topping shall be tested for compliance with surface flatness and levelness tolerances.
- C. Remove and replace applications of concrete floor topping where test results indicate that it does not comply with specified requirements.
- D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

END OF SECTION 03 53 14

SECTION 03 60 00**GROUTING****PART I - GENERAL****1.1 SUMMARY**

- A. Description: The Work specified in this Section consists of furnishing, mixing and placing non-shrink, non-metallic, non-corrosive Portland cement grout for structural members and base plate bearing and as indicated on the Contract Drawings, or specified herein. The work includes labor, material, tools, and equipment as required.

1.2 REFERENCES

ASTM	C 1107	Standard Specification for Packaged Dry, Hydraulic-cement Grout (Non-shrink)
AASHTO	T 106-04	Standard Test Method for Comprehensive Strength of Hydraulic Cement Mortar
ASTM	C 827	Standard Test Method for Change in Height at Early Ages of Cylindrical Specimens of Cementitious Mixtures

1.3 SUBMITTALS

- A. Submittal shall be made in accordance with the requirements of the Project Quality Plan, except as modified herein.
- B. Manufacturer's Product Data Sheets including laboratory results, recommended uses, instructions, and limitations.
- C. Certificates - Submit laboratory test reports showing;
1. Materials used in the grout are free of metallic components, corrosion-producing elements.
 2. Materials meet specified non-shrinkage and compressive strength requirements.
 3. Materials comply with ASTM C 1107.
- D. Manufacturer's Instructions shall include recommended mixing procedure and installation steps, water volume, workability times, and temperatures.

1.4 QUALITY CONTROL

- A. Quality control shall be made in accordance with the requirements of the Project Quality Plan, except as modified herein.
- B. Acceptable manufacturers shall be regularly engaged in the manufacturing of non-shrink, non-metallic, non-corrosive grout.

1.5 PRODUCT DELIVERY, STORAGE AND HANDLING

- A. Deliver and store grout materials in undamaged original protective packaging with seals and labels intact.
- B. Prevent damage to, or contamination of, grout material all the time.

PART II - PRODUCTS**2.1 MATERIALS**

- A. Non-shrink, non-metallic, non-corrosive grout shall conform to the following:
 - 1. ASTM C 1107.
 - 2. Manufactured specifically for use in transferring heavy loads.
 - 3. Grout shall show no shrinkage when tested under ASTM-C827.
 - 4. Compressive strength at 28 days shall be at least 4000 psi.
 - 5. Resistant to attack by oil and water.
- B. Water used in mixing shall be free of deleterious chemicals affecting grout components.
- C. Use of air-entraining agents or admixtures is prohibited.
- D. Pre-approved products: US Spec Multi Purpose Grout, US Spec General Purpose Grout.

2.2 PRODUCTION

- A. Mix grouting materials and water in mechanical mixer. Measure aggregate materials in a damp, loose condition.
- B. Mix grout as close to work area as possible.
- C. Transport grout mix in a manner that does not permit separation of materials.
- D. Do not re-temper or add additional water after grout has been mixed.

PART III - EXECUTION**3.1 SURFACE PREPARATION**

- A. Remove defective concrete, laitance, dirt, oil, grease, and other foreign materials from concrete surfaces by chipping, or other means, until sound, clean concrete surfaces are achieved.
- B. Lightly roughen concrete, but not enough to interfere with proper placement of grout.
- C. Cover concrete areas with protective waterproof membrane or sheet until ready to grout.
- D. Remove foreign materials from steel surfaces in contact with grout.

- E. Align and level components to be grouted and maintain in final position until grouting is complete and accepted.
- F. Remove protective waterproof covering; clean surfaces immediately before grouting.
- G. Saturate concrete surfaces with clean water; remove excess water, with none left standing, immediately before grouting.

3.2 GROUT PLACEMENT

- A. Place grout continuously by gravity flow or under pressurized methods.
- B. Apply grout from one side only to avoid air entrapment.
- C. Thoroughly strap final installation so as to be free from air pockets.
- D. Do not vibrate grout mixture after placing; do not place grout if the grouting area is being vibrated by nearby equipment.
- E. Do not remove leveling shims, if used, for at least 48 hours after grout has been placed.
- F. Fill shim voids with non-shrink, non-corrosive grout, packing the material with suitable tool.
- G. Do not use grout that has begun to set or if more than 1- 1/2 hours have elapsed, after initial mixing.

3.3 CURING

- A. Cure grout for a minimum of two hours after placing by keeping wet and covering with high wet strength Kraft paper or by other acceptable methods.

PART IV - MEASUREMENT

- 4.1 **Measurement** – No Separate measurement will be made for Work described in this Section.

PART V - PAYMENT

- 5.1 **Payment** – Payment for items in this Section will be incidental to the Contract unit cost of the concrete bid items.

END OF SECTION

SECTION 03 64 23**EPOXY INJECTION GROUTING****PART I - GENERAL****1.1 SUMMARY****A. Description**

This work includes repair of cracks by injection epoxy and sealing concrete surfaces as identified by inspections reports, QA/QC and as specified herein. This work shall be constructed in accordance with these specifications and in conformity with the lines, grades, dimensions and notes shown on the Contract Drawings or presented by the Engineer. The work includes material, equipment, and labor necessary to procure, fabricate, prepare, and install in field the concrete repair.

1.2 REFERENCES

<u>Sponsor</u>	<u>Number</u>	<u>Subject</u>
MoDOT	Section 1039	Epoxy Resin Material, 2011 Missouri Standard Specification Book for Highway Construction

1.3 SUBMITTALS**A. Submittals shall be made in accordance with the requirements of the Project Quality Plan, except as modified herein.**

1. Prior to repairing the concrete the product review, data sheets, and repair procedure shall be submitted to the Engineer for review and approval for each repair. Include as needed special mixing procedures and site preparation procedures as applicable.

B. Inspection reports for each repair indicating structure and location.**1.4 QUALITY CONTROL**

Quality control shall be made in accordance with the Engineer in addition to the requirements of the Project Quality Plan except as modified herein.

1.5 ACCEPTANCE

Penetration of 95% of all cracks from 1/64 inch to 1/4 inch is required.

PART II - PRODUCTS**2.1 MATERIALS****A. Select from the Division 1000 maintained by MoDOT.**

1. Epoxy Injection Material:

- a) Use only products for which vertical crack injection is recommended by the manufacturer.
 - b) Use appropriate cap seal material recommended by the particular epoxy manufacturer.
2. Surface Sealing Material: Penetrating sealer.

2.2 EQUIPMENT

- A. Minimum of two pumps with the following required characteristics:
 1. Electric-powered and portable.
 2. Positive displacement.
 3. Positive-ratio control of exact proportions of the two components at the nozzle.
 4. In-line metering and mixing.
- B. Injection equipment required characteristics:
 1. Automatic pressure control capable of discharging the mixed adhesive at any pre-set pressure up to 200 psi \pm 0.5 psi.
 2. Equipped with a manual pressure control override.
- C. Capable of maintaining the volume ratio of the injection material prescribed by the manufacturer within a tolerance of \pm 5% by volume at any discharge pressure up to 200 psi.
- D. With sensors on both the component A and B reservoirs that automatically stop the machine when only one component is being pumped to the mixing head.

PART III - EXECUTION

3.1 INSTALLERS

- A. Injection equipment operators must have a minimum of two years experience in the methods and materials of the selected system for application of epoxy injection.
- B. Injection equipment operators must know the technical aspects of:
 1. Correct material selection and use.
 2. Equipment operation, maintenance, and troubleshooting.

3.2 PREPARATION

- A. Sandblast clean the concrete surfaces
- B. Seal cracks.
- C. Provide entry ports for the epoxy injection. Space ports a maximum of 6 inches.

3.3 EPOXY SEALING

- A. Grind flush all ports extending above the concrete surfaces.
- B. Cover the entire length of the crack with epoxy sealant for a minimum of 2 ft on either side of the crack.
- C. Mask the member so a straight vertical line is produced at the cutoff point.
- D. Apply a second coat at the same application rate as soon as the first coat is dry to the touch. Do not exceed the following times between coats:

Hours	Temperature (Degrees F)
72	66
36	77
24	90

PART IV - MEASUREMENT

4.1 **Measurement** – No Separate measurement will be made for Work described in this Section.

PART V - PAYMENT

5.1 **Payment** – Payment for items in this Section will be incidental to the Contract unit cost of the concrete bid items.

END OF SECTION

SECTION 03 80 00**CONCRETE CUTTING AND BORING****PART I - GENERAL****1.1 SECTION INCLUDES**

- A. Saw or cut pavements, curb and gutter, sidewalk, driveway, and/or any appurtenances as required to provide a smooth surface to match.

PART II - PRODUCTS

NOT USED

PART III - EXECUTION**3.1 PROCEDURE - CONCRETE SURFACES**

- A. Saw cut vertically in a straight line through the full depth of the surface.
- B. Where the edge of the existing surface is cracked, broken, or deteriorated, make the cut so the defective surface can be removed.
- C. Water shall be used to control dust during sawing operations.
- D. Do not allow traffic or construction equipment to cross the cut edge.

3.2 PROCEDURE - ASPHALT SURFACES

- A. Use any method that provides a vertical cut in a straight line through the full depth of the surface.
 - 1. Saw cut at no additional cost to KCMO if the method of cutting does not produce a smooth, non-broken edge.
- B. Where the edge of the existing surface is cracked, broken, or deteriorated, make the cut so the defective surface can be removed.
- C. Water shall be used to control dust during sawing operations.
- D. Do not allow traffic or construction equipment to cross the cut edge.
- E. When appropriate, apply a tack coat to the cut edge before placing hot mix asphalt surfacing. Refer to Section 32 12 13.19.

PART IV - MEASUREMENT

- 4.1 Measurement** – No Separate measurement will be made for Work described in this Section.

PART V - PAYMENT

5.1 Payment – Payment for items in this Section will be incidental to the Contract unit cost of the concrete bid items.

END OF SECTION

SECTION 03 90 00**FLOWABLE FILL****PART I - GENERAL****1.1 SUMMARY**

- A. Description: This Section specifies materials and procedures for placing flowable fill.

1.2 REFERENCES

- A. AASHTO M 154: Air-Entraining Admixtures for Concrete.
- B. AASHTO M 194: Chemical Admixture for Concrete.
- C. ASTM C 150: Portland Cement.
- D. ASTM C 618: Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use as a Mineral Admixture in Concrete.
- E. ASTM D 4832: Preparation and Testing of Controlled Low Strength Material (CLSM) Test.

1.3 SUBMITTALS

- A. Batch Proportions: Submit to Engineer seven days before placement.
- B. Trial Batch:
1. Submit certified test results or conduct laboratory trial batch to verify strength prior to placement.
 2. KCMO or its representative witnesses the trial batch.

PART II – PRODUCTS**2.1 MATERIALS**

- A. Portland Cement: ASTM C 150.
- B. Pozzolan: ASTM C 618.
- C. Sand.
- D. Coarse aggregate: Determine a suitable aggregate size and gradation for the intended application.
- E. Admixtures:
1. Water reducers and set accelerators: AASHTO M 194.
 2. Air entrainment: AASHTO M 154.

2.2 EQUIPMENT

- A. Equipment capable of supplying a homogenous product at the appropriate rate.
- B. Certified scales or measuring devices to measure delivered product and to proportion

product components.

PART III – EXECUTION

3.1 INSTALLATION

- A. Combine materials to meet the requirements for strength and constructability as required. Determine strength from trial batches at 28 days.
 - 1. Minimum strength: 50 psi. ASTM D 4832.
 - 2. Maximum strength: 150 psi. ASTM D 4832.
 - 3. Slump: 5 inches to 10 inches.
- B. Determine a suitable aggregate size and gradation for the intended application.

PART IV - MEASUREMENT

- 4.1 **Measurement** – No Separate measurement will be made for Work described in this Section.

PART V - PAYMENT

- 5.1 **Payment** – Not separate payment will be made for “Flowable Fill”. All costs pertaining thereto shall be included in the contract prices for other items as listed in the Bid Form of Unit Prices.

END OF SECTION

SECTION 04 05 05
COLD AND HOT WEATHER MASONRY PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

- A. Furnish all labor, materials, tools, equipment, and services for Cold and Hot Weather Masonry Procedures, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. As required to achieve desired results.

PART 3 - EXECUTION

3.1 PROCEDURES

- A. International Building Code, Chapter 21.
- B. Local Building Code.
- C. ACI 530.1/ASCE 6/TMS 602.
- D. Brick Industry Association, Technical Note 1.
- E. National Concrete Masonry Construction, Technical Note 3-1C.

3.2 GENERAL

- A. At end of each day or at shutdown, cover tops of walls not enclosed or sheltered.
- B. Do not use frozen or ice coated materials.
- C. Remove and replace frozen or damaged masonry to satisfaction of Architect.

3.3 TEMPORARY FACILITIES

- A. Construct and maintain temporary protection required to permit continuous and orderly progress of work.
- B. Provide temperature conditioning sufficient for indicated temperatures.
- C. Provide sufficient temporary lighting to permit work to be correctly performed.

END OF SECTION

SECTION 04 05 10 MASONRY CLEANING

PART 1 - GENERAL

1.1 SUMMARY

- A. Furnish labor, materials, tools, equipment, and services for Masonry Cleaning in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 SUBMITTALS

- A. Project Information:
 - 1. Name of proposed product and manufacturer.
 - 2. Certification that the proposed products are compatible for materials on subject project.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Cleaners:
 - 1. Base:
 - a. ProSoCo.
 - 2. Optional:
 - a. EaCo Chem.
- B. Other manufacturers desiring approval comply with Section 00 26 00.

2.2 MATERIALS

- A. General:
 - 1. Use only products which are recommended by manufacturer of material to be cleaned.
- B. Concrete Masonry (CMU) Cleaners:
 - 1. General:
 - a. Clean CMU which will remain exposed to view (including CMU walls which are scheduled for painting).
 - 2. Lightweight and Normal Weight CMU:
 - a. Base Product: Sure Klean Custom Masonry Cleaner by ProSoCo.
- C. Cast-in-Place Concrete Cleaner:
 - 1. General:
 - a. Clean Cast-in-Place concrete walls which will remain exposed to view (including CIP walls which are scheduled for painting).
 - b. Clean with most effective products which are appropriate for texture and color specified.
 - 2. Sandblasted, Etched, and Exposed-aggregate Textures:
 - a. Base Product: Sure Klean Custom Masonry Cleaner or Heavy-duty Concrete Cleaner both by ProSoCo.
- D. Architectural Precast Concrete (APC) Cleaner:
 - 1. General:

-
- a. Clean with most effective products which are appropriate for texture and color specified.
 2. Sandblasted, Etched, and Exposed-aggregate Textures:
 - a. Base Product: Sure Klean Custom Masonry Cleaner or Heavy-duty Concrete Cleaner both by ProSoCo.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Examine surfaces to be cleaned.
 1. If necessary point with mortar.
- B. Waiting Time before cleaning:
 1. Mortar Type N: Allow mortar to cure for 14 to 28 days prior to cleaning.
 2. Mortar Types M and S: Allow mortar to cure for 7 to 14 days prior to cleaning.
 3. Colored Mortar: Allow mortar to fully cure 28 days prior to cleaning.
- C. Remove excess mortar using wooden paddles and scrapers.
- D. Do not proceed with cleaning until unsatisfactory conditions have been corrected.
- E. Test 4 x 4 FT area of each surface type for compatibility with cleaner, using recommended dilutions, prior to full scale cleaning operations.
- F. Cleaning indicates acceptance of surfaces and responsibility for performance.

3.2 PREPARATION

- A. Protect adjacent surfaces, not scheduled for cleaning.
- B. Prepare surfaces as recommended by manufacturer.

3.3 CLEANING

- A. Clean surfaces as recommended by manufacturer.
- B. Do not use wire brushes.
- C. Thoroughly rinse and pre-soak walls.
- D. Flush loose mortar and dirt from surface.
- E. Wet to prevent runoff streaking.
- F. Apply solution using fibered wall washing brush or low-pressure spray.
 1. Maximum Pressure: not to exceed 400 PSI.
 2. Tip spray angle: Not less than 25 Degrees.
 3. Maximum rate of flow: 4 to 6 GPM.
 4. Tip shall be held at least 12 IN from surface of masonry.
 5. Comply with manufacturer's recommendations, where more restrictive.
- G. Scrape off mortar and re-apply cleaning solution.
- H. After scrubbing, clean thoroughly with low pressure water.
 1. Comply with low-pressure spray criteria listed above.

END OF SECTION

SECTION 04 05 13
PORTLAND CEMENT-LIME (PCL) MORTARS & GROUT

PART 1 - GENERAL**1.1 SUMMARY**

- A. Furnish all labor, materials, tools, equipment, and services for Portland Cement-Lime (PCL) Mortars & Grout, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. Materials standards:
 - 1. ASTM C143 Standard Test Method for Slump of Hydraulic-Cement Concrete.
 - 2. ASTM C144 Standard Specification for Aggregate for Masonry Mortar.
 - 3. ASTM C150 Standard Specification for Portland Cement.
 - 4. ASTM C207 Standard Specification for Hydrated Lime for Masonry Purposes.
 - 5. ASTM C270 Specification for Unit Masonry.
 - 6. ASTM C404 Standard Specification for Aggregates for Masonry Grout.
 - 7. ASTM C476 Standard Specification for Grout for Masonry.
 - 8. ACI 530.1 Building Code Requirements and Specification for Masonry Structures.
 - 9. Brick Institute of America.
- B. Cold Weather Procedure: Specified in Section 04 05 05.
- C. Hot Weather Procedures:
 - 1. When ambient temperature is over 38 DegC over 100 DegF, or over 32 DegC over 90 DegF with a wind over 13 M/Hour over 8 MPH:
 - a. Monitor mortar temperature and maintain it between 21 to 49 DegC 70 to 120 DegF.
 - b. Limit spreading of bed mortar to 1200mm 4 FT, maximum, and place masonry units within 1 minute of spreading.
- D. Definitions:
 - 1. PCL Mortar: Portland Cement-Lime Mortar.
 - 2. PCL Grout: Portland Cement-Lime Grout.
 - 3. The use of masonry cement alone, or in combination with and PCL mixes, is prohibited.
 - 4. Factory Pre-Blended: Factory blend all mortar mix dry ingredients including; sand, cement, lime, pigments, etc.

1.3 SUBMITTALS**PART 2 - PRODUCTS****2.1 ACCEPTABLE MANUFACTURERS**

- A. Factory Pre-blended PCL Mortar:
 - 1. Base:
 - a. Spec Mix.
 - 2. Optional:
 - a. ProMix (U-mix).

- b. Quikrete.
 - c. ProSpec (Bonsal).
 - d. US Mix Company.
- B. Site-Mixed PCL Grout:
- 1. Base:
 - a. Products as indicated.
- C. Integral Waterproofing Mortar admixture, for mortar mixes used with Glass Unit Masonry Units at Exterior and/or Interior wet areas:
- 1. Base:
 - a. Sonneborn Building Products; Hydracide Powder.
 - 2. Optional:
 - a. Master Builders; Rheomix 235.
 - b. Laticrete 8510.
- D. Other manufacturers desiring approval comply with Section 00 26 00.

2.2 MATERIALS – PCL MORTARS

- A. Factory Pre-blended Mortar Mix:
- 1. Use approved mix designs which comply with ASTM C270, Property Method.
 - 2. Blend cementitious materials, aggregate and admixtures in factory under controlled conditions, which requires only addition of water at project site.
 - 3. Oven-dry aggregates prior to measuring and include in pre-blended mix.
- B. Portland Cement: ASTM C150, Type I, II or III.
- 1. Air-entraining cement is not permitted.
 - 2. Portland Cement Color: As indicated below for each application.
 - 3. Maximum percent of alkalis: 0.60.
- C. Hydrated lime: ASTM C207, Type S.
- D. Mortar aggregate:
- 1. ASTM C144.
 - 2. Aggregate Color: As indicated below for each application.
- E. Water: Potable.
- F. Do not use the following ingredients:
- 1. Do not use antifreeze additives.
 - 2. Do not use calcium chloride, thycyanates, or other materials containing chloride ions.
 - 3. Other admixtures: Not permitted without prior approval by Architect.
 - 4. Do not use ready mix mortar.
 - 5. Do not use masonry cement.

2.3 SCHEDULE OF MORTAR TYPES

- A. All PCL mortar mixes to comply with ASTM C270, property specification using component materials listed above:
- 1. Limit air content to 10 percent, maximum.
 - 2. Use appropriate type as indicated by following Table 4110A, for each condition.
 - 3. Not all conditions may apply to this Project.

TABLE 4110A - Basic Mortar Type Selection		
Location(s)	Building Segment	Mortar Type per ASTM C270
EXTERIOR MASONRY,	Foundation walls	M

TABLE 4110A - Basic Mortar Type Selection		
Location(s)	Building Segment	Mortar Type per ASTM C270
at or below grade	Retaining walls Sewers & manhole, and paving	
EXTERIOR MASONRY, above grade	Reinforced or Load Bearing brick / block walls Glass Unit Masonry Veneer Masonry, Parapets, and Chimneys >30 FT above grade Other areas with severe exposure	S
	Non-load bearing brick/block walls Veneer Masonry, where <30 FT above grade	N (or S)
	Parapets and chimneys where <30 FT above grade	N
INTERIOR MASONRY	Load bearing brick/block walls Non-load bearing brick/block walls Glass Unit Masonry Brick/block veneers	N

2.4 SCHEDULE OF MORTAR COLORS

- A. Use the following mortar colors in conjunction with Table 4110A to determine mixes of appropriate combinations of type and color for each project condition.
- B. Mortar Color MC-2:
 1. Location used:
 - a. CMU walls. See Section 04 22 00.
 2. Method:
 - a. Factory pre-blended mortar.
 3. Mortar Color:
 - a. Natural Grey, no pigment.
 4. Portland Cement Color:
 - a. Natural.
 5. Aggregate Color:
 - a. Natural.
- C. Mortar Color MC-3:
 1. Location used:
 - a. Glass Unit Masonry. See Section 04 23 00.
 2. Method:
 - a. Site-mixed mortar. Factory pre-blended mortar may be used at contractor's option.
 3. Mortar Color:
 - a. White.
 4. Portland Cement Color:
 - a. White.
 5. Aggregate Color:
 - a. White, silica sand.
 6. Reduce the amount of water in mortar mixes that will be used with glass unit masonry as required to account for their lack of absorptive properties.
 7. Do not re-temper mortar mixes used with glass unit masonry.

2.5 MATERIALS – PCL GROUT

- A. Site-mixed PCL Grout:
 1. Use approved mix designs.
 2. Mix on-site using approved materials as indicated.

3. Factory pre-blended dry grout mixes may be used at contractor's option.
 4. Ready-mixed product, delivered to site for direct placement in walls, may be used at contractor's option.
- B. PCL Grout Mixes – General:
1. Comply with ASTM C476.
 2. Portland Cement: ASTM C150, Type I, II or III.
 - a. Air-entraining cement is not permitted.
 - b. Maximum percent of alkalis: 0.60.
 - c. Not permitted: blended hydraulic cements including portland blast-furnace slag cement, portland-pozzolan cement, slag cement, and natural cement.
 3. Grout aggregate: ASTM C404.
 - a. Maximum Aggregate Size: 10mm 3/8 IN.
 - b. The use of blast furnace slag is not permitted.
 4. Hydrated lime:
 - a. ASTM C207, Type S.
 5. Water: Clean and potable.
 6. Other admixtures: Not permitted without prior approval by Architect.
 7. Compressive Strength: As indicated by GROUT MIX SCHEDULE, below, for each type.
 8. Slump for Grout Measured in accordance with ASTM-C143:
 - a. Minimum: 200mm 8 IN.
 - b. Maximum: 254mm 10 IN.

2.6 PCL GROUT MIX SCHEDULE

- A. Grout Mix GM-1:
1. Site mixed grout.
 - a. Redi-mixed or factory pre-blended may be used at contractor's option.
 2. Compressive Strength, 28-day:
 - a. Minimum 13 790 kPa 2000 PSI.
 3. Location used:
 - a. Fill for CMU walls.
 - b. Hollow metal door frames.
 - c. Elevator frames and sills.
 - d. Other indicated locations.
 4. Grout color: Natural grey, no pigment.
 5. Portland cement color: Natural.
 6. Aggregate color: Natural.
 7. Grout mixtures shall not contain gypsum.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Comply with provisions of ACI 530 and ACI 530.1, except where exceeded by requirements of the contract documents.

3.2 MORTAR INSTALLATION

- A. Mix materials minimum of 5 minutes, but not more than 10 minutes.
- B. Adjust consistency to satisfaction of mason subject to compliance with specified criteria.
- C. Comply with BIA Standard MI-72.
- D. Install in accordance with BIA Standards.

- E. Strike all joints to create a uniformly concave final joint.
- F. If mortar begins to stiffen, it may be re-tempered in accordance with ASTM C270, Subparagraph 7.4.
- G. Use mortar within 2-1/2 hours of initial mixing.
- H. Remove units which are disturbed after laying. Clean off original mortar and reset with fresh mortar.

3.3 GROUT INSTALLATION

- A. Mix materials minimum of 5 minutes, but not more than 10 minutes.
- B. Use grout within 1-1/2 hours after initial mixing.
- C. Use coarse grout in spaces larger than 50mm 2 IN in both directions.
- D. Use fine grout in spaces with least dimension is less than 50mm 2 IN.
- E. Grout Installation – frames:
 - 1. Use fine grout for hollow metal door frames.
 - a. Grout frames of elevator hoistway openings.
 - b. Grout hollow metal door frames where the net opening is 1200mm 4 FT and greater.
- F. Grout installation - walls
 - a. See Section 04 22 00.

END OF SECTION

SECTION 04 05 23 MASONRY ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Furnish labor, materials, tools, equipment, and services for Masonry Accessories, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. Welding Standard: Perform welding in accordance with applicable provisions of AWS Structural Welding Code D1.1.
- B. Brick Industry Association Technical Notes on Brick Construction.
- C. ASTM standards indicated.
- D. Expansion Joints (versus Control Joints, Construction Joints etc):
 - 1. Movement joints used in brickwork are defined as Expansion Joints per BIA Technical Notes 18A.
 - a. Construct such Expansion Joints per BIA Technical Note 18A.
 - 2. Movement joints used in CMU work are defined as Control Joints by NCMA Tek 10-2B.
 - a. Construct such Control Joints per Tek 10-2B and other NCMA standards.

1.3 SUBMITTALS

- A. Project Information:
 - 1. Manufacturer literature for products proposed for use.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Masonry Anchors (adjustable wall ties):
 - 1. Base:
 - a. Hohmann & Barnard (H&B).
 - 2. Optional:
 - a. Wirebond.
 - b. Sandell.
- B. Cavity Protection Material:
 - 1. Base:
 - a. Mortar Net.
- C. Horizontal Reinforcing:
 - 1. Base:
 - a. Hohmann & Barnard (H&B).
 - 2. Optional:
 - a. Sandell Manufacturing Company, Inc.
 - b. Wire-Bond, Masonry Reinforcing Corp of America.
 - c. Heckmann.
- D. Pre-molded Control Joint Strips (at CJ's in CMU walls):

-
1. Base:
 - a. Hohmann & Barnard (H&B).
 2. Optional:
 - a. Everlastic.
 - b. Sandell Manufacturing Company, Inc.
 - c. Wire-Bond, Masonry Reinforcing Corp of America.
 - d. Heckmann.
- E. Galvanizing Repair Paint:
1. Base:
 - a. ZRC Worldwide.
 2. Optional:
 - a. Tnemec.
- F. Compressible Filler:
1. Base:
 - a. Hohmann & Barnard (H&B).
 2. Optional:
 - a. Sandell Manufacturing Company, Inc.
- G. Air Barrier: Specified in Division 07.
- H. Loose Lintels: Specified in Section 05 50 10.
- I. Structural Steel Lintels and Shelf Angles: Specified in Section 05 12 00 or 05 12 10.
- J. Other manufacturers desiring approval comply with Section 00 26 00.

2.2 HORIZONTAL REINFORCING

- A. Materials:
1. In interior walls:
 - a. Cold drawn steel wire, ASTM-A82, mill galvanized, ASTM-A641, Class 3 (0.80 OZ/SF).
 2. In walls surrounding wet areas with humidity over 70 percent (pools, showers, kitchens, food processing, wash bays):
 - 1) Stainless Steel, ASTM-A580 Type 304.
- B. Horizontal Reinforcing – Free-standing CMU Walls:
1. Scope: Free standing, single-wythe CMU walls not serving as a back-up wall for masonry veneers.
 2. Description: Horizontal reinforcing composite:
 - a. Width(es) as required
 3. Base Product: 220 Ladder Mesh by H&B.

2.3 VERTICAL REINFORCING

- A. Reinforcing Bars:
1. ASTM-A615, Grade-60.
 2. Size: 4's minimum, or as otherwise indicated.
 3. Refer to Section 03 20 00, and Drawings.

2.4 MISCELLANEOUS ANCHORAGES

- A. General:
1. Include miscellaneous anchorages as required or indicated, such as those necessary to secure stone/APC copings and sills.
 2. Type:
 - a. As indicated.
 3. Material: Same as indicated for veneer anchors above.

2.5 CAVITY VENTS AND WEEPS

- A. Vent / Weeps:
 - 1. Head Vent:
 - a. Polypropylene honeycomb vent/weep for installation in head joint of brick masonry.
 - b. Provides ventilation of cavity and weeping of cavity moisture while restricting ingress of insects and debris.
 - c. Standard size: 3/8 IN x 2-1/2 IN x 3-3/8 IN.
 - d. Color: Gray.
 - e. Base Product: QV – Quadro-Vent by H&B.
 - 2. Rope Weeps:
 - a. Field cut cotton sash cord, nominal 10mm 3/8 IN.
 - b. Use in combination with Head Vent, where indicated
 - 1) See Part 3 for locations.
- B. Vent / Weeps:
 - 1. Head and Weep Vents:
 - a. Polyvinyl chloride (PVC) vent/weep for installation in head joints of brick masonry.
 - b. Provides ventilation of cavity and weeping of cavity moisture while impeding ingress of insects, debris and rodents.
 - c. Size: 2-1/2 IN.
 - d. Color: Gray.
 - e. Color: White.
 - f. Color: Custom. Match brick mortar.
 - g. Base Product: Brick Vent by Williams-Goodco.

2.6 CAVITY PROTECTION MATERIAL

- A. Non-directional nylon or polyester fiber:
 - 1. Thickness:
 - a. 50 mm 2.0 IN.
 - 2. Height: 250mm 10 IN high.
 - 3. Base Product: Mortar Net.

2.7 MISCELLANEOUS ITEMS

- A. Bond Breaker Strips: Asphalt saturated felt, unperforated; ASTM-D226, Type 1.
- B. Pre-Molded Control Joint Strips at CJ's in CMU walls:
 - 1. Solid rubber strips with a Shore A durometer hardness of 60 to 80.
 - 2. Designed to fit standard sash block and maintain lateral stability in masonry wall.
 - 3. Size and configuration as indicated.
 - 4. Base Product: RS-__ Standard by H&B.
 - a. Exception: Where Sash Blocks are not used: Use RS-8 or RS-12 as appropriate for wall thickness.
 - 5. Use symmetrical design for intermediate control joints, and asymmetrical design (Tee-configuration) where CMU wall abuts or intersects a perpendicular element.
 - 6. Do not bridge CJ's with Horizontal ladder/truss:
 - a. Install 2 smooth dowels or other approved device across Control Joints which resist shear loads but allow in-plane expansion, contraction and linear shrinkage movements.
- C. Galvanizing Repair Paint:
 - 1. High zinc dust content paint for re-galvanizing welds and abrasions in galvanized steel.
 - 2. Base Product: ZRC Galvilite by ZRC Worldwide.
 - 3. Optional: Organic Zinc Coating 90-93 by Tnemec.

-
- D. Compressible Filler:
 - 1. Closed cell neoprene sponge.
 - 2. Thickness: 6mm 1/4 IN.
 - 3. Base Product: NS by H&B.

PART 3 - EXECUTION

3.1 INSTALLATION – GENERAL

- A. Keep vertical joint behind weeps free of mortar.
- B. Comply with provisions of ACI 530 and ACI 530.1, except where exceeded by requirements of the contract documents.

3.2 INSTALLATION – MASONRY WALL ANCHORS

- A. Anchoring CMU Walls to building superstructure or to other intersecting CMU walls:
 - 1. Where masonry walls abut concrete or steel structural elements including shear walls, columns, and spandrel beams, anchor thereto with specialized anchors types indicated.
 - 2. Where bearing walls meet or intersect, erect walls separately and anchor together with rigid steel anchors spaced not more than 610mm 24 IN apart vertically.
 - a. Embed end bends of anchors in cores of masonry units filled with mortar or grout.
 - 3. Where non-bearing walls meet or intersect other walls, erect walls separately and anchor together with wire mesh ties spaced not more than 405mm 16 IN apart vertically.
 - a. Embed ties centered in mortar within joint.
 - 4. Fill solid with mortar or grout masonry unit cells within vertical planes of anchors, or use solid masonry units above and below anchors.

3.3 INSTALLATION – REINFORCING

- A. Immediately before placing, clean reinforcement of substances detrimental to good bond.
- B. Reinforcing at CMU Walls: See Section 04 22 00.

3.4 INSTALLATION OF OTHER ITEMS

- A. Cavity Protection Material:
 - 1. Install per manufacturer's recommendations at ledge angles and bottom of wall.
- B. Galvanizing Repair Paint:
 - 1. Apply wherever galvanized masonry accessories are welded or where the galvanic coating is scratched, abraded or otherwise damaged.
- C. Compressible Filler:
 - 1. Install in the masonry joint below relief angles to preclude mortar from being installed in the joint.
 - 2. Install sealant per Section 07 92 13 in joint to insure water-tightness.

END OF SECTION

SECTION 04 22 00
CONCRETE MASONRY (CMU)

PART 1 - GENERAL

1.1 SUMMARY

- A. Furnish labor, materials, tools, equipment, and services for Concrete Masonry (CMU), as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. Test results performed to qualify materials and establish mix designs.
- B. For NRG units:
 - 1. Certifications: All NRG. Insulated Concrete Masonry Units will meet or exceed ASTM C-90, normal weight classification.
 - 2. Material: All insulated, web-less, concrete masonry units shall be NRG™ ICMU's, (Insulated Concrete Masonry Units) except corner, half, solid bottom bond beam and sash units. These "special" units shall be conventional units and shall interspersed into the NRG™ wall construction where needed. Incorporation of conventional CMU's into the NRG™ wall system will have no significant adverse effect upon thermal performance of the overall system. NRG™ ICMU's are available from manufacturers licensed by Niagara Regional Group, Ltd. ICMU's shall be specified as lightweight, medium weight, or normal weight NRG™ design units. Lightweight and medium-weight are not recommended to be specified for walls that directly contact the building exterior. All units exposed to the building exterior shall contain a manufacturer-approved integral water-repellent CMU admixture at the time of manufacture. The NRG™ ICMU's are available in finishes and colors determined by individual manufacturers. All Masonry Units must contain an integral Expanded Polystyrene Insert installed at the site of production. All Masonry Units must contain a Dovetail design to lock the insulation and inner and outer module together. All Masonry Units must not contain a thermal bridge from face to back where as sound, moisture, and thermal energy can be conducted through the wall.
 - 3. General Conditions: It is important to note that the NRG™ ICMU (Insulated Concrete Masonry Unit) is designed with an off-centered core configuration. Therefore, the vertical rebar (positioned and set in the poured foundation) must be matched to the same off-centered designation. (According to specific size units the position of the vertical rebar will vary.) i.e.: 12" ICMU offset is 2.5". List the requirements for mortar, reinforcing, concrete block work and other associated work and details that relate to this product. If this information is detailed in another section, it should be cross-referenced under this heading. The NRG™ Insulated Wall System is laid similar to any other block, either in a running bond or stacked bond. 10" and 12" NRG units shall be presented to the mason, and the mason shall lay each ICMU with each "cap" on top of the block and facing the same direction. (To insure that the thermal mass of the unit is on the inside, face shell and thumb holes toward the outside exterior of the wall.) 8" NRG units with square cells shall be installed with the blocks in each course "flipped" from the course beneath it.

Note: This will also insure that the wall is laid with the tightest thermal barrier.

Scope: Interior and exterior walls shall be insulated, web-less, concrete masonry units as shown on the plans/ or indicated on the finish schedule.

Fire Resistance: 10" and 12" fire rated for up to 4 hours, 8" will have a 2 hour fire rating. Define hourly ratings required by NCMA TEK Notes.

Field Constructed Mock-ups: Construct a sample panel, no less than 4' x 4', of units of each color and size to be used in the project. (These units need not be NRG™ ICMUs).

A full size unit is required to illustrate color and texture for approval. Manufacturer requires a sample panel be installed at the jobsite prior to installation. This panel will represent both the quality of the product and the workmanship to be expected for the project. The panel must be approved by either the owner or architect for the project. Manufacturer will provide 4" units for a 4' by 4' sample panel at no cost for the material (excluding freight to site).

4. Delivery, storage and handling: Units shall be delivered to the jobsite on covered banded pallets with cardboard between layers. Store pallets in single stacks on level ground and cover with waterproof covering (e.g., tarpaulins) to protect the blocks from inclement weather. Handle blocks carefully to avoid breakage and damage to the finished surfaces.
5. Project/site conditions: Protection of Work: Cover walls each day after installation to keep open walls protected and dry. After units are installed they should be protected from damage by other trades performing operations that can stain or otherwise damage the finished surfaces by covering walls with plastic. Corners should be protected from damage after installation by covering them with plywood.

1.3 SUBMITTALS

A. Project Information:

1. Units to be used in Fire Rated walls: Certification of level of fire-resistance provided by units proposed.

For NRG units, submit color samples for selection from manufacturer. Submit product literature, certifications, test reports and full size sample(s) of each color specified.

1.4 MOCK-UP

- A. Use materials and procedures accepted for the work
- B. Minimum sample panel size is 4 FT square
- C. Acceptable standard for the work is established by the accepted sample panel.
- D. Retain sample panel at the site until the Work has been completed.
- E. Include a grouting demonstration panel if grouting operations planned exceed or vary from the limitations set forth in ACI 530.1-05 - Section 3.5

PART 2 - PRODUCTS

2.1 GENERAL

A. Units to be used in Fire-Resistive wall assemblies:

1. Where units are used in assemblies with Fire-Resistive Rating:
 - a. Provide units with aggregate type, and equivalent thickness that yield fire-resistances indicated for each wall assemblies.

- b. Acceptable calculation methodologies for determining Equivalent Thickness:
 - 1) NCMA TEK 7-1B.
 - 2) ACI 216.1 / TMS 0216.
 - c. Units tested per ASTM E119 are also acceptable.
 - 2. Provide solid units, or grouted hollow units, under lintels.
 - 3. Provide matching concrete bricks as required.
 - 4. Do not use chipped, cracked, spalled units exposed in finish work.
 - 5. Provide reinforced concrete masonry lintels fabricated from precast or site cast load bearing masonry units, filled and reinforced as indicated.
- B. For NRG units:
 - 1. Product name: NRG™ Insulated units are manufactured by quality block producers listed at www.energyefficientblock.com (see NRG producers).
 - 2. Related materials: Colored matching or contrasting mortar is available from manufacturer. Consult NCMA TEK Notes for mortar type and specifications. For all exterior mortar, use matching manufacturer-approved water repellent mortar admixture following manufacturer's instructions. Consult manufacturer for recommendations.
 - 3. Sizes and shapes: Face Sizes: Modular 8"x 16", 4" x 16". Face Mortar Joints: 3/8" exposed.
Shapes not available in the NRG™ design shall be substituted for using conventional hollow core CMU's matching the same finish and color of the NRG™ units. These conventional blocks shall also contain an integral water repellent when exposed to the building exterior.
 - 4. Scoring of the face shall be accomplished through the molding process, or by cutting 3/8" wide x 1/4" deep grooves into the face of the ICMU's or CMU's These grooves shall be pointed and tooled using the same mortar as used to lay the units. *When center scored units are used, the finished wall will be much neater to lay if stack bond is used. The use of scored units which have bonding patterns that do not require continuous vertical joints can be installed faster and more economically.
 - 5. *Exterior mortar joints should be raked back a minimum of 1/4" and tuck pointed with an approved water resistant grout.
 - 6. Face joints shall be 3/8" wide and the block joints on the sides, top and bottom shall be 3/8" wide, (thereby giving the visual effect of 8" x 8" squares)
Miscellaneous Tools and Products Required by Masons: Contractor shall include products such as mortar, reinforcing, ties, anchors, and other masonry attachments as may be required to properly finish the project. Striking or jointing tools, rags, and masonry cleaners shall also be required.
 - 7. Masonry cleaners: Carefully following manufacturer's instructions, use Burnished Custom Masonry Cleaner by PROSOCO (dilute 1 part to 3 parts clean water). Available from manufacturer. **Do not powerwash.**
CAUTION! Never use Muriatic Acid solution or any cleaner with an acid base on units.

2.2 CONCRETE MASONRY UNITS - GENERAL PURPOSE

- A. Concrete Masonry Units (CMU):
 - 1. Modular units complying with ASTM C90.
 - 2. Aggregate:
 - a. Normal Weight: In accordance with ASTM C33.
 - 3. Sizes and shapes as indicated or required for conditions.
 - 4. Face shell and web thickness: Table 3, ASTM C90.
- B. Corner Units:
 - 1. Exposed to view: Use bullnosed units at external corners and jambs of openings.

2. Not Exposed to view: Square-nosed units may be used where corners will not be visible in completed wall.

2.3 CONCRETE LINTELS AND SILLS

- A. General:
 1. Fabricate concrete lintels and sills in plant or site cast.
 2. Use concrete having minimum 28 day compressive strength of 21 MPa 3000 PSI.
 3. Exposed surfaces to have surface texture and color to match adjacent concrete masonry units.
 4. Fabricate lintels to modular sizes to match coursing.
 5. Mark tops of lintels with lintel schedule number.
- B. Fabricate lintels by one of following methods:
 1. Use masonry lintel units and reinforced concrete fill.
 2. Cast lintels monolithically with reinforcement.
 3. Provide vertical dummy joints matching pattern of vertical joints and scoring in concrete masonry walls in which installed.

2.4 REINFORCING

- A. Horizontal Reinforcing products including wire ladder truss: Specified in Section 04 05 23.
- B. Reinforcing Bars (vertical and horizontal): Specified in Section 03 20 00.

2.5 ACCESSORY ITEMS

- A. Masonry accessories: See Section 04 05 23.
- B. Mortar and grout: See Section 04 05 13.
- C. Firestopping: See Section 07 84 00 for rated wall penetrations.
- D. Sealants: See Section 07 92 13 and Section 07 92 16 for non-rated wall penetrations.
- E. Grout fill: As specified in Section 04 05 13.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Verify suitability of substrate to accept work.
- B. Verify that anchors and flashings are correct.
- C. Installation constitutes acceptance of substrate and responsibility for performance.

3.2 INSTALLATION

- A. General:
 1. Comply with provisions of ACI 530 and ACI 530.1, except where exceeded by requirements of the contract documents.
 2. Perform cutting with masonry saws.
 3. Cut as required to provide pattern indicated.
 4. Use solid units where cutting or laying would expose holes.
 5. Do not install damaged units.
 6. Do not wet concrete masonry units.
 7. Avoid use of less than half size units.
 8. Build chases and recesses as indicated and required for work of other trades.

- B. Install in running bond unless otherwise indicated.
- C. For NRG units:
1. Lighting: Provide adequate lighting for masonry work by placing all lighting at a reasonable distance from the wall for even illumination. Do not use trough lighting.
 2. Cutting: All cuts for bonding, boxes, holes, etc. shall be made using a motor driven masonry saw using either an abrasive or diamond blade.
Note: The NRG unit should not be cut in half.
 3. Mortar, bedding and jointing: Lay units with full mortar coverage on head and bed joints taking care not to block cores to be grouted or filled with masonry insulation. Tool all mortar joints when thumbprint hard into a concave configuration. Care should be taken to remove mortar from the face of masonry units before it sets. Tuckpoint the joints of scored units for proper appearance. All exterior scored units must be tuckpointed to prevent water penetration. **No rake joints.**
 4. Flashing of masonry work: Install flashing at locations shown in the plans and in strict accordance with the details and the best masonry flashing practices.
 5. Weep holes and vents: The bottom 2" of the vertical joints shall be left open in every other block unit in the first course above grade. Such open joints shall also be left open above flashing, beam units, and filled block areas that act as water stops. Consult NCMA TEK Notes for proper flashing and drawings.
 6. Inspection: The faces shall conform to the requirements of ASTM C90 when viewed from a distance of twenty (20) feet at right angles to the wall with normal lighting.
 7. Cleaning: Keep walls clean daily during installation using brushes, rags and the burlap squares supplied on the pallets. Do not allow excess mortar lumps or smears to harden on the finished surfaces. Harsh cleaning methods after walls have been erected will mar the surface of the blocks.
 8. Final cleandown: Clean the completed walls with PROSOCO Burnished Custom Masonry Cleaner (dilute 1 part to 3 parts clean water), strictly following the manufacturer's instructions – including thorough rinsing. Do not use acid or abrasives on the finished surfaces. Failure to strictly follow manufacturer's instructions can result in permanent damage to the finished faces. Do not apply Burnished Custom Masonry Cleaner with pressure spray above 50 psi. **Do not powerwash.**
 9. Field coat application: Apply to walls after cleandown and when the walls are dry. Apply the acrylic evenly to cover the entire surface without forming drips or runs. For maximum coverage and best appearance, apply with airless spray equipment. Consult manufacturer for further information.
 10. Maintenance: Properly installed and cleaned, units need virtually no maintenance other than routine cleaning (i.e. Pinesol or Fantastik). Graffiti, paint or dye stains may need special cleaning methods and products. Contact manufacturer for specific cleaning recommendations.
 11. Installation recommendations: Consult NCMA TEK Notes, for proper installation of concrete masonry units.

3.3 PARTITION IDENTIFICATION

- A. Identify partitions indicated on Drawings as having a required fire or smoke rating.
1. Follow guidelines set in Chapter 7 of International Building Code.
 2. Permanently identify with signs or stenciling with contrasting, 3 inch high letters in a manner acceptable to authority having jurisdiction.
 3. Suggested text for fire and smoke barriers: FIRE AND SMOKE BARRIER – PROTECT ALL OPENINGS.

3.4 LAYING AND TOOLING

- A. Lay out walls in advance for uniform and accurate spacing of bond patterns and joints.

- B. Properly locate openings, movement joints and offsets.
- C. Lay masonry units with face shells of bed joints fully mortared.
 - 1. Webs shall be fully mortared in all courses of piers, columns, and pilasters, in the starting course on foundations and when necessary to confine grout or loose filled insulation.
 - 2. Head joints shall be mortared a minimum distance from each face equal to the face shell thickness.
 - 3. Vertical cells to be grouted shall be aligned and unobstructed openings.
- D. Maintain nominal 3/8 IN joint widths.
 - 1. Cut joints flush where concealed.
 - 2. Tool exposed joints.
 - 3. Compress mortar in below ground joints.
- E. During tooling of joints, enlarge voids or holes, except weep holes, and completely fill with mortar.
- F. Point up joints at corners, openings and adjacent work to provide neat, uniform appearance.
- G. Remove masonry disturbed after laying.
 - 1. Clean and relay in fresh mortar.
 - 2. Do not pound units to fit.
 - 3. If adjustments are required, remove units, clean, and reset in fresh mortar.
- H. Where work is stopped and later resumed, rake back 0.5 masonry unit length in each course; do not tooth.
 - 1. Remove loose units and mortar prior to laying fresh masonry.
- I. Protect against weather, when work is not in progress.
 - 1. Cover top of walls with waterproof membrane, extend at least 4 FT down both sides of walls; anchor in place.
 - 2. Provide cold weather protection; Section 04 05 05.
- J. As work progresses, build in items indicated and specified.
 - 1. Fill in solidly with mortar around built-in items.
 - 2. Grout fill space between metal frames and masonry.
 - 3. Where built-in items are to be embedded in cores of hollow masonry units, place layer of metal lath in joint below and fill core with grout.
- K. Remove masonry protrusions extending 1/2 IN or more into cells or cavities to be grouted.
- L. For NRG units:
 - 1. Workmanship: ICMU's shall be laid with the faces level, plumb, and true to a line strung horizontally at the face. Units shall have uniform joint dimensions 1/4" both horizontal and vertical. Joints shall be tooled, straight and inform neatly after they are finger hard. Cut pieces shall be sized and placed appropriately to maintain consistency and bond. Masonry construction shall be completed using procedures and workmanship consistent with the best masonry practices.
 - 2. Control Joints: Control joints shall be installed in the locations designated in design plans.
 - 3. Coping: As shown in details/ or specified.

4. Draw blocks from more than one pallet at a time during installation. All exterior mortar shall include manufacturer-approved matching water-repellent additive added to each batch in the appropriate dosage rates for mortar type (M, S or N) per manufacturer's instructions. Refer to NCMA TEK Notes, for Hot and Cold weather construction practices. Lay units using the best concrete masonry practices. Install only quality units; reject all defective units as defined by ASTM C90.
Lay blocks with the faces level, plumb and true to the line strung horizontally at the ground or filled and polished face. Units shall have uniform, 3/8"-wide joints both horizontally and vertically on the finished side of the wall. Tool joints neatly after they are finger-hard to make them straight and uniform. Size and place cut pieces appropriately to maintain consistency and bond. Complete masonry construction using procedures and workmanship consistent with the best masonry practices.

3.5 REINFORCING

A. General:

1. In addition to the following general requirements, provide reinforcing size type and spacing as indicated on Drawings and Details.

B. General Reinforcing Requirements:

1. Reinforce masonry openings over 12 IN wide, where control and expansion joints are not provided, with horizontal joint reinforcing placed in 2 horizontal joints above lintel and below sill.
 - a. Extend reinforcing minimum of 24 IN beyond jambs of opening.
2. Embed horizontal reinforcing in bed joint mortar for entire length with minimum cover of 5/8 IN on exterior side of walls and 1/2 IN at other locations.
 - a. Provide same minimum cover for other embedded items.
3. Minimum laps for horizontal reinforcing: 6 IN.
4. Do not bridge Control Joints or Expansion Joints with horizontal reinforcing.
 - a. Install smooth dowels or other approved device across Control Joints which resist shear loads but allow in-plane expansion, contraction and linear shrinkage movements.

C. Horizontal Reinforcing (wire ladders/trusses):

1. Provide continuous horizontal joint reinforcing concrete masonry walls.
 - a. See elsewhere for reinforcing requirements for anchored veneers.
2. Unless otherwise indicated:
 - a. Install horizontal reinforcing with in 8 IN of first bed joint.
 - b. Running Bonds: Install horizontal reinforcing at 16 IN OC vertically thereafter.
 - c. Stacked Bonds: Install reinforcing 8 IN OC vertically thereafter where stack bond masonry is indicated.
3. Make corners and wall intersections by use of prefabricated L and T sections.
 - a. Cut and bend as required.
4. At intersecting load bearing walls install rigid steel anchors not over 24 IN OC vertically.
 - a. Embed ends in grout filled cores.

D. Horizontal Reinforcing Bars:

1. Install where indicated.
2. Sizes as indicated.

E. Vertical Reinforcing Bars at CMU Walls other than Anchored Veneers:

1. Install vertical reinforcing bars as indicated.
2. When not indicated, provide the following minimum vertical reinforcing:
 - a. Provide one No.5 continuous at 48 IN on center.
 - b. Provide one No.5 Continuous at each corner, at each side of each opening, at each side of each control joint, and at the ends of walls.

3.6 GROUT FILL

- A. Do not place grout until entire portion of wall to be grouted has attained sufficient strength to resist grout pressure.
- B. Use mechanical means to remove air pockets and void for proper consolidation of fill.
- C. Grout walls incrementally as CMU is placed. Minimize lift heights to ensure that walls will remain safe and stable until grout has attained sufficient strength to resist overturning or collapse.
 - 1. Consider detrimental lateral loads which could be anticipated including storms, winds, seismic, soil etc.
 - 2. Adequately brace as needed.
- D. Where vertical or horizontal reinforcing bars are required, place and inspect prior to filling operation.
- E. Fill cores containing vertical reinforcing.
- F. Place in maximum 4 FT lifts.
- G. Leave lifts minimum 1-1/2 IN below top of course to form key with next lift.

3.7 CONTROL JOINTS (CJ)

- A. Provide Control Joints (and other movement joints) as indicated.
- B. Where not indicated:
 - 1. Locate CJ's at natural planes of weakness in masonry wall such as:
 - a. Changes in wall height.
 - b. Changes in wall thickness, such as at pipe and duct chases and pilasters.
 - c. At (above) movement joints in foundations and floors on which wall is bearing.
 - d. At (above) movement joints in roofs and floors that bear on wall.
 - e. Openings: Within 8 IN of one or both jambs of door, window, louver and similar openings:
 - 1) Place CJ at one side of openings less than 6 FT wide.
 - 2) Place CJ at both sides of openings greater than 6 FT wide.
 - f. Corners: Within 4 FT of corners (on at least one leg).
 - 1) Opposing leg: No more than 20 FT from corner.
 - g. Intersections: Within 12 FT of wall intersections.
 - 2. In addition to of the above, locate CJ's at no more than the following absolute maximum (horizontal) distances:
 - a. Walls less than 5 M 16 FT-8 IN tall: Not more than 1-1/2 times the wall height.
 - b. Walls greater than 5 M 16 FT-8 IN tall: No more than 7.62 M 25 FT O.C.
- C. Installation/construction of CJ's:
 - 1. Utilize sash blocks or similar shapes which have slotted end to accept gaskets.
 - a. Pre-molded Control Joint Strips: Specified in Section 04 05 23.
 - 2. Cut ladder/truss type horizontal reinforcing as it crosses CJ's.
 - 3. While mortar is still fresh, rake out mortar from joint, leaving a completely clean joint.
 - 4. After wall has cured, install backer rod and sealant on both wall faces.
 - a. Sealant and Backer Rod: Specified in Section 07 92 13 and Section 07 92 16.

3.8 LINTELS, FLASHING AND SEALANTS

- A. Installation of flashing, weeps and similar masonry accessories: Specified in Section 04 05 23.
- B. Sealant installation requirements:

1. Sealant and Backer Rod: Specified in Section 07 92 13 and Section 07 92 16.
 2. Remove mortar in joint under relieving lintel and at ends.
 3. Seal joints between CMU's and relieving lintels.
 4. Seal Expansion and Control Joints.
- C. Provide precast masonry lintels wherever openings more than 12 IN wide are indicated without other structural support or other supporting lintels.
1. Thoroughly cure lintels before handling and installation.
 2. See lintel schedule for size and type required.

3.9 INSTALLATION TOLERANCES

- A. Maximum variation from plumb in vertical lines and surfaces of columns, walls and arises:
1. 1/4 IN in 10 FT.
 2. 3/8 IN in a story height not over 20 FT.
 3. 1/2 IN in 40 FT or more.
- B. Maximum variation from plumb for external corners, control joints, expansion joints and other conspicuous lines:
1. 1/4 IN in any story or 20 FT maximum.
 2. 1/2 IN in 12 m FT or more.
- C. Maximum variation from level of grades for exposed lintels, sills, parapets, horizontal grooves and other conspicuous lines:
1. 1/4 IN in any bay or 20 FT.
 2. 1/2 IN in 40 FT or more.
- D. Maximum variation from plan location of related portions of columns, walls and partitions:
1. 1/2 IN in any bay or 20 FT.
 2. 3/4 IN in 40 FT or more.
- E. Maximum variation in cross section of columns and thicknesses of walls from dimensions indicated:
1. Minus 1/4 IN.
 2. Plus 1/2 IN.

3.10 REPAIR, POINTING AND CLEANING

- A. Remove and replace loose, stained, or damaged units.
1. Provide new units to match.
 2. Install in fresh mortar.
 3. Point to eliminate evidence of replacement.
- B. Clean in accordance with Section 04 05 10.

3.11 INSPECTION AND TESTING

- A. Permit and facilitate access to the construction sites and the performance of activities for quality assurance by the testing and inspection agencies.
- B. Comply with the requirements of ACI 530.1 Section 1.6C and facilitate the testing and inspection agencies needs.
- C. The Owner will provide testing and inspection services. This does not relieve the contractor of the responsibility to furnish materials and construction in full compliance of contract documents.

CONCRETE MASONRY (CMU)

Kansas City Downtown Streetcar
KCMO Contract No. 89022000-004

**SECTION 05 05 05
GALVANIC CORROSION PROTECTION**

PART 1 - GENERAL

1.1 SUMMARY

- A. Furnish all labor, materials, tools, equipment, and services for Galvanic Corrosion Protection, as indicated, in accordance with provisions of Contract Documents.
- B. Use information in this Section to coordinate, select and apply products listed in other Sections for purposes of Galvanic Corrosion Protection.
- C. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. Provide galvanic corrosion protection:
 1. Appendix C, SMACNA Sheet Metal Manual –6th. Edition.
 2. ASTM G82 and ASTM STP576.

1.3 GALVANIC CORROSION POTENTIAL

- A. Galvanic Scale: Less Noble, electropositive or anodic metals which corrode more readily are at top of scale. Those that are more electronegative or cathodic, Noble, are at bottom of scale.

GALVANIC SCALE
Anodic / Corroded End / Less Noble Materials
Zinc
Aluminum
Galvanized Steel
Cadmium
Mild Steel / Wrought Iron
Cast Iron
Stainless Steel, Types 304 & 316 (active)
Lead-tin Solder
Lead
Brass / Bronze
Copper
Stainless Steel, Types 304 & 316 (Passive)
Cathodic / Protected End / Noble Materials

PART 2 - PRODUCTS – NOT USED**PART 3 - EXECUTION****3.1 INSTALLATION**

- A. Avoid contact between metals that are farther apart in the scale.
- B. Do not couple a small exposed area of a less noble material with a large area of a more noble material.
- C. Coat noble metal with a suitable paint or other non-metallic coating or coat both surfaces at their interface with zinc chromate or bituminous coating.
- D. Separate the metals by tape, gasket, waterproof paper, elastomeric sheet, sealant or other non-absorptive, non-conductive material.
- E. Do not allow moisture run-off from noble material to drain onto less noble material.
- F. Do not use copper nails for fastening galvanized steel roof panels .
- G. Do not use galvanized steel nails on copper roofing.
- H. Do not use galvanized bolts, nuts or washers on stainless steel components.

3.2 METALS EMBEDDED IN CONCRETE

- A. Hot-dip galvanized with bituminous paint.
 - 1. Use at exterior and interior areas exposed to weather or high humidity.
- B. Non-galvanized steel with bituminous paint:
 - 1. Use at interior areas with low or ordinary humidity.
 - 2. Avoid direct embedment where exposed to weather or high humidity.

PART 4 - MEASUREMENT

4.1 Measurement – No Separate measurement will be made for Work described in this Section.

PART 5 - PAYMENT

5.1 Payment – Payment for items in this Section will be incidental to the Contract unit cost of the metal bid items.

END OF SECTION

SECTION 05 12 00**STRUCTURAL STEEL FRAMING****PART I - GENERAL****1.1 SUMMARY****A. Description**

This Work includes furnishing, fabrication and installation of structural steel, other than bridges, as shown on the Contract Drawings and as specified herein. The work includes the furnishing of labor, material, equipment to procure, fabrication, painting, transport, erect and install steel bridges. The work also includes base plates, shear stud connectors, expansion joint plates and all accessories required for a complete installation.

AWS	D1.5	Bridge Welding Code

1.3 SUBMITTALS

- A. Submittals shall be made in accordance with the requirements of the Project Quality Plan, except as modified herein.
- B. Product Data: Technical data and installation instructions including laboratory test reports and supporting data to show compliance with specifications.
 - 1. Structural steel (each type), including certified copies of mill reports covering chemical and physical properties.
 - 2. High strength bolts (each type), including nuts and washers (direct tension indicators, if used).
 - 3. Structural steel primer paint.
- C. Method Statement including welding procedure, welders qualifications, fabrication, painting/galvanization, erection procedures/schedule, maintaining of yard operation and protection of passing trains shall be submitted.
- D. Nondestructive weld test reports shall be submitted within 5 days of the performance of the tests.
- E. Mill test reports signed by manufacturers certifying specified products comply with requirements. Indicate structural strength, destructive and nondestructive test and analysis.
 - 1. Structural steel, including chemical and physical properties.
 - 2. Bolts, nuts and washers, including mechanical properties and chemical analysis.
 - 3. Direct tension indicators.
 - 4. Shear stud connectors
 - 5. Shop primers.
- F. Shop Drawings shall be prepared under supervision of and signed and sealed by qualified licensed professional engineer, including complete details and schedules for fabrication and assembly of structural steel members, procedures, and diagrams.
 - 1. Indicate details of cuts, connections, splices, camber, holes, and other pertinent data.
 - 2. Indicated welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld.
 - 3. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify high strength bolted slip critical, direct tension, or tensioned shear/bearing connections.

4. Provides setting drawings, templates, and directions for installation of anchor bolts and other anchorages to be installed as work of others.
- G. Copies of each survey conducted, showing elevations and locations base plates and anchor bolts to receive structural steel and final elevations and locations for major members. Indicate discrepancies between actual installation and contract documents.

1.4 QUALITY CONTROL

- A. Quality control shall meet the requirements of the Project Quality Plan, except as modified herein.
- B. Fabrication shall be in accordance with the requirements of the AREMA Chapter 15, Part 3, the AISC and ASTM manuals and standards referenced herein and as specified. Welding procedures and welders shall be qualified in accordance with requirements of AWS D1.1 and D1.5.
- C. The Contractor or steel fabricator shall engage a qualified licensed professional engineer to prepare calculations, shop drawings, and other structural data for steel connections.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Deliver structural steel to site in quantities and at times ensuring continuity of installation.
- B. Materials shall be delivered clearly identified, marked, and match marked as necessary for erection. Match markings shall conform to those marks shown on the approved shop drawings.
- C. Store materials to permit easy access for inspection and identification. Keep steel members off of the ground using pallets, platforms, or other supports. Protect steel members and packaged materials from erosion and deterioration.
 1. Store fasteners in a protected place. Clean and re-lubricate bolts and nuts that become dry or rusty before use.
 2. Do not store materials on structure in a manner that might cause distortion or damage to members or supporting structures. Repair or replace damaged materials or structures as directed by the Engineer.

PART II - PRODUCTS

2.1 MATERIALS

- A. Materials shall conform to the following requirements:
 1. Structural plates, shapes, and bars: ASTM A 588, ASTM A 709 and ASTM A36
 2. Nuts: ASTM A 563, Heavy Hex; Washers: ASTM F 436, Grade 3
 3. High Strength Bolts: ASTM A 325, Type 3 or ASTM A490, Type 3
 4. Welding Electrodes: AWS D1.1
 6. Structural Steel Pipe: ASTM A 53 Grade B

2.2 FABRICATION

- A. Fabricate and assemble structural steel in shop to the greatest extent possible. Fabricate structural steel according to referenced specifications and in Shop Drawings. Architecturally exposed structural steel shall be in accordance with section 05 12 13.
1. Dimensions of members and pieces shall be modified as required to compensate for weld shrinkage, distortion, elastic deformation, camber, sweep, slope, waste for proper machining and oxygen cutting, and other material alterations that may make initial in-process fabricating dimensions and material ordering dimensions different than the final product design dimensions shown on the Contract Drawings.
 2. After obtaining approval of shop and erection drawings, all members and plates shall be fabricated to the design dimensions shown on the plans in accordance with the applicable requirements of the AISC Manual and Code, and as specified herein.
 3. Joint contact surfaces and areas adjacent to bolt holes shall be free of all scale (except tight mill scale), burrs, dirt, paint, and other foreign material that may prevent solid seating of the parts.
 4. Galvanize as shown on the Contract Drawings or as specified in Section 05 50 00 Metal Fabrications. Steel shall be galvanized in such a manner so that the paint will bond.
 5. Painting surfaces of metal in contact with each other when assembled shall only be painted as allowed by AISC specifications. Complete assemblies, including welding of the units, before starting shop priming operations.
 6. Members shall be free from twists, bends or other deformations. Measurements shall be checked before drilling or reaming holes to ensure that the assembly conforms to the dimensions shown on approved shop drawings within the dimensional tolerances specified.
 7. Accurately mill ends of columns and other members transmitting loads in bearing.
 8. Unless shown otherwise, comply with AISC Manual of Steel Construction for framed or seated connections. Unless larger reactions are indicated on the plans, connections shall be designed for at least one-half of the total uniform load capacity tabulated in the tables of the manual for the given shape and span of the beam in question. A minimum length of framed connection shall be provided equal to one-half of the "T" distance of the beam web.
 9. Match-marks shall be provided on connecting parts assembled and drilled for field connections.
 10. Prepare steel surfaces as recommended by the manufacturer of shear connectors. Use automatic end welding of headed stud shear connectors according to AWS D 1.1 and manufacturer's printed instructions.
- B. Shop Connections
1. Structural steel shall be welded in accordance with AWS D1.1 and AWS D1.5.
 3. Welding electrodes and fluxes shall be stored and controlled in accordance with procedures recommended by the welding electrode manufacturer.

3. Groove joints shall be prepared for field welding. Such joints shall be assembled in the shop, considering correct camber, to ensure proper joint alignment and fit.
 4. Shop install and tighten high strength bolts according to RCSC's Specification for Structural Joints Using ASTM A 325 or A 490 Bolts.
 5. Assemble and weld built-up sections by methods that maintain true alignment of axes without warp.
- C. Holes: Provide holes required for securing other work to structural steel framing and for passage or other work through steel framing members shown on the Shop Drawings.
1. Cut, drill, or punch holes perpendicular to metal surfaces. Do not flame cut holes or enlarge holes by burning. Drill holes in bearing plates.
 2. Weld threaded nuts to framing and other specialty items as indicated to receive other work.

2.3 SHOP PRIME COAT PAINTING

- A. Clean and shop prime coat all shop fabricated structural steel before delivering to the site. Prepare surfaces and perform painting in accordance with SSPC specifications.
- B. Shop prime steel surfaces, except the followings:
1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
 2. Field welded surfaces.
 3. High strength bolted surfaces with slip critical connections.
 4. Sprayed on fireproofing surfaces.
 5. Galvanized surfaces.

2.4 SOURCE QUALITY CONTROL

- A. General
1. Materials shall conform to the designated ASTM requirements, and welding electrodes conform to the AWS requirements.
 2. Welding equipment shall be inspected to ensure that it conforms to the applicable codes or specifications. The size, length, location and quality of all welds shall be examined visually. All non-destructive testing shall be performed by an independent third party that is pre-approved by the Engineer prior to the commencement of the welding work. The Engineer may choose to witness the non-destructive tests. Records of the test reports shall be prepared, maintained, and submitted to the Engineer.
 3. The installation and tightening of bolts shall be to the specified requirements. An inspecting torque wrench shall be used for arbitration of disputes concerning bolt tension in the turn-of-nut method of installation.

4. Fabricated and assembled members shall meet the dimensional tolerances and permitted deviations.
 5. Surface preparation and primer application shall be in compliance with these specifications.
 6. Each fabricated and inspected piece shall be marked, by paint or ink stamp, with the inspector's acceptance mark.
- B. Inspection and Non-Destructive Testing of Welded Joints
1. The following examination methods shall be used as and where specified. The required examinations shall be shown on the Shop Drawings. The following list is in descending order of rank. When a particular examination method is specified for a joint and the method is impracticable to use, the highest order method that is practicable shall be used. The alternative method will be subject to approval.
 - a. Radiographic Method
 - b. Ultrasonic Method
 - c. Magnetic Particle Method
 2. Requirements for Ten Percent Examination
 - a. A 12" section of weld shall be examined in each 10' increment of each welder's work. If the examination meets the acceptance standards of AWS D1.1 or D1.5, the 10' of weld represented will be accepted.
 - b. If the examination fails to meet the acceptance standards of AWS D1.1 or D1.5, two additional 12" sections shall be examined in the 10' increment. If both of these examinations meet the acceptance standards, the 10' weld represented will be accepted. The defects detected in the first examination shall be repaired and the work shall be re-examined.
 - c. If one or both of the examinations fail to meet the acceptance standards of AWS D1.1 or D1.5, the remaining weld of the 10' increment shall be examined. The areas that do not meet the acceptance standards shall be repaired and the work shall be re-examined.
- C. Replacement of Defective Welds
1. Welds found to contain defects that are prohibited by AWS D1.1 or D1.5 shall be replaced or repaired by methods permitted by AWS D1.1 or D1.5. Repaired and replaced welds shall be re-examined by the same method and acceptance standard used to examine the original defective weld.
 2. In addition to the above, when welds are found to contain prohibited defects, the cause of the defective welding shall be determined and immediate corrective action shall be taken. Shop inspectors shall be required to check and verify that corrective actions are instituted and carried out.

PART III - EXECUTION

3.1 ERECTION EXAMINATION

- A. The Contractor shall verify, by dimensional check, that all support areas are complete and correct in size, location and elevation within tolerances allowed by AISC specifications and code.
- B. The Contractor shall verify, by dimensional check, that all embedded anchor bolts at supports are correct in diameter, location and projection within tolerances allowed by AISC specifications and code.

3.2 FIELD ERECTION

- A. All steel shall be erected in accordance with the erection sequence stated on the approved erection Shop Drawings.
- B. Field welds shall conform to the requirements for shop welding and shall be placed only where indicated on the approved Shop Drawings.
- C. The Contractor shall verify by measurement that the final alignment and profile of the erected steel conforms to the requirements of the plans.

3.3 FIELD QUALITY CONTROL

- A. The Contractor shall comply with the inspection requirements as defined in the Project Quality Plan.

PART IV - MEASUREMENT

- 4.1 Measurement** – No Separate measurement will be made for Work described in this Section.

PART V - PAYMENT

- 5.1 Payment** – Payment for items in this Section will be incidental to the Contract unit cost of the metal bid items.

END OF SECTION

SECTION 05 12 10
STRUCTURAL STEEL**PART 1 - GENERAL****1.1 SUMMARY**

- A. Furnish all labor, materials, tools, equipment, and services for Structural Steel, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. Structural steel work covered herein shall be fabrication and erection of steel framing and bracing members including connections and steel material either supporting or connected to steel members shown on structural plans and not specified in other sections.
- B. Quality standards latest edition of the following standards plus any corresponding published revisions at the time of bidding shall be the applicable standard. The Local Building Code shall govern when conflicts occur.
 - 1. Local Building Code.
 - 2. American Institute of Steel Construction (AISC):
 - a. ANSI/AISC 360 "Specification for Structural Steel Buildings" (referred to herein as the AISC Specification).
 - b. Code of Standard Practice for Steel Buildings and Bridges (referred to as AISC Code of Standard Practice).
 - c. Quality Certification Program.
 - 3. American Welding Society:
 - a. Structural Welding Code - Steel ANSI/AWS-D1.1 (referred to herein as the AWS Code). The AWS Code shall govern the techniques and quality of welding and testing procedures. Statements contained in the AWS Code requiring information to Bidders and/or Contract Documents to define nondestructive testing or statements defining responsibilities and obligations for services and payment shall be disregarded.
 - 4. Research Council on Structural Connections: "Specifications for Structural Joints Using High Strength Bolts" (referred to herein as the RCSC Specification).
 - 5. Steel Structures Painting Council (SSPC): Steel Structures Painting Manual Vol. 2, "System and Specifications" (referred to herein as the SSPC Specification).
- C. Qualifications:
 - 1. Steel fabricator:
 - a. Certified by AISC Quality Certification Program for Structural Steel Fabricators and is designated as AISC Certified Fabricator, Standard for Steel Building Structures.
 - b. Fabricators not certified shall have minimum 10 years experience and shall employ an approved testing agency to inspect fabrication work performed off site. The testing agency shall furnish weekly inspection reports and a final report to the Building Official and the Architect certifying the work was performed in accordance with the specifications and approved shop drawings.
 - 2. Steel erector:
 - a. Minimum 10 years experience in erection of structural steel.
 - b. Certified as Certified Steel Erector by AISC quality Certification Program.
 - 3. Certification by other equivalent programs subject to approval of the Structural Engineer.

- D. Source quality control:
 - 1. Provide access and facilities for testing agency during shop and field inspections.
- E. Testing and inspection: Employ and pay for services of an independent testing agency acceptable to Architect, to inspect structural steel work for compliance with specifications, and perform following:
 - 1. Inspect quality of base material.
 - 2. Inspect shop fabricated structural steel members.
 - 3. Inspect shop and field welding in accordance with Section 6 of AWS Code, including qualification tests of welders and following non-destructive testing.
 - a. Test 20 percent of fillet welds with liquid dye penetrate.
 - b. Test 100 percent of full penetration welds with ultrasonic or radiographic testing.
 - 4. Inspect high strength bolting in accordance with Section 6 of Specification for Structural Joints.
 - 5. Inspect structural steel during erection.
 - 6. Inspect stud welding in accordance with AWS Code.
 - 7. Inspect shop painting.
 - 8. Prepare and submit test reports to Architect. Cooperate with Architect to determine corrective measures necessary for defective work.
 - 9. Upon completion certify that fabrication and erection comply with Contract Documents.
- F. Provide testing and inspection agency with sufficient notification and access so that inspection and testing can be accomplished.
- G. Previous acceptance of material or finished members by testing and inspection agency or Architect/Engineer shall not prevent its rejection at later date if it does not comply with specifications.
- H. Tolerances:
 - 1. Rolling: ASTM-A6.
 - 2. Fabrication and Erection tolerances: AISC Code of Standard Practice.
- I. Complete final design of connections not defined on Contract Documents.
 - 1. Design connections at each end of member for loads (in Kips) noted in parenthesis. If load not indicated, design for capacity of member.
 - 2. Connection arrangement and detail shall be consistent with similar connections where indicated on Contract Documents.
 - 3. Connection design shall satisfy applicable Building Codes and shall use latest approach to design as offered by AISC.

1.3 SUBMITTALS

- A. Shop Drawings:
 - 1. Indicate details including cuts, copes, connections, holes and welds. Indicate shop and field welds using AWS symbols. Indicate connections where high strength bolts are required.
 - 2. Headed stud placement drawings.
- B. Product Data:
 - 1. Source and certification of quality for high-strength bolts, nuts and washers.
 - 2. Technical data on base plate grout.
- C. Project Information:
 - 1. Fabricator's AISC Certification or name of independent testing agency for use by non-certified fabricator along with proof that fabricator has 10 years experience in fabrication of structural steel for buildings.
 - 2. Inspection reports and certification of shop fabrication by independent testing laboratory for non-certified fabricator.
 - 3. Steel erector's AISC Certification and proof that steel erector has 10 years experience in erection of structural steel.

4. Welding Procedure Specification (WPS) for shop and field welds.
- D. Contract closeout information:
1. Certificate by fabricator that steel was fabricated in accordance with the approved construction documents.
 2. Certificate by erector that steel was erected in accordance with the approved erection plans and specifications.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Steel, structural "W" shapes and tee's: ASTM A992 (50 ksi yield point).
- B. Other steel shapes and plate: ASTM A36.
- C. Pipe round: ASTM A53, Grade-B.
- D. Tubing square or rectangular: ASTM A500, Grade-B (317 MPa 46 KSI minimum).
- E. Bolts, nuts, and washers, high-strength. Conform to RCSC Specification
1. Twist off style, conform to ASTM F1852
 - a. Approved bolts:
 - 1) Tension control bolt by LeJeune Bolt Company, Burnsville, MN.
 - 2) Tru-Tension Fasteners by Nucor Fastener a Division of Nucor Corporation, St. Joe, Indiana.
 - 3) Lohr Fasteners by Lohr Structural Fasteners, Humble, TX.
- F. Bolts, nuts and washers, standard strength:
1. Bolts: ASTM A307, Type A.
 2. Nuts: ASTM A563.
 3. Washers plain: ANSI/ASME-B18.22.1.
- G. Anchor bolts, high-strength:
1. Bolts or rod for threading: ASTM F1554-105 ksi. meeting supplementary requirement S4. Pretension to load indicated on plans.
 2. Nuts, heavy hex: ASTM-A563.
 - a. Up to 1 1/2 IN diameter: Grade D hex
 - b. Over 1-1/2 IN diameter: grade DH Heavy Hex.
 3. Washers:
 - a. Hardened Steel: ASTM F436 type 1
 - b. Load indicator type: Direct Tension Indicating Washers as manufactured by TurnaSure LLC of Langhorne, PA or approved equal, Install per manufacturers recommendations
 4. Thread tolerance: ANSI/ASME-B18.1, Class 2A.
- H. Anchor bolts, standard strength:
1. Bolts or rod for threading: ASTM A36 or ASTM F1554-36 ksi.
 2. Nuts and washers:
 - a. Nuts: ASTM A563.
 - b. Washers plain: ANSI/ASME-B18.22.1.
 3. Thread tolerance: ANSI/ASME-B18.1, Class 2A.
- I. Welding electrodes:
1. Shielded metal-arc: AWS A5.1 or AWS A5.5, E70XX
 2. Submerged-arc: AWS A5.17 or A5.23, F7X-EXXX.
 3. Gas metal-arc: AWS A5.18, ER70S-X.
 4. Flux cored-arc: AWS A5.20, E70T-X (except 2, 3, 10, GS).
- J. Headed studs and deformed bar anchors:

1. Headed studs (HS)
 - a. Fabricated from cold drawn bar stock conforming to ASTM A 108, grades 1010 through 1020.
 - b. AWS D1.1 type B.
 - c. Minimum Yield strength: 51 ksi.
 - d. Minimum tensile strength: 65 ksi over 3/8 IN diameter.
 - e. Minimum tensile strength: 55 ksi 3/8 IN diameter and under.
 2. Deformed anchor bars (DBA): Straight, unless otherwise indicated.
 - a. ASTM A496.
 - b. Minimum yield strength: 70 ksi.
 - c. Minimum tensile strength: 80 ksi.
- K. Grout: Pourable.
1. "Duragrout" as manufactured by L&M Construction Chemicals, or equal.
 2. Minimum Strength : 4000 PSI at 7 days and 8000 PSI at 28 days.
- L. Expansion anchors:
1. Expansion anchors shall be a single-end expansion shield anchor which complies with the descriptive part of Federal Specification FF-S325, Group II, Type 4, Class 1 for concrete expansion anchors. Anchors shall be Hilti Kwik Bolt TZ Expansion anchor by Hilti fastening systems of Tulsa, OK (ICC Report No. ESR-1917) or equal.
- M. Adhesive anchors:
1. Threaded rods, bolts, etc., indicated as adhesive anchors into concrete or solid masonry:
 - a. HIT HY-150 MAX - SD adhesive by Hilti Fastening Systems of Tulsa, OK (ICC Report No. ESR-3013) or equal.
 - b. Unless indicated otherwise, adhesive anchor bolt shall conform to HAS - E Standard ISO Class 5.8 by Hilti or equal. Do not field cut rods without engineer's approval.

2.2 FABRICATION

- A. General:
1. Fabricate and assemble material in shop to greatest extent possible.
 2. Use A325 bolts, twist-off type, unless otherwise indicated.
 3. One sided or other types of eccentric connections not indicated, will not be permitted without prior approval.
 4. Bevels for field welds may be flame cut provided such cutting is done automatically. Leave free of burrs and slag.
 5. Grind flush web fillets at webs notched to receive backup plates for flange groove welds.
 6. Flame cut edges of stiffener plates at field or shop butt welds. Do not shear.
 7. Accurately mill bearing ends of columns.
 8. Trusses, beams and girders over 15 m 50 FT in length shall be cambered in an amount required by the Architect. Members less than 15 m 50 FT in length shall be cambered when indicated on the drawings or otherwise fabricate such that after erection any natural camber due to rolling or assembly is upward.
 9. Cut, drill, or punch holes at right angles to surface of metal.
 - a. Do not make or enlarge holes by burning.
 - b. Make holes clean cut, without torn or ragged edges.
 - c. Remove outside burrs resulting from drilling or reaming operations with tool making 1.6 mm 1/16 IN bevel.
 - d. Provide holes in members to permit connection of work of other trades.
 10. Make allowance for draw in of tension bracing.
 11. Make splices only as indicated.

12. Headed stud type shear connectors (H.S.) and deformed bar anchors (D.B.A.), on Drawings: Automatically end welded in accordance with AWS Code.
 - a. When headed stud type shear connectors are to be either shop or field applied, clean top surface of beam flanges in shop to remove oil, scale, rust, dirt and other materials injurious to satisfactory welding.
 - b. Fillet welding of headed studs and deformed anchors is not allowed without prior approval.
 - c. Do not weld studs when temperature is below -18 degC 0 degF or surface is wet with rain or snow.
 - d. After welding, remove ceramic ferrules and maintain clean and free from substances which would interfere with function as anchor or bond of deformed anchor bars.
 - e. Quality control: Weld minimum of 2 studs at start of each production period to determine proper generator, control unit, and stud welder settings.
 - 1) These studs shall be capable of being bent 45 degrees from vertical without weld failure. These studs shall not be included as a part of the required construction.
 - 2) All production studs shall be sounded by a sharp blow with a hammer.
 - 3) If, after welding, a stud does not ring when struck by a hammer or visual inspection reveals that sound weld or full 360 degree fillet has not been obtained for a particular stud, that stud shall be struck with hammer and bent approximately 15 degrees off perpendicular to nearest end of beam.
 - 4) Studs meeting this test shall be considered acceptable and shall be left in this position.
 - 5) Studs bent beyond 15 degrees shall be considered ineffective and replaced.
 - 6) Studs failing under this test shall be replaced.
- B. Welding:
1. Welding, techniques of welding employed, appearance and quality of welds, and methods used to correct defective work shall comply with AWS Code, and requirements indicated.
 2. Test and qualify welding operators and tackers in compliance with AWS Code for position and type of welding to which they will be assigned.
 - a. Conduct tests in presence of approved testing agency.
 - b. Certification within last 12 months from a welding inspector will be acceptable provided samples of welder's work are satisfactory.
 - c. At discretion of testing agency, shop personnel continuously employed at welding process for which they have been qualified may be accepted from older qualification tests.
 3. Qualify joint welding procedures or test in accordance with AWS qualification procedures.
 4. Before start of welding work, meet with testing agency and welders to review and verify procedures.
 5. Comply with AWS Code to minimize shrinkage and distortion stress.
 6. Use back-up plates in accordance with AWS Code, extending minimum of 25 mm 1 IN either side of joint.
 7. Make flange welds before making web welds.
 8. For manual shielded metal-arc welding: Comply with Article 4.6 of AWS Code.
 9. Low hydrogen electrodes: Dry and store electrodes in compliance with AWS Code.
 10. Do not perform welding when ambient temperature is lower than -18 degC 0 degF, or where surfaces are wet or exposed to rain, snow, or high wind, or when welders are exposed to inclement conditions.
 11. Before starting welding:
 - a. Carefully plumb and align members.
 - b. Fully tighten bolts.

- c. Assembly and surface preparation shall comply with AWS Code.
- d. Preheat base metal to temperature stated in AWS Code.
 - 1) When no preheat temperature is given and base metal is below 0 degC 32 degF, preheat base metal to at least 21 degC 70 degF.
 - 2) Maintain temperature during welding.
 - 3) Preheating shall bring surface of base metal within distance from point of welding equal to thickness of thicker part being welded or 75 mm 3 IN, whichever is greater, to specified preheat temperature.
 - 4) Maintain this temperature during welding.
- e. Each welder is to provide identifying mark at welds worked on.

2.3 SURFACE PREPARATION AND SHOP-APPLIED COATINGS

- A. Surfaces not to be coated:
 - 1. Do not coat following surfaces:
 - a. Surfaces to be fireproofed with spray-on material.
 - b. Machined surfaces, surfaces adjacent to field welds, contact surfaces of bolt connections where connection is specified as slip critical, and top of top flanges of beams.
 - c. Other members for which no coating is specified.
 - 2. Clean thoroughly before shipping; remove loose mill scale, rust, dirt, oil and grease.
- B. Hot-dip Galvanized (HDG) members:
 - 1. Galvanize following members:
 - a. Members set in, or in contact with, exterior surface material, including:
 - 1) Brick ledge angles.
 - 2) Embedded items in exterior surfaces.
 - b. Exterior exposed structure not indicated to be shop otherwise shop finished.
 - c. Other members indicated.
 - 2. Clean thoroughly before galvanizing.
 - 3. Galvanize in accordance with ASTM A123.
- C. Exterior Surfaces to be shop-primed for finish paint:
 - 1. Primer: As recommended by finish (top) coat manufacturer for substrate.
 - 2. Primer: Tnemec, Series 94-H20 Hydro-Zinc.
 - 3. Primer: Sherwin-Williams Pro-Cryl Universal Acrylic Primer, B66-310 Series.
- D. Interior Surfaces to be shop-primed for finish paint:
 - 1. Primer: As recommended by finish (top) coat manufacturer for substrate.
 - 2. Primer: Tnemec, Series 94-H20 Hydro-Zinc.
 - 3. Primer: Sherwin-Williams Pro-Cryl Universal Acrylic Primer, B66-310 Series.

PART 3 - EXECUTION

3.1 ERECTION

- A. Safety:
 - 1. Contractor is solely responsible for safety. Construction means and methods and sequencing of work is the prerogative of the Contractor.
- B. Capacity of partially complete construction:
 - 1. Consider that full structural capacity of many structural members is not realized until structural assembly is complete; That is, until slabs, decks and diagonal braces are installed. Partially complete structural members shall not be loaded out of sequence without an investigation.
 - 2. Until elements of the permanent lateral bracing system of the structure are complete, temporary lateral bracing for the partially complete structure will be required.

- C. Temporary bracing:
1. Adequate temporary bracing to provide stability and resist loads to which the partially complete structure may be subjected to including construction activities and operation of equipment is the responsibility of the Contractor.
 2. If not obvious from the drawings, confer with the Architect to identify those structural elements that must be complete before the structure's permanent lateral bracing system is effective. The design of the temporary bracing system must consider the sequence and schedule of placement of such elements and effects of loads imposed on the structural steel frame by partially or completely installed work of other trades. Do not remove temporary bracing until the permanent lateral bracing system is effective.
- D. General:
1. Set base and bearing plates accurately and grout immediately as indicated.
 - a. Use metal wedges, shims or setting nuts as required.
 - b. Pack grout solidly between plate and bearing surface.
 2. Clean bearing and contact surfaces before assembly.
- E. Install A325SC bolts with washers. Install and tighten in accordance with the RCSC Specifications or in accordance with manufacturer's instructions when twist-off bolts are used.
- F. Field weld as specified in paragraph "Welding."
- G. Do not use gas cutting to correct fabrication errors on major members.
1. Gas cutting on minor members may be permitted when members are not loaded, only after approval by Architect.
- H. Tighten and leave in place erection bolts used in welded construction.
- I. Provide beveled washers to give full bearing to bolt head or nut where bolts are to be used on surfaces having slopes greater than 1:20 with a plane normal to bolt axis.
- J. After installation, touch up damaged or abraded areas of primed steel using same materials used for shop priming.
1. Clean field welds, bolted connections and abraded areas before touching up.
- K. After installation, repair galvanized surfaces damaged or abraded using zinc rich paint in accordance with ASTM A780.
1. Surfaces to be repaired with paint containing zinc dust shall be clean, dry, and free of oil, grease, preexisting paint, corrosion, and / or rust.
 2. Surfaces to be repaired shall be blast cleaned to the requirements of SPC SP10 (near white). Where circumstances do not allow blast or power tool cleaning to be used, then hand tools may be used. Cleaning shall meet the requirements of SSPC SP2 (removal of loose rust, mil scale, or paint to the degree specified by hand chipping, scraping, sanding and wire brushing)
 3. If the areas /surfaces to be repaired include welds, first remove all weld flux residue and weld spatter by blasting, chipping, grinding, or power scaling.
 4. Spray or brush apply the paints containing zinc dust to the prepared surfaces/areas. Apply the paint in accordance with the manufacturer's recommendations in a single application employing multiple passes to achieve a dry film thickness equal to the original zinc coating thickness.

END OF SECTION

Where groove welds have back-up plates, make first 3 passes with 3 mm 1/8 IN round electrodes."

SECTION 05 12 13
ARCHITECTURALLY EXPOSED STRUCTURAL STEEL

PART 1 - GENERAL**1.1 SUMMARY**

- A. Furnish labor, materials, tools, equipment, and services for Architecturally Exposed Structural Steel, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. Section covers fabrication and erection requirements in addition to those specified in Section 05 12 10 for structural steel, indicated to be Architecturally Exposed Structural Steel (AESS).
- B. Quality standards, qualifications, source quality control and testing and inspection, specified in Section 05 12 10, shall apply to Architecturally Exposed Structural Steel.
 - 1. Fabricator and erector shall have successfully completed AESS work similar to work indicated for this project.
- C. Tolerances: AISC, Code of Standard Practice for Steel Buildings and Bridges, Section 10, or as noted.
- D. Final design of connections not defined on Contract Documents as specified in Section 05 12 10.

1.3 PRE-INSTALLATION CONFERENCE

- A. Schedule and conduct conference at project site to comply with requirements of Section 01 31 19.
 - 1. Attendees shall include Contractor, Fabricator, Erector, finish painter.
 - 2. Topics for discussion shall include coordination requirements for shipping, special handling, attachment of safety cables, temporary erection bracing, and touch-up painting.

1.4 MOCK-UP

- A. Submit shop drawings for proposed mock-up sample prior to fabrication.
- B. Approved sample shall serve as the basis for acceptance for all AESS assemblies.
- C. Mock-up shall include no less than following:
 - 1. Plate seam.
 - 2. Butt or miter joint in plate, rolled sections, or both.
 - 3. Welds required for installation.

1.5 SUBMITTALS

- A. Shop Drawings:
 - 1. Provide erection drawings indicating AESS members.
 - 2. Details indicating compliance with fabrication and erection requirements, including connections consistent with concepts indicated in drawings.
 - 3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, showing size, length and type of each weld, and identifying grinding, finish and profile of each weld.

4. Indicate bolts by type, size, finish and length, distinguishing between shop and field bolts, identifying high-strength bolted, direct-tensioned shear/bearing connections, and showing which direction bolt heads are to be oriented.
 5. Indicate surfaces and edges exposed and class of surface preparation used.
 6. Indicate tolerances and erection requirements as defined in drawings or specified in this section.
- B. Product Data:
1. Source and certification of quality for high-strength bolts, nuts and washers.
 2. Technical data on base plate grout.
- C. Project Information:
1. Fabricator and Erector Qualifications:
 - a. List completed project names and addresses, and names and addresses of their Architects and Owners.
 - b. Fabricator's AISC certification or name of independent testing agency for use by non-certified fabricator.
 - c. Proof fabricator has 10 years experience in fabrication of structural steel for buildings.
 - d. Steel erector's AISC Certification or proof that steel erector has 10 years experience in erection of structural steel.
 2. Inspection reports and certification of shop fabrication by independent testing laboratory for non-certified fabricator.
 3. Welding Procedure Specification (WPS) for shop and field welds.
- D. Contract Closeout Information:
1. Certificate by fabricator that steel was fabricated in accordance with approved construction documents.
 2. Certificate by erector that steel was erected in accordance with approved erection plans and specifications.

PART 2 - MATERIALS

2.1 ARCHITECTURALLY EXPOSED STRUCTURAL STEEL

- A. Specified in Section 05 12 10.
- B. Epoxy filler:
1. Solvent resistant, two component metal and epoxy compound compatible with required protective coating systems.
 2. Acceptable product:
 - a. Tnemec, 215 Surfacing Epoxy.
- C. Primer:
1. As recommended by finish top coat manufacturer for substrate.

2.2 FABRICATION

- A. Fabricate and assemble in shop to greatest extent possible.
1. Locate field joints at concealed locations unless otherwise indicated.
 2. Detail assemblies to minimize field handling and expedite erection.
- B. Fabricate with exposed surfaces smooth, square and with consistent surface quality.
- C. Fabrication Tolerance: Fabricate steel to one-half of normal tolerances specified in AISC Code of Standard Practice for Steel Buildings and Bridges, Section 10.
- D. Welds:
1. Grind welds smooth.

2. Groove welds: Make flush to surfaces each side to within + 1/16 IN to – 0 IN of plate thickness.
 3. Contouring and Blending of Welds: Oversize fillet welds for grinding to smooth transitions.
 4. Continuous welds: Uniform size and profile.
 5. Minimize weld show-through at locations where welding on far side of exposed connection.
- E. Coping and Blocking Tolerance, and Joint Gap Tolerance: Uniform gap of 1/8 IN +/- 1/32 IN.
- F. Fabricate each piece such that piece mark is fully hidden in the final structure or made with such media to permit full removal after erection.
- G. Steel shall be delivered with no mill marks in exposed locations.
1. Mill marks shall be omitted by cutting of mill material to appropriate lengths where possible.
 2. Where not possible, fill and grind mark area to a surface consistent with surrounding surface.
 3. Filler caulk, or body putty type materials, other than filler metal deposited by welding process, is not acceptable for remedial work.
 4. Epoxy filler may be applied to pockets, voids, pitting, or other blemishes on exposed surfaces of interior steel to be painted, including welds.
- H. All edges of sheared, punched or flame-cut steel shall be ground smooth.
- I. Roll members to final curved shape in the shop and tied during shipping to prevent stress relieving.
1. Distortion of web or stem and of outstanding flanges or legs of angles will be visibly acceptable only if not perceived from a distance of 20 FT under any lighting condition.
 2. Tolerances for vertical and horizontal walls of regular HHS members after rolling shall be specified dimension +/- 1/2 IN.
- J. Seal weld ends of round and rectangular hollow structural sections with 3/8 IN thick closure plates, and provide continuous sealed welds at angle to gusset plate connections and similar locations where exposed to weather.
- K. Shop Connections: Comply with Section 05 12 10, and for:
1. Bolt Connections: Provide bolt type and finish and align bolt heads as indicated on approved shop erection drawings.
 2. Weld Connections: Comply with AWS-D1.1, and assemble and weld build-up sections by methods maintaining alignment of members without warp exceeding tolerance specified.

2.3 SHOP PRIMING

- A. Shop-prime steel surfaces except surfaces embedded in concrete or mortar, and surfaces to be field welded.
1. Extend priming of partially embedded members to a depth of 2 IN.
- B. Do not prime surfaces to be high-strength bolted with slip-critical connections if primer does not meet specified AISC slip coefficient.
- C. Surface Preparation: Clean surfaces to be painted by removing loose rust, loose mill scale, and spatter, slag or flux deposits.
1. Prepare surfaces concealed by other work minimally according to SSPC-P3 Power Tool Cleaning.
 2. Prepare exterior surfaces minimally according to SSPC-P6 Commercial Blast Cleaning.

3. Coordinate required blast profile with approved paint submittal prior to beginning surface preparation.
- D. Priming:
1. Apply primer immediately after surface preparation, in accordance with manufacturer's instructions.
 2. Provide a dry film thickness of not less than 2.5 mils and with full coverage of joints, corners, edges and other exposed surfaces.
 3. Stripe paint lap joints, plate edges, corners, crevices, bolts, welds and sharp edges.
 4. Apply two (2) coats of shop primer to surfaces inaccessible after assembly or erection.

2.4 GALVANIZING

- A. Where galvanizing is indicated, apply zinc coating by hot-dip process according to ASTM A123.
1. Fabricate galvanized assemblies for all field connections made by bolted connections.
 2. Provide galvanized finish in consistent color and surface texture throughout.

2.5 FINISH PAINTING

- A. Finish painting is specified in Section 09 91 13 for exterior assemblies and Section 09 91 23 for interior assemblies.
- B. Finish painting shall be field applied after erection.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify members are free of twist, kinks, gouges or other imperfections which may result in rejection of the appearance of the member.
- B. Replace defective members or correct defects.

3.2 PREPARATION

- A. Provide connections for temporary shoring, bracing and supports only where indicated on approved shop drawings.
- B. Temporary connections not shown on shop drawings shall be made at locations not exposed to view in the final structure.
- C. Handle, lift, and align pieces using padded slings and other protection required to maintain appearance of through process of erection.
- D. Handle to prevent twisting or warping of members.

3.3 ERECTION

- A. Set accurately in locations and to elevations indicated and according to AISC specifications, as specified in Section 05 12 10 and per following:
1. Erection Tolerances: AISC Code of Standard Practice for Steel Buildings and Bridges Section 7, except Section 10, where AESS is located within 20 FT of personnel.
 2. Provide field welds complying with the same requirements required for welds during fabrication, including grinding for flush finish conditions.
 - a. Assemble and weld build-up sections by methods maintaining true alignment of axes without warp.

- b. Verify weld sizes, fabrication sequence and equipment used will limit distortion to acceptable tolerances.
3. Provide bolting complying with same requirements required for bolting during fabrication, including orientation of bolt heads to same side.
4. Remove run-out tabs, erection bolts and other steel members added to connections to allow for alignment, fit-up or field welding,
 - a. Make remaining surfaces made smooth to match adjacent surfaces.
 - b. Holes for erection bolts shall be plug welded and ground smooth.
 - c. Holes cut to permit field welding shall be filled by procedures to minimize restraint and thermal stress.
5. Ream holes to permit bolts; burning and use of drift pins are not allowed.
6. Replace misaligned connection plates where holes cannot be aligned for acceptable final appearance.
7. Remove and replace welded material deemed inferior to quality of mock-up.
8. Repair only when proposed procedures are approved.

3.4 ADJUSTING AND CLEANING

- A. Clean and touch-up painting of field welds, bolted connections and abraded areas.
 1. Touch-up priming, painting, or both:
 2. Stripe paint lap joints, plate edges, corners, crevices, bolts, welds and sharp edges as required.
 3. Finish to blend with adjacent surfaces and comply with paint manufacturer's instructions.
- B. Galvanized Surfaces: Clean field welds, bolted connections and abraded areas, and repair galvanizing in compliance with ASTM A780.

END OF SECTION

SECTION 05 21 10
STEEL JOISTS**PART 1 - GENERAL****1.1 SUMMARY**

- A. Furnish labor, materials, tools, equipment, and services for Steel Joists, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. Fabrication standards for joists and accessories: Steel Joist Institute "Standard Specification and Load Tables" for open web, long span and deep long span steel joists; American Institute of Steel Construction (AISC) "Specifications for Design, Fabrication and Erection of Structural Steel for Buildings," (referred to as AISC Specifications).
- B. Standard for welders and welding work: AWS "Standard Qualification Procedure."
- C. Architect reserves right to observe joists in manufacturer's shop during fabrication.
- D. Architect reserves right to observe and require testing of joists welded in place.
 - 1. Remove and replace work found not to comply with Contract requirements.

1.3 SUBMITTALS

- A. Shop Drawings:
 - 1. Show complete details including layout, special connections, bridging, jointing and accessories.
- B. Project Information:
 - 1. Engineering calculations indicating design moments, shears, and other forces sealed by registered Engineer, licensed to practice Structural Engineering in the State of MO.
 - 2. Manufacturer's certification that steel joists comply with specified requirements and steel joist institutes standard load tables.
 - 3. Manufacturer's certification along with calculations that joists for special loads indicated on drawings have been designed and are capable of supporting all design loads for the spans as shown on the drawings.
 - a. Certification and calculations shall be submitted prior to or along with shop drawings.
 - b. Load combinations as specified by the building code. Where special loads only are shown, combine with typical loads or capacities for adjacent joists.

PART 2 - PRODUCTS**2.1 MATERIALS**

- A. Steel: Comply with SJI and AISC Specifications.
- B. Unfinished threaded fasteners: ASTM A307, Grade-A, regular hexagon type, low carbon steel, with ANSI B27.2, Type B, carbon steel washers.

- C. High-strength threaded fasteners: ASTM A325 or ASTM A490 as required, heavy hexagon structural bolts with nuts and hardened washers.
- A. Prime Paint: Comply with SJI and AISC except that asphalt type paint is not acceptable.
 - 1. Shop coat of red lead or rust-inhibitive paint standard with manufacturer.
 - 2. Comply with SSPC-15.
 - 3. Special coating is required for joists in the wash bay. See 09 91 00.
- B. Bedding Mortar:
 - 1. Portland cement and sand, mixed at a ratio of 1 part cement to 3 parts sand, measured by volume, with only enough water for placement and hydration.
 - 2. Shrinkage-resistant compound complying with Corps of Engineer's CRD-C588, Type M.

2.2 FABRICATION

- A. Fabricate in accord with SJI and AISC specifications and as follows:
 - 1. Do not splice principal tension members.
 - 2. Make shop connections and splices using either arc or resistance welding.
 - 3. Design and fabricate for maximum deflection of 1/360 of clear span under design live load.
 - 4. Shop holes, field holes, and enlargement of holes will not be permitted unless approved by Architect.
 - 5. Fabricate bearing ends to provide following minimum bearing unless otherwise indicated.

BEARING MATERIAL	K SERIES	LH AND DLH SERIES	JOIST GIRDERS
Masonry or Concrete	4 IN	6 IN	8 IN
Steel	2-1/2 IN	4 IN	4 IN

- B. Where special or concentrated loads are indicated, reinforce joist and develop details as necessary for support.
- C. Provide extended bottom chords where indicated. Comply with SJI and AISC requirements and load tables.
- D. Provide extended top chords where indicated. Comply with SJI and AISC requirements and load tables.
- E. Provide ceiling extensions in areas having ceilings attached directly to joist bottom chord.
 - 1. Provide either an extended bottom chord or a separate unit of sufficient strength to support ceiling construction.
 - 2. Extend ends to within 1/2 IN of wall surface.
- F. Remove loose scale, heavy rust, and other foreign materials from fabricated joists and accessories.
- G. Apply one shop coat of steel joist primer paint to steel joists and accessories, by spray, dipping, or other method to provide continuous dry paint film thickness of not less than 0.50 mil.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions under which steel joists are to be installed for conditions detrimental to proper and timely completion of Work.
- B. Do not proceed with Work until unsatisfactory conditions have been corrected.
 - 1. Do not start placement of steel joists until supporting work is in place and secured.

3.2 ERECTION

- A. Deliver, store and handle steel joists as recommended by SJI and AISC.
- B. Do not install joists damaged so that strength is impaired.
- C. Where not specifically indicated otherwise, place and secure steel joists in accordance with SJI and AISC Specifications and as specified. Secure joists along column centerlines in accordance with OSHA standards for erection safety
- D. Field weld joists to supporting steel framework in accordance with SJI and AISC - Specifications for type of joists used. Coordinate welding sequence and procedure with placing of joists.
- E. Secure joists resting on masonry or concrete bearing surfaces by bedding in mortar and anchoring to masonry or concrete construction as specified in SJI and AISC Specifications for type of steel joist used.
- F. Place joists on supporting work, adjust and align in accurate location and spacing before permanently fastening.
 - 1. Provide end bearing and anchorages to secure joists to supporting members or walls in accord with SJI and AISC Specifications, unless otherwise indicated.
 - 2. When joists do not bear flush on supporting member or wall, take corrective measures to ensure full bearing, as directed by Architect.
- G. Provide bridging in accord with SJI and AISC Specifications, where not specifically indicated otherwise, except as modified herein.
 - 1. Provide diagonal type bridging as required and as indicated.
 - 2. Provide additional bridging at each line between exterior and first interior joist and then at every 12th joist space.
- H. Completely install bridging before loads are applied.
 - 1. Anchor ends of bridging lines at top and bottom chords where terminating at walls or beams.
 - 2. Provide bridging connections at top and bottom chords capable of safely resisting a force of 500, 1000 and 1500 LB for open web, long span and deep long span joists respectively.
- I. Do not overload joists.
- J. Remove or repair damaged joists or other work, to satisfaction of Architect.
- K. After installation, paint field bolt heads and nuts, welds and abraded or rusty surfaces on joists and steel supporting members.
 - 1. Wire brush surfaces and clean with solvent before painting.
 - 2. Use same type of paint as used for shop painting.

END OF SECTION

SECTION 05 31 23
METAL ROOF DECKING**PART 1 - GENERAL****1.1 SUMMARY**

- A. Furnish all labor, materials, tools, equipment, and services for Metal Roof Decking, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. Comply with provisions of following codes and standards, except as otherwise indicated.
 - 1. AISI "Specification for Design of Cold-Formed Steel Structural Members."
 - 2. Steel Deck Institute (SDI), "Steel Roof Decking Design Manual."
 - 3. AWS "Sheet Steel in Structures, Specification for Welding" AWS D1.3.
 - 4. International Conference of Building Officials (ICBO).
- B. Qualify welding processes and operations in accordance with AWS "Standard Qualification Procedure."

1.3 SUBMITTALS

- A. Shop Drawings:
 - 1. Complete layout indicating types of deck panels, anchorage, supplementary framing, cut openings, accessories, and thicknesses.
- B. Product Data:
 - 1. Manufacturer's load tables for deck to be furnished on this project.

PART 2 - PRODUCTS**2.1 METAL ROOF DECKING - 38 MM 1-1/2 IN DEEP**

- A. Acceptable manufacturers:
 - 1. Metal roof decking, 38 mm 1-1/2 IN deep:
 - a. Base:
 - 1) BHP Steel Building Products; Type B-36.
 - 2) Consolidated Systems B-Dek
 - 3) Roof Deck; Type B-2.
 - 4) United Steel Deck; Type B.
 - 5) Verco Manufacturing; Type HSB-36.
 - 6) Vulcraft; Type 1.5B.
 - 7) Wheeling Corrugating; Types B, BW, BW-36.
 - 2. Other manufacturers desiring approval comply with Section 00 26 00.
- B. Metal roof decking, 38 mm 1-1/2 IN deep: Size as indicated on structural drawings.
 - 1. Galvanized.
 - 2. Galvanized decking: ASTM-A653, Z180 G60 zinc coating, Fy= 230 MPa 33 KSI, Structural Quality.

2.2 OTHER MATERIALS

- A. Welding rod: E-60XX or greater in accordance with AWS D1.3

- B. Mechanical Fasteners:
 - 1. Definition: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.
 - 2. Acceptable manufacturers:
 - a. Powder actuated:
 - 1) Base:
 - a) Hilti Inc., steel deck fastener.
 - b. Pneumatically driven:
 - 1) Base
 - a) Punetek, Inc.
 - c. Self drilling, self threading screws: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, 4.8mm No. 10 diameter min size.
 - 1) Base;
 - a) Hilti, Inc
 - b) Elco Textron
 - c) Buildex
 - 3. Other manufacturers desiring approval comply with Section 00 26 00.
- C. Steel shapes, miscellaneous: ASTM-A36.
- D. Galvanizing for metal accessories: ASTM-A653, Z180 G60.
- E. Galvanizing repair paint: High zinc dust content paint, Mil-P-21035 (ships).
- F. Metal closure strips: Galvanized sheet steel, minimum 0.86 mm 0.034 IN thick before coating, ASTM-A653, Z180 G60 galvanized. See Part 3 - Execution for locations.

2.3 FABRICATION

- A. Form in lengths to span 3 or more support spacings, with flush, telescoped or nested 50 mm 2 IN end laps.
 - 1. Use deck configurations complying with SDI Basic Design Specifications and as indicated.
- B. Form metal closure strips to configuration required to provide tight-fitting closures at open ends and sides of decking.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Examine areas and conditions under which deck units are to be installed for conditions detrimental to proper and timely completion of work.
- B. Do not proceed with work until unsatisfactory conditions have been corrected.
- C. Start of installation constitutes acceptance of responsibility for correct installation and performance.

3.2 INSTALLATION – GENERAL

- A. Do not overload supporting members.
- B. Install roof deck units and accessories as indicated.
- C. Do not start placement of roof deck units until supporting members are installed complete.
- D. Place each deck unit on supporting structural frame, adjust to final position, accurately align with ends bearing on supporting members.
 - 1. Lap units at ends no less than 50 mm 2 IN.
 - 2. Do not stretch or contract side-lap interlocks.

3. Place deck units flat and square and secure to framing without warp or excessive deflection.
 4. Install deck ends over supporting frame with a minimum end bearing of 38 mm 1-1/2 IN.
- E. Plug weld sizes specified are effective fusion diameter of welds.
1. Weld metal shall penetrate layers of deck material at ends laps and have good fusion to supporting members.
- F. Remove and replace decking which is structurally weak or unsound or which has burn holes due to improper welding or which Architect declares defective.
- G. Cut and fit roof units and accessories around other work projecting through or adjacent to roof decking.
1. Make cutting and fitting neat, square and trim.
 2. Neatly and accurately install reinforcing at openings except:
 - a. Circular openings less than 150 mm 6 IN diameter.
 - b. Rectangular openings having no side dimension greater than 150 mm 6 IN.
 3. Reinforce openings between 150mm 6 IN and 305mm 12 IN with 0.9 mm 20 GA flat steel sheet 305mm 12 IN greater in each dimension than opening. Place sheet around opening and fusion weld to top surface of deck at each corner and each side midway between each corner.
 4. For roof openings larger than 305mm 12 IN and at roof drains: Support deck edges as indicated on Drawings
- H. Install metal closure strips for support of roof insulation.
1. Provide where rib openings in top surface of roof decking occur adjacent to edge and openings.
 2. Weld closure strips into position.
- I. Install metal closure strips at open uncovered ends and edges of roof decking, and in voids between decking and other construction.
1. Weld into position to provide a complete decking installation.

3.3 FASTENING OF ROOF DECKING

- A. Welded connection requirements:
1. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds 16 mm 1/2 IN effective diameter or arc seam welds with an equal perimeter that is not less than 38 mm 1-1/2 IN long.
 - a. Weld Spacing:
 - 1) As indicated on structural drawings
 - 2) Space welds: 450mm 18 IN apart, maximum.
 2. Side-Lap and Perimeter Edge Fastening: As indicated on structural drawings.
 - a. Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of 1/2 of the span or 450 mm 18 IN, and as follows:
 - b. Mechanically fasten with self-drilling, 4.8mm No.10 diameter or larger, carbon-steel screws @ 12" o.c.
 - c. Mechanically clinch or button punch @ 12" o.c.
 - d. Fasten with a minimum of 38 mm 1-1/2 IN -long welds.
- B. Mechanical connection requirements (Alternate)
1. Mechanical fasteners (powder actuated or pneumatically driven steel pins) may be used in lieu of welding indicated to fasten deck to supports. Locate mechanical fasteners and install according to manufacturer's written instructions. The contractor must submit the proposed fastening configuration complete with diaphragm capacities. Diaphragm capacities must meet or exceed capacities based on connections shown in structural drawings.
 - a. Pin size, spacing, and accessories:

- 1) Pin diameter and length per manufacturer's instructions for numbers of layers, deck gage, and steel flange thickness at a given condition.
- 2) Install steel washers or provide pins with integral washers at each pin location. Washer size per manufacturer requirements.

3.4 CLEAN AND TOUCH-UP

- A. Wire brush, clean and paint scarred areas, welds and rust spots on top surfaces of decking units and supporting steel members.
- B. Touch-up damaged galvanized surfaces with galvanizing repair paint applied in accordance with manufacturer's instructions.
- C. Touch-up shop painted surfaces with same paint used in shop, as recommended by deck manufacturer.

END OF SECTION

SECTION 05 36 00
COMPOSITE METAL FORM DECK

PART 1 - GENERAL**1.1 SUMMARY**

- A. Furnish labor, materials, tools, equipment, and services for Composite Metal Form Deck, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. Standards:
 - 1. AISI; Specification for Design of Cold-Formed Steel Structural Members.
 - 2. ANSI/AWS-D1.3; Structural Welding Code - Sheet Steel.
 - 3. SDI; Design manual for composite decks, form decks and roof decks.
- B. Qualify welding processes and welding operators in accordance with AWS qualification procedures.
- C. Minimum thickness:
 - 1. Where gage of metal is indicated, provide following minimum uncoated steel thickness, unless following performance requirements require greater thickness.

Gage	Minimum Thickness
20	0.034 IN
19	0.040 IN
18	0.045 IN
17	0.051 IN
16	0.057 IN

- D. Performance requirements:
 - 1. Provide form deck to act as bottom form for cast-in-place concrete slabs and which will become positive slab reinforcement through mechanical anchorage after concrete hardens.
 - 2. Provide deck thickness such that maximum deck stress shall not exceed 0.6 its yield strength under combined weights of wet concrete(including weight of additional concrete due to structural deflection), deck, and construction live loading of either 20 PSF uniform load or 150 LB concentrated load on a 1 FT wide section of deck.
 - 3. Provide deck with adequate thickness to limit maximum deflection relative to supporting structural members to 1/180 of clear span or 3/4 IN whichever is smaller, caused by combined weights of wet concrete and deck.
 - 4. Provide decking with manufacturers standard male – female side lap joints
 - 5. Gage of deck furnished shall not be less than that indicated on the drawings.
 - 6. Configuration, physical and chemical properties and composite superimposed load carrying capacity of deck units furnished shall conform to manufacturer's catalog current at time bids are received.
 - 7. Provide accessories (pour stops, column closures, end closures, cover plates, and girder fillers) as needed to prevent concrete leakage.

1.3 SUBMITTALS

- A. Shop Drawings:
 - 1. Complete layout indicating types of deck panels, anchorage, supplementary framing, cut openings, accessories, deck thicknesses.
 - 2. Indicate areas requiring shoring on the shop drawings.
- B. Product Data:
 - 1. Manufacturer's load tables for deck to be furnished on this project.
- C. Product Information
 - 1. Manufacturers analysis of unshored span limits
 - 2. Shoring design and documentation prepared by a Licensed Structural Engineer

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Acceptable manufacturers and designations:
 - 1. Composite metal form deck, 2 IN:
 - a. Base:
 - 1) ASC Profiles; Type 2W.
 - 2) Consolidated Systems; Type CFD-2.
 - 3) United Steel Deck; Type 2 IN Lok Floor.
 - 4) Verco Manufacturing; Type W2 Formlok.
 - 5) Vulcraft; Type 2VLI.
 - 2. Composite metal form deck, 3 IN:
 - a. Base:
 - 1) ASC Profiles; Type 3W.
 - 2) Consolidated Systems; Type CFD-3.
 - 3) United Steel Deck; Type 3 IN Lok Floor.
 - 4) Verco Manufacturing; Type W3 Formlok.
 - 5) Vulcraft; Type 3VLI.
 - 3. Other manufacturers desiring approval comply with Section 00 26 00.
- B. Composite metal form deck:
 - 1. Deck shall be cold formed from steel sheets, conforming to ASTM-A653, Structural Quality, Grade-40 with G60 coating.
- C. Accessories:
 - 1. Sheet steel closures, cover plates and other sheet steel accessories: Use same material and coating as for deck.

2.2 FABRICATION

- A. Where possible, deck shall extend over three or more spans with butted end laps.
- B. Form closures and cover plates to configuration required to form concrete and/or to prevent concrete leakage.
- C. End laps and accessories shall be located and be of a style so as not to reduce capacity of field applied studs for composite beams.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Examine areas and conditions under which deck units are to be installed for conditions detrimental to proper and timely completion of work.

- B. Correct unsatisfactory conditions.

3.2 INSTALLATION

A. General:

1. Do not overload supporting members.
2. Unless specifically noted otherwise, provide composite metal form deck for concrete slabs supported directly or indirectly by structural steel frame.
3. Install deck units and accessories in accordance with final shop drawings and as specified herein.
4. Do not start placing units before supporting members are completely installed in place.
5. Bear deck units on supporting members minimum of 2 IN. Butt units tightly together at centerline of support. Place abutting units in accurate and close alignment for entire length of run.
6. Neatly cut and fit deck units and accessories around columns, walls, and other objects projecting through or adjacent to deck. Install closures and cover plates as required to prevent concrete leakage.
7. Install shoring where indicated on shop drawings

B. Openings:

1. Deliver deck to job site intact when openings in deck are indicated on drawings to be installed after concrete fill is cured. Openings installed in this manner shall be paid for by trade requiring opening.
2. Where openings in floor are framed, deliver deck to job site cut to proper length.

C. Fastening – Welded Connectors:

1. For welding deck to supports, employ only welders, qualified under AWS qualification procedures, and experienced in welding light gauge metal.
2. Minimum deck fastening requirements:
 - a. At end of each unit and at intermediate supports: Puddle welds at 12 IN on center with not less than two welds per support.
 - b. At exterior beam parallel to deck span: Puddle welds or 1-1/4 IN seam welds at 24 IN on center.
 - c. At male-female side laps, 1-1/2 IN long seam welds or button punching at 24 IN on center.
 - d. At lapped side laps, 1-1/2 IN long seam welds at 24 IN on center.
 - e. Sheet metal closures, cover plates: Self-drilling screws or tack welds at 24 IN on center.
3. Verify that minimum deck fastening requirements are adequate for safely supporting material and construction loads placed on deck from time of deck placement to time of concrete placement. Additional fastening required to accomplish this shall be provided and paid for by Contractor.
4. Puddle welds shall have effective fusion diameter not less than 1/2 IN. Weld metal shall penetrate layers of deck material at end laps and be thoroughly fused to supporting members.

END OF SECTION

SECTION 05 40 00 COLD-FORMED METAL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

- A. Furnish labor, materials, tools, equipment, and services for Cold-Formed Metal Framing as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. ASTM A653: Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy Coated (Galvannealed) by the Hot-Dip Process.
- B. ASTM C1007: Standard Specification for Installation of Load Bearing (Transverse and Axial) Steel Studs and Related Accessories
- C. AISI Standard for Cold-Formed Steel Framing General Provisions.

1.3 DESIGN CRITERIA

- A. Provide engineering design performed and sealed by registered Engineer, licensed to practice Structural Engineering in the State of MO.
- B. Design Loads:
 - 1. Design Exterior Stud Wall System to satisfy requirements of applicable building codes as locally amended, but not less than loads shown in contract documents.
 - a. Design Exterior Soffits similarly.
 - b. Include superimposed loads.
 - 2. Limit lateral deflection of stud wall system due to wind or earthquake as follows:

MAXIMUM ALLOWABLE DEFLECTION	
Exterior Finish Material	Deflection Limit
Marble, Granite and other Stone Veneers	L/720
Brick and Concrete Masonry Veneers	L/600
Portland Cement Plaster (Stucco)	L/360
Manufactured Stone Veneer, Adhered Stone Veneer, Thin Brick, Tile and similar Mortar-Set finishes.	L/360
Metal Panels, Curtainwalls, and other flexible wall finishes.	L/240

- 3. Select stud gauge and spacing as required to limit deflection due to applied loads.
 - a. Utilize strength properties of metal stud only. Disregard contribution of facings such as Gypsum Wall Board and Gypsum Sheathing.
- 4. Size and define headers and reinforcing members around openings.
- 5. Develop details defining method of fastening throughout system.
- 6. Design system to accommodate in plane wind and seismic loads.
- 7. Coordinate and design wall system to accommodate loads and movements from adjacent exterior wall and soffit systems.
- 8. In addition to gravity loads, design framing system to resist wind uplift at soffits.

1.4 SUBMITTALS

- A. Project Information:
 - 1. Manufacture identification.
 - 2. Complete Building Elevations defining framing member sizes, locations, and connection details.
 - a. Show openings, edges and support conditions that have been field verified with respect to location.
 - b. Show openings, edges and support conditions that have coordinated with respect to physical requirements of items to be installed in or on exterior wall system.
 - 3. Details and isometrics at windows showing layouts of Air Barrier Flashings and sequence of installation.
 - 4. Structural calculations.
 - 5. Certification Exterior Stud Wall System has been designed, to satisfy specified design criteria, sealed by registered Engineer, licensed to practice Structural Engineering in the State of MO.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Exterior metal studs:
 - 1. Base:
 - 2. Telling Industries.Optional:
 - a. California Expanded Metal Products Co.
 - b. Custom Stud Inc.
 - c. Marino\WARE
 - d. MRI Steel Framing LLC
 - e. The Steel Network
 - f. ClarkDietrich Building Systems
- B. Galvanizing repair coating:
 - 1. Base:
 - a. Tnemec
 - 2. Optional:
 - a. ZRC Worldwide
 - b. Sherwin Williams
- C. Other manufacturers desiring approval comply with Section 00 26 00.

2.2 MATERIALS

- A. Exterior Studs:
 - 1. Galvanized 33ksi steel studs, runner channels and track, bracing, and accessories, minimum G60 galvanized.
 - a. Revise thickness and minimum requirements if 50 KSI steel is used.
 - 2. Stud depth:
 - a. As indicated on Drawings.
 - 3. Span:
 - a. As indicated on Drawings.
 - 4. Stud spacing:
 - a. Use closer spacing as needed to satisfy load deflection criteria.
 - b. 12 IN OC minimum.
 - c. 16 IN OC maximum.
 - 5. Minimum thickness for Studs, Runners and Tracks
 - a. 43 mils (18 GA).
 - b. Use heavier members where needed to satisfy loading and deflection criteria.
 - 6. Minimum flange on Deep-Leg runners: 2 IN.

7. Runner fasteners:
 - a. Power driven fasteners.
 - b. Minimum 190 LB shear and bearing.
8. Headers:
 - a. C-shapes used to form header beams, of
 - b. Web depths required and with stiffened flanges.
 - c. Thickness (Gauge): As determined by engineering calculations for specific openings.
- B. Galvanizing repair coating:
 1. Tnemec Series 94-H20 Hydro-Zinc.
 2. ZRC Worldwide, Galvilite 221.
 3. Sherwin Williams Zinc Clad III HS 100.
- C. Wood Sheathing: Specified in Section 06 11 10.
- D. Gypsum Sheathing: Specified in Section 06 16 43.
- E. Exterior Joint Sealants: Specified in Section 07 92 13.
- F. Gypsum wallboard, interior: Specified in Section 09 29 00.
- G. Insulation and Vapor Retarder: Specified in Section 07 21 00.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Examine substrate for suitability to accept work.
- B. Start of work constitutes acceptance of substrate and responsibility for performance.

3.2 ERECTION

- A. Studs and runners:
 1. Align outside deep leg runner track accurately according to exterior wall layout.
 2. Fasten 12 IN OC, or as needed to satisfy design criteria.
 3. Position studs vertically in inside deep leg runners at required spacing.
 4. Install minimum of two (2) studs each side of openings; use more if required to meet loadings.
 5. Anchorage:
 - a. Top:
 - 1) Allow 3/4 IN clearance between top of inside deep leg runner and outside deep leg runner.
 - 2) Do not fasten inside deep leg runner to outside deep leg runner.
 - 3) Fasten studs to inside deep leg runner.
 - b. Bottom:
 - 1) Anchor each stud at bottom to runners with two, 3/8 IN minimum, type S-12 pan head screws.
 6. Where stud design is outside edge of floor slab, provide galvanized connectors designed for loading requirements and allow individual floor movement without affecting integrity of stud system.
 7. Shop weld assemblies as required to meet design requirements.
 8. Touch-up burned off or abraded galvanizing with galvanizing repair coating.
- B. Openings: Install header, jamb, and sill framing system per approved engineering documents
- C. Expansion Joints at Portland cement plaster walls and soffits:
 1. Utilize double studs, spaced 3/8 IN apart, where expansion joints are indicated.

2. Sheathing shall not be continuous across expansion joints.
- A. Expansion Joints at DEFS Soffits:
 1. Utilize double studs, spaced 3/8 IN apart, where expansion joints are indicated.
 2. Sheathing shall not be continuous across expansion joints.
- B. Metal Wall Backing: Specified in Section 09 22 16.
 1. Coordinate installation of metal wall backing used to support wall-supported items with installation of exterior stud wall system.
 2. See Section 09 22 16 for items requiring metal wall backing.
- C. Wood Wall Blocking: Specified in Section 06 10 53.
 1. Coordinate installation of wood wall blocking used to support wall-supported items with installation of exterior stud wall system specified herein.
 2. See Section 06 10 53 for items requiring wood wall blocking.

3.3 PROTECTION

- A. Protect erected wall and openings with temporary covers until finish, roofing, flashing, and windows are installed.

END OF SECTION

SECTION 05 50 00**METAL FABRICATIONS****PART I - GENERAL****1.1 SUMMARY****A. Description**

This Section specifies requirements for furnishing and installing metal hardware, aluminum hardware, and miscellaneous steels as indicated on the Contract Drawings and specified herein. The work under this Section includes furnishing all labor, materials, tools and equipment necessary, including metal surface preparation, galvanization, painting, connections, leveling and base plates, grouts, setting devices, and field modifications such as drilling, welding and re-fabrication as required, to ensure proper fit and complete the work.

1.2 REFERENCED STANDARDS

<u>Sponsor</u>	<u>Number</u>	<u>Subject</u>
ASTM	A 27	Specification for Steel Castings, Carbon, for General Application
ASTM	A 36	Specification for Carbon Structural Steel
ASTM	A 47	Specification for Ferric Malleable Iron Castings
ASTM	A 53	Specification for Steel Pipe, Black and Hot-Dipped, Zinc Coated, Welded and Seamless
ASTM	A 123	Specification for Zinc (Hot Galvanized) Coatings on Products Fabricated from Rolled, Pressed, and Forged Steel Shapes, Plates, Bars, and Strip
ASTM	A 153	Specification for Zinc Coating (Hot Dip) on Iron and Steel Hardware
ASTM	A 307	Specification for Carbon Steel Externally Threaded Standard Fasteners
ASTM	A 325	Specification for High-Strength Bolts for Structural Steel Joints, Including Suitable Nuts and Plain Hardened Washers
ASTM	A 449	Standard Specification for Quenched and Tempered Steel Bolts and Studs
ASTM	A 500	Standard Specification for Cold-formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes
ASTM	A 563	Standard Specification for Carbon and Alloy Steel Nuts
ASTM	A 780	Specification for Practice for Repair of Damaged Hot-Dip Galvanized Coatings

ASTM	B 209	Specification for Aluminum and Aluminum Alloy Sheet and Plate
ASTM	B 221	Specification for Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes
ASTM	B 429	Specification for Aluminum-Alloy Extruded Structural Pipe and Tube
ASTM	B 633	Standard Specification for Electrodeposited coatings of Zinc on Iron and Steel
ASTM	C 1107	Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Non-shrink)
ASTM	E 488	Standard Test Methods for Strength of Anchors in Concrete and Masonry Elements
ASTM	F 669	Specifications for Strength Requirements of Metal Posts and Rails for Industrial Chain Link Fence
ASTM	F 959	Standard Specification for Compressible-Washer-Type Direct Tension Indicators for Use with Structural Fasteners
ASTM	F 1554	Standard Specification for Anchor Bolts
ASME	B18.2.1	Square and Hex Bolts and Screws
ASME	B18.6.1	Wood Screws
ASME	B18.6.3	Machine Screws and Machine Screw Nuts
ASME	B18.21.1	Lock Washers
ASME	B18.22.1	Plain Washers
AWS	D1.1	Structural Welding Code – Steel
COE	CRD-C620	Specification for Non-Shrink Grout
SSPC	Paint-20	Specification for Zinc Rich Primers, Type I - Inorganic and Type II - Organic

1.3 SUBMITTALS

- A. Submittals shall be made in accordance with the requirements of the General Provisions, and as modified herein.
- B. Manufacturer's product data, anchor details and installation instructions for products to be used in the fabrication of metal work, including paint products and grout. Submit manufacturer's qualification to the Engineer for review.
- C. Shop Drawings showing fabrication and erection of metal fabrications. Include plans, elevations, sections and connection details, as well as anchorage and accessory items, and for custom aluminum assemblies, sealed drawings by an engineer licensed in the State of Missouri. Structural calculations shall be prepared and sealed by a licensed engineer. All relevant design loads shall be considered with load combinations in accordance with ASCE

07-11. The Station shade structures shall be designed for Dead, Roof Live, Snow and Wind as a minimum. An additional 500 pound concentrated roof live load shall also be considered at any point on the roof.

- D. Welding operators' qualification in accordance with AWS "Standard Qualification Procedure".
- E. Welding process qualification certificate per AWS D 1.1.

1.4 QUALITY ASSURANCE/QUALITY CONTROL

- A. Quality assurance/quality control shall be in accordance with the requirements of the General Provisions, and as modified herein.
- B. Assign a task manager to oversee the work of this Section. Submit the task manager's qualification to the Engineer for approval.
- C. Comply with the provisions of the Referenced Standards, except where more stringent requirements are shown or specified.
- D. Take field measurements prior to preparation of Shop Drawings and fabrication.
- E. Furnish inserts and anchoring devices that must be set in concrete or built into masonry for installation of metal work. Coordinate delivery with others to avoid delay and misplacement.
- F. Shop Assembly: Pre-assemble items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- G. Engage manufacturers who have been regularly performed the Work of similar magnitude and scope in last 3 years.
- H. Furnish products of a single manufacturer for each component and process to achieve uniformity.

PART II - PRODUCTS

2.1 MATERIALS

- A. Structural steel shall conform to ASTM A 36.
- B. Structural steel pipe shall conform to ASTM A 53, Type E or Type S.
- C. Structural steel tubing shall conform to ASTM A 500, Grade B, $F_y = 46$ ksi.
- D. Aluminum and Aluminum Alloy Sheet and Plate shall conform to ASTM B 209
- E. Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes shall conform to ASTM B 221
- F. Aluminum-Alloy Extruded Structural Pipe and Tube ASTM B 429
- G. Standard bolts shall conform to ASTM A 307.
- H. High strength bolts shall conform to ASTM A 325, Type N.
- I. High strength tie rods shall be galvanized and shall conform to ASTM A 449.

- J. Tie rod nuts shall be galvanized and shall be heavy hexagon nuts conforming to ASTM A 563, Grade DH.
- K. Direct tension indicators shall be the compressible-washer-type conforming to ASTM F 959.
- L. Galvanizing repair paint shall be high zinc dust content paint for re-galvanizing welds in galvanized steel, with dry film containing not less than 84 percent zinc dust by weight, and complying with SSPC-Paint-20.
- M. Galvanized Chain
1. Description
 - a. Type: Straight Link Machine Chain
 - b. Size: 5/0
 - c. Weight: 52 lbs/100 ft
 - d. Material Diameter: 0.250 in
 - e. Links per foot: 11 ¹/₄
 2. Manufacturer's qualification shall be submitted with product data sheet for review and approval by the Engineer.
- N. Ferrous Metal Surfaces, General: Exposed materials shall be free of pitting, seam marks, roller marks, rolled trade names, roughness, and other variations.
- O. Brackets, Flanges and Anchors: Cast or formed metal of the same type material and finish as supported rails, unless otherwise indicated.
- P. Concrete Inserts: Threaded or wedge type; galvanized ferrous castings, either malleable iron, ASTM A 47, or cast steel, ASTM A 27. Provide bolts, washers, and shims as required, hot-dip galvanized per ASTM A 153.
- Q. Grout and Anchoring Cement
1. Non-shrink Metallic Grout: Premixed, factory-packaged, non-staining, non-corrosive, nongaseous, complying with ASTM C 1107, specifically manufactured for heavy duty loading application.
 2. Submit manufacturer's qualification with product data sheet to the Engineer for review and approval.
- R. Fasteners
1. General: Provide stainless steel, tamperproof fasteners for exterior use or where built into exterior fabrications. Select fasteners for the type, grade, and class required.
 - a. Bolts and Nuts: Regular hexagon head type, ASTM A 307, Grade A, with hex nuts, ASTM A 563.
 - b. Anchor Bolts: ASTM F 1554, Grade 36.
 - c. Lag Screws: ASME B18.2.1
 - d. Machine Screws: ASME B18.6.3.

- e. Wood Screws: Flat head, carbon steel, ASME B18.6.1.
 - f. Plain Washers: Round, carbon steel, ASME B18.22.1.
 - g. Lock Washers: Helical, spring type, carbon steel, ASME B18.21.1.
 - h. Masonry Anchorage Devices: Expansion Shields, CID A-A-1922.
 - i. Drilled-in Expansion Anchors: Anchor bolts and sleeve assembly shall be carbon steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5, capable to sustain, without failure, load equal to six times load imposed when installed in unit masonry and equal to four times load imposed when installed in concrete determined by testing per ASTM E 488, conducted by qualified independent testing agency.
 - j. Toggle Bolts: Tumble-wing type, FS FF-B-588D (canceled), class, and style as required.
- S. Concrete Fill: Comply with requirements of Section 03300 Cast-In-Place Concrete for normal weight, air entrained, ready mix concrete with min. 28 day compressive strength of 4000 psi.

2.2 FABRICATION

- A. For fabrication of metal work which will be exposed to view, use only materials which are smooth and free of surface blemishes including pitting, seam marks, roller/extrusion marks and rolled trade names.
- B. Shop Fabrication
 - 1. Use steel materials of size and thickness shown or, if not shown, of required size and thickness to produce strength and durability in finished product.
 - 2. Assemble materials to dimensions shown on accepted Shop Drawings, using proven details of fabrication and support.
 - 3. Form exposed work true to line and level with accurate angles and surfaces and straight sharp edges. Ease exposed edges to a radius of approximately $\frac{1}{32}$ inch unless otherwise shown.
 - 4. Form bent metal corners to smallest radius possible without causing grain separation or otherwise impairing Work.
- C. Welds and Anchors
 - 1. Shop weld corners and seams continuously, complying with AWS recommendations.
 - 2. Grind exposed welds smooth and flush, to match and blend with adjoining surfaces.
 - 3. Increase sizes of welds as required to compensate for grinding smooth.
 - 4. Shop form exposed connections with hairline joints, flush and smooth, using concealed fasteners wherever possible.
 - 5. Use exposed fasteners of type shown or, if not shown, socket type flat head (countersunk) screws or bolts.

6. Provide sufficient backing at screw locations to cover at least three threads.
 7. Provide for anchorage of type suitable for use with supporting structure.
 8. Fabricate and space anchoring devices as shown and as required to provide adequate support for intended use.
 9. Cut, reinforce, drill and tap metal Work as required to receive finish hardware.
- D. Galvanizing: Provide a zinc coating for those items shown or specified to be galvanized (unless otherwise noted), as follows, and items at exterior and in exterior walls.
1. ASTM A 153 for galvanizing iron and steel hardware.
 2. ASTM A 123 for galvanizing iron and steel products.
- E. Fabrication of Rough Hardware:
1. Furnish bent or otherwise custom fabricated bolts, plates, anchors, hangers, dowels and other steel, aluminum, and iron shapes as required for framing and supporting Work, and for anchoring or securing Work to substrates.
 2. Fabricate items of sizes, shapes and dimensions required.
- F. Fabrication of Structural Steel Framing: Fabricate shapes and sizes as required for profiles shown. Except as otherwise noted, fabricate units from structural steel shapes and plates and steel bars, with continuously welded joints and smooth exposed edges. Use concealed field splices wherever possible. Provide cutouts, fittings and anchorages as required for coordination of assembly and installation with other Work. Galvanize exterior structural steel.
- G. Fabrication of Loose Bearing Plates: Fabricate loose bearing plates for steel items bearing on concrete and masonry construction, made flat, free from warps or twists, and of required thickness and bearing area. Drill plates to receive anchor bolts and for grouting as required. Galvanize bearing plates after fabrication.
- H. Fabrication of Steel Angles, Support Framing and Pipe Sleeves
1. Fabricate steel angles, support framing and pipe sleeves as required to complete Work. Galvanize items at exterior and in exterior walls.
 2. Fabricate steel support framing units to sizes, shapes, and profiles shown or, if not shown in the drawings, of required dimensions to receive adjacent other Work to be retained by framing. Except as otherwise shown, fabricate framing and sleeves from structural steel shapes, plates and steel bars, of welded construction using mitered joints for field connections. Cut, drill and tap units to receive hardware and similar items.
 3. Fabricate pipe sleeves with integrally welded anchor straps for casting into concrete. Except as otherwise shown, space anchors 24 inches on center and provide minimum steel straps of 1-¹/₄ inches wide by ¹/₄ inch thick by 8 inches long.
- I. Fabrication of Custom Extruded Aluminum Shapes (Base Bid)
1. Fabricate aluminum pipe section to match sizes, shapes and profiles shown in the drawings. Fabricate framing and sleeves from aluminum shapes of welded construction using mitered joints. Where a section is assembled from more than

one part to achieve the section profile, the joints shall be welded or mechanically joined such that the seams, joints, and fasteners are concealed. Cut, drill and tap units to receive conduit, pipe, fasteners, fixtures and similar items.

- J. Allow for thermal movement to prevent buckling, opening up of joints, overstressing of components, failure of connections, and other detrimental effects.

PART III - EXECUTION

3.1 PREPARATION

- A. Examine areas and conditions under which metal fabrications are to be installed. Do not proceed with the work until unsatisfactory conditions have been corrected in a manner acceptable to installer.
- B. Furnish setting drawings, diagrams, templates, instructions, and directions for installation of anchorages, such as concrete inserts, anchor bolts and steel supporting items having integral anchors, which are to be embedded in concrete or masonry construction. Coordinate delivery of steel supporting items to the work site.
- C. Set sleeves in concrete with tops flush with finish surface elevations; protect sleeves from water and concrete entry.

3.2 INSTALLATION

- A. Fastening to In-Place Construction
 - 1. Provide anchorage devices and fasteners where necessary for securing steel supporting items to in-place construction including threaded fasteners for concrete inserts, toggle bolts, through bolts, and other connectors as required.
- B. Cutting, Fitting and Placement
 - 1. Perform cutting, drilling, and fitting required for installation of steel and aluminum supporting metal items. Set Work accurately in location, alignment and elevation, plumb, level, true and free of rack, measured from established lines and levels with lines visually parallel. Provide temporary bracing or anchors in framework for items that are to be built into concrete or masonry.
 - 2. Fit exposed connections accurately together to form tight hairline joints. Weld connections that are not to be left as exposed joints, but cannot be shop welded because of shipping size limitations. Grind joints smooth and touch-up shop paint coat. Do not weld, cut or abrade the surfaces of exterior units which have been hot-dip galvanized or powder coated after fabrication, and are intended for bolted or screwed field connections.
- C. Field Welding: Comply with AWS Code for procedures of manual shielded metal-arc welding, appearance and quality of welds made, and methods used in correcting welding work.
- D. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting. Apply by brush or spray to provide a minimum dry film thickness of 1.0 mil.
- E. For galvanized surfaces clean welds, bolted connections and abraded areas and apply galvanizing repair paint as recommended by ASTM A 780.

3.3 SETTING BEARING AND LEVELING PLATES

- A. Clean concrete and masonry bearing surfaces of any bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of bearing plates.
- B. Set loose leveling and bearing plates on wedges, or other adjustable devices. After the bearing members have been positioned and plumbed, tighten the anchor bolts. Do not remove wedges or shims, but if protruding, cut off flush with the edge of the bearing plate before packing with grout.
 - 1. Use metallic non-shrink grout in concealed locations where not exposed to moisture; use nonmetallic non-shrink grout in exposed locations, unless otherwise indicated.
 - 2. Do not place grout when overnight temperatures are expected to drop below freezing, if left unprotected.
 - 3. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.4 ADJUSTING AND CLEANING

- A. For galvanized surfaces clean welds, bolted connections and abraded areas and apply galvanizing repair paint to comply with ASTM A 780.

PART IV - MEASUREMENT

- 4.1 Measurement** – No Separate measurement will be made for Work described in this Section.

PART V - PAYMENT

- 5.1 Payment** – Payment for items in this Section will be incidental to the Contract unit cost of the metal bid items.

END OF SECTION

SECTION 05 50 10
MISCELLANEOUS METAL FABRICATIONS

PART 1 - GENERAL

1.1 SUMMARY

- A. Furnish labor, materials, tools, equipment, and services for Miscellaneous Metal Fabrications, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. Materials and operations standards:
 - 1. AAMA, Architectural Aluminum Manufacturer's Association.
 - 2. AISC, American Institute of Steel Construction.
 - 3. ASTM, American Society for Testing and Materials.
 - 4. AWS, American Welding Society.
 - 5. NAAMM, National Association of Architectural Metals Manufacturers.

1.3 SUBMITTALS

- A. Shop drawings:
 - 1. Plans and elevations showing all members and connections.
 - 2. Anchors and accessory items.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Materials listed:
 - 1. Base: As noted.
- B. Galvanizing Repair Paint:
 - 1. Base:
 - a. Tnemec.
 - 2. Optional:
 - a. ZRC Worldwide.
 - b. Sherwin-Williams.
- C. Shop Primer:
 - 1. Base:
 - a. As recommended by finish coat manufacturer for substrate.
 - 2. Optional:
 - a. Sherwin-Williams.
 - b. Tnemec.
- D. Non-shrink Grout:
 - 1. Base:
 - a. Dayton Superior Corporation.
 - 2. Optional:
 - a. Sauereisen.
 - b. CGM Building Products (Por-Rok).
- E. Decorative Bollard Covers:
 - 1. Base:

a. Thermoprene.

F. Other manufacturers desiring approval comply with Section 00 26 00.

2.2 MATERIALS

A. Structural steel:

1. Steel, Structural W shapes and tee's: ASTM-A992 (50ksi yield point)
2. Other steel shapes and plate: ASTM-A36
3. Pipe – Round ASTM A53 Grade B
4. Tubing square or rectangular: ASTM-A500, grade-B (46ksi minimum)

B. Cast steel: ASTM-A27, Grade-65-35; and ASTM-A148, Grade-80-50.

C. Steel forgings: ASTM-A668.

D. Bolts: ASTM-A307, ASTM-A325, ASTM-A354.

E. Filler metal: AWS Standards.

F. Cast iron: ASTM-A48, Class 30, minimum 206 850 kPa 30,000 PSI tensile.

G. Malleable iron: ASTM-A47 and ASTM-A197.

H. Aluminum: ASTM-B308 for particular alloy in standard shapes and extrusions, ASTM-B26 for castings.

I. Stainless steel: ASTM-A484 and ASTM-A276.

1. Concealed: Type 302 or Type 304.
2. Exposed: Type 304.
 - a. Finish: ASTM-A480 AISI finish #4, unless otherwise indicated.
3. Exposed: Type 316.
 - a. Finish: ASTM-A480 AISI finish #4, unless otherwise indicated.

J. Anchorage devices - Masonry:

1. Standard manufactured items.
2. Lead expansion shields for machine screws and bolts 1/4 IN and smaller: Head out embedded nut type.
3. For machine screws and bolts larger than 1/4 IN: Manufacturers' standard.
4. Bolt anchor expansion shields for lag bolts: Zinc alloy, long shield anchors.
5. Bolt anchor expansion shields for bolts: Closed end bottom bearing type.
6. Anchor to embed or set device in setting compound or epoxy grout where shown.

K. Fasteners:

1. Galvanized or stainless where built into exterior walls.
2. Select fasteners for type, grade and class required.
3. Bolts and Nuts: Regular hexagon head ASTM-A307, Grade-A.
4. Lag Bolts: Square or octagonal head type.
5. Machine Screws: Cadmium plated steel.
6. Wood Screws: Flat head carbon steel.
7. Plain Washers: Round, carbon steel.
8. Lock Washers: Helical spring carbon steel.

L. Non-shrink grout:

1. Compressive strength: 48.2 MPa 9000 PSI at 7 days.
2. Base Product: 1107 Advantage Grout by Dayton Superior.

M. Abrasive warning tape:

1. Self-adhering, tape with slip resistive mineral surface.
2. Color: Safety Yellow.
3. Width: 2 IN, except where noted otherwise.
4. Tape Type 2:
 - a. Base Product: Safety-Walk 530 Conformable by 3M.

- b. Backing: Aluminum foil.
- c. Thickness: 0.035 IN.
- d. Use Type 2 at top and bottom rungs of all ladders.

2.3 FABRICATION

- A. Form to shapes indicated with straight lines, sharp angles, and smooth curves.
- B. Drill or punch holes with smooth edges for temporary field connections and attachment of work by other trades.
- C. Make permanent shop and field connections with continuous fillet type welds.
- D. Grind exposed welds smooth.
- E. Conceal fastenings where practicable.
- F. Shop fabricate in as large assemblies as practicable.
- G. Meet requirements specified under Structural Steel for fabricating items of structural nature or use.
- H. Qualify welding processes and welding operators in accordance with AWS.

2.4 SURFACE PREPARATION AND SHOP-APPLIED COATINGS

- A. Items not to receive coatings:
 - 1. Surfaces scheduled to be fireproofed with spray-on material.
 - 2. Machined surfaces.
 - 3. Surfaces adjacent to field welds.
 - 4. Contact surfaces of bolt connections at slip connections.
 - 5. Top flanges of beams to receive shear connectors.
 - 6. Items for which no coating or field finish is specified.
- B. Shop Primer for Interior (non-wet) Items:
 - 1. Primer: Coordinate with finish systems specified in Section 09 91 23.
 - 2. Apply primer for interior finish paint to following surfaces not receiving other coating:
 - a. Surfaces exposed on interior.
 - 3. Clean thoroughly before priming; remove mill scale, rust, dirt, oil, and grease in accordance with SSPC-SP3.
 - 4. Apply in accordance with paint manufacturer's instructions.
 - a. Apply minimum 0.002 IN, dry film thickness.
 - 5. Finish Paint (applied in field): Specified in Section 09 91 23.
- C. Hot-dip Galvanized (HDG) Coating for Exterior items:
 - 1. Galvanize (HDG) the following items:
 - a. Items to be installed on site, roof or other areas that are outside of building enclosure walls. This shall include items "attached to" exterior walls of building.
 - b. Items to be installed in wet or humid (>70% RH) areas of building.
 - c. Partial listing of items to receive HDG:
 - 1) Masonry lintels, ledge angles and shelf angles.
 - 2) Pipe Bollards.
 - 3) Exterior Ladders, Stairs and railings.
 - 4) Exterior gratings and substructure.
 - 5) Exterior equipment supports.
 - 6) Similar items which are exposed to weather or built-in to Exterior walls.
 - 7) Other items indicated.
 - 2. Clean thoroughly before galvanizing.
 - 3. Galvanize in accordance with ASTM-A123.
- D. Galvanizing repair coating:
 - 1. Tnemec Series 94-H20 Hydro-Zinc.

2. ZRC Worldwide, Galvilite 221.
3. Sherwin Williams Zinc Clad III HS 100.

2.5 PAINTING

- A. Paint exterior steel items (in field) as Specified in Section 09 91 13.
- B. Paint interior steel items (in field) as Specified in Section 09 91 23.

2.6 METAL FABRICATIONS

- A. General:
 1. Supply items required to complete construction and installation.
 2. Minimum Workmanship Standards (unless noted otherwise): Class 1 (Architectural) per NAAMM AMP-555, Code of Standard Practice for the Architectural Industry.
 3. Anchorage accessories:
 - a. Items required to secure wood to metal, wood to masonry, metals to masonry or concrete, metal to metal or metal to other items.
- B. Ladders:
 1. General:
 - a. Design to comply with the following regulations:
 - 1) ANSI-A14.3.
 - 2) OSHA 29 1910.27.
 - b. Material:
 - 1) Exterior Ladders: Galvanized steel, painted by Section 09 91 13.
 - 2) Interior Ladders: Shop-primed steel, painted by Section 09 91 23.
 - c. Side rail members: Minimum 13 x 1/2 x 2 IN.
 - d. Rungs: Minimum 7/8 IN round or square bars.
 - e. Punch rungs through side rails and weld.
 - f. Size to support concentrated moving load of 200 LB.
 - g. Minimum clearance from centerline of rung to wall or obstruction: 7 IN.
 - h. Minimum ladder width: 16 IN between side rails.
 - i. Rung spacing: 12 IN O.C.
 - j. Apply abrasive warning tape Type 2 to top and bottom rung of all ladders.
 2. Elevator Pit Ladders:
 - a. Comply with general items above, except as amended by following:
 - b. Extend from bottom of pit to 4 FT above floor level.
 - c. Rungs: Minimum 3/4 IN round or square bars.
 - d. Rung clearance: 7 IN from center of rung to face of pit wall.
 - e. Maximum projection from wall: 8 IN or as directed by locally adopted codes and elevator running clearances.
 - f. Comply with ANSI/ASME-A17.1.
 - g. Coordinate final dimensions and locations with Elevator contractor.
 - h. Provide radius edges at tops of all side rails.
- C. Metal Gratings:
 1. Complying with NAAMM Metal Bar Grating Manual.
 2. Material and Thickness (except were otherwise indicated):
 - a. Galvanized steel, nominal 1-1/2 IN thick.
 3. Load Capacity: Support minimum uniform load of 9575 Pa 200 PSF.
 4. Provide hold down clips.
 5. Furnish with frames and support items of comparable material and finish.
- D. Steel Support Angles, Members and Loose Lintels:
 1. ASTM-A36 steel, Sizes and configurations as indicated.
 2. Items to be HDG (galvanized):
 - a. Items to be permanently exposed to weather, high-humidity, or wet conditions.
 - b. Items set into exterior walls.

3. Shop Prime interior items (in non-wet areas).
- E. Miscellaneous Equipment Supports:
1. ASTM A36 steel, Sizes and configurations as indicated.
 2. Examples of items included:
 - a. Supports for Folding Partitions, Operable Walls, Coiling Doors and Grilles.
 - b. Supports for ICU Doors.
 - c. Support of Medical Equipment including Surgical Lights, Power Columns. And other items indicated.
 - d. Ceiling hung toilet partitions.
 - e. Other miscellaneous support items as indicated.
 3. Items to be hot dipped galvanized:
 - a. Items to be permanently exposed to weather, high-humidity, or wet conditions.
 - b. Items set into exterior walls.
 4. Shop Prime interior items (in non-wet areas).

2.7 BOLLARDS

- A. General:
1. Provide where indicated.
 2. Supply items required to complete construction and installation.
 3. Minimum Workmanship Standards (unless noted otherwise): Class 1 (Architectural) per NAAMM AMP-555, Code of Standard Practice for the Architectural Industry.
- B. Type UB-1 (Utility Bollards):
1. 6 IN diameter extra strength, HDG (galvanized), steel pipe.
 2. Length: Unless otherwise indicated; minimum 42 IN projection above ground and 36 IN embedment into concrete.
 3. Fabricate with welded on anchors.
 4. Fill pipe with 3000 PSI concrete with rounded top.
 5. Paint (in-field) by Division 09.
- C. Type DB-1 (Steel Bollards with Decorative Cover):
1. Assembly including a concrete-filled steel pipe with a decorative cover sleeve.
 2. Steel pipe bollard:
 - a. 6 IN diameter extra strength, HDG (galvanized), steel pipe.
 - b. Length: Unless otherwise indicated; minimum 42 IN projection above ground and 36 IN embedment into concrete.
 - c. Fabricate with welded on anchors.
 - d. Fill with 3000 PSI concrete, flush at top.
 3. Decorative Bollard Covers:
 - a. Description: 1/8 IN thick, HDPE.
 - b. Size as appropriate for pipe.
 - c. Color: To be selected by Architect.
 - 1) 5-year warranty for color-fastness, cracking and UV-resistance.
 - d. Dual reflective stripes near top of cover.
 - e. Base Product: Bollardgard by Thermoprene.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Verify suitability of substrate to accept installation.
- B. Installation constitutes acceptance of responsibility for performance.
- C. Ensure that adequate Wall Backing (as specified in Section 09 22 16) has been installed where required for wall-mounted items specified in this Section.

3.2 INSTALLATION

- A. General:
 - 1. Set work level, true to line, plumb.
 - 2. Shim and grout as necessary.
 - 3. Weld field connections and grind smooth.
 - 4. Where practical, conceal fastenings.
 - 5. Secure metal to wood with lag screws of adequate size with appropriate washers.
 - 6. Secure metal to concrete with embedded anchors, setting compounds, caulking and sleeves, or setting grout.
 - a. Use expansion bolts, toggle bolts, or screws for light duty service.
 - 7. Meet structural requirements for erecting items of structural nature.
 - 8. Do not field splice fabricated items unless size requires splicing.
 - 9. Weld splices.
 - 10. Provide fabricated items complete with attachment devices as required to install.
- B. Galvanic Repair:
 - 1. After galvanized units have been erected and anchored apply galvanizing repair paint in accordance with manufacturer's recommendations.
 - 2. Surface preparation: Remove contaminates in accordance with SSPC SP-1.
- C. Bollards:
 - 1. Direct-buried: Prepare hole in earth which is at least:
 - a. Hole Depth: 6 IN deeper than embedment length specified for bollard.
 - b. Hole Diameter: 24 IN diameter for 150mm 6 IN diameter pipes.
 - c. Set pipe bollards plumb and to the exposure height indicated.
 - 2. Surface-Bolted and other means of attachment: Install as detailed.
 - 3. Fill annular space with concrete fill having a compressive strength of at least 20,685 kPa 3000 PSI.
 - 4. Paint or cover with decorative sleeves as scheduled.

END OF SECTION

SECTION 05 50 13 STEEL STAIRS AND RAILINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Furnish labor, materials, tools, equipment, and services for Steel Stairs and Railings, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. Code Compliance:
 - 1. Conform to applicable Building Codes.
 - 2. Use most restrictive requirements of NFPA, IBC, ADA Standards of Accessible Design or other codes or amendments adopted by local Authority Having Jurisdiction.
- B. Design Responsibility:
 - 1. Engineering design submittal must be performed by, or under direct supervision of, a registered Professional Engineer, licensed to practice Structural Engineering in State of Missouri.
 - 2. Submittal must include calculations for all load-bearing components of stairs and landings.
 - a. Indicate design live loads on submittal.
 - 3. Submittal to be reviewed by Architect for general conformance with design intent shown by Contract Documents.
 - a. Physical adequacy of Structural design and conformance with applicable building Codes are responsibility of stair fabricator.
- C. Materials and Design Standards:
 - 1. American Institute of Steel Construction (AISC).
 - 2. ASTM International (ASTM).
 - 3. American Welding Society (AWS).
 - 4. National Association of Architectural Metals Manufacturers (NAAMM).
 - 5. National Ornamental & Miscellaneous Metals Association (NOMMA).
- D. Workmanship Standards:
 - 1. Fabricate in accordance with latest editions of NAAMM AMP 521, Pipe Railings Systems Manual, and NAAMM AMP-510, Metal Stairs Manual.
 - 2. Railing System Joints: Continuous fillet weld. Type 1 Railing System Joint Construction.

1.3 SUBMITTALS

- A. Shop Drawings:
 - 1. Layout drawings indicating rise and run.
 - 2. Include full sections, details, handrails, guardrails and anchoring methods.
- B. Project Information:
 - 1. Engineering calculations indicating design moments, shears, and other forces sealed by registered Engineer, licensed to practice Structural Engineering in the State of MO.
 - a. Submit concurrent with Shop Drawings.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Steel Stairs:
 - 1. Shop fabricated.
- B. Galvanizing Repair Paint:
 - 1. Base:
 - a. Tnemec.
 - 2. Optional:
 - a. ZRC Worldwide.
 - b. Sherwin-Williams.
- C. Shop Primer:
 - 1. Base:
 - a. As recommended by finish coat manufacturer for substrate.
 - 2. Optional:
 - a. Sherwin-Williams.
 - b. Tnemec.
- D. Non-shrink Grout:
 - 1. Base:
 - a. Dayton Superior Corporation.
 - 2. Optional:
 - a. Sauereisen.
 - b. CGM Building Products (Por-Rok).
- E. Abrasive Warning Tape:
 - 1. Base:
 - a. 3M.
- F. Other manufacturers desiring approval comply with Section 00 26 00.

2.2 MATERIALS

- A. Structural steel: ASTM A36, ASTM A501, ASTM A575 or ASTM A108.
- B. Cast steel: ASTM A27, Grade-65-35; and ASTM A148, Grade-80-50.
- C. Steel forgings: ASTM A668.
- D. Bolts: ASTM A307, ASTM A325, ASTM A354.
- E. Filler metal: AWS Standards.
- F. Malleable iron: ASTM A47 and ASTM A197.
- G. Steel pipe: ASTM A53.
- H. Non-shrink Grout:
 - 1. Compressive strength: 41,370 kPa 6,000 PSI at 7 days.
 - 2. Base Product: 1107 Advantage Grout by Dayton Superior Corporation.
- I. Anchorage Devices:
 - 1. Items required to secure wood to metal, wood to masonry, metals to masonry, or concrete, metal-to-metal or metal to other items.
 - 2. Galvanized or stainless where built into exterior walls.
 - 3. Select fasteners for type, grade, and class required.
 - 4. Bolts and Nuts: Regular hexagon head ASTM A307, Grade A.
 - 5. Lag Bolts: Square or octagonal head type.
 - 6. Machine Screws: Cadmium plated steel.
 - 7. Wood Screws: Flat head carbon steel.

8. Plain Washers: Round, carbon steel.
9. Lock Washers: Helical spring carbon steel.
10. Lead expansion shields for machine screws and bolts 1/4 IN and smaller: Head out embedded nut type.
 - a. For machine screws and bolts larger than 1/4 IN: Manufacturers' standard.
 - b. Bolt anchor expansion shields for lag bolts: Zinc alloy, long shield anchors.
 - c. Bolt anchor expansion shields for bolts: Closed end bottom bearing type.

2.3 STEEL STAIRS

- A. Design, fabricate, and install in compliance with applicable codes.
 1. Enclosed Stairs: Commercial Class per latest edition NAAMM AMP-510, Metal Stairs Manual.
 2. Non-enclosed and monumental stairs: Architectural Class per latest edition NAAMM AMP-510, Metal Stairs Manual.
- B. Fabricate and design stair and landing assembly to support larger of following loads, whichever results in strongest components:
 1. Design Concentrated Moving Load: 136 KG 300 LBS.
 2. Design Uniform Load: 4790 Pa 100 PSF.
- C. Support stairs at locations indicated.
- D. Hangers: Minimum 1/2 IN diameter steel rod.
 1. Connect hangers to beams only.
 2. Hanger-slab connections are not permitted.
 3. Maximum eccentricity from beam centerline to hanger centerline shall be 2 IN.
 4. Connect hangers to structure with through-bolt type connections when in tension.
 - a. Recess top plate and nut in slab and grout smooth.
 5. Expansion anchor type connections in tension are not allowed.
- E. Support brackets and posts:
 1. Attach to structure as required, use welded connections whenever possible.
 2. When required, expansion anchors in concrete shall only be used for shear type connections.
- F. Stringers:
 1. Channel shape: 3/16 IN x 12 IN deep steel plate, minimum.
 2. Outside stringers shall span flight length plus landing.
 - a. Intermediate supports are not allowed without prior approval.
- G. Treads:
 1. Minimum 14 GA steel pans with angle supports as required.
- H. Risers:
 1. Minimum 14 GA steel.
- I. Landings:
 1. Minimum 10 GA pans with angle supports as required.
- J. Metal Lath:
 1. Self-furring diamond mesh with dimples or embossed ribs.
 2. Maintain metal lath, 1/4 IN minimum, above tread and landing steel pans.
- K. Form surface with slip resistant materials: See Section 03 35 00.
- L. Apply abrasive warning tape Type 1 to first and last nosing, at top and bottom, of stair runs.
- M. Contractor's option: Provide factory manufactured stair system in lieu of fabricated stairs, subject to review by Architect.

2.4 HANDRAILS AND GUARDRAILS

- A. Design Criteria:
 - 1. Comply with building codes and amendments.
 - 2. Utilize following loads for design of indicated members and their direct or indirect connection to building superstructure.
 - a. Handrails and top rail of Guardrails, Uniform Load: 50 LBS/LF minimum applied in any direction.
 - b. Handrails, Concentrated Load: 200 LBS minimum applied in any direction at any point along rail.
 - c. Guardrail, Concentrated Load: 200 LBS minimum applied in any direction at any point along rail.
 - d. Uniform and concentrated loads need not be concurrently applied.
 - 3. Intermediate rails, balusters, panels, and other infill materials:
 - a. Design to withstand a horizontal applied normal load of 50 LBS minimum on an area not to exceed 1 SF including openings and space between rails.
 - 4. Form to profiles indicated.
- B. Rails to be installed on exterior:
 - 1. Apply hot-dip galvanized (HDG) coating to steel after all rails which will be installed in exterior locations.
 - 2. Apply HDG coating after all cutting, drilling, grinding, welding and other fabrication has been completed.
- C. Handrails -General:
 - 1. Minimum clearance from wall: 1-1/2 IN.
 - 2. Maximum projection from wall: 4-1/2 IN.
 - 3. Maximum span between mounting brackets and/or newel posts: 8 FT.
 - 4. Return ends of wall mounted rails to wall.
- D. Make rails smooth with no projections to prevent a hand from sliding along entire length.
- E. Handrail Member Size:
 - 1. Round Tube: HSS 1.50.x 0.083; ASTM A500.
- F. Guardrail Member Sizes - General:
 - 1. Following member sizes are minimum.
 - 2. Sizes shall be increased where appropriate to resist design loads.
 - 3. Refer to drawings for depiction of guardrails.
 - 4. Maximum span between mounting brackets and newel posts: 8 FT.
- G. Newel Posts:
 - 1. Definition: Vertical elements at terminal ends of a guardrail panels; means by which Guardrail panels are attached to floors, stringers and other structural elements.
 - 2. Round Tube: HSS 1.66.x 0.140; ASTM A500 or as required to resist loads and spacing as shown on Architectural drawings.
- H. Top Rails and Bottom Rails:
 - 1. Definition: Top and bottom elements spanning the length of a Guardrail panel and terminated by Newel Posts.
 - 2. Round Tube: HSS 1.66.x 0.140; ASTM A500.
- I. Balusters/Pickets:
 - 1. Definition: Vertical elements spanning between Top Rails and Bottom Rails in a Guardrail panel; Used to subdivide panel.
 - 2. Square Bar: 1/2 x 1/2 IN.

2.5 MISCELLANEOUS ITEMS

- A. Abrasive Warning Tape:

1. Self-adhering, tape with slip resistive mineral surface.
2. Color: Safety Yellow.
3. Width: 2 IN, except where noted otherwise.
4. Tape Type 1:
 - a. Base Product: Safety-Walk 630 General Purpose Tread by 3M.
 - b. Backing: Plastic film.
 - c. Thickness: 0.70.030 IN.
 - d. Use Type 1 at first and last stair nosings of all stair runs.
 - 1) Do not use where rubber stair treads or carpet is scheduled.

2.6 FABRICATION

- A. Form to shapes indicated with straight lines, sharp angles, and smooth curves.
- B. Drill or punch holes with smooth edges for temporary field connections and attachment by work of other trades.
- C. Qualify welding processes and welding operators in accordance with American Welding Society.
- D. Make permanent shop and field connections with continuous fillet type welds.
- E. Grind exposed welds smooth and blend seamlessly into pipe.
- F. Conceal fastenings where practicable.
- G. Shop fabricate in as large assemblies as practicable.
- H. Meet requirements specified under Structural Steel for fabricating items of structural nature or use.

2.7 SURFACE PREPARATION AND SHOP APPLIED COATINGS

- A. General:
 1. All items in this section shall be shop finished by one of methods described in this Article.
- B. Shop Primer for Interior (non-wet) Items:
 1. Primer: Coordinate with finish systems specified in Section 09 91 23.
 2. Apply primer for interior finish paint to following surfaces not receiving other coating:
 - a. Surfaces exposed on interior.
 3. Clean thoroughly before priming; remove mill scale, rust, dirt, oil, and grease in accordance with SSPC-SP3.
 4. Apply in accordance with paint manufacturer's instructions.
 - a. Apply minimum 0.002 IN, dry film thickness.
- C. Finish Paint:
 1. Applied in field specified in Section 09 91 23.
- D. Hot-dip Galvanized (HDG) Coating for Exterior and interior wet items:
 1. Galvanize following items:
 - a. Items to be installed on site, roof or other areas that are outside of building enclosure walls. This shall include items attached to exterior walls of building.
 - b. Items to be installed in wet or humid, greater than 70 percent RH, areas of building.
 2. Clean thoroughly before galvanizing.
 3. Galvanize in accordance with ASTM A123.
- E. Galvanizing repair coating:
 1. Tnemec Series 94-H20 Hydro-Zinc.
 2. ZRC Worldwide, Galvilite 221.
 3. Sherwin Williams Zinc Clad III HS 100.

2.8 PAINTING

- A. Paint exterior steel items in field as Specified in Section 09 91 13.
- B. Paint interior steel items in field as Specified in Section 09 91 23.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Verify suitability of substrate to accept installation.
- B. Installation constitutes acceptance of responsibility for performance.
- C. Ensure that adequate wall backing has been installed where required for handrails and similar wall-mounted items specified in this Section.

3.2 INSTALLATION

- A. General:
 - 1. Shim and grout as required to set work plumb, level, and true to line.
 - 2. Weld field connections and grind smooth.
 - 3. Where practical, conceal fastenings.
 - 4. Secure metal to wood with lag screws and washers.
 - 5. Secure metal to concrete with embedded anchors, setting compounds, caulking and sleeves, or setting grout.
 - 6. Meet design requirements for erecting structural components.
 - 7. Do not field splice fabricated items unless size requires splicing.
 - 8. Weld splices and grind smooth.
 - 9. Provide fabricated items complete with attachment devices as required to install.
- B. Galvanic Repair:
 - 1. Repair abraded areas with galvanizing paint in accordance with manufacturer's recommendations.
 - 2. Surface preparation: Remove contaminates in accordance with SSPC SP-1.
- C. Handrails:
 - 1. Furnish handrails complete with brackets.
 - 2. Coordinate locations and installation of wall backing.
 - 3. Where posts are indicated to be set in sleeves, provide galvanized steel sleeves having a minimum wall thickness of 1/8 IN.
 - 4. Set newels or balusters in sleeves with non-shrink grout.
 - 5. Where setting is required for exterior, hold non-shrink grout back 1/4 IN from surface and fill flush with self leveling sealant.
- D. Abrasive warning tapes:
 - 1. Tape application to be installed immediately prior to Substantial Completion.
 - 2. Clean and prepare surfaces to receive tape prior to application.
 - 3. Apply tape in accordance with manufacturer's instructions.
 - 4. Where tape is damaged by construction activities, remove, clean, and reapply new material.

END OF SECTION

SECTION 05 51 19**METAL GRATING STAIRS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section Includes:

1. Industrial-type stairs with steel grating treads.

- B. Related Sections:

1. Section 05 50 13 "Steel Stairs and Railings" for metal stairs and railings.
2. Section 05 52 13 "Steel Tube Railings" for railings attached to metal grating stairs.

1.03 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design metal stairs, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

- B. Structural Performance of Stairs: stairs shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated.

1. Uniform Load: 100 lbf/ft.
2. Concentrated Load: 300 lbf applied on an area of 4 sq. in.
3. Uniform and concentrated loads need not be assumed to act concurrently.
4. Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
5. Limit deflection of treads, platforms, and framing members to L/240 or 1/4 inch, whichever is less.

- C. Structural Performance of Railings: Railings shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated.

1. Handrails and Top Rails of Guards:

- a. Uniform load of 50 lbf/ft. applied in any direction.
- b. Concentrated load of 200 lbf applied in any direction.
- c. Uniform and concentrated loads need not be assumed to act concurrently.

2. Infill of Guards:

- a. Concentrated load of 50 lbf applied horizontally on an area of 1 sq. ft.
- b. Infill load and other loads need not be assumed to act concurrently.

- D. Seismic Performance: Metal stairs shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. Component Importance Factor is 1.5.

1.04 SUBMITTALS

- A. Product Data: For metal stairs and the following:
 1. Nonslip aggregates and nonslip-aggregate finishes.
 2. Dimple plate nosings.
 3. Paint products.
 4. Grout.
- B. LEED Submittals:
 1. Product Data for Credit MR 4.1 and Credit MR 4.2. Indicating percentages by weight of postconsumer and preconsumer recycled content for products having recycled content. Include statement indicating costs for each product having recycled content.
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
- D. Samples for Initial Selection: For products involving selection of color, texture, or design.
- E. Samples for Verification: For the following products, in manufacturer's standard sizes:
 1. Stair treads with nonslip-aggregate surface finish.
 2. Grating treads.
 3. Dimple plate nosings.
- F. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- G. Qualification Data: For qualified professional engineer.
- H. Welding certificates.
- I. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.
- J. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for stairs and railings.
 1. Test railings according ASTM E 894 and ASTM E 935.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: Fabricator of products.
- B. NAAMM Stair Standard: Comply with "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP 510, "Metal Stairs Manual," for class of stair designated, unless more stringent requirements are indicated.
 1. Industrial-Type Stairs: Industrial class.
- C. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

- D. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 2. AWS D1.3, "Structural Welding Code - Sheet Steel."

1.06 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for metal stairs. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- C. Coordinate locations of hanger rods and struts with other work so that they will not encroach on required stair width and will be within the fire-resistance-rated stair enclosure.

PART 2 - PRODUCTS

2.01 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

2.02 FERROUS METALS

- A. Recycled Content of Steel Products: Provide products with average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.
- B. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
- C. Steel Tubing: ASTM A 500 (cold formed) or ASTM A 513.
- D. Steel Bars for Grating Treads: ASTM A 36/A 36M or steel strip, ASTM A 1011/A 1011M or ASTM A 1018/A 1018M.

2.03 DIMPLE PLATE NOSINGS

- A. Basis of Design: Subject to compliance with requirements, provide dimple plate nosings by Amico, a Gibraltar Industries Company.
1. Configuration: Manufacturer's standard dimple plate.

2.04 FASTENERS

- A. General: Provide zinc-plated fasteners with coating complying with ASTM B 633 or [ASTM F 1941](#), Class Fe/Zn 12 for exterior use, and Class Fe/Zn 5 where built into exterior walls. Select fasteners for type, grade, and class required.
- B. Bolts and Nuts: Regular hexagon-head bolts, [ASTM A 307, Grade A](#); with hex nuts, [ASTM A 563](#); and, where indicated, flat washers.

- C. Anchor Bolts: ASTM F 1554, Grade 36, of dimensions indicated; with nuts, [ASTM A 563](#); and, where indicated, flat washers.
 - 1. Provide mechanically deposited or hot-dip, zinc-coated anchor bolts for stairs indicated to be galvanized.
- D. Plain Washers: Round, [ASME B18.22.1](#).
- E. Lock Washers: Helical, spring type, [ASME B18.21.1](#).
- F. Post-Installed Anchors: Torque-controlled expansion anchors or chemical anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.
 - 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or [ASTM F 1941](#), Class Fe/Zn 5, unless otherwise indicated.
 - 2. Material for Exterior Locations and Where Stainless Steel is Indicated: Alloy Group 1 stainless-steel bolts, [ASTM F 593](#), and nuts, [ASTM F 594](#).

2.05 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- B. Shop Primers: Provide primers that comply with Division 09 painting Sections.
- C. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.
- E. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.

2.06 FABRICATION, GENERAL

- A. Provide complete stair assemblies, including metal framing, hangers, struts, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.
 - 1. Join components by welding unless otherwise indicated.
 - 2. Use connections that maintain structural value of joined pieces.
 - 3. Fabricate treads and platforms of exterior stairs so finished walking surfaces slope to drain.
- B. Preassembled Stairs: Assemble stairs in shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately [1/32 inch](#) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- D. Form bent-metal corners to smallest radius possible without causing grain separation

or otherwise impairing work.

- E. Form exposed work with accurate angles and surfaces and straight edges.
- F. Weld connections to comply with the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. Weld exposed corners and seams continuously unless otherwise indicated.
- G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated. Locate joints where least conspicuous.
- H. Fabricate joints that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

2.07 STEEL-FRAMED STAIRS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Alfab, Inc.
 - 2. American Stair, Inc.
 - 3. Ohio Gratings, Inc.
 - 4. Sharon Companies Ltd. (The).
- B. Stair Framing:
 - 1. Fabricate stringers of steel plates or channels.
 - a. Provide closures for exposed ends of channel stringers.
 - 2. Construct platforms of steel plate or channel headers and miscellaneous framing members as needed to comply with performance requirements.
 - 3. Weld or bolt stringers to headers; weld or bolt framing members to stringers and headers. If using bolts, fabricate and join so bolts are not exposed on finished surfaces.
 - 4. Where stairs are enclosed by gypsum board assemblies, provide hanger rods or struts to support landings from floor construction above or below. Locate hanger rods and struts where they will not encroach on required stair width and will be within the fire-resistance-rated stair enclosure.
 - 5. Where masonry walls support metal stairs, provide temporary supporting struts designed for erecting steel stair components before installing masonry.
- C. Metal Bar-Grating Stairs: Form treads and platforms to configurations shown from metal bar grating; fabricate to comply with NAAMM MBG 531, "Metal Bar Grating Manual."
 - 1. Fabricate treads and platforms from welded or pressure-locked steel grating with 1-1/4-by-3/16-inch bearing bars at 15/16 inch o.c. and crossbars at 4 inches o.c.
 - 2. Fabricate treads and platforms from welded or pressure-locked steel grating with openings in gratings no more than 5/16 inch in least dimension.
 - 3. Surface: Serrated.

4. Finish: Shop primed.
5. Fabricate grating treads with cast abrasive nosing and with steel angle or steel plate carrier at each end for stringer connections. Secure treads to stringers with bolts.
6. Fabricate grating platforms with nosing matching that on grating treads. Provide toeplates at open-sided edges of grating platforms. Weld grating to platform framing.

2.08 STAIR RAILINGS

- A. Decorative I railings as specified in 05 73 00 "Decorative Metal Railings:"

2.09 FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish metal stairs after assembly.
- C. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A 153/A 153M for steel and iron hardware and with ASTM A 123/A 123M for other steel and iron products.
 1. Fill vent and drain holes that will be exposed in finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.
- C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.
- D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
- E. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- F. Field Welding: Comply with requirements for welding in "Fabrication, General" Article.
- G. Place and finish concrete fill for treads and platforms to comply with Division 03 Section "Cast-in-Place Concrete."
 1. Install abrasive nosings with anchors fully embedded in concrete. Center

nosings on tread width.

3.02 INSTALLING METAL STAIRS WITH GROUTED BASEPLATES

- A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of baseplates.
- B. Set steel stair baseplates on wedges, shims, or leveling nuts. After stairs have been positioned and aligned, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with grout.
 - 1. Use nonmetallic, nonshrink grout unless otherwise indicated.
 - 2. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.03 ADJUSTING AND CLEANING

- A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - 1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

END OF SECTION 05 51 19

SECTION 05 52 14**STEEL PIPE RAILINGS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes:

- 1. Steel pipe railings for metal grating stairs and guardrails at locations indicated.
 - 2. Chain closures.

- B. Related Requirements:

- 1. Section 05 50 13 "Steel Stairs and Railings" for railings associated with metal pan stairs.
 - 2. Section 05 51 19 "Metal Grating Stairs" for stairs associated with Steel Pipe Railings.

1.03 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- C. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not satisfy structural performance requirements.

1.04 ACTION SUBMITTALS

- A. Product Data: For the following:

- 1. Manufacturer's product lines of mechanically connected railings.
 - 2. Railing brackets.
 - 3. Grout, anchoring cement, and paint products.

- B. LEED Submittals:

- 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

- D. Samples: For each type of exposed finish required.
 - 1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters.
 - 2. Fittings and brackets.
 - 3. Assembled Sample of railing system, made from full-size components, including top rail, post, handrail, and infill. Sample need not be full height.
 - a. Show method of connecting and finishing members at intersections.
- E. Delegated-Design Submittal: For railings, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.05 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified professional engineer.
- B. Welding certificates.
- C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.
- D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, according to ASTM E 894 and ASTM E 935.
- E. Evaluation Reports: For post-installed anchors, from ICC-ES.

1.06 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

1.08 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Steel Pipe and Tube Railings:
 - a. Pisor Industries, Inc.
 - b. Sharpe Products.
 - c. Wagner, R & B, Inc.; a division of the Wagner Companies.

2.02 PERFORMANCE REQUIREMENTS

- A. General: In engineering railings to withstand structural loads indicated, determine allowable design working stresses of railing materials based on the following:
1. Steel: 72 percent of minimum yield strength.
- B. Structural Performance: Provide railings capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
1. Handrails:
 - a. Uniform load of 50 lbf/ ft. applied in any direction.
 - b. Concentrated load of 200 lbf applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 2. Top Rails of Guards:
 - a. Uniform load of 50 lbf/ ft. applied in any direction.
 - b. Concentrated load of 200 lbf applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 3. Infill of Guards:
 - a. Concentrated load of 50 lbf applied horizontally on an area of 1 sq. ft..
 - b. Infill load and other loads need not be assumed to act concurrently.
- C. Thermal Movements: Provide exterior railings that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
- D. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

2.03 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
- B. Brackets, Flanges, and Anchors: Cast or formed metal of same type of material and finish as supported rails unless otherwise indicated.
1. Provide type of bracket with flange tapped for concealed anchorage to threaded hanger bolt and that provides 1-1/2-inch clearance from inside face of handrail to finished wall surface.

2.04 STEEL AND IRON

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- B. Tubing: ASTM A 500 (cold formed) or ASTM A 513.
 - 1. Provide galvanized finish.
- C. Plates, Shapes, and Bars: ASTM A 36/A 36M.
- D. Cast Iron: Either gray iron, ASTM A 48/A 48M, or malleable iron, ASTM A 47/A 47M, unless otherwise indicated.

2.05 FASTENERS

- A. General: Provide the following:
 - 1. Steel Railings: Plated steel fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating.
- B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated and capable of withstanding design loads.
- C. Fasteners for Interconnecting Railing Components:
 - 1. Provide concealed fasteners for interconnecting railing components and for attaching them to other work, unless exposed fasteners are unavoidable or are the standard fastening method for railings indicated.
- D. Anchors: Provide cast-in-place or torque-controlled expansion anchors, fabricated from corrosion-resistant materials with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and equal to four times the load imposed when installed in concrete, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.

2.06 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- B. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
- C. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.
- E. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- F. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.
 - 1. Water-Resistant Product: At exterior locations and where indicated provide formulation that is resistant to erosion from water exposure without needing

protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.07 FABRICATION

- A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.
- B. Shop assemble railings to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.
- C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately $1/32$ inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- D. Form work true to line and level with accurate angles and surfaces.
- E. Fabricate connections that are exposed to weather in a manner that excludes water. Provide weep holes where water may accumulate.
- F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- G. Connections: Fabricate railings with either welded or nonwelded connections unless otherwise indicated.
- H. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove flux immediately.
 - 4. At exposed connections, finish exposed surfaces smooth and blended so no roughness shows after finishing and welded surface matches contours of adjoining surfaces.
- I. Nonwelded Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
 - 1. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.
- J. Form Changes in Direction as follows.
 - 1. By bending or by inserting prefabricated elbow fittings.
- K. For changes in direction made by bending, use jigs to produce uniform curvature for each repetitive configuration required. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- L. Close exposed ends of railing members with prefabricated end fittings.

- M. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is $\frac{1}{4}$ inch or less.
- N. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.
 - 1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers or other means to transfer loads through wall finishes to structural supports and prevent bracket or fitting rotation and crushing of substrate.
- O. Gate Hinges: Install two hinges minimum per gate. Space 8-inches from bottom and top of gate. Install additional hinges as required to limit intermediate spacing at not more than 24-inches o.c.
- P. Gate Locking Hardware: Install one bottom lock on each gate. Install one top lock on each single or pair of gates.
- Q. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.
- R. For railing posts set in concrete, provide steel sleeves not less than 6 inches long with inside dimensions not less than $\frac{1}{2}$ inch greater than outside dimensions of post, with metal plate forming bottom closure.
- S. Toe Boards: Where indicated, provide toe boards at railings around openings and at edge of open-sided floors and platforms. Fabricate to dimensions and details indicated.
- T. Safety Chain Closures: Provide plastic-coated Traffic Red RAL 3020 chain closures at locations shown on Drawings.

2.08 STEEL AND IRON FINISHES

- A. Galvanized Railings:
 - 1. Hot-dip galvanize steel railings, including hardware, after fabrication.
 - 2. Comply with ASTM A 123/A 123M for hot-dip galvanized railings.
 - 3. Comply with ASTM A 153/A 153M for hot-dip galvanized hardware.
 - 4. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion for railings to receive fluoropolymer coatings.
 - 5. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- B. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.
- C. Preparing Galvanized Railings for Shop Priming: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.
- D. Primer Application: Apply shop primer to prepared surfaces of railings unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Shop, Field, and Maintenance Painting of Steel," for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.

1. Shop prime uncoated railings with universal shop primer.
- E. Shop-Painted Finish: Comply with Section 09 96 00 "High-Performance Coatings."
 1. Color: As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements are clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.02 INSTALLATION, GENERAL

- A. Fit exposed connections together to form tight, hairline joints.
- B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
 1. Do not weld, cut, or abrade surfaces of railing components that are coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
 2. Set posts plumb within a tolerance of **1/16 inch in 3 feet**.
 3. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed **1/4 inch in 12 feet**.
- C. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
- D. Adjust railings before anchoring to ensure matching alignment at abutting joints.
- E. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.03 RAILING CONNECTIONS

- A. Nonwelded Connections: Use mechanical or adhesive joints for permanently connecting railing components. Seal recessed holes of exposed locking screws using plastic cement filler colored to match finish of railings.
- B. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article whether welding is performed in the shop or in the field.
- C. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending **2 inches** beyond joint on either side, fasten internal sleeve securely to one side, and locate joint within **6 inches** of post.

3.04 ANCHORING POSTS

- A. For posts indicated to be installed in concrete, use steel pipe sleeves preset and anchored into concrete for installing posts. After posts have been inserted into sleeves, fill annular space between post and sleeve with nonshrink, nonmetallic grout, mixed and placed to comply with anchoring material manufacturer's written instructions.
- B. Form or core-drill holes not less than 5 inches deep and 3/4 inch larger than OD of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with nonshrink, nonmetallic grout, mixed and placed to comply with anchoring material manufacturer's written instructions.
- C. Cover anchorage joint with flange of same metal as post, welded to post after placing anchoring material.
- D. Leave anchorage joint exposed; wipe off surplus anchoring material; and leave 1/8-inch buildup, sloped away from post.
- E. Anchor posts to metal surfaces with oval flanges, angle type, or floor type as required by conditions, connected to posts and to metal supporting members as follows:
 - 1. For steel pipe railings, weld flanges to post and bolt to metal supporting surfaces.

3.05 ATTACHING RAILINGS

- A. Anchor railings as indicated on Drawings.
- B. Anchor railing ends at walls with round flanges anchored to wall construction and welded to railing ends or connected to railing ends using nonwelded connections.
- C. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and welded to railing ends or connected to railing ends using nonwelded connections.
- D. Attach railings to wall with wall brackets, except where end flanges are used. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
- E. Secure wall brackets and railing end flanges to building construction as follows:
 - 1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
 - 2. For steel-framed partitions, use toggle bolts installed through flanges of steel framing or through concealed steel reinforcements.

3.06 ADJUSTING AND CLEANING

- A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 requirements for touching up shop-painted surfaces.
 - 1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas, and repair galvanizing to comply with ASTM A 780/A 780M.

3.07 PROTECTION

- A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

END OF SECTION 05 52 14

SECTION 05 53 13
STEEL BAR GRATINGS**PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes steel bar gratings and metal frames and supports for gratings.
- B. Locations: As shown on Drawings, including the following:
 - 1. Safety platform
 - 2. Wash bay

1.03 COORDINATION

- A. Coordinate installation of anchorages for gratings, grating frames, and supports. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.04 ACTION SUBMITTALS

- A. LEED Submittals:
 - 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
- B. Shop Drawings: Include plans, sections, details, and attachments to other work.

1.05 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

1.06 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

1.07 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with gratings by field measurements before fabrication.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Alabama Metal Industries Corporation, a Gibraltar Industries company.
 2. Fisher & Ludlow.
 3. McNichols Co.
 4. Ohio Gratings, Inc.

2.02 METAL BAR GRATINGS

- A. Metal Bar Grating Standards: Comply with NAAMM MBG 531, "Metal Bar Grating Manual" and NAAMM MBG 532, "Heavy-Duty Metal Bar Grating Manual."
- B. Welded Steel Gratings:
1. Bearing Bar Spacing, Depth, Thickness, and Crossbar Spacing: Comply with Grating Marks indicated on Structural Drawings.
 2. Traffic Surface: Plain.
 3. Steel Finish: Hot-dip galvanized with a coating weight of not less than 1.8 oz./sq. ft. of coated surface.

2.03 FERROUS METALS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- B. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
- C. Steel Bars for Bar Gratings: ASTM A 36/A 36M or steel strip, ASTM A 1011/A 1011M or ASTM A 1018/A 1018M.
- D. Wire Rod for Bar Grating Crossbars: [ASTM A 510](#).
- E. Uncoated Steel Sheet: ASTM A 1011/A 1011M, structural steel, [Grade 30](#).

2.04 MISCELLANEOUS MATERIALS

- A. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20.
1. Use primer with a VOC content of 420 g/L (3.5 lb/gal.) or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.05 FABRICATION

- A. Shop Assembly: Fabricate grating sections in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
1. Fabricate removable sections in weights not to exceed 50 pounds per section.
- B. Cut, drill, and punch material cleanly and accurately. Remove burrs and ease edges to a radius of approximately $1/32$ inch unless otherwise indicated. Remove sharp or

rough areas on exposed surfaces.

- C. Form from materials of size, thickness, and shapes indicated on Structural Drawings.
- D. Fit exposed connections accurately together to form hairline joints.
- E. Welding: Comply with AWS recommendations and the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
- F. Provide for anchorage of type indicated on Structural Drawings; coordinate with supporting structure. Fabricate and space the anchoring devices to secure frames rigidly in place.
- G. Removable Grating Sections: Fabricate with banding bars attached by welding to entire perimeter of each section.
- H. Fabricate cutouts in grating sections for penetrations indicated. Arrange cutouts to permit grating removal without disturbing items penetrating gratings.
 - 1. Edge-band openings in grating that interrupt four or more bearing bars with bars of same size and material as bearing bars.
- I. Do not notch bearing bars at supports to maintain elevation.

2.06 GRATING FRAMES AND SUPPORTS

- A. Fabricate from metal shapes, plates, and bars of welded construction to sizes, shapes, and profiles indicated and as necessary to receive gratings. Miter and weld connections for perimeter angle frames. Cut, drill, and tap units to receive hardware and similar items.
 - 1. Unless otherwise indicated, fabricate from same basic metal as gratings.
 - 2. Equip units indicated to be cast into concrete or built into masonry with integrally welded anchors of type and spacing indicated on Structural Drawings.
- B. Hot-dip galvanized steel frames and supports with a coating weight of not less than 1.8 oz./sq. ft. of coated surface.

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL

- A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing gratings. Set units accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
- B. Provide temporary bracing or anchors in formwork for frames and other items that are to be built into concrete or masonry.
- C. Fit exposed connections accurately together to form hairline joints.
 - 1. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade the

surfaces of exterior units that have been hot-dip galvanized after fabrication.

D. Field Welding: Comply with AWS recommendations and the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.

3.02 INSTALLING METAL BAR GRATINGS

A. General: Install gratings to comply with recommendations of referenced metal bar grating standards that apply to grating types and bar sizes indicated, including installation clearances and standard anchoring details.

3.03 ADJUSTING AND CLEANING

A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780/A 780M.

1. Where used inside the building use primer complying with VOC limits specified in Part 2 "Products."

END OF SECTION 05 53 13

SECTION 05 58 00**SHEET METAL PANELS****PART I - GENERAL****1.1 SUMMARY****A. Definition:**

1. Work in this Section includes custom fabrication of sheet metal panels. Types of sheet metal include exterior station canopy panels and trim.

1.2 SUBMITTALS AND INFORMATION TO BE RETAINED

- A. Submittals shall be made in accordance with the requirements of the Project Quality Plan, except as modified herein.
- B. Product Data: Retain manufacturer's product data, installation instructions and general recommendations for each specified miscellaneous sheet metal product, including paint products and other finishing materials.
- C. Construction Drawings: Retain Construction Drawings for the fabrication of sheet metal work. Include plans, elevations and detail sections. Indicate jointing, fasteners, anchorage, and accessory items, and specify finishes.
- D. Samples: Retain 8" square samples of each metal finish. Prepare samples on metal of same alloy and gage to be used for the Work.

1.3 QUALITY ASSURANCE/QUALITY CONTROL

- A. Quality assurance/quality control shall be in accordance with the requirements of the Quality Plan and the General Provisions, except as modified herein.
- B. Shop Assembly: Preassemble items in the shop to the greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

SSPC	SP 8	Picking (Steel Structures Painting Manual, Ch 2 – Surface Preparation Specs.)
SMACNA		Sheet Metal and AC Contractors National Association

PART II - PRODUCTS

2.1 MATERIALS

- A. General: Provide materials selected for their surface flatness, smoothness and freedom from surface blemishes where exposed to view in the finished unit. Do not use materials having exposed- to-view surfaces exhibiting pitting, seam marks, roller marks "oil canning", stains, discoloration or other imperfections.
- B. Galvanized Sheet Steel: ASTM A 653 (commercial quality or lockforming quality), Coating Designation G90, mill phosphatized.
- C. Sheet Steel: Provide commercial quality cold-rolled carbon steel sheet as follows, unless otherwise indicated.
- D. Zinc-Coated Sheet Steel: ASTM A 591, with Class C zinc coating chemically treated in mill with phosphate solution and light chromate rinse.
- E. Fasteners: Use fasteners made of the same basic metal as the fastened metal, unless otherwise indicated. Do not use metals that are corrosive or incompatible with materials joined.
 - 1. Do not use exposed fasteners except where unavoidable. Match finish of metal surrounding fastener, unless otherwise indicated.
- F. Shop-Applied Enamel Finish System for Sheet Steel: Two coats Exterior Alkyd Urethane Semi-gloss enamel, DeVoe "Mirrolac" or equal, applied over DeVoe Primer 13201, or equal.
 - 1. Color to be selected by Architect.
- G. Joint Sealers: See Section 07 92 13.

2.2 FABRICATION, GENERAL

- A. Fabricate items to comply with requirements indicated, on Design Drawings including those for quality, thickness and finish of material as well as those indicating dimensions and details. Use heavier metal gages, stiffeners or metal backing as required to produce surface flatness, free of "oil-canning", and to impart sufficient strength for use indicated. If not otherwise indicated, provide the following minimum thickness of metal and comply with SMACNA recommendations for fabrication and installation details.
 - 1. Sheet Steel: Gauge as indicated on Design Drawings.
- B. Form sheet metals items in maximum lengths and keep joints to a minimum. Do not expose cut edges of sheet metal except as indicated. Fold back exposed ends of unsupported sheet metal to form a 2" wide hem on the concealed side, or ease exposed edges with backing to a

radius of approximately $\frac{1}{32}$ ". Form items with flat, flush surfaces, true to line and level, and without cracking and grain separation at bends.

- C. Continuously weld all joints and seams except where other methods of joining are indicated on Design Drawings; grind welds smooth and flush on exposed surfaces. Comply with AWS and other metal authorities.
- D. Provide straps, plates and brackets as required for support and anchorage of fabricated items to adjoining Work.
- E. Reinforce sheet metal items as required for attachment and support of hinges, catches and other hardware for operating components.

2.3 PANELS AND TRIM

- A. Form panel and trim members to the profiles shown on Design Drawings. Furnish all components required for support and installation of closures and trim. Fabricate closures and trim to tightly close with adjoining Work, and with weathertight joints at exterior installations.
- B. Locate fasteners to be concealed where possible; otherwise to be as inconspicuous as possible. Size to securely support the Work and space to prevent buckling or waviness of the finished surface.
- C. Drill and tap holes required for securing closures to other surfaces.
- D. Provide gaskets of closed-cell sponge neoprene or mastic sealing tape where shown on Design Drawings or required for concealed, continuous seal at abutting surfaces.
- E. Provide concealed support at joints to hold meeting faces in flush alignment. Miter or cope trim members at corners to form tight joints.

2.4 POCKETS FOR GLAZING TREATMENT

- A. Form pockets to profiles shown on Design Drawings using 18 gage sheet steel, unless otherwise indicated. Provide end closures and coordinate dimensions and attachment methods with window treatment equipment, window frames, ceiling suspension system, and other related Work to produce a coordinated and integrated assembly. Reinforce pocket for attachment of window treatment equipment and hardware or use heavier gage metal.
- B. For continuous pockets provide built-in filler panels between adjoining window treatment units to coincide with window mullions and of size indicated or required to fit to filler panels at ends of partitions.

2.5 SHOP FINISHING

- A. General:
 - 1. Comply with NAAMM AMP 500-505 for finish designations and application recommendations, except as otherwise indicated on Design Drawings.
 - 2. Complete mechanical finishes of flat sheet metal surfaces before fabrication, wherever possible. After fabrication, finish all joints, bends, abrasions, and other surface blemishes to match the sheet finish. Protect mechanical finishes on exposed surfaces from damage by application of adhesive paper or other temporary protective covering, prior to shipment.

- B. Colors: Provide colors indicated on Design Drawings, or if not indicated, as selected by Owner.
- C. Sheet Steel: Surface Preparation: Solvent-clean surfaces in compliance with SSPC-SP 1 to remove dirt, oil, grease and other contaminants that could impair paint bond. Remove mill scale and rust, if present, from uncoated steel in compliance with SSPC-SP 5 (White Metal Blast Cleaning) or SSPC-SP 8 (Pickling).
- D. Factory-Primed Sheet Steel: Apply shop primer for sheet steel immediately following surface preparation and pretreatment.
- E. Enamel Finish: Apply coats in strict compliance with paint manufacturer's specifications.

PART III - EXECUTION

3.1 PREPARATION

- A. Field Measurements: Perform sheet metal Work in cooperation with other trades. Where possible, verify size, location and placement of miscellaneous sheet metal work prior to fabrication. Coordinate field measurements and Construction Drawings with fabrication and shop assembly.
- B. Coordinate setting drawings, diagrams, templates, instructions, and directions for the installation of anchorages, such as concrete inserts, anchor bolts and miscellaneous items having integral anchors, which are to be embedded in concrete or masonry construction. Coordinate the delivery of such items to the Project site.

3.2 INSTALLATION

- A. Locate and place sheet metal items plumb, level and in alignment with adjacent Work.
- B. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect sheet metal surfaces and to make a weathertight connection.
- C. Form tight joints with exposed connections accurately fitted together. Provide reveals and openings for sealants and joint fillers, as shown on Design Drawings.
- D. Protect zinc-coated, galvanized and non-ferrous metal surfaces from corrosion or galvanic action by application of a heavy coating of bituminous paint on surfaces which will be in contact with concrete, masonry or dissimilar metals.
- E. Repair finishes damaged by cutting, welding, soldering and grinding operations required for shop fitting and jointing. Restore finishes and prime coats of paint so that there is no evidence of corrective Work. Return items which cannot be refinished in the field to the shop, make required alterations, and refinish the entire unit or provide new units, at fabricator's option.
- F. Provide concealed gaskets, flashing, sealants, fillers and insulation, and install as the Work progresses to make the installation weathertight or sealed.

PART IV - MEASUREMENT

- 4.1 Measurement** – No Separate measurement will be made for Work described in this Section.

PART V - PAYMENT

5.1 Payment – Payment for items in this Section will be incidental to the Contract unit cost of the metal bid items.

END OF SECTION

SECTION 05 73 13
GLASS-SUPPORTED RAILINGS**PART 1 - GENERAL****1.1 SUMMARY**

- A. Furnish labor, materials, tools, equipment, and services for Glass Supported Railings, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. References standards:
 - 1. Architectural Aluminum Manufacturer's Association (AAMA) for aluminum.
 - 2. American Society for Testing and Materials (ASTM).
 - 3. National Association of Architectural Metals Manufacturers (NAAMM) for metal finishes.
 - 4. American National Standards Institute (ANSI).
 - 5. American Iron and Steel Institute (AISI) for stainless steel.
 - 6. Copper Development Association (CDA) for bronze.
 - 7. ANSI Z97.1 - Safety Glazing Material Used in Buildings.
- B. Material Standards:
 - 1. General:
 - a. Refer to Part 2 for component materials required.
 - b. Refer to Part 2 for finishes required.
 - 2. Structural steel components: ASTM-A36, ASTM-A501, ASTM-A575 or ASTM-A108.
 - 3. Aluminum components: Alloy 6063-T52 for extruded pipe sections and posts in accord with ASTM-B221.
 - a. Anodic Finish Standards (where applicable):
 - 1) Clear Anodized: AA-M12-C22-A41 in accord with AAMA 606.1.
 - 4. Stainless Steel:
 - a. AISI Type 304.
 - b. Finish(es) indicated to comply with ASTM-A480.
- C. Design Responsibility - General:
 - 1. Engineering design submittal must be performed by, or under the direct supervision of, a registered Engineer, licensed to practice Structural Engineering in State of Missouri.
 - 2. Submittal must include calculations for all Rails, Posts, Balusters, Pickets, Infill members, and other load-resisting components.
 - a. Note design live loads on submittal.
 - 3. Submittal to be reviewed by A/E for general conformance with design intent shown by Contract Documents
 - a. Physical adequacy of Structural design, and conformance with applicable building Codes are the responsibility of the railing fabricator.
 - 4. Component sizes shall comply as indicated except larger/stronger members may be used where additional strength is required.
 - a. Demonstrate by calculations performed by qualified Engineer employed by the fabricator.
- D. Code Compliance:
 - 1. Design Glass-supported Railing system to comply with:
 - a. International Building Code as locally adopted.
 - b. ADA requirements.

- E. Top of guardrail systems capable of withstanding the following loads applied as indicated:
 - 1. Concentrated load of 250 LB applied at any point and in any direction.
 - 2. Uniform load of 50 LB per linear FT applied horizontally and concurrently with uniform load of 100 LB/Lineal FT applied vertically downward.
 - 3. Concentrated load need not be assumed to act concurrently with uniform loads.
- F. Handrails not serving as top rails capable of withstanding the following loads applied as indicated:
 - 1. Concentrated load of 250 LB applied at any point and in any direction.
 - 2. Uniform dead load of 50 LB/Lineal FT applied in any direction.
 - 3. Concentrated load need not be assumed to act concurrently with uniform loads.
- G. Infill area of guardrail systems capable of withstanding a horizontal concentrated load of 250 LB applied to 1 FT² at any point in the system.
 - 1. Above load need not be assumed to act concurrently with loads on top rails of railing system in determining stress on guard.
- H. Mock-Ups
 - 1. Provide full scale mock-up of the guardrails to accurately represent the materials, attachments, and assembly indicated in the Drawings. Approved mock-up may be incorporated into the Work.

1.3 SUBMITTALS

- A. Shop Drawings:
 - 1. Including elevations, sections, and details, indicating materials, components, sizes, dimensions, tolerances, hardware, fasteners, finishes, options, accessories, and installation.
 - 2. Indicate component details, materials, finishes, connection and joining methods.
 - 3. Show details of attaching railing system to supports.
- B. Product Data:
 - 1. Manufacturer's product data, including description of materials, components, fabrication, installation details and finishes.
- C. Samples:
 - 1. Submit manufacturer's samples of standard materials, finishes, colors, and textures.
 - 2. Minimum 2 IN x 4 IN sample of specified finish.
- D. Project Information:
 - 1. Engineering calculations indicating design moments, shears, and other forces sealed by registered Engineer, licensed to practice Structural Engineering in the State of Missouri.
 - a. Submit concurrent with Shop Drawings.
 - 2. Test reports.
- E. Contract Closeout Information:
 - 1. Maintenance Instructions.
 - 2. Warranty.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Glass-Supported Railing System:
 - 1. Base:
 - a. Livers Bronze, Co.
 - 2. Optional:

- a. Julius Blum & Co.
 - b. J.G. Braun.
 - c. Blumcraft of Pittsburgh.
- B. Dissimilar metal protection coating:
1. Base:
 - a. Tnemec.
- C. Grout, non-shrink:
1. Base:
 - a. Dayton Superior Corporation.
 2. Optional:
 - a. Sauereisen Cements Co.
 - b. Minwax.
- D. Other manufacturers desiring approval comply with Section 00 25 00.

2.2 GLASS-SUPPORTED RAILING SYSTEM

- A. General:
1. Frameless glass panel guardrail anchored to concrete
- B. Glass:
1. Kind: Tempered plate glass complying with ANSI Z97.1.
 - a. Utilized bent tempered units where curved rails are indicated.
 2. Thickness:
 - a. 1/2 IN.
 3. Color:
 - a. Clear.
 4. Field glaze glass panels.
- C. Anchors
1. Stainless steel concrete anchor embedded and sized to meet load requirements.
 2. Aluminum cap
 3. Rubber washers
- D. Glass Cap:
1. Metal U-shaped channel applied to top edge of glass railing where indicated on the Drawings.
 2. Include all gaskets, fasteners and other items required.

2.3 FINISHES

- A. Aluminum Items:
1. Clear Anodized
- B. Miscellaneous Items:
1. Anchorage devices:
 - a. Furnish anchorage devices compatible with system and substrate.
 2. Grout, non-shrink:
 - a. Compressive strength: 9000 PSI at 7 days.
 - b. Base Product: 1107 Advantage Grout by Dayton Superior Corporation,

2.4 FABRICATION

- A. Form to shapes and profiles indicated with straight lines, sharp angles, smooth curves.
- B. Drill or punch holes with smooth edges for temporary field connections and attachment of work by other trades.
- C. Conceal fastenings where practicable.
- D. Shop fabricate in as large assemblies as practicable.

- E. Provide dissimilar metal protection coating:
 - 1. When dissimilar metals come in contact.
 - 2. When metal or aluminum is anchored to or in contact with concrete or masonry.
- F. Cut material square and remove burrs from exposed edges with no chamfer.
- G. Make rails smooth with no projections preventing a hand from sliding along entire length.
- H. Make exposed joints with ¼" spacing and flush.
- I. Close exposed ends of pipes or rails with end caps.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive railing system.
 - 1. Verify suitability of substrate to accept installation.
- B. Correct non-conforming conditions.
- C. Do not begin installation until unacceptable conditions have been corrected.
 - 1. Installation constitutes acceptance of responsibility for performance.

3.2 INSTALLATION

- A. General:
 - 1. Install railing system in accordance with manufacturer's instructions and approved Shop Drawings.
 - 2. Install railing system plumb, level, square, true to line, and rigid.
 - 3. Attach railing system securely in place using fasteners supplied or approved by manufacturer.
 - a. Where practical, conceal fastenings.
 - b. Attach railing system to supports supplied or approved by manufacturer.
 - c. Use manufacturer's supplied hardware.
 - 4. Field-weld components as approved by manufacturer.
- B. Shim and grout as necessary.
- C. Secure metal to concrete with embedded anchors, setting compounds, caulking and sleeves, or setting grout.
- D. Meet structural requirements for erecting items of structural nature.
- E. Do not field splice fabricated items unless size requires splicing.
- F. Provide fabricated items complete with attachment devices as required to install.

3.3 ERECTION TOLERANCES

- A. Set glass plumb within a tolerance of 1:200 1/16 IN in 12 IN.
- B. Fit exposed connections accurately together to form tight hairline joints except as required for expansion.

3.4 PROTECTION

- A. Protect installed railing system and finish from damage during other construction.
- B. Repair minor damages to finish in accordance with manufacturer's instructions and as approved by Architect.

- C. Remove and replace defective or damaged components that cannot be successfully repaired as determined by Architect.

3.5 CLEANING

- A. Clean railing system promptly after installation in accordance with manufacturer's instructions.
- B. Do not use harsh cleaning materials or methods that would damage glass or finish.
- C. Do not use abrasive cleaners.

PART 4 - MEASUREMENT

4.1 Measurement – No Separate measurement will be made for Work described in this Section.

PART 5 - PAYMENT

5.1 Payment – Payment for items in this Section will be incidental to the Contract lump sum cost of the Station Stops.

END OF SECTION

SECTION 06 10 53**MISCELLANEOUS ROUGH CARPENTRY****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. This Section includes the following:
 - 1. Wood blocking and nailers.
 - 2. Plywood backing panels.
- B. Related Sections include the following:
 - 1. Division 06 Section "Interior Architectural Woodwork" for nonstructural carpentry items exposed to view and not specified in another Section.

1.03 DEFINITIONS

- A. Lumber grading agencies, and the abbreviations used to reference them, include the following:
 - 1. NELMA - Northeastern Lumber Manufacturers Association.
 - 2. NLGA - National Lumber Grades Authority.
 - 3. SPIB - Southern Pine Inspection Bureau.
 - 4. WCLIB - West Coast Lumber Inspection Bureau.
 - 5. WWPA - Western Wood Products Association.

1.04 SUBMITTALS

- A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.
 - 1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used, net amount of preservative retained, and chemical treatment manufacturer's written instructions for handling, storing, installing, and finishing treated material.
 - 2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials, both before and after exposure to elevated temperatures when tested according to ASTM D 5516 and ASTM D 5664.

3. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.
 4. Include copies of warranties from chemical treatment manufacturers for each type of treatment.
- B. Fastener and Anchorage Schedule.
- C. LEED Submittals:
1. Product Data for Credit EQ 4.1: For adhesives, including printed statement of VOC content.
 2. Product Data for Credit EQ 4.4: For composite-wood products, documentation indicating that product contains no urea formaldehyde.
 3. Certificates for Credit MR 7: Chain-of-custody certificates certifying that products specified to be made from certified wood comply with forest certification requirements. Include evidence that mill is certified for chain of custody by an FSC-accredited certification body.
 - a. Include statement indicating costs for each certified wood product.
- D. Evaluation Reports: For the following, from ICC-ES:
1. Fire-retardant-treated wood.
 2. Power-driven fasteners.
 3. Powder-actuated fasteners.
 4. Expansion anchors.
 5. Metal framing anchors.

1.05 QUALITY ASSURANCE

- A. Forest Certification: For the following wood products, provide materials produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship":
4. Miscellaneous lumber.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Stack lumber, plywood, and other panels; place spacers between each bundle to provide air circulation. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.01 WOOD PRODUCTS, GENERAL

- A. Certified Wood: Lumber and plywood shall be produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
- A. Lumber: DOC PS 20 and applicable rules of lumber grading agencies certified by the American Lumber Standards Committee Board of Review.

1. Factory mark each piece of lumber with grade stamp of grading agency.
2. Where nominal sizes are indicated, provide actual sizes required by DOC PS 20 for moisture content specified. Where actual sizes are indicated, they are minimum dressed sizes for dry lumber.
3. Provide dressed lumber, S4S, unless otherwise indicated.
4. Provide dry lumber with 19 percent maximum moisture content at time of dressing for 2-inch nominal thickness or less, unless otherwise indicated.
5. Provide dry lumber with 15 percent maximum moisture content at time of dressing for 2-inch nominal thickness or less, unless otherwise indicated.

2.02 FIRE-RETARDANT-TREATED MATERIALS

- A. General: Comply with performance requirements in AWPA C20 (lumber) and AWPA C27 (plywood).
 1. Use treatment that does not promote corrosion of metal fasteners.
 2. Use Interior Type A, unless otherwise indicated.
- B. Identify fire-retardant-treated wood with appropriate classification marking of testing and inspecting agency acceptable to authorities having jurisdiction.
- C. Application: Treat all concealed blocking to be installed in interior walls and partitions:

2.03 MISCELLANEOUS LUMBER

- A. General: Provide lumber for support or attachment of other construction, including the following:
 1. Blocking
 2. Nailers.
 3. Grounds.
- B. For items of dimension lumber size, provide Construction, Stud, or No. 2 grade lumber with 19 percent maximum moisture content and any of the following species:
 1. Mixed southern pine; SPIB.
 2. Eastern softwoods; NELMA.
 3. Northern species; NLGA.
 4. Western woods; WCLIB or WWPA.
- C. For concealed boards, provide lumber with 19 percent maximum moisture content and any of the following species and grades:
 1. Mixed southern pine, No. 2 grade; SPIB.
 2. Eastern softwoods, No. 2 Common grade; NELMA.
 3. Northern species, No. 2 Common grade; NLGA.
 4. Western woods, Construction or No. 2 Common grade; WCLIB or WWPA.

2.04 PANEL PRODUCTS

- A. Miscellaneous Concealed Plywood: Exposure 1 sheathing, span rating to suit framing in each location, and thickness as indicated but not less than 1/2 inch.
- B. Telephone and Electrical Equipment Backing Panels: DOC PS 1, Exposure 1, C-D Plugged, fire-retardant treated, in thickness indicated or, if not indicated, not less than

1/2 inch thick.

2.05 FASTENERS

- A. General: Provide fasteners of size and type indicated that comply with requirements specified in this Article for material and manufacture.
- B. Nails, Wire, Brads, and Staples: FS FF-N-105.
- C. Power-Driven Fasteners: CABO NER-272.
- D. Wood Screws: ASME B18.6.1.
- E. Screws for Fastening to Cold-Formed Metal Framing: ASTM C 954, except with wafer heads and reamer wings, length as recommended by screw manufacturer for material being fastened.
- F. Lag Bolts: ASME B18.2.1
- G. Bolts: Steel bolts complying with ASTM A 307, Grade A; with ASTM A 563 hex nuts and, where indicated, flat washers.
- H. Expansion Anchors: Anchor bolt and sleeve assembly of material indicated below with capability to sustain, without failure, a load equal to 6 times the load imposed when installed in unit masonry assemblies and equal to 4 times the load imposed when installed in concrete as determined by testing per ASTM E 488 conducted by a qualified independent testing and inspecting agency.
 - 1. Material: Carbon-steel components, zinc plated to comply with ASTM B 633, Class Fe/Zn 5.
 - 2. Material: Stainless steel with bolts and nuts complying with ASTM F 593 and ASTM F 594, Alloy Group 1 or 2.

2.06 METAL FRAMING ANCHORS

- A. General: Provide galvanized steel framing anchors of structural capacity, type, and size indicated and acceptable to authorities having jurisdiction.
- B. Galvanized Steel Sheet: Hot-dip, zinc-coated steel sheet complying with ASTM A 653/A 653M, G60 coating designation.

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL

- A. Discard units of material with defects that impair quality of carpentry and that are too small to use with minimum number of joints or optimum joint arrangement.
- B. Set carpentry to required levels and lines, with members plumb, true to line, cut, and fitted. Fit carpentry to other construction; scribe and cope as needed for accurate fit. Locate furring, nailers, blocking, grounds, and similar supports to comply with requirements for attaching other construction.

- C. Apply field treatment complying with AWPA M4 to cut surfaces of preservative-treated lumber and plywood.
- D. Securely attach carpentry work as indicated and according to applicable codes and recognized standards.
- E. Countersink fastener heads on exposed carpentry work and fill holes with wood filler.
- F. Use fasteners of appropriate type and length. Pre-drill members when necessary to avoid splitting wood.

3.02 WOOD GROUND, BLOCKING, AND NAILER INSTALLATION

- A. Install where indicated and where required for screeding or attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.
- B. Attach items to substrates to support applied loading. Recess bolts and nuts flush with surfaces, unless otherwise indicated.

3.03 WOOD FURRING INSTALLATION

- A. Install level and plumb with closure strips at edges and openings. Shim with wood as required for tolerance of finish work.
- B. Furring to Receive Gypsum Board: Install 1-by-2-inch nominal- size furring vertically at 16 inches o.c.

3.04 PROTECTION

- A. Protect wood that has been treated with inorganic boron (SBX) from weather. If, despite protection, inorganic boron-treated wood becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.
- B. Protect rough carpentry from weather. If, despite protection, rough carpentry becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

END OF SECTION 06 10 53

SECTION 06 16 43
GYP SUM SHEATHING**PART 1 - GENERAL****1.01 SUMMARY**

- A. This Section includes the following:
 - 1. Wall sheathing.
- B. Related Sections include the following:
 - 1. Division 07 Section "Weather Barriers" for air barrier and flexible flashings.

1.02 SUBMITTALS

- A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.
- B. LEED Submittals:
 - 1. Product Data for Credit EQ 4.1: For adhesives, including printed statement of VOC content.

1.03 QUALITY ASSURANCE

- A. Fire-Test-Response Characteristics: For assemblies with fire-resistance ratings, provide materials and construction identical to those of assemblies tested for fire resistance per ASTM E 119 by a testing and inspecting agency acceptable to authorities having jurisdiction.
 - 1. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory."

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Stack panels flat with spacers between each bundle to provide air circulation. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS**2.01 WALL SHEATHING**

- A. Glass-Mat Gypsum Wall Sheathing: ASTM C 1177/1177M.
 - 1. Available Products: Subject to compliance with requirements, provide one of the following products:
 - a. "Dens-Glass Gold" by G-P Gypsum Corporation.
 - b. "Securock" by USG Corporation
 - 2. Type and Thickness: Type X, 5/8 inch thick.
 - 3. Size: 48 by 96 inches.

2.02 FASTENERS

- A. General: Provide fasteners of size and type indicated that comply with requirements specified in this Article for material and manufacture.
 - 1. For wall sheathing, provide fasteners with hot-dip zinc coating complying with ASTM A 153/A 153M.
- B. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing board to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B 117.
 - 1. For steel framing less than 0.0329 inch thick, attach sheathing to comply with ASTM C 1002.
 - 2. For steel framing from 0.033 to 0.112 inch thick, attach sheathing to comply with ASTM C 954.

2.03 SHEATHING JOINT-AND-PENETRATION TREATMENT MATERIALS

- A. Sealant for Sheathing Board: Elastomeric, medium-modulus, neutral-curing silicone joint sealant compatible with joint substrates formed by gypsum sheathing and other materials, recommended by sheathing manufacturer for application indicated, and complying with requirements for elastomeric sealants specified in Division 07 Section "Joint Sealants."
 - 1. VOC Content of Interior Sealants: Provide sealants and sealant primers for use inside the weatherproofing system that comply with the following limits for VOC content when calculated according to 40 CFR 59, Part 59, Subpart D (EPA Method 24):
 - a. Architectural Sealants: 250 g/L.
 - b. Sealant Primers for Porous Substrates: 775 g/L.

2.04 MISCELLANEOUS MATERIALS

- A. Adhesives for Field Gluing Panels to Framing: Formulation complying with APA AFG-01 that is approved for use with type of construction panel indicated by manufacturers of both adhesives and panels.
 - 1. Adhesives shall have a VOC content of 70g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL

- A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement.
- B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction, unless otherwise indicated.
- C. Securely attach to substrate by fastening as indicated, complying with the following:
 - 1. NES NER-272 for power-driven fasteners.
 - 2. Table 2304.9.1, "Fastening Schedule," in ICC's "International Building Code."

- D. Coordinate wall sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.
- E. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.
- F. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast.

3.02 GYPSUM SHEATHING INSTALLATION

- A. Comply with GA-253 and with manufacturer's written instructions.
 - 1. Fasten gypsum sheathing to cold-formed metal framing with screws.
 - 2. Install boards with a 3/8-inch gap where non-load-bearing construction abuts structural elements.
 - 3. Install boards with a 1/4-inch gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.
- B. Apply fasteners so heads bear tightly against face of sheathing boards but do not cut into facing.
- C. Vertical Installation: Install board vertical edges centered over studs. Abut ends and edges of each board with those of adjacent boards. Attach boards at perimeter and within field of board to each stud.
 - 1. Space fasteners approximately 8 inches o.c. and set back a minimum of 3/8 inch from edges and ends of boards.

3.03 SHEATHING JOINT-AND-PENETRATION TREATMENT

- A. Seal sheathing joints according to sheathing manufacturer's written instructions.
 - 1. Apply elastomeric sealant to joints and fasteners and trowel flat. Apply sufficient quantity of sealant to completely cover joints and fasteners after troweling. Seal other penetrations and openings.

3.04 PROTECTION

- A. Apply covering to sheathing within time period recommended by sheathing manufacturer.

3.05 CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

- A. Comply with Waste Management Plan required under Division 01 Section "Construction Waste Management And Disposal."

END OF SECTION 06 16 43

SECTION 06 40 23**INTERIOR ARCHITECTURAL WOODWORK****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. This Section includes the following:
 - 1. Plastic-laminate cabinets.
 - 2. Solid-surfacing-material countertops.
- B. Related Sections include the following:
 - 1. Division 06 Section "Miscellaneous Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing woodwork and concealed within other construction before woodwork installation.

1.03 DEFINITIONS

- A. Interior architectural woodwork includes wood furring, blocking, shims, and hanging strips for installing woodwork items unless concealed within other construction before woodwork installation.

1.04 SUBMITTALS

- A. Product Data: For each type of product indicated, including cabinet hardware and accessories and finishing materials and processes.
- B. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.
 - 1. Show details full size.
 - 2. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
 - 3. Show locations and sizes of cutouts and holes for plumbing fixtures and other items installed in architectural woodwork.
 - 4. Apply AWI-certified compliance label to first page of Shop Drawings.
 - 5. Include Fastener and Anchorage Schedule for attaching interior architectural woodwork to blocking.
- C. Samples for Verification:
 - 1. Plastic laminates, 8 by 10 inches, for each type, color, pattern, and surface finish, with 1 sample applied to core material and specified edge material applied to 1 edge.
 - 2. Thermoset decorative-panels, 8 by 10 inches, for each type, color, pattern, and surface finish, with edge banding on 1 edge.
 - 3. Solid-surfacing materials, 6 inches square.
 - 4. Corner pieces as follows:

- a. Cabinet-front frame joints between stiles and rails, as well as exposed end pieces, 18 inches high by 18 inches wide by 6 inches deep.
 - b. Miter joints for standing trim.
5. Exposed cabinet hardware and accessories, one unit for each type and finish.
- D. LEED Submittals:
1. Product Data for Credit EQ 4.1: For installation adhesives, including printed statement of VOC content.
 2. Product Data for Credit EQ 4.4:
 - a. For each composite-wood product used, documentation indicating that the bonding agent contains no urea formaldehyde.
 - b. For each adhesive used, documentation indicating that the adhesive contains no urea formaldehyde.
 3. Product Data for Credit(s) MR 4.1 and MR 4.2: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content
 - a. Include statement indicating costs for each product having recycled content.
 4. Product Data for Credit MR 5.1: For products regionally extracted and manufactured material, including source and cost.
- E. Product Certificates: For each type of product, signed by product manufacturer.
- F. Woodwork Quality Standard Compliance Certificates: AWI-certified compliance certificates.
- G. Qualification Data: For fabricator.

1.05 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate products similar to those required for this Project and whose products have a record of successful in-service performance. Shop is a licensee of AWI's Certified Compliance Program.
- B. Quality Standard: Unless otherwise indicated, comply with AWI's "Manual of Millwork" for grades of interior architectural woodwork indicated for construction, finishes, installation, and other requirements.
 1. Provide AWI-certified compliance labels and certificates indicating that woodwork, including installation, complies with requirements of grades specified.
- C. Fire-Test-Response Characteristics: Where fire-retardant materials or products are indicated, provide materials and products with specified fire-test-response characteristics as determined by testing identical products per test method indicated by UL, ITS, or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify with appropriate markings of applicable testing and inspecting agency in the form of separable paper label or, where required by authorities having jurisdiction, imprint on surfaces of materials that will be concealed from view after installation.
- D. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver woodwork until painting and similar operations that could damage woodwork have been completed in installation areas. If woodwork must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Project Conditions" Article.

1.07 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install woodwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.
- B. Field Measurements: Where woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 1. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being enclosed, and indicate measurements on Shop Drawings.
 2. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating woodwork without field measurements. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.08 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that interior architectural woodwork can be supported and installed as indicated.
- B. Hardware Coordination: Distribute copies of approved hardware schedule specified in Division 08 Section "Door Hardware (Scheduled by Describing Products)" to fabricator of architectural woodwork; coordinate Shop Drawings and fabrication with hardware requirements.

PART 2 - PRODUCTS

2.01 MATERIALS

- A. General: Provide materials that comply with requirements of AWI's quality standard for each type of woodwork and quality grade specified, unless otherwise indicated.
- B. Wood Products: Comply with the following:
 1. Recycled Content of Medium-Density Fiberboard and Particleboard: Provide products with an average recycled content so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 20 percent.
 2. Hardboard: AHA A135.4.
 3. Medium-Density Fiberboard: ANSI A208.2, Grade MD, made with binder

- containing no urea formaldehyde.
 - 4. Particleboard: ANSI A208.1, Grade M-2-Exterior Glue.
 - 5. Softwood Plywood: DOC PS 1, Medium Density Overlay.
- C. Thermoset Decorative Panels: Particleboard or medium-density fiberboard finished with thermally fused, melamine-impregnated decorative paper complying with LMA SAT-1.
- 1. Provide PVC or matching plastic laminate edge banding complying with LMA EDG-1 on components with exposed or semiexposed edges.
- D. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated or, if not indicated, as required by woodwork quality standard.
- 1. Basis of Design: Subject to compliance with requirements, provide products indicated on Finish Legend on Drawings.
- E. Solid-Surfacing Material: Homogeneous solid sheets of filled plastic resin complying with ISSFA-2.
- 1. Basis of Design: Subject to compliance with requirements, provide products indicated on Finish Legend on Drawings.

2.02 FIRE-RETARDANT-TREATED MATERIALS

- A. General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this Article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified.
- 1. Do not use treated materials that do not comply with requirements of referenced woodworking standard or that are warped, discolored, or otherwise defective.
 - 2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 - 3. Identify fire-retardant-treated materials with appropriate classification marking of UL, U.S. Testing, Timber Products Inspection, or another testing and inspecting agency acceptable to authorities having jurisdiction.
- B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Comply with performance requirements of AWWA C20 (lumber) and AWWA C27 (plywood). Use the following treatment type:
- 1. Exterior Type: Organic-resin-based formulation thermally set in wood by kiln drying.
 - 2. Interior Type A: Low-hygroscopic formulation.
 - 3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking plant certified by testing and inspecting agency.
 - 4. Mill lumber before treatment and implement special procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.
 - 5. Kiln-dry materials before and after treatment to levels required for untreated materials.
- C. Fire-Retardant Particleboard: Panels complying with the following requirements, made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed

index of 25 or less per ASTM E 84.

1. For panels 3/4 inch thick and less, comply with ANSI A208.1 for Grade M-2 except for the following minimum properties: modulus of rupture, 1600 psi; modulus of elasticity, 300,000 psi; internal bond, 80 psi; and screw-holding capacity on face and edge, 250 and 225 lbf, respectively.
2. For panels 13/16 to 1-1/4 inches thick, comply with ANSI A208.1 for Grade M-1 except for the following minimum properties: modulus of rupture, 1300 psi; modulus of elasticity, 250,000 psi; linear expansion, 0.50 percent; and screw-holding capacity on face and edge, 250 and 175 lbf, respectively.
3. Product: Subject to compliance with requirements, provide "Duraflake FR" by Weyerhaeuser.

D. Fire-Retardant Fiberboard: Medium-density fiberboard panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less per ASTM E 84.

1. Product: Subject to compliance with requirements, provide "Meditate FR" by SierraPine Ltd.; Medite Div.

2.03 CABINET HARDWARE AND ACCESSORIES

A. General: Provide cabinet hardware and accessory materials associated with architectural cabinets, except for items specified in Division 08 Section "Door Hardware."

B. Butt Hinges: 2-3/4-inch, 5-knuckle steel hinges made from 0.095-inch- thick metal, and as follows:

1. Semiconcealed Hinges for Flush Doors: BHMA A156.9, B01361.
2. Semiconcealed Hinges for Overlay Doors: BHMA A156.9, B01521.

C. Back-Mounted Pulls: BHMA A156.9, B02011.

D. Wire Pulls: Back mounted, solid metal 5 inches long, 2-1/2 inches deep, and 5/16 inch in diameter.

E. Catches: Magnetic catches, BHMA A156.9, B03141.

F. Adjustable Shelf Standards and Supports: BHMA A156.9, B04071; with shelf rests, B04081.

G. Shelf Rests: BHMA A156.9, B04013; metal, two-pin type with shelf hold-down clip.

H. Drawer Slides: BHMA A156.9, B05091.

1. Standard Duty (Grade 1, Grade 2, and Grade 3): Side mounted and extending under bottom edge of drawer; partial-extension type; epoxy-coated steel with polymer rollers.
2. Heavy Duty (Grade 1HD-100 and Grade 1HD-200): Side mounted; full-extension type; zinc-plated steel ball-bearing slides.
3. File Drawer Slides: Grade 1HD-100; for drawers more than 6 inches high or 24 inches wide.

4. Pencil Drawer Slides: Grade 2; for drawers not more than 3 inches high and 24 inches wide.

I. Door Locks: BHMA A156.11, E07121.

J. Drawer Locks: BHMA A156.11, E07041.

K. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with BHMA A156.18 for BHMA finish number indicated.

1. Satin Stainless Steel: BHMA 630.

L. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in BHMA A156.9.

2.04 MISCELLANEOUS MATERIALS

A. Furring, Blocking, Shims, and Hanging Strips: Softwood or hardwood lumber, kiln dried to less than 15 percent moisture content.

B. Furring, Blocking, Shims, and Hanging Strips: Fire-retardant-treated softwood lumber, kiln dried to less than 15 percent moisture content.

C. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

D. Adhesives, General: Do not use adhesives that contain urea formaldehyde.

E. VOC Limits for Installation Adhesives and Glues: Use installation adhesives that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):

1. Wood Glues: 30 g/L.

2. Contact Adhesive: 250 g/L.

F. Adhesive for Bonding Plastic Laminate: Unpigmented contact cement.

1. Adhesive for Bonding Edges: Hot-melt adhesive or adhesive specified above for faces.

2.05 FABRICATION, GENERAL

A. Interior Woodwork Grade: Unless otherwise indicated, provide Custom-grade interior woodwork complying with referenced quality standard.

B. Wood Moisture Content: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.

C. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.

D. Fabricate woodwork to dimensions, profiles, and details indicated. Ease edges to radius indicated for the following:

1. Corners of Cabinets and Edges of Solid-Wood (Lumber) Members 3/4 Inch Thick or Less: 1/16 inch.
 2. Edges of Rails and Similar Members More Than 3/4 Inch Thick: 1/8 inch.
 3. Corners of Cabinets and Edges of Solid-Wood (Lumber) Members and Rails: 1/16 inch.
- E. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
1. Notify Authority seven days in advance of the dates and times woodwork fabrication will be complete.
 2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements indicated on Shop Drawings before disassembling for shipment.
- F. Shop-cut openings to maximum extent possible to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
1. Seal edges of openings in countertops with a coat of varnish.

2.06 PLASTIC-LAMINATE CABINETS

- A. Grade: Custom.
- B. AWI Construction Style: As indicated.
- C. AWI Door and Drawer Front Style: As indicated.
- D. Reveal Dimension: As indicated.
- E. Laminate Cladding for Exposed Surfaces: High-pressure decorative laminate complying with the following requirements:
1. Horizontal Surfaces Other Than Tops: Grade HGL.
 2. Postformed Surfaces: Grade HGP.
 3. Vertical Surfaces: Grade VGS.
 4. Edges: Grade VGS.
- F. Concealed Backs of Panels with Exposed Plastic Laminate Surfaces: High-pressure decorative laminate, Grade BKL.
- G. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:
1. As indicated by laminate manufacturer's designations on Finish Legend on Drawings.
- H. Provide dust panels of 1/4-inch plywood or tempered hardboard above compartments and drawers, unless located directly under tops.

2.07 SOLID-SURFACING-MATERIAL COUNTERTOPS

- A. Grade: Custom.
- B. Solid-Surfacing-Material Thickness: 3/4 inch.
- C. Colors, Patterns, and Finishes: Provide materials and products that result in colors of solid-surfacing material indicated by manufacturer's designations on Finish Legend on Drawings.
- D. Fabricate tops in one piece, unless otherwise indicated. Comply with solid-surfacing-material manufacturer's written recommendations for adhesives, sealers, fabrication, and finishing.
 - 1. Fabricate tops with shop-applied edges of materials and configuration indicated.
- E. Drill holes in countertops for plumbing fittings and soap dispensers in shop.

PART 3 - EXECUTION

3.01 PREPARATION

- A. Before installation, condition woodwork to average prevailing humidity conditions in installation areas.
- B. Before installing architectural woodwork, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.02 INSTALLATION

- A. Grade: Install woodwork to comply with requirements for the same grade specified in Part 2 for fabrication of type of woodwork involved.
- B. Assemble woodwork and complete fabrication at Project site to comply with requirements for fabrication in Part 2, to extent that it was not completed in the shop.
- C. Install woodwork level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb (including tops) to a tolerance of 1/8 inch in 96 inches.
- D. Scribe and cut woodwork to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
- E. Fire-Retardant-Treated Wood: Handle, store, and install fire-retardant-treated wood to comply with chemical treatment manufacturer's written instructions, including those for adhesives used to install woodwork.
- F. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing as required for complete installation. Use fine finishing nails or finishing screws for exposed fastening, countersunk and filled flush with woodwork and matching final finish if transparent finish is indicated.
- G. Paneling: Anchor paneling to supporting substrate with concealed panel-hanger clips. Do not use face fastening, unless otherwise indicated.
 - 1. Install flush paneling with no more than 1/16 inch in 96-inch vertical cup or bow

and 1/8 inch in 96-inch horizontal variation from a true plane.

- H. Cabinets: Install without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
 - 1. Install cabinets with no more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line.
 - 2. Maintain veneer sequence matching of cabinets with transparent finish.
 - 3. Fasten wall cabinets through back, near top and bottom, at ends and not more than 16 inches o.c. with No. 10 wafer-head sheet metal screws through metal backing or metal framing behind wall finish.
- I. Countertops: Anchor securely by screwing through corner blocks of base cabinets or other supports into underside of countertop.
 - 1. Align adjacent solid-surfacing-material countertops and form seams to comply with manufacturer's written recommendations using adhesive in color to match countertop. Carefully dress joints smooth, remove surface scratches, and clean entire surface.
 - 2. Install countertops with no more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line.
 - 3. Calk space between backsplash and wall with sealant specified in Division 07 Section "Joint Sealants."
- J. Touch up finishing work specified in this Section after installation of woodwork. Fill nail holes with matching filler where exposed.

3.03 ADJUSTING AND CLEANING

- A. Repair damaged and defective woodwork, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.
- B. Clean, lubricate, and adjust hardware.
- C. Clean woodwork on exposed and semiexposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

END OF SECTION 06 40 23

SECTION 06 64 00**PLASTIC PANELING****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes glass-fiber reinforced plastic (FRP) wall paneling and trim accessories.
- B. Locations: As shown on Drawings, including Janitor's Closet.
- C. Related Sections:
 - 1. Section 06 10 53 "Miscellaneous Rough Carpentry" for wood furring for installing plastic paneling.

1.03 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content.
 - 2. Product Data for Credit IEQ 4.4: For laminating adhesive used in factory-laminated plastic panels, documentation indicating that product contains no urea formaldehyde.
- C. Samples for Initial Selection: For plastic paneling and trim accessories.
- D. Samples for Verification: For plastic paneling and trim accessories, in manufacturer's standard sizes.

1.04 QUALITY ASSURANCE

- A. Source Limitations: Obtain plastic paneling and trim accessories from single manufacturer.
- B. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: 25 or less.
 - 2. Smoke-Developed Index: 450 or less.
 - 3. Testing Agency: Acceptable to authorities having jurisdiction.

1.05 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install plastic paneling until spaces are enclosed and weathertight and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

PART 2 - PRODUCTS

2.01 PLASTIC SHEET PANELING

- A. General: Gelcoat-finished, glass-fiber reinforced plastic panels complying with ASTM D 5319.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Kemlite Company Inc.
 - b. Marlite.
 - c. Nudo Products, Inc.
 - 2. Nominal Thickness: Not less than 0.12 inch.
 - 3. Surface Finish: As selected by Architect from manufacturer's full range.
 - 4. Color: As indicated on Finish Legend.

2.02 ACCESSORIES

- A. Trim Accessories: Manufacturer's standard one-piece vinyl extrusions designed to retain and cover edges of panels. Provide division bars, inside corners, outside corners, and caps as needed to conceal edges.
 - 1. Color: Match panels.
- B. Exposed Fasteners: Nylon drive rivets recommended by panel manufacturer.
- C. Concealed Mounting Splines: Continuous, H-shaped aluminum extrusions designed to fit into grooves routed in edges of factory-laminated panels and to be fastened to substrate.
- D. Adhesive: As recommended by plastic paneling manufacturer.
 - 1. Adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- E. Sealant: Single-component, mildew-resistant, neutral-curing silicone sealant recommended by plastic paneling manufacturer and complying with requirements in Section 07 92 00 "Joint Sealants."
 - 1. Sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Prepare substrate by sanding high spots and filling low spots as needed to provide flat, even surface for panel installation.
- B. Clean substrates of substances that could impair bond of adhesive, including oil, grease, dirt, and dust.
- C. Condition panels by unpacking and placing in installation space before installation according to manufacturer's written recommendations.
- D. Lay out paneling before installing. Locate panel joints to provide equal panels at ends of walls not less than half the width of full panels.
 - 1. Mark plumb lines on substrate at panel joint locations for accurate installation.
 - 2. Locate trim accessories to allow clearance at panel edges according to manufacturer's written instructions.

3.03 INSTALLATION

- A. Install plastic paneling according to manufacturer's written instructions.
- B. Install panels in a full spread of adhesive.
- C. Install panels with fasteners. Layout fastener locations and mark on face of panels so that fasteners are accurately aligned.
 - 1. Drill oversized fastener holes in panels and center fasteners in holes.
 - 2. Apply sealant to fastener holes before installing fasteners.
- D. Install factory-laminated panels using concealed mounting splines in panel joints.
- E. Install trim accessories with adhesive and nails or staples
- F. Fill grooves in trim accessories with sealant before installing panels and bed inside corner trim in a bead of sealant.
- G. Maintain uniform space between panels and wall fixtures. Fill space with sealant.
- H. Maintain uniform space between adjacent panels and between panels and floors, ceilings, and fixtures. Fill space with sealant.
- I. Remove excess sealant and smears as paneling is installed. Clean with solvent recommended by sealant manufacturer and then wipe with clean dry cloths until no residue remains.

END OF SECTION 06 64 00

SECTION 06 74 13**GLASS-FIBER-REINFORCED PLASTIC GRATINGS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. This Section includes the following:
 - 1. Pultruded glass-fiber-reinforced plastic gratings.
 - 2. Metal frames and supports for gratings.
- B. Locations: As shown on Drawings at exterior pedestrian walkways.
- C. Related Sections include the following:
 - 1. Division 05 Section "Structural Steel Framing" for structural-steel framing system components.
 - 2. Division 05 Section "Metal Stairs" for grating treads and landings of steel-framed stairs.
 - 3. Division 05 Section "Pipe Railings" for metal pipe handrails and railings.

1.03 PERFORMANCE REQUIREMENTS

- A. Structural Performance of Gratings: Provide gratings capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Floors: Uniform load of 250 lbf/sq. ft. or concentrated load of 3000 lbf, whichever produces the greater stress.
 - 2. Elevated Platforms Other Than Exits: Uniform load of 60 lbf/sq. ft..
 - 3. Walkways and Elevated Platforms at Secondary Buildings: Uniform load of 100 lbf/sq. ft..
 - 4. Limit deflection to $L/240$ or 1/4 inch, whichever is less.
- B. Seismic Performance: Provide gratings capable of withstanding the effects of earthquake motions determined according to ASCE 7, "Minimum Design Loads for Buildings and Other Structures": Section 9, "Earthquake Loads."
- C. Accessibility: Provide gratings that are listed as ADA compliant.

1.04 SUBMITTALS

- A. Product Data: For the following:
 - 1. Glass-fiber-reinforced plastic gratings.
 - 2. Clips and anchorage devices for gratings.
- B. LEED Submittal:
 - 1. Product Data for Credit MR 4.1 and Credit MR 4.2: For products having recycled

content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content.

a. Include statement indicating costs for each product having recycled content.

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Provide templates for anchors and bolts specified for installation under other Sections.

2. For installed products indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

D. Welding certificates.

1.05 QUALITY ASSURANCE

A. Welding: Qualify procedures and personnel according to the following:

1. AWS D1.1, "Structural Welding Code--Steel."

1.06 PROJECT CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with gratings by field measurements before fabrication and indicate measurements on Shop Drawings.

1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating gratings without field measurements. Coordinate wall and other contiguous construction to ensure that actual dimensions correspond to established dimensions.

2. Provide allowance for trimming and fitting at site.

1.07 COORDINATION

A. Coordinate installation of anchorages for gratings, grating frames, and supports. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

PART 2 - PRODUCTS

2.01 GLASS-FIBER-REINFORCED PLASTIC GRATINGS

A. Basis of Design: Provide Aqua Grate T1215 Grating by Fibergrate Composite Structures Inc.

B. Pultruded Glass-Fiber-Reinforced Gratings: Bar gratings assembled from components made by simultaneously pulling glass fibers and extruding thermosetting plastic resin through a heated die under pressure to produce a product without voids and with a high glass-fiber content.

1. Resin Type: Polyester.

a. Flame-Spread Index: 25 or less when tested according to ASTM E 84.

- b. U.S.D.A. Acceptance: Accepted for food processing applications.
- 2. Color:
 - a. For interior installation, Traffic Red RAL 3020
 - b. For exterior installation, as selected by Architect.
- 3. Traffic Surface: Applied abrasive finish.
- C. Fabricate cutouts in grating sections for penetrations indicated. Arrange cutouts to permit grating removal without disturbing items penetrating gratings.

2.02 FASTENERS

- A. General: Unless otherwise indicated, provide Type 316 stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633, Class Fe/Zn 5, at exterior walls. Provide stainless-steel fasteners for fastening aluminum. Select fasteners for type, grade, and class required.
- B. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM A 307, Grade A; with hex nuts, ASTM A 563; and, where indicated, flat washers.
- C. Stainless-Steel Bolts and Nuts: Regular hexagon-head annealed stainless-steel bolts, nuts, and, where indicated, flat washers; ASTM F 593 for bolts and ASTM F 594 for nuts, Alloy Group 2.
- D. Plain Washers: Round, ASME B18.22.1.
- E. Lock Washers: Helical, spring type, ASME B18.21.1.
- F. Anchors: Provide cast-in-place or torque-controlled expansion anchors with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and equal to four times the load imposed when installed in concrete, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.
 - 1. Material for Anchors in Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B 633, Class Fe/Zn 5.
 - 2. Material for Anchors in Exterior Locations: Alloy Group 2 stainless-steel bolts complying with ASTM F 593 and nuts complying with ASTM F 594.

2.03 FABRICATION

- A. Shop Assembly: Fabricate grating sections in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- B. Cut, drill, and punch material cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch, unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- C. Form from materials of size, thickness, and shapes indicated, but not less than that needed to support indicated loads.
- D. Fit exposed connections accurately together to form hairline joints.
- E. Provide for anchorage of type indicated; coordinate with supporting structure.

Fabricate and space the anchoring devices to secure gratings, frames, and supports rigidly in place and to support indicated loads.

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing gratings to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Color-tinting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing gratings. Set units accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
- C. Provide temporary bracing or anchors in formwork for items that are to be built into concrete or masonry.
- D. Fit exposed connections accurately together to form hairline joints.
- E. Corrosion Protection: Coat concealed surfaces of aluminum that will come into contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

3.02 INSTALLING GLASS-FIBER-REINFORCED PLASTIC GRATINGS

- A. Comply with manufacturer's written instructions for installing gratings. Use manufacturer's standard stainless-steel anchor clips and hold-down devices for bolted connections.

END OF SECTION 06 74 13

SECTION 07 13 26**SELF-ADHERING SHEET WATERPROOFING****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. This Section includes the following:
 - 1. Rubberized-asphalt sheet waterproofing.
 - 2. HDPE sheet waterproofing.
 - 3. Protection board.
- B. Related Sections include the following:
 - 1. Division 07 Section "Joint Sealants" for joint-sealant materials and installation.

1.03 PERFORMANCE REQUIREMENTS

- A. Provide waterproofing that prevents the passage of water.

1.04 SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
 - 2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.
- B. LEED Submittals:
 - 1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
- C. Shop Drawings: Show locations and extent of waterproofing and details of substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.
 - 1. Include setting drawings showing layout, sizes, sections, profiles, and joint details of pedestal-supported concrete pavers.
- D. Samples: For each exposed product and for each color and texture specified, including the following products:

1. 8-by-8-inch square of waterproofing and flashing sheet.
2. 8-by-8-inch square of insulation.
3. 4-by-4-inch square of protection board.

- E. Qualification Data: For Installer.
- F. Field quality-control reports.
- G. Sample Warranties: For special warranties.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who is acceptable to waterproofing manufacturer to install manufacturer's products.
- B. Source Limitations: Obtain waterproofing materials through one source from a single manufacturer.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Deliver liquid materials to Project site in original packages with seals unbroken, labeled with manufacturer's name, product brand name and type, date of manufacture, and directions for storing and mixing with other components.
- B. Store liquid materials in their original undamaged packages in a clean, dry, protected location and within temperature range required by waterproofing manufacturer.
- C. Remove and replace liquid materials that cannot be applied within their stated shelf life.
- D. Store rolls according to manufacturer's written instructions.
- E. Protect stored materials from direct sunlight.

1.07 PROJECT CONDITIONS

- A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.
1. Do not apply waterproofing in rain, fog, or mist.
- B. Maintain adequate ventilation during preparation and application of waterproofing materials.

1.08 WARRANTY

- A. Special Manufacturer's Warranty: Written warranty, signed by waterproofing manufacturer agreeing to replace waterproofing material that does not comply with requirements or that does not remain watertight during specified warranty period.
1. Warranty Period: Three years after date of Substantial Completion.

- B. Special Installer's Warranty: Written waterproofing Installer's warranty, signed by Installer, covering Work of this Section, for warranty period of two years.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
1. HDPE Sheet Waterproofing:
 - a. W. R. Grace & Co.; Preprufe.
 2. Rubberized-Asphalt Sheet Waterproofing:
 - a. Carlisle Corporation, Carlisle Coatings & Waterproofing Div.; CCW miradri 860.

2.02 HDPE SHEET WATERPROOFING

- A. HDPE Sheet for Vertical Applications: 42-mil- thick, uniform, flexible sheets consisting of 16-mil- thick, HDPE sheet coated with a pressure-sensitive rubber adhesive, a protective adhesive coating, and a release liner.
- B. HDPE Sheet for Horizontal Applications: 56-mil- thick, uniform, flexible sheets consisting of 30-mil- thick, HDPE sheet coated with a pressure-sensitive rubber adhesive, a protective adhesive coating, a detackifying surface treatment, an uncoated self-adhering side lap strip, and a release liner.
- C. Physical Properties: As follows, measured per standard test methods referenced:
1. Tensile Strength, Film: 4000 psi minimum; ASTM D 412.
 2. Low-Temperature Flexibility: Pass at minus 10 deg F; ASTM D 1970.
 3. Peel Adhesion to Concrete: 5 lbf/in.; ASTM D 903, modified.
 4. Lap Adhesion: 2.5 lbf/in.; ASTM D 1876, modified.
 5. Hydrostatic-Head Resistance: 231 feet; ASTM D 5385, modified.
 6. Vapor Permeance: 0.01 perms; ASTM E 96, Water Method.

2.03 RUBBERIZED-ASPHALT SHEET WATERPROOFING

- A. Rubberized-Asphalt Sheet: 60-mil- thick, self-adhering sheet consisting of 56 mils of rubberized asphalt laminated to a 4-mil- thick, polyethylene film with release liner on adhesive side [and formulated for application with primer or surface conditioner that complies with VOC limits of authorities having jurisdiction].
1. Physical Properties: As follows, measured per standard test methods referenced:
- a. Tensile Strength: 325 psi minimum; ASTM D 412, Die C, modified.
 - b. Ultimate Elongation: 350 percent minimum; ASTM D 412, Die C, modified.
 - c. Low-Temperature Flexibility: Pass at minus 45 deg F; ASTM D 1970.

- d. Crack Cycling: Unaffected after 100 cycles of 1/8-inch movement; ASTM C 836.
- e. Puncture Resistance: 60 lbf minimum; ASTM E 154.
- f. Hydrostatic-Head Resistance: 230 feet minimum; ASTM D 5385.
- g. Water Absorption: 0.1 percent weight-gain maximum after 48-hour immersion at 70 deg F; ASTM D 570.
- h. Vapor Permeance: 0.05 perms; ASTM E 96, Water Method.

2.04 AUXILIARY MATERIALS

- A. General: Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.
 - 1. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.
- B. Primer: Liquid waterborne primer recommended for substrate by manufacturer of sheet waterproofing material.
- C. Surface Conditioner: Liquid, waterborne surface conditioner recommended for substrate by manufacturer of sheet waterproofing material.
- D. Mastic, Adhesives, and Tape: Liquid mastic and adhesives, and adhesive tapes recommended by waterproofing manufacturer.
 - 1. Detail Tape: Two-sided, pressure-sensitive, self-adhering reinforced tape, 4-1/2 inches wide, with a tack-free protective adhesive coating on one side and release film on self-adhering side.
- E. Protection Course: ASTM D 6506, semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners and as follows:
 - 1. Thickness: 1/8 inch, nominal, for vertical applications; 1/4 inch, nominal, elsewhere.
 - 2. Adhesive: Rubber-based solvent type recommended by waterproofing manufacturer for protection course type.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance.
 - 1. Verify that compacted subgrade is dry, smooth, and sound; ready to receive HDPE sheet.
 - 2. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 HDPE SHEET APPLICATION

- A. Install HDPE sheets according to waterproofing manufacturer's written instructions.

- B. Horizontal Applications: Install sheet membrane with HDPE face against substrate. Accurately align sheets and maintain uniform 3-inch- minimum lap widths and end laps. Overlap and seal seams. Overlap, stagger, and seal end laps with detail tape to ensure watertight installation.
- C. Corners: Seal lapped terminations and cut edges of sheet waterproofing at inside and outside corners with detail tape.
- D. Seal penetrations through sheet waterproofing to provide watertight seal with detail tape patches or wraps and a liquid-membrane troweling.
- E. Install sheet waterproofing and auxiliary materials to produce a continuous watertight tie into adjacent waterproofing.
- F. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Tape perimeter of damaged or nonconforming area extending 6 inches beyond repaired areas in all directions. Apply a patch of sheet membrane and firmly secure with detail tape.
- G. Correct deficiencies in or remove waterproofing that does not comply with requirements, repair substrates, reapply waterproofing, and repair sheet flashings.

3.03 RUBBERIZED-ASPHALT SHEET APPLICATION

- A. Install self-adhering sheets according to waterproofing manufacturer's written instructions and recommendations in ASTM D 6135.
- B. Apply primer to substrates at required rate and allow to dry. Limit priming to areas that will be covered by sheet waterproofing in same day. Reprime areas exposed for more than 24 hours.
- C. Apply and firmly adhere sheets over area to receive waterproofing. Accurately align sheets and maintain uniform 2-1/2-inch- minimum lap widths and end laps. Overlap and seal seams and stagger end laps to ensure watertight installation.
 - 1. When ambient and substrate temperatures range between 25 and 40 deg F, install self-adhering, rubberized-asphalt sheets produced for low-temperature application. Do not use low-temperature sheets if ambient or substrate temperature is higher than 60 deg F.
- D. Two-Ply Application: Install sheets to form a membrane with lap widths not less than 50 percent of sheet widths to provide a minimum of 2 thicknesses of sheet membrane over areas to receive waterproofing.
- E. Horizontal Application: Apply sheets from low point to high point of decks to ensure that side laps shed water.
- F. Apply continuous sheets over sheet strips bridging substrate cracks, construction, and contraction joints.
- G. Seal exposed edges of sheets at terminations not concealed by metal counterflashings or ending in reglets with mastic or sealant.

- H. Install sheet waterproofing and auxiliary materials to tie into adjacent waterproofing.
- I. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheets extending 6 inches beyond repaired areas in all directions.
- J. Correct deficiencies in or remove sheet waterproofing that does not comply with requirements, repair substrates, reapply waterproofing, and repair sheet flashings.

3.04 PROTECTION AND CLEANING

- A. Do not permit foot or vehicular traffic on unprotected membrane.
- B. Protect waterproofing from damage and wear during remainder of construction period.
- C. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 13 26

SECTION 07 21 13**FOAM BOARD FOUNDATION INSULATION****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section Includes foam-plastic board insulation for following applications
1. Adhered to below grade foundation walls.
 2. Applied to earthen grade beneath concrete slabs-on-grade receiving hydronic heating.
- B. Locate each insulation type as indicated in following table:

Location	Foam Plastic Board Insulation Type
Perimeter and field insulation under slabs-on-grade	Extruded-Polystyrene Board Insulation, Type VII (seven)
Perimeter wall insulation (supporting backfill)	Extruded-Polystyrene Board Insulation, Type IV (four)

1.03 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. LEED Submittals:
1. Product Data for Credit EA 1: For products indicated to comply with minimum thermal energy performance requirements including resistance, conductance, transmittance, reflectance, and absorption.
 2. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 3. Credit EQ 4.1: Manufacturers' product data for adhesive, including printed statement of VOC content.

1.04 QUALITY ASSURANCE

- A. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

- B. Protect foam-plastic board insulation as follows:
1. Do not expose to sunlight except to necessary extent for period of installation and concealment.
 2. Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site before installation time.
 3. Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.

PART 2 - PRODUCTS

2.01 FOAM-PLASTIC BOARD INSULATION

- A. Extruded-Polystyrene Board Insulation: ASTM C 578, of type, minimum compressive strength, density, and thermal resistance indicated below, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84.
1. Manufacturers: Subject to compliance with requirements, provide available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. DiversiFoam Products.
 - b. Dow Chemical Company (The).
 - c. Owens Corning.
 - d. Pactiv Building Products.
 2. Type IV:
 - a. Compressive Strength: 25 psi
 - b. Density: 1.60 lb/cu. ft.
 - c. Thermal Resistance at 75 deg F: 4.65/in.
 3. Type VII:
 - a. Compressive Strength: 60 psi
 - b. Density: 2.20 lb/cu. ft.
 - c. Thermal Resistance at 75 deg F: 4.65/in.
 4. Thickness: As indicated on Drawings.
- B. Unfaced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type IV, 25-psi or Type VI, 40-psi minimum compressive strength; unfaced; fabricated with shiplap or channel edges and with one side having grooved drainage channels.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. DiversiFoam Products.
 - b. Dow Chemical Company (The).
 - c. Pactiv Building Products.
- C. Adhesive for Bonding Insulation to Concrete Foundations: Product with demonstrated capability to bond insulation securely to substrates without damaging insulation and substrates.

1. For field applied adhesives comply with the following VOC requirements:
 - a. Plastic Foam Adhesives: 50 g/L.
- D. Joint Tape: Pressure-sensitive plastic tape recommended by insulation manufacturer for sealing joints and minor penetrations in board insulation.
 1. Tape Width: 2-7/8 inches minimum.
 2. Products: Dow Chemical Company (The); WEATHERMATE Construction Tape or comparable product by another manufacturer.

PART 3 - EXECUTION

3.01 PREPARATION

- A. Clean substrates of substances that are harmful to insulation or that interfere with insulation attachment.

3.02 INSTALLATION, GENERAL

- A. Comply with insulation manufacturer's written instructions applicable to products and applications indicated.
- B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.
- C. Extend insulation to envelop or cover entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
- D. Provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.

3.03 INSTALLATION OF BELOW-GRADE INSULATION

- A. On vertical surfaces, set insulation units using manufacturer's recommended adhesive according to manufacturer's written instructions.
- B. On horizontal surfaces, loosely lay insulation units according to manufacturer's written instructions.
 1. Stagger end joints and tightly abut insulation units.
 2. Seal seams and penetrations with joint tape centered over joints.

3.04 PROTECTION

- A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION 07 21 13

SECTION 07 21 14**CONTINUOUS MINERAL BOARD WALL INSULATION****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section Includes continuous mineral-wool board thermal insulation applied to outboard side of exterior wall sheathing over weather barrier for applications including following:
 - 1. Metal stud exterior wall framing receiving metal plate wall panels.
 - 2. Metal stud exterior wall framing receiving cementitious façade panels.

1.03 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. LEED Submittals:
 - 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

1.04 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each product.

1.05 QUALITY ASSURANCE

- A. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

PART 2 - PRODUCTS**2.01 MINERAL-WOOL BOARD INSULATION**

- A. Unfaced, Mineral-Wool Board Insulation: ASTM C 612; with maximum flame-spread and smoke-developed indexes of zero and zero, respectively, per ASTM E 84;

passing ASTM E 136 for combustion characteristics.

1. R Value: Minimum 8.7 for 2 inch thickness.
2. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 70 percent.
3. Available Products: Subject to compliance with requirements, provide one of the following:
 - a. Roxul; CavityRock DD (dual density).
 - b. Thermafiber; RainBarrier 45.
4. Fiber Color: Provide darkened material on walls receiving cementitious façade panels.

2.02 INSULATION FASTENERS

- A. Fasteners for Fastening Insulation to Cold-Formed Metal Framing: Provide screws with plastic cap washers.
 1. Screws: Steel drill screws with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B 117.
 - a. Length: As required to produce not less than 3 screw threads visible on backside of face of metal stud.
 - b. For steel framing less than 0.0329 inch thick, use screws that comply with ASTM C 1002.
 - c. For steel framing from 0.033 to 0.112 inch thick, use screws that comply with ASTM C 954.
 2. Plastic Cap Washers: Approximately 1 inch o.d. with fastener hole in center.
 - a. Product: Ideal Security Inc.; Plastic Cap Washer SKPHC or comparable product by another manufacturer.

PART 3 - EXECUTION

3.01 PREPARATION

- A. Clean substrates of substances that are harmful to insulation or that interfere with insulation attachment.

3.02 INSTALLATION

- A. Comply with insulation manufacturer's written instructions applicable to products and applications indicated.
- B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.
- C. Extend insulation to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
- D. Provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units to produce thickness indicated.

- E. Apply insulation units to substrates by method indicated, complying with manufacturer's written instructions. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.
- F. Apply insulation units to substrates as follows:
 - 1. For metal stud wall framing, hold insulation in place by securing with metal screws with plastic caps specified, spaced at intervals recommended in writing by insulation manufacturer to hold insulation securely in place, but not greater than 24 inches o.c. Avoid compressing insulation with fasteners.
 - 2. Where indicated, Z-furring members may be used to retain edges of insulation in lieu of fasteners.

3.03 PROTECTION

- A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION 07 21 14

SECTION 07 21 16
BLANKET INSULATION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

1. Glass-fiber blanket insulation.
2. Mineral-wool blanket insulation.

B. Related Sections:

1. Division 06 Section "Sheathing" for glass mat sheathing over steel framing.
2. Division 07 Section "Thermoplastic Polyolefin (TPO) Roofing" for insulation specified as part of roofing construction.
3. Division 07 Section "Fire-Resistive Joint Systems" for insulation installed as part of a perimeter fire-resistive joint system.

1.03 SUBMITTALS

- A. Product Data: For each type of product indicated.

B. LEED Submittals:

1. Product Data for Credit MR 4.1 and Credit MR 4.2: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating costs for each product having recycled content.
2. Product Data for Credit EQ 4.1: For sealants, including printed statement of VOC content.
3. Product Data for Credit EQ 4.1: For adhesives, including printed statement of VOC content.

- C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each product.

1.04 QUALITY ASSURANCE

- A. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

PART 2 - PRODUCTS

2.01 GLASS-FIBER BLANKET INSULATION

- A. Performance Criteria: Minimum R3 per inch thickness.
- B. Recycled Content of Blanket Insulation: Provide products with average recycled content of products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 20 percent.
- C. Regional Materials: Provide glass-fiber blanket insulation that has been manufactured within 500 miles of Project site from raw materials that have been extracted or recovered, as well as manufactured, within 500 miles of Project site.
- D. Sustainability Requirements: Provide glass-fiber blanket insulation as follows:
 - 1. Free of Formaldehyde: Insulation manufactured with 100 percent acrylic binders and no formaldehyde.
 - 2. Low Emitting: Insulation tested according to ASTM D 5116 and shown to emit less than 0.05-ppm formaldehyde.
- E. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. CertainTeed Corporation.
 - 2. Guardian Building Products, Inc.
 - 3. Johns Manville.
 - 4. Knauf Insulation.
 - 5. Owens Corning.
- F. Unfaced, Glass-Fiber Blanket Insulation: ASTM C 665, Type I; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
- G. Reinforced-Foil-Faced, Glass-Fiber Blanket Insulation: ASTM C 665, Type III (reflective faced), Class A (faced surface with a flame-spread index of 25 or less); Category 1 (membrane is a vapor barrier), faced with foil scrim, foil-scrim kraft, or foil-scrim polyethylene.
- H. Foil-Faced, Glass-Fiber Blanket Insulation: ASTM C 665, Type III (reflective faced), Class B (faced surface with a flame-propagation resistance of 0.12 W/sq. cm); Category 1 (membrane is a vapor barrier), faced with foil scrim, foil-scrim kraft, or foil-scrim polyethylene.

2.02 MINERAL-WOOL BLANKET INSULATION

- A. Performance Criteria: Minimum R3 per inch thickness.
- B. Recycled Content of Blanket Insulation: Provide products with average recycled content of products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 70 percent.
- C. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Fibrex Insulations Inc.
 - 2. Owens Corning.

3. Roxul Inc.
 4. Thermafiber.
- D. Unfaced, Mineral-Wool Blanket Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
- E. Reinforced-Foil-Faced, Mineral-Wool Blanket Insulation: ASTM C 665, Type III (reflective faced), Class A (faced surface with a flame-spread index of 25 or less per ASTM E 84); Category 1 (membrane is a vapor barrier), faced with foil scrim, foil-scrim kraft, or foil-scrim polyethylene.

2.03 INSULATION FASTENERS

- A. Adhesively Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. AGM Industries, Inc.; Series T TACTOO Insul-Hangers.
 - b. Gemco; Spindle Type.
 2. Plate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
 3. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch in diameter; length to suit depth of insulation indicated.
- B. Adhesively Attached, Angle-Shaped, Spindle-Type Anchors: Angle welded to projecting spindle; capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Gemco; 90-Degree Insulation Hangers.
 2. Angle: Formed from 0.030-inch- thick, perforated, galvanized carbon-steel sheet with each leg 2 inches square.
 3. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch in diameter; length to suit depth of insulation indicated.
- C. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick galvanized-steel sheet, with beveled edge for increased stiffness, sized as required to hold insulation securely in place, but not less than 1-1/2 inches square or in diameter.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. AGM Industries, Inc.; RC150 or SC150.
 - b. Gemco; R-150 or S-150.
 2. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in the following locations:
 - a. Crawl spaces.
 - b. Ceiling plenums.
 - c. Where indicated.

- D. Insulation Standoff: Spacer fabricated from galvanized mild-steel sheet for fitting over spindle of insulation anchor to maintain air space of 1 inch minimum between face of insulation and substrate to which anchor is attached.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Gemco; Clutch Clip.
- E. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates indicated without damaging insulation, fasteners, and substrates.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. AGM Industries, Inc.; TACTOO Adhesive.
 - b. Gemco; Tuff Bond Hanger Adhesive.
 - c. Michigan Adhesive Manufacturing; Seal Bond 95.

PART 3 - EXECUTION

3.01 PREPARATION

- A. Clean substrates of substances that are harmful to insulation or vapor retarders, including removing projections capable of puncturing vapor retarders, or that interfere with insulation attachment.

3.02 INSTALLATION, GENERAL

- A. Comply with insulation manufacturer's written instructions applicable to products and applications indicated.
- B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.
- C. Extend insulation to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
- D. Provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.

3.03 INSTALLATION OF INSULATION FOR FRAMED CONSTRUCTION

- A. Apply insulation units to substrates by method indicated, complying with manufacturer's written instructions. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.
- B. Glass-Fiber or Mineral-Wool Blanket Insulation: Install in cavities formed by framing members according to the following requirements:
 1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.
 2. Place insulation in cavities formed by framing members to produce a friction fit

- between edges of insulation and adjoining framing members.
3. Maintain **3-inch** clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.
 4. For metal-framed wall cavities where cavity heights exceed **96 inches**, support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.
 5. Vapor-Retarder-Faced Blankets: Tape joints and ruptures in vapor-retarder facings, and seal each continuous area of insulation to ensure airtight installation.
 - a. Exterior Walls: Set units with facing placed toward interior of construction.
 - b. Interior Walls: Set units with facing placed toward areas of high humidity.
- C. Miscellaneous Voids: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials:
1. Loose-Fill Insulation: Compact to approximately 40 percent of normal maximum volume equaling a density of approximately **2.5 lb/cu. ft.**

3.04 INSTALLATION OF INSULATION IN CEILINGS FOR SOUND ATTENUATION

- A. Where glass-fiber blankets are indicated for sound attenuation above ceilings, install blanket insulation over entire ceiling area in thicknesses indicated. Extend insulation **48 inches** up either side of partitions.

3.05 INSTALLATION OF INSULATION FOR CONCRETE SUBSTRATES

- A. Install blanket insulation on concrete substrates by adhesively attached, spindle-type insulation anchors as follows:
1. Fasten insulation anchors to concrete substrates with insulation anchor adhesive according to anchor manufacturer's written instructions. Space anchors according to insulation manufacturer's written instructions for insulation type, thickness, and application indicated.
 2. Apply insulation standoffs to each spindle to create cavity width indicated between concrete substrate and insulation.
 3. After adhesive has dried, install blanket insulation by pressing insulation into position over spindles and securing it tightly in place with insulation-retaining washers, taking care not to compress insulation below indicated thickness.
 4. Where insulation will not be covered by other building materials, apply capped washers to tips of spindles.

3.06 PROTECTION

- A. Protect installed insulation and vapor retarders from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- B. Construction Waste Management and Disposal:
1. Comply with Waste Management Plan required under Division 01 Section "Construction Waste Management And Disposal."

END OF SECTION 07 21 16

**SECTION 07 25 00
WEATHER BARRIERS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Vapor-permeable water-resistive barrier.

1.03 RELATED REQUIREMENTS

- A. Division 06 Section "Sheathing" for exterior wall sheathing substrate for weather barrier.

1.04 REFERENCE STANDARDS

- A. American Association of Textile Chemists and Colorists (AATCC):
 - 1. AATCC 127 - Test Method for Water Resistance: Hydrostatic Pressure Test.
- B. ASTM International (ASTM):
 - 1. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers-Tension
 - 2. ASTM D570 - Standard Test Method for Water Absorption of Plastics.
 - 3. ASTM D 882 - Test Method for Tensile Properties of Thin Plastic Sheeting.
 - 4. ASTM D903 - Standard Test Method for Peel or Stripping Strength of Adhesive Bonds.
 - 5. ASTM D1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
 - 6. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials
 - 7. ASTM E 96/E 96M - Test Methods for Water Vapor Transmission of Materials
 - 8. ASTM E2178-01 - Standard Test Method for Air Permeance of Building Materials
- C. International Code Council Evaluation Service, Inc. (ICC-ES):
 - 1. ICC-ES AC38 - Acceptance Criteria for Water-Resistive Barriers.

1.05 QUALITY ASSURANCE

- A. Single Source: Provide water-resistive barrier and accessories that are products of or recommended for use by a single manufacturer.
- B. Manufacturer Qualifications: Approved manufacturer of products listed in this Section with minimum 5 years experience in manufacture of similar products in successful use in similar applications.

1. Approval of Comparable Products: Submit the following in accordance with project substitution requirements, within time allowed for substitution review:
 - a. Product data, including certified independent test data indicating compliance with requirements.
 - b. Samples of each component.
 - c. Sample warranty.
 - d. Substitutions following award of contract are not allowed except as stipulated in Division 01 General Requirements.
- C. Fire Performance Characteristics: Provide water-resistive barrier with the following fire-test characteristics.
 1. Surface-Burning Characteristics: ASTM E 84.
 - a. Flame spread index: 25 or less.
 - b. Smoke developed index: 450 or less.
 - c. Mockups: Build mockup in size and location indicated on Drawings. Show details of water-resistive barrier. Demonstrate methods and details of installation. Show details of joints, penetrations, openings, inside and outside corners, and top and bottom of wall.
 2. Perform water spray test of mockup to demonstrate performance.

1.06 ADMINISTRATIVE REQUIREMENTS

- A. Preinstallation Meeting: Conduct preinstallation meeting at site attended by Installer, affected trade contractors, and inspector.
 1. Include Architect and Owner.
 2. Coordinate substrate installation in relation to requirements for water-resistive barrier.
 3. Coordinate window, door, and other openings and penetrations of water-resistive barrier.
 4. Review mockup.

1.07 SUBMITTALS

- A. Product Data: Manufacturer's data sheets for specified products. Include data indicating compliance with requirements of this Section.
 1. Provide manufacturer's standard installation instructions and details for water-resistive barrier and accessories.
- B. Samples: Submit samples of the following:
 1. Water-resistive barrier sheet, minimum 10 by 10 inches.
 2. Membrane flashings and tapes.
 3. Fasteners.
 4. Sealants.
- C. Evaluation Report: For water-resistive barrier, from ICC-ES.

- D. Manufacturer's warranty: Submit sample warranty.

1.08 WARRANTY

- A. Special Manufacturer's Warranty: On manufacturer's standard form, in which manufacturer agrees to provide replacement material for water-resistive barrier installed in accordance with manufacturer's instructions that fails due to material defects within 20 years from date of purchase.

PART 2 - PRODUCTS

2.01 WATER-RESISTIVE BARRIER

- A. Building Wrap: ASTM E 1677, Type I air barrier; with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, when tested according to ASTM E 84; UV stabilized; and acceptable to authorities having jurisdiction.
1. Basis of Design: Subject to requirements, provide Tyvek Commercial Wrap by DuPont or an approved product by one of the following:
 - a. Dow Chemical Company (The.
 - b. Pactiv, Inc.; .
 - c. Raven Industries Inc.
 2. Water-Vapor Permeance: Not less than 28 perms per ASTM E 96/E 96M, Desiccant Method (Procedure A).
 3. Air Permeance: Not more than 0.004 cfm/sq. ft. at 0.3-inch wg when tested according to ASTM E 2178.
 4. Allowable UV Exposure Time: Not less than three months.
- B. Building-Wrap Tape: Pressure-sensitive plastic tape recommended by building-wrap manufacturer for sealing joints and penetrations in building wrap.

PART 3 - EXECUTION

3.01 INSPECTION

- A. Examine substrate with Installer present for compliance with requirements and other conditions that would adversely affect installation or performance of weather resistive barrier. Correct deficient conditions prior to proceeding with water-resistive barrier installation.

3.02 SUBSTRATE PREPARATION

- A. Clean and prepare substrate according to manufacturer's written recommendations. Provide clean and dry substrate for breathable membrane application.

3.03 WATER-RESISTIVE BARRIER INSTALLATION

- A. General: Install water-resistive barrier in accordance with manufacturer's instructions over exterior sheathing. Secure water-resistive barrier to substrate to prevent damage prior to installation of cladding.

B. Window and Louver Openings

1. Secure prefabricated sill pan and water-resistive barrier corners at sill of opening.
2. Install lap strip of water-resistive barrier across sill and secure with tape or mechanical fasteners, leaving bottom of lap strip free to overlap water-resistive barrier minimum of 6 inches.
3. Install lap strip water-resistive barrier around jambs, extending along wall surface a minimum of 9 inches.
4. Secure prefabricated water-resistive barrier corners at head of opening.
5. Install lap strip of water-resistive barrier across head of opening, extending horizontally beyond corners minimum of 6 inches.
6. Cut water-resistive barrier along leading edge of header 2 inches beyond jamb to allow insertion of window nailing flange behind weather barrier.

C. Door Openings

1. Install water-resistive barrier lap strip around jambs, extending along wall surface a minimum of 9 inches.
2. Secure prefabricated water-resistive barrier corners at head of opening.
3. Install lap strip of water-resistive barrier across head of opening, extending horizontally beyond corners minimum of 6 inches.
4. Cut water-resistive barrier along leading edge of header 2 inches beyond jamb to allow insertion of door nailing flange behind weather barrier.

D. Pipe and Conduit Penetrations

1. Install manufactured penetration sleeves sized for penetration and installed as recommended by sleeve manufacturer.
2. Prepare water-resistive barrier skirt with minimum 12 inches of fabric on all sides at counter-flashed penetrations. Make multiple cuts to form a star-shaped opening in fabric and place over penetration. Extend skirt fabric along penetrating item and seal to penetrating item with single-sided tape.

E. Water-Resistive Barrier

1. Begin water-resistive barrier installation at bottom of wall, mechanically fastening water-resistive barrier at bottom and top at 24 inches o.c. Seal bottom edge of water-resistive barrier to substrate in continuous bead of non-skinning butyl sealant or butyl tape.
2. Install water-resistive barrier at overlapped lap strips and penetration skirts. Overlap at vertical laps minimum of 6 inches with taped joints or 12 inches without tape. Overlap at horizontal laps minimum of 6 inches. Insert water-resistive barrier under bottom edge of lap strips and penetration skirts; do not tape bottom edge of skirts and lap strips.
3. Extend water-resistive barrier 6 inches over corners.
4. Shingle subsequent courses of water-resistive barrier. Do not place vertical laps above openings.
5. Use additional mechanical fasteners in field of sheet and tape joints if water-resistive barrier will be left exposed prior to installation of cladding.

3.04 FIELD QUALITY CONTROL

- A. Engage independent inspector to inspect substrate, observe installation, and inspect and document completed water-resistive barrier prior to concealment. Submit photo documentation and written report of inspections.

3.05 PROTECTING AND CLEANING

- A. Protect installed water-resistive barrier from damage due to construction activities, high wind conditions, and extended exposure to weather.
- B. Inspect exposed water-resistive barrier prior to installation of cladding. Remove water-resistive barrier materials that have been damaged and replace. Patch damaged areas as recommended by manufacturer.

END OF SECTION 07 25 00

SECTION 07 42 13**CONCEALED-FASTENER LAP SEAM METAL WALL PANELS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section Includes concealed-fastener, lap-seam metal wall panels.
- B. Related Sections:
 - 1. Section 05 40 00 "Cold-Formed Metal Framing" for support framing, including girts, studs, and bracing.
 - 2. Section 07 25 00 "Weather Barriers" for continuous air barrier systems.
 - 3. Section 07 42 16 "Insulated Core Metal Wall Panels" for metal panels with honeycomb core.
 - 4. Section 07 62 00 "Sheet Metal Flashing and Trim" for flashing and other sheet metal work that is not part of metal wall panel assemblies.

1.03 DEFINITION

- A. Metal Wall Panel Assembly: Metal wall panels, attachment system components, miscellaneous metal framing, thermal insulation, and accessories necessary for a complete weathertight wall system.

1.04 PERFORMANCE REQUIREMENTS

- A. General Performance: Metal wall panel assemblies shall comply with performance requirements without failure due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Air Infiltration: Air leakage through assembly of not more than **0.06 cfm/sq. ft** of wall area when tested according to ASTM E 283 at the following test-pressure difference:
 - 1. Test-Pressure Difference: **1.57 lbf/sq. ft.**
- C. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 331 at the following test-pressure difference:
 - 1. Test-Pressure Difference: **6.24 lbf/sq. ft.**
- D. Structural Performance: Provide metal wall panel assemblies capable of withstanding the effects the following loads and stresses within limits and under conditions indicated, based on testing according to ASTM E 1592:
 - 1. Wind Loads: Determine loads based on the following minimum design wind pressures:
 - a. Uniform pressure as indicated on Drawings.
 - 2. Deflection Limits: Metal wall panel assemblies shall withstand wind loads with

horizontal deflections no greater than 1/180 of the span.

- E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

1.05 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of wall panel and accessory.
- B. Shop Drawings: Show fabrication and installation layouts of metal wall panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details. Distinguish between factory-, shop- and field-assembled work.
 - 1. Accessories: Include details of the following items, at a scale of not less than 1-1/2 inches per 12 inches:
 - a. Flashing and trim.
 - b. Anchorage systems.
- C. Samples for Initial Selection: For each type of metal wall panel indicated with factory-applied color finishes.
 - 1. Include similar Samples of trim and accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.
 - 1. Metal Wall Panels: 12 inches long by actual panel width. Include fasteners, closures, and other metal wall panel accessories.
 - 2. Trim and Closures: 12 inches long. Include fasteners and other exposed accessories.
 - 3. Accessories: 12-inch- long Samples for each type of accessory.

1.06 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Exterior elevations drawn to scale and coordinating penetrations and wall-mounted items. Show the following:
 - 1. Wall panels and attachments.
 - 2. Girts.
 - 3. Wall-mounted items including doors, windows, louvers, and lighting fixtures.
 - 4. Penetrations of wall by pipes and utilities.
- B. Qualification Data: For Installer and testing agency.
- C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each product.
- D. Field quality-control reports.

E. Warranties: Sample of special warranties.

1.07 CLOSEOUT SUBMITTALS

A. Maintenance Data: For metal wall panels to include in maintenance manuals.

1.08 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers trained and approved by manufacturer.

B. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

C. Source Limitations: Obtain each type of metal wall panel from single source from single manufacturer.

D. Fire-Resistance Ratings: Where indicated, provide metal wall panels identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

E. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Build mockup of typical corner panel as shown on Drawings; approximately one bay wide by one story high by full thickness, including insulation, supports, attachments, and accessories.

2. Conduct water spray test of mockup of metal wall panel assembly, testing for water penetration according to AAMA 501.2.

3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

F. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, metal wall panel Installer, metal wall panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal wall panels, including installers of doors, windows, and louvers.

2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.

3. Review methods and procedures related to metal wall panel installation, including manufacturer's written instructions.

4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.

5. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that will affect metal wall panels.

6. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.

7. Review temporary protection requirements for metal wall panel assembly during

and after installation.

8. Review wall panel observation and repair procedures after metal wall panel installation.

1.09 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, sheets, metal wall panels, and other manufactured items so as not to be damaged or deformed. Package metal wall panels for protection during transportation and handling.
- B. Unload, store, and erect metal wall panels in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack metal wall panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal wall panels to ensure dryness, with positive slope for drainage of water. Do not store metal wall panels in contact with other materials that might cause staining, denting, or other surface damage.
- D. Retain strippable protective covering on metal wall panel for period of metal wall panel installation.
- E. Protect foam-plastic insulation as follows:
 1. Do not expose to sunlight, except to extent necessary for period of installation and concealment.
 2. Protect against ignition at all times. Do not deliver foam-plastic insulation materials to Project site before installation time.
 3. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

1.10 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal wall panels to be performed according to manufacturers' written instructions and warranty requirements.
- B. Field Measurements: Verify locations of structural members and wall opening dimensions by field measurements before metal wall panel fabrication, and indicate measurements on Shop Drawings.

1.11 COORDINATION

- A. Coordinate metal wall panel assemblies with rain drainage work, flashing, trim, and construction of girts, studs, soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.12 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal wall panel assemblies that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Structural failures including rupturing, cracking, or puncturing.
 - b. Deterioration of metals and other materials beyond normal weathering.
 2. Warranty Period: Two years from date of Substantial Completion.

- B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal wall panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PANEL MATERIALS

- A. Aluminum Sheet: Coil-coated sheet, [ASTM B 209](#), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
1. Surface: Smooth, flat finish.
 2. Exposed Coil-Coated Finish:
 - a. 3-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 3. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of [0.5 mil](#).
- B. Panel Sealants:
1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape [1/2 inch](#) wide and [1/8 inch](#) thick.
 2. Joint Sealant: [ASTM C 920](#); elastomeric polyurethane, polysulfide, or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal wall panels and remain weathertight; and as recommended in writing by metal wall panel manufacturer.
 3. Butyl-Rubber-Based, Solvent-Release Sealant: [ASTM C 1311](#).

2.02 FIELD-INSTALLED THERMAL INSULATION

- A. Refer to Division 07 insulation sections.

2.03 MISCELLANEOUS METAL FRAMING

- A. Miscellaneous Metal Framing, General: [ASTM C 645](#), cold-formed metallic-coated steel sheet, [ASTM A 653/A 653M](#), [G60](#) hot-dip galvanized or coating with equivalent corrosion resistance unless otherwise indicated.
- B. Subgirts: Manufacturer's standard C- or Z-shaped sections, [0.064-inch](#) nominal thickness.

- C. Zee Clips: 0.079-inch nominal thickness.
- D. Base or Sill Angles: 0.079-inch nominal thickness.
- E. Hat-Shaped, Rigid Furring Channels:
 - 1. Nominal Thickness: As required to meet performance requirements.
 - 2. Depth: As indicated.
- F. Cold-Rolled Furring Channels: Minimum 1/2-inch- wide flange.
 - 1. Nominal Thickness: 0.064 inch.
 - 2. Depth: 3/4 inch.
 - 3. Furring Brackets: Adjustable, corrugated-edge type of steel sheet with 0.040-inch nominal thickness.
 - 4. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch-diameter wire, or double strand of 0.048-inch- diameter wire.
- G. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches, wall attachment flange of 7/8 inch, and depth required to fit insulation thickness indicated.
 - 1. Nominal Thickness: 0.025 inch.
- H. Fasteners for Miscellaneous Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten miscellaneous metal framing members to substrates.

2.04 MISCELLANEOUS MATERIALS

- A. Panel Fasteners: Self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand design loads. Provide exposed fasteners with heads matching color of metal wall panels by means of plastic caps or factory-applied coating. Provide EPDM, PVC, or neoprene sealing washers.

2.05 CONCEALED-FASTENER, LAP-SEAM METAL WALL PANELS

- A. General: Provide factory-formed metal wall panels designed to be field assembled by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant in side laps. Include accessories required for weathertight installation.
- B. Tapered-Rib-Profile, Concealed-Fastener Metal Wall Panels: Formed with raised, trapezoidal major ribs.
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide EX160 Aluminum Wall Panel System by Merchant and Evans, Inc., or comparable product by one of the following:
 - a. ATAS International, Inc.
 - b. Dimensional Metals, Inc.
 - c. Metal Sales Manufacturing Corporation.
 - d. Metecno-Morin.
 - 2. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch nominal thickness.
 - a. Exterior Finish: 3-coat fluoropolymer.
 - b. Color: Dark grey to match Architect's sample.

3. Panel Coverage: 16 inches.
4. Panel Height: 1 – 5/16 inches

2.06 ACCESSORIES

- A. Wall Panel Accessories: Provide components required for a complete metal wall panel assembly including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal wall panels, unless otherwise indicated.
 1. Closures: Provide closures at eaves and rakes, fabricated of same metal as metal wall panels.
 2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
 3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- thick, flexible closure strips; cut or premolded to match metal wall panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.
- B. Flashing and Trim: Formed from 0.018-inch minimum thickness, zinc-coated (galvanized) steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating. Provide flashing and trim as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal wall panels.

2.07 FABRICATION

- A. General: Fabricate and finish metal wall panels and accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
- B. Fabricate metal wall panels in a manner that eliminates condensation on interior side of panel and with joints between panels designed to form weathertight seals.
- C. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
- D. Fabricate metal wall panel joints with factory-installed captive gaskets or separator strips that provide a tight seal and prevent metal-to-metal contact, and that will minimize noise from movements within panel assembly.
- E. Sheet Metal Accessories: Fabricate flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to the design, dimensions, metal, and other characteristics of item indicated.
 1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
 3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 4. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA standards.

5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended by metal wall panel manufacturer.
 - a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

2.08 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal wall panel supports, and other conditions affecting performance of work.
 1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal wall panel manufacturer.
 2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal wall panel manufacturer.
 3. Verify that weather-resistant sheathing paper has been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
 4. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of work.
- B. Examine roughing-in for components and systems penetrating metal wall panels to verify actual locations of penetrations relative to seam locations of metal wall panels before metal wall panel installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Miscellaneous Framing: Install subgirts, base angles, sills, furring, and other miscellaneous wall panel support members and anchorages according to ASTM C 754 and metal wall panel manufacturer's written recommendations.

3.03 METAL WALL PANEL INSTALLATION

- A. General: Install metal wall panels according to manufacturer's written instructions in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts and subgirts unless otherwise indicated. Anchor metal wall panels and other components of the Work securely in place, with provisions for thermal and structural movement.
1. Commence metal wall panel installation and install minimum of 300 sq. ft in presence of factory-authorized representative.
 2. Shim or otherwise plumb substrates receiving metal wall panels.
 3. Flash and seal metal wall panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until weather barrier and flashings that will be concealed by metal wall panels are installed.
 4. Install screw fasteners in predrilled holes.
 5. Locate and space fastenings in uniform vertical and horizontal alignment.
 6. Install flashing and trim as metal wall panel work proceeds.
 7. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 8. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete and elsewhere as indicated or, if not indicated, as necessary for waterproofing.
 9. Align bottom of metal wall panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 10. Provide weathertight escutcheons for pipe and conduit penetrating exterior walls.
- B. Fasteners:
1. Aluminum Wall Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized steel fasteners for surfaces exposed to the interior.
- C. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action as recommended by metal wall panel manufacturer.
- D. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weathertight performance of metal wall panel assemblies. Provide types of gaskets, fillers, and sealants indicated or, if not indicated, types recommended by metal wall panel manufacturer.
1. Seal metal wall panel end laps with double beads of tape or sealant, full width of panel. Seal side joints where recommended by metal wall panel manufacturer.
 2. Prepare joints and apply sealants to comply with requirements in Section 07 92 00 "Joint Sealants."
- E. Lap-Seam Metal Wall Panels: Fasten metal wall panels to supports with fasteners at each lapped joint at location and spacing recommended by manufacturer.
1. Lap ribbed or fluted sheets one full rib corrugation. Apply panels and associated items for neat and weathertight enclosure. Avoid "panel creep" or application not true to line.
 2. Provide metal-backed washers under heads of exposed fasteners bearing on weather side of metal wall panels.
 3. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
 4. Install screw fasteners with power tools having controlled torque adjusted to compress washer tightly without damage to washer, screw threads, or panels.

- Install screws in predrilled holes.
5. Provide sealant tape at lapped joints of metal wall panels and between panels and protruding equipment, vents, and accessories.
 6. Apply a continuous ribbon of sealant tape to weather-side surface of fastenings on end laps; on side laps of nesting-type panels; on side laps of corrugated nesting-type, ribbed, or fluted panels; and elsewhere as needed to make panels weathertight.
 7. At panel splices, nest panels with minimum 6-inch end lap, sealed with butyl-rubber sealant and fastened together by interlocking clamping plates.
- F. Zee Clips: Provide Zee clips of size indicated or, if not indicated, as required to act as standoff from subgirts for thickness of insulation indicated. Attach to subgirts with fasteners.

3.04 ACCESSORY INSTALLATION

- A. General: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
1. Install components required for a complete metal wall panel assembly including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
- B. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
1. Install exposed flashing and trim that is without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with mastic sealant (concealed within joints).

3.05 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Water-Spray Test: After completing the installation of 75-foot- by-2-story minimum area of metal wall panel assembly, test assembly for water penetration according to AAMA 501.2 in a 2-bay area directed by Architect.
- C. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect and test completed metal wall panel installation, including accessories.
- D. Remove and replace metal wall panels where tests and inspections indicate that they do not comply with specified requirements.
- E. Additional tests and inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.06 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as metal wall panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal wall panel installation, clean finished surfaces as recommended by metal wall panel manufacturer. Maintain in a clean condition during construction.
- B. After metal wall panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
- C. Replace metal wall panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07 42 13

SECTION 07 42 16**INSULATED-CORE METAL WALL PANELS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section Includes:
 - 1. Honeycomb-core metal wall panels.
- B. Related Sections:
 - 1. Section 05 40 00 "Cold-Formed Metal Framing" for cold-formed metal framing supporting metal wall panels.
 - 2. Section 07 42 13 "Concealed-Fastener Lap Seam Metal Wall Panels".

1.03 DEFINITIONS

- A. Metal Wall Panel Assembly: Insulated-core metal wall panels, attachment system components, miscellaneous metal framing, and accessories necessary for a complete weathertight wall system.

1.04 PERFORMANCE REQUIREMENTS

- A. General Performance: Metal wall panel assemblies shall comply with performance requirements without failure due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Delegated Design: Design metal wall panel assembly, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- C. Air Infiltration: Air leakage through assembly of not more than 0.06 cfm/sq. ft. of wall area when tested according to ASTM E 283 at the following test-pressure difference:
 - 1. Test-Pressure Difference: 1.57 lbf/sq. ft. .
- D. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 331 at the following test-pressure difference:
 - 1. Test-Pressure Difference: 6.24 lbf/sq. ft.
- E. Structural Performance: Metal wall panel assemblies shall withstand the effects the following loads and stresses within limits and under conditions indicated, based on testing according to ASTM E 330:
 - 1. Wind Loads: Determine loads based on the following minimum design wind pressures:
 - a. Uniform pressure as indicated on Drawings.

2. Deflection Limits: Metal wall panel assemblies shall withstand wind loads with horizontal deflections no greater than $l/180$ $l/240$ \leq Insert deflection \geq of the span.
- F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 1. Temperature Change (Range): 120 deg F , ambient; 180 deg F, material surfaces.
- G. Thermal Performance: Provide insulated metal wall panel assemblies with thermal-resistance value (R-value) indicated when tested according to ASTM C 518.

1.05 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of wall panel and accessory.
- B. Shop Drawings: Show fabrication and installation layouts of metal wall panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details. Distinguish between factory-, shop- and field-assembled work.
 1. Accessories: Include details of the following items, at a scale of not less than 1-1/2 inches per 12 inches:
 - a. Flashing and trim.
 - b. Anchorage systems.
- C. Samples for Initial Selection: For each type of metal wall panel indicated with factory-applied color finishes.
 1. Include similar Samples of trim and accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.
 1. Metal Wall and Soffit Panels: 12 inches long by actual panel width. Include fasteners, closures, and other metal wall panel accessories.
 2. Trim and Closures: 12 inches long. Include fasteners and other exposed accessories.
 3. Accessories: 12-inch-long Samples for each type of accessory.
- E. Delegated-Design Submittal: For metal wall panel assembly indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.06 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Exterior elevations drawn to scale and coordinating penetrations and wall-mounted items. Show the following:
 1. Wall panels and attachments.

2. Stud framing.
3. Wall-mounted items including doors, windows, louvers, and lighting fixtures.
4. Penetrations of wall by pipes and utilities.

B. Qualification Data: For professional engineer.

C. Material Certificates: For thermal insulation, signed by manufacturers.

D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each product.

E. Field quality-control reports.

F. Warranties: Sample of special warranties.

1.07 CLOSEOUT SUBMITTALS

A. Maintenance Data: For metal wall panels to include in maintenance manuals.

1.08 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

B. Source Limitations: Obtain each type of metal wall panel from single source from single manufacturer.

C. Fire-Resistance Ratings: Where indicated, provide metal wall panels identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

D. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Build mockup of typical wall and corner panel, including soffit, as shown on Drawings; approximately one bay wide by one story high by full thickness, including insulation, supports, attachments, and accessories.
2. Conduct water spray test of mockup of metal wall panel assembly, testing for water penetration according to AAMA 501.2.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

E. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, metal wall panel Installer, metal wall panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal wall panels, including installers of doors, windows, and louvers.
2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and

avoid delays.

3. Review methods and procedures related to metal wall panel installation, including manufacturer's written instructions.
4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
5. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that will affect metal wall panels.
6. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
7. Review temporary protection requirements for metal wall panel assembly during and after installation.
8. Review wall panel observation and repair procedures after metal wall panel installation.

1.09 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, sheets, metal wall panels, and other manufactured items so as not to be damaged or deformed. Package metal wall panels for protection during transportation and handling.
- B. Unload, store, and erect metal wall panels in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack metal wall panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal wall panels to ensure dryness, with positive slope for drainage of water. Do not store metal wall panels in contact with other materials that might cause staining, denting, or other surface damage.
- D. Retain strippable protective covering on metal wall panel for period of metal wall panel installation.
- E. Protect foam-plastic insulation as follows:
 1. Do not expose to sunlight, except to extent necessary for period of installation and concealment.
 2. Protect against ignition at all times. Do not deliver foam-plastic insulation materials to Project site before installation time.
 3. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

1.10 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal wall panels to be performed according to manufacturers' written instructions and warranty requirements.
- B. Field Measurements: Verify locations of structural members and wall opening dimensions by field measurements before metal wall panel fabrication, and indicate measurements on Shop Drawings.

1.11 COORDINATION

- B. Coordinate metal wall panel assemblies with rain drainage work, flashing, trim, and construction of girts, studs, soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.12 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal wall panel assemblies that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Structural failures including rupturing, cracking, or puncturing.
 - b. Deterioration of metals and other materials beyond normal weathering.
 2. Warranty Period: [Two] [Insert number] years from date of Substantial Completion.
- B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal wall panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PANEL MATERIALS

- A. Aluminum Sheet: Coil-coated sheet, ASTM B 209 , alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
1. Surface: Smooth, flat finish.
 2. Exposed Coil-Coated Finishes:
 - a. Three-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 3. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil .
- B. Panel Sealants:
1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch wide and 1/8 inch thick.
 2. Joint Sealant: ASTM C 920; elastomeric polyurethane, polysulfide, or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal wall panels and remain weathertight; and as recommended in writing by metal wall panel manufacturer.
 3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.

2.02 MISCELLANEOUS METAL FRAMING

- A. Miscellaneous Metal Framing, General: ASTM C 645, cold-formed metallic-coated steel sheet, ASTM A 653/A 653M, G40 hot-dip galvanized, or coating with equivalent corrosion resistance unless otherwise indicated.
- B. Subgirts: Manufacturer's standard C- or Z-shaped sections, 0.064-inch nominal thickness.
- C. Zee Clips: 0.079-inch nominal thickness.
- D. Base or Sill Angles: 0.079-inch nominal thickness.
- E. Hat-Shaped, Rigid Furring Channels:
 - 1. Nominal Thickness: As required to meet performance requirements.
 - 2. Depth: As indicated.
- F. Cold-Rolled Furring Channels: Minimum 1/2-inch- wide flange.
 - 1. Nominal Thickness: As required to meet performance requirements.
 - 2. Depth: As indicated.
 - 3. Furring Brackets: Adjustable, corrugated-edge type of steel sheet with 0.040-inch nominal thickness.
 - 4. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch-diameter wire, or double strand of 0.048-inch- diameter wire.
- G. Fasteners for Miscellaneous Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten miscellaneous metal framing members to substrates.

2.03 MISCELLANEOUS MATERIALS

- A. Panel Fasteners: Self-tapping screws; bolts and nuts; self-locking rivets and bolts; end-welded studs; and other suitable fasteners designed to withstand design loads. Provide exposed fasteners with heads matching color of metal wall panels by means of plastic caps or factory-applied coating. Provide EPDM, PVC, or neoprene sealing washers.

2.04 HONEYCOMB-CORE METAL WALL PANELS

- A. General: Provide factory-formed and -assembled metal wall panels fabricated from two metal facing sheets and honeycomb-core material laminated or otherwise securely bonded to facing sheets during fabrication without use of contact adhesives or pinch rollers, and with joints between panels designed to form weathertight seals. Include accessories required for weathertight installation.
 - 1. Panel Performance:
 - a. Fatigue: No evidence of delamination, core cracking, or permanent bowing when tested to a 20-lbf/sq. ft. positive and negative wind load and with deflection of L/180 for 2 million cycles.
 - b. Autoclave: No delamination when exposed to 2-psi pressure at a temperature of 212 deg F for 2-1/2 hours.
- B. Wrapped-Edge, Honeycomb-Core Metal Wall Panels: Formed with flush exterior panel facing wrapped over panel edges; designed for independent installation by mechanically attaching panels to supports using staggered, concealed side clips engaging panel edges; with sealant joints.

1. Basis of Design: Subject to requirements, provide QuadroClad 100 by Hunter Douglas.
2. Facings: Fabricate panel with exterior and interior facings of same material and thickness.
 - a. Material: Aluminum sheet, manufacturer's standard thickness.
 - b. Exterior Facing Finish: 3-coat fluoropolymer.
 - 1) Color: Traffic Red 3020.
 - c. Interior Facing Finish: Manufacturer's standard primer or polyester.
3. Aluminum Honeycomb Core: Manufacturer's standard 0.003-inch-thick, commercial grade aluminum with maximum 3/4-inch cell size.
4. Clips: Manufacturer's standard one piece, formed from stainless steel.
5. Gaskets: Extruded, dry seal silicone.
6. Sealant: Manufacturer's standard silicone.
7. Panel Thickness: 1.0 inch

2.05 ACCESSORIES

- A. Wall Panel Accessories: Provide components required for a complete metal wall panel assembly including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal wall panels unless otherwise indicated.
 1. Closures: Provide closures at eaves and rakes, fabricated of same metal as metal wall panels.
 2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
 3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- thick, flexible closure strips; cut or premolded to match metal wall panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.
- B. Flashing and Trim: Formed from 0.018-inch-minimum thickness, zinc-coated (galvanized) steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating. Provide flashing and trim as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal wall panels.

2.06 FABRICATION

- A. General: Fabricate and finish metal wall panels and accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
- B. Fabricate metal wall panels in a manner that eliminates condensation on interior side of panel and with joints between panels designed to form weathertight seals.
- C. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.

- D. Fabricate metal wall panel joints with factory-installed captive gaskets or separator strips that provide a tight seal and prevent metal-to-metal contact, in a manner that will minimize noise from movements within panel assembly.
- E. Honeycomb-Core Metal Wall Panels: Fabricate panels using manufacturer's standard thermosetting structural adhesive in a lamination process that bonds panel under minimum 10-psi pressure. Use of contact adhesives with pinch-roll process is not acceptable.
 - 1. Panel Bow Tolerance: Not more than 0.5 percent of panel width or length.
- F. Sheet Metal Accessories: Fabricate flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to the design, dimensions, metal, and other characteristics of item indicated.
 - 1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 - 2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
 - 3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 - 4. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA standards.
 - 5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
 - 6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended by metal wall panel manufacturer.
 - a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

2.07 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal wall panel supports, and other conditions affecting performance of work.
 - 1. Examine wall framing to verify that girts, angles, channels, studs, and other

- structural panel support members and anchorage have been installed within alignment tolerances required by metal wall panel manufacturer.
2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal wall panel manufacturer.
 3. Verify that weather-resistant sheathing paper has been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
 4. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of work.
- B. Examine roughing-in for components and systems penetrating metal wall panels to verify actual locations of penetrations relative to seam locations of metal wall panels before metal wall panel installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Miscellaneous Framing: Install subgirts, base angles, sills, furring, and other miscellaneous wall panel support members and anchorages according to ASTM C 754 and metal wall panel manufacturer's written recommendations.

3.03 METAL WALL PANEL INSTALLATION, GENERAL

- A. General: Install metal wall panels according to manufacturer's written instructions in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts and subgirts unless otherwise indicated. Anchor metal wall panels and other components of the Work securely in place, with provisions for thermal and structural movement.
1. Commence metal wall panel installation and install minimum of 300 sq. ft. in presence of factory-authorized representative.
 2. Shim or otherwise plumb substrates receiving metal wall panels.
 3. Flash and seal metal wall panels with weather closures at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until weather barrier and flashings that will be concealed by metal wall panels are installed.
 4. Install screw fasteners in predrilled holes.
 5. Locate and space fastenings in uniform vertical and horizontal alignment.
 6. Install flashing and trim as metal wall panel work proceeds.
 7. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 8. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete, and elsewhere as indicated or, if not indicated, as necessary for waterproofing.
 9. Align bottom of metal wall panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 10. Provide weathertight escutcheons for pipe and conduit penetrating exterior walls.
- B. Fasteners:
1. Steel Wall Panels: Use stainless-steel fasteners for surfaces exposed to the exterior; use galvanized steel fasteners for surfaces exposed to the interior.
 2. Aluminum Wall Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized steel fasteners for surfaces exposed to the interior.
 3. Copper Wall Panels: Use copper, stainless-steel, or hardware-bronze fasteners.

4. Stainless-Steel Wall Panels: Use stainless-steel fasteners.
- C. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action as recommended by metal wall panel manufacturer.
- D. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weathertight performance of metal wall panel assemblies. Provide types of gaskets, fillers, and sealants indicated or, if not indicated, types recommended by metal wall panel manufacturer.
 1. Seal metal wall panel end laps with double beads of tape or sealant, full width of panel. Seal side joints where recommended by metal wall panel manufacturer.
 2. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants."

3.04 INSULATED-CORE METAL WALL PANEL INSTALLATION

- A. General: Apply continuous ribbon of sealant to panel joint on concealed side of insulated-core metal wall panels as vapor seal; apply sealant to panel joint on exposed side of panels for weather seal.
 1. Fasten insulated-core metal wall panels to supports with fasteners at each lapped joint at location and spacing and with fasteners recommended by manufacturer.
 2. Lap ribbed or fluted sheets one full rib corrugation. Apply panels and associated items for neat and weathertight enclosure. Avoid "panel creep" or application not true to line.
 3. Provide metal-backed washers under heads of exposed fasteners on weather side of insulated metal wall panels.
 4. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
 5. Provide sealant tape at lapped joints of insulated metal wall panels and between panels and protruding equipment, vents, and accessories.
 6. Apply a continuous ribbon of sealant tape to panel side laps and elsewhere as needed to make panels weathertight.
 7. Apply snap-on battens to exposed-fastener, insulated-core metal wall panel seams to conceal fasteners.
- B. Honeycomb-Core Metal Wall Panels:
 1. Wrapped-Edge Panels: Mechanically attach wall panels to supports using staggered, concealed side clips engaging wrapped panel edges. Install clips to supports with self-tapping fasteners. Seal joints with [backer rod and sealant] [manufacturer's standard gaskets].
 2. Wrapped-Edge Panels: Mechanically attach wall panels through extended edge of panels to supports using self-tapping fasteners. Seal joints with [backer rod and sealant] [manufacturer's standard gaskets].
 3. Shiplap-Edge Panels: Mechanically attach wall panels to supports using staggered, concealed side clips engaging tongue-and-groove panel edges. Install clips to supports with self-tapping fasteners.
 - a. Horizontal Joints: [Maintain reveal joint of consistent width] [Seal joints with backer rod and sealant] [Seal joints with manufacturer's standard gaskets].
 - b. Vertical Joints: [Maintain reveal joint of consistent width] [Seal joints with backer rod and sealant] [Seal joints with manufacturer's standard gaskets].

4. Framed-Edge Panels: Mechanically attach wall panels through integral, extruded edge members to supports using self-tapping fasteners. Seal joints with manufacturer's standard gaskets.

3.05 ACCESSORY INSTALLATION

- A. General: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.
 1. Install components required for a complete metal wall panel assembly including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
- B. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
 1. Install exposed flashing and trim that is without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with mastic sealant (concealed within joints).

3.06 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Water-Spray Test: After completing the installation of 75-foot- by-2-story minimum area of metal wall panel assembly, test assembly for water penetration according to AAMA 501.2 in a 2-bay area directed by Architect.
- C. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect and test completed metal wall panel installation, including accessories.
- D. Remove and replace metal wall panels where tests and inspections indicate that they do not comply with specified requirements.
- E. Additional tests and inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.07 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as metal wall panels are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of metal wall panel installation, clean finished surfaces as recommended by metal wall panel manufacturer. Maintain in a clean condition during construction.
- B. After metal wall panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.

- C. Replace metal wall panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07 42 16

SECTION 07 54 23**THERMOPLASTIC POLYOLEFIN ROOFING****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY**A. Section Includes:**

1. Adhered thermoplastic polyolefin roofing system.
2. Vapor retarder.
3. Roof insulation.

- B. Section includes the installation of insulation strips in ribs of roof deck. Insulation strips are furnished under Section 05 31 00 "Steel Decking."

C. Related Requirements:

1. Section 07 21 16 "Blanket Insulation" for insulation beneath the roof deck.
2. Section 07 62 00 "Sheet Metal Flashing and Trim" for metal roof flashings and counterflashings.
3. Section 07 71 29 "Manufactured Roof Expansion Joints" for proprietary manufactured roof expansion-joint assemblies.
4. Section 07 92 00 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
5. Section 22 14 23 "Facility Storm Drainage Piping Specialties" for roof drains.

1.03 DEFINITIONS

- A. Roofing Terminology: Definitions in ASTM D 1079 and glossary in NRCA's "The NRCA Roofing and Waterproofing Manual" apply to work of this Section.

1.04 PREINSTALLATION MEETINGS**A. Preinstallation Roofing Conference: Conduct conference at Project site.**

1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review governing regulations and requirements for insurance and certificates if applicable.

8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

1.05 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. LEED Submittals:
 1. Product Data for Credit SS 7.2: For roof materials, documentation indicating that roof materials comply with Solar Reflectance Index requirement.
 2. Product Data for Credit IEQ 4.1: For adhesives and sealants used inside the weatherproofing system, documentation including printed statement of VOC content.
- C. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and attachments to other work, including:
 1. Base flashings and membrane terminations.
 2. Tapered insulation, including slopes.
 3. Roof plan showing orientation of steel roof deck and orientation of roofing, fastening spacings, and patterns for mechanically fastened roofing.
 4. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.
- D. Samples for Verification: For the following products:
 1. Sheet roofing, of color required.
 2. Walkway pads or rolls, of color required.

1.06 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and manufacturer.
- B. Manufacturer Certificates: Signed by roofing manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
 1. Submit evidence of compliance with performance requirements.
- C. Product Test Reports: For components of roofing system, tests performed by manufacturer and witnessed by a qualified testing agency.
- D. Research/Evaluation Reports: For components of roofing system, from ICC-ES.
- E. Field quality-control reports.
- F. Sample Warranties: For manufacturer's special warranties.

1.07 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For roofing system to include in maintenance manuals.

1.08 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is UL listed for roofing system identical to that used for this Project.
- B. Installer Qualifications: A qualified firm that is approved by roofing system

manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

1.09 DELIVERY, STORAGE, AND HANDLING

- A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
- B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
 - 1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
- C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.
- D. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.

1.10 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.11 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.
 - 1. Special warranty includes roofing, base flashings, roof insulation, cover boards, substrate board, and other components of roofing system.
 - 2. Warranty Period: 15 years from date of Substantial Completion.
- B. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering the Work of this Section, including all components of roofing system such as roofing, base flashing, roof insulation, fasteners, cover boards, substrate boards, vapor retarders, roof pavers, and walkway products, for the following warranty period:
 - 1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Sure-Weld Adhered Roofing System by Carlisle Syntec Systems or comparable product by one of the following:
 - 1. Firestone Building Products.

2. GAF Materials Corporation.
3. GenFlex Roofing Systems.
4. Johns Manville.
5. Mule-Hide Products Co., Inc.

- B. Source Limitations: Obtain components including roof insulation for roofing system from same manufacturer as membrane roofing or manufacturer approved by membrane roofing manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. General Performance: Installed roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roofing and base flashings shall remain watertight.
1. Accelerated Weathering: Roofing system shall withstand 2000 hours of exposure when tested according to ASTM G 152, ASTM G 154, or ASTM G 155.
 2. Impact Resistance: Roofing system shall resist impact damage when tested according to ASTM D 3746 or ASTM D 4272.
- B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roofing manufacturer based on testing and field experience.
- C. Roofing System Design: Tested by a qualified testing agency to resist the following uplift pressures:
1. Corner Uplift Pressure: <Insert lbf/sq. ft.>.
 2. Perimeter Uplift Pressure: <Insert lbf/sq. ft.>.
 3. Field-of-Roof Uplift Pressure: <Insert lbf/sq. ft.>.
- D. FM Global Listing: Roofing, base flashings, and component materials shall comply with requirements in FM Global 4450 or FM Global 4470 as part of a built-up roofing system, and shall be listed in FM Global's "RoofNav" for Class 1 or noncombustible construction, as applicable. Identify materials with FM Global markings.
1. Fire/Windstorm Classification: [Class 1A-60] [Class 1A-75] [Class 1A-90] [Class 1A-105] [Class 1A-120] <Insert class>.
 2. Hail-Resistance Rating: [MH] [SH].
- E. Solar Reflectance Index: Not less than 78 when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency.
- F. Exterior Fire-Test Exposure: ASTM E 108 or UL 790, Class A; for application and roof slopes indicated; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

2.03 TPO ROOFING

- A. Fabric-Reinforced TPO Sheet: ASTM D 6878, internally fabric- or scrim-reinforced, uniform, flexible fabric-backed TPO sheet.
1. Thickness: 60 mils, nominal.
 2. Exposed Face Color: White.

2.04 AUXILIARY ROOFING MATERIALS

- A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with roofing.
 - 1. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
 - 2. Adhesives and sealants that are not on the exterior side of weather barrier shall comply with the following limits for VOC content:
 - a. Plastic Foam Adhesives: 50 g/L.
 - b. Gypsum Board and Panel Adhesives: 50 g/L.
 - c. Multipurpose Construction Adhesives: 70 g/L.
 - d. Fiberglass Adhesives: 80 g/L.
 - e. Single-Ply Roof Membrane Adhesives: 250 g/L.
 - f. Single-Ply Roof Membrane Sealants: 450 g/L.
 - g. Nonmembrane Roof Sealants: 300 g/L.
 - h. Sealant Primers for Nonporous Substrates: 250 g/L.
 - i. Sealant Primers for Porous Substrates: 775 g/L.
 - j. Other Adhesives and Sealants: 250 g/L.
- B. Sheet Flashing: Manufacturer's standard unreinforced TPO sheet flashing, 55 mils thick, minimum, of same color as TPO sheet.
- C. Bonding Adhesive: Manufacturer's standard, water based.
- D. Slip Sheet: Manufacturer's standard, of thickness required for application.
- E. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch thick; with anchors.
- F. Metal Battens: Manufacturer's standard, aluminum-zinc-alloy-coated or zinc-coated steel sheet, approximately 1 inch wide by 0.05 inch thick, prepunched.
- G. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening roofing to substrate, and acceptable to roofing system manufacturer.
- H. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, lap sealants, termination reglets, and other accessories.

2.05 SUBSTRATE BOARDS

- A. Substrate Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/2 inch thick.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corporation; GlasRoc Sheathing Type X.
 - b. Georgia-Pacific Corporation; Dens Deck Prime.
 - c. National Gypsum Company; Gold Bond eXP Extended Exposure Sheathing.
 - d. USG Corporation; Securock Glass Mat Roof Board.
- B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening substrate board to roof deck.

2.06 VAPOR RETARDER

- A. Polyethylene Film: ASTM D 4397, 6 mils thick, minimum, with maximum permeance rating of 0.13 perm.
 1. Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
 2. Adhesive: Manufacturer's standard lap adhesive.
- B. Laminated Sheet: Polyethylene laminate, two layers, reinforced with cord grid, with maximum permeance rating of 0.06 perm.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Reef Industries, Inc.
 2. Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.

2.07 ROOF INSULATION

- A. General: Preformed roof insulation boards manufactured or approved by TPO roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated and that produce FM Global-approved roof insulation.
- B. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 2, felt or glass-fiber mat facer on both major surfaces.
 1. Basis-of-Design Product: Subject to compliance with requirements, provide HP-H Polyiso by Carlisle Syntec Systems or comparable product by one of the following:
 - a. Atlas Roofing Corporation.
 - b. Firestone Building Products.
 - c. GAF Materials Corporation.
 - d. Hunter Panels.
 - e. Insulfoam LLC; a Carlisle company.
 - f. Johns Manville.
 - g. Rmax, Inc.
- C. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches unless otherwise indicated.

2.08 INSULATION ACCESSORIES

- A. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with roofing.
- B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening roof insulation and cover boards to substrate, and acceptable to roofing system manufacturer.
- C. Insulation Adhesive: Insulation manufacturer's recommended adhesive formulated to attach roof insulation to substrate or to another insulation layer as follows:
 1. Modified asphaltic, asbestos-free, cold-applied adhesive.

- D. Cover Board: ASTM C 208, Type II, Grade 2, cellulosic-fiber insulation board, 1/2 inch thick.
- E. Cover Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch thick, factory primed.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corporation; GlasRoc Sheathing Type X.
 - b. Georgia-Pacific Corporation; Dens Deck Prime.
 - c. National Gypsum Company; Gold Bond eXP Extended Exposure Sheathing.
 - d. USG Corporation; Securock Glass Mat Roof Board.
- F. Protection Mat: Woven or nonwoven polypropylene, polyolefin, or polyester fabric, water permeable and resistant to UV degradation, type and weight as recommended by roofing system manufacturer for application.

2.09 ASPHALT MATERIALS

- A. Roofing Asphalt: ASTM D 312, Type III or Type IV.

2.10 WALKWAYS

- A. Flexible Walkways: Factory-formed, nonporous, heavy-duty, slip-resisting, surface-textured walkway pads or rolls, approximately 3/16 inch thick and acceptable to roofing system manufacturer.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work:
1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.
 2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
 3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Section 05 31 00 "Steel Decking."
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.
- B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- C. Install insulation strips according to acoustical roof deck manufacturer's written instructions.

3.03 ROOFING INSTALLATION, GENERAL

- A. Install roofing system according to roofing system manufacturer's written instructions.
- B. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.
- C. Install roofing and auxiliary materials to tie in to existing roofing to maintain weathertightness of transition.

3.04 SUBSTRATE BOARD INSTALLATION

- A. Install substrate board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt substrate boards together.
 - 1. Fasten substrate board to top flanges of steel deck according to recommendations in FM Global's "RoofNav" and FM Global Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification.
 - 2. Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to roofing system manufacturers' written instructions.

3.05 VAPOR-RETARDER INSTALLATION

- A. Polyethylene Film: Loosely lay polyethylene-film vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches and 6 inches, respectively. Continuously seal side and end laps with [tape] [adhesive].
- B. Laminate Sheet: Loosely lay laminate-sheet vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches and 6 inches, respectively. Continuously seal side and end laps with tape.
- C. Self-Adhering-Sheet Vapor Retarder: Prime substrate if required by manufacturer. Install self-adhering-sheet vapor retarder over area to receive vapor retarder, side and end lapping each sheet a minimum of 3-1/2 inches and 6 inches, respectively. Seal laps by rolling.
- D. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into roofing system.

3.06 INSULATION INSTALLATION

- A. Coordinate installing roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.
- B. Comply with roofing system and insulation manufacturer's written instructions for installing roof insulation.
- C. Install tapered insulation under area of roofing to conform to slopes indicated.
- D. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2.7 inches or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches in each direction.

- E. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.
- F. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch with insulation.
 - 1. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
- G. Mechanically Fastened Insulation: Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
 - 1. Fasten insulation according to requirements in FM Global's "RoofNav" for specified Windstorm Resistance Classification.
 - 2. Fasten insulation to resist uplift pressure at corners, perimeter, and field of roof.
- H. Mechanically Fastened and Adhered Insulation: Install each layer of insulation to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
 - 1. Fasten first layer of insulation to resist uplift pressure at corners, perimeter, and field of roof.
 - 2. Set each subsequent layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F of equiviscous temperature.
 - 3. Set each subsequent layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 4. Set each subsequent layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
- I. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches in each direction. Loosely butt cover boards together and fasten to roof deck.
 - 1. Fasten cover boards to resist uplift pressure at corners, perimeter, and field of roof.

3.07 ADHERED ROOFING INSTALLATION

- A. Adhere roofing over area to receive roofing according to roofing system manufacturer's written instructions. Unroll roofing and allow to relax before retaining.
- B. Start installation of roofing in presence of roofing system manufacturer's technical personnel.
- C. Accurately align roofing, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
- D. Bonding Adhesive: Apply to substrate and underside of roofing at rate required by manufacturer, and allow to partially dry before installing roofing. Do not apply to splice area of roofing.
- E. In addition to adhering, mechanically fasten roofing securely at terminations, penetrations, and perimeter of roofing.
- F. Apply roofing with side laps shingled with slope of roof deck where possible.

- G. Seams: Clean seam areas, overlap roofing, and hot-air weld side and end laps of roofing and sheet flashings according to manufacturer's written instructions, to ensure a watertight seam installation.
 - 1. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet.
 - 2. Verify field strength of seams a minimum of twice daily, and repair seam sample areas.
 - 3. Repair tears, voids, and lapped seams in roofing that do not comply with requirements.
- H. Spread sealant bed over deck-drain flange at roof drains, and securely seal roofing in place with clamping ring.

3.08 BASE FLASHING INSTALLATION

- A. Install sheet flashings and preformed flashing accessories, and adhere to substrates according to roofing system manufacturer's written instructions.
- B. Apply bonding adhesive to substrate and underside of sheet flashing at required rate, and allow to partially dry. Do not apply to seam area of flashing.
- C. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.
- D. Clean seam areas, overlap, and firmly roll sheet flashings into the adhesive. Hot-air weld side and end laps to ensure a watertight seam installation.
- E. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars.

3.09 WALKWAY INSTALLATION

- A. Flexible Walkways: Install walkway products in locations indicated. Heat weld to substrate or adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.

3.10 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components, and to furnish reports to Architect.
- B. Flood Testing: Flood test each roofing area for leaks, according to recommendations in ASTM D 5957, after completing roofing and flashing but before overlying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
 - 1. Flood to an average depth of 2-1/2 inches with a minimum depth of 1 inch and not exceeding a depth of 4 inches. Maintain 2 inches of clearance from top of base flashing.
 - 2. Flood each area for 24, 48, 72 hours.
 - 3. After flood testing, repair leaks, repeat flood tests, and make further repairs until roofing and flashing installations are watertight.
- C. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel

to inspect roofing installation on completion.

- D. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.11 PROTECTING AND CLEANING

- A. Protect roofing system from damage and wear during remainder of construction period. When remaining construction does not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.
- B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.
- C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.12 ROOFING INSTALLER'S WARRANTY

(See next page for sample installer's warranty)

- A. WHEREAS _____ of _____, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:
1. Owner: <Insert name of Owner>.
 2. Address: <Insert address>.
 3. Building Name/Type: <Insert information>.
 4. Address: <Insert address>.
 5. Area of Work: <Insert information>.
 6. Acceptance Date: _____.
 7. Warranty Period: <Insert time>.
 8. Expiration Date: _____.
- B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,
- C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period he will, at his own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.
- D. This Warranty is made subject to the following terms and conditions:
1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:
 - a. lightning;
 - b. peak gust wind speed exceeding <Insert mph>;
 - c. fire;
 - d. failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
 - e. faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
 - f. vapor condensation on bottom of roofing; and
 - g. activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.
 2. When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
 3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.
 4. During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.

5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.
6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.
7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

E. IN WITNESS THEREOF, this instrument has been duly executed this _____ day of _____, _____.

1. Authorized Signature: _____.
2. Name: _____.
3. Title: _____.

END OF SECTION 07 54 23

SECTION 07 62 00**SHEET METAL FLASHING AND TRIM****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. This Section includes the following sheet metal flashing and trim:
1. Formed equipment support flashing.
- B. Related Sections include the following:
1. Division 06 Section "Miscellaneous Rough Carpentry" for wood nailers, curbs and blocking.
 2. Division 07 Section "Manufactured Roof Expansion Joints" for expansion joints installed with roofing system.
 3. Division 07 Section "Roof Hatches."
 4. Division 07 Section "Joint Sealants" for field-applied sheet metal flashing and trim sealants.

1.03 DEFINITIONS

- A. Gauge numbers and corresponding metal thicknesses shall be as indicated in the table below.

Gauge	U.S. Standard Gauge for Uncoated Hot & Cold Rolled Sheets	Galvanized Sheet Gauge for Hot-Dipped Zinc Coated Sheets
20	0.0359	0.0396
21	0.0329	0.0366
22	0.0299	0.0336
23	0.0269	0.0306
24	0.0239	0.0276
25	0.0209	0.0247
26	0.0179	0.0217

1.04 SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each manufactured product and accessory.
- B. LEED Submittals:
1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and

preconsumer recycled content. Include statement indicating cost for each product having recycled content.

- C. Shop Drawings: Show fabrication and installation layouts of sheet metal flashing and trim, including plans, elevations, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled work. Include the following:
1. Identification of material, thickness, weight, and finish for each item and location in Project.
 2. Details for forming sheet metal flashing and trim, including profiles, shapes, seams, and dimensions.
 3. Details for joining, supporting, and securing sheet metal flashing and trim, including layout of fasteners, cleats, clips, and other attachments. Include pattern of seams.
 4. Details of termination points and assemblies, including fixed points.
 5. Details of expansion joints and expansion-joint covers, including showing direction of expansion and contraction.
 6. Details of edge conditions, including eaves, ridges, valleys, rakes, crickets, and counterflashings as applicable.
 7. Details of special conditions.
 8. Details of connections to adjoining work.
- D. Samples for Initial Selection: For each type of sheet metal flashing, trim, and accessory indicated with factory-applied color finishes involving color selection.
- E. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:
1. Sheet Metal Flashing: 12 inches long by actual width of unit, including finished seam and in required profile. Include fasteners, cleats, clips, closures, and other attachments.
 2. Trim, Metal Closures, Expansion Joints, Joint Intersections, and Miscellaneous Fabrications: 12 inches long and in required profile. Include fasteners and other exposed accessories.
 3. Accessories and Miscellaneous Materials: Full-size Sample.
 4. Anodized Aluminum Samples: Samples to show full range to be expected for each color required.
- F. Qualification Data: For qualified fabricator.
- G. Warranty: Sample of special warranty.
- H. Maintenance Data: For sheet metal flashing, trim, and accessories to include in maintenance manuals.

1.05 QUALITY ASSURANCE

- A. Sheet Metal Flashing and Trim Standard: Comply with SMACNA's "Architectural Sheet Metal Manual." Conform to dimensions and profiles shown unless more stringent requirements are indicated.
- B. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination."
1. Meet with Authority, Architect, Authority's insurer if applicable, Installer, and installers whose work interfaces with or affects sheet metal flashing and trim

including installers of roofing materials, roof accessories, unit skylights, and roof-mounted equipment.

2. Review methods and procedures related to sheet metal flashing and trim.
3. Examine substrate conditions for compliance with requirements, including flatness and attachment to structural members.
4. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Deliver sheet metal flashing materials and fabrications undamaged. Protect sheet metal flashing and trim materials and fabrications during transportation and handling.
- B. Unload, store, and install sheet metal flashing materials and fabrications in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack materials on platforms or pallets, covered with suitable weathertight and ventilated covering. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage.

1.07 COORDINATION

- A. Coordinate installation of sheet metal flashing and trim with interfacing and adjoining construction to provide a leakproof, secure, and noncorrosive installation.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. General: Sheet metal flashing and trim assemblies shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.
- B. Sheet Metal Standard for Flashing and Trim: Comply with NRCA's "The NRCA Roofing Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.
- C. Recycled Content of Steel-Sheet Flashing and Trim: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.02 SHEET METALS

- A. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, G90 coating designation; structural quality.
- B. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304 with No. 2D (dull, cold rolled) finish.

2.03 MISCELLANEOUS MATERIALS

- A. General: Provide materials and types of fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation.
- B. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads.
 - 1. Fasteners for Flashing and Trim: Blind
 - 2. Blind Fasteners: High-strength aluminum or stainless-steel rivets.
- C. Elastomeric Sealant: ASTM C 920, elastomeric polymer sealant of composition indicated below; and of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.
 - 1. For Galvanized Metal and Stainless Steel: Polyurethane.
- D. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant, polyisobutylene plasticized, heavy bodied for hooked-type expansion joints with limited movement.
- E. Epoxy Seam Sealer: Two-part, noncorrosive, aluminum seam-cementing compound, recommended by aluminum manufacturer for exterior nonmoving joints, including riveted joints.
- F. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.04 FABRICATION, GENERAL

- A. General: Custom fabricate sheet metal flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated. Shop fabricate items where practicable. Obtain field measurements for accurate fit before shop fabrication.
- B. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
- C. Fabricate sheet metal flashing and trim without excessive oil canning, buckling, and tool marks and true to line and levels indicated, with exposed edges folded back to form hems.
 - 1. Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.

- D. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA recommendations.
- E. Expansion Provisions: Where lapped or bayonet-type expansion provisions in the Work cannot be used, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with butyl sealant concealed within joints.
- F. Conceal fasteners and expansion provisions where possible on exposed-to-view sheet metal flashing and trim, unless otherwise indicated.
- G. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal.
 - 1. Thickness: As recommended by SMACNA's "Architectural Sheet Metal Manual" for application but not less than thickness of metal being secured.

2.05 WALL SHEET METAL FABRICATIONS

- A. Through-Wall Flashing: Fabricate continuous flashings in minimum 96 inch long, but not exceeding 12 foot long, sections, under copings, at shelf angles, and where indicated. Fabricate discontinuous lintel, sill, and similar flashings to extend 6 inches beyond each side of wall openings. Form with 2 inch high end dams. Fabricate from the following material:
 - 1. Stainless Steel: 0.0156 inch thick.

2.06 FINISHES

- A. Finish all exposed sheet metal trim to match metal wall panels.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions and other conditions affecting performance of work.
 - 1. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
 - 2. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

- A. General: Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.
 - 1. Torch cutting of sheet metal flashing and trim is not permitted.

- B. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by fabricator or manufacturers of dissimilar metals.
1. Coat side of uncoated stainless-steel and leadsheet metal flashing and trim with bituminous coating where flashing and trim will contact wood, ferrous metal, or cementitious construction.
 2. Underlayment: Where installing metal flashing directly on cementitious or wood substrates, install a course of EPDM underlayment and cover with a slip sheet. Lab underlayment joint 6 inches minimum with adhesive and lap joint sealant recommended by EMPD manufacturer.
 3. Bed flanges in thick coat of asphalt roofing cement where required for waterproof performance.
- C. Install exposed sheet metal flashing and trim without excessive oil canning, buckling, and tool marks.
- D. Install sheet metal flashing and trim true to line and levels indicated. Provide uniform, neat seams with minimum exposure of solder, welds, elastomeric and butyl sealant.
- E. Install sheet metal flashing and trim to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.
1. Except where indicated to be continuous, space cleats not more than 12 inches apart.
 2. Anchor each cleat with two fasteners. Bend tabs over fasteners.
- F. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped or bayonet-type expansion provisions cannot be used or would not be sufficiently watertight, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with butyl sealant concealed within joints.
- G. Fasteners: Use fasteners of sizes that will penetrate substrate not less than 1-1/4 inches for nails and not less than 3/4 inch for wood screws.
1. Galvanized or Metallic-Coated Steel: Use stainless-steel fasteners.
 2. Stainless Steel: Use stainless-steel fasteners.
- H. Seal joints with elastomeric sealant as required for watertight construction.
1. Where sealant-filled joints are used, embed hooked flanges of joint members not less than 1 inch into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is moderate, between 40 and 70 deg F, set joint members for 50 percent movement either way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F.
 2. Prepare joints and apply sealants to comply with requirements in Division 7 Section "Joint Sealants."

- I. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pretin edges of sheets to be soldered to a width of 1-1/2 inches except where pretinned surface would show in finished Work.
 1. Pretinning is not required for lead.
 2. Stainless-Steel Soldering: Pretin edges of uncoated sheets to be soldered using solder recommended for stainless steel and phosphoric acid flux. Promptly wash off acid flux residue from metal after soldering.
 3. Where surfaces to be soldered are lead coated, do not tin edges, but wire brush lead coating before soldering.
 4. Do not use open-flame torches for soldering. Heat surfaces to receive solder and flow solder into joints. Fill joints completely. Completely remove flux and spatter from exposed surfaces.

3.03 ROOF FLASHING INSTALLATION

- A. General: Install sheet metal roof flashing and trim to comply with performance requirements and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, set units true to line, and level as indicated. Install work with laps, joints, and seams that will be permanently watertight.
- B. Counterflashing: Coordinate installation of counterflashing with installation of base flashing. Insert counterflashing in reglets or receivers and fit tightly to base flashing. Extend counterflashing 4 inches over base flashing. Lap counterflashing joints a minimum of 4 inches and bed with elastomeric sealant.
 1. Secure in a waterproof manner by one of following means as indicated on Drawings:
 - a. Snap-in installation and sealant or lead wedges and sealant.
 - b. Interlocking folded seam or blind rivets and sealant.
 - c. Anchor and washer at 36-inch centers.
- C. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Install flashing as follows:
 1. Seal with elastomeric sealant and clamp flashing to pipes penetrating roof except for lead flashing on vent piping.

3.04 WALL FLASHING INSTALLATION

- A. General: Install sheet metal wall flashing to intercept and exclude penetrating moisture according to SMACNA recommendations and as indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.
- B. Reglets: Installation of reglets is specified in Division 03 precast concrete sections.

3.05 MISCELLANEOUS FLASHING INSTALLATION

- A. Equipment Support Flashing: Coordinate installation of equipment support flashing with installation of roofing and equipment.

3.06 CLEANING AND PROTECTION

- A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.
- B. Clean and neutralize flux materials. Clean off excess solder and sealants.
- C. Remove temporary protective coverings as sheet metal flashing and trim are installed. On completion of installation, clean finished surfaces, including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain in a clean condition during construction.
- D. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07 62 00

SECTION 07 72 33**ROOF HATCHES****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. This Section includes roof hatches with integral safety post.
- B. Related Sections include the following:
 - 1. Division 05 Section "Metal Fabrications" for ladders and miscellaneous metal framing and supports.
 - 2. Division 06 Section "Miscellaneous Rough Carpentry" for wood nailers.
 - 3. Division 07 low-slope roofing Sections for roofing accessories.
 - 4. Division 07 Section "Sheet Metal Flashing and Trim" for shop- and field-fabricated metal flashing and counterflashing and miscellaneous sheet metal trim and accessories.

1.03 SUBMITTALS

- A. Product Data: For each type of roof accessory indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

1.04 QUALITY ASSURANCE

- A. Standards: Comply with the following:
 - 1. SMACNA's "Architectural Sheet Metal Manual" details for fabrication of units, including flanges and cap flashing to coordinate with type of roofing indicated.
 - 2. NRCA's "Roofing and Waterproofing Manual" details for installing units.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Pack, handle, and ship roof accessories properly labeled in heavy-duty packaging to prevent damage.

1.06 PROJECT CONDITIONS

- A. Field Measurements: Verify required openings for each type of roof accessory by field measurements before fabrication and indicate measurements on Shop Drawings.

1.07 COORDINATION

- A. Coordinate layout and installation of roof accessories with roofing membrane and base flashing and interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.

PART 2 - PRODUCTS

2.01 METAL MATERIALS

- A. Galvanized Steel Sheet: ASTM A 653/A 653M, G90 coated and mill phosphatized for field painting.
- B. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, AZ50 coated.
- C. Steel Shapes: ASTM A 36/A 36M, hot-dip galvanized to comply with ASTM A 123/A 123M, unless otherwise indicated.
- D. Galvanized Steel Tube: ASTM A 500, round tube, hot-dip galvanized to comply with ASTM A 123/A 123M.
- E. Galvanized Steel Pipe: ASTM A 53/A 53M.

2.02 MISCELLANEOUS MATERIALS

- A. Glass-Fiber Board Insulation: ASTM C 726, 1 inch thick.
- B. Polyisocyanurate Board Insulation: ASTM C 1289, 1 inch thick.
- C. Felt: ASTM D 226, Type II (No. 30), asphalt-saturated organic felt, nonperforated.
 - 1. Slip Sheet: Rosin-sized paper, minimum 3 lb/100 sq. ft..
- D. Fasteners: Same metal as metals being fastened, or nonmagnetic stainless steel or other noncorrosive metal as recommended by roof accessory manufacturer. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners.
- E. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, or PVC; or flat design of foam rubber, sponge neoprene, or cork.

2.03 ROOF HATCHES

- A. Roof Hatches: Fabricate roof hatches with insulated double-wall lids and insulated single-wall curb frame with integral deck mounting flange and lid frame counterflashing. Fabricate with welded or mechanically fastened and sealed corner joints. Provide continuous weathertight perimeter gasketing and equip with corrosion-resistant or hot-dip galvanized hardware.
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Babcock-Davis; a Cierra Products Inc. Company.
 - b. Bilco Company (The).
 - c. Custom Curb, Inc.
 - d. Dur-Red Products.
 - e. J. L. Industries, Inc.
 - f. Nystrom, Inc.
 - g. Wasco Products, Inc.
 - 2. Loads: Fabricate roof hatches to withstand 40-lbf/sq. ft. external and 20-lbf/sq. ft. internal loads.
 - 3. Type and Size: Single-leaf lid, 36 x 78 inches unless indicated otherwise on Drawings.
 - 4. Curb Material: Galvanized or Aluminum-zinc alloy-coated steel sheet, 0.079 inch thick.

5. Lid Material: Aluminum sheet, 0.090 inch thick with mill finish.
6. Insulation: Glass-fiber or polyisocyanurate board.
7. Interior Lid Liner: Manufacturer's standard metal liner of same material and finish as outer metal lid.
8. Fabricate units to minimum height of 12 inches, unless otherwise indicated.
9. Hardware: Galvanized steel spring latch with turn handles, butt- or pintle-type hinge system, and padlock hasps inside and outside.
10. Ladder Safety Post: Manufacturer's standard ladder safety post. Post to lock in place on full extension. Provide release mechanism to return post to closed position.
 - a. Product: Subject to compliance with the requirements provide The Bilco Company; Model LU-1 or a comparable product by another available manufacturer.
 - b. Test Load: Single concentrated load of 200 pounds applied in any direction at any point at the top of post.
 - c. Height: 42 inches above finished roof deck.
 - d. Material and Finish: Steel tube, baked enameled.
 - e. Diameter: Pipe with 1-5/8-inch OD tube.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of work.
 1. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored and is ready to receive roof accessories.
 2. Verify dimensions of roof openings for roof accessories.
 3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. General: Install roof accessories according to manufacturer's written instructions. Anchor roof accessories securely in place and capable of resisting forces specified. Use fasteners, separators, sealants, and other miscellaneous items as required for completing roof accessory installation. Install roof accessories to resist exposure to weather without failing, rattling, leaking, and fastener disengagement.
- B. Install roof accessories to fit substrates and to result in watertight performance.
- C. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
 1. Underlayment: Where installing exposed-to-view components of roof accessories directly on cementitious, install a course of felt underlayment and cover with a slip sheet.
- D. Install roof accessories level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil canning, buckling, or tool marks.
- E. Roof Hatch Installation:

1. Check roof hatch for proper operation. Adjust operating mechanism as required. Clean and lubricate joints and hardware.
2. Attach ladder safety post according to manufacturer's written instructions.

3.03 TOUCH UP

- A. Touch up factory-primed surfaces with compatible primer ready for field painting in accordance with Division 09 painting Sections.

3.04 CLEANING

- A. Clean exposed surfaces according to manufacturer's written instructions.

END OF SECTION 07 72 33

SECTION 07 84 13**PENETRATION FIRESTOPPING****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. This Section includes the following:
 - 1. Through-penetration firestop systems for penetrations through the following fire-resistance-rated constructions, including both empty openings and openings containing penetrating items:
 - a. 1-hour rated concrete floors/ceiling and roof/ceiling decks.
 - b. 1 hour rated masonry partitions.
 - c. 1-hour rated gypsum board partitions.
 - d. 3-hour rated masonry partitions.
 - 2. Through-penetration firestop system schedule.
- B. Related Sections include the following:
 - 1. Division 07 Section "Fire-Resistive Joint Systems."
 - 2. Division 21 Sections specifying fire-suppression piping penetrations.
 - 3. Division 22 and 23 Sections specifying duct and piping penetrations.
 - 4. Division 26, 27, and 28 Sections specifying cable and conduit penetrations.

1.03 PERFORMANCE REQUIREMENTS

- A. General: For penetrations through the following fire-resistance-rated constructions, including both empty openings and openings containing penetrating items, provide through-penetration firestop systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated.
 - 1. Fire-resistance-rated walls including fire walls, fire partitions, fire barriers and smoke barriers.
- B. Rated Systems: Provide through-penetration firestop systems with the following ratings determined per ASTM E 814:
 - 1. F-Rated Systems: Provide through-penetration firestop systems with F-ratings indicated, but not less than that equaling or exceeding fire-resistance rating of constructions penetrated.
 - 2. T-Rated Systems: For the following conditions, provide through-penetration firestop systems with T-ratings indicated, as well as F-ratings, where systems protect penetrating items exposed to potential contact with adjacent materials in

occupiable floor areas:

- a. Penetrations located outside wall cavities.
 - b. Penetrations located outside fire-resistance-rated shaft enclosures.
- C. For through-penetration firestop systems exposed to view, traffic, moisture, and physical damage, provide products that, after curing, do not deteriorate when exposed to these conditions both during and after construction.
1. For piping penetrations for plumbing and wet-pipe sprinkler systems, provide moisture-resistant through-penetration firestop systems.
 2. For penetrations involving insulated piping, provide through-penetration firestop systems not requiring removal of insulation.
- D. For through-penetration firestop systems exposed to view, provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.

1.04 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. LEED Submittals:
1. Product Data for Credit IEQ 4.1: For penetration firestopping sealants and sealant primers, documentation including printed statement of VOC content.
- C. Product Schedule: For each penetration firestopping system. Include location and design designation of qualified testing and inspecting agency.
1. Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping condition, submit illustration, with modifications marked, approved by penetration firestopping manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.
- D. Qualification Data: For qualified Installer.
- E. Installer Certificates: From Installer indicating penetration firestopping has been installed in compliance with requirements and manufacturer's written recommendations.
- F. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for penetration firestopping.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: A firm experienced in installing through-penetration firestop systems similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful performance. Qualifications include having the necessary experience, staff, and training to install manufacturer's products per specified requirements. Manufacturer's willingness to sell its through-penetration firestop system products to Contractor or to Installer engaged by Contractor does not in itself confer qualification on buyer.

- B. Installation Responsibility: Assign installation of through-penetration firestop systems in Project to a single qualified installer.
- C. Source Limitations: Obtain through-penetration firestop systems, for each kind of penetration and construction condition indicated, through one source from a single manufacturer.
- D. Fire-Test-Response Characteristics: Provide through-penetration firestop systems that comply with the following requirements and those specified in Part 1 "Performance Requirements" Article:
 - 1. Firestopping tests are performed by a qualified testing and inspecting agency. A qualified testing and inspecting agency is UL or another agency performing testing and follow-up inspection services for firestop systems acceptable to authorities having jurisdiction.
 - 2. Through-penetration firestop systems are identical to those tested per testing standard referenced in "Part 1 Performance Requirements" Article. Provide rated systems complying with the following requirements:
 - a. Through-penetration firestop system products bear classification marking of qualified testing and inspecting agency.
 - b. Through-penetration firestop systems correspond to those indicated by reference to through-penetration firestop system designations listed by the following:
 - 1) UL in its "Fire Resistance Directory."
- E. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination."

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Deliver through-penetration firestop system products to Project site in original, unopened containers or packages with intact and legible manufacturers' labels identifying product and manufacturer, date of manufacture, lot number, shelf life if applicable, qualified testing and inspecting agency's classification marking applicable to Project, curing time, and mixing instructions for multicomponent materials.
- B. Store and handle materials for through-penetration firestop systems to prevent their deterioration or damage due to moisture, temperature changes, contaminants, or other causes.

1.07 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install through-penetration firestop systems when ambient or substrate temperatures are outside limits permitted by through-penetration firestop system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.
- B. Ventilate through-penetration firestop systems per manufacturer's written instructions by natural means or, where this is inadequate, forced-air circulation.

1.08 COORDINATION

- A. Coordinate construction of openings and penetrating items to ensure that through-penetration firestop systems are installed according to specified requirements.
- B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate through-penetration firestop systems.
- C. Notify Authority's inspecting agency at least seven days in advance of through-penetration firestop system installations; confirm dates and times on days preceding each series of installations.
- D. Do not cover up through-penetration firestop system installations that will become concealed behind other construction until each installation has been examined by Authority's inspecting agency and building inspector, if required by authorities having jurisdiction.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Available Products: Subject to compliance with requirements, through-penetration firestop systems that may be incorporated into the Work include, but are not limited to, those systems indicated in the Through-Penetration Firestop System Schedule at the end of Part 3 that are produced by one of the following manufacturers:
 - 1. Hilti Construction Chemicals, Inc. (Hilti)
 - 2. Nelson Firestop Products (Nelson).
 - 3. Specified Technologies Inc. (STI).
 - 4. 3M; Fire Protection Products Division (3M).

2.02 FIRESTOPPING, GENERAL

- A. Provide penetration firestopping that is produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated. Penetration firestopping systems shall be compatible with one another, with the substrates forming openings, and with penetrating items if any.
- B. Accessories: Provide components for each through-penetration firestop system that are needed to install fill materials and to comply with Part 1 "Performance Requirements" Article. Use only components specified by through-penetration firestop system manufacturer and approved by qualified testing and inspecting agency for firestop systems indicated. Accessories include, but are not limited to, the following items:
 - 1. Permanent forming/damming/backing materials, including the following:
 - a. Slag-/rock-wool-fiber insulation.
 - b. Sealants used in combination with other forming/damming/backing materials to prevent leakage of fill materials in liquid state.
 - c. Fire-rated form board.
 - d. Fillers for sealants.

2. Temporary forming materials.
 3. Substrate primers.
 4. Collars.
 5. Steel sleeves.
- C. VOC Content: Penetration firestopping sealants and sealant primers shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
1. Sealants: 250 g/L.
 2. Sealant Primers for Nonporous Substrates: 250 g/L.
 3. Sealant Primers for Porous Substrates: 775 g/L.

2.03 FILL MATERIALS

- A. General: Provide through-penetration firestop systems containing the types of fill materials indicated in the Through-Penetration Firestop System Schedule at the end of Part 3 by referencing the types of materials described in this Article. Fill materials are those referred to in directories of referenced testing and inspecting agencies as "fill," "void," or "cavity" materials.
- B. Latex Sealants: Single-component latex formulations that after cure do not re-emulsify during exposure to moisture.
- C. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.
- D. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced elastomeric sheet bonded to galvanized steel sheet.
- E. Intumescent Putties: Nonhardening dielectric, water-resistant putties containing no solvents, inorganic fibers, or silicone compounds.
- F. Intumescent Wrap Strips: Single-component intumescent elastomeric sheets with aluminum foil on one side.
- G. Mortars: Prepackaged dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogeneous mortar.
- H. Pillows/Bags: Reusable heat-expanding pillows/bags consisting of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents, and fire-retardant additives.
- I. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.
- J. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below:
 1. Grade: nonsag formulation for openings in vertical and other surfaces requiring a nonslumping, gunnable sealant.

2.04 MIXING

- A. For those products requiring mixing before application, comply with through-penetration firestop system manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Surface Cleaning: Clean out openings immediately before installing through-penetration firestop systems to comply with firestop system manufacturer's written instructions and with the following requirements:
 - 1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of through-penetration firestop systems.
 - 2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with through-penetration firestop systems. Remove loose particles remaining from cleaning operation.
 - 3. Remove laitance and form-release agents from concrete.
- B. Priming: Prime substrates where recommended in writing by through-penetration firestop system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.
- C. Masking Tape: Use masking tape to prevent through-penetration firestop systems from contacting adjoining surfaces that will remain exposed on completion of Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove smears from firestop system materials. Remove tape as soon as possible without disturbing firestop system's seal with substrates.

3.03 THROUGH-PENETRATION FIRESTOP SYSTEM INSTALLATION

- A. General: Install through-penetration firestop systems to comply with Part 1 "Performance Requirements" Article and with firestop system manufacturer's written installation instructions and published drawings for products and applications indicated.

- B. Install forming/damming/backing materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
 - 1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of firestop systems.
- C. Install fill materials for firestop systems by proven techniques to produce the following results:
 - 1. Fill voids and cavities formed by openings, forming materials, accessories, and penetrating items as required to achieve fire-resistance ratings indicated.
 - 2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
 - 3. For fill materials that will remain exposed after completing Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.04 IDENTIFICATION

- A. Identify through-penetration firestop systems with preprinted metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches of edge of the firestop systems so that labels will be visible to anyone seeking to remove penetrating items or firestop systems. Use mechanical fasteners for metal labels. For plastic labels, use self-adhering type with adhesives capable of permanently bonding labels to surfaces on which labels are placed and, in combination with label material, will result in partial destruction of label if removal is attempted. Include the following information on labels:
 - 1. The words "Warning - Through-Penetration Firestop System - Do Not Disturb. Notify Building Management of Any Damage."
 - 2. Contractor's name, address, and phone number.
 - 3. Through-penetration firestop system designation of applicable testing and inspecting agency.
 - 4. Date of installation.
 - 5. Through-penetration firestop system manufacturer's name.
 - 6. Installer's name.

3.05 FIELD QUALITY CONTROL

- A. Inspecting Agency: Authority will engage a qualified, independent inspecting agency to inspect through-penetration firestops. Independent inspecting agency shall comply with ASTM E 2174 requirements including those related to qualifications, conducting inspections, and preparing test reports.
- B. Where deficiencies are found, repair or replace through-penetration firestop systems so they comply with requirements.
- C. Proceed with enclosing through-penetration firestop systems with other construction only after inspection reports are issued and firestop installations comply with requirements.

3.06 CLEANING AND PROTECTING

- A. Clean off excess fill materials adjacent to openings as Work progresses by methods and with cleaning materials that are approved in writing by through-penetration firestop system manufacturers and that do not damage materials in which openings occur.
- B. Provide final protection and maintain conditions during and after installation that ensure that through-penetration firestop systems are without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated through-penetration firestop systems immediately and install new materials to produce systems complying with specified requirements.
- C. Construction Waste Management and Disposal: Comply with Waste Management Plan required under Division 01 Section "Construction Waste Management And Disposal."

3.07 THROUGH-PENETRATION FIRESTOP SYSTEM SCHEDULE

- A. Where UL-classified systems are indicated, they refer to alpha-alpha-numeric designations listed in UL's "Fire Resistance Directory" under product Category XHEZ.
- B. General:
 - 1. N/A* indicates that no UL-Classified system is available for manufacturer indicated. Manufacturer may provide engineer judgment drawing acceptable to Authorities having jurisdiction.
 - 2. Jobsite conditions of each through-penetration firestop system shall meet all details of the UL-Classified System selected.
 - 3. If jobsite conditions do not match any UL-classified systems scheduled below then contact firestop manufacturer for alternative systems or engineer judgment drawings.
 - 4. Where more than one applicable UL-Classified System is listed in the schedules, choose the UL System which is most economical for each through-penetration firestop system.
 - 5. Coordinate work with other trades to assure that penetration opening sizes are appropriate for penetrant locations, and vice versa.
- C. Concrete Walls:

END OF SECTION 07 84 13

SECTION 07 84 46**FIRE-RESISTIVE JOINT SYSTEMS FOR WALLS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section Includes joints in or between fire-resistance-rated constructions and fire-resistive joint system schedule.
- B. Related Sections:
 - 1. Division 07 Section "Penetration Firestopping" for penetrations in fire-resistance-rated walls, horizontal assemblies, and smoke barriers.

1.03 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.1: For fire-resistive joint system sealants, documentation including printed statement of VOC content.
- C. Product Schedule: For each fire-resistive joint system. Include location and design designation of qualified testing agency.
- D. Where Project conditions require modification to a qualified testing agency's illustration for a particular fire-resistive joint system condition, submit illustration, with modifications marked, approved by fire-resistive joint system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Installer Certificates: From Installer indicating fire-resistive joint systems have been installed in compliance with requirements and manufacturer's written recommendations.
- C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for fire-resistive joint systems.

1.05 QUALITY ASSURANCE

- A. **Installer Qualifications:** A firm experienced in installing fire-resistive joint systems similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful performance. Qualifications include having the necessary experience, staff, and training to install manufacturer's products per specified requirements. Manufacturer's willingness to sell its fire-resistive joint system products to Contractor or to Installer engaged by Contractor does not in itself confer qualification on buyer.
- B. **Fire-Test-Response Characteristics:** Fire-resistive joint systems shall comply with the following requirements:
 - 1. Fire-resistive joint system tests are performed by a qualified testing agency acceptable to authorities having jurisdiction.
 - 2. Fire-resistive joint systems are identical to those tested per testing standard referenced in "Fire-Resistive Joint Systems" Article. Provide rated systems complying with the following requirements:
 - a. Fire-resistive joint system products bear classification marking of qualified testing agency.
 - b. Fire-resistive joint systems correspond to those indicated by reference to designations listed by UL in its "Fire Resistance Directory."
- C. **Preinstallation Conference:** Conduct conference at Project site.

1.06 PROJECT CONDITIONS

- A. **Environmental Limitations:** Do not install fire-resistive joint systems when ambient or substrate temperatures are outside limits permitted by fire-resistive joint system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.
- B. Install and cure fire-resistive joint systems per manufacturer's written instructions using natural means of ventilation or, where this is inadequate, forced-air circulation.

1.07 COORDINATION

- A. Coordinate construction of joints to ensure that fire-resistive joint systems are installed according to specified requirements.
- B. Coordinate sizing of joints to accommodate fire-resistive joint systems.

PART 2 - PRODUCTS

2.01 FIRE-RESISTIVE JOINT SYSTEMS

- A. Where required, provide fire-resistive joint systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of assemblies in or between which fire-resistive joint systems are installed. Fire-resistive joint systems shall accommodate building movements without impairing their ability to resist the passage of fire and hot gases.
- B. **Joints in or between Fire-Resistance-Rated Construction:** Provide fire-resistive joint systems with ratings determined per ASTM E 1966 or UL 2079:

1. Joints include those installed in or between fire-resistance-rated walls, floor or floor/ceiling assemblies, and roofs or roof/ceiling assemblies.
 2. Fire-Resistance Rating: Equal to or exceeding the fire-resistance rating of construction they will join.
 3. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide Hilti, Inc., UL-Classified Systems indicated in Part 3 Article "Fire-Resistive Joint System Schedule" or comparable systems by one of the following:
 - a. Nelson Firestop Products.
 - b. Specified Technologies Inc.
 - c. 3M Fire Protection Products.
- C. Exposed Fire-Resistive Joint Systems: Provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.
- D. VOC Content: Provide fire-resistive joint systems that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
1. Architectural Sealants: 250 g/L.
 2. Sealant Primers for Nonporous Substrates: 250 g/L.
 3. Sealant Primers for Porous Substrates: 775 g/L.
- E. Accessories: Provide components of fire-resistive joint systems, including primers and forming materials, that are needed to install fill materials and to maintain ratings required. Use only components specified by fire-resistive joint system manufacturer and approved by the qualified testing agency for systems indicated.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for joint configurations, substrates, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Surface Cleaning: Clean joints immediately before installing fire-resistive joint systems to comply with fire-resistive joint system manufacturer's written instructions and the following requirements:
 1. Remove from surfaces of joint substrates foreign materials that could interfere with adhesion of fill materials.
 2. Clean joint substrates to produce clean, sound surfaces capable of developing optimum bond with fill materials. Remove loose particles remaining from cleaning operation.
 3. Remove laitance and form-release agents from concrete.
- B. Masking Tape: Use masking tape to prevent fill materials of fire-resistive joint system from contacting adjoining surfaces that will remain exposed on completion of the Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove stains. Remove tape as soon as possible without disturbing fire-resistive joint system's seal with substrates.

3.03 INSTALLATION

- A. General: Install fire-resistive joint systems to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.
- B. Install forming materials and other accessories of types required to support fill materials during their application and in position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
 - 1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of fire-resistive joint system.
- C. Install fill materials for fire-resistive joint systems by proven techniques to produce the following results:
 - 1. Fill voids and cavities formed by joints and forming materials as required to achieve fire-resistance ratings indicated.
 - 2. Apply fill materials so they contact and adhere to substrates formed by joints.
 - 3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.04 CLEANING AND PROTECTING

- A. Clean off excess fill materials adjacent to joints as the Work progresses by methods and with cleaning materials that are approved in writing by fire-resistive joint system manufacturers and that do not damage materials in which joints occur.
- B. Provide final protection and maintain conditions during and after installation that ensure fire-resistive joint systems are without damage or deterioration at time of Substantial Completion. If damage or deterioration occurs despite such protection, cut out and remove damaged or deteriorated fire-resistive joint systems immediately and install new materials to produce fire-resistive joint systems complying with specified requirements.
- C. Construction Waste Management and Disposal:
 - 1. Comply with Waste Management Plan required under Division 01 Section "Construction Waste Management And Disposal."

3.05 FIRE-RESISTIVE JOINT SYSTEM SCHEDULE

- A. Where UL-classified systems are indicated, they refer to system numbers in UL's "Fire Resistance Directory" under product Category XHBN.

- B. Wall-to-Wall, Fire-Resistive Joint Systems: UL-Classified WW-D Systems including the following:

Basis-of-Design UL System No.	Applications	Max. Fire Rating (Hour)	Max. Joint Width (inch)	Class	Compression %	Extension %
WW-D-0064	Cast-in-place concrete or concrete masonry units to cast-in-place concrete or concrete masonry units	3	2	II	6	6

- C. Head-of-Wall, Fire-Resistive Joint Systems: UL-Classified HW-D Systems including the following:

Basis-of-Design UL System No.	Applications	Max. Fire Rating (Hour)	Max. Joint Width (inch)	Class	Compression %	Extension %
HW-D-0042	Gypsum board wall perpendicular to flutes of concrete filled metal deck	2	1	II	50	50
HW-D-0049	Gypsum board wall parallel to flutes of concrete filled metal deck	2	1	II	50	50
HW-D-2018	Gypsum board wall at beam or joist supporting concrete filled metal deck	2	1	II	25	25
HW-D-0259	Gypsum board wall at centerline of beam supporting concrete filled metal deck	2	1	II	25	25

END OF SECTION 07 84 46

SECTION 07 92 00**JOINT SEALANTS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY**A. Section Includes:**

1. Joints sealed with following materials:
 - a. Silicone joint sealants.
 - b. Urethane joint sealants.
 - c. Latex joint sealants.
 - d. Solvent-release-curing joint sealants.
2. Sealant selection tables for following applications:
 - a. Table 1: Exterior joints in vertical surfaces and horizontal nontraffic surfaces (not subject to water immersion) (including ceilings and soffits).
 - b. Table 3: Interior joints in vertical surfaces and horizontal nontraffic surfaces (including ceilings).
 - c. Table 4: Interior joints in horizontal traffic surfaces.
 - d. Table 5 Mildew-resistant interior joints in vertical surfaces and horizontal nontraffic surfaces (including ceilings). Locations include rooms containing sinks, showers, toilets, urinals, and similar plumbing fixtures.

B. Related Sections:

1. Section 03 15 23 "Expansion Joint Seals in Concrete" for expansion joints in cast-in-place or precast concrete.
2. Section 04 20 00 "Unit Masonry" for masonry control and expansion joint fillers and gaskets.
3. Section 07 95 00 "Expansion Control" for building expansion joints.
4. Section 07 84 46 "Fire-Resistive Joint Systems" for sealing joints in fire-resistance-rated construction.
5. Section 08 80 00 "Glazing" for glazing sealants.
6. Section 09 29 00 "Gypsum Board" for sealing perimeter joints.
7. Section 09 30 00 "Tiling" for sealing tile joints.
8. Section 32 13 73 "Concrete Paving Joint Sealants" for sealing joints in pavements, walkways, and curbing.

C. Sealant Selection Tables:

1. Table 1: Exterior Joints in Vertical Surfaces and Horizontal Nontraffic Surfaces (Not Subject to Water Immersion) (Including Ceilings and Soffits):

Surface Material	Joint Type	Sealant Type	
Between concrete or unit masonry and perimeter of frames of doors, windows and louvers.	Perimeter joints (not expansion joint).	JS-01, JS-02, JS-03, JS-07	Non-staining type where indicated above.
	Expansion joints.	JS-01	
Other joints as indicated on Drawings.			

D. Table 2: Interior Joints in Vertical Surfaces and Horizontal Nontraffic Surfaces (Including Ceilings):

Material	Joint Type	Sealant Type
Exposed interior surfaces of exterior walls.	Control joints.	JS-50, JS-60
	Expansion joints	See Section 07 95 00 "EXPANSION CONTROL"
Perimeter joints of exterior openings where indicated.	Perimeter joints (not expansion joint).	JS-50, JS-60
	Expansion joints.	See Section 07 95 00 "EXPANSION CONTROL"
Ceramic tile	Control joints.	See Section 09 30 00 "TILING"
	Expansion joints.	See Section 07 95 00 "EXPANSION CONTROL"
Exposed surfaces of interior unit masonry partitions.	Vertical control joints.	JS-50, JS-60
	Vertical expansion joints.	See Section 07 95 00 "EXPANSION CONTROL"
Between interior wall surfaces and frames of interior doors windows and elevator entrances.	Perimeter joints (not expansion joint).	JS-50, JS-60
	Expansion joints.	See Section 07 95 00 "EXPANSION CONTROL"

E. Table 3: Interior Joints in Horizontal Traffic Surfaces:

Material	Joint Type	Sealant Type
----------	------------	--------------

Material	Joint Type	Sealant Type
Cast-in-place concrete slabs.	Control joints.	See Section 03 30 00 "CAST-IN-PLACE CONCRETE" for semirigid joint filler.
	Isolation joints.	JS-05, JS-06, JS-08
Ceramic tile flooring.	Control joints.	JS-05, JS-06, JS-08, JS-23, JS-24, JS-27, JS-28
	Expansion joints.	See Section 07 95 00 "EXPANSION CONTROL"

F. Table 4: Mildew-Resistant Interior Joints in Vertical Surfaces and Horizontal Nontraffic Surfaces (Including Ceilings). Locations include rooms containing sinks, showers, toilets, urinals, and similar plumbing fixtures:

Material	Joint Type	Sealant Type
Plumbing fixtures and adjoining walls, floors, and counters.	Joints between fixture and adjacent surface.	JS-09, JS-10
Ceramic tile.	Control joints.	JS-09, JS-10
	Joints at inside corners, vertical and horizontal.	JS-09, JS-10
	Expansion joints.	See Section 07 95 00 "EXPANSION CONTROL"

1.03 REFERENCES

A. Definitions:

1. Isolation Joints: Junctions of horizontal surfaces with vertical surfaces where each surface is not structurally connected and is allowed to move independently.
 - a. Horizontal surfaces include the following:
 - 1) Concrete slabs-on-grade.
 - b. Vertical surfaces include the following:
 - 1) Foundation walls.
 - 2) Exterior walls, including those with veneers.

- 3) Storefronts.
 - 4) Curtainwalls.
2. Reference Standards:
- a. ASTM C834-10 Standard Specification for Latex Sealants.
 - b. ASTM C920-11 Standard Specification for Elastomeric Joint Sealants.
 - c. ASTM C1021-08 Standard Practice for Laboratories Engaged in Testing of Building Sealants.
 - d. ASTM C1087-00(2011) Standard Test Method for Determining Compatibility of Liquid-Applied Sealants with Accessories Used in Structural Glazing Systems.
 - e. ASTM C1193-11a Standard Guide for Use of Joint Sealants.
 - f. ASTM C1247-09 Standard Test Method for Durability of Sealants Exposed to Continuous Immersion in Liquids.
 - g. ASTM C1248-08 Standard Test Method for Staining of Porous Substrate by Joint Sealants.
 - h. ASTM C1311-10 Standard Specification for Solvent Release Sealants.
 - i. ASTM C1330-02(2007) Standard Specification for Cylindrical Sealant Backing for Use with Cold Liquid Applied Sealants.
 - j. ASTM C1521-09e1 Standard Practice for Evaluating Adhesion of Installed Weatherproofing Sealant.

1.04 PRECONSTRUCTION TESTING

- A. Preconstruction Field-Adhesion Testing: Before installing sealants, field test their adhesion to Project joint substrates as follows:
1. Locate test joints where indicated on Project or, if not indicated, as directed by Authority.
 2. Conduct field tests for each application indicated below:
 - a. Each kind of sealant and joint substrate indicated.
 3. Notify Authority seven days in advance of dates and times when test joints will be erected.
 4. Arrange for tests to take place with joint-sealant manufacturer's technical representative present.
 - a. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193 or Method A, Tail Procedure, in ASTM C 1521.
 - 1) For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
 5. Report whether sealant failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. For sealants that fail adhesively, retest until satisfactory adhesion is obtained.
 6. Evaluation of Preconstruction Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

1.05 ACTION SUBMITTALS

- A. Product Data: For each joint-sealant product indicated.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.1: For sealants and sealant primers used inside the weatherproofing system, documentation including printed statement of VOC content.
- C. Samples for Initial Selection: Manufacturer's color charts consisting of strips of cured sealants showing the full range of colors available for each product exposed to view.
- D. Samples for Verification: For each kind and color of joint sealant required, provide Samples with joint sealants in 1/2-inch- wide joints formed between two 6-inch- long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

1.06 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that sealants comply with requirements.
- C. Field-Adhesion Test Reports: For each sealant application tested.
- D. Warranties: Sample of special warranties.

1.07 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
- B. Source Limitations: Obtain each kind of joint sealant from single source from single manufacturer.
- C. Mockups: Install sealant in mockups of assemblies specified in other Sections that are indicated to receive joint sealants specified in this Section. Use materials and installation methods specified in this Section.
- D. Preinstallation Conference: Conduct conference at Project site.

1.08 PROJECT CONDITIONS

- A. Do not proceed with installation of joint sealants under the following conditions:
 - 1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F.
 - 2. When joint substrates are wet.
 - 3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
 - 4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.09 WARRANTY

- A. Special Installer's Warranty: Manufacturer's standard form in which Installer agrees to repair or replace joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
1. Warranty Period:
 - a. Sealants Exposed to Exterior: Two years from date of Substantial Completion.
 - b. Sealants Exposed to Interior: One year from date of Substantial Completion.
- B. Special Manufacturer's Warranty: Manufacturer's standard form in which joint-sealant manufacturer agrees to furnish joint sealants to repair or replace those that do not comply with performance and other requirements specified in this Section within specified warranty period.
1. Warranty Period:
 - a. Silicone Joint Sealants: 20 years from date of Substantial Completion.
 - b. Urethane Joint Sealants: 5 years from date of Substantial Completion.
- C. Special warranties specified in this article exclude deterioration or failure of joint sealants from the following:
1. Movement of the structure caused by structural settlement or errors attributable to design or construction resulting in stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression.
 2. Disintegration of joint substrates from natural causes exceeding design specifications.
 3. Mechanical damage caused by individuals, tools, or other outside agents.
 4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

PART 2 - PRODUCTS

2.01 MATERIALS, GENERAL

- A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.
- B. VOC Content of Interior Sealants: Sealants and sealant primers used inside the weatherproofing system shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
1. Architectural Sealants: 250 g/L.
 2. Sealant Primers for Nonporous Substrates: 250 g/L.
 3. Sealant Primers for Porous Substrates: 775 g/L.
- C. Liquid-Applied Joint Sealants: Comply with ASTM C 920 and other requirements indicated for each liquid-applied joint sealant specified, including those referencing ASTM C 920 classifications for type, grade, class, and uses related to exposure and joint substrates.

- D. Stain-Test-Response Characteristics: Where sealants are specified to be nonstaining to porous substrates, provide products that have undergone testing according to ASTM C 1248 and have not stained porous joint substrates indicated for Project.
- E. Colors of Exposed Joint Sealants: As selected by Authority from manufacturer's full range of colors, except match color of substrate being sealed for the following:
 - 1. Concrete.
 - 2. Masonry mortar for CMU.
 - 3. Prefinished metal.

2.02 SILICONE JOINT SEALANTS

- A. JS-01 - Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 100/50, for Use NT.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; 790 or NS Parking Structure Sealant.
 - b. GE Advanced Materials - Silicones; SilPruf LM SCS2700.
 - c. May National Associates, Inc.; Bondaflex Sil 290 or Bondaflex Sil 728 NS.
 - d. Pecora Corporation; 301 NS, 311 NS, 890, or 890FTS.
 - e. Sika Corporation, Construction Products Division; SikaSil-C990.
 - f. Tremco Incorporated; Spectrem 1 or Spectrem 800.
- B. JS-02 - Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 50, for Use NT.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Omniseal 50.
 - b. Dow Corning Corporation; 756 SMS, 791, 795, or 995.
 - c. GE Advanced Materials - Silicones; SilGlaze II SCS2800, SilPruf NB SCS9000, SilPruf SCS2000, or UltraPruf II SCS2900.
 - d. May National Associates, Inc.; Bondaflex Sil 295.
 - e. Pecora Corporation; 864, 895, or 898.
 - f. Polymeric Systems, Inc.; PSI-641.
 - g. Sika Corporation, Construction Products Division; SikaSil-C995.
 - h. Tremco Incorporated; Spectrem 2 or Spectrem 3.
- C. JS-03 - Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; 799.
 - b. GE Advanced Materials - Silicones; UltraGlaze SSG4000 or UltraGlaze SSG4000AC.
 - c. May National Associates, Inc.; Bondaflex Sil 200 GPN or Bondaflex Sil 201 FC.
 - d. Polymeric Systems, Inc.; PSI-631.
 - e. Schnee-Morehead, Inc.; SM5731 Poly-Glaze Plus.
 - f. Tremco Incorporated; Proglaze SSG or Tremsil 600.
- D. JS-04 - Single-Component, Nonsag, Acid-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Bostik, Inc.; Chem-Calk 1200.
 - b. Dow Corning Corporation; 999-A.
 - c. GE Advanced Materials - Silicones; Contractors SCS1000 or Construction SCS1200.
 - d. May National Associates, Inc.; Sil 100 GC, Sil 100 GP or Sil 100 WF.
 - e. Pecora Corporation; 860.
 - f. Polymeric Systems, Inc.; PSI-601.
 - g. Schnee-Morehead, Inc.; SM5732 Polyglaze.
 - h. Tremco Incorporated; Proglaze or Tremsil 200.

- E. JS-05 - Single-Component, Nonsag, Traffic-Grade, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 100/50, for Use T.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; 790 or NS Parking Structure Sealant.
 - b. May National Associates, Inc.; Bondaflex Sil 728 NS.
 - c. Pecora Corporation; 301 NS or 311 NS.
 - d. Tremco Incorporated; Spectrem 800.

- F. JS-06 - Single-Component, Pourable, Traffic-Grade, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade P, Class 100/50, for Use T.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; 890-SL or SL Parking Structure Sealant.
 - b. May National Associates, Inc.; Bondaflex Sil 728 SG or Sil 728 SL.
 - c. Pecora Corporation; 300 SL or 310 SL.
 - d. Tremco Incorporated; Spectrem 900 SL.

- G. JS-07 - Multicomponent, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type M, Grade NS, Class 50, for Use NT.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Tremco Incorporated; Spectrem 4TS.

- H. JS-08 - Multicomponent, Pourable, Traffic-Grade, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type M, Grade P, Class 100/50, for Use T.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; FC Parking Structure Sealant.
 - b. May National Associates, Inc.; Bondaflex Sil 728 RCS.

- I. JS-09 - Mildew-Resistant, Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Pecora Corporation; 898.

- J. JS-10 - Mildew-Resistant, Single-Component, Acid-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Omniplus.
 - b. Dow Corning Corporation; 786 Mildew Resistant.
 - c. GE Advanced Materials - Silicones; Sanitary SCS1700.
 - d. May National Associates, Inc.; Bondaflex Sil 100 WF.
 - e. Tremco Incorporated; Tremsil 200 Sanitary.

2.03 URETHANE JOINT SEALANTS

- A. JS-20 - Single-Component, Nonsag, Urethane Joint Sealant: ASTM C 920, Type S, Grade NS, Class 100/50, for Use NT.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Sika Corporation, Construction Products Division; Sikaflex - 15LM.
 - b. Tremco Incorporated; Vulkem 921, or Dymonic FC.
- B. JS-21 - Single-Component, Nonsag, Urethane Joint Sealant: ASTM C 920, Type S, Grade NS, Class 50, for Use NT.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Pacific Polymers International, Inc.; Elasto-Thane 230 LM Type II.
 - b. Polymeric Systems, Inc.; PSI-901.
- C. JS-22 - Single-Component, Nonsag, Urethane Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Sonolastic NP1, Sonolastic TX1, or Sonolastic Ultra.
 - b. Bostik, Inc.; Chem-Calk 900, 915, or 916 Textured.
 - c. May National Associates, Inc.; Bondaflex PUR 25, Bondaflex PUR 25 Textured, or Bondaflex PUR 40 FC.
 - d. Pacific Polymers International, Inc.; Elasto-Thane 230 Type II.
 - e. Pecora Corporation; Dynatrol I-XL.
 - f. Polymeric Systems, Inc.; Flexiprene 1000.
 - g. Schnee-Morehead, Inc.; Permathane SM7100, Permathane SM7108, or Permathane SM7110.
 - h. Sika Corporation, Construction Products Division; Sikaflex - 1a.
 - i. Tremco Incorporated; Dymonic or Vulkem 116.
- D. JS-23 - Single-Component, Nonsag, Traffic-Grade, Urethane Joint Sealant: ASTM C 920. Type S, Grade NS, Class 25, for Use T.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Sonolastic NP1 or Sonolastic Ultra.
 - b. May National Associates, Inc.; Bondaflex PUR 40 FC.
 - c. Pacific Polymers International, Inc.; Elasto-Thane 230 Type II.
 - d. Sika Corporation, Construction Products Division; Sikaflex - 1a.
 - e. Tremco Incorporated; Vulkem 116.
- E. JS-24 - Single-Component, Pourable, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type S, Grade P, Class 25, for Use T.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Sonolastic SL 1.
 - b. Bostik, Inc.; Chem-Calk 950.
 - c. May National Associates, Inc.; Bondaflex PUR 35 SL.
 - d. Pecora Corporation; Urexpan NR-201.
 - e. Polymeric Systems, Inc.; Flexiprene 952.
 - f. Schnee-Morehead, Inc.; Permathane SM7101.
 - g. Sika Corporation. Construction Products Division; Sikaflex - 1CSL.
 - h. Tremco Incorporated; Vulkem 45.

- F. JS-25 - Multicomponent, Nonsag, Urethane Joint Sealant: ASTM C 920, Type M, Grade NS, Class 50, for Use NT.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Pecora Corporation; Dynatrol II.
 - b. Polymeric Systems, Inc.; PSI-270.
 - c. Tremco Incorporated; Dymeric 240, or Dymeric 240 FC.

- G. JS-26 - Multicomponent, Nonsag, Urethane Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Use NT.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Sonolastic NP 2.
 - b. Bostik, Inc.; Chem-Calk 500.
 - c. May National Associates, Inc.; Bondaflex PUR 2 NS.
 - d. Pacific Polymers International, Inc.; Elasto-Thane 227 High Shore Type II, Elasto-Thane 227 R Type II, or Elasto-Thane 227 Type II.
 - e. Pecora Corporation; Dynatred.
 - f. Sika Corporation, Construction Products Division; Sikaflex - 2c NS or Sikaflex - 2c EZ Mix.
 - g. Tremco Incorporated; Vulkem 227.

- H. JS-27 - Multicomponent, Nonsag, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type M, Grade NS, Class 50, for Use T.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Polymeric Systems, Inc.; PSI-270.
 - b. Tremco Incorporated; Dymeric 240 FC.

- I. JS-28 - Multicomponent, Nonsag, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Use T.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Sonolastic NP 2.
 - b. LymTal International, Inc.; Iso-Flex 885 SG.
 - c. May National Associates, Inc.; Bondaflex PUR 2 NS.
 - d. Pacific Polymers International, Inc.; Elasto-Thane 227 High Shore Type II, or Elasto-Thane 227 Type II.
 - e. Pecora Corporation; Dynatred.
 - f. Sika Corporation, Construction Products Division; Sikaflex - 2c NS or Sikaflex - 2c EZ Mix.

- g. Tremco Incorporated; Vulkem 227.

2.04 LATEX JOINT SEALANTS

- A. JS-50 - Latex Joint Sealant: Acrylic latex or siliconized acrylic latex, ASTM C 834, Type OP, Grade NF.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Sonolac.
 - b. Bostik, Inc.; Chem-Calk 600.
 - c. May National Associates, Inc.; Bondaflex 600 or Bondaflex Sil-A 700.
 - d. Pecora Corporation; AC-20+.
 - e. Schnee-Morehead, Inc.; SM 8200.
 - f. Tremco Incorporated; Tremflex 834.

2.05 SOLVENT-RELEASE-CURING JOINT SEALANTS

- A. JS-60 - Acrylic-Based Joint Sealant: ASTM C 1311.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Schnee-Morehead, Inc.; Acryl-R Acrylic Sealant.
 - b. Tremco Incorporated; Mono 555.
- B. JS-61 - Butyl-Rubber-Based Joint Sealant: ASTM C 1311.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Bostik, Inc.; Chem-Calk 300.
 - b. Pecora Corporation; BC-158.
 - c. Tremco Incorporated; Tremco Butyl Sealant.

2.06 JOINT SEALANT BACKING

- A. General: Provide sealant backings of material that are nonstaining; are compatible with joint substrates, sealants, primers, and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.
- B. Cylindrical Sealant Backings: ASTM C 1330, Type indicated below, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance. Type indicated below except where approved otherwise in writing by joint-sealant manufacturer for joint application indicated:

Location	Exposure	Position	Type
Exterior	Wet	Vertical	C (closed-cell material with a surface skin) B (bicellular material with a surface skin)
		Horizontal	C (closed-cell material with a surface skin) B (bicellular material with a surface skin)
	Dry	Vertical	B (bicellular material with a surface skin)
		Horizontal	B (bicellular material with a surface skin)
Interior	Wet	Vertical	C (closed-cell material with a surface skin) B (bicellular material with a surface skin)
		Horizontal	C (closed-cell material with a surface skin) B (bicellular material with a surface skin)
	Dry	Vertical	O (open-cell material)

Location	Exposure	Position	Type
			B (bicellular material with a surface skin)
		Horizontal	B (bicellular material with a surface skin)

- C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

2.07 MISCELLANEOUS MATERIALS

- A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.
- B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.
- C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:
1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
 2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:
 - a. Concrete.
 - b. Masonry including brick, CMU, and stone.
 - c. Unglazed surfaces of ceramic tile.
 3. Remove laitance and form-release agents from concrete.
 4. Clean nonporous joint substrate surfaces with chemical cleaners or other means

that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following:

- a. Metal.
 - b. Glass.
 - c. Porcelain enamel.
 - d. Glazed surfaces of ceramic tile.
- B. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.
- C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.03 INSTALLATION OF JOINT SEALANTS

- A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.
- B. Sealant Installation Standard: Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.
- C. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
1. Do not leave gaps between ends of sealant backings.
 2. Do not stretch, twist, puncture, or tear sealant backings.
 3. Remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.
- D. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.
- E. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
1. Place sealants so they directly contact and fully wet joint substrates.
 2. Completely fill recesses in each joint configuration.
 3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.
- F. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.
1. Remove excess sealant from surfaces adjacent to joints.
 2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
 3. Joint Profile: Provide the following:

- a. Concave joint profile per Figure 8A in ASTM C 1193, unless otherwise indicated.
 - b. Flush joint profile per Figure 8B in ASTM C 1193, where indicated on Drawings.
 - c. Recessed joint configuration per Figure 8C in ASTM C 1193, of recess depth and at locations indicated on Drawings.
- 1) Use masking tape to protect surfaces adjacent to recessed tooled joints.

3.04 FIELD QUALITY CONTROL

- A. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:
 1. Extent of Testing: Test completed and cured sealant joints as follows:
 - a. Perform 1 test for each 1000 feet of joint length thereafter or 1 test per each floor per elevation.
 2. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193 or Method A, Tail Procedure, in ASTM C 1521.
 - a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
 3. Inspect tested joints and report on the following:
 - a. Whether sealants filled joint cavities and are free of voids.
 - b. Whether sealant dimensions and configurations comply with specified requirements.
 - c. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion passes sealant manufacturer's field-adhesion hand-pull test criteria.
 4. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant fill, sealant configuration, and sealant dimensions.
 5. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.
- B. Evaluation of Field-Adhesion Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

3.05 CLEANING

- A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint

sealants and of products in which joints occur.

3.06 PROTECTION

- A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

END OF SECTION 07 92 00

SECTION 07 92 13
EXTERIOR JOINT SEALANTS**PART 1 - GENERAL****1.1 SUMMARY**

- A. Furnish labor, materials, tools, equipment, and services for Sealants, as indicated, in accordance with provisions of Contract Documents.
- B. Completely coordinate with work of other trades.

1.2 QUALITY ASSURANCE

- A. Definitions:
 - 1. Caulk and Caulking are synonymous with sealant work.
- B. Paving Joints include joints in floor slabs, sidewalks, steps, ramps and curbs.
- C. Seal joints which would otherwise permit penetration of moisture or air, unless sealant work is specifically required under other section.
- D. Provide sealants as follows:
 - 1. Flashing reglets and retainers.
 - 2. Exterior wall joints.
 - 3. Masonry control joints, and between masonry and other materials.
 - 4. Isolation joints.
 - 5. Joints between paving or sidewalks and building.
 - 6. Joints at penetrations of walls, floors and decks by piping and other services and equipment not requiring firestopping.
 - 7. Perimeters door and window frames, louvers, grilles, etc.
 - 8. Joints between dissimilar materials, to provide visually acceptable closures.
 - 9. Solidly bed thresholds at exterior doors.
 - 10. Other joints where caulking, or sealant is indicated.
 - 11. Joints where Pre-molded Compressible Sealants is indicated.
- E. Related materials specified elsewhere:
 - 1. Interior Joint Sealants: See Section 07 92 16.
 - 2. Firestopping: Specified in Section 07 84 00.

1.3 REFERENCES

- A. American Society for Testing and Materials:
 - 1. ASTM C510 Standard Test Method for Staining and Color Change of Single- or Multicomponent Joint Sealants
 - 2. ASTM C920 Standard Specification for Elastomeric Joint Sealants
 - 3. ASTM C1193 Standard Guide for Use of Joint Sealants

1.4 SUBMITTALS

- A. Shop Drawings:
 - 1. Sealant Schedule with the following information:
 - a. Generally describe locations requiring sealants (i.e. Brick to Aluminum Window).
 - b. List type of sealant and name of product proposed for each location.
 - c. Include a blank Color Column on schedule for selection.
 - d. Architect to complete Color Column upon selection from submitted samples.
- B. Product Data:

1. Performance characteristics and limitations.
 2. Recommended installation.
- C. Samples:
1. Cured sample of each color. Submit with Sealant Schedule.
- D. Contract Closeout Information:
1. Warranty.

1.5 WARRANTY

- A. Provide written warranty that sealant work will remain free of defects for a period of 3 years from Date of Substantial Completion:
1. Failure of water or air tightness constitutes defect.
 2. Loss of adhesion, cohesion or failure to cure constitutes defect.
 3. Remove defective work and materials and replace with new work and materials.
 4. Repair other work damaged as a result of defective sealant work at no additional expense to Owner.
 5. Non- prorated warranty to include labor and material.
 6. Warranty signed by Installer, Contractor, or both.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS:

- A. Silicone sealants:
1. Base:
 - a. Tremco.
 - b. Dow Corning.
 2. Optional:
 - a. Pecora.
 - b. GE Silicones.
 - c. Sonneborn/ChemRex.
 - d. Bondaflex Technologies.
- B. Polyurethane sealants:
1. Base:
 - a. Tremco.
 2. Optional:
 - a. Pecora.
 - b. Sonneborn/ChemRex.
 - c. Sika.
 - d. Bondaflex Technologies.
- C. Other Sealants:
1. Base: As indicated.

2.2 MATERIALS

- A. General:
1. ASTM C920 Type S or M, Grade-NS, minimum Class 25.
 2. Non-staining sealant complying with ASTM C510.
 3. Where sealant is not exposed to view, use manufacturer's standard color which has best performance.
 4. Use non-sag sealant in vertical joints.
 5. Use self-leveling or non-sag sealant in horizontal joints.
 6. Before use of sealant, investigate its compatibility with surfaces, fillers and other materials in joint system.

- B. Elastomeric Sealants:
1. Refer to Sealant Selection Guide for Base Products.
 2. Comply with VOC limits as required by local laws.
 3. VOC content no greater than 250 g/L.

2.3 PRE-MOLDED COMPRESSIBLE SEALANT

- A. Pre-molded Compressible Sealant (pre-finished):
1. Description: Foam backing: Multiple layers of acrylic-impregnated, expanding foam sealant and closed-cell (EVA) foam.
 2. Weather Facing: Low-modulus silicone with bellows profile.
 3. Movement capability: +/-25 percent movement, 50 percent total.
 4. Material to be sized appropriately for joint widths indicated.
 5. Base Product: ColorSeal by Emseal.
- B. Compressible Backer:
1. Description: Foam backing with multiple layers of acrylic-impregnated, expanding foam sealant and closed-cell (EVA) foam.
 2. Provide behind conventional backer-rod and sealant where indicated.
 3. Provide behind directly-applied liquid sealant where indicated.
 4. Movement capability: +/- 25 percent movement, 50 percent total.
 5. Material to be sized appropriately for joint widths indicated.
 6. Base Product: Backerseal by Emseal.
- C. Accessory Items:
1. Installation Adhesive: As recommended by manufacturer of compressible sealants and backers.
 2. Comply with VOC limits as required by local laws.

2.4 MISCELLANEOUS MATERIALS

- A. Joint cleaner, primer, bond breaker:
1. As recommended by sealant manufacturer.
- B. Backer Rod:
1. Rod stock of polyethylene, polyethylene jacketed polyurethane foam, or other flexible, non-absorbent, non-bituminous material recommended by sealant manufacturer to:
 - a. Control joint depth.
 - b. Break bond of sealant at bottom of joint.
 - c. Provide proper shape of sealant.

PART 3 - EXECUTION

3.1 SEALANT USAGE GUIDELINES

Guide to Sealant Types - EXTERIOR				
Location	Materials	Sealant Type	Base Product	Remarks / Exceptions
General Exterior	Cast in Place Concrete	Multi-part Polyurethane, chemically curing, epoxidized	Tremco Dymeric 240FC	Exception: Use Dymonic where used as bedding sealant for frames, sills, thresholds etc.
	Brick and Concrete Masonry			
	Portland Cement Plaster			
	Hollow Metal Door and Window Perimeters			

Guide to Sealant Types - EXTERIOR					
Location	Materials	Sealant Type	Base Product	Remarks / Exceptions	
	Aluminum Composite Panels (ACM) and Metal Column Covers	Silicone or Silyl Terminated Polyether (STPE)	Tremco Spectrem 1 or Sonolastic 150 VLM	--	
	Joints in materials with high coefficients of linear expansion				
	Weatherseals of Aluminum Window Frames (including perimeter joints)				
	Precast Concrete Panels	Silicone or Silyl Terminated Polyether (STPE)	Tremco Spectrem 1 or Spectrem 3 or Sonolastic 150 VLM	--	
	EIFS Systems				
	Stone Work	Silicone or Silyl Terminated Polyether (STPE)	Tremco Spectrem 3 or Sonolastic 150 VLM	Exception: Pre-test for staining potential per ASTM C1248, with stain-sensitive stone Note: Sonolastic will not stain.	
	General Exterior Glazing	Silicone; Neutral-cure	Tremco Spectrem 2 or Proglaze	Exception: Select alternate silicone sealant types as appropriate for specific glazing application.	
	Butt Glazing and Structural Silicone Joints	Silicone; 1-part, Neutral-cure	Dow Corning 795	--	
	Fabrication of Insulating Glass Units (IGU)	Primary Seal: Polyisobutylene	Select high quality sealants, of basic type listed, as appropriate for specific application.		
		Secondary Seal: Silicone	Dow Corning 982	--	
	Zone dams, shear blocks and other internal component of Aluminum Window Systems	Silicone	Use product which offers optimal adhesion and performance for application.		
	Sheet Metal Gutters, Downspouts, Scuppers, etc	Synthetic Rubber-Resin, elastomeric	Tremco Gutter Sealant	--	
Existing joints where Silicone was previously used	Silicone	Use product which offers optimal adhesion and performance for condition, and which offers suitable color choices for matching.			
Exterior Flatwork	Concrete Paving and Parking Structures	Multi-part Polyurethane	Tremco THC 900 / 901	Exception: Where subject to continual water emersion; use Vulkem 45 or 245	
	Concrete Walks				
	Brick Paving and Walks				
	Stone and Precast Plazas				

General Notes:

1. The above is intended to be an overall guide. Additional conditions and materials may be required. Notify Architect if additional Guidance is required to select unlisted items.
2. Optional sealant products shall offer same number of color choices as the Base Product listed.
3. All of the conditions and materials listed may not apply to subject project.

3.2 EXAMINATION

- A. Environmental Limitations:
 1. Do not proceed with installation of joint sealants under following conditions:
 - a. When ambient and substrate temperature conditions are outside limits permitted by joint sealant manufacturer or are below 5 degC 40 degF.
 - b. When joint substrates are wet.
- B. Joint-Width Conditions:
 1. Do not proceed with installation of joint sealants where joint widths are less than those allowed by joint sealant manufacturer for applications indicated.
- C. Apply only to joints free of material which may inhibit bond.
- D. Apply to cementitious materials only when thoroughly cured and dry.

3.3 PREPARATION

- A. Clean joints and prime as required by sealant manufacturer.
- B. Where finish coating or covering is to be applied to surface (e.g., paint, wall covering, glazed coating), wait until such coating or covering has been applied before installing sealant.
- C. Limit application to surfaces to receive sealants and mask edges of joints to protect adjacent surfaces.

3.4 INSTALLATION

- A. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
 1. Do not leave gaps between ends of sealant backings.
 2. Do not stretch, twist, puncture, or tear sealant backings.
 3. Remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.
- B. Make depth of sealant not more than one-half width of joint, but not less than 6mm 1/4 IN.
- C. Sub-caulk joints without suitable backstop, to proper depth.
- D. Install correctly sized backer rods.
- E. Apply bond breaker as required or recommended by sealant manufacturer.
- F. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.
- G. Make joints water and air tight.
- H. Install sealants using proven techniques that comply with the following and at same time backings are installed:
 1. Place sealants so they directly contact and fully wet joint substrates.
 2. Completely fill recesses in each joint configuration.

3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.
- I. Tooling of Non-sag Sealants:
 1. Tool immediately after sealant application and before skinning or curing begins, to form smooth, uniform beads, eliminate air pockets, and ensure contact and adhesion of sealant with sides of joint.
 2. Remove excess sealant adjacent to joints as the Work progresses with cleaning materials approved by manufacturers of joint sealants and of products in which joints occur.
 3. Use tooling agents that are approved by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
 4. Provide concave joint profile per Figure 8A in ASTM C 1193, unless otherwise indicated.
- J. At traffic joints, slightly recess sealant to avoid direct contact with wheeled traffic.

PART 4 - MEASUREMENT

4.1 Measurement – No Separate measurement will be made for Work described in this Section.

PART 5 - PAYMENT

5.1 Payment – Payment for items in this Section will be incidental to the Contract unit cost of the metal bid items.

END OF SECTION

SECTION 08 11 13**HOLLOW METAL DOORS AND FRAMES****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY**A. Section Includes:**

- 1. Standard hollow metal doors and frames.

B. Related Sections:

- 1. Division 04 Section "Unit Masonry" for embedding anchors for hollow metal work into masonry construction.
- 2. Division 08 Section "Door Hardware" for door hardware for hollow metal doors.
- 3. Division 08 glazing sections for lites in hollow metal doors.
- 4. Division 09 Sections "Exterior Painting" and "Interior Painting" for field painting hollow metal doors and frames.
- 5. Division 26 Sections for electrical connections including conduit and wiring for door controls and operators.

1.03 DEFINITIONS

- A. Minimum Thickness: Minimum thickness of base metal without coatings.

- B. Standard Hollow Metal Work: Hollow metal work fabricated according to ANSI/SDI A250.8.

- C. Custom Hollow Metal Work: Hollow metal work fabricated according to ANSI/NAAMM-HMMA 861.

1.04 SUBMITTALS

- A. Product Data: For each type of product.

- 1. Include construction details, material descriptions, core descriptions, fire-resistance ratings, and finishes.

B. LEED Submittals:

- 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

- C. Shop Drawings: Include the following:

- 1. Elevations of each door type.
- 2. Details of doors, including vertical- and horizontal-edge details and metal thicknesses.

3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
 4. Locations of reinforcement and preparations for hardware.
 5. Details of each different wall opening condition.
 6. Details of anchorages, joints, field splices, and connections.
 7. Details of accessories.
 8. Details of moldings, removable stops, and glazing.
 9. Details of conduit and preparations for power, signal, and control systems.
- D. Samples for Initial Selection: For units with factory-applied color finishes.
- E. Samples for Verification:
1. For each type of exposed finish required, prepared on Samples of not less than 3 by 5 inches .
 2. For "Doors" and "Frames" subparagraphs below, prepare Samples approximately 12 by 12 inches to demonstrate compliance with requirements for quality of materials and construction:
 - a. Doors: Show vertical-edge, top, and bottom construction; core construction; and hinge and other applied hardware reinforcement. Include separate section showing glazing if applicable.
 - b. Frames: Show profile, corner joint, floor and wall anchors, and silencers. Include separate section showing fixed hollow-metal panels and glazing if applicable.
- F. Schedule: Provide a schedule of hollow-metal work prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with final Door Hardware Schedule.
- G. Product Test Reports: For each type of hollow-metal door and frame assembly, for tests performed by a qualified testing agency.

1.05 QUALITY ASSURANCE

- A. Source Limitations: Obtain hollow metal work from single source from single manufacturer.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Deliver hollow metal work palletized, wrapped, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.
1. Provide additional protection to prevent damage to finish of factory-finished units.
- B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.
- C. Store hollow metal work under cover at Project site. Place in stacks of five units maximum in a vertical position with heads up, spaced by blocking, on minimum 4-inch-high wood blocking. Do not store in a manner that traps excess humidity.
1. Provide minimum 1/4-inch space between each stacked door to permit air circulation.

1.07 PROJECT CONDITIONS

- A. Field Measurements: Verify actual dimensions of openings by field measurements

before fabrication.

1.08 COORDINATION

- A. Coordinate installation of anchorages for hollow metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Amweld Building Products, LLC.
 - 2. Benchmark; a division of Therma-Tru Corporation.
 - 3. Ceco Door Products; an Assa Abloy Group company.
 - 4. Curries Company; an Assa Abloy Group company.
 - 5. Deansteel Manufacturing Company, Inc.
 - 6. Firedoor Corporation.
 - 7. Fleming Door Products Ltd.; an Assa Abloy Group company.
 - 8. Habersham Metal Products Company.
 - 9. Kewanee Corporation (The).
 - 10. Mesker Door Inc.
 - 11. Pioneer Industries, Inc.
 - 12. Security Metal Products Corp.
 - 13. Steelcraft; an Ingersoll-Rand company.
 - 14. Windsor Republic Doors.

2.02 MATERIALS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 50 percent.
- B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B; suitable for exposed applications.
- C. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.
- D. Frame Anchors: ASTM A 591/A 591M, Commercial Steel (CS), 40Z coating designation; mill phosphatized.
 - 1. For anchors built into exterior walls, steel sheet complying with ASTM A 1008/A 1008M or ASTM A 1011/A 1011M, hot-dip galvanized according to ASTM A 153/A 153M, Class B.
- E. Inserts, Bolts, and Fasteners: Hot-dip galvanized according to ASTM A 153/A 153M.
- F. Powder-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hollow metal frames of type indicated.

- G. Grout: ASTM C 476, except with a maximum slump of 4 inches, as measured according to ASTM C 143/C 143M.
- H. Mineral-Fiber Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool with 6- to 12-lb/cu. ft. density; with maximum flame-spread and smoke-development indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics.
- I. Glazing: Comply with requirements in Division 08 Section "Glazing."
- J. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.
 - 1. VOC Content: 0.25 lb/gal. (30 g/L) or less.
 - 2. Coating shall not contain aromatic compounds and restricted components listed in Division 01 Section "Sustainable Design Requirements" for paints and coatings.

2.03 STANDARD HOLLOW METAL DOORS

- A. General: Provide doors of design indicated, not less than thickness indicated; fabricated with smooth surfaces, without visible joints or seams on exposed faces unless otherwise indicated. Comply with ANSI/SDI A250.8.
 - 1. Design: Flush panel.
 - 2. Core Construction: Manufacturer's standard kraft-paper honeycomb, polystyrene, polyurethane, polyisocyanurate, mineral-board, or vertical steel-stiffener core.
 - a. Thermal-Rated (Insulated) Doors: Where indicated, provide doors fabricated with thermal-resistance value (R-value) of not less than 4.0 deg F x h x sq. ft./Btu when tested according to ASTM C 1363.
 - 1) Locations: Exterior doors
 - 3. Vertical Edges for Single-Acting Doors: Manufacturer's standard.
 - a. Beveled Edge: 1/8 inch in 2 inches.
 - 4. Vertical Edges for Double-Acting Doors: Round vertical edges with 2-1/8-inch radius.
 - 5. Top and Bottom Edges: Closed with flush or inverted 0.042-inch- thick, end closures or channels of same material as face sheets.
 - 6. Tolerances: Comply with SDI 117, "Manufacturing Tolerances for Standard Steel Doors and Frames."
- B. Exterior Doors: Face sheets fabricated from metallic-coated steel sheet. Provide doors complying with requirements indicated below by referencing ANSI/SDI A250.8 for level and model and ANSI/SDI A250.4 for physical performance level:
 - 1. Level 4 and Physical Performance Level A (Maximum Duty), Model 1 (Full Flush.
- C. Interior Doors: Face sheets fabricated from cold-rolled steel sheet. Provide doors complying with requirements indicated below by referencing ANSI/SDI A250.8 for level and model and ANSI/SDI A250.4 for physical performance level:
 - 1. Level 3 and Physical Performance Level A (Extra Heavy Duty), Model 1 (Full

Flush).

- D. Hardware Reinforcement: Fabricate according to ANSI/SDI A250.6 with reinforcing plates from same material as door face sheets.
- E. Fabricate concealed stiffeners and hardware reinforcement from either cold- or hot-rolled steel sheet.

2.04 STANDARD HOLLOW METAL FRAMES

- A. General: Comply with ANSI/SDI A250.8 and with details indicated for type and profile.
- B. Exterior Frames: Fabricated from metallic-coated steel sheet.
 - 1. Fabricate frames with mitered or coped corners.
 - 2. Fabricate frames as full profile welded.
 - 3. Frames for Level 4 Steel Doors: 0.067-inch- thick steel sheet.
- C. Interior Frames: Fabricated from cold-rolled steel sheet unless metallic-coated sheet is indicated.
 - 1. Fabricate frames with mitered or coped corners.
 - 2. Frames for Level 3 Steel Doors: 0.053-inch- thick steel sheet.
 - 3. Frames for Wood Doors: 0.042-inch-thick steel sheet.
 - 4. Frames for Borrowed Lights: Same as adjacent door frame.
 - 5. Fabricate all frames as full profile welded.
- D. Hardware Reinforcement: Fabricate according to ANSI/SDI A250.6 with reinforcement plates from same material as frames.

2.05 FRAME ANCHORS

- A. Jamb Anchors:
 - 1. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, not less than 0.042 inch thick, with corrugated or perforated straps not less than 2 inches wide by 10 inches long; or wire anchors not less than 0.177 inch thick.
 - 2. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than 0.042 inch thick.
- B. Floor Anchors: Formed from same material as frames, not less than 0.042 inch thick, and as follows:
 - 1. Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive fasteners.
 - 2. Separate Topping Concrete Slabs: Adjustable-type anchors with extension clips, allowing not less than 2-inch height adjustment. Terminate bottom of frames at finish floor surface.

2.06 STOPS AND MOLDINGS

- A. Moldings for Glazed Lites in Doors: Minimum 0.032 inch thick, fabricated from same material as door face sheet in which they are installed.
- B. Fixed Frame Moldings: Formed integral with hollow metal frames, a minimum of 5/8 inch high unless otherwise indicated.

- C. Loose Stops for Glazed Lites in Frames: Minimum 0.032 inch thick, fabricated from same material as frames in which they are installed.
- D. Terminated Stops: Where indicated on interior door frames, terminate stops 6 inches above finish floor with a 45-degree angle cut, and close open end of stop with steel sheet closure. Cover opening in extension of frame with welded-steel filler plate, with welds ground smooth and flush with frame.

2.07 ACCESSORIES

- A. Mullions and Transom Bars: Join to adjacent members by welding or rigid mechanical anchors.
- B. Ceiling Struts: Minimum 1/4-inch-thick by 1-inch- wide steel.
- C. Grout Guards: Formed from same material as frames, not less than 0.016 inch thick.

2.08 FABRICATION

- A. Fabricate hollow metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
- B. Tolerances: Fabricate hollow metal work to tolerances indicated in SDI 117.
- C. Hollow Metal Doors:
 - 1. Exterior Doors: Provide weep-hole openings in bottom of exterior doors to permit moisture to escape. Seal joints in top edges of doors against water penetration.
 - 2. Glazed Lites: Factory cut openings in doors.
- D. Hollow Metal Frames: Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of same thickness metal as frames.
 - 1. Welded Frames: Weld flush face joints continuously; grind, fill, dress, and make smooth, flush, and invisible.
 - 2. Sidelight Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by butt welding.
 - 3. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
 - 4. Grout Guards: Weld guards to frame at back of hardware mortises in frames to be grouted.
 - 5. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.
 - 6. Jamb Anchors: Provide number and spacing of anchors as follows:
 - a. Masonry Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:
 - 1) Two anchors per jamb up to 60 inches high.
 - 2) Three anchors per jamb from 60 to 90 inches high.
 - 3) Four anchors per jamb from 90 to 120 inches high.

-
- 4) Four anchors per jamb plus 1 additional anchor per jamb for each 24 inches or fraction thereof above 120 inches high.
 - b. Stud-Wall Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:
 - 1) Three anchors per jamb up to 60 inches high.
 - 2) Four anchors per jamb from 60 to 90 inches high.
 - 3) Five anchors per jamb from 90 to 96 inches high.
 - 4) Five anchors per jamb plus 1 additional anchor per jamb for each 24 inches or fraction thereof above 96 inches high.
 - 5) Two anchors per head for frames above 42 inches wide and mounted in metal-stud partitions.
 7. Door Silencers: Except on weather-stripped doors, drill stops to receive door silencers as follows. Keep holes clear during construction.
 - a. Single-Door Frames: Drill stop in strike jamb to receive three door silencers.
 - b. Double-Door Frames: Drill stop in head jamb to receive two door silencers.
 - E. Fabricate concealed stiffeners, edge channels, and hardware reinforcement from either cold- or hot-rolled steel sheet.
 - F. Hardware Preparation: Factory prepare hollow metal work to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to the Door Hardware Schedule and templates furnished as specified in Division 08 Section "Door Hardware."
 1. Locate hardware as indicated, or if not indicated, according to ANSI/SDI A250.8.
 2. Reinforce doors and frames to receive nontemplated, mortised and surface-mounted door hardware.
 3. Comply with applicable requirements in ANSI/SDI A250.6 and ANSI/DHI A115 Series specifications for preparation of hollow metal work for hardware.
 4. Coordinate locations of conduit and wiring boxes for electrical connections with Division 26 Sections.
 - G. Stops and Moldings: Provide stops and moldings around glazed lites where indicated. Form corners of stops and moldings with butted or mitered hairline joints.
 1. Single Glazed Lites: Provide fixed stops and moldings welded on secure side of hollow metal work.
 2. Multiple Glazed Lites: Provide fixed and removable stops and moldings so that each glazed lite is capable of being removed independently.
 3. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames.
 4. Provide loose stops and moldings on inside of hollow metal work.
 5. Coordinate rabbet width between fixed and removable stops with type of glazing and type of installation indicated.

2.09 STEEL FINISHES

- A. Prime Finish: Apply manufacturer's standard primer immediately after cleaning and pretreating.
 - 1. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with ANSI/SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for embedded and built-in anchors to verify actual locations before frame installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.
- B. Prior to installation, adjust and securely brace welded hollow metal frames for squareness, alignment, twist, and plumbness to the following tolerances:
 - 1. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - 2. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
 - 3. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - 4. Plumbness: Plus or minus 1/16 inch, measured at jambs on a perpendicular line from head to floor.
- C. Drill and tap doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.

3.03 INSTALLATION

- A. General: Install hollow metal work plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.
- B. Hollow Metal Frames: Install hollow metal frames of size and profile indicated. Comply with ANSI/SDI A250.11.
 - 1. Set frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.

- a. Where frames are fabricated in sections because of shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.
 - b. Install frames with removable glazing stops located on secure side of opening.
 - c. Install door silencers in frames before grouting.
 - d. Remove temporary braces necessary for installation only after frames have been properly set and secured.
 - e. Check plumbness, squareness, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.
2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with postinstalled expansion anchors.
 - a. Floor anchors may be set with powder-actuated fasteners instead of postinstalled expansion anchors if so indicated and approved on Shop Drawings.
 3. Metal-Stud Partitions: Solidly pack mineral-fiber insulation behind frames.
 4. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with grout.
 5. Ceiling Struts: Extend struts vertically from top of frame at each jamb to overhead structural supports or substrates above frame unless frame is anchored to masonry or to other structural support at each jamb. Bend top of struts to provide flush contact for securing to supporting construction. Provide adjustable wedged or bolted anchorage to frame jamb members.
 6. Installation Tolerances: Adjust hollow metal door frames for squareness, alignment, twist, and plumb to the following tolerances:
 - a. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - b. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
 - c. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - d. Plumbness: Plus or minus 1/16 inch, measured at jambs at floor.
- C. Hollow Metal Doors: Fit hollow metal doors accurately in frames, within clearances specified below. Shim as necessary.
1. Non-Fire-Rated Standard Steel Doors:
 - a. Jambs and Head: 1/8 inch plus or minus 1/16 inch.
 - b. Between Edges of Pairs of Doors: 1/8 inch plus or minus 1/16 inch.
 - c. Between Bottom of Door and Top of Threshold: Maximum 3/8 inch.
 - d. Between Bottom of Door and Top of Finish Floor (No Threshold): Maximum 3/4 inch.
 2. Fire-Rated Doors: Install doors with clearances according to NFPA 80.
- D. Glazing: Comply with installation requirements in Division 08 Section "Glazing" and with hollow metal manufacturer's written instructions.
1. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches o.c. and not more than 2 inches o.c. from each corner.

3.04 ADJUSTING AND CLEANING

- A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including hollow metal work that is warped, bowed, or otherwise unacceptable.
- B. Remove grout and other bonding material from hollow metal work immediately after installation.
- C. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying, rust-inhibitive primer.
- D. Metallic-Coated Surfaces: Clean abraded areas and repair with galvanizing repair paint according to manufacturer's written instructions.

END OF SECTION 08 11 13

SECTION 08 14 16**FLUSH WOOD DOORS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY**A. Section Includes:**

1. Solid-core doors with wood-veneer faces.
2. Factory finishing flush wood doors.
3. Factory fitting flush wood doors to frames and factory machining for hardware.

B. Related Sections:

1. Division 08 Section "Glazing" for glass view panels in flush wood doors.

1.03 ACTION SUBMITTALS

- A. Product Data: For each type of door. Include details of core and edge construction and trim for openings. Include factory-finishing specifications.

B. LEED Submittals:

1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
2. Certificates for Credit MR 7: Chain-of-custody certificates indicating that flush wood doors comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body
3. Product Data for Credit IEQ 4.4: For adhesives and composite wood products, documentation indicating that product contains no urea formaldehyde.

- C. Shop Drawings: Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data; and the following:

1. Dimensions and locations of blocking.
2. Dimensions and locations of mortises and holes for hardware.
3. Dimensions and locations of cutouts.
4. Undercuts.
5. Requirements for veneer matching.
6. Doors to be factory finished and finish requirements.
7. Fire-protection ratings for fire-rated doors.

- D. Samples for Initial Selection: For factory-finished doors.

- E. Samples for Verification:

1. Factory finishes applied to actual door face materials, approximately 8 by 10 inches, for each material and finish.[For each wood species and transparent finish, provide set of three Samples showing typical range of color and grain to be expected in finished Work.]
2. Corner sections of doors, approximately 8 by 10 inches, with door faces and edges representing actual materials to be used.
 - a. Provide Samples for each species of veneer and solid lumber required.
 - b. Finish veneer-faced door Samples with same materials proposed for factory-finished doors.
3. Louver blade and frame sections, 6 inches long, for each material and finish specified.
4. Frames for light openings, 6 inches long, for each material, type, and finish required.

1.04 INFORMATIONAL SUBMITTALS

- A. Sample Warranty: For special warranty.

1.05 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- B. Source Limitations: Obtain flush wood doors from single manufacturer.
- C. Quality Standard: In addition to requirements specified, comply with WDMA I.S.1-A, "Architectural Wood Flush Doors."
- D. Forest Certification: Provide doors made with cores veneers not less than 70 percent of wood products all wood products obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
- E. Fire-Rated Wood Doors: Doors complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10B UL 10C.
 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
 2. Temperature-Rise Limit: At vertical exit enclosures and exit passageways, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F above ambient after 30 minutes of standard fire-test exposure.
- F. Preinstallation Conference: Conduct conference at Project site.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Comply with requirements of referenced standard and manufacturer's written instructions.
- B. Package doors individually in plastic bags or cardboard cartons.
- C. Mark each door on top and bottom rail with opening number used on Shop Drawings.

1.07 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- B. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and HVAC system is operating and maintaining temperature between 60 and 90 deg F and relative humidity between 17 and 50 percent during the remainder of the construction period.

1.08 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Warping (bow, cup, or twist) more than 1/4 inch in a 42-by-84-inch section.
 - b. Telegraphing of core construction in face veneers exceeding 0.01 inch in a 3 inch span.
 - 2. Warranty Period for Solid-Core Interior Doors: Life of installation.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Graham; an Assa Abloy Group company.
 - 2. Marshfield Door Systems, Inc.
 - 3. VT Industries Inc.

2.02 DOOR CONSTRUCTION, GENERAL

- A. Low-Emitting Materials: Provide doors made with adhesives and composite wood products that do not contain urea formaldehyde.
- B. WDMA I.S.1-A Performance Grade: Standard Duty.
- C. Particleboard-Core Doors:
 - 1. Particleboard: Straw-based particleboard complying with ANSI A208.1, Grade LD-2 or M-2, except for density.
- D. Fire-Protection-Rated Doors: Provide core specified or mineral core as needed to provide fire-protection rating indicated.
 - 1. Edge Construction: Provide edge construction with intumescent seals concealed by outer stile. Comply with specified requirements for exposed edges.
 - 2. Pairs: Provide fire-retardant stiles that are listed and labeled for applications

indicated without formed-steel edges and astragals. Provide stiles with concealed intumescent seals. Comply with specified requirements for exposed edges.

3. Pairs: Provide formed-steel edges and astragals with intumescent seals.
 - a. Finish steel edges and astragals with baked enamel.
 - b. Finish steel edges and astragals to match door hardware (locksets or exit devices).

E. Mineral-Core Doors:

1. Core: Noncombustible mineral product complying with requirements of referenced quality standard and testing and inspecting agency for fire-protection rating indicated.
2. Blocking: Provide composite blocking with improved screw-holding capability approved for use in doors of fire-protection ratings indicated as needed to eliminate through-bolting hardware.
3. Edge Construction: At hinge stiles, provide laminated-edge construction with improved screw-holding capability and split resistance. Comply with specified requirements for exposed edges.

2.03 VENEERED-FACED DOORS FOR TRANSPARENT FINISH

A. Interior Solid-Core Doors:

1. Grade: Premium, with Grade A faces.
2. Species: White oak.
3. Cut: Quarter sawn.
4. Match between Veneer Leaves: Book match.
5. Assembly of Veneer Leaves on Door Faces: Balance match.
6. Exposed Vertical Edges: Same species as faces or a compatible species.
7. Core: Particleboard.
8. Construction: Five or seven plies. Stiles and rails are bonded to core, then entire unit abrasive planed before veneering. Five ply faces are bonded to core using a hot press.

2.04 LOUVERS AND LIGHT FRAMES

A. Wood Louvers: Door manufacturer's standard solid-wood louvers unless otherwise indicated.

1. Wood Species: Species compatible with door faces.

B. Metal Louvers:

C. Wood Beads for Light Openings in Wood Doors: Provide manufacturer's standard wood beads as follows unless otherwise indicated.

1. Wood Species: Same species as door faces.
2. Profile: Flush rectangular beads.

D. Wood-Veneered Beads for Light Openings in Fire-Rated Doors: Manufacturer's standard wood-veneered noncombustible beads matching veneer species of door faces and approved for use in doors of fire-protection rating indicated. Include concealed metal glazing clips where required for opening size and fire-protection rating indicated.

1. Metal Frames for Light Openings in Fire-Rated Doors: Manufacturer's standard

frame formed of 0.048-inch-thick, cold-rolled steel sheet; factory primed for paint finish with baked-enamel- or powder-coated finish; and approved for use in doors of fire-protection rating indicated.

2.05 FABRICATION

- A. Factory fit doors to suit frame-opening sizes indicated. Comply with clearance requirements of referenced quality standard for fitting unless otherwise indicated.
 - 1. Comply with requirements in NFPA 80 for fire-rated doors.
- B. Factory machine doors for hardware that is not surface applied. Locate hardware to comply with DHI-WDHS-3. Comply with final hardware schedules, door frame Shop Drawings, DHI A115-W series standards, and hardware templates.
 - 1. Coordinate with hardware mortises in metal frames to verify dimensions and alignment before factory machining.
 - 2. Metal Astragals: Factory machine astragals and formed-steel edges for hardware for pairs of fire-rated doors.
- C. Openings: Cut and trim openings through doors in factory.
 - 1. Light Openings: Trim openings with moldings of material and profile indicated.
 - 2. Glazing: Factory install glazing in doors indicated to be factory finished. Comply with applicable requirements in Division 08 Section "Glazing."
 - 3. Louvers: Factory install louvers in prepared openings.

2.06 FACTORY FINISHING

- A. General: Comply with referenced quality standard for factory finishing. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing.
 - 1. Finish faces, all four edges, edges of cutouts, and mortises. Stains and fillers may be omitted on bottom edges, edges of cutouts, and mortises.
- B. Finish doors at factory that are indicated to receive transparent finish.
- C. Transparent Finish:
 - 1. Grade: Premium.
 - 2. Finish: WDMA TR-4 conversion varnish or TR-6 catalyzed polyurethane.
 - 3. Sheen: Satin.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine doors and installed door frames before hanging doors.
 - 1. Verify that frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jams.
 - 2. Reject doors with defects.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Hardware: For installation, see Division 08 Section "Door Hardware."
- B. Installation Instructions: Install doors to comply with manufacturer's written instructions and the referenced quality standard, and as indicated.
 - 1. Install fire-rated doors in corresponding fire-rated frames according to NFPA 80.
- C. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.
- D. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

3.03 ADJUSTING

- A. Operation: Rehang or replace doors that do not swing or operate freely.
- B. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.

3.04 CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

- A. Comply with Waste Management Plan required under Division 01 Section "Construction Waste Management And Disposal."

END OF SECTION 08 14 16

SECTION 08 31 13**ACCESS DOORS AND FRAMES****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. This Section includes the following:
1. Wall access doors and frames.
 2. Ceiling access doors and frames.
- B. Provide access door and frames at locations indicated in the following table:

Installation in Following Building Elements:	Access to Following Equipment:	Access Door and Frame Type	Nominal Size
Interior Non-Fire-Rated Walls	Piping Shut-Off Valves, Concealed Valves, Shock Absorbers, Clean-Outs	Flush Access Doors and Frames with Exposed Trim	12 inches square
	Control Devices		
Interior Non-Fire-Rated Gypsum Board Ceilings	Manual Volume Dampers	Flush Access Doors and Frames with Exposed Trim	18 inches square
	VAV Terminal Units		
	Piping Shut-Off Valves, Concealed Valves, Clean-Outs		
	Control Devices		
Interior Non-Fire-Rated Walls	Fan Coil Units, Duct Access Doors and other equipment requiring servicing	Flush Access Doors and Frames with Exposed Trim	24 inches square
Interior Non-Fire-Rated Gypsum Board Ceilings	Fan Coil Units, Duct Access Doors and other equipment requiring servicing	Flush Access Doors and Frames with Exposed Trim	24 inches square

- C. Related Sections include the following:
1. Division 09 Section "Acoustical Tile Ceilings" and "Linear Wood Ceilings" for access tile in suspended ceilings.

2. Division 22 Section "Plumbing" for connection of floor door drainage couplings to drains.
3. Division 22 Section "HVAC Air Distribution" for heating and air-conditioning duct access doors.

1.03 SUBMITTALS

- A. Product Data: For each type of door and frame indicated. Include construction details relative to materials, individual components and profiles, finishes for access doors and frames. Include percentage of pre-consumer and post-consumer recycled content. Include percentage of materials extracted, processed and manufactured regionally.
- B. Shop Drawings: Show fabrication and installation details of customized doors and frames. Include plans, elevations, sections, details, and attachments to other Work.
- C. Schedule: Provide complete door and frame schedule, including types, general locations, sizes, construction details, latching or locking provisions, and other data pertinent to installation.

1.04 QUALITY ASSURANCE

- A. Source Limitations: Obtain doors and frames through one source from a single manufacturer.
- B. Size Variations: Obtain Architect's acceptance of manufacturer's standard-size units, which may vary slightly from sizes indicated.

1.05 COORDINATION

- A. Verification: Determine specific locations and sizes for access doors needed to gain access to concealed equipment, and indicate on schedule specified in "Submittals" Article.

PART 2 - PRODUCTS

2.01 MATERIALS

- A. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
- B. Hot-Rolled Steel Sheets: ASTM A 569/A 569M, Commercial Steel (CS), Type B; free of scale, pitting, and surface defects; pickled and oiled; with minimum thickness indicated representing specified nominal thickness according to ASTM A 568/A 568M.
- C. Cold-Rolled Steel Sheets: ASTM A 366/A 366M, Commercial Steel (CS), or ASTM A 620/A 620M, Drawing Steel (DS), Type B; stretcher-leveled standard of flatness; with minimum thickness indicated representing specified nominal thickness according to ASTM A 568/A 568M. Electrolytic zinc-coated steel sheet, complying with ASTM A 591/A 591M, Class C coating, may be substituted at fabricator's option.

- D. Electrolytic Zinc-Coated Steel Sheet: ASTM A 591/A 591M, Commercial Steel (CS), with Class C coating and phosphate treatment to prepare surface for painting; with minimum thickness indicated representing specified nominal thickness according to ASTM A 568/A 568M for uncoated base metal.
- E. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B, with A60 zinc-iron-alloy (galvannealed) coating or G60 mill-phosphatized zinc coating; stretcher-leveled standard of flatness; with minimum thickness indicated representing specified thickness according to ASTM A 924/A 924M.

2.02 PAINT

- A. Shop Primer for Ferrous Metal: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with performance requirements in FS TT-P-664; selected for good resistance to normal atmospheric corrosion, compatibility with finish paint systems indicated, and capability to provide a sound foundation for field-applied topcoats despite prolonged exposure.
- B. Shop Primer for Metallic-Coated Steel: Organic zinc-rich primer complying with SSPC-Paint 20 and compatible with topcoat.
- C. Galvanizing Repair Paint: High-zinc-dust-content paint for regalvanizing welds in steel, complying with SSPC-Paint 20.

2.03 ACCESS DOORS AND FRAMES

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Acudor Products, Inc.
 - 2. Bar-Co, Inc. Div.; Alfab, Inc.
 - 3. Cesco Products.
 - 4. Jensen Industries.
 - 5. J. L. Industries, Inc.
 - 6. Karp Associates, Inc.
 - 7. Larsen's Manufacturing Company.
 - 8. MIFAB Manufacturing, Inc.
 - 9. Milcor Limited Partnership.
 - 10. Nystrom Building Products Co.
- B. Flush Access Doors and Frames with Exposed Trim: Fabricated from metallic-coated steel sheet.
 - 1. Locations: See Table in Part 1 Article "Summary."
 - 2. Door: Minimum 0.060-inch- thick sheet metal, set flush with exposed face flange of frame.
 - 3. Frame: Minimum 0.060-inch- thick sheet metal with 1-inch- to 1-1/4-inch- wide, surface-mounted trim.
 - 4. Hinges: Either spring-loaded concealed pin type and continuous piano hinge.
 - 5. Latch: Screwdriver-operated cam latch.

2.04 FABRICATION

- A. General: Provide access door assemblies manufactured as integral units ready for installation.
- B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.
- C. Steel Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of supports indicated.
 - 1. Exposed Flanges: Nominal 1 to 1-1/2 inches wide around perimeter of frame.
 - 2. Provide mounting holes in frames to attach frames to metal framing in drywall construction and to attach masonry anchors in masonry construction. Furnish adjustable metal masonry anchors.
- D. Latching Mechanisms: Furnish number required to hold doors in flush, smooth plane when closed.

2.05 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish metal fabrications after assembly.

2.06 METALLIC-COATED STEEL FINISHES

- A. Galvanizing of Steel Shapes and Plates: Hot-dip galvanize items indicated to comply with applicable standard listed below:
 - 1. ASTM A 123/A 123M, for galvanizing steel and iron products.
 - 2. ASTM A 153/A 153M, for galvanizing steel and iron hardware.
- B. Surface Preparation: Clean surfaces with nonpetroleum solvent so surfaces are free of oil and other contaminants. For galvanized surfaces, apply, after cleaning, a conversion coating suited to the organic coating to be applied over it. For metallic-coated surfaces, clean welds, mechanical connections, and abraded areas, and apply galvanizing repair paint specified below to comply with ASTM A 780.
 - 1. Galvanizing Repair Paint: High-zinc-dust-content paint for regalvanizing welds in steel, complying with SSPC-Paint 20.
- C. Factory Priming for Field-Painted Finish: Apply shop primer immediately after cleaning and pretreating.

PART 3 - EXECUTION

3.01 PREPARATION

- A. Advise installers of other work about specific requirements relating to access door installation, including sizes of openings to receive access door and frame, as well as locations of supports, inserts, and anchoring devices.

3.02 INSTALLATION

- A. Comply with manufacturer's written instructions for installing access doors and frames.
- B. Set frames accurately in position and attach securely to supports with plane of face panels aligned with adjacent finish surfaces.
- C. Install flush with adjacent finish surfaces.

3.03 ADJUSTING AND CLEANING

- A. Adjust doors and hardware after installation for proper operation.
- B. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

END OF SECTION 08 31 13

SECTION 08 32 21**SLIDING GLASS DOOR TRACK****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. This Section includes sliding glass door track set into counter door framing for reception window.
- B. Related Sections: The following Sections contain requirements that may relate to this Section:
 - 1. Division 8 Section "Glazing" for glass panels.

1.03 SUBMITTALS

- A. Product Data: For all products specified. Include dimensions of individual components, profiles, and finishes. Provide installation details, operating instructions, and maintenance information.

1.04 DELIVERY, STORAGE AND HANDLING

- A. Package loose components for field installation of glass specified in Division 9 Section "Glazing."

PART 2 - PRODUCTS**2.01 SLIDING GLASS DOOR TRACK**

- A. Track Assembly: Provide ball bearing zinc-plated steel track assembly for 1/4-inch glass doors. Include upper channel, side channels, shoe, ball-bearing carriers and lower double track.
 - 1. Basis of Design Manufacturer and Product: Knape & Vogt Mfg. Co.; P992 ZC Assembly or comparable product by another manufacturer, as approved by Architect.
- B. Door Pulls: Provide one aluminum door pull for each sliding glass panel.
 - 1. Basis of Design Manufacturer and Product: Knape & Vogt Mfg. Co.; #822 Alum or comparable product by another manufacturer, as approved by Architect.
- C. Ratchet Locks: Provide one chrome look ratchet lock for each sliding glass door assembly. Include 2 keys for each lock.

1. Basis of Design Manufacturer and Product: Knape & Vogt Mfg. Co.: #962 CHR or comparable product by another manufacturer, as approved by Architect.

PART 3 - EXECUTION

3.01 INSTALLATION

- A. General: Install glass into track in accordance with track manufacturer written installation instructions.
- B. Installation in Metal Frames: Permanently mount track and channels to metal frame head and sill. Center track and channels on centerline of adjoining partitions walls.
- C. Installation in Rough Wall Openings: Permanently mount track and channels to header and sill or counter. Center track and channels on centerline of adjoining partitions walls. Package loose components for field installation of glass specified in Division 9 Section "Glazing."

3.02 TESTING AND ADJUSTING

- A. Lubricate bearings and sliding parts; adjust doors to operate easily, free from warp, twist, or distortion entire perimeter.

END OF SECTION 08 32 21

SECTION 08 33 23**EXTERIOR OVERHEAD COILING DOORS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section Includes:
 - 1. Fire-rated, coiling steel doors.
- B. Related Requirements:
 - 1. Section 05 50 10 "Miscellaneous Metal Fabrications" for miscellaneous steel supports.

1.03 ACTION SUBMITTALS

- A. Product Data: For each type and size of overhead coiling door and accessory.
 - 1. Include construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
 - 3. Include description of automatic closing device and testing and resetting instructions.
- B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.
 - 1. Include plans, elevations, sections, and mounting details.
 - 2. Include details of equipment assemblies, and indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
 - 4. For exterior components, include details of provisions for assembly expansion and contraction and for excluding and draining moisture to the exterior.
 - 5. Show locations of controls, locking devices, detectors or replaceable fusible links, and other accessories.
 - 6. Include diagrams for power, signal, and control wiring.
- C. Samples for Initial Selection: Manufacturer's finish charts showing full range of colors and textures available for units with factory-applied finishes.
 - 1. Include similar Samples of accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish on the following components, in manufacturer's standard sizes:
 - 1. Curtain slats.

2. Bottom bar with sensor edge.
3. Guides.
4. Brackets.
5. Hood.
6. Locking device(s).
7. Include similar Samples of accessories involving color selection.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Oversize Construction Certification: For door assemblies required to be fire-rated and that exceed size limitations of labeled assemblies.

1.05 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For overhead coiling doors to include in maintenance manuals.

1.06 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer for both installation and maintenance of units required for this Project.
 1. Maintenance Proximity: Not more than two hours' normal travel time from Installer's place of business to Project site.
- B. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at as close to neutral pressure as possible according to [NFPA 252] [or] [UL 10B].
 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
 2. Temperature-Rise Limit: Where indicated, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F above ambient after 30 minutes of standard fire-test exposure.
 3. Smoke Control: Where indicated, provide doors that are listed and labeled with the letter "S" on the fire-rating label by a qualified testing agency for smoke- and draft-control based on testing according to UL 1784; with maximum air-leakage rate of 3.0 cfm/sq. ft. of door opening at 0.10-inch wg for both ambient and elevated temperature tests.
- C. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines.

PART 2 - PRODUCTS

2.01 MANUFACTURERS, GENERAL

- A. Source Limitations: Obtain overhead coiling doors from single source from single manufacturer.
 1. Obtain operators and controls from overhead coiling door manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design overhead coiling doors, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance, Exterior Doors: Exterior overhead coiling doors shall withstand the wind loads, the effects of gravity loads, and loads and stresses within limits and under conditions indicated according to SEI/ASCE 7.
 - 1. Wind Loads: 35 mph as indicated on Drawings.
 - 2. Deflection Limits: Design overhead coiling doors to withstand design wind load without evidencing permanent deformation or disengagement of door components.
- C. Operability under Wind Load: Design overhead coiling doors to remain operable under design wind load, acting inward and outward.
- D. Seismic Performance: Overhead coiling doors shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified"
 - 2. Seismic Component Importance Factor: 1.5.
- E. Operation Cycles: Provide overhead coiling door components and operators capable of operating for not less than number of cycles indicated for each door. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.

2.03 FIRE-RATED DOOR ASSEMBLY

- A. Fire-Rated Insulated Service Door: Overhead fire-rated coiling door formed with curtain of interlocking metal slats.
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide FireStar 700 Series door by Wayne-Dalton Corporation or an approved comparable product by one of the following:
 - a. C.H.I. Overhead Doors.
 - b. Clipay Building Products.
 - c. Cookson Company.
 - d. Cornell Iron Works, Inc.
 - e. McKeon Rolling Steel Door Company, Inc.
 - f. Raynor.
- B. Operation Cycles: Door components and operators capable of operating for not less than 20,000. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.
 - 1. Include tamperproof cycle counter.
- C. Fire Rating: 3 hours with temperature-rise limit and with smoke control.
- D. Air Infiltration: Maximum rate of 0.08 cfm/sq. ft. at 15 and 25 mph when tested according to ASTM E 283.

- E. Curtain R-Value: 5.0 deg F x h x sq. ft./Btu.
- F. Door Curtain Material: Galvanized steel.
- G. Door Curtain Slats: Curved profile slats of 2-5/8-inch center-to-center height.
 - 1. Insulated-Slat Interior Facing: Metal.
- H. Curtain Jamb Guides: Galvanized steel with exposed finish matching curtain slats.
- I. Hood: Galvanized steel.
 - 1. Shape: As shown on Drawings.
 - 2. Mounting: As shown on Drawings.
- J. Locking Devices: Equip door with slide bolt for padlock and chain lock keeper.
- K. Electric Door Operator:
 - 1. Usage Classification: Heavy duty, 25 or more cycles per hour and over 90 cycles per day
 - 2. Operator Location: As shown on Drawings.
 - 3. Safety: Listed according to UL 325 by a qualified testing agency for commercial or industrial use; moving parts of operator enclosed or guarded if exposed and mounted at 8 feet or lower.
 - 4. Motor Exposure: Exterior, wet, and humid.
 - 5. Emergency Manual Operation: Chain type.
 - 6. Obstruction Detection Device: Automatic photoelectric sensor.
 - 7. Control Station(s): Where shown on Drawings
 - 8. Other Equipment: [Audible and visual signals] [Portable radio-control system].
- L. Curtain Accessories: Equip door with smoke seals, automatic closing device, push/pull handles.
- M. Door Finish:
 - 1. Powder-Coated Finish: Color matching Architect's sample.
 - 2. Interior Curtain-Slat Facing: Finish as selected by Architect from manufacturer's full range.

2.04 MATERIALS, GENERAL

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.05 DOOR CURTAIN MATERIALS AND CONSTRUCTION

- A. Door Curtains: Fabricate overhead coiling-door curtain of interlocking metal slats, designed to withstand wind loading indicated, in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of thickness and mechanical properties recommended by door manufacturer for performance, size, and type of door indicated, and as follows:
 - 1. Steel Door Curtain Slats: Zinc-coated (galvanized), cold-rolled structural steel sheet; complying with ASTM A 653/A 653M, with G90 zinc coating; nominal sheet thickness (coated) of 0.028 inch; and as required.

2. Insulation: Fill slats for insulated doors with manufacturer's standard thermal insulation complying with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E 84 or UL 723. Enclose insulation completely within slat faces.
 3. Metal Interior Curtain-Slat Facing: Match metal of exterior curtain-slat face, with minimum steel thickness of 0.010 inch.
- B. Curtain Jamb Guides: Manufacturer's standard angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Slot bolt holes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain, and a continuous bar for holding windlocks.

2.06 HOODS

- A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.
1. Galvanized Steel: Nominal 0.028-inch- thick, hot-dip galvanized steel sheet with G90 zinc coating, complying with ASTM A 653/A 653M.
 2. Include automatic drop baffle on fire-rated doors to guard against passage of smoke or flame.
 3. Exterior-Mounted Doors: Fabricate hood to act as weather protection and with a perimeter sealant-joint-bead profile for applying joint sealant.

2.07 LOCKING DEVICES

- A. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on both left and right jamb sides, operable from coil side.
- B. Locking Device Assembly: Fabricate with cylinder lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.
1. Lock Cylinders: Cylinders specified in Section 08 71 00 "Door Hardware.
 2. Keys: Three for each cylinder.
- C. Chain Lock Keeper: Suitable for padlock.
- D. Safety Interlock Switch: Equip power-operated doors with safety interlock switch to disengage power supply when door is locked.

2.08 CURTAIN ACCESSORIES

- A. Smoke Seals: Equip each fire-rated door with replaceable smoke-seal perimeter gaskets or brushes for smoke and draft control as required for door listing and labeling by a qualified testing agency.
- B. Weatherseals for Exterior Doors: Equip each exterior door with weather-stripping gaskets fitted to entire exterior perimeter of door for a weather-resistant installation unless otherwise indicated.
1. At door head, use 1/8-inch- thick, replaceable, continuous-sheet baffle secured to inside of hood or field- installed on the header.

2. At door jambs, use replaceable, adjustable, continuous, flexible, 1/8-inch- thick seals of flexible vinyl, rubber, or neoprene.
- C. Astragal for Interior Doors: Equip each door bottom bar with a replaceable, adjustable, continuous, compressible gasket of flexible vinyl, rubber, or neoprene as a cushion bumper.
 - D. Push/Pull Handles: Equip each push-up-operated or emergency-operated door with lifting handles on each side of door, finished to match door.
 - E. Pull-Down Strap: Provide pull-down straps for doors more than 84 inches high.
 - F. Automatic-Closing Device for Fire-Rated Doors: Equip each fire-rated door with an automatic-closing device or holder-release mechanism and governor unit complying with NFPA 80 and an easily tested and reset release mechanism. Release mechanism for motor- operated doors shall allow testing without mechanical release of the door. Automatic-closing device shall be designed for activation by the following:
 1. Replaceable fusible links with temperature rise and melting point of 165 deg F interconnected and mounted on both sides of door opening.
 2. Manufacturer's standard UL-labeled smoke detector and door-holder-release devices.
 3. Manufacturer's standard UL-labeled heat detector and door-holder-release devices.
 4. Building fire-detection, smoke-detection, and -alarm systems.

2.09 COUNTERBALANCING MECHANISM

- A. General: Counterbalance doors by means of manufacturer's standard mechanism with an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.
- B. Counterbalance Barrel: Fabricate spring barrel of manufacturer's standard hot-formed, structural-quality, seamless or welded carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of slats and to limit barrel deflection to not more than 0.03 in./ft. of span under full load.
- C. Counterbalance Spring: One or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.
 1. Fire-Rated Doors: Equip with auxiliary counterbalance spring and prevent tension release from main counterbalance spring when automatic closing device operates.
- D. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel, sized to hold fixed spring ends and carry torsional load.
- E. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.

2.10 ELECTRIC DOOR OPERATORS

- A. General: Electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and operation-cycles requirement specified,

with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, control stations, control devices, integral gearing for locking door, and accessories required for proper operation.

1. Comply with NFPA 70.
 2. Control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24-V ac or dc.
- B. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each door.
- C. Door Operator Location(s): Operator location indicated for each door.
1. Top-of-Hood Mounted: Operator is mounted to the right or left door head plate with the operator on top of the door-hood assembly and connected to the door drive shaft with drive chain and sprockets. Headroom is required for this type of mounting.
 2. Front-of-Hood Mounted: Operator is mounted to the right or left door head plate with the operator on coil side of the door-hood assembly and connected to the door drive shaft with drive chain and sprockets. Front clearance is required for this type of mounting.
 3. Wall Mounted: Operator is mounted to the inside front wall on the left or right side of door and connected to door drive shaft with drive chain and sprockets. Side room is required for this type of mounting. Wall mounted operator can also be mounted above or below shaft; if above shaft, headroom is required.
 4. Bench Mounted: Operator is mounted to the right or left door head plate and connected to the door drive shaft with drive chain and sprockets. Side room is required for this type of mounting.
 5. Through-Wall Mounted: Operator is mounted on other side of wall from coil side of door.
- D. Motors: Reversible-type motor for motor exposure indicated.
1. Electrical Characteristics:
 - a. Phase: Single phase Polyphase.
 - b. Volts: 115 208 230 460 Insert value V.
 - c. Hertz: 60.
 2. Motor Size: Minimum size as indicated. If not indicated, large enough to start, accelerate, and operate door in either direction from any position, at a speed not less than 8 in./sec. and not more than 12 in./sec., without exceeding nameplate ratings or service factor.
 3. Operating Controls, Controllers, Disconnect Switches, Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
 4. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.
- E. Limit Switches: Equip each motorized door with adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.
- F. Obstruction Detection Devices: External entrapment protection consisting of indicated automatic safety sensor capable of protecting full width of door opening. For fire-rated doors, activation delays closing.
1. Photoelectric Sensor: Manufacturer's standard system designed to detect an

obstruction in door opening without contact between door and obstruction.

- a. Self-Monitoring Type: Designed to interface with door operator control circuit to detect damage to or disconnection of sensing device. When self-monitoring feature is activated, door closes only with sustained or constant pressure on close button.
- G. Control Station: Three-button control station in fixed location with momentary-contact push-button controls labeled "Open" and "Stop" and sustained- or constant-pressure push-button control labeled "Close."
 1. Interior-Mounted Units: Full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
 2. Exterior-Mounted Units: Full-guarded, standard-duty, surface-mounted, weatherproof type, NEMA ICS 6, Type 4 enclosure, key operated.
- H. Emergency Manual Operation: Equip each electrically powered door with capability for emergency manual operation. Design manual mechanism so required force for door operation does not exceed 25 lbf.
- I. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
- J. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.
- K. Audible and Visual Signals: Audible alarm and visual indicator lights in compliance with regulatory requirements for accessibility.

2.11 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA's "Metal Finishes Manual for Architectural and Metal Products (AMP 500-06)" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.12 STEEL AND GALVANIZED-STEEL FINISHES

- A. Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.

- B. Examine locations of electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install overhead coiling doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
- B. Install overhead coiling doors, hoods, controls, and operators at the mounting locations indicated for each door.
- C. Accessibility: Install overhead coiling doors, switches, and controls along accessible routes in compliance with regulatory requirements for accessibility.
- D. Fire-Rated Doors: Install according to NFPA 80.
- E. Smoke-Control Doors: Install according to NFPA 80 and NFPA 105.
- F. Power-Operated Doors: Install according to UL 325.

3.03 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Perform installation and startup checks according to manufacturer's written instructions.
 - 2. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
 - 3. Test door closing when activated by detector or alarm-connected fire-release system. Reset door-closing mechanism after successful test.

3.04 ADJUSTING

- A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
 - 1. Adjust exterior doors and components to be weather-resistant.
- B. Lubricate bearings and sliding parts as recommended by manufacturer.
- C. Adjust seals to provide tight fit around entire perimeter.

3.05 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain overhead coiling doors.

END OF SECTION 08 33 23

SECTION 08 33 25**OVERHEAD COILING COUNTER DOORS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

- B. Section Includes manually operated counter doors.
- C. Related Sections:
 - 1. Division 12 Section "Stainless Steel Countertops."

1.02 PERFORMANCE REQUIREMENTS

- A. Operation Cycles: Provide overhead coiling door components and operators capable of operating for not less than number of cycles indicated for each door. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.

1.03 SUBMITTALS

- A. Product Data: For each type and size of overhead coiling door and accessory. Include the following:
 - 1. Construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
- B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
- C. Samples for Initial Selection: Manufacturer's finish charts showing full range of colors and textures available for units with factory-applied finishes.
 - 1. Include similar Samples of accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.
 - 1. Curtain Slats: 12 inches long.
- E. Qualification Data: For qualified Installer.
- F. Maintenance Data: For overhead coiling doors to include in maintenance manuals.
- G. LEED Submittals:

1. Product Data for Credit MR 4.1 and Credit MR 4.2: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content.
 - a. Include statement indicating costs for each product having recycled content.

1.04 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for both installation and maintenance of units required for this Project.
- B. Source Limitations: Obtain overhead coiling doors from single source from single manufacturer.

PART 2 - PRODUCTS

2.01 DOOR CURTAIN MATERIALS AND CONSTRUCTION

- A. Door Curtains: Fabricate overhead coiling-door curtain of interlocking metal slats, in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of thickness and mechanical properties recommended by door manufacturer for performance, size, and type of door indicated, and as follows:
 1. Steel Door Curtain Slats: Zinc-coated (galvanized), cold-rolled structural steel sheet; complying with ASTM A 653/A 653M, with G90 zinc coating; nominal sheet thickness (coated) of 0.028 inch and as required to meet requirements.
- B. Endlocks for Counter Doors: Manufacturer's standard locks on not less than alternate curtain slats for curtain alignment and resistance against lateral movement.
- C. Bottom Bar for Counter Doors: Manufacturer's standard continuous channel or tubular shape, fabricated from manufacturer's standard hot-dip galvanized steel to match curtain slats and finish.
- D. Astragal for Interior Doors: Equip each door bottom bar with a replaceable, adjustable, continuous, compressible gasket of flexible vinyl, rubber, or neoprene as a cushion bumper.
- E. Curtain Jamb Guides: Manufacturer's standard angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Slot bolt holes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain.
- F. Recycled Content of Steel Products: Provide products with an average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent. the following:
 1. Steel Curtain Material, Structural Steel Guides and Bottom Bar Angle: 50 percent.

2.02 HOOD

- A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-

mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.

1. Galvanized Steel: Nominal 0.028-inch- thick, hot-dip galvanized steel sheet with G90 zinc coating, complying with ASTM A 653/A 653M.

B. Recycled Content of Steel Products: Provide products with an average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 50 percent.

2.03 LOCKING DEVICES

A. Lockset: Cylinder lock as specified in Section 08 71 00 "Door Hardware."

2.04 COUNTERBALANCING MECHANISM

A. General: Counterbalance doors by means of manufacturer's standard mechanism with an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.

B. Counterbalance Barrel: Fabricate spring barrel of manufacturer's standard hot-formed, structural-quality, welded or seamless carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of slats and to limit barrel deflection to not more than 0.03 in./ft. of span under full load.

C. Spring Balance: One or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.

D. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel, sized to hold fixed spring ends and carry torsional load.

E. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.

F. Recycled Content of Steel Products: Provide products with an average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than the following:

1. General Steel Components in Shafts and Brackets: 50 percent.

2.05 MANUAL DOOR OPERATORS

A. Chain-Hoist Operator: Consisting of endless steel hand chain, chain-pocket wheel and guard, and gear-reduction unit with a maximum 25 lbf force for door operation. Provide alloy-steel hand chain with chain holder secured to operator guide.

2.06 DOOR ASSEMBLY

A. Counter Door: Overhead coiling door formed with curtain of interlocking metal slats.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- a. Cookson Company.
 - b. Cornell Iron Works, Inc.
 - c. Raynor.
- B. Operation Cycles: Not less than 20,000.
- C. Door Curtain Material: Galvanized steel.
- D. Door Curtain Slats: Flat profile slats of 1-1/4-inch or 1-1/2-inch center-to-center height.
- E. Curtain Jamb Guides: Galvanized steel with exposed finish matching curtain slats.
- F. Hood: Match curtain material and finish.
- 1. Shape: As shown on Drawings.
 - 2. Mounting: Face of wall.
- G. Sill Configuration for Counter Door: No sill. See Division 12 Section "Stainless Steel Countertops."
- H. Locking Devices: Equip door with chain lock keeper.
- I. Manual Door Operator: Chain-hoist operator.
- J. Door Finish:
- 1. Stainless-Steel Finish: No. 4 (polished directional satin).

2.07 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.08 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
- 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION**3.01 EXAMINATION**

- A. Examine substrates areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install overhead coiling doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
- B. Install overhead coiling doors, hoods, and operators at the mounting locations indicated for each door.
- C. Accessibility: Install overhead coiling doors, switches, and controls along accessible routes in compliance with regulatory requirements for accessibility.

3.03 ADJUSTING

- A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
- B. Lubricate bearings and sliding parts as recommended by manufacturer.

END OF SECTION 08 33 25

SECTION 08 34 19
INDUSTRIAL FOUR-FOLD DOORS**PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. This Section includes Four-Fold metal doors with surface mounted tube frames
- B. Operation of Four-Fold metal doors includes overhead mounted electro-mechanical operators.

1.03 SUBMITTALS

- A. General: Submit each item in this Article according to the Conditions of the Contract and Division 1 Specification Sections.
- B. Product Data for each type of product specified consisting of manufacturer's technical Product Data and installation instructions for each type of door required, including data substantiating that products comply with requirements.
- C. Submittal Drawings showing fabrication and installation of Four-Fold metal doors including plans, elevations, sections, details of components, hardware, operating mechanism, and attachments to the other units of Work. Include wiring diagrams for coordination with electrical trade.
- D. Reference list including (5) successful installations of this type of door within the past two (2) years.

1.04 QUALITY ASSURANCE

- A. Door manufacturer shall have at least 10 years experience in manufacturing door type specified for emergency vehicle applications.

PART 2 - PRODUCTS**2.01 PERFORMANCE REQUIREMENTS**

- A. Doors shall be designed to withstand external or internal horizontal wind loads of 20 pounds minimum per square foot.
- B. The maximum allowable deflection shall not exceed 1/120 of the span, acting vertically, across the entire door opening. Flexural stresses in main members shall be limited to 27,000 pounds per square inch. Steel frames shall be designed in accordance with the AISC "Steel Construction Manual".
 - 1. Basis of calculations: See loading geometry shown in Fig. 1 below.

Fig. 1

2.02 MANUFACTURERS

- A. Manufacturers: Four-Fold industrial metal doors manufactured by Electric Power Door or comparable products by other manufacturers meeting all performance requirements and if approved in advance by Architect.

1. Model: Model 39 Hydraulic Four-Fold Doors with Catenary Notch.

2.03 MATERIALS

- A. Structural Steel: ASTM A36/A36M.
- B. Steel Sheets: Steel sheets of commercial quality, complying with ASTM A366/A366M cold-rolled steel sheet, or A569/A569M hot-rolled steel sheet.
- C. Steel Tubing, Electric Welded: ASTM A513.
- D. Steel Tubing, Structural Welded: ASTM A500 Grade B.
- E. Hardware: Manufacturer's standard components.
- F. Fasteners: Zinc-coated steel.

2.04 FOUR-FOLD DOORS

- A. Construction: Provide doors with both horizontal and vertical structural framing. Door framing shall be minimum 14-gauge structural steel tube with 14-gauge steel sheet on the exterior and interior faces.
1. Sheeting shall be formed on the vertical edges with no visible welds on the interior or exterior panel faces.
 2. All frames and framing members shall be true to dimension and square in all directions, and no door shall be bowed, warped, or out of line, in the vertical or horizontal plane of the door opening by more than 1/8 inch in 20 feet.
 3. Exposed welds and welds which interfere with the installation of various parts shall be ground smooth and flush.

4. Door sections shall be insulated with 2 inches of fiberglass batt insulation to provide a u-value of 0.12 or less. Insulation material shall be fitted to cover the entire surface of the door panel between structural members.
 5. Provide cut-out notch in center door panels to accommodate catenary when in closed position. Provide di-electric silicon rubber seal, field cut, to close around catenary and make weather-tight.
- B. Structural Frame: Provide structural frame of welded construction with all joints ground smooth wherever exposed and/or where sheeting overlaps the framing members All hinges, track supports and operator supports shall be factory attached.
- C. Factory finish: All exposed steel shall be shop primed in preparation for field finishing.
- D. Operating Hardware: Provide hardware, including guide tracks and brackets, trolleys, center guides, not less than three pairs of jamb and fold hinges per opening, and all bolts, nuts, fasteners, etc. necessary for complete installation and operation, and as follows:
1. Jamb Hinges: Construct from steel 3 inch x 3/8 inch bar. Any seams where the barrel of the jamb hinge joins the strap must be fully welded. A pair of gussets consisting of 1inch x 3/8 inch x 21inch long steel bars shall be welded to the surface of the hinge strap and barrel. Each hinge shall be supported on Timken roller bearings properly sized to carry the weight of the jamb and center door panels. Jamb hinges shall be attached to the door panel with through bolted connections. Grease zerk fittings shall be provided on all hinge barrels for greasing hinge pintles.
 2. Door Guides: The door guides shall be an upside down channel fabricated from 1/4 inch thick steel plate. Include wall support brackets.. Guides shall be capable of being mounted within 4 inch headroom.
 3. Guide Roller Assemblies: The door shall have a minimum of two anti-friction bearing guide rollers. The guide rollers shall be of sufficient size to transmit the windload from the door panel to the steel door guides.
- E. Weatherstripping: Material shall be adjustable and readily replaceable and provide a substantially weather-tight installation. Weatherstripping at center shall be 1/16 " cloth inserted neoprene. Weatherstripping at sill shall be 1/16 inch cloth inserted neoprene on interior and exterior. Weatherstripping shall be retained continuously.
- F. Perimeter Weatherstripping: Provide jamb and head weatherstripping of 1/16inch cloth-inserted neoprene bulb (or closed cell neoprene).
- G. Vision Panels or grilles: Provide vision panels or grilles of the size, shape and location as noted on the drawings.

2.05 OPERATOR

- A. Each Four-Fold door shall be hydraulically operated using one (1) jamb mounted cylinder per side. There shall be no more than five pivot points in the jamb mounted door actuator mechanism with no sliding or rolling contact points. Hydraulic door operators shall not use a geared "rack & pinion" operating system of any type to provide motion to doors. The use of overhead rotary or jamb mounted rotary actuators will not be allowed. The hydraulic cylinder rods shall extend from the hydraulic cylinder and be in the retracted position when the door is closed.

-
- B. Operator shall be instantly reversible, open and close rapidly and start and stop gradually. Operator shall be adjustable to allow door to fully clear the opening. Operator shall automatically lock the door in the closed position. Operator shall be equipped with disengaging mechanism to convert to free wheeling mode for manual operation.
- C. The operator shall be furnished complete and shall consist of a hydraulic power unit complete with integral pump, hydraulic reservoir, hydraulic control manifold block and attached electric motor. Control panel(s), adjustable limits, hydraulic cylinders, push button station(s), and all necessary brackets, hydraulic hoses and fittings to provide smooth and satisfactory operation shall be provided.
- D. Operator shall open or close the door, starting the door in motion smoothly and then accelerating the door panels to mid-swing and decelerate the panels to an adjustable slow and smooth stop.
- E. Each hydraulic actuator shall be mounted onto the wall adjacent to the jamb panel hinges and require less than 14 inches of wall space. Approximately 2 foot -6 inches of side-room (measured from the edge of the door jamb), or 1 foot -8 inches of side room (measured from the jamb panel hinge centerline) shall be required to swing the jamb panel 105 degrees for full operation.
- F. Actuators shall not extend out from the door more than 18 inches when the door is closed.
- G. Provide an emergency override of the hydraulic system that will enable the doors to be manually operated in case of a power failure.
1. Door panels shall be free to operate manually after the emergency override system has been activated.
- H. The powered opening and closing motion of the left and right hand door panels shall automatically resynchronize themselves without adjustments to any limit switches after the emergency override has been reset and the doors have been returned to powered operation.
- I. Pump Unit: Each pump unit shall be rated by the manufacturer to provide a minimum flow rate of 3 gallons per minute at 1,100 psi hydraulic pressure. Pump units shall consist of the following:
1. Electric Motor: Electric motor driving the pump shall be suitable for operation on 3 phase, 460 volts AC power Specify different voltage if required and of sufficient horsepower and torque to move door in either direction from any position to produce an average door travel speed measured from the leading edge of the jamb panel of not less than two-thirds, nor more than one foot per second, without exceeding the rated capacity of the motor. The motor shall be totally enclosed with fan cooling (TEFC) and conform to NEMA Design "B" (Code J) standards with an insulation class of F4. Motor horsepower rating shall be 2 H.P. minimum, with service factor rating equal to or greater than 1.15
 2. Electric motor shall be of sufficient size to operate doors under normal operating conditions at no more than 75 percent of rated capacity. The motor shall be wound for three phase 208/230/480 (select one) VAC, 60 Hertz operation.
 3. Hydraulic Reservoir Tank: Each reservoir tank shall have a hydraulic oil capacity of 4.5 gallons and be equipped with an oil level sight glass and removable lid. An

- additional combination electronic low level/high temperature hydraulic oil sensing switch shall be factory wired to a NEMA 4 electrical junction box permanently attached to the reservoir unit.
4. A precision hydraulic gear pump with a screened oil strainer shall be connected to the suction side of the pump. The pump shall be mounted inside the reservoir and connected to the motor with a suitable self-aligning coupling.
 5. Hydraulic control valves shall be incorporated into a single machined aluminum manifold block that is attached to the lid of the hydraulic reservoir and shall be removable without removing the lid from the reservoir. The manifold shall be designed to smoothly start the doors into motion and then increase the speed to the maximum at mid-cycle, and then slow the doors to a smooth stop. All movements shall be smooth and controlled. The valves in the manifold shall be capable of independently adjusting the operator's over-all speed, the closing speed, and the deceleration (checking speed) near the end of opening and closing cycles. Needle type flow control valves shall be provided in the manifold to allow for manual operation of the doors without disconnecting cylinder actuators from the door panels. Additional hydraulic components consisting of pressure relief valve, back-flow check valve, manual operation valves, synchronization valve, oil filter, oil filled pressure gauge with snubber and shut-off valve shall be incorporated into the manifold. Solenoid operated directional control and cushioning valves shall be installed into the manifold and factory wired into the NEMA 4 electrical junction box. Each solenoid shall be connected with a field detachable weather resistant DIN connector that includes a red LED indicator. The use of individual hydraulic flow control valves to synchronize the operator speeds, or hydraulic fittings to connect the required valves will not be allowed.
 6. Pump Enclosure: Provide a ventilated, lockable steel enclosure with hinged door to fully surround the pump unit assembly. Enclosure wall, top and floor shall be designed and fabricated to prevent intrusion with normal hand tools. Provide wall-mounting brackets for motor pump assembly and/or pump enclosure assembly.
 7. Door Position Switches: Provide limits to be used exclusively for indicating if the door is in the opened or closed position.
 8. A sufficient quantity of hydraulic hose shall be supplied to interconnect the pump unit to the door operators. The hydraulic hose shall be 3/8 inch minimum inside diameter and consist of an inner synthetic rubber tube with one braid of high-tensile strength steel wire reinforcement and an outer synthetic rubber cover which is resistant to oil, weather and abrasion. The hose shall be capable of operation in temperature ranges between -40 to +250 degrees F. Minimum burst pressure to be 9,000 PSI. Hose to be equivalent to SAE 100 R1 type "AT".
 9. Supply all-temperature hydraulic fluid (-70 to +120 degree F) to fill the pump unit, hydraulic lines and operators. Hydraulic fluid shall be Lubriplate 231052-70.
- J. Electric Controls: Controls shall be furnished by the door manufacturer and shall be complete for each door, and built in accordance with the latest NEMA standards. Control circuits shall not exceed a nominal 110 volts.
1. Controls shall include a programmable logic controller with digital message display. Controller shall include programmable close timers and programmable inputs/outputs
 2. Motor starters shall be magnetic reversing, factory wired with overload and under voltage protection, and equipped with mechanical interlocks. All control components shall be enclosed in one enclosure with a wiring diagram placed on the inside of the cover.

3. Enclosures shall be NEMA 4 with disconnect switch.
4. Pushbuttons (interior) for each door shall have one momentary pressure three-button push-button station marked "OPEN", "CLOSE" and "STOP". Push button enclosure shall be NEMA 4.
5. Limit switches shall be provided to stop the travel of the door in its fully open or fully closed position. Provide auxiliary limit switch to be used for HVAC or exhaust removal system.
6. Safety edges: Provide electric safety edges on leading edge of all doors to reverse door upon contact with obstruction. Provide wireless safety edge transmitters with low battery alarm
7. Photo eyes: Provide (1) exterior, jamb mounted, thru-beam type photo eyes, NEMA 4 rated.
8. Presence Sensor: Provide (2) interior, overhead mounted, presence sensor.
9. Radio controls: Provide one (1) radio receiver and (1) single button remotes per door. Remotes to open and close doors with single button.
10. Wiring: Door manufacturer shall supply controls and components only. Electrical contractor shall install controls and furnish and install conduits and wiring for jobsite power and control wiring.

PART 3 - EXECUTION

3.01 INSTALLATION

- A. Install Four-Fold metal doors in accordance with the approved drawings by qualified door erection crews. All door openings shall be completely prepared by the general contractor prior to the installation of the doors. Permanent or temporary electric wiring shall be brought to the door opening before installation is started and shall be completed so as not to delay the inspection test.
- B. Doors shall be set plumb, level, and square, and with all parts properly fastened and mounted. All moving parts shall be tested and adjusted and left in good operating condition.

3.02 ADJUSTING AND CLEANING

- A. Inspection of the doors and a complete operating test will be made by the installer in the presence of the general contractor and Architect as soon as the erection is complete. Any defects noted shall be corrected. After door approval in the above test, the general contractor must assume the responsibility for any damage or rough handling of the doors during construction until the building is turned over to the Owner and final inspection is made.
- B. Clean surfaces and repaint abraded or damaged finished surfaces to match factory-applied finish.

END OF SECTION 08 34 19

SECTION 08 36 16**STEEL SECTIONAL DOORS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes electrically operated steel sectional doors.
- B. Related Sections:
 - 1. Division 05 Section "Metal Fabrications" for miscellaneous steel supports.
 - 2. Division 26 Sections for electrical service and connections for powered operators and accessories.

1.03 PERFORMANCE REQUIREMENTS

- A. General Performance: Sectional doors shall meet performance requirements specified without failure due to defective manufacture, fabrication, installation, or other defects in construction and without requiring temporary installation of reinforcing components.
- B. Delegated Design: Design sectional doors, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- C. Structural Performance: Exterior sectional doors shall withstand the effects of gravity loads, and the following loads and stresses within limits and under conditions indicated according to ASCE/SEI 7
 - 1. Wind Loads: As indicated on Drawings.
 - 2. Deflection Limits: Design sectional doors to withstand design wind loads without evidencing permanent deformation or disengagement of door components. Deflection of door in horizontal position (open) shall not exceed 1/120 of the door width.
- D. Air Infiltration: Maximum rate not more than indicated when tested according to ASTM E 283.
 - 1. Air Infiltration: Maximum rate of 0.08 cfm/sq. ft. at 15 and 25 mph.
- E. Windborne-Debris-Impact-Resistance Performance: Provide sectional doors that pass large-missile-impact and cyclic-pressure tests when tested according to ASTM E 1886 and ASTM E 1996.
- F. Seismic Performance: Sectional doors shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

2. Seismic Component Importance Factor: 1.5.

- G. Operation Cycles: Provide sectional door components and operators capable of operating for not less than number of cycles indicated for each door. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.

1.04 SUBMITTALS

- A. Product Data: For each type and size of sectional door and accessory. Include the following:
1. Construction details, material descriptions, dimensions of individual components, profile door sections, and finishes.
 2. Rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
- B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data. Include plans, elevations, sections, details, and attachments to other work.
1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Wiring Diagrams: For power, signal, and control wiring.
- C. Samples for Initial Selection: Manufacturer's finish charts showing full range of colors and textures available for units with factory-applied finishes.
1. Include similar Samples of accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:
1. Flat Door Sections: 6 inches square.
 2. Frame for Paneled Door Sections: 6 inches long of each width of stile and rail required.
 3. Panel for Raised-Panel Door Sections: 12 inches square at panel corner, but not smaller than required to show raised-panel profile.
- E. Delegated-Design Submittal: For sectional doors indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Detail fabrication and assembly of seismic restraints.
 2. Summary of forces and loads on walls and jambs.
- F. Qualification Data: For qualified Installer.
- G. Seismic Qualification Certificates: For sectional doors, accessories, and components, from manufacturer.
- H. Maintenance Data: For sectional doors to include in maintenance manuals.
- I. Warranties: Sample of special warranties.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for both installation and maintenance of units required for this Project.
- B. Source Limitations: Obtain sectional doors from single source from single manufacturer.
 - 1. Obtain operators and controls from sectional door manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Standard for Sectional Doors: Fabricate sectional doors to comply with DASMA 102 unless otherwise indicated.
- E. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA) and Architectural Barriers Act (ABA) Accessibility Guidelines for Buildings and Facilities" and ICC/ANSI A117.1.

1.06 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of sectional doors that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Faulty operation of hardware.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use; rust through.
 - d. Delamination of exterior or interior facing materials.
 - 2. Warranty Period: Two years from date of Substantial Completion.
- B. Special Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 STEEL DOOR SECTIONS

- A. Exterior Section Faces and Frames: Fabricate from zinc-coated (galvanized), cold-rolled, commercial steel (CS) sheet, complying with ASTM A 653/A 653M, with indicated zinc coating and thickness.
 - 1. Fabricate section faces from single sheets to provide sections not more than 24 inches high and of indicated thickness. Roll horizontal meeting edges to a continuous, interlocking, keyed, rabbeted, shiplap, or tongue-in-groove weathertight seal, with a reinforcing flange return.
 - 2. For insulated doors, provide sections with continuous thermal-break construction, separating the exterior and interior faces of door.

- B. Section Ends and Intermediate Stiles: Enclose open ends of sections with channel end stiles formed from galvanized-steel sheet not less than 0.064-inch- nominal coated thickness and welded to door section. Provide intermediate stiles formed from not less than 0.064-inch- thick galvanized-steel sheet, cut to door section profile, and welded in place. Space stiles not more than 48 inches apart.
- C. Reinforce bottom section with a continuous channel or angle conforming to bottom-section profile and allowing installation of astragal.
- D. Provide reinforcement for hardware attachment.
- E. Board Thermal Insulation: Insulate interior of steel sections with door manufacturer's standard CFC-free polystyrene or polyurethane board insulation, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E 84; or with glass-fiber-board insulation. Secure insulation to exterior face sheet. Enclose insulation completely within steel sections that incorporate the following interior facing material, with no exposed insulation:
 - 1. Interior Facing Material: Zinc-coated (galvanized), cold-rolled, commercial steel (CS) sheet, complying with ASTM A 653/A 653M, with indicated thickness.
 - 2. Interior Facing Material: Manufacturer's standard prefinished hardboard panel, 1/8 inch thick and complying with ANSI A135.5.
- F. Fabricate sections so finished door assembly is rigid and aligned, with tight hairline joints and free of warp, twist, and deformation.

2.02 TRACKS, SUPPORTS, AND ACCESSORIES

- A. Tracks: Manufacturer's standard, galvanized-steel track system of configuration indicated, sized for door size and weight, designed for lift type indicated and clearances shown on Drawings, and complying with ASTM A 653/A 653M for minimum G60 zinc coating. Provide complete track assembly including brackets, bracing, and reinforcement for rigid support of ball-bearing roller guides for required door type and size. Slot vertical sections of track spaced 2 inches apart for door-drop safety device. Slope tracks at proper angle from vertical or design tracks to ensure tight closure at jambs when door unit is closed.
- B. Track Reinforcement and Supports: Galvanized-steel track reinforcement and support members, complying with ASTM A 36/A 36M and ASTM A 123/A 123M. Secure, reinforce, and support tracks as required for door size and weight to provide strength and rigidity without sag, sway, and vibration during opening and closing of doors.
 - 1. Vertical Track Assembly: Track with continuous reinforcing angle attached to track and attached to wall with jamb brackets.
 - 2. Horizontal Track Assembly: Track with continuous reinforcing angle attached to track and supported at points from curve in track to end of track by laterally braced attachments to overhead structural members.
- C. Weatherseals: Replaceable, adjustable, continuous, compressible weather-stripping gaskets of flexible vinyl, rubber, or neoprene fitted to bottom and top of sectional door unless otherwise indicated.

2.03 HARDWARE

- A. General: Provide heavy-duty, corrosion-resistant hardware, with hot-dip galvanized, stainless-steel, or other corrosion-resistant fasteners, to suit door type.

- B. Hinges: Heavy-duty, galvanized-steel hinges of not less than 0.079-inch- nominal coated thickness at each end stile and at each intermediate stile, according to manufacturer's written recommendations for door size. Attach hinges to door sections through stiles and rails with bolts and lock nuts or lock washers and nuts. Use rivets or self-tapping fasteners where access to nuts is not possible. Provide double-end hinges where required, for doors over 16 feet wide unless otherwise recommended by door manufacturer.
- C. Rollers: Heavy-duty rollers with steel ball-bearings in case-hardened steel races, mounted with varying projections to suit slope of track. Extend roller shaft through both hinges where double hinges are required. Provide 3-inch- diameter roller tires for 3-inch- wide track and 2-inch- diameter roller tires for 2-inch- wide track.
- D. Push/Pull Handles: For push-up or emergency-operated doors, provide galvanized-steel lifting handles on each side of door.

2.04 LOCKING DEVICES

- A. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on single-jamb side, operable from inside only.
- B. Locking Device Assembly: Fabricate with cylinder lock, spring-loaded deadbolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.
 - 1. Lock Cylinders: Provide cylinders specified in Division 08 Section "Door Hardware" and keyed to building keying system.
 - 2. Keys: Three for each cylinder.
- C. Chain Lock Keeper: Suitable for padlock.
- D. Safety Interlock Switch: Equip power-operated doors with safety interlock switch to disengage power supply when door is locked.

2.05 COUNTERBALANCE MECHANISM

- A. Torsion Spring: Counterbalance mechanism consisting of adjustable-tension torsion springs fabricated from steel-spring wire complying with ASTM A 229/A 229M, mounted on torsion shaft made of steel tube or solid steel. Provide springs designed for number of operation cycles indicated.
- B. Weight Counterbalance: Counterbalance mechanism consisting of filled pipe weights that move vertically in a galvanized-steel weight pipe. Connect pipe weights with cable to weight-cable drums mounted on torsion shaft made of steel tube or solid steel.
- C. Cable Drums and Shaft for Doors: Cast-aluminum or gray-iron casting cable drums mounted on torsion shaft and grooved to receive door-lifting cables as door is raised. Mount counterbalance mechanism with manufacturer's standard ball-bearing brackets at each end of torsion shaft. Provide one additional midpoint bracket for shafts up to 16 feet long and two additional brackets at one-third points to support shafts more than 16 feet long unless closer spacing is recommended by door manufacturer.
- D. Cables: Galvanized-steel lifting cables with cable safety factor of at least 7 to 1.
- E. Cable Safety Device: Include a spring-loaded steel or spring-loaded bronze cam mounted to bottom door roller assembly on each side and designed to automatically stop door if either lifting cable breaks.

- F. Bracket: Provide anchor support bracket as required to connect stationary end of spring to the wall and to level the shaft and prevent sag.
- G. Provide a spring bumper at each horizontal track to cushion door at end of opening operation.

2.06 ELECTRIC DOOR OPERATORS

- A. General: Electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and "operation cycles" requirement specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, remote-control stations, control devices, integral gearing for locking door, and accessories required for proper operation.
 - 1. Comply with NFPA 70.
 - 2. Provide control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6; with NFPA 70, Class 2 control circuit, maximum 24-V ac or dc.
- B. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each door.
- C. Door-Operator Type: Unit consisting of electric motor, gears, pulleys, belts, sprockets, chains, and controls needed to operate door and meet required usage classification.
 - 1. Jackshaft, Side Mounted: Jackshaft operator mounted on the inside front wall on right or left side of door and connected to torsion shaft with an adjustable coupling or drive chain.
- D. Electric Motors: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Division 11 Section "Common Motor Requirements for Equipment" unless otherwise indicated.
 - 1. Electrical Characteristics:
 - a. Phase: Polyphase.
 - b. Volts: 460 V.
 - c. Hertz: 60.
 - 2. Motor Type and Controller: Reversible motor and controller (disconnect switch) for motor exposure indicated.
 - 3. Motor Size: Minimum size as indicated. If not indicated, large enough to start, accelerate, and operate door in either direction from any position, at a speed not less than 8 in./sec. and not more than 12 in./sec., without exceeding nameplate ratings or service factor.
 - 4. Operating Controls, Controllers (Disconnect Switches), Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
 - 5. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.
 - 6. Use adjustable motor-mounting bases for belt-driven operators.
- E. Limit Switches: Equip each motorized door with adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.
- F. Obstruction Detection Device: Equip motorized door with indicated external

automatic safety sensor capable of protecting full width of door opening. Activation of device immediately stops and reverses downward door travel.

1. Photoelectric Sensor: Manufacturer's standard system designed to detect an obstruction in door opening without contact between door and obstruction.
 - a. Self-Monitoring Type: Designed to interface with door operator control circuit to detect damage to or disconnection of sensor device. When self-monitoring feature is activated, door closes only with sustained pressure on close button.
- G. Remote-Control Station: Momentary-contact, three-button control station with push-button controls labeled "Open," "Close," and "Stop."
 1. Interior units, full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
 2. Exterior units, full-guarded, standard-duty, surface-mounted, weatherproof type, NEMA ICS 6, Type 4 enclosure, key operated.
- H. Emergency Manual Operation: Equip each electrically powered door with capability for emergency manual operation. Design manual mechanism so required force for door operation does not exceed 25 lbf.
- I. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
- J. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.
- K. Audible and Visual Signals: Audible alarm and visual indicator lights in compliance with regulatory requirements for accessibility.
- L. Radio-Control System: Consisting of the following:
 1. Three-channel universal coaxial receiver to open, close, and stop door; two per operator.
 2. Multifunction remote control.
 3. Remote antenna and mounting kit.

2.07 PNEUMATIC DOOR OPERATORS, WET DOORS

- A. General: Provide operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for long-term, maintenance-free operation under traffic load for type of occupancy indicated.
 1. Operators shall start, accelerate, and operate door in either direction from any position, at not less than 2/3 fps and not more than 1 fps.
- B. Pneumatic Operating System: Pneumatic operator, air opened and counterbalance closed, checking in both cycles, with doors manually operable when power is off.
 1. Compressed Air Power Unit: As specified in Division 11 Section "Vehicle Service Equipment."

- C. Disconnect Device: Failsafe operation that allows drawbar carriage to slide along drawbar cylinder in event of electrical or compressed air failure.
- D. Design operator so overhead door may be operated without disturbing limit-switch adjustment.
- E. Door-Operator Type: Trolley or drawbar carriage type unit consisting of pneumatically operated direct magnetic drive and the following:
 - 1. Quick release for manual operation.
 - 2. Minimum 2 inch diameter Type 304 or 316 stainless steel drawbar cylinder.
 - 3. Piston magnetically coupled to a carriage connected to a drawbar cylinder
 - 4. Carriage with integral wiper seal built-in to prevent dust accumulation on cylinder.
 - 5. Sealed stainless steel shock absorbing piston cylinder operating within the following compressed air requirements:
 - a. Air Volume: Not less than 0.2 CFM; not more than 0.4 CFM.
 - b. Air Pressure: Not less than 50 PSIp; not more than 90 PSI.
 - 6. 1/4" NPT x 3/8" non-corrosive airline fittings on piston cylinder.
 - 7. Type 304 or 316 stainless steel brackets and fasteners.
- F. Remote-Control Station: Provide the following:
 - 1. Provide full-guarded, standard-duty, surface-mounted, weatherproof-type exterior unit with NEMA ICS 6, Type 4 enclosure.
 - 2. Provide momentary-contact, two-button control station with illuminated push-button controls labeled "Open" and "Close." Include emergency open button that opens overhead door in case of power failure. Buttons shall comply with requirements for NEMA ICS 6, Type 4 enclosure.
 - 3. Provide automatic compressed air valves mounted with gaskets. O-rings will not be accepted.
 - 4. Provide compressed air noise relief mufflers.
 - 5. Microprocessor Control Unit: Solid-state controls with 24 VAC fused circuitry.
 - 6. Terminal Connections: Provide not less than 10 places for electrical connections.
 - 7. Provide pre-wired electric eye pin sockets.
 - 8. Mounting: Surface.
- G. Operator Features:
 - 1. Adjustable opening and closing speed.
 - 2. Adjustable backcheck.
 - 3. Adjustable hold-open time of not less than 0 to 30 seconds.
 - 4. Adjustable time delay.
 - 5. Adjustable limit switch.
 - 6. Obstruction recycle.
- H. Automatic Oiler: Provide in-line oiler that automatically drops controlled amounts of oil into compressed air lines.
- I. Inline Airline Dryer: Provide in-line dryer that removes excess water from compressed air and prevents build-up of water in air lines.
- J. Obstruction Detection Device: Provide each motorized door with indicated external automatic safety sensor capable of protecting full width of door opening. Activation of sensor immediately stops and reverses downward door travel.

1. Photoelectric Sensor: Manufacturer's standard system designed to detect an obstruction in door opening without contact between door and obstruction.
 2. Pressure-Sensor Edge: Provide each pneumatically operated door with an automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor immediately stops and reverses downward door travel. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.
 - a. Provide pneumatically actuated automatic bottom bar.
- K. Limit Switches: Adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.

2.08 DOOR ASSEMBLY

- A. Steel Sectional Door: Sectional door formed with hinged sections.
1. Basis of Design: Subject to performance requirements, provide Thermospan 200 Doors by Wayne-Dalton or a comparable product by one of the following:
 - a. C.H.I. Overhead Doors.
 - b. Clopay Building Products; a Griffon company.
 - c. Raynor.
 2. Products by Overhead Door Corporation will not be accepted.
 3. Products by Airlift Doors Inc. will not be accepted.
- B. Operation Cycles: Not less than 50,000
- C. Installed R-Value: 17.5
- D. Steel Sections: Zinc-coated (galvanized) steel sheet with G60 zinc coating.
1. Section Thickness: 2 inches nominal.
 2. Exterior-Face, Steel Sheet Thickness: 0.022-inch nominal coated thickness.
 - a. Surface: Manufacturer's standard, grooved.
 3. Insulation: Foamed-in-place polyurethane.
 4. Interior Facing Material: Zinc-coated (galvanized) steel sheet of manufacturer's recommended thickness to meet performance requirements nominal coated thickness.
- E. Track Configuration: Standard-lift track, minimum 3 inches wide.
- F. Weatherseals: Fitted to bottom and top and around entire perimeter of door
- G. Roller-Tire Material: Case-hardened steel, 3-inch diameter to fit 3-inch wide track..
- H. Locking Devices: Equip door with chain lock keeper.
- I. Counterbalance Type: Torsion spring.

2.09 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.10 STEEL AND GALVANIZED-STEEL FINISHES

- A. Factory Prime Finish: Manufacturer's standard primer, compatible with field-applied finish. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.
- B. Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness. Match exterior metal panels.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
- B. Examine locations of electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install sectional doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
- B. Tracks:
 - 1. Fasten vertical track assembly to opening jambs and framing, spaced not more than 24 inches apart.
 - 2. Hang horizontal track assembly from structural overhead framing with angles or channel hangers attached to framing by welding or bolting, or both. Provide sway bracing, diagonal bracing, and reinforcement as required for rigid installation of track and door-operating equipment.
 - 3. Repair galvanized coating on tracks according to ASTM A 780.
- C. Accessibility: Install sectional doors, switches, and controls along accessible routes in compliance with regulatory requirements for accessibility.

3.03 STARTUP SERVICES

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.04 ADJUSTING

- A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
- B. Lubricate bearings and sliding parts as recommended by manufacturer.
- C. Adjust doors and seals to provide weathertight fit around entire perimeter.
- D. Align and adjust motors, pulleys, belts, sprockets, chains, and controls according to manufacturer's written instructions.
- E. Touch-up Painting: Immediately after welding galvanized materials, clean welds and abraded galvanized surfaces and repair galvanizing to comply with ASTM A 780.

3.05 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain sectional doors.

END OF SECTION 08 36 16

SECTION 08 41 13**ALUMINUM-FRAMED STOREFRONTS AND WINDOWS**

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section Includes:
 - 1. Exterior and interior storefront framing.
 - 2. Exterior and interior manual-swing entrance doors and door-frame units.
 - 3. Exterior fixed windows in storefront framing.

1.03 DEFINITIONS

- A. ADA/ABA Accessibility Guidelines: U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disability Act (ADA) and Architectural Barriers Act (ABA) Accessibility Guidelines for Buildings and Facilities."

1.04 PERFORMANCE REQUIREMENTS

- A. General Performance: Aluminum-framed systems shall withstand the effects of the following performance requirements without exceeding performance criteria or failure due to defective manufacture, fabrication, installation, or other defects in construction:
 - 1. Movements of supporting structure indicated on Drawings including, but not limited to, story drift and deflection from uniformly distributed and concentrated live loads.
 - 2. Dimensional tolerances of building frame and other adjacent construction.
 - 3. Failure includes the following:
 - a. Deflection exceeding specified limits.
 - b. Thermal stresses transferring to building structure.
 - c. Framing members transferring stresses, including those caused by thermal and structural movements to glazing.
 - d. Glazing-to-glazing contact.
 - e. Noise or vibration created by wind and by thermal and structural movements.
 - f. Loosening or weakening of fasteners, attachments, and other components.
 - g. Sealant failure.
 - h. Failure of operating units.
- B. Delegated Design: Design aluminum-framed systems, including comprehensive engineering analysis by a qualified professional engineer licensed to practice in the state where the project is located, using performance requirements and design criteria indicated.
- C. Structural Loads:
 - 1. Wind Loads: As indicated on Drawings.
 - 2. Seismic Loads: As indicated on Drawings.

- D. Deflection of Framing Members:
1. Deflection Normal to Wall Plane: Limited to edge of glass in a direction perpendicular to glass plane shall not exceed $L/175$ of the glass edge length for each individual glazing lite or an amount that restricts edge deflection of individual glazing lites to $3/4$ inch, whichever is less.
 2. Deflection Parallel to Glazing Plane: Limited to $L/360$ of clear span or $1/8$ inch, whichever is smaller.
- E. Structural-Test Performance: Provide aluminum-framed systems tested according to ASTM E 330 as follows:
1. When tested at positive and negative wind-load design pressures, systems do not evidence deflection exceeding specified limits.
 2. When tested at 150 percent of positive and negative wind-load design pressures, systems, including anchorage, do not evidence material failures, structural distress, and permanent deformation of main framing members exceeding 0.2 percent of span.
 3. Test Durations: As required by design wind velocity, but not fewer than 10 seconds.
- F. Air Infiltration: Provide aluminum-framed systems with maximum air leakage through fixed glazing and framing areas of 0.06 cfm/sq. ft. of fixed wall area when tested according to ASTM E 283 at a minimum static-air-pressure difference of 1.57 lbf/sq. ft.
- G. Water Penetration under Static Pressure: Provide aluminum-framed systems that do not evidence water penetration through fixed glazing and framing areas when tested according to ASTM E 331 at a minimum static-air-pressure difference of 20 percent of positive wind-load design pressure, but not less than 6.24 lbf/sq. ft.
1. Maximum Water Leakage: According to AAMA 501.1. Water leakage does not include water controlled by flashing and gutters that is drained to exterior and water that cannot damage adjacent materials or finishes.
- H. Thermal Movements: Provide aluminum-framed systems that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
 2. Test Performance: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested according to AAMA 501.5.
 - a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of 180 deg F.
 - b. Low Exterior Ambient-Air Temperature: 0 deg F.
 3. Interior Ambient-Air Temperature: 75 deg F.
- I. Condensation Resistance: Provide aluminum-framed systems with fixed glazing and framing areas having condensation-resistance factor (CRF) of not less than 45 when tested according to AAMA 1503.
- J. Thermal Conductance: Provide aluminum-framed systems with fixed glazing and framing areas having an average U-factor of not more than 0.57 Btu/sq. ft. x h x deg F when tested according to AAMA 1503.

- K. Structural Sealant: Capable of withstanding tensile and shear stresses imposed by aluminum-framed systems without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant shall occur before adhesive failure.
1. Adhesive failure occurs when sealant pulls away from substrate cleanly, leaving no sealant material behind.
 2. Cohesive failure occurs when sealant breaks or tears within itself but does not separate from each substrate because sealant-to-substrate bond strength exceeds sealant's internal strength.
- L. Structural-Sealant Joints: Designed to produce tensile or shear stress of less than 20 psi.

1.05 SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for aluminum-framed systems.
- B. Shop Drawings: For aluminum-framed systems. Include plans, elevations, sections, details, and attachments to other work.
1. Include details of provisions for system expansion and contraction and for drainage of moisture in the system to the exterior.
 2. For entrance doors, include hardware schedule and indicate operating hardware types, functions, quantities, and locations.
- C. Samples for Initial Selection: For units with factory-applied color finishes.
- D. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
- E. Fabrication Sample: Of each vertical-to-horizontal intersection of aluminum-framed systems, made from 12-inch lengths of full-size components and showing details of the following:
1. Joinery, including concealed welds.
 2. Anchorage.
 3. Expansion provisions.
 4. Glazing.
 5. Flashing and drainage.
- F. Other Action Submittals:
1. Entrance Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of entrance door hardware, as well as procedures and diagrams. Coordinate final entrance door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of entrance door hardware.
- G. Delegated-Design Submittal: For aluminum-framed systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Detail fabrication and assembly of aluminum-framed systems.
 2. Include design calculations.

- H. Qualification Data: For qualified Installer.
- I. Seismic Qualification Certificates: For aluminum-framed systems, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
- J. Welding certificates.
- K. Preconstruction Test Reports: For sealant.
- L. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for aluminum-framed systems, indicating compliance with performance requirements.
- M. Source quality-control reports.
- N. Quality-Control Program for Structural-Sealant-Glazed System: Include reports.
- O. Field quality-control reports.
- P. Maintenance Data: For aluminum-framed systems to include in maintenance manuals.
- Q. Warranties: Sample of special warranties.

1.06 QUALITY ASSURANCE

- A. Source Limitations for Aluminum-Framed Systems: Obtain Aluminum Framed Entrances and Storefront and Curtain Wall System from single source from single manufacturer.
- B. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
- C. Testing Agency Qualifications: Qualified according to ASTM E 699 for testing indicated.
- D. Engineering Responsibility: Prepare data for aluminum-framed systems, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in systems similar to those indicated for this Project.
- E. Quality-Control Program for Structural-Sealant-Glazed System: Develop quality control program specifically for Project. Document quality-control procedures and verify results for aluminum-framed systems. Comply with ASTM C 1401 recommendations including, but not limited to, system material-qualification procedures, preconstruction sealant-testing program, procedures for system fabrication and installation, and intervals of reviews and checks.
- F. Product Options: Information on Drawings and in Specifications establishes requirements for systems' aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including preconstruction testing, field testing, and in-service performance.

1. Do not revise intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If revisions are proposed, submit comprehensive explanatory data to Architect for review.
- G. Accessible Entrances: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and ICC/ANSI A117.1.
- H. Welding Qualifications: Qualify procedures and personnel according to AWS D1.2, "Structural Welding Code - Aluminum."
- I. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
1. Build mockup of typical wall area as shown on Drawings.
 2. Field testing shall be performed on mockups according to requirements in "Field Quality Control" Article.
 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- J. Preinstallation Conference: Conduct conference at Project site.

1.07 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of structural supports for aluminum-framed systems by field measurements before fabrication and indicate measurements on Shop Drawings.

1.08 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of aluminum-framed systems that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Noise or vibration caused by thermal movements.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 - d. Adhesive or cohesive sealant failures.
 - e. Water leakage through fixed glazing and framing areas.
 - f. Failure of operating components.
 2. Warranty Period: Two years from date of Substantial Completion.
- B. Special Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes do not comply with requirements or that fail in materials or workmanship within specified warranty period. Warranty does not include normal weathering.
1. Warranty Period: Five years from date of Substantial Completion.

1.09 MAINTENANCE SERVICE

A. Entrance Door Hardware:

1. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of entrance door hardware.
2. Initial Maintenance Service: Beginning at Substantial Completion, provide six months' full maintenance by skilled employees of entrance door hardware Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper entrance door hardware operation at rated speed and capacity. Provide parts and supplies the same as those used in the manufacture and installation of original equipment.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Trifab 451T Storefront Framing System by Kawneer North America or comparable product by one of the following:
1. Arcadia, Inc.
 2. EFCO Corporation.
 3. Tubelite.
 4. United States Aluminum.
 5. Vistawall Architectural Products; The Vistawall Group; a Bluescope Steel company.
 6. Wausau Window and Wall Systems.

2.02 MATERIALS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
1. Sheet and Plate: [ASTM B 209](#).
 2. Extruded Bars, Rods, Profiles, and Tubes: [ASTM B 221](#).
 3. Extruded Structural Pipe and Tubes: [ASTM B 429](#).
 4. Structural Profiles: [ASTM B 308/B 308M](#).
 5. Welding Rods and Bare Electrodes: [AWS A5.10/A5.10M](#).
- B. Steel Reinforcement: Manufacturer's standard zinc-rich, corrosion-resistant primer, complying with SSPC-PS Guide No.12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.
1. Structural Shapes, Plates, and Bars: [ASTM A 36/A 36M](#).
 2. Cold-Rolled Sheet and Strip: [ASTM A 1008/A 1008M](#).
 3. Hot-Rolled Sheet and Strip: [ASTM A 1011/A 1011M](#).

2.03 FRAMING SYSTEMS

- A. Framing Members: Manufacturer's standard extruded-aluminum framing members of thickness required and reinforced as required to support imposed loads.
1. Construction: Thermally broken.

2. Glazing System: Retained mechanically with gaskets on four sides.
 3. Glazing Plane: Center.
- B. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.
- C. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 2. Reinforce members as required to receive fastener threads.
- D. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts, complying with ASTM A 123/A 123M or ASTM A 153/A 153M.
- E. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.
- F. Framing System Gaskets and Sealants: Manufacturer's standard, recommended by manufacturer for joint type.
1. Provide sealants for use inside of the weatherproofing system that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.04 ENTRANCE DOOR SYSTEMS

- A. Entrance Doors: Manufacturer's standard glazed entrance doors for manual-swing operation.
1. Door Construction: 1-3/4-inch overall thickness, with minimum 0.125-inch overall thickness, with minimum 0.188-inch-thick, extruded-aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods.
 - a. Thermal Construction: High-performance plastic connectors separate aluminum members exposed to the exterior from members exposed to the interior.
 2. Door Design: As indicated.
 - a. Accessible Doors: Smooth surfaced for width of door in area within 10 inches above floor or ground plane.
 3. Glazing Stops and Gaskets: Beveled, snap-on, extruded-aluminum stops and preformed gaskets.
 - a. Provide nonremovable glazing stops on outside of door.
- B. Entrance Door Hardware: As specified in Division 08 Section "Door Hardware."

2.05 GLAZING SYSTEMS

- A. Glazing: As specified in Division 08 Section "Glazing."

2.06 ACCESSORY MATERIALS

- A. Joint Sealants: For installation at perimeter of aluminum-framed systems, as specified in Division 07 Section "Joint Sealants."
 - 1. Provide sealants for use inside of the weatherproofing system that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. Bituminous Paint: Cold-applied, asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos; formulated for 30-mil thickness per coat.

2.07 FABRICATION

- A. Form or extrude aluminum shapes before finishing.
- B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- C. Framing Members, General: Fabricate components that, when assembled, have the following characteristics:
 - 1. Profiles that are sharp, straight, and free of defects or deformations.
 - 2. Accurately fitted joints with ends coped or mitered.
 - 3. Means to drain water passing joints, condensation within framing members, and moisture migrating within the system to exterior.
 - 4. Physical and thermal isolation of glazing from framing members.
 - 5. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
 - 6. Provisions for field replacement of glazing from exterior.
 - 7. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
- D. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.
- E. Structural-Sealant-Glazed Framing Members: Include accommodations for using temporary support device to retain glazing in place while structural sealant cures.
- F. Storefront Framing: Fabricate components for assembly using head-and-sill-receptor system with shear blocks at intermediate horizontal members.
- G. Entrance Door Frames: Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.
 - 1. At exterior doors, provide compression weather stripping at fixed stops.
 - 2. At interior doors, provide silencers at stops to prevent metal-to-metal contact. Install three silencers on strike jamb of single-door frames and two silencers on head of frames for pairs of doors.
- H. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.08 ALUMINUM FINISHES

- A. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal

surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: Match Concealed-Fastener Lap Seam Metal Wall Panels.

2.09 SOURCE QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to evaluate structural-sealant-glazed systems.
- B. Structural-Sealant-Glazed Systems: Perform quality-control procedures complying with ASTM C 1401 recommendations, including, but not limited to, system material-qualification procedures, sealant testing, and system fabrication reviews and checks.
- C. Structural-sealant-glazed system will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. General:
 1. Comply with manufacturer's written instructions.
 2. Do not install damaged components.
 3. Fit joints to produce hairline joints free of burrs and distortion.
 4. Rigidly secure nonmovement joints.
 5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration.
 6. Seal joints watertight unless otherwise indicated.
- B. Metal Protection:
 1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or applying sealant or tape, or by installing nonconductive spacers as recommended by manufacturer for this purpose.
 2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- C. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within the system to exterior.
- D. Set continuous sill members and flashing in full sealant bed as specified in Division 07 Section "Joint Sealants" to produce weathertight installation.
- E. Install components plumb and true in alignment with established lines and grades, and without warp or rack.

- F. Install glazing as specified in Division 08 Section "Glazing."
1. Structural-Sealant Glazing:
 - a. Prepare surfaces that will contact structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.
 - b. Install weatherseal sealant according to Division 07 Section "Joint Sealants" and according to sealant manufacturer's written instructions to produce weatherproof joints. Install joint filler behind sealant as recommended by sealant manufacturer.
 - G. Entrance Doors: Install doors to produce smooth operation and tight fit at contact points.
 1. Exterior Doors: Install to produce weathertight enclosure and tight fit at weather stripping.
 2. Field-Installed Entrance Door Hardware: Install surface-mounted entrance door hardware according to entrance door hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.
 - H. Install perimeter joint sealants as specified in Division 07 Section "Joint Sealants" to produce weathertight installation.

3.03 ERECTION TOLERANCES

- A. Install aluminum-framed systems to comply with the following maximum erection tolerances:
1. Location and Plane: Limit variation from true location and plane to **1/8 inch in 12 feet**; **1/4 inch** over total length.
 2. Alignment:
 - a. Where surfaces abut in line, limit offset from true alignment to **1/16 inch**.
 - b. Where surfaces meet at corners, limit offset from true alignment to **1/32 inch**.
- B. Diagonal Measurements: Limit difference between diagonal measurements to **1/8 inch**.

3.04 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections.
- B. Testing Services: Testing and inspecting of representative areas to determine compliance of installed systems with specified requirements shall take place as follows and in successive phases as indicated on Drawings. Do not proceed with installation of the next area until test results for previously completed areas show compliance with requirements.
1. Structural-Sealant Compatibility and Adhesion: Structural sealant shall be tested according to recommendations in ASTM C 1401.
 - a. Destructive Test Method A, "Hand Pull Tab (Destructive)," in ASTM C 1401, Appendix X2, shall be used.
 - 1) A minimum of four areas on each building face shall be tested.
 - 2) Repair installation areas damaged by testing.

2. Structural-Sealant Glazing Inspection: After installation of aluminum-framed systems is complete, structural-sealant glazing shall be inspected and evaluated according to recommendations in ASTM C 1401.
 3. Air Infiltration: Areas shall be tested for air leakage of 1.5 times the rate specified for laboratory testing under "Performance Requirements" Article, but not more than 0.09 cfm/sq. ft. of fixed wall area when tested according to ASTM E 783 at a minimum static-air-pressure difference of 1.57 lbf/sq. ft.
 4. Water Spray Test: Before installation of interior finishes has begun, a minimum area of 75 feet by 1 story of aluminum-framed systems designated by Architect shall be tested according to AAMA 501.2 and shall not evidence water penetration.
- C. Repair or remove work if test results and inspections indicate that it does not comply with specified requirements.
 - D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
 - E. Aluminum-framed assemblies will be considered defective if they do not pass tests and inspections.
 - F. Prepare test and inspection reports.

3.05 ADJUSTING

- A. Adjust operating entrance door hardware to function smoothly as recommended by manufacturer.
 1. For entrance doors accessible to people with disabilities, adjust closers to provide a 3-second closer sweep period for doors to move from a 70-degree open position to 3 inches from the latch, measured to the leading door edge.

END OF SECTION 08 41 13

SECTION 08 41 23**ALUMINUM-FRAMED INTERIOR STOREFRONTS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section Includes:
 - 1. Non-thermal interior storefront framing.
- B. Related Requirements:
 - 1. Section 08 41 13 "Aluminum-Framed Storefronts And Fixed Windows" for exterior storefront systems.
 - 2. Section 08 41 15 "Aluminum-Framed Manual Swing Entrance Doors" for doors installed in aluminum framed interior storefront.

1.03 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.04 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.1: For glazing sealants used inside the weatherproofing system, documentation including printed statement of VOC content.
- C. Shop Drawings: For aluminum-framed interior storefronts. Include plans, elevations, sections, full-size details, and attachments to other work.
- D. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
- E. Fabrication Sample: Of each vertical-to-horizontal intersection of assemblies, made from 12-inch lengths of full-size components and showing details of the following:
 - 1. Joinery, including concealed welds.
 - 2. Anchorage.
 - 3. Glazing.

1.05 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.

- B. Source quality-control reports.
- C. Field quality-control reports.
- D. Sample Warranties: For special warranties.

1.06 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For aluminum-framed storefronts to include in maintenance manuals.

1.07 QUALITY ASSURANCE

- A. Sole-source Requirement: Provide Aluminum-Framed Storefronts and Fixed Windows, Aluminum Framed Manual Swing Entrance Doors, and Aluminum-framed Interior Storefront by the same manufacturer.
- B. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- C. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
 - 1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

1.08 WARRANTY

- A. Special Warranty: Installer agrees to repair or replace components of aluminum-framed storefronts that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal wear.
 - c. Failure of operating components.
 - 2. Warranty Period: Two years from date of Substantial Completion.
- B. Special Finish Warranty: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design aluminum-framed interior storefronts.
- B. General Performance: Comply with performance requirements specified, as determined by testing of aluminum-framed storefronts representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
 - 1. Aluminum-framed storefronts shall withstand movements of supporting structure including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
 - 2. Failure also includes the following:
 - a. Thermal stresses transferring to building structure.
 - b. Glass breakage.
 - c. Noise or vibration created by wind and thermal and structural movements.
 - d. Loosening or weakening of fasteners, attachments, and other components.
 - e. Failure of operating units.
- C. Deflection of Framing Members: At design wind pressure, as follows:
 - 1. Deflection Normal to Wall Plane: Limited to edge of glass in a direction perpendicular to glass plane not exceeding 1/175 of the glass edge length for each individual glazing lite or an amount that restricts edge deflection of individual glazing lites to 3/4 inch, whichever is less.
 - 2. Deflection Parallel to Glazing Plane: Limited to 1/360 of clear span or 1/8 inch, whichever is smaller.

2.02 MANUFACTURERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Trifab VG 450 (non-thermal, 2 inch sightline). Other manufacturers may be considered, provided the sole-source requirement is met.

2.03 FRAMING

- A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
 - 1. Construction: Nonthermal.
 - 2. Glazing System: Retained mechanically with gaskets on four sides.
 - 3. Glazing Plane: Front.
 - 4. Finish: Clear anodic finish.
 - 5. Fabrication Method: Field-fabricated stick system.
- B. Backer Plates: Manufacturer's standard, continuous backer plates for framing members, if not integral, where framing abuts adjacent construction.
- C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

D. Materials:

1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 - a. Sheet and Plate: [ASTM B 209](#).
 - b. Extruded Bars, Rods, Profiles, and Tubes: [ASTM B 221](#).
 - c. Extruded Structural Pipe and Tubes: [ASTM B 429/B 429M](#).
 - d. Structural Profiles: [ASTM B 308/B 308M](#).

2.04 ACCESSORIES

- A. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
 1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 2. Reinforce members as required to receive fastener threads.
- B. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for [30-mil](#) thickness per coat.

2.05 FABRICATION

- A. Form or extrude aluminum shapes before finishing.
- B. concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- C. Fabricate components that, when assembled, have the following characteristics:
 1. Profiles that are sharp, straight, and free of defects or deformations.
 2. Accurately fitted joints with ends coped or mitered.
 3. Physical isolation of glazing from framing members.
 4. Accommodations for mechanical movements of glazing and framing to maintain required glazing edge clearances.
 5. Provisions for field replacement of glazing from interior.
 6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
- D. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.
- E. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.06 ALUMINUM FINISHES

- A. Clear Anodic Finish: [AAMA 611](#), [AA-M12C22A31](#), Class II, 0.010 mm or thicker.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for

installation tolerances and other conditions affecting performance of the Work.

- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Prepare surfaces that are in contact with structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.

3.03 INSTALLATION

- A. General:

1. Comply with manufacturer's written instructions.
2. Do not install damaged components.
3. Fit joints to produce hairline joints free of burrs and distortion.
4. Rigidly secure nonmovement joints.
5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.

- B. Metal Protection:

1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with materials recommended by manufacturer for this purpose or by installing nonconductive spacers.
2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

- C. Install components plumb and true in alignment with established lines and grades.

- D. Install glazing as specified in Section 08 80 00 "Glazing."

3.04 ERECTION TOLERANCES

- A. Erection Tolerances: Install aluminum-framed storefronts to comply with the following maximum tolerances:

1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet.
2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet.
3. Alignment:
 - a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
 - b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.
 - c. Where surfaces are separated by reveal or protruding element of 1 inch wide or more, limit offset from true alignment to 1/4 inch.
4. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

END OF SECTION 08 41 13

SECTION 08 62 14**TUBULAR DAYLIGHTING SYSTEM****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes the following:
1. Tubular daylighting system, consisting of roof dome, reflective tube, and diffuser assembly; configuration as indicated on the drawings.
 2. Accessories.
- B. Related Section:
1. Division 07 roofing sections for flashing of skylight base.
 2. Division 26 Sections for Equipment Wiring: Electrical connections.

1.03 PERFORMANCE REQUIREMENTS

- A. Completed tubular daylighting system assemblies shall be capable of meeting the following performance requirements:
1. Air Infiltration Test: Air infiltration will not exceed .30 cfm/sf aperture with a pressure delta of 1.57 psf across the tube when tested in accordance with ASTM E 283.
 2. Water Resistance Test: No uncontrolled water leakage at 16.5 psf pressure differential with water rate of 5 gallons/hours/sf when tested in accordance with ASTM E 331.
 3. Uniform Load Test:
 - a. No breakage, permanent damage to fasteners, hardware parts, or damage to make system inoperable or cause permanent deflection of any section in excess of 1 percent of its span at a Positive Load of 110 psf or Negative Load of 60 psf.
 - b. All units shall be tested with a safety factor of 3 for positive pressure and 2 for negative pressure, acting normal to plane of roof in accordance with ASTM E 330.
 4. Testing:
 - a. Class B Burning Brand – The burning brand shall self-extinguish without transferring the fire to the dome Per: U.B.C. Standard 15-2 Class B Burning Brand Test. See ASTM E 108 and UL 790.
 - b. Self-Ignition Temperature - Greater than 650 degrees F Per: U.B.C. Standard 26-6. See ASTM D-1929-68 (1975).
 - c. Smoke Density - Rating no greater than 75 Per: U.B.C. Standard 26-5. (See ASTM D-2843-70) or no greater than 450 Per U.B.C. 8-1 (See ASTM

- Standard E 84-91A) in way intended for use.
- d. Rate of Burn - Minimum Burning Rate: 2.5 inches/min Classification CC-2: U.B.C. Standard 26-7. See ASTM D 635-74.

1.04 SUBMITTALS

- A. Product Data: Manufacturer's data sheets on each product to be used, including:
 1. Preparation instructions and recommendations.
 2. Storage and handling requirements and recommendations.
 3. Installation methods.
- B. Shop Drawings. Submit shop drawings showing layout, profiles and product components, including anchorage, flashings and accessories.
- C. Verification Samples: As requested by Architect.
- D. Test Reports: Independent testing agency or evaluation service reports verifying compliance with specified performance requirements.
- E. LEED Submittals: Provide documentation of how the requirements of Credit will be met:
 1. List of Daylight Credits available for the products specified.
 2. Data on Energy Optimization Performance Credits for the products specified.
 3. List of proposed materials with recycled content. Indicate post-consumer recycled content and pre-consumer recycled content for each product having recycled content.
 4. Product data and certification letter indicating percentages by weight of post-consumer and pre-consumer recycled content for products having recycled content.
 - a. Data on Regional Credits which may be available for the project location.
 5. Data on Perimeter and Non-Perimeter Controllability of Systems for use of Daylight Dimmer option with the products specified.
 6. Data on potential Innovation in Design Credits which may be available for the innovative use of the products specified.

1.05 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Engaged in manufacture of tubular skylights for minimum 10 years.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Store products in manufacturer's unopened packaging until ready for installation.
- B. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.07 PROJECT CONDITIONS

- A. Maintain environmental conditions (temperature, humidity, and ventilation) within

limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.08 WARRANTY

- A. Tubular Daylighting System: Manufacturer's standard warranty for 10 years.
- B. Electrical Parts: Manufacturer's standard warranty for 5 years, unless otherwise indicated.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Manufacturer: Solatube International, Inc.

2.02 TUBULAR DAYLIGHTING SYSTEM

- A. Tubular Daylighting System General : Transparent roof-mounted skylight dome and self-flashing curb, reflective tube, and ceiling level diffuser assembly, transferring sunlight to interior spaces; complying with ICBO/ICC AC-16.
- B. Skyvault Series: Solatube Model M74 Daylighting System:
 - 1. Roof Dome Assembly: Transparent, UV and impact resistant dome with flashing base supporting dome and top of tube.
 - a. Outer Dome Glazing: Type DA, 0.125 inch minimum thickness impact resistant injection molded acrylic classified as CC2 material and meeting characteristics of DR-101 blend. Visible light transmission minimum 92 percent.
 - b. Inner Dome Glazing: Type DAI, 0.115 inch (3 mm) minimum thickness acrylic classified as CC2 material.
 - 2. Flashing Base: One piece, seamless, leak-proof flashing functioning as base support for dome and top of tube.
 - a. Base Material: Sheet steel, corrosion resistant, meeting ASTM A 653/A 653M or ASTM A 463/A 463M, 0.028 inch thick.
 - b. Base Style: Type FC, Curb cap, with inside dimensions of 27 inches by 27 inches to cover curb.
 - c. Curb Insulator: Type CI, Thermal isolation material for use at curb base.
 - 3. Dome Ring: Attached to top of base section; 0.090 inch nominal thickness injection molded high impact acrylic; to prevent thermal bridging between base flashing and tubing and channel condensed moisture out of tubing.
 - 4. Reflective Extension Tube: Aluminum sheet, thickness 0.015 inch.
 - a. Interior Finish: Spectralight Infinity high reflectance specular finish on exposed reflective surface. Visible spectrum greater than 99 percent. Total solar spectrum less than 93 percent.
 - b. Color: a* and b* (defined by CIE L*a*b* color model) shall not exceed plus 2 or be less than minus 2 as determined in accordance to ASTM E 308.

- c. Tube Diameter: Approximately 21 Inches
5. Reflective 30 degree Adjustable tube: Aluminum sheet, thickness .015 inch.
 - a. Interior Finish: Spectralight Infinity high reflectance specular finish on exposed reflective surface. Visible spectrum greater than 99 percent. Total solar spectrum less than 93 percent.
6. Ceiling Ring: Injection molded impact resistant acrylic. Nominal thickness is 0.110 inches.
7. Dress Ring: Injection molded impact resistant acrylic. Nominal thickness is 0.100 inches Prevents air infiltration and condensation from attic spaces.
8. Diffuser Assemblies for Tubes Penetrating Ceilings: Ceiling mounted box transitioning from round tube to square ceiling assembly, supporting light transmitting surface at bottom termination of tube; 23.8 inches by 23.8 inches square frame to fit standard suspended ceiling grids or hard ceilings.
 - a. Round to square transition box made of opaque polymeric material, classified as CC2, Class C, 0.110 inch thick:
 - b. Lens: Type L2 Prismatic lens design to maximize light output and diffusion with extruded aluminum frame and EPDM foam seal to minimize condensation and bug, dirt and air infiltration per ASTM E 283. Visible Light Transmission shall be greater than 90 percent at 0.100 inches (2.5 mm) thick. Classified as CC2.
9. Accessories:
 - a. Daylight Dimmer: Type D, Electro-mechanically actuated daylight valve; for universal input voltages ranging between 90 and 277 V at 50 or 60 Hz; actuator rated at 0.1 amp per unit; controlled by low voltage, series circuited, 4 conductor, size 22 cable, and low voltage DC DP/DT switch; providing daylight output between 2 and 100 percent. Provided with dimmer switch and cable.
 - 1) Switch: Type SW, Low voltage switch (white) required to operate Daylight Dimmer. Note: only one switch is required per set of synchronously controlled dimmers.
 - 2) Cable: Type CA, Two conductor low voltage cable (500 ft.)
 - b. Wire Suspension Kit: Type E, Use the wire suspension kit when additional bracing to the structure is required

2.03 ACCESSORIES

- A. Fasteners: Same material as metals being fastened, non-magnetic steel, non-corrosive metal of type recommended by manufacturer, or injection molded nylon.
- B. Suspension Wire: Steel, annealed, galvanized finish, size and type for application and ceiling system requirement.
- C. Sealant: Polyurethane or copolymer based elastomeric sealant as provided or recommended by manufacturer.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Do not begin installation until substrates have been properly prepared.
- B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

- A. Clean surfaces thoroughly prior to installation.
- B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION

- A. Install in accordance with manufacturer's printed instructions.
- B. After installation of first unit, field test to determine adequacy of installation. Conduct water test in presence of Owner, Architect, or Contractor, or their designated representative. Correct if needed before proceeding with installation of subsequent units.

3.04 PROTECTION

- A. Protect installed products until completion of project.
- B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION 08 62 14

**SECTION 087100
DOOR HARDWARE****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Furnish and install all commercial door hardware and electrified door hardware as shown on the Drawings or specified herein, or as required to complete the Work.
- B. Intent of Hardware Groups
 - 1. The following schedule of hardware sets shall be considered a guide only, and the supplier is cautioned to refer to general conditions, special conditions, and the preamble of this section. It shall be the hardware supplier's responsibility to furnish all required hardware.
 - 2. Where items of hardware aren't definitely or correctly specified and are required for completion of the Work, a written statement of such omission, error, or other discrepancy shall be sent to the Architect, prior to date specified for receipt of bids for clarification by addendum; or, furnish such items in the type and quality established by this specification, and appropriate to the service intended.
- C. Related sections:
 - 1. Division 1 – General Requirements
 - 2. Division 8 – Steel Doors and Frames
 - 3. Division 8 – Wood Doors
 - 4. Division 8 – Aluminum Doors and Frames
 - 5. Division 8 – Special Doors
 - 6. Division 26 – Electrical
 - 7. Division 28 – Access Control and Security Intrusion

1.03 REFERENCES

- A. Use date of standard or code in effect as of Bid date.

1.04 SUBMITTALS

- A. Submit copies of the finish hardware shop drawings in accordance with Division 1, General Requirements.
- B. Product Data: Submit manufacturer's complete product literature for specified hardware items, detailed installation diagrams and instructions, including:
 - 1. Preparation instructions and recommendations.
 - 2. Storage and handling requirements and recommendations.
 - 3. Installation methods.
- C. Door Hardware Schedule: Prepared by or under the supervision of the supplier's Architectural Hardware Consultant, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.
 - 1. Check specified hardware for suitability and adaptability to details and surrounding conditions. Indicate unsuitable or incompatible items and proposed substitutions in hardware schedule.
 - 2. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."
 - 3. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening.
 - 4. Organize door hardware sets in same order as in the Door Hardware Schedule at the end of Part 3.
 - 5. Content: Include the following information:
 - a. Type, style, function, size, label, hand, degree of swing, and finish of each door hardware item.
 - b. Manufacturer of each item.
 - c. Fastenings and other pertinent information.
 - d. Location of each door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.

- e. Explanation of abbreviations, symbols, and codes contained in schedule.
 - f. Mounting locations for door hardware.
 - g. Door and frame sizes and materials.
6. Electrified Hardware Drawings:
- a. Submit elevation drawings showing relationship of all electrical hardware components to door and frame prior to electrical rough-in. Indicate number and gage of wires required.
 - b. Include wiring drawing showing point to point wire hook up for all components.
 - c. Include system operations descriptions for each type of opening; describe each possible condition.
- D. Keying Schedule: Prepared by or under the supervision of Architectural Hardware Consultant, detailing Owner's final keying instructions for locks. Include schematic keying diagram and index each key set to unique door designations. Keying Schedule: Per DHI manual "Keying Procedures, Systems, and Nomenclature".
- E. Qualification Data: For Installer, Supplier, and Architectural Hardware Consultant. Compliance with this Section shall include letters of certification. Certifications shall be submitted for approval with and be incorporated with hardware schedule submittal. Submittals will not be considered without the certifications.
- F. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.
- G. Operations and maintenance manuals:
1. Upon completion of construction and building turnover, furnish two (2) complete maintenance manuals to the owner. Manuals to include the following items:
 - a. Approved hardware schedule, catalog cuts and keying schedule.
 - b. Hardware installation and adjustment instructions.
 - c. Manufacturer's written warranty information.
 - d. As installed "Wiring Diagrams" for each opening connected to power, both low voltage and 110 volts.
 - e. One complete set of special tools required for maintenance and adjustment of hardware, including changing of cylinders.

1.05 QUALITY ASSURANCE

A. Substitutions:

1. All substitution requests must be submitted within the procedures and time frame as outlined in Division 1, General Requirements. Approval of products is at the discretion of the architect and their consultant.
2. Items listed with no substitute manufacturers have been requested by Owner to

meet existing standards.

B. Requirements of Regulatory Agencies:

1. Furnish finish hardware to comply with the requirements of laws, codes, ordinances, and regulations of the governmental authorities having jurisdiction where such requirements exceed the requirements of the Specifications. Furnish finish hardware to comply with the requirements of the American National Standards for Making Buildings and Facilities Accessible and Usable by Physically Handicapped People ICC/ANSI A117.1) and to comply with Americans with Disabilities Act (ADA).
2. Doors to stairs (other than exit stairs), loading platforms, boiler rooms, stages and doors serving other hazardous locations shall have knurled or other similar approved marking of door lever handles or cross bars in accordance with local building codes.

C. Installer Qualifications: An experienced installer with five (5) years documented experience who has completed door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

D. Supplier Qualifications: Company specializing in the supply of door hardware with five (5) years documented experience and an Architectural Hardware Consultant (AHC) to properly handle, detail and service hardware in a satisfactory manner. Architectural Hardware Consultant shall be available during the course of the Work to consult with Contractor, Architect, Hardware Consultant, and Owner about door hardware and keying.

1. Scheduling Responsibility: Preparation of door hardware and keying schedules.
2. Engineering Responsibility: Preparation of data for electrified door hardware, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.
3. Hardware supplier shall be a certified direct distributor and be a full sales and service organization for the manufacturer's listed. Compliance with this Section shall include letters of certification from the manufacturers stating the hardware supplier is a factory direct authorized distributor. Certifications shall be submitted for approval with and be incorporated with hardware schedule submittal. Submittals will not be considered without the certifications.
4. Supplier shall have warehousing facilities in Project's vicinity.

E. Architectural Hardware Consultant Qualifications: A person who is currently certified by the Door and Hardware Institute as an Architectural Hardware Consultant and who is experienced in providing consulting services for door hardware installations that are comparable in material, design, and extent to that indicated for this Project.

1. Electrified Door Hardware Consultant Qualifications: A qualified Architectural Hardware Consultant who is experienced in providing consulting services for electrified door hardware installations.

F. Source Limitations: Obtain each type and variety of door hardware from a single

manufacturer, unless otherwise indicated.

1. Provide electrified door hardware from same manufacturer as mechanical door hardware, unless otherwise indicated. Manufacturers that perform electrical modifications and that are listed by a testing and inspecting agency acceptable to authorities having jurisdiction are acceptable.
- G. Fire-Rated Door Assemblies: Provide door hardware for assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to NFPA 252 and UL10C. Project requires door assemblies and components that are compliant with positive pressure and S-label requirements. Specifications must be cross-referenced and coordinated with door manufacturers to ensure that total opening engineering is compatible with UL10C Standard for Positive Pressure Fire Tests of Door Assemblies. Provide proper latching hardware, non-flaming door closers, approved-bearing hinges, plus resilient and required intumescent seals if not furnished with wood door.
- H. Templates: Furnish a complete list and suitable templates, together with finish hardware schedule to contractor, for distribution to necessary trades supplying materials to be prepped for finish hardware.
- I. Keying Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination." In addition to Owner, Construction Manager, Contractor, and Architect, conference participants shall also include Suppliers Architectural Hardware Consultant and Owner's security consultant. Incorporate keying conference decisions into final keying schedule after reviewing door hardware keying system including, but not limited to, the following:
1. Review of all lock functions.
 2. Function of building, flow of traffic, purpose of each area, degree of security required, and plans for future expansion.
 3. Preliminary key system schematic diagram.
 4. Requirements for key control system.
 5. Address for delivery of keys.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Marking and packaging:

1. Properly package and mark items according to the approved hardware schedule, complete with necessary screws and accessories, instructions and installation templates for spotting mortising tools.
2. Packaging of door hardware is the responsibility of the supplier. As hardware supplier receives material from various manufacturers, sort and repackage in containers clearly marked with appropriate hardware set and door numbers to match the approved hardware schedule. Two or more identical sets may be packed in same container.

B. Delivery:

1. Deliver all hardware to the project site; direct factory shipments are not allowed unless agreed upon beforehand.
2. No keys, other than construction master keys and/or temporary keys are to be packed in boxes with the locks.
3. Deliver keys and permanent cores to Owner by registered mail or overnight package service.
4. Check deliveries against accepted list and provide receipt for them

C. Storage:

1. Provide secure lock-up for door hardware delivered to the Project, but not yet installed. Control handling and installation of hardware items that are not immediately replaceable so that completion of work will not be delayed by hardware losses both before and after installation.

1.07 PROJECT CONDITIONS

- A. Maintain environmental conditions (temperature, humidity and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.08 COORDINATION

- A. Supplier shall coordinate the following items with the General Contractor and related trades.

1. Coordinate work of this Section with other directly affected Sections involving manufacture of any internal reinforcement for door hardware. Furnish hardware templates to door fabricators for factory preparation to receive hardware.
2. Furnish hardware items of proper design for use on doors and frames of thicknesses, profile, swing, security, and other indicated requirements as necessary for proper function.
3. Coordinate solid blocking between studs of frame construction to support wall mounted items such as stops.
4. Electrical System Roughing-in: Coordinate layout and installation of electrified door hardware with connections to power supplies, fire alarm system and detection devices and access control system. Electro-Mechanical Hardware requires meticulous coordination among:
 - a. Architect.
 - b. Electrical engineer.
 - c. Hardware supplier/contractor.
 - d. Electro-mechanical hardware supplier/contractor.
 - e. Frame supplier/contractor.
 - f. Electrical Contractor.
 - g. Security systems Contractor

- B. A hardware and keying conference is mandatory within 30 days of contract award.

- C. Use hardware consultant to check Shop Drawings for doors and entrances to confirm that adequate provisions will be made for proper hardware installation.

1.09 WARRANTY:

- A. General Warranty: Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.
- B. Special Warranty: Written warranty, executed by manufacturer agreeing to repair or replace components of door hardware that fail in materials or workmanship within specified warranty period. Failures include, but are not limited to, the following:
 - 1. Structural failures including excessive deflection, cracking, or breakage.
 - 2. Faulty operation of operators and door hardware.
 - 3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
- C. Warranty Period: One (1) year from date of Substantial Completion, unless otherwise indicated.
 - 1. Warranty Period for Manual Closers: Ten (10) years from date of Substantial Completion.
 - 2. Warranty Period for Locksets: Seven (7) years from date of Substantial Completion.
 - 3. Warranty Period for Mechanical Exit Devices: Three (3) years from date of Substantial Completion.

1.10 MAINTENANCE SERVICE

- A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

1.11 COMMISSIONING:

- 1. Test door hardware operation with climate control system both at rest and while in full operation.
- 2. Test electrical and electronic hardware systems for satisfactory operation.
- 3. Test hardware interfaced with fire/life-safety system for proper operation and release.

1.12 EXTRA MATERIALS

- A. Deliver to Owner extra service materials from same production run as products installed. Package products with protective covering and identify with descriptive labels. Comply with Division 01 Closeout Submittals (Maintenance Materials) Section.
 - 1. Special Tools: Provide special wrenches and tools applicable to each different or special hardware component.
 - 2. Maintenance Tools: Provide maintenance tools and accessories supplied by hardware component manufacturer.
 - 3. Delivery, Storage and Protection: Comply with Owner's requirements for delivery,

storage and protection of extra materials.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Furnish each category with the products of only one manufacturer unless specified otherwise; this requirement is mandatory whether various manufacturers are listed or not.
- B. Provide the products of manufacturer designated or if more than one manufacturer is listed, the comparable product of one of the other manufacturers listed. Where only one manufacturer or product is listed, it is understood that this is the owner's Building Standard and "no substitution" is allowed.

2.02 GENERAL HARDWARE REQUIREMENTS:

- A. Provide hardware materials and products of the best quality, free from imperfections and flaws in appearance, finish, or operational function.
- B. Refer to Hardware Schedule below for specific hardware items, designs, functions, sizes, and finishes.

2.03 HINGES

- A. Manufacturers:
 - 1. Ives
 - 2. McKinney
 - 3. Stanley
- B. General: Except for hinges and pivots to be installed entirely (both leaves) into wood doors and frames, provide only template-produced units.
- C. Hinges shall be five-knuckle design, ball bearing, as specified with NRP (non-removable pin) feature, at all reverse bevel doors with locksets.
- D. Hinge Base Metal: Unless otherwise indicated, provide the following:
 - 1. Exterior Hinges: Stainless steel with stainless-steel non-removable pin.
 - 2. Interior Hinges: Steel, with steel pin
 - 3. Hinges for Fire-Rated Assemblies: Steel, with steel pin.
- E. Quantity, regardless of quantities specified in the hardware schedule provide the following:
 - 1. 2 - hinges per leaf for openings through 60 inches (1524 mm) high.
 - 2. 1 - additional hinge per leaf for each additional 30 inches (762 mm) in height or fraction thereof.
- F. Size, provide the following:
 - 1. Doors up to 3'6": three ball bearing, standard weight, 0.134 gage, 4-1/2 inch by

- 4-1/2 inch (114 mm by 114 mm).
 - 2. Doors 3'-6" and over: three ball bearing, heavy weight, 0.190 gage, 5 inches x 4-1/2 inches (127 mm by 114 mm).
- G. Provide shims and shimming instructions for proper door adjustment.
- H. Electric Hinges:
- 1. Transfer power from door frame to edge of door.
 - 2. Provide sufficient number of concealed wires to accommodate electric function of specified hardware plus at least two extra wires as spares.
 - 3. Locate electric hinges at second hinge from bottom.
 - 4. Provide mortar guard for each electric hinge scheduled.
- I. Electric Power Transfer:
- 1. Manufacturers:
 - a. Von Duprin
 - 2. Transfer power from door frame to edge of door.
 - 3. Provide sufficient number of concealed wires to accommodate electric function of specified hardware.

2.04 DOOR BOLTS

- A. Manufacturers:
- 1. Ives
 - 2. Rockwood
 - 3. Trimco
- B. Bolt Throw: Comply with testing requirements for length of bolts required for labeled fire doors, and as follows:
- 1. Mortise Flush Bolts: Minimum 3/4-inch (19-mm) throw.
- C. Manual Flush Bolts: designed for mortising into door edge.
- D. Automatic and Self-Latching Flush Bolts: designed for mortising into door edge.
- E. Surface bolt locks automatically when throw, can be released only by pressing knob toward door while retracting. Provide strikes as required.
- F. Locate centerline of manual top bolt not more than 78 inches (1981 mm) from finished floor.
- G. Dust Proof Strikes - furnish with all flush bolts.

2.05 COORDINATORS

- A. Manufacturers:

1. Ives
 2. Rockwood
 3. Trimco
- B. Provide coordinator for labeled pairs of doors equipped with automatic flush bolts and those with vertical rod/mortise lock fire exit device combinations with astragals.
- C. Provide filler bars for total opening width, closer mounting brackets, carry bars, and special preparation for top latches where applicable.

2.06 LOCKSETS AND LATCHSETS

- A. Manufacturers:
1. Schlage L9000/ND
 2. Best 40H/9K
 3. Sargent 8800/10 Line
- B. Latches and Locks for Means of Egress Doors: Comply with NFPA 101. Doors shall not exceed 15 lbf (67 N) to release the latch. Locks shall not require the use of a key, tool, or special knowledge for operation from the egress side.
- C. Function numbers as listed in sets.
- D. Heavy duty cylindrical type:
1. Provide cylindrical locksets that comply with ANSI A156.2, Series 4000, Grade 1; tested to exceed 3,000,000 cycles. Functions as listed in Hardware Sets.
 2. Provide cylindrical locksets that meet ANSI A117.1, Accessibility Code.
 3. Provide cylindrical locksets that meet UL A label; to have a minimum listing for single doors 4' x 8'
 4. Levers are to be plated to match BHMA finishes.
 5. Thru-bolts to be a minimum of ¼" in diameter.
 6. Latchbolt to be steel with minimum ½" throw deadlatch on keyed and exterior functions; ¾" throw anti-friction latchbolt on pairs of doors.
 7. Lockset shall accept large format interchangeable core cylinder.
 8. Lockset Trim: Basis of Design: Schlage Rhodes
- E. Mortise type:
1. Provide mortise locksets that comply with ANSI A156.13, Series 1000, Operational Grade 1 and Security Grade 2 with all standard trims.
 2. Provide mortise locksets that comply with UL10C and UBC 7-2 positive pressure requirements.
 3. Lock components to be manufactured of zinc dichromate plated steel. .
 4. Lock components to incorporate a spring loaded fusible link for Fire/Life Safety. Manufacturers utilizing gravity, fusible link are acceptable.
 5. Latchbolts to have a standard 2 ¾" backset with a full ¾" throw.

6. Deadbolts to be 1 3/4" total length; have standard 1" throw with a minimum 3/4" internal engagement when fully extended.
7. Spindles to be independent, designed to "break-away" at a maximum of 75psi torque.
8. Strikes to be non-handed and bridged to ensure dead latching. Manufacturers utilizing fillers of any kind for deadlatch engagement are not acceptable.
9. Thumbturn and back-plate to be manufactured from castings and comply with ANSI 117 accessibility standard.
10. Electric operation: Manufacturer-installed continuous duty solenoid.
11. Lockset Trim: Basis of Design: Schlage 06A

F. Strikes:

1. Provide strikes with extended lips where required to protect trim from being marred by latch bolt. Provide strike lips that do not project more than 1/8" beyond doorframe trim at single doors and have 7/8" lip to center at pairs of 1-3/4" doors. Provide wrought box strikes on all locks.

G. Hardware supplier shall verify all lock functions with Owner prior to ordering material.

2.07 CYLINDERS AND KEYING

A. Manufacturers:

1. Schlage
2. Best
3. Sargent

B. Keying schedule: The supplier's Factory Authorized Service Center shall meet with the Owner to finalize keying requirements and obtain keying instructions in writing. All cylinders shall be keyed by Service Center, combined in sets or subsets, masterkeyed or great grandmaster keyed, as directed by Owner.

C. Permanent Cores: Manufacturer's standard; finish face to match lockset; interchangeable cores.

D. Construction Cores: Provide construction cores that are replaceable by permanent cores.

1. The Owner or Owner's Security Agent in conjunction with the service center shall remove construction cores and install final cores.

E. Keying System: Both the cylinders and key blanks shall be protected from unauthorized manufacture and distribution by the manufacturer's United States patents.

F. Key System: Lock manufacturers patented, restricted keyway. Key blanks available only from factory-direct sources, not available from after-market key blank manufacturers.

- G. Keys: Provide nickel-silver keys permanently inscribed with a visual key control number and "DO NOT DUPLICATE" notation. Furnish keys in the following quantities:
1. Cylinder Change Keys: Three.
 2. Master Keys: Five.
 3. Grand Master Keys: Five.
 4. Great-Grand Master Keys: Five.
 5. Temporary construction keys: Twenty.
 6. Construction control keys: Two.
- H. Deliver all permanent keys, security cores, and other security keys direct to Owner from Service Center a minimum of thirty (30) days prior to completion by secure courier return receipt requested.

2.08 EXIT DEVICES AND MULLIONS

- A. Exit devices for Means of Egress Doors: Comply with NFPA 101. Doors shall not exceed 15 lbf (67 N) to release the latch. Locks shall not require the use of a key, tool, or special knowledge for operation from the egress side.
- B. Manufacturers:
1. Von Duprin
 2. Precision
 3. Detex
- C. Rim devices:
1. Exit devices shall be touchpad style plated to the standard architectural finishes to match the balance of the door hardware.
 2. Mechanism case or housing shall have an average minimum thickness of .140".
 3. Touchpad shall extend a minimum of one half of the door width. Devices shall be push through type touch pad design with a straight or horizontal motion to eliminate pinch points. The angular motion type pad with end cavity exposed when depressed is unacceptable. Touch pad have a minimum height of 2-3/16" Plastic is not acceptable at the touch pad.
 4. All latchbolts to be deadlatching type, with a self-lubricating coating to reduce wear. Plated latch bolts are unacceptable.
 5. Lever trim for exit devices shall be vandal-resistant type, which will travel to a 90-degree down position when more than 35 pounds of torque are applied, and which can easily be re-set. Trim shall be heavy duty type and fastened by means of concealed welded lugs and thru bolts from the inside. Lever trim shall be forged brass with a minimum average thickness on the escutcheon of .130". Plate with pull shall be minimum average thickness of .090" and have forged pulls.
 6. Trim: as specified in sets, function numbers as listed in sets. Levers to match lockset design.
 7. Exit devices shall be UL listed panic exit hardware. All exit devices for fire rated openings shall be UL labeled fire exit hardware.
 8. Electrically Operated Devices: Single manufacturer source for electric latch retraction devices, electrically controlled trim, power transfers, power supplies,

- monitoring switches and controls.
9. Provide hex key or cylinder dogging on panic exit hardware as scheduled.
 10. Furnish glass bead kits for exit devices as required.
 11. Where RX and LX switches and used at exit devices hardware supplier shall confirm current draw with security contractor, low current (LC) option may be required.
 12. Through Bolts: For exit devices and trim on metal doors, non-fire-rated wood doors, fire-rated wood doors and fire-rated metal doors.

2.09 DOOR PULLS

- A. Manufacturers:
 1. Ives
 2. Rockwood
 3. Trimco
- B. Pull Hardware – as scheduled.

2.10 CLOSERS

- A. Manufacturers:
 1. LCN -4111
 2. Sargent -281
- B. Surface Closers:
- C. Door Closers:
 1. Closers shall conform to ANSI A156.4 Grade 1 and UL 10C
 2. Closers shall have fully hydraulic, full rack and pinion action with a high strength cast iron cylinder and one piece forged steel piston. Cylinder body to have 1½” piston diameter .
 3. Hydraulic fluid of a type requires no seasonal adjustments.
 4. Spring power shall be continuously adjustable over the full range of closer sizes, and allow for reduced opening force for the physically handicapped. .
 5. Size closers in compliance with requirements for accessibility for handicapped and recommendations of manufacturer. Comply with following maximum opening-force requirements:
 - a. Interior Hinged Doors: 5.0 lbs.
 - b. Fire Doors: Minimum opening force allowable by authorities having jurisdiction
 6. Closers will have Powder coating finish certified to exceed 100 hours salt spray testing by ETL, an independent testing laboratory used by BHMA for ANSI certification. Provide special rust inhibitor finish (SRI) where specified,
 7. Refer to door and frame details, furnish accessories such as drop plates, special templates, spacers and supports as required to correctly install door closers. Install closers to allow maximum degree of opening, position backcheck to activate well in advance of the stop position to cushion the opening swing and prevent door and frame damage. Do not us the door closer to stop door travel.
 8. Coordinate with door manufacturer that the top rail of the door is sized appropriately for the surface closer.

9. Doors swinging into exit corridors should provide for corridor clear width as required by applicable codes.
10. Install closers on room side of corridor doors, inside of exterior doors, and stair side of stairway doors.
11. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

2.11 STOPS AND HOLDERS

A. Manufacturers:

1. Ives
2. Rockwood
3. Trimco

- B. Provide wall stops for doors, unless other type stops are scheduled or indicated. Where wall stops are not appropriate, provide overhead stops.
- C. Wrought, forged, or cast, approximately 2-1/2 inch diameter, convex or concave rubber center according to lock type, concealed fasteners.
- D. Silencers for Door Frames: Neoprene or rubber; fabricated for drilled-in application to frame.

2.12 OVERHEAD HOLDERS AND STOPS

A. Manufacturers:

1. Glynn Johnson
2. Rixson
3. ABH

- B. Type, function and fasteners shall be as specified. Size per manufacturer's selector chart. Plastic end caps, hold open mechanisms and shock blocks are not allowed. End caps must be finished same as balance of unit.
- C. When the overhead holder or stop is installed with a surface closer template closer according to work with the stop or holder. Provide mounting plates with closer is required.

2.13 KICK PLATES

A. Manufacturers:

1. Ives
2. Rockwood
3. Trimco

- B. Furnish .050 inches thick, 10" high x door width less 2" at single doors and less 1" at pairs on push side and 1" less door width on pull side, with counter sink holes for

fasteners. Where glass or louvers prevent this height, supply with height equal to height of bottom rail less 2".

- C. Fasteners: Manufacturer's standard machine or self-tapping screws.

2.14 THRESHOLDS

- A. Manufacturers:

1. National Guard Products
2. Pemko
3. Reese

- B. Accessibility Requirements: Where thresholds are indicated to comply with accessibility requirements, comply with the Accessibility Guidelines for Buildings and Facilities ANSI A117.1

1. Bevel raised thresholds with a slope of not more than 1:2.

- C. Type as listed in sets.

- D. Cope at jambs.

- E. Furnish full wall opening width when frames are recessed.

- F. Where thresholds occur at openings with one or more mullions, they shall be cut for the mullions and extended continuously for the entire opening.

- G. Furnish with non-ferrous Stainless Steel Screws and Lead Anchors.

2.15 DOOR SWEEPS

- A. Manufacturers:

1. National Guard Products
2. Pemko
3. Reese

- B. Type as listed in sets.

2.16 WEATHER-STRIPPING

- A. Manufacturers:

1. National Guard Products
2. Pemko
3. Reese

B. Door Gasketing: Provide continuous weather-strip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated or scheduled. Provide non-corrosive fasteners for exterior applications and elsewhere as indicated. Type as listed in sets.

1. Apply to head and jamb stops.

C. Fire, Smoke and Draft Control Seals:

1. Smoke-Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled based on testing according to UL 1784.

2. Fire-Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled based on testing according to UL 10C.

3. Gaskets must comply with UL10C.

4. Intumescent seals shall be provided by the wood door manufacturer.

D. Where rain drips are specified in hardware groups, provide full frame width, unless detailed otherwise.

2.17 LATCH PROTECTORS

A. Manufacturers:

1. Ives

2. Rockwood

3. Trimco

B. Latch protectors shall be 13 gage stainless steel and be of the type required to work with the specified latch.

2.18 DOOR CONTACT (DOOR POSITION SWITCH)

A. Manufacturers:

1. Schlage Electronic

2. GE/Sentrol

3. SDC (Security Door Controls)

B. Concealed in frame and door.

C. Single Pole, double throw (SPDT) magnetic switch.

2.19 MISCELLANEOUS

A. Boxed Power Supplies: Modular unit in NEMA enclosure; filtered and regulated; voltage rating and type matching requirements of door hardware served; and listed and labeled for use with fire alarm systems.

B. Furnish items not categorized in the above descriptions but specified by manufacturer's names in Hardware Sets.

- C. Supplier shall review Security/Electrical Plan for locations of security equipment provided by others.

2.20 FABRICATION

- A. Base Metals: Produce door hardware units of base metal, fabricated by forming method indicated, using manufacturer's standard metal alloy, composition, temper, and hardness. Furnish metals of a quality equal to or greater than that of specified door hardware units and BHMA A156.18. Do not furnish manufacturer's standard materials or forming methods if different from specified standard.

2.21 FASTENERS

- A. Including, but not limited to, wood or machine screws, bolts, nuts, anchors, etc. of proper type, material, and finish required for installation of hardware.
- B. Use phillips head for exposed screws. Do not use aluminum screws to attach hardware.
- C. Provide self-tapping (TEC) screws for attachment of sweeps and stop-applied weatherstripping only.
- D. Through Bolts: For exit devices and surface closers on non-rated metal doors, fire-rated metal doors non-fire-rated wood doors, and fire-rated wood doors unless door blocking is provided:

2.22 FINISHES

- A. Generally, Dull Chrome, US26D / BHMA 626/652. Thresholds and Weatherstrip shall be Mill Finish Aluminum. Closers shall be Powder Coated Aluminum (BHMA 689). Trim and Flat Goods may be furnished in US32D (BHMA 630), Satin Stainless Steel.
- B. Provide finish for each item as indicated in sets.
- C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.01 ACCEPTABLE INSTALLERS:

- A. Factory trained and certified by the lock, closer and panic hardware manufacturers. Alternative: can demonstrate suitably equivalent competence and experience.

3.02 EXAMINATION

- A. Examine doors and frames as follows.
 - 1. Examine doors and frames, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance. Ensure

- that walls and frames are square and plumb before hardware installation.
2. Examine roughing-in for electrical power systems to verify actual locations of wiring connections before electrified door hardware installation.
 3. Proceed with installation only after unsatisfactory conditions have been corrected.
 4. Beginning of installation means acceptance of existing conditions.

3.03 PREPARATION

- A. Wood Doors: Comply with DHI A115-W series.
- B. Steel Doors and Frames: Comply with DHI A115 series.
 1. Surface-Applied Door Hardware: Drill and tap doors and frames according to ANSI/SDI A250.6-97.
- C. Door and Frame Manufacturer(s) to prepare doors and frames for electronic hardware furnished by Security Contractor.

3.04 INSTALLATION

- A. Install hardware in accordance with manufacturer's instructions and applicable requirements of SDI, WDMA, NFPA 80, BHMA, and DHI.
- B. Use the templates provided by hardware item manufacturer.
- C. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:
 1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
 2. Wood Doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."
 3. Conform to ANSI A117.1 for positioning requirements for the handicapped.
 4. Where new hardware is to be installed near existing doors/hardware scheduled to remain, match locations of existing hardware.
- D. Process hardware for aluminum doors in accordance with DHI handbook, Processing Hardware for Custom Aluminum Doors and Frames.
- E. Wherever cutting and fitting are required to install hardware on surfaces which are to be painted or finished by others, coordinate removal, storage, and reinstallation or application of surface protections with finishing work specified in other Sections. Do not install surface-mounted items until finishes have been completed on the substrate. NOTE: NO POWER DRIVEN TOOLS SHALL BE USED FOR INSTALLATION OF LOCKSETS AND HARDWARE ON DOORS.
- F. Set units level, plumb, and true to line and location. Adjust and reinforce the attachment substrate as required for proper installation and operation.

- G. Drill and countersink units, which are not factory-prepared for anchorage fasteners. Space fasteners and anchors in accordance with referenced standards.
- H. Drill pilot holes for fasteners in wood doors and/or frames.
- I. Drawings typically depict doors at 90 degrees; doors will actually swing to maximum allowable. Template hardware for maximum allowable degree of swing.
- J. Gaskets: install jamb-applied gaskets before closers, overhead stops, rim strikes, etc. Install sweeps across bottoms of doors before astragals, cope sweeps around bottom pivots, trim astragals to tops of sweeps. Door Jambs must be cleaned of all dirt, grease, oil, solvents or solvent residue and dust before applying Pressure-Sensitive Adhesive backed Gasketing, Smoke Seal or Weatherstripping.
- K. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 07 Section "Joint Sealants."
- L. Locate floor stops not more than 4 inches from the wall.
- M. Boxed Power Supplies: Locate power supplies as indicated or, if not indicated, above accessible ceilings. Verify location with Architect.

3.05 ADJUSTING

- A. Adjust and check each operating hardware item, and each door assembly to ensure proper operation and function. Lubricate moving parts with lubrication type recommended by manufacturer.
- B. Replace units, which cannot be adjusted and lubricated to operate freely and smoothly.
- C. Hardware damaged by improper installation or adjustment methods to be repaired or replaced to Owner's satisfaction.
- D. Make final adjustments and lubrication immediately prior to final acceptance.
 - 1. Door Closers: Closers shall be adjusted so that from an open position of 90 degrees, the time required to move the door to an open position of 12 degrees shall be 5 seconds minimum.
 - 2. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.
 - 3. Door control devices backcheck shall be properly located for protection of the door, frame, and applied hardware.

3.06 CLEANING AND PROTECTION

- A. Clean adjacent surfaces soiled by door hardware installation.
- B. Clean operating items as necessary to restore proper function and finish.
- C. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of Substantial Completion.

3.07 FINAL ADJUSTMENT

- A. Wherever hardware installation is made more than one month prior to acceptance or occupancy of a space or area, return to the work during the week prior to acceptance or occupancy, and make final check and adjustment of all hardware items in such space or area. Clean operating items as necessary to restore proper function and finish of hardware and doors. Adjust door control devices to compensate for final operation of heating and ventilating equipment.

3.08 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain door hardware and door hardware finishes.

3.09 CLEANUP

- A. Remove protective material from hardware where present.
- B. Upon completion and verification of performance of installation, remove surplus materials, excess materials, rubbish, tools and equipment.

3.10 CONTINUED MAINTENANCE SERVICE

- A. Approximately six months after the acceptance of hardware in each area, the Installer shall return to the project and re-adjust every item of hardware to restore proper function of doors and hardware. Consult with and instruct Owner's personnel in recommended additions to the maintenance procedures. Replace hardware items that have deteriorated or failed due to faulty design, materials or installation of hardware units. Prepare a written report of current and predictable problems in the performance of the hardware.

3.11 ACCEPTANCE

- A. Warranty shall not start until Owner Acceptance. Acceptance shall be withheld until the following activities have been successfully completed:
 1. Commissioning per paragraph 1.12.
 2. Delivery and Acceptance of all Operations and maintenance manuals.
 3. Successful Final Test and Inspection of Security System.

3.12 DOOR HARDWARE SCHEDULE

- A. The following schedule is furnished for whatever assistance it may afford the Contractor; do not consider it as entirely inclusive. Should any particular door or item be omitted in any scheduled hardware heading, provide door or item with hardware same as required for similar purposes. Hardware supplier is responsible for handling and sizing all products as listed in the hardware heading. Quantities listed are for each pair of doors, or for each single door.
- B. Manufacturer Legend:
 1. (B/O) By Others

2. (GLY) Glynn Johnson
3. (IVE) Ives
4. (LCN) LCN
5. (NGP) National Guard Products
6. (SCE) Schlage Electronics
7. (SCH) Schlage
8. (VON) Von Duprin

HW SET# 001 - EXTERIOR (ALUM) W/AUTO OPERATOR

EACH TO HAVE:

END OF SECTION 087100

SECTION 08 80 00**GLAZING****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. This Section includes glazing for the following products and applications, including those specified in other Sections where glazing requirements are specified by reference to this Section:
 - 1. Windows.
 - 2. Doors.
 - 3. Glazed storefront.
 - 4. Glazed entrances.
 - 5. Interior borrowed lites.
 - 6. Storefront framing.

1.03 DEFINITIONS

- A. Manufacturers of Glass Products: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.
- B. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C 1036.
- C. Interspace: Space between lites of an insulating-glass unit that contains dehydrated air or a specified gas.
- D. Deterioration of Coated Glass: Defects developed from normal use that are attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in metallic coating.
- E. Deterioration of Insulating Glass: Failure of hermetic seal under normal use that is attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.
- F. Deterioration of Laminated Glass: Defects developed from normal use that are attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1.04 PERFORMANCE REQUIREMENTS

- A. General: Provide glazing systems capable of withstanding normal thermal movement

and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, and installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.

- B. Glass Design: Glass thickness designations indicated are minimums and are for detailing only. Confirm glass thicknesses by analyzing Project loads and in-service conditions. Provide glass lites in the thickness designations indicated for various size openings, but not less than thicknesses and in strengths (annealed or heat treated) required to meet or exceed the following criteria:
1. Glass Thicknesses: Select minimum glass thicknesses to comply with ASTM E 1300, according to the following requirements:
 - a. Specified Design Wind Loads: As indicated, but not less than wind loads applicable to Project as required by ASCE 7 "Minimum Design Loads for Buildings and Other Structures": Section 6.0 "Wind Loads."
 - b. Probability of Breakage for Vertical Glazing: 8 lites per 1000 for lites set vertically or not more than 15 degrees off vertical and under wind action.
 - 1) Load Duration: 3 seconds.
 - c. Maximum Lateral Deflection: For the following types of glass supported on all 4 edges, provide thickness required that limits center deflection at design wind pressure to 1/50 times the short side length or 1 inch, whichever is less.
 - 1) For monolithic-glass lites heat treated to resist wind loads.
 - 2) For insulating glass.
 - 3) For laminated-glass lites.
- C. Thermal Movements: Provide glazing that allows for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures acting on glass framing members and glazing components. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): 120 deg F, ambient; 180 deg F , material surfaces.
- D. Thermal and Optical Performance Properties: Provide glass with performance properties specified based on manufacturer's published test data, as determined according to procedures indicated below:
1. For monolithic-glass lites, properties are based on units with lites 6.0 mm thick.
 2. For laminated-glass lites, properties are based on products of construction indicated.
 3. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
 4. Center-of-Glass Values: Based on using LBL-44789 WINDOW 5.0 computer program for the following methodologies:
 - a. U-Factors: NFRC 100 expressed as Btu/ sq. ft. x h x deg F .
 - b. Solar Heat Gain Coefficient: NFRC 200.
 - c. Solar Optical Properties: NFRC 300.

1.05 SUBMITTALS

- A. Product Data: For each glass product and glazing material indicated.
- B. Samples: For the following products, in the form of 12-inch- square Samples for glass and of 12-inch-long Samples for sealants. Install sealant Samples between two strips of material representative in color of the adjoining framing system.
- C. Samples: For the following products, in the form of 12-inch- square Samples for glass.
 - 1. Each color of tinted float glass.
 - 2. Coated vision glass.
 - 3. Ceramic-coated spandrel glass.
 - 4. Wired glass.
 - 5. Fire-resistive glazing products.
 - 6. Insulating glass for each designation indicated.
 - 7. For each color (except black) of exposed glazing sealant indicated.
- D. Glazing Schedule: Use same designations indicated on Drawings for glazed openings in preparing a schedule listing glass types and thicknesses for each size opening and location.
- E. Product Certificates: Signed by manufacturers of glass and glazing products certifying that products furnished comply with requirements.
 - 1. For solar-control low-e-coated glass, provide documentation demonstrating that manufacturer of coated glass is certified by coating manufacturer.
- F. Qualification Data: For installers.
- G. Preconstruction Adhesion and Compatibility Test Report: From glazing sealant manufacturer indicating glazing sealants were tested for adhesion to glass and glazing channel substrates and for compatibility with glass and other glazing materials.
- H. Product Test Reports: For each of the following types of glazing products:
 - 1. Tinted float glass.
 - 2. Coated float glass.
 - 3. Insulating glass.
 - 4. Glazing sealants.
 - 5. Glazing gaskets.
- I. Warranties: Special warranties specified in this Section.

1.06 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who has completed glazing similar in material, design, and extent to that indicated for this Project; whose work has resulted in glass installations with a record of successful in-service performance; and who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.
- B. Source Limitations for Glass: Obtain the following through one source from a single manufacturer for each glass type: clear float glass coated float glass and insulating glass.
- C. Source Limitations for Glass Sputter-Coated with Solar-Control Low-E Coatings:

Where solar-control low-e coatings of a primary glass manufacturer that has established a certified fabricator program is specified, obtain sputter-coated solar-control low-e-coated glass in fabricated units from a manufacturer that is certified by coated-glass manufacturer.

- D. Source Limitations for Glazing Accessories: Obtain glazing accessories through one source from a single manufacturer for each product and installation method indicated.
- E. Glass Product Testing: Obtain glass test results for product test reports in "Submittals" Article from a qualified testing agency based on testing glass products.
 - 1. Glass Testing Agency Qualifications: An independent testing agency with the experience and capability to conduct the testing indicated, as documented according to ASTM E 548.
 - 2. Glass Testing Agency Qualifications: An independent testing agency accredited according to the NFRC CAP 1 Certification Agency Program.
- F. Elastomeric Glazing Sealant Product Testing: Obtain sealant test results for product test reports in "Submittals" Article from a qualified testing agency based on testing current sealant formulations within a 36-month period.
 - 1. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated, as documented according to ASTM E 548.
 - 2. Test elastomeric glazing sealants for compliance with requirements specified by reference to ASTM C 920, and where applicable, to other standard test methods.
- G. Glazing for Fire-Rated Door Assemblies: Glazing for assemblies that comply with NFPA 80 and that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 252.
- H. Glazing for Fire-Rated Window Assemblies: Glazing for assemblies that comply with NFPA 80 and that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to NFPA 257.
- I. Safety Glazing Products: Comply with testing requirements in 16 CFR 1201 and, for wired glass, ANSI Z97.1.
 - 1. Where glazing units, including Kind FT glass and laminated glass, are specified in Part 2 articles for glazing lites more than 9 sq. ft. in exposed surface area of one side, provide glazing products that comply with Category II materials, for lites 9 sq. ft. or less in exposed surface area of one side, provide glazing products that comply with Category I or II materials, except for hazardous locations where Category II materials are required by 16 CFR 1201 and regulations of authorities having jurisdiction.
- J. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.
 - 1. GANA Publications: GANA Laminated Division's "Laminated Glass Design Guide" and GANA's "Glazing Manual."
 - 2. IGMA Publication for Insulating Glass: SIGMA TM-3000, "Glazing Guidelines for Sealed Insulating Glass Units."

- K. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of the following testing and inspecting agency:
 - 1. Insulating Glass Certification Council.
 - 2. Associated Laboratories, Inc.
- L. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockups in the location and of the size indicated or, if not indicated, as directed by Architect.
 - 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- M. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination."

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Protect glazing materials according to manufacturer's written instructions and as needed to prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.
- B. For insulating-glass units that will be exposed to substantial altitude changes, comply with insulating-glass manufacturer's written recommendations for venting and sealing to avoid hermetic seal ruptures.

1.08 PROJECT CONDITIONS

- A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
 - 1. Do not install liquid glazing sealants when ambient and substrate temperature conditions are outside limits permitted by glazing sealant manufacturer or below 40 deg F .

1.09 WARRANTY

- A. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer's standard form, made out to Owner and signed by coated-glass manufacturer agreeing to replace coated-glass units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.
 - 1. Warranty Period: 10 years from date of Substantial Completion.
- B. Manufacturer's Special Warranty on Insulating Glass: Manufacturer's standard form, made out to Owner and signed by insulating-glass manufacturer agreeing to replace insulating-glass units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.
 - 1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, products specified.
 2. Products: Subject to compliance with requirements, provide one of the products specified.
 3. Product: Subject to compliance with requirements, provide product specified.
 4. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers specified.
 5. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.
 6. Basis-of-Design Product: The design for each glazing product is based on the product named. Subject to compliance with requirements, provide either the named product or a comparable product by one of the other manufacturers specified.

2.02 GLASS PRODUCTS

- A. Annealed Float Glass: ASTM C 1036, Type I (transparent flat glass), Quality-Q3; of class indicated.
- B. Heat-Treated Float Glass: ASTM C 1048; Type I (transparent flat glass); Quality-Q3; of class, kind, and condition indicated.
1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed, unless otherwise indicated.
 2. Provide Kind HS (heat-strengthened) float glass in place of annealed float glass where needed to resist thermal stresses induced by differential shading of individual glass lites and to comply with glass design requirements specified in Part 1 "Performance Requirements" Article.
 3. For uncoated glass, comply with requirements for Condition A.
 4. For coated vision glass, comply with requirements for Condition C (other uncoated glass).
 5. Provide Kind FT (fully tempered) float glass in place of annealed or Kind HS (heat-strengthened) float glass where safety glass is indicated.
- C. Sputter-Coated Float Glass: ASTM C 1376, float glass with metallic-oxide or -nitride coating deposited by vacuum deposition process after manufacture and heat treatment (if any), and complying with other requirements specified.
- D. Insulating-Glass Units, General: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, and complying with ASTM E 774 for Class CBA units and with requirements specified in this Article and in Part 2 "Insulating-Glass Units" Article.
1. Provide Kind HS (heat-strengthened) float glass in place of annealed glass where needed to resist thermal stresses induced by differential shading of individual glass lites and to comply with glass design requirements specified in Part 1 "Performance Requirements" Article.
 2. Overall Unit Thickness and Thickness of Each Lite: Dimensions indicated for insulating-glass units are nominal and the overall thicknesses of units are

- measured perpendicularly from outer surfaces of glass lites at unit's edge.
3. Sealing System: Dual seal, with primary and secondary sealants as follows:
 - a. Manufacturer's standard sealants.
 4. Spacer Specifications: Manufacturer's standard spacer material and construction.

2.03 FIRE-PROTECTION-RATED GLAZING

- A. Fire-Protection-Rated Glazing, General: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 252 for door assemblies and NFPA 257 for window assemblies.
- B. Fire-Protection-Rated Laminated Glass: 5/16-inch-thick, fire-protection-rated laminated glass, complying with testing requirements in 16 CFR 1201 for Category II materials.
 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Oldcastle Glass, Inc.; Pyroguard.

2.04 GLAZING GASKETS

- A. Dense Compression Gaskets: Molded or extruded gaskets of material indicated below, complying with standards referenced with name of elastomer indicated below, and of profile and hardness required to maintain watertight seal:
 1. Neoprene, ASTM C 864.
 2. EPDM, ASTM C 864.
 3. Silicone, ASTM C 1115.
 4. Thermoplastic polyolefin rubber, ASTM C 1115.
 5. Any material indicated above.
- B. Soft Compression Gaskets: Extruded or molded, closed-cell, integral-skinned gaskets of material indicated below; complying with ASTM C 509, Type II, black; and of profile and hardness required to maintain watertight seal:
 1. Neoprene.
 2. EPDM.
 3. Silicone.
 4. Thermoplastic polyolefin rubber.
 5. Any material indicated above.
- C. Lock-Strip Gaskets: Neoprene extrusions in size and shape indicated, fabricated into frames with molded corner units and zipper lock-strips, complying with ASTM C 542, black.

2.05 GLAZING SEALANTS

- A. General: Provide products of type indicated, complying with the following requirements:
 1. Compatibility: Select glazing sealants that are compatible with one another and with other materials they will contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of

- service and application, as demonstrated by sealant manufacturer based on testing and field experience.
2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
 3. Colors of Exposed Glazing Sealants: As selected by Architect from manufacturer's full range.
- B. Glazing Sealants for Fire-Resistive Glazing Products: Identical to products used in test assemblies to obtain fire-protection rating.

2.06 GLAZING TAPES

- A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based elastomeric tape with a solids content of 100 percent; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; packaged on rolls with a release paper backing; and complying with ASTM C 1281 and AAMA 800 for products indicated below:
1. AAMA 804.3 tape, where indicated.
 2. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
 3. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.
- B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; packaged on rolls with release liner protecting adhesive; and complying with AAMA 800 for the following types:
1. Type 1, for glazing applications in which tape acts as the primary sealant.
 2. Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

2.07 MISCELLANEOUS GLAZING MATERIALS

- A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
- B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
- C. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.
- D. Spacers: Elastomeric blocks or continuous extrusions with a Shore, Type A durometer hardness required by glass manufacturer to maintain glass lites in place for installation indicated.
- E. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side walking).
- F. Cylindrical Glazing Sealant Backing: ASTM C 1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

- G. Perimeter Insulation for Fire-Resistive Glazing: Identical to product used in test assembly to obtain fire-resistance rating.

2.08 FABRICATION OF GLAZING UNITS

- A. Fabricate glazing units in sizes required to glaze openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.
- B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites in a manner that produces square edges with slight kerfs at junctions with outdoor and indoor faces.
- C. Grind smooth and polish exposed glass edges and corners.

2.09 MONOLITHIC FLOAT-GLASS UNITS

- A. Uncoated Clear Float-Glass Units - GL-02: Class 1 (clear).
1. Thickness: 6.0 mm.
- B. Uncoated Clear Float-Glass Units - GL-02T: Class 1 (clear) Kind FT (fully tempered) float glass.
1. Thickness: 6.0 mm.

2.10 INSULATING-GLASS UNITS

- A. South Elevation: Low-e-coated on no. 3 surface, clear insulating glass unit, heat-treated, 1 inch thickness (double pane), air filled with stainless steel spacer:
1. Performance:
 - a. Visible Light Transmittance: 70% minimum.
 - b. Visible Light Reflectance - Exterior: 11% approximate.
 - c. U-Value Winter: 0.29 minimum.
 - d. U-Value Summer: 0.26 minimum.
 - e. Shading Coefficient: 0.44 approximate.
 - f. Solar Heat Gain Coef.: 0.38 approximate.
 - g. Light to Solar Gain Ratio: 1.84 approximate.
 - h. Available Product: Viracon VE 1-85.
- B. North Elevation: Low-e-coated on no. 4 surface, clear insulating glass unit, heat-treated, 1 inch thickness (double pane), air filled with stainless steel spacer, fully tempered:
1. Performance:
 - a. Visible Light Transmittance: 48% minimum.
 - b. Visible Light Reflectance - Exterior: 11% approximate.
 - c. U-Value Winter: 0.20 minimum.
 - d. U-Value Summer: 0.17 minimum.
 - e. Shading Coefficient: 0.29 approximate.
 - f. Solar Heat Gain Coef.: 0.25 approximate.
 - g. Light to Solar Gain Ratio: 1.92 approximate.
 - h. Available Product: Viracon VUE 1-50.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine framing glazing, with Installer present, for compliance with the following:
 - 1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
 - 2. Presence and functioning of weep system.
 - 3. Minimum required face or edge clearances.
 - 4. Effective sealing between joints of glass-framing members.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

3.03 GLAZING, GENERAL

- A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Glazing channel dimensions, as indicated on Drawings, provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances. Adjust as required by Project conditions during installation.
- C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.
- D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction sealant-substrate testing.
- E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
- F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- G. Provide spacers for glass lites where length plus width is larger than 50 inches as follows:
 - 1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
 - 2. Provide 1/8-inch minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

- H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.
- I. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
- J. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.
- K. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.

3.04 TAPE GLAZING

- A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.
- B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
- C. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.
- D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
- E. Do not remove release paper from tape until just before each glazing unit is installed.
- F. Apply heel bead of elastomeric sealant.
- G. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
- H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.05 GASKET GLAZING (DRY)

- A. Fabricate compression gaskets in lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
- B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.
- C. Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
- D. Install gaskets so they protrude past face of glazing stops.

3.06 SEALANT GLAZING (WET)

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
- B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
- C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.07 LOCK-STRIP GASKET GLAZING

- A. Comply with ASTM C 716 and gasket manufacturer's written instructions. Provide supplementary wet seal and weep system, unless otherwise indicated.

3.08 CLEANING AND PROTECTION

- A. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels, and clean surfaces.
- B. Protect glass from contact with contaminating substances resulting from construction operations, including weld splatter. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended by glass manufacturer.
- C. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by glass manufacturer.
- D. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.
- E. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

END OF SECTION 08 80 00

1.4 SUBMITTALS**A. Shop Drawings:**

1. See Specification Section 01 33 00 for requirements for the mechanics and administration of the submittal process.
2. Product technical data including:
 - a. Acknowledgement that products submitted meet requirements of standards referenced.
 - b. Manufacturer's installation instructions.
 - c. Certification that glass has been tested and approved for use in fire rated doors or walls.
 - 1) Copies of all test criteria.
3. Certification that insulated glass units meet requirements of IGCC and are certified by IGCC to ASTM E2190.

B. Samples:

1. 12 x 12 IN sample of each type, color, and thickness specified except clear glass (glass Type 1 and 2.)

PART 2 - PRODUCTS**2.1 ACCEPTABLE MANUFACTURERS****A. Subject to compliance with the Contract Documents, the following manufacturers are acceptable:**

1. Clear glass - tempered, float and heat strengthened:
 - a. Libbey-Owens-Ford.
 - b. PPG.
 - c. Viracon.
 - d. Visteon.
2. Gaskets, glazing compounds, setting blocks, spacers, sealant, sealant tape, etc., as recommended by glass manufacturer, glass unit fabricator, or as required by NFPA.

B. Submit request for substitution in accordance with Specification Section 01 25 00.**2.2 MATERIALS****A. Shelter Structure: Clear Tempered, Laminated Float Glass:**

1. (2) 1/4 IN thick outer layers with a vinyl inner layer for 9/16 IN overall thickness.
2. ASTM C1048.
 - a. Kind FT, Kind FT, Condition A, Type 1, Class I.
3. ANSI Z97.1.
4. Inner Layer: Polyvinyl butyral (PVB) plastic interlayer, clear. .090 IN thick.

B. Frameless Guardrail: Clear Tempered, Laminated, Float Frit Glass.

1. 1) 1/4 IN fritted 80% opaque round white grid coated to inside face of outer layer, and (1) 1/4 IN thick clear inside layer with an middle layer of vinyl for 9/16 IN overall thickness.
2. Glazing Manufacturer Standard to comply with Clear Tempered, Laminated Float Glass.
3. ASTM C1048, Kind FT, Condition A, Type 1, Class I.
4. ANSI Z97.1.
5. Inner Layer: Polyvinyl butyl (PVB) plastic interlayer, clear .090 IN thick

- 1
- 2 C. Glazing Compounds:
- 3 1. Non-sag, non-stain type.
- 4 2. Pigmented to match frame units not requiring painting.
- 5 3. Compatible with adjacent surfaces.
- 6 4. One- or two-part polyurethane or silicone sealant for use in setting glass.
- 7 a. Provide glazing compounds which will not be affected by chemicals stored in
- 8 rooms where glazing compounds are used.
- 9 D. Sealant Tape: Butyl rubber sealant tape or ribbon having a continuous neoprene shim.
- 10 E. Gaskets:
- 11 1. Flexible polyvinyl chloride or neoprene.
- 12 a. Provide gaskets which will not be affected by chemicals stored in rooms where
- 13 gaskets are used.
- 14 2. Extruded of profile and hardness required to receive glass and provide a watertight
- 15 installation.
- 16 3. Provide gaskets in accordance with NFPA in fire rated glazing.
- 17 F. Setting Blocks and Spacers:
- 18 1. Neoprene or EPDM, compatible with sealants used.
- 19 2. Setting blocks: 70-90 durometer.
- 20 3. Spacers: 40-50 durometer.
- 21 G. Compressible Filler Stock: Closed-cell jacketed rod stock of synthetic rubber or plastic
- 22 foam.
- 23 H. Shims, Clips, Springs, Angles, Beads, Attachment Screws and Other Miscellaneous
- 24 Items: As required by condition.

25 PART 3 - EXECUTION

26 3.1 INSTALLATION

- 27 A. Provide safety glazing in all locations where required by the Building Code and CPSC
- 28 16 CFR 1201.
- 29 B. Install in accordance with recommendations of manufacturer, GANA Glazing Manual
- 30 and IGMA TM-3000.
- 31 C. Install setting blocks in adhesive or sealant.
- 32 D. Install spacers inside and out, of proper size and spacing, for all glass sizes larger than
- 33 50 united inches, except where gaskets are used for glazing.
- 34 E. Provide 1/8 IN minimum bite of spacers on glass.
- 35 F. Spacer thickness to equal sealant width.
- 36 G. Prevent sealant exudation from glazing channels of insulating glass which is more than
- 37 1/2 IN thick; colored, heat absorbing, coated or laminated glass sizes larger than 75
- 38 united inches; and other glass more than 9/32 IN thick or larger than 125 united inches.
- 39 1. Leave void at heel (or install filler) at jambs and head.
- 40 2. Do not leave void (or install filler) at sill.
- 41 H. Miter cut and bond gasket ends together at corners.
- 42 I. Immediately after installation, attach crossed streamers to framing held away from
- 43 glass.

- 1 J. Use polysulfide-based glazing sealants in window assembly and as perimeter sealant
2 around frames in areas which may be exposed to chlorine gas or chlorine liquid splash
3 or spillage.
4 1. See Specification Section 07 92 13 for sealants.

5 **3.2 FIELD QUALITY CONTROL**

- 6 A. Do not install glass with edge damage.
7 B. Do not apply anything to surfaces of glass.
8 C. Remove and replace damaged glass.

9 **3.3 CLEANING**

- 10 A. Maintain glass reasonably clean during construction, so that it will not be damaged by
11 corrosive action and will not contribute to deterioration of other materials.
12 B. Wash and polish glass on both faces not more than seven (7) days prior to acceptance
13 of work in each area.
14 1. Comply with glass manufacturer's recommendations.
-

16

17 **PART 4 - MEASUREMENT**

18

- 19 **4.1 Measurement** – No Separate measurement will be made for Work described in this
20 Section.

21

22

23 **PART 5 - PAYMENT**

24

- 25 **5.1 Payment** – Payment for items in this Section will be incidental to the Contract lump sum
26 cost of the Station Stops.

27

END OF SECTION

SECTION 08 83 00**MIRRORS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes the following types of silvered flat glass mirrors:

- 1. Annealed monolithic glass mirrors.

1.03 SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Mirrors. Include description of materials and process used to produce each type of silvered flat glass mirror specified that indicates sources of glass, glass coating components, edge sealer, and quality-control provisions.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
- C. Shop Drawings: Include mirror elevations, edge details, mirror hardware, and attachments to other work.
- D. Samples: For each type of the following products:
 - 1. Mirrors: 12 inches square, including edge treatment on two adjoining edges.
 - 2. Mirror Clips: Full size.
 - 3. Mirror Trim: 12 inches long.
- E. Qualification Data: For qualified Installer.
- F. Product Certificates: For each type of mirror and mirror mastic, from manufacturer.
- G. Preconstruction Test Reports: From mirror manufacturer indicating that mirror mastic was tested for compatibility and adhesion with mirror backing paint and substrates on which mirrors are installed.
- H. Warranty: Sample of special warranty.
- I. Maintenance Data: For mirrors to include in maintenance manuals.

1.04 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.

- B. Source Limitations for Mirrors: Obtain mirrors from single source from single manufacturer.
- C. Source Limitations for Mirror Accessories: Obtain mirror glazing accessories from single source.
- D. Glazing Publications: Comply with the following published recommendations:
 - 1. GANA's "Glazing Manual" unless more stringent requirements are indicated. Refer to this publication for definitions of glass and glazing terms not otherwise defined in this Section or in referenced standards.
 - 2. GANA Mirror Division's "Mirrors, Handle with Extreme Care: Tips for the Professional on the Care and Handling of Mirrors."
- E. Preconstruction Mirror Mastic Compatibility Test: Submit mirror mastic products to mirror manufacturer for testing to determine compatibility of mastic with mirror backing paint and substrates on which mirrors are installed.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Protect mirrors according to mirror manufacturer's written instructions and as needed to prevent damage to mirrors from moisture, condensation, temperature changes, direct exposure to sun, or other causes.
- B. Comply with mirror manufacturer's written instructions for shipping, storing, and handling mirrors as needed to prevent deterioration of silvering, damage to edges, and abrasion of glass surfaces and applied coatings. Store indoors.

1.06 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install mirrors until ambient temperature and humidity conditions are maintained at levels indicated for final occupancy.

1.07 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which mirror manufacturer agrees to replace mirrors that deteriorate within specified warranty period. Deterioration of mirrors is defined as defects developed from normal use that are not attributed to mirror breakage or to maintaining and cleaning mirrors contrary to manufacturer's written instructions. Defects include discoloration, black spots, and clouding of the silver film.
 - 1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 SILVERED FLAT GLASS MIRRORS

- A. Glass Mirrors, General: ASTM C 1503.

2.02 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. American Mirror Co.

- a. Consolidated Glass & Mirror Corp.
2. Falconer Glass Industries, Inc.
3. Gardner Mirror Corp.

2.03 FLOAT GLASS

- A. Tempered Float Glass: ASTM C 1048, Type I (transparent glass, flat), Condition A (uncoated), Kind FT (fully tempered), Quality q3 (glazing select) float glass, complying with the following requirements:
 1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of mirror as installed, unless otherwise indicated.
 2. Clear Tempered Float Glass: Class 1 (clear).
 - a. Thickness: 6 mm.

2.04 MIRRORING GLASS

- A. Silvered Mirrored Glass: Annealed and tempered, clear float glass with successive layers of chemically deposited silver, electrically or chemically deposited copper, and manufacturer's standard organic protective coating applied to second glass surface to produce a coating system complying with FS DD-M-411.

2.05 FABRICATION

- A. Mirrored Glass Sizes: Cut mirrored glass to final sizes and shapes as indicated on Drawings.
- B. Cutouts: Fabricate cutouts for notches and holes in mirrored glass without marring visible surfaces. Locate and size cutouts so they fit closely around penetrations in mirrored glass.
- A. Mirrored Glass Edge Treatment: Treat edges as indicated below.
 1. Mirrors in restrooms: Flat polished edge.
 2. Seal edges of silvered mirrored glass after edge treatment to prevent chemical or atmospheric penetration of glass coating.
 3. Require mirrored glass manufacturer to perform edge treatment and sealing in factory immediately after cutting to final sizes.

2.06 MISCELLANEOUS MATERIALS

- A. Edge Sealer: Coating compatible with glass coating and approved by mirrored glass manufacturer for use in protecting against silver deterioration at mirrored glass edges.

2.07 MASTIC MATERIALS

- A. Mirror Mastic: An adhesive setting compound, produced specifically for setting mirrored glass by spot application, certified by both mirrored glass manufacturer and mastic manufacturer as compatible with glass coating and substrates on which mirrored glass will be installed.
 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- a. Gunther Mirror Mastics.
- b. Palmer Products Corporation.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, over which mirrored glass units are to be mounted, with Installer present, for compliance with installation tolerances, substrate preparation, and other conditions affecting performance.
 1. Verify compatibility with and suitability of substrates, including compatibility of mirror mastic with existing finishes or primers.
 2. Proceed with mirrored glass installation only after unsatisfactory conditions have been corrected and surfaces are dry.

1.02 PREPARATION

- B. Comply with mastic manufacturer's written installation instructions for preparation of substrates, including coating surfaces with mastic manufacturer's special bond coating where applicable.

3.02 GLAZING

- A. General: Install mirrored glass units to comply with written instructions of mirrored glass manufacturer and with referenced GANA and NAAMM publications. Mount mirrored glass accurately in place in a manner that avoids distorting reflected images.
- B. Provide space for air circulation between back of mirrored glass units and face of mounting surface.
- C. Frame Mounting Installation System: For wall-mounted mirrored glass units, install permanent means of support at bottom and top edges with bottom support designed to withstand mirrored glass weight and top support designed to prevent mirrored glass from coming away from wall along top edges.
 1. Attach mirror hardware securely to mounting surfaces with mechanical fasteners installed with anchors or inserts as applicable. Install fasteners so heads do not impose point loads on backs of mirrored glass units.
 2. For continuous bottom supports, provide setting blocks 1/8 inch thick by 4 inches long at quarter points.
 3. Install aluminum bottom and top trim. Fabricate trim in single lengths to fit and cover top and bottom edges of mirrored glass units.

3.03 PROTECTION AND CLEANING

- A. Protect mirrored glass from breakage and contaminating substances resulting from construction operations.
 1. Do not permit edges of silvered mirrored glass to be exposed to standing water.
 2. Maintain environmental conditions that will prevent silvered mirrored glass from being exposed to moisture from condensation or other sources for continuous periods of time.
- B. Wash mirrored glass not more than four days before date scheduled for inspections intended to establish date for Substantial Completion. Wash mirrored glass by

methods recommended in NAAMM publication and in writing by mirrored glass manufacturer. Use water and glass cleaners free from substances capable of damaging mirrored glass edges or coatings.

END OF SECTION 08 83 00

1.5 WARRANTY

- A. Written five (5) year warranty signed by installer to cover weathertightness of installation including water integrity.
- B. Written five (5) year warranty signed by manufacturer or fabricator against discoloration and breakage.

PART 2 - PRODUCTS**2.1 ACCEPTABLE MANUFACTURERS**

- A. Subject to compliance with the Contract Documents, the following manufacturers are acceptable:

1. Plastic glazing:
 - a. Lucite
 - b. Reynolds Polymer
 - c. Arkema Inc.

2.2 MATERIALS

- A. General:
 1. Cast acrylic glazing sheet.
 2. UV stabilized.
 3. Light transmission:
 - a. Roof Canopy: 20 percent (colorless sheet with translucent vinyl coating on surface 1).
 - b. Light Fixture Cover: 80 Percent (colorless sheet with smooth, translucent finish)
 - c. Stop Marker: 92% min (colorless)
 4. Flame spread: ASTM E84, maximum 80.
 5. Extend of burning: ASTM D635, classification CC1.
 6. Smoke density: ASTM D2843, not greater than 75.
 7. Self ignition: Minimum temperature of 650 DegF per ASTM D1929
 8. Surface Abrasion Resistance: 1000 cycles <2% ASTM D1044
 9. Yellowness Index (YI): Less than 0.3
- B. Plastic Glazing (Single Sheet):
 1. Minimum thickness: As indicated in the Drawings
 2. Color: Clear
- C. Glazing Compounds:
 1. Nonsag, nonstain type.
 2. Pigmented to match frame units not requiring painting.
 3. Compatible with adjacent surfaces.
 4. One or two-part silicone sealant for use in setting polycarbonate glazing.
 5. Approved by glazing manufacturer.
- D. Sealant Tape: Butyl rubber sealant tape or ribbon having a continuous neoprene shim approved by glazing manufacturer.
- E. Gaskets:
 1. Flexible neoprene or EPDM.
 2. Extruded of profile and hardness required to receive glazing and provide a watertight installation.
 3. Approved by glazing manufacturer.
- F. Setting Blocks and Spacers:
 1. Neoprene, compatible with sealants used.

- 1 2. Setting blocks: 70-90 durometer.
- 2 3. Spacers: 40-50 durometer.
- 3 4. Approved by glazing manufacturer.
- 4 G. Compressible Filler Stock: Closed-cell jacketed rod stock of synthetic rubber approved
- 5 by glazing manufacturer.
- 6 H. Shims, Clips, Springs, Angles, Beads, Attachment Screws and Other Miscellaneous
- 7 Items: As indicated on Drawings or required.

8 **PART 3 - EXECUTION**

9 **3.1 INSTALLATION**

- 10 A. Install products in accordance with manufacturer's instructions.
- 11 B. Install setting blocks when required in adhesive or sealant.
- 12 C. Install spacers when required inside and out, of proper size and spacing, for all glazing
- 13 sizes larger than 50 united inches, except where gaskets are used for glazing.
- 14 D. Provide minimum bite of spacers on glazing per glazing manufacturer.
- 15 E. Spacer thickness to equal sealant width.
- 16 F. Prevent sealant exudation from glazing channels of thermal unit which is more than 1/2
- 17 IN thick; colored, coated or laminated glazing sizes larger than 75 united inches; and
- 18 other glazing more than 9/32 IN thick or larger than 125 united inches.
- 19 1. Leave void at heel (or install filler) at jambs and head.
- 20 2. Do not leave void (or install filler) at sill.
- 21 G. Miter cut and bond gasket ends together at corners.
- 22 H. Immediately after installation, attach crossed streamers to framing held away from
- 23 glazing.
- 24 I. Factory cut glazing to sizes required.
- 25 1. Field cutting of glazing panels is not allowed.

26 **3.2 FIELD QUALITY CONTROL**

- 27 A. Do not install glazing with edge damage.
- 28 B. Do not apply anything to surfaces of glazing.
- 29 C. Remove, and replace damaged glazing.

30 **3.3 CLEANING AND PROTECTION**

- 31 A. Protect glazing from scratch damage and UV exposure prior to acceptance of building
- 32 by Owner.
- 33 B. Maintain glazing reasonably clean during construction, so that surfaces will not be
- 34 damaged by corrosive action and will not contribute to deterioration of other materials.
- 35 C. Wash both faces not more than seven (7) days prior to acceptance of work in each
- 36 area.
- 37 1. Comply with manufacturer's recommendations.

38 **PART 4 - MEASUREMENT**

- 39
- 40 **4.1 Measurement** – No Separate measurement will be made for Work described in this
- 41 Section.
- 42
- 43

1 **PART 5 - PAYMENT**

2

3 **5.1 Payment** – Payment for items in this Section will be incidental to the Contract lump sum
4 cost of the Station Stops.

5

END OF SECTION

9

SECTION 09 22 16**NON-STRUCTURAL METAL FRAMING****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY**A. Section Includes:**

- 1. Non-load-bearing steel framing systems for interior gypsum board assemblies.
- 2. Suspension systems for interior gypsum ceilings, soffits, and grid systems.

B. Related Requirements:

- 1. Section 05 40 00 "Cold-Formed Metal Framing" for exterior and interior load-bearing and exterior non-load-bearing wall studs; floor joists; roof rafters and ceiling joists; and roof trusses.

1.03 SUBMITTALS**A. Product Data:** For each type of product.**B. LEED Submittals:**

- 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating costs for each product having recycled content.

C. Evaluation Reports: For dimpled steel studs and runners and firestop tracks, from ICC-ES.**PART 2 - PRODUCTS****2.01 DESCRIPTION**

- A. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing steel framing, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.
- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.
- C. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

2.02 FRAMING SYSTEMS

-
- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- B. Framing Members, General: Comply with ASTM C 754 for conditions indicated.
1. Steel Sheet Components: Comply with ASTM C 645 requirements for metal unless otherwise indicated.
 2. Protective Coating: Coating with equivalent corrosion resistance of ASTM A 653/A 653M, G40, hot-dip galvanized, unless otherwise indicated.
- C. Studs and Runners: ASTM C 645. Use either steel studs and runners or dimpled steel studs and runners.
1. Steel Studs and Runners:
 - a. Minimum Base-Metal Thickness: 0.027 inch.
 - b. Depth: As indicated on Drawings.
 2. Dimpled Steel Studs and Runners:
 - a. Minimum Base-Metal Thickness: 0.025 inch.
 - b. Depth: As indicated on Drawings.
- D. Slip-Type Head Joints: Where indicated, provide one of the following:
1. Deflection Track: Steel sheet top runner manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) ClarkDietrich Metal Framing; SLP-TRK Slotted Deflection Track.
 - 2) MBA Building Supplies; Slotted Deflecto Track.
 - 3) Steel Network Inc. (The); VertiTrack VTD Series.
- E. Firestop Tracks: Top runner manufactured to allow partition heads to expand and contract with movement of the structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ClarkDietrich Metal Framing; SLP-TRK Slotted Deflection Track.
 - b. Fire Trak Corp.; Fire Trak System attached to studs with Fire Trak Posi Klip.
 - c. Grace Construction Products; FlameSafe FlowTrak System.
 - d. Metal-Lite, Inc.; The System.
- F. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated.
1. Minimum Base-Metal Thickness: 0.033 inch.
- G. Cold-Rolled Channel Bridging: Steel, 0.053-inch minimum base-metal thickness, with minimum 1/2-inch- wide flanges.

1. Depth: As indicated on Drawings.
2. Clip Angle: Not less than 1-1/2 by 1-1/2 inches, 0.068-inch- thick, galvanized steel.

H. Hat-Shaped, Rigid Furring Channels: ASTM C 645.

1. Minimum Base-Metal Thickness: 0.033 inch.
2. Depth: As indicated on Drawings.

I. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches, wall attachment flange of 7/8 inch, minimum uncoated-metal thickness of 0.018 inch, and depth required to fit insulation thickness indicated.

2.03 SUSPENSION SYSTEMS

- A. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch-diameter wire, or double strand of 0.048-inch- diameter wire.
- B. Wire Hangers: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.16 inch in diameter.
- C. Flat Hangers: Steel sheet, 1 by 3/16 inch by length indicated.
- D. Carrying Channels: Cold-rolled, commercial-steel sheet with a base-metal thickness of 0.053 inch and minimum 1/2-inch- wide flanges.
 1. Depth: 2-1/2 inches.

2.04 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that comply with referenced installation standards.
 1. Fasteners for Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance of the Work.
